- [gh-97001](https://github.com/python/cpython/issues/97001) [https://github.com/python/cpython/issues/97001]: Release the GIL when calling `termios` APIs to avoid blocking threads.
- [gh-99341](https://github.com/python/cpython/issues/99341) [https://github.com/python/cpython/issues/99341]: Fix `ast.increment_lineno()` to also cover `ast.TypeIgnore` when changing line numbers.
- [gh-99418](https://github.com/python/cpython/issues/99418) [https://github.com/python/cpython/issues/99418]: Fix bug in `urllib.parse.urlparse()` that causes URL schemes that begin with a digit, a plus sign, or a minus sign to be parsed incorrectly.
- [gh-99382](https://github.com/python/cpython/issues/99382) [https://github.com/python/cpython/issues/99382]: Check the number of arguments in substitution in user generics containing a `TypeVarTuple` and one or more `TypeVar`.
- [gh-99379](https://github.com/python/cpython/issues/99379) [https://github.com/python/cpython/issues/99379]: Fix substitution of `ParamSpec` followed by `TypeVarTuple` in generic aliases.
- [gh-99344](https://github.com/python/cpython/issues/99344) [https://github.com/python/cpython/issues/99344]: Fix substitution of `TypeVarTuple` and `ParamSpec` together in user generics.
- [gh-74044](https://github.com/python/cpython/issues/74044) [https://github.com/python/cpython/issues/74044]: Fixed bug where `inspect.signature()` reported incorrect arguments for decorated methods.
- [gh-99275](https://github.com/python/cpython/issues/99275) [https://github.com/python/cpython/issues/99275]: Fix `SystemError` in `ctypes` when exception was not set during `__init_subclass__`.
- [gh-99277](https://github.com/python/cpython/issues/99277) [https://github.com/python/cpython/issues/99277]: Remove

older version of

`_SSLProtocolTransport.get_write_buffer_limits`  
in **`asyncio.sslproto`**

- [gh-99248](https://github.com/python/cpython/issues/99248) [https://github.com/python/cpython/issues/99248]: fix negative numbers failing in `verify()`
- [gh-99155](https://github.com/python/cpython/issues/99155) [https://github.com/python/cpython/issues/99155]: Fix **`statistics.NormalDist`** pickle with 0 and 1 protocols.
- [gh-93464](https://github.com/python/cpython/issues/93464) [https://github.com/python/cpython/issues/93464]: `enum.auto()` is now correctly activated when combined with other assignment values. E.g. `ONE = auto(), 'some text'` will now evaluate as `(1, 'some text')`.
- [gh-99134](https://github.com/python/cpython/issues/99134) [https://github.com/python/cpython/issues/99134]: Update the bundled copy of pip to version 22.3.1.
- [gh-83004](https://github.com/python/cpython/issues/83004) [https://github.com/python/cpython/issues/83004]: Clean up reflink on failed module initialisation in **`_zoneinfo`**
- [gh-83004](https://github.com/python/cpython/issues/83004) [https://github.com/python/cpython/issues/83004]: Clean up reflinks on failed module initialisation in **`_pickle`**
- [gh-83004](https://github.com/python/cpython/issues/83004) [https://github.com/python/cpython/issues/83004]: Clean up reflink on failed module initialisation in **`_io`**.
- [gh-98897](https://github.com/python/cpython/issues/98897) [https://github.com/python/cpython/issues/98897]: Fix memory leak in **`math.dist()`** when both points don't have the same dimension. Patch by Kumar Aditya.
- [gh-98706](https://github.com/python/cpython/issues/98706) [https://github.com/python/cpython/issues/98706]: [3.11] Applied changes from `importlib_metadata` [4.11.4 through 4.13](https://importlib-metadata.readthedocs.io/en/latest/history.html#v4-13-0) [https://importlib-metadata.readthedocs.io/en/latest/history.html#v4-13-0], including compatibility and robustness fixes for `Distribution` objects without `_normalized_name`, disallowing invalid inputs to `Distribution.from_name`, and refined behaviors in `PathDistribution._name_from_stem` and `PathDistribution._normalized_name`.
- [gh-98793](https://github.com/python/cpython/issues/98793) [https://github.com/python/cpython/issues/98793]: Fix

argument typechecks in `_overlapped.WSACconnect()` and `_overlapped.Overlapped.WSASendTo()` functions.

- [gh-98744](https://github.com/python/cpython/issues/98744) [https://github.com/python/cpython/issues/98744]: Prevent crashing in `traceback` when retrieving the byte-offset for some source files that contain certain unicode characters.
- [gh-98740](https://github.com/python/cpython/issues/98740) [https://github.com/python/cpython/issues/98740]: Fix internal error in the `re` module which in very rare circumstances prevented compilation of a regular expression containing a `conditional expression` without the “else” branch.
- [gh-98703](https://github.com/python/cpython/issues/98703) [https://github.com/python/cpython/issues/98703]: Fix `asyncio.StreamWriter.drain()` to call `protocol.connection_lost` callback only once on Windows.
- [gh-98624](https://github.com/python/cpython/issues/98624) [https://github.com/python/cpython/issues/98624]: Add a mutex to `unittest.mock.NonCallableMock` to protect concurrent access to mock attributes.
- [gh-89237](https://github.com/python/cpython/issues/89237) [https://github.com/python/cpython/issues/89237]: Fix hang on Windows in `subprocess.wait_closed()` in `asyncio` with `ProactorEventLoop`. Patch by Kumar Aditya.
- [gh-98458](https://github.com/python/cpython/issues/98458) [https://github.com/python/cpython/issues/98458]: Fix infinite loop in `unittest` when a self-referencing chained exception is raised
- [gh-97928](https://github.com/python/cpython/issues/97928) [https://github.com/python/cpython/issues/97928]: `tkinter.Text.count()` raises now an exception for options starting with “-” instead of silently ignoring them.
- [gh-97966](https://github.com/python/cpython/issues/97966) [https://github.com/python/cpython/issues/97966]: On `uname_result`, restored expectation that `_fields` and `_asdict` would include all six properties including `processor`.
- [gh-98307](https://github.com/python/cpython/issues/98307) [https://github.com/python/cpython/issues/98307]: A `createSocket()` method was added to `SysLogHandler`.

- [gh-96035](https://github.com/python/cpython/issues/96035) [https://github.com/python/cpython/issues/96035]: Fix bug in `urllib.parse.urlparse()` that causes certain port numbers containing whitespace, underscores, plus and minus signs, or non-ASCII digits to be incorrectly accepted.
- [gh-98251](https://github.com/python/cpython/issues/98251) [https://github.com/python/cpython/issues/98251]: Allow `venv` to pass along `PYTHON*` variables to `ensurepip` and `pip` when they do not impact path resolution
- [gh-98178](https://github.com/python/cpython/issues/98178) [https://github.com/python/cpython/issues/98178]: On macOS, fix a crash in `syslog.syslog()` in multi-threaded applications. On macOS, the libc `syslog()` function is not thread-safe, so `syslog.syslog()` no longer releases the GIL to call it. Patch by Victor Stinner.
- [gh-96151](https://github.com/python/cpython/issues/96151) [https://github.com/python/cpython/issues/96151]: Allow `BUILTINS` to be a valid field name for frozen dataclasses.
- [gh-87730](https://github.com/python/cpython/issues/87730) [https://github.com/python/cpython/issues/87730]: Wrap network errors consistently in `urllib` FTP support, so the test suite doesn't fail when a network is available but the public internet is not reachable.
- [gh-98086](https://github.com/python/cpython/issues/98086) [https://github.com/python/cpython/issues/98086]: Make sure `patch.dict()` can be applied on async functions.
- [gh-90985](https://github.com/python/cpython/issues/90985) [https://github.com/python/cpython/issues/90985]: Earlier in 3.11 we deprecated `asyncio.Task.cancel("message")`. We realized we were too harsh, and have undepricated it.
- [gh-97837](https://github.com/python/cpython/issues/97837) [https://github.com/python/cpython/issues/97837]: Change deprecate warning message in `unittest` from

It is deprecated to return a value!=None  
to

It is deprecated to return a value that is not  
None from a test case

- [gh-97825](https://github.com/python/cpython/issues/97825) [https://github.com/python/cpython/issues/97825]: Fixes

**AttributeError** when `subprocess.check_output()` is used with argument `input=None` and either of the arguments *encoding* or *errors* are used.

- [gh-82836](https://github.com/python/cpython/issues/82836) [https://github.com/python/cpython/issues/82836]: Fix **is\_private** properties in the **ipaddress** module. Previously non-private networks (0.0.0.0/0) would return True from this method; now they correctly return False.
- [gh-96827](https://github.com/python/cpython/issues/96827) [https://github.com/python/cpython/issues/96827]: Avoid spurious tracebacks from **asyncio** when default executor cleanup is delayed until after the event loop is closed (e.g. as the result of a keyboard interrupt).
- [gh-97592](https://github.com/python/cpython/issues/97592) [https://github.com/python/cpython/issues/97592]: Avoid a crash in the C version of **asyncio.Future.remove\_done\_callback()** when an evil argument is passed.
- [gh-97639](https://github.com/python/cpython/issues/97639) [https://github.com/python/cpython/issues/97639]: Remove `tokenize.NL` check from **tabnanny**.
- [gh-73588](https://github.com/python/cpython/issues/73588) [https://github.com/python/cpython/issues/73588]: Fix generation of the default name of **tkinter.Checkbutton**. Previously, checkbuttons in different parent widgets could have the same short name and share the same state if arguments “name” and “variable” are not specified. Now they are globally unique.
- [gh-97005](https://github.com/python/cpython/issues/97005) [https://github.com/python/cpython/issues/97005]: Update bundled libexpat to 2.4.9
- [gh-85760](https://github.com/python/cpython/issues/85760) [https://github.com/python/cpython/issues/85760]: Fix race condition in **asyncio** where **process\_exited()** called before the **pipe\_data\_received()** leading to inconsistent output. Patch by Kumar Aditya.
- [gh-96819](https://github.com/python/cpython/issues/96819) [https://github.com/python/cpython/issues/96819]: Fixed check in **multiprocessing.resource\_tracker** that guarantees that the length of a write to a pipe is not greater than `PIPE_BUF`.

- [gh-96741](https://github.com/python/cpython/issues/96741) [https://github.com/python/cpython/issues/96741]: Corrected type annotation for dataclass attribute `pstats.FunctionProfile.ncalls` to be `str`.
- [gh-95987](https://github.com/python/cpython/issues/95987) [https://github.com/python/cpython/issues/95987]: Fix repr of Any subclasses.
- [gh-96388](https://github.com/python/cpython/issues/96388) [https://github.com/python/cpython/issues/96388]: Work around missing socket functions in `socket`'s `__repr__`.
- [gh-96073](https://github.com/python/cpython/issues/96073) [https://github.com/python/cpython/issues/96073]: In `inspect`, fix overeager replacement of "typing." in formatting annotations.
- [gh-96192](https://github.com/python/cpython/issues/96192) [https://github.com/python/cpython/issues/96192]: Fix handling of bytes path-like objects in `os.ismount()`.
- [gh-96052](https://github.com/python/cpython/issues/96052) [https://github.com/python/cpython/issues/96052]: Fix handling compiler warnings (SyntaxWarning and DeprecationWarning) in `codeop.compile_command()` when checking for incomplete input. Previously it emitted warnings and raised a `SyntaxError`. Now it always returns `None` for incomplete input without emitting any warnings.
- [gh-88863](https://github.com/python/cpython/issues/88863) [https://github.com/python/cpython/issues/88863]: To avoid apparent memory leaks when `asyncio.open_connection()` raises, break reference cycles generated by local exception and future instances (which has exception instance as its member var). Patch by Dong Uk, Kang.
- [gh-91212](https://github.com/python/cpython/issues/91212) [https://github.com/python/cpython/issues/91212]: Fixed flickering of the turtle window when the tracer is turned off. Patch by Shin-myong-serp.
- [gh-88050](https://github.com/python/cpython/issues/88050) [https://github.com/python/cpython/issues/88050]: Fix `asyncio` subprocess transport to kill process cleanly when process is blocked and avoid `RuntimeError` when loop is closed. Patch by Kumar Aditya.
- [gh-93858](https://github.com/python/cpython/issues/93858) [https://github.com/python/cpython/issues/93858]: Prevent

error when activating venv in nested fish instances.

- [gh-91078](https://github.com/python/cpython/issues/91078) [https://github.com/python/cpython/issues/91078]: **`TarFile.next()`** now returns `None` when called on an empty tarfile.
- [bpo-47220](https://bugs.python.org/issue?@action=redirect&bpo=47220) [https://bugs.python.org/issue?@action=redirect&bpo=47220]: Document the optional *callback* parameter of **`WeakMethod`**. Patch by Géry Ogam.
- [bpo-46364](https://bugs.python.org/issue?@action=redirect&bpo=46364) [https://bugs.python.org/issue?@action=redirect&bpo=46364]: Restrict use of sockets instead of pipes for stdin of subprocesses created by **`asyncio`** to AIX platform only.
- [bpo-38523](https://bugs.python.org/issue?@action=redirect&bpo=38523) [https://bugs.python.org/issue?@action=redirect&bpo=38523]: **`shutil.copytree()`** now applies the *ignore\_dangling\_symlinks* argument recursively.
- [bpo-36267](https://bugs.python.org/issue?@action=redirect&bpo=36267) [https://bugs.python.org/issue?@action=redirect&bpo=36267]: Fix `IndexError` in **`argparse.ArgumentParser`** when a `store_true` action is given an explicit argument.

## Documentation

- [gh-92892](https://github.com/python/cpython/issues/92892) [https://github.com/python/cpython/issues/92892]: Document that calling variadic functions with ctypes requires special care on macOS/arm64 (and possibly other platforms).
- [gh-85525](https://github.com/python/cpython/issues/85525) [https://github.com/python/cpython/issues/85525]: Remove extra row
- [gh-95588](https://github.com/python/cpython/issues/95588) [https://github.com/python/cpython/issues/95588]: Clarified the conflicting advice given in the **`ast`** documentation about **`ast.literal_eval()`** being “safe” for use on untrusted input while at the same time warning that it can crash the process. The latter statement is true and is deemed unfixable without a large amount of work unsuitable for a bugfix. So we keep the warning and no longer claim that `literal_eval` is safe.
- [bpo-41825](https://bugs.python.org/issue?@action=redirect&bpo=41825) [https://bugs.python.org/issue?@action=redirect&bpo=41825]: Restructured the documentation

for the `os.wait*` family of functions, and improved the docs for `os.waitid()` with more explanation of the possible argument constants.

## Tests

- [gh-99892](https://github.com/python/cpython/issues/99892) [https://github.com/python/cpython/issues/99892]: Skip `test_normalization()` of `test_unicodedata` if it fails to download `NormalizationTest.txt` file from `pythontest.net`. Patch by Victor Stinner.
- [gh-99934](https://github.com/python/cpython/issues/99934) [https://github.com/python/cpython/issues/99934]: Correct `test_marsh` on (32 bit) x86: `test_deterministic` sets was failing.
- [gh-99659](https://github.com/python/cpython/issues/99659) [https://github.com/python/cpython/issues/99659]: Optional big memory tests in `test_sqlite3` now catch the correct `sqlite.DataError` exception type in case of too large strings and/or blobs passed.
- [gh-98713](https://github.com/python/cpython/issues/98713) [https://github.com/python/cpython/issues/98713]: Fix a bug in the `typing` tests where a test relying on CPython-specific implementation details was not decorated with `@cpython_only` and was not skipped on other implementations.
- [gh-87390](https://github.com/python/cpython/issues/87390) [https://github.com/python/cpython/issues/87390]: Add tests for star-unpacking with PEP 646, and some other miscellaneous PEP 646 tests.
- [gh-96853](https://github.com/python/cpython/issues/96853) [https://github.com/python/cpython/issues/96853]: Added explicit coverage of `Py_Initialize` (and hence `Py_InitializeEx`) back to the embedding tests (all other embedding tests migrated to `Py_InitializeFromConfig` in Python 3.11)
- [bpo-34272](https://bugs.python.org/issue?@action=redirect&bpo=34272) [https://bugs.python.org/issue?@action=redirect&bpo=34272]: Some C API tests were moved into the new `Lib/test/test_capi/` directory.

## Build

- [gh-99086](https://github.com/python/cpython/issues/99086) [https://github.com/python/cpython/issues/99086]: Fix `-Wimplicit-int`, `-Wstrict-prototypes`, and `-Wimplicit-function-declaration` compiler warnings in `configure` checks.
- [gh-99337](https://github.com/python/cpython/issues/99337) [https://github.com/python/cpython/issues/99337]: Fix a

compilation issue with GCC 12 on macOS.

- [gh-99086](https://github.com/python/cpython/issues/99086) [https://github.com/python/cpython/issues/99086]: Fix `-Wimplicit-int` compiler warning in **configure** check for `PTHREAD_SCOPE_SYSTEM`.
- [gh-98872](https://github.com/python/cpython/issues/98872) [https://github.com/python/cpython/issues/98872]: Fix a possible fd leak in `Programs/_freeze_module.c` introduced in Python 3.11.
- [gh-99016](https://github.com/python/cpython/issues/99016) [https://github.com/python/cpython/issues/99016]: Fix build with `PYTHON_FOR_REGEN=python3.8`.
- [gh-97731](https://github.com/python/cpython/issues/97731) [https://github.com/python/cpython/issues/97731]: Specify the full path to the source location for `make docclean` (needed for cross-builds).
- [gh-98707](https://github.com/python/cpython/issues/98707) [https://github.com/python/cpython/issues/98707]: Don't use vendored `libmpdec` headers if `--with-system-libmpdec` is passed to **configure**. Don't use vendored `libexpat` headers if `--with-system-expat` is passed to **configure**.
- [gh-96761](https://github.com/python/cpython/issues/96761) [https://github.com/python/cpython/issues/96761]: Fix the build process of clang compiler for **bootstrap\_python** if LTO optimization is applied. Patch by Matthias Görgens and Donghee Na.
- [gh-96883](https://github.com/python/cpython/issues/96883) [https://github.com/python/cpython/issues/96883]: `wasm32-emscrip` builds for browsers now include `concurrent.futures` for `asyncio` and `unittest.mock`.
- [gh-84461](https://github.com/python/cpython/issues/84461) [https://github.com/python/cpython/issues/84461]: `wasm32-emscrip` platform no longer builds `resource` module, `getresuid()`, `getresgid()`, and their setters. The APIs are stubs and not functional.
- [gh-94280](https://github.com/python/cpython/issues/94280) [https://github.com/python/cpython/issues/94280]: Updated pegen regeneration script on Windows to find and use Python 3.9 or higher. Prior to this, pegen regeneration already required 3.9 or higher, but the script may have used lower versions of Python.

## Windows

- [gh-99345](https://github.com/python/cpython/issues/99345) [https://github.com/python/cpython/issues/99345]: Use faster initialization functions to detect install location for Windows Store package

- [gh-98629](https://github.com/python/cpython/issues/98629) [https://github.com/python/cpython/issues/98629]: Fix initialization of `sys.version` and `sys._git` on Windows
- [gh-99442](https://github.com/python/cpython/issues/99442) [https://github.com/python/cpython/issues/99442]: Fix handling in [Python Launcher for Windows](#) when `argv[0]` does not include a file extension.
- [gh-98689](https://github.com/python/cpython/issues/98689) [https://github.com/python/cpython/issues/98689]: Update Windows builds to zlib v1.2.13. v1.2.12 has CVE-2022-37434, but the vulnerable `inflateGetHeader` API is not used by Python.
- [gh-98790](https://github.com/python/cpython/issues/98790) [https://github.com/python/cpython/issues/98790]: Assumes that a missing `DLLs` directory means that standard extension modules are in the executable's directory.
- [gh-98745](https://github.com/python/cpython/issues/98745) [https://github.com/python/cpython/issues/98745]: Update `py.exe` launcher to install 3.11 by default and 3.12 on request.
- [gh-98692](https://github.com/python/cpython/issues/98692) [https://github.com/python/cpython/issues/98692]: Fix the [Python Launcher for Windows](#) ignoring unrecognized shebang lines instead of treating them as local paths
- [gh-94328](https://github.com/python/cpython/issues/94328) [https://github.com/python/cpython/issues/94328]: Update Windows installer to use SQLite 3.39.4.
- [gh-97728](https://github.com/python/cpython/issues/97728) [https://github.com/python/cpython/issues/97728]: Fix possible crashes caused by the use of uninitialized variables when pass invalid arguments in `os.system()` on Windows and in Windows-specific modules (like `winreg`).
- [gh-96965](https://github.com/python/cpython/issues/96965) [https://github.com/python/cpython/issues/96965]: Update `libffi` to 3.4.3
- [gh-94781](https://github.com/python/cpython/issues/94781) [https://github.com/python/cpython/issues/94781]: Fix `pcbuild.proj` to clean previous instances of output files in `Python\deepfreeze` and `Python\frozen_modules` directories on Windows. Patch by Charlie Zhao.
- [bpo-40882](https://bugs.python.org/issue?@action=redirect&bpo=40882) [https://bugs.python.org/issue?@action=redirect&bpo=40882]: Fix a memory leak in `multiprocessing.shared_memory.SharedMemory` on Windows.

## macOS

- [gh-87235](https://github.com/python/cpython/issues/87235) [https://github.com/python/cpython/issues/87235]: On macOS `python3 /dev/fd/9 9</path/to/script.py` failed for any script longer than a couple of bytes.

- [gh-98940](https://github.com/python/cpython/issues/98940) [https://github.com/python/cpython/issues/98940]: Fix `Mac/Extras.install.py` file filter bug.
- [gh-94328](https://github.com/python/cpython/issues/94328) [https://github.com/python/cpython/issues/94328]: Update macOS installer to SQLite 3.39.4.

## IDLE

- [gh-97527](https://github.com/python/cpython/issues/97527) [https://github.com/python/cpython/issues/97527]: Fix a bug in the previous bugfix that caused IDLE to not start when run with 3.10.8, 3.12.0a1, and at least Microsoft Python 3.10.2288.0 installed without the Lib/test package. 3.11.0 was never affected.

## Tools/Demos

- [gh-95853](https://github.com/python/cpython/issues/95853) [https://github.com/python/cpython/issues/95853]: The `wasm_build.py` script now pre-builds Emscripten ports, checks for broken EMSDK versions, and warns about pkg-config env vars.
- [gh-95853](https://github.com/python/cpython/issues/95853) [https://github.com/python/cpython/issues/95853]: The new tool `Tools/wasm/wasm_builder.py` automates configure, compile, and test steps for building CPython on WebAssembly platforms.
- [gh-95731](https://github.com/python/cpython/issues/95731) [https://github.com/python/cpython/issues/95731]: Fix handling of module docstrings in `Tools/i18n/pygettext.py`.

## C API

- [gh-98680](https://github.com/python/cpython/issues/98680) [https://github.com/python/cpython/issues/98680]: `PyBUF_*` constants were marked as part of Limited API of Python 3.11+. These were available in 3.11.0 with `Py_LIMITED_API` defined for 3.11, and are necessary to use the buffer API.
- [gh-98978](https://github.com/python/cpython/issues/98978) [https://github.com/python/cpython/issues/98978]: Fix use-after-free in `Py_SetPythonHome(NULL)`, `Py_SetProgramName(NULL)` and `_Py_SetProgramFullPath(NULL)` function calls. Issue reported by Benedikt Reinartz. Patch by Victor Stinner.
- [gh-96853](https://github.com/python/cpython/issues/96853) [https://github.com/python/cpython/issues/96853]:

`Py_InitializeEx` now correctly calls `PyConfig_Clear` after initializing the interpreter (the omission didn't cause a memory leak only because none of the dynamically allocated config fields are populated by the wrapper function)

## Python 3.11.0 final

*Release date: 2022-10-24*

### Security

- [gh-97616](https://github.com/python/cpython/issues/97616) [https://github.com/python/cpython/issues/97616]: Fix multiplying a list by an integer (`list *= int`): detect the integer overflow when the new allocated length is close to the maximum size. Issue reported by Jordan Limor. Patch by Victor Stinner.
- [gh-97514](https://github.com/python/cpython/issues/97514) [https://github.com/python/cpython/issues/97514]: On Linux the [multiprocessing](#) module returns to using filesystem backed unix domain sockets for communication with the *forkserver* process instead of the Linux abstract socket namespace. Only code that chooses to use the “forkserver” [start method](#) is affected.

Abstract sockets have no permissions and could allow any user on the system in the same [network namespace](#) [https://man7.org/linux/man-pages/man7/network\_namespaces.7.html] (often the whole system) to inject code into the multiprocessing *forkserver* process. This was a potential privilege escalation. Filesystem based socket permissions restrict this to the *forkserver* process user as was the default in Python 3.8 and earlier.

This prevents Linux [CVE-2022-42919](#) [https://cve.mitre.org/cgi-bin/cvename.cgi?name=CVE-2022-42919].

### Core and Builtins

- [gh-97002](https://github.com/python/cpython/issues/97002) [https://github.com/python/cpython/issues/97002]: Fix an issue where several frame objects could be backed by the

same interpreter frame, possibly leading to corrupted memory and hard crashes of the interpreter.

- [gh-97752](https://github.com/python/cpython/issues/97752) [https://github.com/python/cpython/issues/97752]: Fix possible data corruption or crashes when accessing the `f_back` member of newly-created generator or coroutine frames.
- [gh-96975](https://github.com/python/cpython/issues/96975) [https://github.com/python/cpython/issues/96975]: Fix a crash occurring when `PyEval_GetFrame()` is called while the topmost Python frame is in a partially-initialized state.
- [gh-96848](https://github.com/python/cpython/issues/96848) [https://github.com/python/cpython/issues/96848]: Fix command line parsing: reject `-X int_max_str_digits` option with no value (invalid) when the `PYTHONINTMAXSTRDIGITS` environment variable is set to a valid limit. Patch by Victor Stinner.
- [gh-96821](https://github.com/python/cpython/issues/96821) [https://github.com/python/cpython/issues/96821]: Fix undefined behaviour in `_testcapimodule.c`.
- [gh-95778](https://github.com/python/cpython/issues/95778) [https://github.com/python/cpython/issues/95778]: When `ValueError` is raised if an integer is larger than the limit, mention the `sys.set_int_max_str_digits()` function in the error message. Patch by Victor Stinner.
- [gh-96587](https://github.com/python/cpython/issues/96587) [https://github.com/python/cpython/issues/96587]: Correctly raise `SyntaxError` on exception groups ([PEP 654](https://peps.python.org/pep-0654/) [https://peps.python.org/pep-0654/]) on python versions prior to 3.11
- [bpo-42316](https://bugs.python.org/issue?@action=redirect&bpo=42316) [https://bugs.python.org/issue?@action=redirect&bpo=42316]: Document some places where an assignment expression needs parentheses.

## Library

- [gh-98331](https://github.com/python/cpython/issues/98331) [https://github.com/python/cpython/issues/98331]: Update the bundled copies of pip and setuptools to versions 22.3 and 65.5.0 respectively.
- [gh-90985](https://github.com/python/cpython/issues/90985) [https://github.com/python/cpython/issues/90985]: Earlier in 3.11 we deprecated `asyncio.Task.cancel("message")`. We realized we were too harsh, and have undeprecated it.
- [gh-97545](https://github.com/python/cpython/issues/97545) [https://github.com/python/cpython/issues/97545]: Make

Semaphore run faster.

- [gh-96865](https://github.com/python/cpython/issues/96865) [https://github.com/python/cpython/issues/96865]: fix Flag to use boundary CONFORM

This restores previous Flag behavior of allowing flags with non-sequential values to be combined; e.g.

```
class Skip(Flag): TWO = 2 EIGHT = 8
```

```
Skip.TWO | Skip.EIGHT -> <Skip.TWO|EIGHT: 10>
```

- [gh-90155](https://github.com/python/cpython/issues/90155) [https://github.com/python/cpython/issues/90155]: Fix broken `asyncio.Semaphore` when acquire is cancelled.

## Documentation

- [gh-97741](https://github.com/python/cpython/issues/97741) [https://github.com/python/cpython/issues/97741]: Fix `! in c domain ref target syntax` via a `conf.py` patch, so it works as intended to disable ref target resolution.
- [gh-93031](https://github.com/python/cpython/issues/93031) [https://github.com/python/cpython/issues/93031]: Update tutorial introduction output to use 3.10+ `SyntaxError` invalid range.

## Tests

- [gh-95027](https://github.com/python/cpython/issues/95027) [https://github.com/python/cpython/issues/95027]: On Windows, when the Python test suite is run with the `-jN` option, the ANSI code page is now used as the encoding for the stdout temporary file, rather than using UTF-8 which can lead to decoding errors. Patch by Victor Stinner.

## Build

- [gh-96729](https://github.com/python/cpython/issues/96729) [https://github.com/python/cpython/issues/96729]: Ensure that Windows releases built with `Tools\msi\buildrelease.bat` are upgradable to and from official Python releases.

## Windows

- [gh-98360](https://github.com/python/cpython/issues/98360) [https://github.com/python/cpython/issues/98360]: Fixes **multiprocessing** spawning child processes on Windows from a virtual environment to ensure that child processes that also use **multiprocessing** to spawn more children will recognize that they are in a virtual environment.
- [gh-98414](https://github.com/python/cpython/issues/98414) [https://github.com/python/cpython/issues/98414]: Fix `py.exe` launcher handling of `-V:<company>/` option when default preferences have been set in environment variables or configuration files.
- [gh-90989](https://github.com/python/cpython/issues/90989) [https://github.com/python/cpython/issues/90989]: Clarify some text in the Windows installer.

## macOS

- [gh-97897](https://github.com/python/cpython/issues/97897) [https://github.com/python/cpython/issues/97897]: The macOS 13 SDK includes support for the `mkfifoat` and `mknodat` system calls. Using the `dir_fd` option with either `os.mkfifo()` or `os.mknod()` could result in a segfault if cpython is built with the macOS 13 SDK but run on an earlier version of macOS. Prevent this by adding runtime support for detection of these system calls (“weaklinking”) as is done for other newer syscalls on macOS.

# Python 3.11.0 release candidate 2

*Release date: 2022-09-11*

## Security

- [gh-95778](https://github.com/python/cpython/issues/95778) [https://github.com/python/cpython/issues/95778]: Converting between **int** and **str** in bases other than 2 (binary), 4, 8 (octal), 16 (hexadecimal), or 32 such as base 10 (decimal) now raises a **ValueError** if the number of digits in string form is above a limit to avoid potential denial of service attacks due to the algorithmic complexity. This is a mitigation for [CVE-2020-10735](https://cve.mitre.org/cgi-bin/cvename.cgi?name=CVE-2020-10735) [https://cve.mitre.org/cgi-bin/cvename.cgi?name=CVE-2020-10735].

This new limit can be configured or disabled by environment

variable, command line flag, or **sys** APIs. See the [integer string conversion length limitation](#) documentation. The default limit is 4300 digits in string form.

Patch by Gregory P. Smith [Google] and Christian Heimes [Red Hat] with feedback from Victor Stinner, Thomas Wouters, Steve Dower, Ned Deily, and Mark Dickinson.

## Core and Builtins

- [gh-96678](#) [<https://github.com/python/cpython/issues/96678>]: Fix case of undefined behavior in `ceval.c`
- [gh-96641](#) [<https://github.com/python/cpython/issues/96641>]: Do not expose `KeyWrapper` in **`__functools`**.
- [gh-96636](#) [<https://github.com/python/cpython/issues/96636>]: Ensure that tracing, `sys.settrace()`, is turned on immediately. In pre-release versions of 3.11, some tracing events might have been lost when turning on tracing in a `__del__` method or interrupt.
- [gh-96572](#) [<https://github.com/python/cpython/issues/96572>]: Fix use after free in trace refs build mode. Patch by Kumar Aditya.
- [gh-96611](#) [<https://github.com/python/cpython/issues/96611>]: When loading a file with invalid UTF-8 inside a multi-line string, a correct `SyntaxError` is emitted.
- [gh-96612](#) [<https://github.com/python/cpython/issues/96612>]: Make sure that incomplete frames do not show up in `tracemalloc` traces.
- [gh-96569](#) [<https://github.com/python/cpython/issues/96569>]: Remove two cases of undefined behavior, by adding `NULL` checks.
- [gh-96582](#) [<https://github.com/python/cpython/issues/96582>]: Fix possible `NULL` pointer dereference in `_PyThread_CurrentFrames`. Patch by Kumar Aditya.
- [gh-96352](#) [<https://github.com/python/cpython/issues/96352>]: Fix **`AttributeError`** missing `name` and `obj` attributes in **`object.__getattr__()`**. Patch by Philip Georgi.
- [gh-96268](#) [<https://github.com/python/cpython/issues/96268>]: Loading a file with invalid UTF-8 will now report the broken character at the correct location.
- [gh-96187](#) [<https://github.com/python/cpython/issues/96187>]: Fixed a bug that caused `_PyCode_GetExtra` to return garbage for

negative indexes. Patch by Pablo Galindo

- [gh-96071](https://github.com/python/cpython/issues/96071) [https://github.com/python/cpython/issues/96071]: Fix a deadlock in `PyGILState_Ensure()` when allocating new thread state. Patch by Kumar Aditya.
- [gh-96046](https://github.com/python/cpython/issues/96046) [https://github.com/python/cpython/issues/96046]: `PyType_Ready()` now initializes `ht_cached_keys` and performs additional checks to ensure that type objects are properly configured. This avoids crashes in 3rd party packages that don't use regular API to create new types.
- [gh-95818](https://github.com/python/cpython/issues/95818) [https://github.com/python/cpython/issues/95818]: Skip over incomplete frames in `PyThreadState_GetFrame()`.
- [gh-95876](https://github.com/python/cpython/issues/95876) [https://github.com/python/cpython/issues/95876]: Fix format string in `_PyPegen_raise_error_known_location` that can lead to memory corruption on some 64bit systems. The function was building a tuple with `i` (int) instead of `n` (`Py_ssize_t`) for `Py_ssize_t` arguments.
- [gh-95605](https://github.com/python/cpython/issues/95605) [https://github.com/python/cpython/issues/95605]: Fix misleading contents of error message when converting an all-whitespace string to `float`.
- [gh-94996](https://github.com/python/cpython/issues/94996) [https://github.com/python/cpython/issues/94996]: `ast.parse()` will no longer parse function definitions with positional-only params when passed `feature_version` less than `(3, 8)`. Patch by Shantanu Jain.

## Library

- [gh-96700](https://github.com/python/cpython/issues/96700) [https://github.com/python/cpython/issues/96700]: Fix incorrect error message in the `io` module.
- [gh-96652](https://github.com/python/cpython/issues/96652) [https://github.com/python/cpython/issues/96652]: Fix the `faulthandler` implementation of `faulthandler.register(signal, chain=True)` if the `sigaction()` function is not available: don't call the previous signal handler if it's NULL. Patch by Victor Stinner.
- [gh-68163](https://github.com/python/cpython/issues/68163) [https://github.com/python/cpython/issues/68163]: Correct conversion of `numbers.Rational`'s to `float`.
- [gh-96385](https://github.com/python/cpython/issues/96385) [https://github.com/python/cpython/issues/96385]: Fix `TypeVarTuple.__typing_prepare_subst__`. `TypeError` was not raised when using more than one `TypeVarTuple`, like `[*T, *V]` in type alias substitutions.

- [gh-90467](https://github.com/python/cpython/issues/90467) [https://github.com/python/cpython/issues/90467]: Fix **`asyncio.streams.StreamReaderProtocol`** to keep a strong reference to the created task, so that it's not garbage collected
- [gh-96159](https://github.com/python/cpython/issues/96159) [https://github.com/python/cpython/issues/96159]: Fix a performance regression in logging **`TimedRotatingFileHandler`**. Only check for special files when the rollover time has passed.
- [gh-96175](https://github.com/python/cpython/issues/96175) [https://github.com/python/cpython/issues/96175]: Fix unused **`localName`** parameter in the **`Attr`** class in **`xml.dom.minidom`**.
- [gh-96125](https://github.com/python/cpython/issues/96125) [https://github.com/python/cpython/issues/96125]: Fix incorrect condition that causes **`sys.thread_info.name`** to be wrong on pthread platforms.
- [gh-95463](https://github.com/python/cpython/issues/95463) [https://github.com/python/cpython/issues/95463]: Remove an incompatible change from [bpo-28080](https://bugs.python.org/issue?@action=redirect&bpo=28080) [https://bugs.python.org/issue?@action=redirect&bpo=28080] that caused a regression that ignored the utf8 in **`ZipInfo.flag_bits`**. Patch by Pablo Galindo.
- [gh-95899](https://github.com/python/cpython/issues/95899) [https://github.com/python/cpython/issues/95899]: Fix **`asyncio.Runner`** to call **`asyncio.set_event_loop()`** only once to avoid calling **`attach_loop()`** multiple times on child watchers. Patch by Kumar Aditya.
- [gh-95736](https://github.com/python/cpython/issues/95736) [https://github.com/python/cpython/issues/95736]: Fix **`unittest.IsolatedAsyncioTestCase`** to set event loop before calling setup functions. Patch by Kumar Aditya.
- [gh-95704](https://github.com/python/cpython/issues/95704) [https://github.com/python/cpython/issues/95704]: When a task catches **`asyncio.CancelledError`** and raises some other error, the other error should generally not silently be suppressed.
- [gh-95231](https://github.com/python/cpython/issues/95231) [https://github.com/python/cpython/issues/95231]: Fail gracefully if **`EPERM`** or **`ENOSYS`** is raised when loading **`crypt`** methods. This may happen when trying to load **`MD5`** on a Linux kernel with FIPS enabled.
- [gh-74116](https://github.com/python/cpython/issues/74116) [https://github.com/python/cpython/issues/74116]: Allow **`asyncio.StreamWriter.drain()`** to be awaited concurrently by multiple tasks. Patch by Kumar Aditya.
- [gh-92986](https://github.com/python/cpython/issues/92986) [https://github.com/python/cpython/issues/92986]: Fix **`ast.unparse()`** when **`ImportFrom.level`** is **`None`**

## Documentation

- [gh-96098](https://github.com/python/cpython/issues/96098) [https://github.com/python/cpython/issues/96098]: Improve discoverability of the higher level concurrent.futures module by providing clearer links from the lower level threading and multiprocessing modules.
- [gh-95957](https://github.com/python/cpython/issues/95957) [https://github.com/python/cpython/issues/95957]: What's New 3.11 now has instructions for how to provide compiler and linker flags for Tcl/Tk and OpenSSL on RHEL 7 and CentOS 7.

## Tests

- [gh-95243](https://github.com/python/cpython/issues/95243) [https://github.com/python/cpython/issues/95243]: Mitigate the inherent race condition from using find\_unused\_port() in testSockName() by trying to find an unused port a few times before failing. Patch by Ross Burton.

## Build

- [gh-94682](https://github.com/python/cpython/issues/94682) [https://github.com/python/cpython/issues/94682]: Build and test with OpenSSL 1.1.1q

## Windows

- [gh-96577](https://github.com/python/cpython/issues/96577) [https://github.com/python/cpython/issues/96577]: Fixes a potential buffer overrun in [msilib](#).
- [gh-96559](https://github.com/python/cpython/issues/96559) [https://github.com/python/cpython/issues/96559]: Fixes the Windows launcher not using the compatible interpretation of default tags found in configuration files when no tag was passed to the command.

# Python 3.11.0 release candidate 1

*Release date: 2022-08-05*

## Core and Builtins

- [gh-95150](https://github.com/python/cpython/issues/95150) [https://github.com/python/cpython/issues/95150]: Update

code object hashing and equality to consider all debugging and exception handling tables. This fixes an issue where certain non-identical code objects could be “deduplicated” during compilation.

- [gh-95355](https://github.com/python/cpython/issues/95355) [https://github.com/python/cpython/issues/95355]: `_PyPegen_Parser_New` now properly detects token memory allocation errors. Patch by Honglin Zhu.
- [gh-90081](https://github.com/python/cpython/issues/90081) [https://github.com/python/cpython/issues/90081]: Run Python code in `tracer/profiler` function at full speed. Fixes slowdown in earlier versions of 3.11.
- [gh-95324](https://github.com/python/cpython/issues/95324) [https://github.com/python/cpython/issues/95324]: Emit a warning in debug mode if an object does not call `PyObject_GC_UnTrack()` before deallocation. Patch by Pablo Galindo.
- [gh-95185](https://github.com/python/cpython/issues/95185) [https://github.com/python/cpython/issues/95185]: Prevented crashes in the AST constructor when compiling some absurdly long expressions like `" +0" * 1000000`. `RecursionError` is now raised instead. Patch by Pablo Galindo
- [gh-93351](https://github.com/python/cpython/issues/93351) [https://github.com/python/cpython/issues/93351]: `ast.AST` node positions are now validated when provided to `compile()` and other related functions. If invalid positions are detected, a `ValueError` will be raised.
- [gh-94938](https://github.com/python/cpython/issues/94938) [https://github.com/python/cpython/issues/94938]: Fix error detection in some builtin functions when keyword argument name is an instance of a str subclass with overloaded `__eq__` and `__hash__`. Previously it could cause `SystemError` or other undesired behavior.

## Library

- [gh-95609](https://github.com/python/cpython/issues/95609) [https://github.com/python/cpython/issues/95609]: Update bundled pip to 22.2.2.
- [gh-95289](https://github.com/python/cpython/issues/95289) [https://github.com/python/cpython/issues/95289]: Fix `asyncio.TaskGroup` to propagate exception when `asyncio.CancelledError` was replaced with another exception by a context manger. Patch by Kumar Aditya and Guido van Rossum.
- [gh-95339](https://github.com/python/cpython/issues/95339) [https://github.com/python/cpython/issues/95339]: Update bundled pip to 22.2.1.

- [gh-95045](https://github.com/python/cpython/issues/95045) [https://github.com/python/cpython/issues/95045]: Fix GC crash when deallocating `_lsprof.Profiler` by untracking it before calling any callbacks. Patch by Kumar Aditya.
- [gh-95097](https://github.com/python/cpython/issues/95097) [https://github.com/python/cpython/issues/95097]: Fix `asyncio.run()` for `asyncio.Task` implementations without `uncancel()` method. Patch by Kumar Aditya.
- [gh-93899](https://github.com/python/cpython/issues/93899) [https://github.com/python/cpython/issues/93899]: Fix check for existence of `os.EFD_CLOEXEC`, `os.EFD_NONBLOCK` and `os.EFD_SEMAPHORE` flags on older kernel versions where these flags are not present. Patch by Kumar Aditya.
- [gh-95166](https://github.com/python/cpython/issues/95166) [https://github.com/python/cpython/issues/95166]: Fix `concurrent.futures.Executor.map()` to cancel the currently waiting on future on an error - e.g. `TimeoutError` or `KeyboardInterrupt`.
- [gh-95109](https://github.com/python/cpython/issues/95109) [https://github.com/python/cpython/issues/95109]: Ensure that timeouts scheduled with `asyncio.Timeout` that have already expired are delivered promptly.
- [gh-91810](https://github.com/python/cpython/issues/91810) [https://github.com/python/cpython/issues/91810]: Suppress writing an XML declaration in open files in `ElementTree.write()` with `encoding='unicode'` and `xml_declaration=None`.
- [gh-91447](https://github.com/python/cpython/issues/91447) [https://github.com/python/cpython/issues/91447]: Fix `findtext` in the `xml` module to only give an empty string when the text attribute is set to `None`.

## Documentation

- [gh-91207](https://github.com/python/cpython/issues/91207) [https://github.com/python/cpython/issues/91207]: Fix stylesheet not working in Windows CHM htmlhelp docs and add warning that they are deprecated. Contributed by C.A.M. Gerlach.
- [gh-95451](https://github.com/python/cpython/issues/95451) [https://github.com/python/cpython/issues/95451]: Update library documentation with [availability information](#) on WebAssembly platforms `wasm32-emscrip`ten and `wasm32-wasi`.
- [gh-95415](https://github.com/python/cpython/issues/95415) [https://github.com/python/cpython/issues/95415]: Use consistent syntax for platform availability. The directive now supports a content body and emits a warning when it encounters an unknown platform.

- [gh-86128](https://github.com/python/cpython/issues/86128) [https://github.com/python/cpython/issues/86128]: Document a limitation in ThreadPoolExecutor where its exit handler is executed before any handlers in atexit.

## Tests

- [gh-95573](https://github.com/python/cpython/issues/95573) [https://github.com/python/cpython/issues/95573]: [Lib/test/test\\_asyncio/test\\_ssl.py](https://github.com/python/cpython/tree/3.11/Lib/test/test_asyncio/test_ssl.py) [https://github.com/python/cpython/tree/3.11/Lib/test/test\_asyncio/test\_ssl.py] exposed a bug in the macOS kernel where intense concurrent load on non-blocking sockets occasionally causes `errno.ENOBUFS` (“No buffer space available”) to be emitted. FB11063974 filed with Apple, in the mean time as a workaround buffer size used in tests on macOS is decreased to avoid intermittent failures. Patch by Fantix King.
- [gh-95280](https://github.com/python/cpython/issues/95280) [https://github.com/python/cpython/issues/95280]: Fix problem with `test_ssl test_get_ciphers` on systems that require perfect forward secrecy (PFS) ciphers.
- [gh-94675](https://github.com/python/cpython/issues/94675) [https://github.com/python/cpython/issues/94675]: Add a regression test for `re` exponential slowdown when using `rjsmin`.

## Build

- [gh-94801](https://github.com/python/cpython/issues/94801) [https://github.com/python/cpython/issues/94801]: Fix a regression in `configure` script that caused some header checks to ignore custom `CPPFLAGS`. The regression was introduced in [gh-94802](https://github.com/python/cpython/issues/94802) [https://github.com/python/cpython/issues/94802].
- [gh-95145](https://github.com/python/cpython/issues/95145) [https://github.com/python/cpython/issues/95145]: `wasm32-wasi` builds no longer depend on WASIX’s `pthread` stubs. Python now has its own stubbed `pthread` API.
- [gh-95174](https://github.com/python/cpython/issues/95174) [https://github.com/python/cpython/issues/95174]: Python now detects missing `dup` function in WASI and works around some missing `errno`, `select`, and `socket` constants.
- [gh-95174](https://github.com/python/cpython/issues/95174) [https://github.com/python/cpython/issues/95174]: Python now skips missing `socket` functions and methods on WASI. WASI can only create sockets from existing `fd / accept` and has no `netdb`.
- [gh-95085](https://github.com/python/cpython/issues/95085) [https://github.com/python/cpython/issues/95085]:

Platforms `wasm32-unknown-emsripten` and `wasm32-unknown-wasi` have been promoted to [PEP 11](https://peps.python.org/pep-0011/) [https://peps.python.org/pep-0011/] tier 3 platform support.

## Windows

- [gh-95656](https://github.com/python/cpython/issues/95656) [https://github.com/python/cpython/issues/95656]: Enable the `enable_load_extension()` `sqlite3` API.
- [gh-95587](https://github.com/python/cpython/issues/95587) [https://github.com/python/cpython/issues/95587]: Fixes some issues where the Windows installer would incorrectly detect certain features of an existing install when upgrading.
- [gh-94399](https://github.com/python/cpython/issues/94399) [https://github.com/python/cpython/issues/94399]: Restores the behaviour of [Python Launcher for Windows](#) for `/usr/bin/env` shebang lines, which will now search `PATH` for an executable matching the given command. If none is found, the usual search process is used.
- [gh-95445](https://github.com/python/cpython/issues/95445) [https://github.com/python/cpython/issues/95445]: Fixes the unsuccessful removal of the HTML document directory when uninstalling with Windows msi.
- [gh-95359](https://github.com/python/cpython/issues/95359) [https://github.com/python/cpython/issues/95359]: Fix [Python Launcher for Windows](#) handling of `py.ini` commands (it was incorrectly expecting a `py_` prefix on keys) and crashes when reading per-user configuration file.
- [gh-95285](https://github.com/python/cpython/issues/95285) [https://github.com/python/cpython/issues/95285]: Fix [Python Launcher for Windows](#) handling of command lines where it is only passed a short executable name.

## IDLE

- [gh-65802](https://github.com/python/cpython/issues/65802) [https://github.com/python/cpython/issues/65802]: Document handling of extensions in Save As dialogs.
- [gh-95191](https://github.com/python/cpython/issues/95191) [https://github.com/python/cpython/issues/95191]: Include prompts when saving Shell (interactive input and output).
- [gh-95511](https://github.com/python/cpython/issues/95511) [https://github.com/python/cpython/issues/95511]: Fix the Shell context menu copy-with-prompts bug of copying an extra line when one selects whole lines.
- [gh-95471](https://github.com/python/cpython/issues/95471) [https://github.com/python/cpython/issues/95471]: In the Edit menu, move `Select All` and add a new separator.
- [gh-95411](https://github.com/python/cpython/issues/95411) [https://github.com/python/cpython/issues/95411]: Enable using IDLE's module browser with `.pyw` files.

- [gh-89610](https://github.com/python/cpython/issues/89610) [https://github.com/python/cpython/issues/89610]: Add `.pyi` as a recognized extension for IDLE on macOS. This allows opening stub files by double clicking on them in the Finder.

## C API

- [gh-92678](https://github.com/python/cpython/issues/92678) [https://github.com/python/cpython/issues/92678]: Restore the 3.10 behavior for multiple inheritance of C extension classes that store their dictionary at the end of the struct.
- [gh-94936](https://github.com/python/cpython/issues/94936) [https://github.com/python/cpython/issues/94936]: Added `PyCode_GetVarnames()`, `PyCode_GetCellvars()` and `PyCode_GetFreevars()` for accessing `co_varnames`, `co_cellvars` and `co_freevars` respectively via the C API.

## Python 3.11.0 beta 5

*Release date: 2022-07-25*

### Core and Builtins

- [gh-93351](https://github.com/python/cpython/issues/93351) [https://github.com/python/cpython/issues/93351]: `ast.AST` node positions are now validated when provided to `compile()` and other related functions. If invalid positions are detected, a `ValueError` will be raised.
- [gh-94438](https://github.com/python/cpython/issues/94438) [https://github.com/python/cpython/issues/94438]: Fix an issue that caused extended opcode arguments and some conditional pops to be ignored when calculating valid jump targets for assignments to the `f_lineno` attribute of frame objects. In some cases, this could cause inconsistent internal state, resulting in a hard crash of the interpreter.
- [gh-95060](https://github.com/python/cpython/issues/95060) [https://github.com/python/cpython/issues/95060]: Undocumented `PyCode_Addr2Location` function now properly returns when `addrq` argument is less than zero.
- [gh-95113](https://github.com/python/cpython/issues/95113) [https://github.com/python/cpython/issues/95113]: Replace all `EXTENDED_ARG_QUICK` instructions with basic `EXTENDED_ARG` instructions in unquickenened code. Consumers of non-adaptive bytecode should be able to handle extended arguments the same way they were handled in CPython 3.10

and older.

- [gh-91409](https://github.com/python/cpython/issues/91409) [https://github.com/python/cpython/issues/91409]: Fix incorrect source location info caused by certain optimizations in the bytecode compiler.
- [gh-94036](https://github.com/python/cpython/issues/94036) [https://github.com/python/cpython/issues/94036]: Fix incorrect source location info for some multi-line attribute accesses and method calls.
- [gh-94739](https://github.com/python/cpython/issues/94739) [https://github.com/python/cpython/issues/94739]: Allow jumping within, out of, and across exception handlers in the debugger.
- [gh-94949](https://github.com/python/cpython/issues/94949) [https://github.com/python/cpython/issues/94949]: `ast.parse()` will no longer parse parenthesized context managers when passed `feature_version` less than `(3, 9)`. Patch by Shantanu Jain.
- [gh-94947](https://github.com/python/cpython/issues/94947) [https://github.com/python/cpython/issues/94947]: `ast.parse()` will no longer parse assignment expressions when passed `feature_version` less than `(3, 8)`. Patch by Shantanu Jain.
- [gh-91256](https://github.com/python/cpython/issues/91256) [https://github.com/python/cpython/issues/91256]: Ensures the program name is known for help text during interpreter startup.
- [gh-94869](https://github.com/python/cpython/issues/94869) [https://github.com/python/cpython/issues/94869]: Fix the column offsets for some expressions in multi-line f-strings `ast` nodes. Patch by Pablo Galindo.
- [gh-94822](https://github.com/python/cpython/issues/94822) [https://github.com/python/cpython/issues/94822]: Fix an issue where lookups of metaclass descriptors may be ignored when an identically-named attribute also exists on the class itself.
- [gh-91153](https://github.com/python/cpython/issues/91153) [https://github.com/python/cpython/issues/91153]: Fix an issue where a `bytearray` item assignment could crash if it's resized by the new value's `__index__()` method.
- [gh-90699](https://github.com/python/cpython/issues/90699) [https://github.com/python/cpython/issues/90699]: Fix reference counting bug in `bool.__repr__()`. Patch by Kumar Aditya.

## Library

- [gh-95087](https://github.com/python/cpython/issues/95087) [https://github.com/python/cpython/issues/95087]: Fix `IndexError` in parsing invalid date in the `email` module.
- [gh-95199](https://github.com/python/cpython/issues/95199) [https://github.com/python/cpython/issues/95199]: Upgrade

bundled setuptools to 63.2.0.

- [gh-95194](https://github.com/python/cpython/issues/95194) [https://github.com/python/cpython/issues/95194]: Upgrade bundled pip to 22.2.
- [gh-95132](https://github.com/python/cpython/issues/95132) [https://github.com/python/cpython/issues/95132]: Fix a **sqlite3** regression where `*args` and `**kwargs` were incorrectly relayed from `connect()` to the **Connection** factory. The regression was introduced in 3.11a1 with PR 24421 ([gh-85128](https://github.com/python/cpython/issues/85128) [https://github.com/python/cpython/issues/85128]). Patch by Erlend E. Aasland.`
- [gh-93157](https://github.com/python/cpython/issues/93157) [https://github.com/python/cpython/issues/93157]: Fix **fileinput** module didn't support `errors` option when `inplace` is true.
- [gh-95105](https://github.com/python/cpython/issues/95105) [https://github.com/python/cpython/issues/95105]: **wsgiref.types.InputStream.\_\_iter\_\_()** should return `Iterator[bytes]`, not `Iterable[bytes]`. Patch by Shantanu Jain.
- [gh-94857](https://github.com/python/cpython/issues/94857) [https://github.com/python/cpython/issues/94857]: Fix reflink in `_io.TextIOWrapper.reconfigure`. Patch by Kumar Aditya.
- [gh-94821](https://github.com/python/cpython/issues/94821) [https://github.com/python/cpython/issues/94821]: Fix binding of unix socket to empty address on Linux to use an available address from the abstract namespace, instead of "0".
- [gh-89988](https://github.com/python/cpython/issues/89988) [https://github.com/python/cpython/issues/89988]: Fix memory leak in **pickle.Pickler** when looking up **dispatch\_table**. Patch by Kumar Aditya.
- [bpo-47025](https://bugs.python.org/issue?@action=redirect&bpo=47025) [https://bugs.python.org/issue?@action=redirect&bpo=47025]: Drop support for **bytes** on **sys.path**.

## Tests

- [gh-95212](https://github.com/python/cpython/issues/95212) [https://github.com/python/cpython/issues/95212]: Make multiprocessing test case `test_shared_memory_recreate` parallel-safe.

## Build

- [gh-94847](https://github.com/python/cpython/issues/94847) [https://github.com/python/cpython/issues/94847]: Fixed `_decimal` module build issue on GCC when compiling with LTO and `pydebug`. Debug builds no longer force inlining of

functions.

- [gh-94841](https://github.com/python/cpython/issues/94841) [https://github.com/python/cpython/issues/94841]: Fix the possible performance regression of `PyObject_Free()` compiled with MSVC version 1932.
- [gh-94801](https://github.com/python/cpython/issues/94801) [https://github.com/python/cpython/issues/94801]: configure now uses custom flags like `ZLIB_CFLAGS` and `ZLIB_LIBS` when searching for headers and libraries.
- [gh-94773](https://github.com/python/cpython/issues/94773) [https://github.com/python/cpython/issues/94773]: `deepfreeze.py` now supports code object with frozensets that contain incompatible, unsortable types.

## Windows

- [gh-90844](https://github.com/python/cpython/issues/90844) [https://github.com/python/cpython/issues/90844]: Allow virtual environments to correctly launch when they have spaces in the path.
- [gh-94772](https://github.com/python/cpython/issues/94772) [https://github.com/python/cpython/issues/94772]: Fix incorrect handling of shebang lines in `py.exe` launcher

## C API

- [gh-92678](https://github.com/python/cpython/issues/92678) [https://github.com/python/cpython/issues/92678]: Adds unstable C-API functions `_PyObject_VisitManagedDict` and `_PyObject_ClearManagedDict` to allow C extensions to allow the VM to manage their object's dictionaries.
- [gh-94930](https://github.com/python/cpython/issues/94930) [https://github.com/python/cpython/issues/94930]: Fix `SystemError` raised when `PyArg_ParseTupleAndKeywords()` is used with `#` in `(...)` but without `PY_SSIZE_T_CLEAN` defined.
- [gh-94864](https://github.com/python/cpython/issues/94864) [https://github.com/python/cpython/issues/94864]: Fix `PyArg_Parse*` with deprecated format units “u” and “Z”. It returned 1 (success) when warnings are turned into exceptions.
- [gh-94731](https://github.com/python/cpython/issues/94731) [https://github.com/python/cpython/issues/94731]: Python again uses C-style casts for most casting operations when compiled with C++. This may trigger compiler warnings, if they are enabled with e.g. `-Wold-style-cast` or `-Wzero-as-null-pointer-constant` options for g++.

# Python 3.11.0 beta 4

*Release date: 2022-07-11*

## Security

- [gh-87389](https://github.com/python/cpython/issues/87389) [https://github.com/python/cpython/issues/87389]: **http.server**: Fix an open redirection vulnerability in the HTTP server when an URI path starts with `//`. Vulnerability discovered, and initial fix proposed, by Hamza Avvan.
- [gh-79096](https://github.com/python/cpython/issues/79096) [https://github.com/python/cpython/issues/79096]: LWPCookieJar and MozillaCookieJar create files with file mode 600 instead of 644 (Microsoft Windows is not affected)
- [gh-92888](https://github.com/python/cpython/issues/92888) [https://github.com/python/cpython/issues/92888]: Fix `memoryview` use after free when accessing the backing buffer in certain cases.
- [gh-68966](https://github.com/python/cpython/issues/68966) [https://github.com/python/cpython/issues/68966]: The deprecated `mailcap` module now refuses to inject unsafe text (filenames, MIME types, parameters) into shell commands. Instead of using such text, it will warn and act as if a match was not found (or for test commands, as if the test failed).

## Core and Builtins

- [gh-94694](https://github.com/python/cpython/issues/94694) [https://github.com/python/cpython/issues/94694]: Fix an issue that could cause code with multi-line method lookups to have misleading or incorrect column offset information. In some cases (when compiling a hand-built AST) this could have resulted in a hard crash of the interpreter.
- [gh-93252](https://github.com/python/cpython/issues/93252) [https://github.com/python/cpython/issues/93252]: Fix an issue that caused internal frames to outlive failed Python function calls, possibly resulting in memory leaks or hard interpreter crashes.
- [gh-94215](https://github.com/python/cpython/issues/94215) [https://github.com/python/cpython/issues/94215]: Fix an issue where exceptions raised by line-tracing events would cause frames to be left in an invalid state, possibly resulting in a hard crash of the interpreter.

- [gh-92228](https://github.com/python/cpython/issues/92228) [https://github.com/python/cpython/issues/92228]: Disable the compiler's inline-small-exit-blocks optimization for exit blocks that are associated with source code lines. This fixes a bug where the debugger cannot tell where an exception handler ends and the following code block begins.
- [gh-94485](https://github.com/python/cpython/issues/94485) [https://github.com/python/cpython/issues/94485]: Line number of a module's `RESUME` instruction is set to 0 as specified in [PEP 626](https://peps.python.org/pep-0626/) [https://peps.python.org/pep-0626/].
- [gh-94438](https://github.com/python/cpython/issues/94438) [https://github.com/python/cpython/issues/94438]: Account for instructions that can push NULL to the stack when setting line number in a frame. Prevents some (unlikely) crashes.
- [gh-91719](https://github.com/python/cpython/issues/91719) [https://github.com/python/cpython/issues/91719]: Reload opcode when raising unknown opcode error in the interpreter main loop, for C compilers to generate dispatching code independently.
- [gh-94329](https://github.com/python/cpython/issues/94329) [https://github.com/python/cpython/issues/94329]: Compile and run code with unpacking of extremely large sequences (1000s of elements). Such code failed to compile. It now compiles and runs correctly.
- [gh-94360](https://github.com/python/cpython/issues/94360) [https://github.com/python/cpython/issues/94360]: Fixed a tokenizer crash when reading encoded files with syntax errors from `stdin` with non utf-8 encoded text. Patch by Pablo Galindo
- [gh-88116](https://github.com/python/cpython/issues/88116) [https://github.com/python/cpython/issues/88116]: Fix an issue when reading line numbers from code objects if the encoded line numbers are close to `INT_MIN`. Patch by Pablo Galindo
- [gh-94262](https://github.com/python/cpython/issues/94262) [https://github.com/python/cpython/issues/94262]: Don't create frame objects for incomplete frames. Prevents the creation of generators and closures from being observable to Python and C extensions, restoring the behavior of 3.10 and earlier.
- [gh-94192](https://github.com/python/cpython/issues/94192) [https://github.com/python/cpython/issues/94192]: Fix error

for dictionary literals with invalid expression as value.

- [gh-93883](https://github.com/python/cpython/issues/93883) [https://github.com/python/cpython/issues/93883]: Revise the display strategy of traceback enhanced error locations. The indicators are only shown when the location doesn't span the whole line.
- [gh-94021](https://github.com/python/cpython/issues/94021) [https://github.com/python/cpython/issues/94021]: Fix unreachable code warning in `Python/specialize.c`.
- [gh-93516](https://github.com/python/cpython/issues/93516) [https://github.com/python/cpython/issues/93516]: Store offset of first traceable instruction in code object to avoid having to recompute it for each instruction when tracing.
- [gh-93516](https://github.com/python/cpython/issues/93516) [https://github.com/python/cpython/issues/93516]: Lazily create a table mapping bytecode offsets to line numbers to speed up calculation of line numbers when tracing.
- [gh-89828](https://github.com/python/cpython/issues/89828) [https://github.com/python/cpython/issues/89828]: `types.GenericAlias` no longer relays the `__class__` attribute. For example, `isinstance(list[int], type)` no longer returns `True`.
- [gh-93671](https://github.com/python/cpython/issues/93671) [https://github.com/python/cpython/issues/93671]: Fix some exponential backtrace case happening with deeply nested sequence patterns in match statements. Patch by Pablo Galindo
- [gh-93662](https://github.com/python/cpython/issues/93662) [https://github.com/python/cpython/issues/93662]: Make sure that the end column offsets are correct in multi-line method calls. Previously, the end column could precede the column offset.
- [gh-93461](https://github.com/python/cpython/issues/93461) [https://github.com/python/cpython/issues/93461]: `importlib.invalidate_caches()` now drops entries from `sys.path_importer_cache` with a relative path as name. This solves a caching issue when a process changes its current working directory.

`FileFinder` no longer inserts a dot in the path, e.g. `/egg/. /spam` is now `/egg/spam`.

- [gh-93418](https://github.com/python/cpython/issues/93418) [https://github.com/python/cpython/issues/93418]: Fixed an assert where an f-string has an equal sign '=' following an expression, but there's no trailing brace. For example, `f"{i} = "`.
- [gh-93382](https://github.com/python/cpython/issues/93382) [https://github.com/python/cpython/issues/93382]: Cache the result of `PyCode_GetCode()` function to restore the O(1) lookup of the `co_code` attribute.
- [gh-93354](https://github.com/python/cpython/issues/93354) [https://github.com/python/cpython/issues/93354]: Use exponential backoff for specialization counters in the interpreter. Can reduce the number of failed specializations significantly and avoid slowdown for those parts of a program that are not suitable for specialization.
- [gh-93021](https://github.com/python/cpython/issues/93021) [https://github.com/python/cpython/issues/93021]: Fix the `__text_signature__` for `__get__()` methods implemented in C. Patch by Jelle Zijlstra.
- [gh-92930](https://github.com/python/cpython/issues/92930) [https://github.com/python/cpython/issues/92930]: Fixed a crash in `_pickle.c` from mutating collections during `__reduce__` or `persistent_id`.
- [gh-92914](https://github.com/python/cpython/issues/92914) [https://github.com/python/cpython/issues/92914]: Always round the allocated size for lists up to the nearest even number.
- [gh-92858](https://github.com/python/cpython/issues/92858) [https://github.com/python/cpython/issues/92858]: Improve error message for some suites with syntax error before ':'
- [bpo-46142](https://bugs.python.org/issue?@action=redirect&bpo=46142) [https://bugs.python.org/issue?@action=redirect&bpo=46142]: Make `--help` output shorter by moving some info to the new `--help-env` and `--help-  
options` command-line options. Also add `--help-all` option to print complete usage.

## Library

- [gh-94736](https://github.com/python/cpython/issues/94736) [https://github.com/python/cpython/issues/94736]: Fix crash when deallocating an instance of a subclass of `_multiprocessing.SemLock`. Patch by Kumar Aditya.

- [gh-94637](https://github.com/python/cpython/issues/94637) [https://github.com/python/cpython/issues/94637]: **SSLContext.set\_default\_verify\_paths()** now releases the GIL around `SSL_CTX_set_default_verify_paths` call. The function call performs I/O and CPU intensive work.
- [gh-94607](https://github.com/python/cpython/issues/94607) [https://github.com/python/cpython/issues/94607]: Fix subclassing complex generics with type variables in **typing**. Previously an error message saying Some type variables ... are not listed in Generic[...] was shown. **typing** no longer populates `__parameters__` with the `__parameters__` of a Python class.
- [gh-93910](https://github.com/python/cpython/issues/93910) [https://github.com/python/cpython/issues/93910]: The ability to access the other values of an enum on an enum (e.g. `Color.RED.BLUE`) has been restored in order to fix a performance regression.
- [gh-93896](https://github.com/python/cpython/issues/93896) [https://github.com/python/cpython/issues/93896]: Fix **asyncio.run()** and **unittest.IsolatedAsyncioTestCase** to always set the event loop as it was done in Python 3.10 and earlier. Patch by Kumar Aditya.
- [gh-94510](https://github.com/python/cpython/issues/94510) [https://github.com/python/cpython/issues/94510]: Re-entrant calls to **sys.setprofile()** and **sys.settrace()** now raise **RuntimeError**. Patch by Pablo Galindo.
- [gh-92336](https://github.com/python/cpython/issues/92336) [https://github.com/python/cpython/issues/92336]: Fix bug where **linecache.getline()** fails on bad files with **UnicodeDecodeError** or **SyntaxError**. It now returns an empty string as per the documentation.
- [gh-94398](https://github.com/python/cpython/issues/94398) [https://github.com/python/cpython/issues/94398]: Once a **asyncio.TaskGroup** has started shutting down (i.e., at least one task has failed and the task group has started cancelling the remaining tasks), it should not be possible to add new tasks to the task group.
- [gh-94254](https://github.com/python/cpython/issues/94254) [https://github.com/python/cpython/issues/94254]: Fixed

types of `struct` module to be immutable. Patch by Kumar Aditya.

- [gh-94207](https://github.com/python/cpython/issues/94207) [https://github.com/python/cpython/issues/94207]: Made `_struct.Struct` GC-tracked in order to fix a reference leak in the `_struct` module.
- [gh-91742](https://github.com/python/cpython/issues/91742) [https://github.com/python/cpython/issues/91742]: Fix `pdb` crash after jump caused by a null pointer dereference. Patch by Kumar Aditya.
- [gh-94101](https://github.com/python/cpython/issues/94101) [https://github.com/python/cpython/issues/94101]: Manual instantiation of `ssl.SSLSession` objects is no longer allowed as it lead to misconfigured instances that crashed the interpreter when attributes where accessed on them.
- [gh-84753](https://github.com/python/cpython/issues/84753) [https://github.com/python/cpython/issues/84753]: `inspect.iscoroutinefunction()`, `inspect.isgeneratorfunction()`, and `inspect.isasyncgenfunction()` now properly return `True` for duck-typed function-like objects like instances of `unittest.mock.AsyncMock`.

This makes `inspect.iscoroutinefunction()` consistent with the behavior of `asyncio.iscoroutinefunction()`. Patch by Mehdi ABAAKOUK.

- [gh-94028](https://github.com/python/cpython/issues/94028) [https://github.com/python/cpython/issues/94028]: Fix a regression in the `sqlite3` where statement objects were not properly cleared and reset after use in cursor iters. The regression was introduced by PR 27884 in Python 3.11a1. Patch by Erlend E. Aasland.
- [gh-93820](https://github.com/python/cpython/issues/93820) [https://github.com/python/cpython/issues/93820]: Pickle `enum.Flag` by name.
- [gh-93847](https://github.com/python/cpython/issues/93847) [https://github.com/python/cpython/issues/93847]: Fix repr of enum of generic aliases.
- [gh-91404](https://github.com/python/cpython/issues/91404) [https://github.com/python/cpython/issues/91404]: Revert

the **re** memory leak when a match is terminated by a signal or memory allocation failure as the implemented fix caused a major performance regression.

- [gh-83499](https://github.com/python/cpython/issues/83499) [https://github.com/python/cpython/issues/83499]: Fix double closing of file description in **tempfile**.
- [gh-93820](https://github.com/python/cpython/issues/93820) [https://github.com/python/cpython/issues/93820]: Fixed a regression when **copy.copy()** -ing **enum.Flag** with multiple flag members.
- [gh-79512](https://github.com/python/cpython/issues/79512) [https://github.com/python/cpython/issues/79512]: Fixed names and `__module__` value of **weakref** classes **ReferenceType**, **ProxyType**, **CallableProxyType**. It makes them pickleable.
- [gh-91389](https://github.com/python/cpython/issues/91389) [https://github.com/python/cpython/issues/91389]: Fix an issue where **dis** utilities could report missing or incorrect position information in the presence of **CACHE** entries.
- [gh-93626](https://github.com/python/cpython/issues/93626) [https://github.com/python/cpython/issues/93626]: Set `__future__.annotations` to have a `None` mandatoryRelease to indicate that it is currently ‘TBD’.
- [gh-90473](https://github.com/python/cpython/issues/90473) [https://github.com/python/cpython/issues/90473]: Emscripten and WASI have no home directory and cannot provide **PEP 370** [https://peps.python.org/pep-0370/] user site directory.
- [gh-90494](https://github.com/python/cpython/issues/90494) [https://github.com/python/cpython/issues/90494]: **copy.copy()** and **copy.deepcopy()** now always raise a `TypeError` if `__reduce__()` returns a tuple with length 6 instead of silently ignore the 6th item or produce incorrect result.
- [gh-90549](https://github.com/python/cpython/issues/90549) [https://github.com/python/cpython/issues/90549]: Fix a multiprocessing bug where a global named resource (such as a semaphore) could leak when a child process is spawned (as opposed to forked).
- [gh-93521](https://github.com/python/cpython/issues/93521) [https://github.com/python/cpython/issues/93521]: Fixed a

case where dataclasses would try to add `__weakref__` into the `__slots__` for a dataclass that specified `weakref_slot=True` when it was already defined in one of its bases. This resulted in a `TypeError` upon the new class being created.

- [gh-79579](https://github.com/python/cpython/issues/79579) [https://github.com/python/cpython/issues/79579]: `sqlite3` now correctly detects DML queries with leading comments. Patch by Erlend E. Aasland.
- [gh-93421](https://github.com/python/cpython/issues/93421) [https://github.com/python/cpython/issues/93421]: Update `sqlite3.Cursor.rowcount` when a DML statement has run to completion. This fixes the row count for SQL queries like `UPDATE ... RETURNING`. Patch by Erlend E. Aasland.
- [gh-91162](https://github.com/python/cpython/issues/91162) [https://github.com/python/cpython/issues/91162]: Support splitting of unpacked arbitrary-length tuple over `TypeVar` and `TypeVarTuple` parameters. For example:
  - `A[T, *Ts][*tuple[int, ...]] -> A[int, *tuple[int, ...]]`
  - `A[*Ts, T][*tuple[int, ...]] -> A[*tuple[int, ...], int]`
- [gh-93353](https://github.com/python/cpython/issues/93353) [https://github.com/python/cpython/issues/93353]: Fix the `importlib.resources.as_file()` context manager to remove the temporary file if destroyed late during Python finalization: keep a local reference to the `os.remove()` function. Patch by Victor Stinner.
- [gh-83658](https://github.com/python/cpython/issues/83658) [https://github.com/python/cpython/issues/83658]: Make `multiprocessing.Pool` raise an exception if `maxtasksperchild` is not `None` or a positive int.
- [gh-93156](https://github.com/python/cpython/issues/93156) [https://github.com/python/cpython/issues/93156]: Accessing the `pathlib.PurePath.parents` sequence of an absolute path using negative index values produced incorrect results.
- [gh-74696](https://github.com/python/cpython/issues/74696) [https://github.com/python/cpython/issues/74696]: `shutil.make_archive()` no longer temporarily changes

the current working directory during creation of standard .zip or tar archives.

- [gh-89973](https://github.com/python/cpython/issues/89973) [https://github.com/python/cpython/issues/89973]: Fix **re.error** raised in **fnmatch** if the pattern contains a character range with upper bound lower than lower bound (e.g. [c-a]). Now such ranges are interpreted as empty ranges.
- [gh-92932](https://github.com/python/cpython/issues/92932) [https://github.com/python/cpython/issues/92932]: Now **dis()** and **get\_instructions()** handle operand values for instructions prefixed by **EXTENDED\_ARG\_QUICK**. Patch by Sam Gross and Dong-hee Na.
- [gh-91577](https://github.com/python/cpython/issues/91577) [https://github.com/python/cpython/issues/91577]: Move imports in **SharedMemory** methods to module level so that they can be executed late in python finalization.
- [gh-91456](https://github.com/python/cpython/issues/91456) [https://github.com/python/cpython/issues/91456]: Deprecate current default **auto()** behavior: In 3.13 the default will be for **auto()** to always return the largest member value incremented by 1, and to raise if incompatible value types are used.
- [bpo-47231](https://bugs.python.org/issue?@action=redirect&bpo=47231) [https://bugs.python.org/issue?@action=redirect&bpo=47231]: Fixed an issue with inconsistent trailing slashes in tarfile longname directories.
- [bpo-46755](https://bugs.python.org/issue?@action=redirect&bpo=46755) [https://bugs.python.org/issue?@action=redirect&bpo=46755]: In **QueueHandler**, clear **stack\_info** from **LogRecord** to prevent stack trace from being written twice.
- [bpo-46197](https://bugs.python.org/issue?@action=redirect&bpo=46197) [https://bugs.python.org/issue?@action=redirect&bpo=46197]: Fix **ensurepip** environment isolation for subprocess running **pip**.
- [bpo-45924](https://bugs.python.org/issue?@action=redirect&bpo=45924) [https://bugs.python.org/issue?@action=redirect&bpo=45924]: Fix **asyncio** incorrect traceback when future's exception is raised multiple times. Patch by Kumar Aditya.

- [bpo-34828](https://bugs.python.org/issue?@action=redirect&bpo=34828) [https://bugs.python.org/issue?@action=redirect&bpo=34828]: `sqlite3.Connection.iterdump()` now handles databases that use `AUTOINCREMENT` in one or more tables.

## Documentation

- [gh-94321](https://github.com/python/cpython/issues/94321) [https://github.com/python/cpython/issues/94321]: Document the [PEP 246](https://peps.python.org/pep-0246/) [https://peps.python.org/pep-0246/] style protocol type `sqlite3.PrepareProtocol`.
- [gh-61162](https://github.com/python/cpython/issues/61162) [https://github.com/python/cpython/issues/61162]: Clarify `sqlite3` behavior when [How to use the connection context manager](#).
- [gh-87260](https://github.com/python/cpython/issues/87260) [https://github.com/python/cpython/issues/87260]: Align `sqlite3` argument specs with the actual implementation.
- [gh-86986](https://github.com/python/cpython/issues/86986) [https://github.com/python/cpython/issues/86986]: The minimum Sphinx version required to build the documentation is now 3.2.
- [gh-88831](https://github.com/python/cpython/issues/88831) [https://github.com/python/cpython/issues/88831]: Augmented documentation of `asyncio.create_task()`. Clarified the need to keep strong references to tasks and added a code snippet detailing how to do this.
- [bpo-47161](https://bugs.python.org/issue?@action=redirect&bpo=47161) [https://bugs.python.org/issue?@action=redirect&bpo=47161]: Document that `pathlib.PurePath` does not collapse initial double slashes because they denote UNC paths.

## Tests

- [gh-91330](https://github.com/python/cpython/issues/91330) [https://github.com/python/cpython/issues/91330]: Added more tests for `dataclasses` to cover behavior with data descriptor-based fields.
- [gh-94208](https://github.com/python/cpython/issues/94208) [https://github.com/python/cpython/issues/94208]: `test_ssl` is now checking for supported TLS version and protocols in more tests.
- [gh-94315](https://github.com/python/cpython/issues/94315) [https://github.com/python/cpython/issues/94315]: Tests now check for DAC override capability instead of relying on `os.geteuid()`.
- [gh-93951](https://github.com/python/cpython/issues/93951) [https://github.com/python/cpython/issues/93951]: In `test_bdb.StateTestCase.test_skip`, avoid including auxiliary

importers.

- [gh-93957](https://github.com/python/cpython/issues/93957) [https://github.com/python/cpython/issues/93957]: Provide nicer error reporting from subprocesses in `test_venv.EnsurePipTest.test_with_pip`.
- [gh-84461](https://github.com/python/cpython/issues/84461) [https://github.com/python/cpython/issues/84461]: `run_tests.py` now handles cross compiling env vars correctly and pass `HOSTRUNNER` to regression tests.
- [gh-93616](https://github.com/python/cpython/issues/93616) [https://github.com/python/cpython/issues/93616]: `test_modulefinder` now creates a temporary directory in `ModuleFinderTest.setUp()` instead of module scope.
- [gh-93575](https://github.com/python/cpython/issues/93575) [https://github.com/python/cpython/issues/93575]: Fix issue with `test_unicode test_raiseMemError`. The test case now use `test.support.calcobjsize` to calculate size of `PyUnicode` structs. `sys.getsizeof()` may return different size when string has UTF-8 memory.
- [gh-90473](https://github.com/python/cpython/issues/90473) [https://github.com/python/cpython/issues/90473]: WASI does not have a `chmod(2)` syscall. `os.chmod()` is now a dummy function on WASI. Skip all tests that depend on working `os.chmod()`.
- [gh-90473](https://github.com/python/cpython/issues/90473) [https://github.com/python/cpython/issues/90473]: Skip tests on WASI that require symlinks with absolute paths.
- [gh-57539](https://github.com/python/cpython/issues/57539) [https://github.com/python/cpython/issues/57539]: Increase calendar test coverage for `calendar.LocaleTextCalendar.formatweekday()`.
- [gh-90473](https://github.com/python/cpython/issues/90473) [https://github.com/python/cpython/issues/90473]: Skip symlink tests on WASI. `wasmtime` uses `openat2(2)` with `RESOLVE_BENEATH` flag, which prevents symlinks with absolute paths.
- [gh-89858](https://github.com/python/cpython/issues/89858) [https://github.com/python/cpython/issues/89858]: Fix `test_embed` for out-of-tree builds. Patch by Kumar Aditya.
- [gh-92886](https://github.com/python/cpython/issues/92886) [https://github.com/python/cpython/issues/92886]: Fixing tests that fail when running with optimizations (`-O`) in `test_imaplib.py`.
- [gh-92886](https://github.com/python/cpython/issues/92886) [https://github.com/python/cpython/issues/92886]: Fixing tests that fail when running with optimizations (`-O`) in `test_zipimport.py`
- [bpo-47016](https://bugs.python.org/issue?@action=redirect&bpo=47016) [https://bugs.python.org/issue?@action=redirect&bpo=47016]: Create a GitHub Actions workflow for verifying bundled pip and setuptools. Patch by Illia Volochii and Adam Turner.

## Build

- [gh-94404](https://github.com/python/cpython/issues/94404) [https://github.com/python/cpython/issues/94404]: `makesetup` now works around an issue with `sed` on macOS and uses correct `CFLAGS` for object files that end up in a shared extension. Module `CFLAGS` are used before `PY_STDMODULE_CFLAGS` to avoid clashes with system headers.
- [gh-93584](https://github.com/python/cpython/issues/93584) [https://github.com/python/cpython/issues/93584]: Address race condition in `Makefile` when installing a PGO build. All `test` and `install` targets now depend on `all` target.
- [gh-93491](https://github.com/python/cpython/issues/93491) [https://github.com/python/cpython/issues/93491]: `configure` now detects and reports [PEP 11](https://peps.python.org/pep-0011/) support tiers.

## Windows

- [gh-93824](https://github.com/python/cpython/issues/93824) [https://github.com/python/cpython/issues/93824]: Drag and drop of files onto Python files in Windows Explorer has been enabled for Windows ARM64.
- [bpo-42658](https://bugs.python.org/issue?@action=redirect&bpo=42658) [https://bugs.python.org/issue?@action=redirect&bpo=42658]: Support native Windows case-insensitive path comparisons by using `LCMapStringEx` instead of `str.lower()` in `ntpath.normcase()`. Add `LCMapStringEx` to the `_winapi` module.

## Tools/Demos

- [gh-94538](https://github.com/python/cpython/issues/94538) [https://github.com/python/cpython/issues/94538]: Fix Argument Clinic output to custom file destinations. Patch by Erlend E. Aasland.
- [gh-94430](https://github.com/python/cpython/issues/94430) [https://github.com/python/cpython/issues/94430]: Allow parameters named `module` and `self` with custom C names in Argument Clinic. Patch by Erlend E. Aasland

## C API

- [gh-93937](https://github.com/python/cpython/issues/93937) [https://github.com/python/cpython/issues/93937]: The following frame functions and type are now directly available

with `#include <Python.h>`, it's no longer needed to add `#include <frameobject.h>`:

- `PyFrame_Check()`
- `PyFrame_GetBack()`
- `PyFrame_GetBuiltins()`
- `PyFrame_GetGenerator()`
- `PyFrame_GetGlobals()`
- `PyFrame_GetLasti()`
- `PyFrame_GetLocals()`
- `PyFrame_Type`

Patch by Victor Stinner.

- [gh-91321](https://github.com/python/cpython/issues/91321) [https://github.com/python/cpython/issues/91321]: Fix the compatibility of the Python C API with C++ older than C++11. Patch by Victor Stinner.
- [gh-91731](https://github.com/python/cpython/issues/91731) [https://github.com/python/cpython/issues/91731]: Avoid defining the `static_assert` when compiling with C++11, where this is a keyword and redefining it can lead to undefined behavior. Patch by Pablo Galindo
- [gh-93442](https://github.com/python/cpython/issues/93442) [https://github.com/python/cpython/issues/93442]: Add C++ overloads for `_Py_CAST_impl()` to handle 0/NULL. This will allow C++ extensions that pass 0 or NULL to macros using `_Py_CAST()` to continue to compile.

## Python 3.11.0 beta 3

*Release date: 2022-06-01*

### Core and Builtins

- [gh-93359](https://github.com/python/cpython/issues/93359) [https://github.com/python/cpython/issues/93359]: Ensure that custom `ast` nodes without explicit end positions can be compiled. Patch by Pablo Galindo.
- [gh-93345](https://github.com/python/cpython/issues/93345) [https://github.com/python/cpython/issues/93345]: Fix a crash in substitution of a `TypeVar` in nested generic alias after `TypeVarTuple`.

## Build

- [gh-69093](https://github.com/python/cpython/issues/69093) [https://github.com/python/cpython/issues/69093]: Fix `Modules/Setup.stdlib.in` rule for `_sqlite3` extension.

## Python 3.11.0 beta 2

*Release date: 2022-05-30*

### Core and Builtins

- [gh-84694](https://github.com/python/cpython/issues/84694) [https://github.com/python/cpython/issues/84694]: The `--experimental-isolated-subinterpreters` configure option and `EXPERIMENTAL_ISOLATED_SUBINTERPRETERS` macro have been removed.
- [gh-91924](https://github.com/python/cpython/issues/91924) [https://github.com/python/cpython/issues/91924]: Fix `__lltrace__` debug feature if the stdout encoding is not UTF-8. Patch by Victor Stinner.
- [gh-93061](https://github.com/python/cpython/issues/93061) [https://github.com/python/cpython/issues/93061]: Backward jumps after `async` for loops are no longer given dubious line numbers.
- [gh-93065](https://github.com/python/cpython/issues/93065) [https://github.com/python/cpython/issues/93065]: Fix contextvars HAMT implementation to handle iteration over deep trees.

The bug was discovered and fixed by Eli Libman. See [MagicStack/immutables#84](https://github.com/MagicStack/immutables/issues/84) [https://github.com/MagicStack/immutables/issues/84] for more details.

- [gh-90473](https://github.com/python/cpython/issues/90473) [https://github.com/python/cpython/issues/90473]: Decrease default recursion limit on WASI to address limited call stack size.
- [gh-92804](https://github.com/python/cpython/issues/92804) [https://github.com/python/cpython/issues/92804]: Fix memory leak in `memoryview` iterator as it was not finalized at exit. Patch by Kumar Aditya.

- [gh-92236](https://github.com/python/cpython/issues/92236) [https://github.com/python/cpython/issues/92236]: Remove spurious “LINE” event when starting a generator or coroutine, visible tracing functions implemented in C.
- [gh-92619](https://github.com/python/cpython/issues/92619) [https://github.com/python/cpython/issues/92619]: Make the compiler duplicate an exit block only if none of its instructions have a lineno (previously only the first instruction in the block was checked, leading to unnecessarily duplicated blocks).
- [gh-92261](https://github.com/python/cpython/issues/92261) [https://github.com/python/cpython/issues/92261]: Fix hang when trying to iterate over a `typing.Union`.

## Library

- [gh-93297](https://github.com/python/cpython/issues/93297) [https://github.com/python/cpython/issues/93297]: Make asyncio task groups prevent child tasks from being GCed
- [gh-90817](https://github.com/python/cpython/issues/90817) [https://github.com/python/cpython/issues/90817]: The `locale.resetlocale()` function is deprecated and will be removed in Python 3.13. Use `locale.setlocale(locale.LC_ALL, "")` instead. Patch by Victor Stinner.
- [gh-92728](https://github.com/python/cpython/issues/92728) [https://github.com/python/cpython/issues/92728]: The `re.template()` function and the corresponding `re.TEMPLATE` and `re.T` flags are restored after they were removed in 3.11.0b1, but they are now deprecated, so they might be removed from Python 3.13.
- [gh-93044](https://github.com/python/cpython/issues/93044) [https://github.com/python/cpython/issues/93044]: No longer convert the database argument of `sqlite3.connect()` to bytes before passing it to the factory.
- [gh-93010](https://github.com/python/cpython/issues/93010) [https://github.com/python/cpython/issues/93010]: In a very special case, the email package tried to append the nonexistent `InvalidHeaderError` to the defect list. It should have been `InvalidHeaderDefect`.
- [gh-92675](https://github.com/python/cpython/issues/92675) [https://github.com/python/cpython/issues/92675]: Fix `venv.ensure_directories()` to accept `pathlib.Path` arguments in addition to `str` paths. Patch by David Foster.
- [gh-87901](https://github.com/python/cpython/issues/87901) [https://github.com/python/cpython/issues/87901]: Removed the `encoding` argument from `os.popen()` that

was added in 3.11b1.

- [gh-91922](https://github.com/python/cpython/issues/91922) [https://github.com/python/cpython/issues/91922]: Fix function `sqlite.connect()` and the `sqlite.Connection` constructor on non-UTF-8 locales. Also, they now support bytes paths non-decodable with the current FS encoding.
- [gh-92839](https://github.com/python/cpython/issues/92839) [https://github.com/python/cpython/issues/92839]: Fixed crash resulting from calling `bisect.insort()` or `bisect.insort_left()` with the key argument not equal to None.
- [gh-90473](https://github.com/python/cpython/issues/90473) [https://github.com/python/cpython/issues/90473]: `subprocess` now fails early on Emscripten and WASI platforms to work around missing `os.pipe()` on WASI.
- [gh-92671](https://github.com/python/cpython/issues/92671) [https://github.com/python/cpython/issues/92671]: Fixed `ast.unparse()` for empty tuples in the assignment target context.
- [gh-91581](https://github.com/python/cpython/issues/91581) [https://github.com/python/cpython/issues/91581]: `utcfromtimestamp()` no longer attempts to resolve `fold` in the pure Python implementation, since the fold is never 1 in UTC. In addition to being slightly faster in the common case, this also prevents some errors when the timestamp is close to `datetime.min`. Patch by Paul Ganssle.
- [gh-92550](https://github.com/python/cpython/issues/92550) [https://github.com/python/cpython/issues/92550]: Fix `pathlib.Path.rglob()` for empty pattern.
- [gh-92530](https://github.com/python/cpython/issues/92530) [https://github.com/python/cpython/issues/92530]: Fix an issue that occurred after interrupting `threading.Condition.notify()`.
- [gh-92531](https://github.com/python/cpython/issues/92531) [https://github.com/python/cpython/issues/92531]: The `statistics.median_grouped()` function now always return a float. Formerly, it did not convert the input type when for sequences of length one.
- [gh-91810](https://github.com/python/cpython/issues/91810) [https://github.com/python/cpython/issues/91810]: `ElementTree` method `write()` and function `tostring()` now use the text file's encoding ("UTF-8" if not available) instead of locale encoding in XML declaration when `encoding="unicode"` is specified.
- [gh-90622](https://github.com/python/cpython/issues/90622) [https://github.com/python/cpython/issues/90622]: Worker processes for `concurrent.futures.ProcessPoolExecutor` are no longer spawned on demand (a feature added in 3.9) when the multiprocessing context start method is `"fork"` as that can

lead to deadlocks in the child processes due to a fork happening while threads are running.

- [gh-91581](https://github.com/python/cpython/issues/91581) [https://github.com/python/cpython/issues/91581]: Remove an unhandled error case in the C implementation of calls to `datetime.fromtimestamp` with no time zone (i.e. getting a local time from an epoch timestamp). This should have no user-facing effect other than giving a possibly more accurate error message when called with timestamps that fall on 10000-01-01 in the local time. Patch by Paul Ganssle.
- [bpo-39064](https://bugs.python.org/issue?@action=redirect&bpo=39064) [https://bugs.python.org/issue?@action=redirect&bpo=39064]: `zipfile.ZipFile` now raises `zipfile.BadZipFile` instead of `ValueError` when reading a corrupt zip file in which the central directory offset is negative.
- [bpo-45393](https://bugs.python.org/issue?@action=redirect&bpo=45393) [https://bugs.python.org/issue?@action=redirect&bpo=45393]: Fix the formatting for `await x` and `not x` in the operator precedence table when using the `help()` system.
- [bpo-28249](https://bugs.python.org/issue?@action=redirect&bpo=28249) [https://bugs.python.org/issue?@action=redirect&bpo=28249]: Set `doctest.DocTest.lineno` to `None` when object does not have `__doc__`.
- [bpo-45046](https://bugs.python.org/issue?@action=redirect&bpo=45046) [https://bugs.python.org/issue?@action=redirect&bpo=45046]: Add support of context managers in `unittest`: methods `enterContext()` and `enterClassContext()` of class `TestCase`, method `enterAsyncContext()` of class `IsolatedAsyncioTestCase` and function `unittest.enterModuleContext()`.
- [bpo-42627](https://bugs.python.org/issue?@action=redirect&bpo=42627) [https://bugs.python.org/issue?@action=redirect&bpo=42627]: Fix incorrect parsing of Windows registry proxy settings

## Documentation

- [gh-86438](https://github.com/python/cpython/issues/86438) [https://github.com/python/cpython/issues/86438]: Clarify that `-W` and `PYTHONWARNINGS` are matched literally and case-insensitively, rather than as regular expressions, in `warnings`.
- [gh-92240](https://github.com/python/cpython/issues/92240) [https://github.com/python/cpython/issues/92240]: Added release dates for “What’s New in Python 3.X” for 3.0, 3.1, 3.2,

3.8 and 3.10

- [bpo-40838](https://bugs.python.org/issue?@action=redirect&bpo=40838) [https://bugs.python.org/issue?@action=redirect&bpo=40838]: Document that `inspect.getdoc()`, `inspect.getmodule()`, and `inspect.getsourcefile()` might return `None`.
- [bpo-38056](https://bugs.python.org/issue?@action=redirect&bpo=38056) [https://bugs.python.org/issue?@action=redirect&bpo=38056]: Overhaul the [Error Handlers](#) documentation in [codecs](#).
- [bpo-13553](https://bugs.python.org/issue?@action=redirect&bpo=13553) [https://bugs.python.org/issue?@action=redirect&bpo=13553]: Document `tkinter.Tk` args.

## Tests

- [gh-92670](https://github.com/python/cpython/issues/92670) [https://github.com/python/cpython/issues/92670]: Skip `test_shutil.TestCopy.test_copyfile_nonexistent_dir` test on AIX as the test uses a trailing slash to force the OS consider the path as a directory, but on AIX the trailing slash has no effect and is considered as a file.

## Build

- [gh-90473](https://github.com/python/cpython/issues/90473) [https://github.com/python/cpython/issues/90473]: Disable `pymalloc` and increase stack size on `wasm32-wasi`.
- [bpo-34449](https://bugs.python.org/issue?@action=redirect&bpo=34449) [https://bugs.python.org/issue?@action=redirect&bpo=34449]: Drop invalid compiler switch `-fPIC` for HP aCC on HP-UX. Patch by Michael Osipov.

## Windows

- [gh-92817](https://github.com/python/cpython/issues/92817) [https://github.com/python/cpython/issues/92817]: Ensures that `py.exe` will prefer an active virtual environment over default tags specified with environment variables or through a `py.ini` file.
- [gh-92984](https://github.com/python/cpython/issues/92984) [https://github.com/python/cpython/issues/92984]: Explicitly disable incremental linking for non-Debug builds
- [gh-92841](https://github.com/python/cpython/issues/92841) [https://github.com/python/cpython/issues/92841]: [asyncio](#) no longer throws `RuntimeError: Event loop is closed` on interpreter exit after asynchronous socket activity. Patch by Oleg Iarygin.
- [bpo-46907](https://bugs.python.org/issue?@action=redirect&bpo=46907) [https://bugs.python.org/issue?@action=redirect&bpo=46907]

@action=redirect&bpo=46907]: Update Windows installer to use SQLite 3.38.4.

## C API

- [gh-92898](https://github.com/python/cpython/issues/92898) [https://github.com/python/cpython/issues/92898]: Fix C + compiler warnings when casting function arguments to PyObject\*. Patch by Serge Guelton.
- [gh-92913](https://github.com/python/cpython/issues/92913) [https://github.com/python/cpython/issues/92913]: Ensures changes to `PyConfig.module_search_paths` are ignored unless `PyConfig.module_search_paths_set` is set
- [gh-92781](https://github.com/python/cpython/issues/92781) [https://github.com/python/cpython/issues/92781]: Avoid mixing declarations and code in the C API to fix the compiler warning: “ISO C90 forbids mixed declarations and code” [-Werror=declaration-after-statement]. Patch by Victor Stinner.

## Python 3.11.0 beta 1

*Release date: 2022-05-06*

### Security

- [gh-57684](https://github.com/python/cpython/issues/57684) [https://github.com/python/cpython/issues/57684]: Add the `-P` command line option and the `PYTHONSAFEPATH` environment variable to not prepend a potentially unsafe path to `sys.path`. Patch by Victor Stinner.

### Core and Builtins

- [gh-89519](https://github.com/python/cpython/issues/89519) [https://github.com/python/cpython/issues/89519]: Chaining classmethod descriptors (introduced in [bpo-19072](https://bugs.python.org/issue?@action=redirect&bpo=19072) [https://bugs.python.org/issue?@action=redirect&bpo=19072]) is deprecated. It can no longer be used to wrap other descriptors such as `property()`. The core design of this feature was flawed, and it caused a number of downstream problems.
- [gh-92345](https://github.com/python/cpython/issues/92345) [https://github.com/python/cpython/issues/92345]: `pymain_run_python()` now imports `readline` and

`rlcompleter` before `sys.path` is extended to include the current working directory of an interactive interpreter. Non-interactive interpreters are not affected.

- [bpo-43857](https://bugs.python.org/issue?@action=redirect&bpo=43857) [https://bugs.python.org/issue?@action=redirect&bpo=43857]: Improve the `AttributeError` message when deleting a missing attribute. Patch by Géry Ogam.
- [gh-92245](https://github.com/python/cpython/issues/92245) [https://github.com/python/cpython/issues/92245]: Make sure that PEP 523 is respected in all cases. In 3.11a7, specialization may have prevented Python-to-Python calls respecting PEP 523.
- [gh-92203](https://github.com/python/cpython/issues/92203) [https://github.com/python/cpython/issues/92203]: Add a closure keyword-only parameter to `exec()`. It can only be specified when `exec`-ing a code object that uses free variables. When specified, it must be a tuple, with exactly the number of cell variables referenced by the code object. `closure` has a default value of `None`, and it must be `None` if the code object doesn't refer to any free variables.
- [gh-91173](https://github.com/python/cpython/issues/91173) [https://github.com/python/cpython/issues/91173]: Disable frozen modules in debug builds. Patch by Kumar Aditya.
- [gh-92114](https://github.com/python/cpython/issues/92114) [https://github.com/python/cpython/issues/92114]: Improve error message when subscript a type with `__class_getitem__` set to `None`.
- [gh-92112](https://github.com/python/cpython/issues/92112) [https://github.com/python/cpython/issues/92112]: Fix crash triggered by an evil custom `mro()` on a metaclass.
- [gh-92063](https://github.com/python/cpython/issues/92063) [https://github.com/python/cpython/issues/92063]: The `PRECALL_METHOD_DESCRIPTOR_FAST_WITH_KEYWORDS` instruction now ensures methods are called only on objects of the correct type.
- [gh-92031](https://github.com/python/cpython/issues/92031) [https://github.com/python/cpython/issues/92031]: Deoptimize statically allocated code objects during `Py_FINALIZE()` so that future `_PyCode_Quicken` calls always start with unquicken code.

- [gh-92036](https://github.com/python/cpython/issues/92036) [https://github.com/python/cpython/issues/92036]: Fix a crash in subinterpreters related to the garbage collector. When a subinterpreter is deleted, untrack all objects tracked by its GC. To prevent a crash in deallocator functions expecting objects to be tracked by the GC, leak a strong reference to these objects on purpose, so they are never deleted and their deallocator functions are not called. Patch by Victor Stinner.
- [gh-92032](https://github.com/python/cpython/issues/92032) [https://github.com/python/cpython/issues/92032]: The interpreter can now autocomplete soft keywords, as of now `match`, `case`, and `_` (wildcard pattern) from [PEP 634](https://peps.python.org/pep-0634/) [https://peps.python.org/pep-0634/].
- [gh-87999](https://github.com/python/cpython/issues/87999) [https://github.com/python/cpython/issues/87999]: The warning emitted by the Python parser for a numeric literal immediately followed by keyword has been changed from deprecation warning to syntax warning.
- [gh-91869](https://github.com/python/cpython/issues/91869) [https://github.com/python/cpython/issues/91869]: Fix an issue where specialized opcodes with extended arguments could produce incorrect tracing output or lead to assertion failures.
- [gh-91603](https://github.com/python/cpython/issues/91603) [https://github.com/python/cpython/issues/91603]: Speed up `types.UnionType` instantiation. Based on patch provided by Yurii Karabas.
- [gh-89373](https://github.com/python/cpython/issues/89373) [https://github.com/python/cpython/issues/89373]: If Python is built in debug mode, Python now ensures that deallocator functions leave the current exception unchanged. Patch by Victor Stinner.
- [gh-91632](https://github.com/python/cpython/issues/91632) [https://github.com/python/cpython/issues/91632]: Fix a minor memory leak at exit: release the memory of the `generic_alias_iterator` type. Patch by Dong-hee Na.
- [gh-81548](https://github.com/python/cpython/issues/81548) [https://github.com/python/cpython/issues/81548]: Octal escapes with value larger than `0o377` now produce a `DeprecationWarning`. In a future Python version they will be a `SyntaxWarning` and eventually a `SyntaxError`.

- [bpo-43950](https://bugs.python.org/issue?@action=redirect&bpo=43950) [https://bugs.python.org/issue?@action=redirect&bpo=43950]: Use a single compact table for line starts, ends and column offsets. Reduces memory consumption for location info by half
- [gh-91102](https://github.com/python/cpython/issues/91102) [https://github.com/python/cpython/issues/91102]: Use Argument Clinic for **EncodingMap**. Patch by Oleg Iarygin.
- [gh-91636](https://github.com/python/cpython/issues/91636) [https://github.com/python/cpython/issues/91636]: Fixed a crash in a garbage-collection edge-case, in which a `PyFunction_Type.tp_clear` function could leave a python function object in an inconsistent state.
- [gh-91603](https://github.com/python/cpython/issues/91603) [https://github.com/python/cpython/issues/91603]: Speed up `isinstance()` and `issubclass()` checks for **types.UnionType**. Patch by Yurii Karabas.
- [gh-91625](https://github.com/python/cpython/issues/91625) [https://github.com/python/cpython/issues/91625]: Fixed a bug in which adaptive opcodes ignored any preceding `EXTENDED_ARGS` on specialization failure.
- [gh-78607](https://github.com/python/cpython/issues/78607) [https://github.com/python/cpython/issues/78607]: The LLTRACE special build now looks for the name `__lltrace__` defined in module `globals`, rather than the name `__ltrace__`, which had been introduced as a typo.
- [gh-91576](https://github.com/python/cpython/issues/91576) [https://github.com/python/cpython/issues/91576]: Speed up iteration of ascii strings by 50%. Patch by Kumar Aditya.
- [gh-89279](https://github.com/python/cpython/issues/89279) [https://github.com/python/cpython/issues/89279]: Improve interpreter performance on Windows by inlining a few specific macros.
- [gh-91502](https://github.com/python/cpython/issues/91502) [https://github.com/python/cpython/issues/91502]: Add a new `__PyFrame_IsEntryFrame()` API function, to check if a **PyFrameObject** is an entry frame. Patch by Pablo Galindo.
- [gh-91266](https://github.com/python/cpython/issues/91266) [https://github.com/python/cpython/issues/91266]: Refactor the bytearray strip methods `strip`, `lstrip` and `rstrip` to use a common implementation.

- [gh-91479](https://github.com/python/cpython/issues/91479) [https://github.com/python/cpython/issues/91479]: Replaced the `__note__` field of `BaseException` (added in an earlier version of 3.11) with the final design of [PEP 678](https://peps.python.org/pep-0678/) [https://peps.python.org/pep-0678/]. Namely, `BaseException` gets an `add_note()` method, and its `__notes__` field is created when necessary.
- [gh-46055](https://github.com/python/cpython/issues/46055) [https://github.com/python/cpython/issues/46055]: Speed up right shift of negative integers, by removing unnecessary creation of temporaries. Original patch by Xinhang Xu, reworked by Mark Dickinson.
- [gh-91462](https://github.com/python/cpython/issues/91462) [https://github.com/python/cpython/issues/91462]: Make the interpreter's low-level tracing (lltrace) feature output more readable by displaying opcode names (rather than just numbers), and by displaying stack contents before each opcode.
- [gh-89455](https://github.com/python/cpython/issues/89455) [https://github.com/python/cpython/issues/89455]: Fixed an uninitialized bool value in the traceback printing code path that was introduced by the initial [bpo-45292](https://bugs.python.org/issue?@action=redirect&bpo=45292) [https://bugs.python.org/issue?@action=redirect&bpo=45292] exception groups work.
- [gh-91421](https://github.com/python/cpython/issues/91421) [https://github.com/python/cpython/issues/91421]: Fix a potential integer overflow in `_Py_DecodeUTF8Ex`.
- [gh-91428](https://github.com/python/cpython/issues/91428) [https://github.com/python/cpython/issues/91428]: Add `static const char *const _PyOpcode_OpName[256] = {...};` to `opcode.h` for debug builds to assist in debugging the Python interpreter. It is now more convenient to make various forms of debugging output more human-readable by including opcode names rather than just the corresponding decimal digits.
- [bpo-47120](https://bugs.python.org/issue?@action=redirect&bpo=47120) [https://bugs.python.org/issue?@action=redirect&bpo=47120]: Make `POP_JUMP_IF_TRUE`, `POP_JUMP_IF_FALSE`, `POP_JUMP_IF_NONE` and `POP_JUMP_IF_NOT_NONE` virtual, mapping to new relative jump opcodes.

- [bpo-45317](https://bugs.python.org/issue?@action=redirect&bpo=45317) [https://bugs.python.org/issue?@action=redirect&bpo=45317]: Add internal documentation explaining design of new (for 3.11) frame stack.
- [bpo-47197](https://bugs.python.org/issue?@action=redirect&bpo=47197) [https://bugs.python.org/issue?@action=redirect&bpo=47197]: `ctypes` used to mishandle `void` return types, so that for instance a function declared like `ctypes.CFUNCTYPE(None, ctypes.c_int)` would be called with signature `int f(int)` instead of `void f(int)`. Wasm targets require function pointers to be called with the correct signatures so this led to crashes. The problem is now fixed.
- [bpo-47120](https://bugs.python.org/issue?@action=redirect&bpo=47120) [https://bugs.python.org/issue?@action=redirect&bpo=47120]: Make opcodes `JUMP_IF_TRUE_OR_POP` and `JUMP_IF_FALSE_OR_POP` relative rather than absolute.
- [bpo-47177](https://bugs.python.org/issue?@action=redirect&bpo=47177) [https://bugs.python.org/issue?@action=redirect&bpo=47177]: Replace the `f_lasti` member of the internal `_PyInterpreterFrame` structure with a `prev_instr` pointer, which reduces overhead in the main interpreter loop. The `f_lasti` attribute of Python-layer frame objects is preserved for backward-compatibility.
- [bpo-46961](https://bugs.python.org/issue?@action=redirect&bpo=46961) [https://bugs.python.org/issue?@action=redirect&bpo=46961]: Integer mod/remainder operations, including the three-argument form of `pow()`, now consistently return ints from the global small integer cache when applicable.
- [bpo-46962](https://bugs.python.org/issue?@action=redirect&bpo=46962) [https://bugs.python.org/issue?@action=redirect&bpo=46962]: Classes and functions that unconditionally declared their docstrings ignoring the `--without-doc-strings` compilation flag no longer do so.

The classes affected are `ctypes.UnionType`, `pickle.PickleBuffer`, `testcapi.RecursingIninitelyError`, and `types.GenericAlias`.

The functions affected are 24 methods in `ctypes`.

Patch by Oleg Iarygin.

- [bpo-46942](https://bugs.python.org/issue?@action=redirect&bpo=46942) [https://bugs.python.org/issue?@action=redirect&bpo=46942]: Use Argument Clinic for the `types.MethodType` constructor. Patch by Oleg Iarygin.
- [bpo-46764](https://bugs.python.org/issue?@action=redirect&bpo=46764) [https://bugs.python.org/issue?@action=redirect&bpo=46764]: Fix wrapping bound methods with `@classmethod`
- [bpo-43464](https://bugs.python.org/issue?@action=redirect&bpo=43464) [https://bugs.python.org/issue?@action=redirect&bpo=43464]: Optimize `set.intersection()` for non-set arguments.
- [bpo-46721](https://bugs.python.org/issue?@action=redirect&bpo=46721) [https://bugs.python.org/issue?@action=redirect&bpo=46721]: Optimize `set.issuperset()` for non-set argument.
- [bpo-46509](https://bugs.python.org/issue?@action=redirect&bpo=46509) [https://bugs.python.org/issue?@action=redirect&bpo=46509]: Add type-specialized versions of the `Py_DECREF()`, and use them for `float`, `int`, `str`, `bool`, and `None` to avoid pointer-chasing at runtime where types are known at C compile time.
- [bpo-46045](https://bugs.python.org/issue?@action=redirect&bpo=46045) [https://bugs.python.org/issue?@action=redirect&bpo=46045]: Do not use POSIX semaphores on NetBSD
- [bpo-36819](https://bugs.python.org/issue?@action=redirect&bpo=36819) [https://bugs.python.org/issue?@action=redirect&bpo=36819]: Fix crashes in built-in encoders with error handlers that return position less or equal than the starting position of non-encodable characters.
- [bpo-34093](https://bugs.python.org/issue?@action=redirect&bpo=34093) [https://bugs.python.org/issue?@action=redirect&bpo=34093]: `marshal.dumps()` uses `FLAG_REF` for all interned strings. This makes output more deterministic and helps reproducible build.
- [bpo-26579](https://bugs.python.org/issue?@action=redirect&bpo=26579) [https://bugs.python.org/issue?@action=redirect&bpo=26579]: Added `object.__getstate__`

which provides the default implementation of the `__getstate__()` method.

Copying and pickling instances of subclasses of builtin types `bytearray`, `set`, `frozenset`, `collections.OrderedDict`, `collections.deque`, `weakref.WeakSet`, and `datetime.tzinfo` now copies and pickles instance attributes implemented as slots.

## Library

- [gh-87901](https://github.com/python/cpython/issues/87901) [https://github.com/python/cpython/issues/87901]: Add the *encoding* parameter to `os.popen()`.
- [gh-90997](https://github.com/python/cpython/issues/90997) [https://github.com/python/cpython/issues/90997]: Fix an issue where `dis` utilities may interpret populated inline cache entries as valid instructions.
- [gh-92332](https://github.com/python/cpython/issues/92332) [https://github.com/python/cpython/issues/92332]: Deprecate `typing.Text` (removal of the class is currently not planned). Patch by Alex Waygood.
- Deprecate nested classes in enum definitions becoming members – in 3.13 they will be normal classes; add `member` and `nonmember` functions to allow control over results now.
- [gh-92356](https://github.com/python/cpython/issues/92356) [https://github.com/python/cpython/issues/92356]: Fixed a performance regression in ctypes function calls.
- [gh-90997](https://github.com/python/cpython/issues/90997) [https://github.com/python/cpython/issues/90997]: Show the actual named values stored in inline caches when `show_caches=True` is passed to `dis` utilities.
- [gh-92301](https://github.com/python/cpython/issues/92301) [https://github.com/python/cpython/issues/92301]: Prefer `close_range()` to iterating over procs for file descriptor closing in `subprocess` for better performance.
- [gh-67248](https://github.com/python/cpython/issues/67248) [https://github.com/python/cpython/issues/67248]: Sort the miscellaneous topics in `Cmd.do_help()`
- [gh-92210](https://github.com/python/cpython/issues/92210) [https://github.com/python/cpython/issues/92210]: Port `socket.__init__` to Argument Clinic. Patch by Cinder.

- [gh-80010](https://github.com/python/cpython/issues/80010) [https://github.com/python/cpython/issues/80010]: Add support for generalized ISO 8601 parsing to `datetime.datetime.fromisoformat()`, `datetime.date.fromisoformat()` and `datetime.time.fromisoformat()`. Patch by Paul Ganssle.
- [gh-92118](https://github.com/python/cpython/issues/92118) [https://github.com/python/cpython/issues/92118]: Fix a 3.11 regression in `contextmanager()`, which caused it to propagate exceptions with incorrect tracebacks.
- [gh-90887](https://github.com/python/cpython/issues/90887) [https://github.com/python/cpython/issues/90887]: Adding `COPYFILE_STAT`, `COPYFILE_ACL` and `COPYFILE_XATTR` constants for `os.fcopyfile()` available in macOS.
- [gh-91215](https://github.com/python/cpython/issues/91215) [https://github.com/python/cpython/issues/91215]: For `@dataclass`, add `weakref_slot`. Default is `False`. If `True`, and if `slots = True`, add a slot named “`_weakref_`”, which will allow instances to be weakref’d. Contributed by Eric V. Smith
- [gh-85984](https://github.com/python/cpython/issues/85984) [https://github.com/python/cpython/issues/85984]: New function `os.login_tty()` for Unix.
- [gh-92128](https://github.com/python/cpython/issues/92128) [https://github.com/python/cpython/issues/92128]: Add `__class_getitem__()` to `logging.LoggerAdapter` and `logging.StreamHandler`, allowing them to be parameterized at runtime. Patch by Alex Waygood.
- [gh-92049](https://github.com/python/cpython/issues/92049) [https://github.com/python/cpython/issues/92049]: Forbid pickling constants `re._constants.SUCCESS` etc. Previously, pickling did not fail, but the result could not be unpickled.
- [gh-92062](https://github.com/python/cpython/issues/92062) [https://github.com/python/cpython/issues/92062]: `inspect.Parameter` now raises `ValueError` if `name` is a keyword, in addition to the existing check that it is an identifier.
- [gh-87390](https://github.com/python/cpython/issues/87390) [https://github.com/python/cpython/issues/87390]: Add an `__unpacked__` attribute to `types.GenericAlias`. Patch by Jelle Zijlstra.

- [gh-88089](https://github.com/python/cpython/issues/88089) [https://github.com/python/cpython/issues/88089]: Add support for generic `typing.NamedTuple`.
- [gh-91996](https://github.com/python/cpython/issues/91996) [https://github.com/python/cpython/issues/91996]: New `http.HTTPMethod` enum to represent all the available HTTP request methods in a convenient way
- [gh-91984](https://github.com/python/cpython/issues/91984) [https://github.com/python/cpython/issues/91984]: Modified test strings in `test_argparse.py` to not contain trailing spaces before end of line.
- [gh-91952](https://github.com/python/cpython/issues/91952) [https://github.com/python/cpython/issues/91952]: Add `encoding="locale"` support to `TextIOWrapper.reconfigure()`.
- [gh-91954](https://github.com/python/cpython/issues/91954) [https://github.com/python/cpython/issues/91954]: Add `encoding` and `errors` arguments to `subprocess.getoutput()` and `subprocess.getstatusoutput()`.
- [bpo-47029](https://bugs.python.org/issue?@action=redirect&bpo=47029) [https://bugs.python.org/issue?@action=redirect&bpo=47029]: Always close the read end of the pipe used by `multiprocessing.Queue` after the last write of buffered data to the write end of the pipe to avoid `BrokenPipeError` at garbage collection and at `multiprocessing.Queue.close()` calls. Patch by G ry Ogam.
- [gh-91928](https://github.com/python/cpython/issues/91928) [https://github.com/python/cpython/issues/91928]: Add `datetime.UTC` alias for `datetime.timezone.utc`.  
  
Patch by Kabir Kwatra.
- [gh-68966](https://github.com/python/cpython/issues/68966) [https://github.com/python/cpython/issues/68966]: The `mailcap` module is now deprecated and will be removed in Python 3.13. See [PEP 594](https://peps.python.org/pep-0594/) [https://peps.python.org/pep-0594/] for the rationale and the `mimetypes` module for an alternative. Patch by Victor Stinner.
- [gh-91401](https://github.com/python/cpython/issues/91401) [https://github.com/python/cpython/issues/91401]: Provide a way to disable `subprocess` use of `vfork()` just in case

it is ever needed and document the existing mechanism for `posix_spawn()`.

- [gh-64783](https://github.com/python/cpython/issues/64783) [https://github.com/python/cpython/issues/64783]: Fix **`signal.NSIG`** value on FreeBSD to accept signal numbers greater than 32, like **`signal.SIGRTMIN`** and **`signal.SIGRTMAX`**. Patch by Victor Stinner.
- [gh-91910](https://github.com/python/cpython/issues/91910) [https://github.com/python/cpython/issues/91910]: Add missing `f` prefix to f-strings in error messages from the **`multiprocessing`** and **`asyncio`** modules.
- [gh-91860](https://github.com/python/cpython/issues/91860) [https://github.com/python/cpython/issues/91860]: Add **`typing.dataclass_transform()`**, implementing [PEP 681](https://peps.python.org/pep-0681/) [https://peps.python.org/pep-0681/]. Patch by Jelle Zijlstra.
- [gh-91832](https://github.com/python/cpython/issues/91832) [https://github.com/python/cpython/issues/91832]: Add required attribute to **`argparse.Action`** repr output.
- [gh-91827](https://github.com/python/cpython/issues/91827) [https://github.com/python/cpython/issues/91827]: In the **`tkinter`** module add method `info_patchlevel()` which returns the exact version of the Tcl library as a named tuple similar to **`sys.version_info`**.
- [gh-84461](https://github.com/python/cpython/issues/84461) [https://github.com/python/cpython/issues/84461]: Add **`--enable-wasm-pthreads`** to enable pthreads support for WASM builds. Emscripten/node no longer has threading enabled by default. Include additional file systems.
- [gh-91821](https://github.com/python/cpython/issues/91821) [https://github.com/python/cpython/issues/91821]: Fix unstable `test_from_tuple` test in `test_decimal.py`.
- [gh-91217](https://github.com/python/cpython/issues/91217) [https://github.com/python/cpython/issues/91217]: Deprecate the `xdrlib` module.
- [gh-91217](https://github.com/python/cpython/issues/91217) [https://github.com/python/cpython/issues/91217]: Deprecate the `uu` module.
- [gh-91760](https://github.com/python/cpython/issues/91760) [https://github.com/python/cpython/issues/91760]: More strict rules will be applied for numerical group references and group names in regular expressions. For now, a deprecation warning is emitted for group references and group names

which will be errors in future Python versions.

- [gh-84461](https://github.com/python/cpython/issues/84461) [https://github.com/python/cpython/issues/84461]: Add provisional `sys._emscripten_info` named tuple with build-time and run-time information about Emscripten platform.
- [gh-90623](https://github.com/python/cpython/issues/90623) [https://github.com/python/cpython/issues/90623]: `signal.raise_signal()` and `os.kill()` now check immediately for pending signals. Patch by Victor Stinner.
- [gh-91734](https://github.com/python/cpython/issues/91734) [https://github.com/python/cpython/issues/91734]: Fix OSS audio support on Solaris.
- [gh-90633](https://github.com/python/cpython/issues/90633) [https://github.com/python/cpython/issues/90633]: Include the passed value in the exception thrown by `typing.assert_never()`. Patch by Jelle Zijlstra.
- [gh-91700](https://github.com/python/cpython/issues/91700) [https://github.com/python/cpython/issues/91700]: Compilation of regular expression containing a conditional expression `(?(group) . . .)` now raises an appropriate `re.error` if the group number refers to not defined group. Previously an internal `RuntimeError` was raised.
- [gh-91231](https://github.com/python/cpython/issues/91231) [https://github.com/python/cpython/issues/91231]: Add an optional keyword `shutdown_timeout` parameter to the `multiprocessing.BaseManager` constructor. Kill the process if `terminate()` takes longer than the timeout. Patch by Victor Stinner.
- [gh-91621](https://github.com/python/cpython/issues/91621) [https://github.com/python/cpython/issues/91621]: Fix `typing.get_type_hints()` for `collections.abc.Callable`. Patch by Shantanu Jain.
- [gh-90568](https://github.com/python/cpython/issues/90568) [https://github.com/python/cpython/issues/90568]: Parsing `\N` escapes of Unicode Named Character Sequences in a `regular expression` raises now `re.error` instead of `TypeError`.
- [gh-91670](https://github.com/python/cpython/issues/91670) [https://github.com/python/cpython/issues/91670]: Remove deprecated `SO` config variable in `sysconfig`.

- [gh-91217](https://github.com/python/cpython/issues/91217) [https://github.com/python/cpython/issues/91217]: Deprecate the telnetlib module.
- [gh-91217](https://github.com/python/cpython/issues/91217) [https://github.com/python/cpython/issues/91217]: Deprecate the sunau module.
- [gh-91217](https://github.com/python/cpython/issues/91217) [https://github.com/python/cpython/issues/91217]: Deprecate the spwd module.
- [gh-91217](https://github.com/python/cpython/issues/91217) [https://github.com/python/cpython/issues/91217]: Deprecate the sndhdr module, as well as inline needed functionality for `email.mime.MIMEAudio`.
- [gh-91616](https://github.com/python/cpython/issues/91616) [https://github.com/python/cpython/issues/91616]: **re** module, fix `fullmatch()` mismatch when using Atomic Grouping or Possessive Quantifiers.
- [gh-91217](https://github.com/python/cpython/issues/91217) [https://github.com/python/cpython/issues/91217]: Deprecate the ‘pipes’ module.
- [gh-91217](https://github.com/python/cpython/issues/91217) [https://github.com/python/cpython/issues/91217]: Deprecate the ossaudiodev module.
- [bpo-47256](https://bugs.python.org/issue?@action=redirect&bpo=47256) [https://bugs.python.org/issue?@action=redirect&bpo=47256]: **re** module, limit the maximum capturing group to 1,073,741,823 in 64-bit build, this increases the depth of backtracking.
- [gh-91217](https://github.com/python/cpython/issues/91217) [https://github.com/python/cpython/issues/91217]: Deprecate the nis module.
- [gh-91595](https://github.com/python/cpython/issues/91595) [https://github.com/python/cpython/issues/91595]: Fix the comparison of character and integer inside `Tools.gdb.libpython.write_repr()`. Patch by Yu Liu.
- [gh-74166](https://github.com/python/cpython/issues/74166) [https://github.com/python/cpython/issues/74166]: Add option to raise all errors from `create_connection()` in an `ExceptionGroup` when it fails to create a connection. The default remains to raise only the last error that had occurred when multiple addresses were tried.
- [gh-91487](https://github.com/python/cpython/issues/91487) [https://github.com/python/cpython/issues/91487]:

Optimize asyncio UDP speed, over 100 times faster when transferring a large file.

- [gh-91575](https://github.com/python/cpython/issues/91575) [https://github.com/python/cpython/issues/91575]: Update case-insensitive matching in the `re` module to the latest Unicode version.
- [gh-90622](https://github.com/python/cpython/issues/90622) [https://github.com/python/cpython/issues/90622]: In `concurrent.futures.process.ProcessPoolExecutor` disallow the “fork” multiprocessing start method when the new `max_tasks_per_child` feature is used as the mix of threads + fork can hang the child processes. Default to using the safe “spawn” start method in that circumstance if no `mp_context` was supplied.
- [gh-89022](https://github.com/python/cpython/issues/89022) [https://github.com/python/cpython/issues/89022]: In `sqlite3`, `SQLITE_MISUSE` result codes are now mapped to `InterfaceError` instead of `ProgrammingError`. Also, more accurate exceptions are raised when binding parameters fail. Patch by Erlend E. Aasland.
- [gh-91526](https://github.com/python/cpython/issues/91526) [https://github.com/python/cpython/issues/91526]: Stop calling `os.device_encoding(file.fileno())` in `TextIOWrapper`. It was complex, never documented, and didn’t work for most cases. (Patch by Inada Naoki.)
- [gh-88116](https://github.com/python/cpython/issues/88116) [https://github.com/python/cpython/issues/88116]: Change the frame-related functions in the `inspect` module to return a regular object (that is backwards compatible with the old tuple-like interface) that include the extended [PEP 657](https://peps.python.org/pep-0657/) [https://peps.python.org/pep-0657/] position information (end line number, column and end column). The affected functions are: `inspect.getframeinfo()`, `inspect.getouterframes()`, `inspect.getinnerframes()`, `inspect.stack()` and `inspect.trace()`. Patch by Pablo Galindo.
- [gh-69093](https://github.com/python/cpython/issues/69093) [https://github.com/python/cpython/issues/69093]: Add indexing and slicing support to `sqlite3.Blob`. Patch by Aviv Palivoda and Erlend E. Aasland.

- [gh-69093](https://github.com/python/cpython/issues/69093) [https://github.com/python/cpython/issues/69093]: Add [context manager](#) support to [sqlite3.Blob](#). Patch by Aviv Palivoda and Erlend E. Aasland.
- [gh-91217](https://github.com/python/cpython/issues/91217) [https://github.com/python/cpython/issues/91217]: Deprecate [nntplib](#).
- [gh-91217](https://github.com/python/cpython/issues/91217) [https://github.com/python/cpython/issues/91217]: Deprecate [msilib](#).
- [gh-91404](https://github.com/python/cpython/issues/91404) [https://github.com/python/cpython/issues/91404]: Improve the performance of [re](#) matching by using computed gotos (or “threaded code”) on supported platforms and removing expensive pointer indirections.
- [gh-91217](https://github.com/python/cpython/issues/91217) [https://github.com/python/cpython/issues/91217]: Deprecate the [imgohdr](#) module.
- [gh-91217](https://github.com/python/cpython/issues/91217) [https://github.com/python/cpython/issues/91217]: Deprecate the [crypt](#) module.
- [gh-91276](https://github.com/python/cpython/issues/91276) [https://github.com/python/cpython/issues/91276]: Make space for longer opcodes in [dis](#) output.
- [bpo-47000](https://bugs.python.org/issue?@action=redirect&bpo=47000) [https://bugs.python.org/issue?@action=redirect&bpo=47000]: Make [TextIOWrapper](#) use locale encoding when `encoding="locale"` is specified even in UTF-8 mode.
- [gh-91230](https://github.com/python/cpython/issues/91230) [https://github.com/python/cpython/issues/91230]: [warnings.catch\\_warnings\(\)](#) now accepts arguments for [warnings.simplefilter\(\)](#), providing a more concise way to locally ignore warnings or convert them to errors.
- [gh-91217](https://github.com/python/cpython/issues/91217) [https://github.com/python/cpython/issues/91217]: Deprecate the [chunk](#) module.
- Add the `TCP_CONNECTION_INFO` option (available on macOS) to [socket](#).
- [bpo-47260](https://bugs.python.org/issue?@action=redirect&bpo=47260) [https://bugs.python.org/issue?@action=redirect&bpo=47260]: Fix `os.closerange()`

potentially being a no-op in a Linux seccomp sandbox.

- [bpo-47087](https://bugs.python.org/issue?@action=redirect&bpo=47087) [https://bugs.python.org/issue?@action=redirect&bpo=47087]: Implement `typing.Required` and `typing.NotRequired` (**PEP 655** [https://peps.python.org/pep-0655/]). Patch by David Foster and Jelle Zijlstra.
- [bpo-47061](https://bugs.python.org/issue?@action=redirect&bpo=47061) [https://bugs.python.org/issue?@action=redirect&bpo=47061]: Deprecate `cgi` and `cgitb`.
- [bpo-47061](https://bugs.python.org/issue?@action=redirect&bpo=47061) [https://bugs.python.org/issue?@action=redirect&bpo=47061]: Deprecate `audioop`.
- [bpo-47000](https://bugs.python.org/issue?@action=redirect&bpo=47000) [https://bugs.python.org/issue?@action=redirect&bpo=47000]: Add `locale.getencoding()` to get the current locale encoding. It is similar to `locale.getpreferredencoding(False)` but ignores the **Python UTF-8 Mode**.
- [bpo-42012](https://bugs.python.org/issue?@action=redirect&bpo=42012) [https://bugs.python.org/issue?@action=redirect&bpo=42012]: Add `wsgiref.types`, containing WSGI-specific types for static type checking.
- [bpo-47227](https://bugs.python.org/issue?@action=redirect&bpo=47227) [https://bugs.python.org/issue?@action=redirect&bpo=47227]: Suppress expression chaining for more **re** parsing errors.
- [bpo-47211](https://bugs.python.org/issue?@action=redirect&bpo=47211) [https://bugs.python.org/issue?@action=redirect&bpo=47211]: Remove undocumented and never working function `re.template()` and flag `re.TEMPLATE`. This was later reverted in 3.11.0b2 and deprecated instead.
- [bpo-47135](https://bugs.python.org/issue?@action=redirect&bpo=47135) [https://bugs.python.org/issue?@action=redirect&bpo=47135]: `decimal.localcontext()` now accepts context attributes via keyword arguments
- [bpo-43323](https://bugs.python.org/issue?@action=redirect&bpo=43323) [https://bugs.python.org/issue?@action=redirect&bpo=43323]: Fix errors in the **email** module if the charset itself contains undecodable/unencodable characters.
- [bpo-46841](https://bugs.python.org/issue?@action=redirect&bpo=46841) [https://bugs.python.org/issue?@action=redirect&bpo=46841]

@action=redirect&bpo=46841]: Disassembly of quickened code.

- [bpo-46681](https://bugs.python.org/issue?@action=redirect&bpo=46681) [https://bugs.python.org/issue?@action=redirect&bpo=46681]: Forward `gzip.compress()` `compresslevel` to `zlib`.
- [bpo-45100](https://bugs.python.org/issue?@action=redirect&bpo=45100) [https://bugs.python.org/issue?@action=redirect&bpo=45100]: Add `typing.get_overloads()` and `typing.clear_overloads()`. Patch by Jelle Zijlstra.
- [bpo-44807](https://bugs.python.org/issue?@action=redirect&bpo=44807) [https://bugs.python.org/issue?@action=redirect&bpo=44807]: `typing.Protocol` no longer silently replaces `__init__()` methods defined on subclasses. Patch by Adrian Garcia Badaracco.
- [bpo-46787](https://bugs.python.org/issue?@action=redirect&bpo=46787) [https://bugs.python.org/issue?@action=redirect&bpo=46787]: Fix `concurrent.futures.ProcessPoolExecutor` exception memory leak
- [bpo-46720](https://bugs.python.org/issue?@action=redirect&bpo=46720) [https://bugs.python.org/issue?@action=redirect&bpo=46720]: Add support for path-like objects to `multiprocessing.set_executable()` for Windows to be on a par with Unix-like systems. Patch by Géry Ogam.
- [bpo-46696](https://bugs.python.org/issue?@action=redirect&bpo=46696) [https://bugs.python.org/issue?@action=redirect&bpo=46696]: Add `SO_INCOMING_CPU` constant to `socket`.
- [bpo-46053](https://bugs.python.org/issue?@action=redirect&bpo=46053) [https://bugs.python.org/issue?@action=redirect&bpo=46053]: Fix OSS audio support on NetBSD.
- [bpo-45639](https://bugs.python.org/issue?@action=redirect&bpo=45639) [https://bugs.python.org/issue?@action=redirect&bpo=45639]: `image/avif` and `image/webp` were added to `mimetypes`.
- [bpo-46285](https://bugs.python.org/issue?@action=redirect&bpo=46285) [https://bugs.python.org/issue?@action=redirect&bpo=46285]: Add command-line option `-p/--protocol` to module `http.server` which specifies the HTTP version to which the server is conformant (HTTP/1.1

conformant servers can now be run from the command-line interface of module `http.server`). Patch by G ry Ogam.

- [bpo-44791](https://bugs.python.org/issue?@action=redirect&bpo=44791) [https://bugs.python.org/issue?@action=redirect&bpo=44791]: Accept ellipsis as the last argument of `typing.Concatenate`.
- [bpo-46547](https://bugs.python.org/issue?@action=redirect&bpo=46547) [https://bugs.python.org/issue?@action=redirect&bpo=46547]: Remove variables leaking into `pydoc.Helper` class namespace.
- [bpo-46415](https://bugs.python.org/issue?@action=redirect&bpo=46415) [https://bugs.python.org/issue?@action=redirect&bpo=46415]: Fix `ipaddress.ip_{address,interface,network}` raising `TypeError` instead of `ValueError` if given invalid tuple as address parameter.
- [bpo-46075](https://bugs.python.org/issue?@action=redirect&bpo=46075) [https://bugs.python.org/issue?@action=redirect&bpo=46075]: `CookieJar` with `DefaultCookiePolicy` now can process cookies from localhost with domain=localhost explicitly specified in Set-Cookie header.
- [bpo-45995](https://bugs.python.org/issue?@action=redirect&bpo=45995) [https://bugs.python.org/issue?@action=redirect&bpo=45995]: Add a “z” option to the string formatting specification that coerces negative zero floating-point values to positive zero after rounding to the format precision. Contributed by John Belmonte.
- [bpo-26175](https://bugs.python.org/issue?@action=redirect&bpo=26175) [https://bugs.python.org/issue?@action=redirect&bpo=26175]: Fully implement the `io.BufferedIOBase` or `io.TextIOBase` interface for `tempfile.SpooledTemporaryFile` objects. This lets them work correctly with higher-level layers (like compression modules). Patch by Carey Metcalfe.
- [bpo-45138](https://bugs.python.org/issue?@action=redirect&bpo=45138) [https://bugs.python.org/issue?@action=redirect&bpo=45138]: Fix a regression in the `sqlite3` trace callback where bound parameters were not expanded in the passed statement string. The regression was introduced in Python 3.10 by [bpo-40318](https://bugs.python.org/issue?@action=redirect&bpo=40318)

@action=redirect&bpo=40318]. Patch by Erlend E. Aasland.

- [bpo-44863](https://bugs.python.org/issue?@action=redirect&bpo=44863) [https://bugs.python.org/issue?@action=redirect&bpo=44863]: Allow **TypedDict** subclasses to also include **Generic** as a base class in class based syntax. Thereby allowing the user to define a generic `TypedDict`, just like a user-defined generic but with `TypedDict` semantics.
- [bpo-44587](https://bugs.python.org/issue?@action=redirect&bpo=44587) [https://bugs.python.org/issue?@action=redirect&bpo=44587]: Fix `BooleanOptionalAction` to not automatically add a default string. If a default string is desired, use a formatter to add it.
- [bpo-43827](https://bugs.python.org/issue?@action=redirect&bpo=43827) [https://bugs.python.org/issue?@action=redirect&bpo=43827]: All positional-or-keyword parameters to `ABCMeta.__new__` are now positional-only to avoid conflicts with keyword arguments to be passed to `__init_subclass__()`.
- [bpo-43218](https://bugs.python.org/issue?@action=redirect&bpo=43218) [https://bugs.python.org/issue?@action=redirect&bpo=43218]: Prevent creation of a venv whose path contains the `PATH` separator. This could affect the usage of the activate script. Patch by Dustin Rodrigues.
- [bpo-38435](https://bugs.python.org/issue?@action=redirect&bpo=38435) [https://bugs.python.org/issue?@action=redirect&bpo=38435]: Add a `process_group` parameter to `subprocess.Popen` to help move more things off of the unsafe `preexec_fn` parameter.
- [bpo-42066](https://bugs.python.org/issue?@action=redirect&bpo=42066) [https://bugs.python.org/issue?@action=redirect&bpo=42066]: Fix cookies getting sorted in `CookieJar.__iter__()` which is an extra behavior and not mentioned in RFC 2965 or Netscape cookie protocol. Now the cookies in `CookieJar` follows the order of the `Set-Cookie` header. Patch by Iman Kermani.
- [bpo-40617](https://bugs.python.org/issue?@action=redirect&bpo=40617) [https://bugs.python.org/issue?@action=redirect&bpo=40617]: Add `create_window_function()` to `sqlite3.Connection` for creating aggregate window functions. Patch by Erlend E.

Aasland.

- [bpo-40676](https://bugs.python.org/issue?@action=redirect&bpo=40676) [https://bugs.python.org/issue?@action=redirect&bpo=40676]: Convert `csv` to use Argument Clinic for `csv.field_size_limit()`, `csv.get_dialect()`, `csv.unregister_dialect()` and `csv.list_dialects()`.
- [bpo-39716](https://bugs.python.org/issue?@action=redirect&bpo=39716) [https://bugs.python.org/issue?@action=redirect&bpo=39716]: Raise an `ArgumentError` when the same subparser name is added twice to an `argparse.ArgumentParser`. This is consistent with the (default) behavior when the same option string is added twice to an `ArgumentParser`.
- [bpo-36073](https://bugs.python.org/issue?@action=redirect&bpo=36073) [https://bugs.python.org/issue?@action=redirect&bpo=36073]: Raise `ProgrammingError` instead of segfaulting on recursive usage of cursors in `sqlite3` converters. Patch by Sergey Fedoseev.
- [bpo-34975](https://bugs.python.org/issue?@action=redirect&bpo=34975) [https://bugs.python.org/issue?@action=redirect&bpo=34975]: Adds a `start_tls()` method to `StreamWriter`, which upgrades the connection with TLS using the given `SSLContext`.
- [bpo-22276](https://bugs.python.org/issue?@action=redirect&bpo=22276) [https://bugs.python.org/issue?@action=redirect&bpo=22276]: `Path` methods `glob()` and `rglob()` return only directories if *pattern* ends with a pathname components separator (`/` or `sep`). Patch by Eisuke Kawashima.
- [bpo-24905](https://bugs.python.org/issue?@action=redirect&bpo=24905) [https://bugs.python.org/issue?@action=redirect&bpo=24905]: Add `blobopen()` to `sqlite3.Connection`. `sqlite3.Blob` allows incremental I/O operations on blobs. Patch by Aviv Palivoda and Erlend E. Aasland.

## Documentation

- [gh-91888](https://github.com/python/cpython/issues/91888) [https://github.com/python/cpython/issues/91888]: Add a new `gh` role to the documentation to link to GitHub issues.

- [gh-91783](https://github.com/python/cpython/issues/91783) [https://github.com/python/cpython/issues/91783]: Document security issues concerning the use of the function `shutil.unpack_archive()`
- [gh-91547](https://github.com/python/cpython/issues/91547) [https://github.com/python/cpython/issues/91547]: Remove “Undocumented modules” page.
- [gh-91298](https://github.com/python/cpython/issues/91298) [https://github.com/python/cpython/issues/91298]: In `importlib.resources.abc`, refined the documentation of the Traversable Protocol, applying changes from `importlib_resources` 5.7.1.
- [bpo-44347](https://bugs.python.org/issue?@action=redirect&bpo=44347) [https://bugs.python.org/issue?@action=redirect&bpo=44347]: Clarify the meaning of `dirs_exist_ok`, a kwarg of `shutil.copytree()`.
- [bpo-36329](https://bugs.python.org/issue?@action=redirect&bpo=36329) [https://bugs.python.org/issue?@action=redirect&bpo=36329]: Remove ‘make -C Doc serve’ in favour of ‘make -C Doc htmlview’
- [bpo-47189](https://bugs.python.org/issue?@action=redirect&bpo=47189) [https://bugs.python.org/issue?@action=redirect&bpo=47189]: Add a What’s New in Python 3.11 entry for the Faster CPython project. Documentation by Ken Jin and Kumar Aditya.
- [bpo-38668](https://bugs.python.org/issue?@action=redirect&bpo=38668) [https://bugs.python.org/issue?@action=redirect&bpo=38668]: Update the introduction to documentation for `os.path` to remove warnings that became irrelevant after the implementations of [PEP 383](https://peps.python.org/pep-0383/) [https://peps.python.org/pep-0383/] and [PEP 529](https://peps.python.org/pep-0529/) [https://peps.python.org/pep-0529/].
- [bpo-47115](https://bugs.python.org/issue?@action=redirect&bpo=47115) [https://bugs.python.org/issue?@action=redirect&bpo=47115]: The documentation now lists which members of C structs are part of the [Limited API/Stable ABI](#).
- [bpo-46962](https://bugs.python.org/issue?@action=redirect&bpo=46962) [https://bugs.python.org/issue?@action=redirect&bpo=46962]: All docstrings in code snippets are now wrapped into `PyDoc_STR()` to follow the guideline of [PEP 7’s Documentation Strings paragraph](https://www.python.org/dev/peps/pep-0007/#documentation-strings) [https://www.python.org/dev/peps/pep-0007/#documentation-strings]. Patch by Oleg Iarygin.
- [bpo-26792](https://bugs.python.org/issue?@action=redirect&bpo=26792) [https://bugs.python.org/issue?@action=redirect&bpo=26792]: Improve the docstrings of `runpy.run_module()` and `runpy.run_path()`. Original patch by Andrew Brezovsky.

## Tests

- [gh-92169](https://github.com/python/cpython/issues/92169) [https://github.com/python/cpython/issues/92169]: Use `warnings_helper.import_deprecated()` to import deprecated modules uniformly in tests. Patch by Hugo van Kemenade.
- [gh-84461](https://github.com/python/cpython/issues/84461) [https://github.com/python/cpython/issues/84461]: When multiprocessing is enabled, `libregtest` can now use a Python executable other than `sys.executable` via the `--python` flag.
- [gh-91904](https://github.com/python/cpython/issues/91904) [https://github.com/python/cpython/issues/91904]: Fix initialization of **`PYTHONREGTEST_UNICODE_GUARD`** which prevented running regression tests on non-UTF-8 locale.
- [gh-91752](https://github.com/python/cpython/issues/91752) [https://github.com/python/cpython/issues/91752]: Added `@requires_zlib` to `test.test_tools.test_freeze.TestFreeze`.
- [gh-91607](https://github.com/python/cpython/issues/91607) [https://github.com/python/cpython/issues/91607]: Fix `test_concurrent_futures` to test the correct multiprocessing start method context in several cases where the test logic mixed this up.
- [bpo-40280](https://bugs.python.org/issue?@action=redirect&bpo=40280) [https://bugs.python.org/issue?@action=redirect&bpo=40280]: Threading tests are now skipped on WASM targets without pthread support.
- [bpo-47109](https://bugs.python.org/issue?@action=redirect&bpo=47109) [https://bugs.python.org/issue?@action=redirect&bpo=47109]: Test for **`ctypes.macholib.dyld`**, **`ctypes.macholib.dylib`**, and **`ctypes.macholib.framework`** are brought from manual pre-**`unittest`** times to **`ctypes.test`** location and structure. Patch by Oleg Iarygin.
- [bpo-29890](https://bugs.python.org/issue?@action=redirect&bpo=29890) [https://bugs.python.org/issue?@action=redirect&bpo=29890]: Add tests for **`ipaddress.IPv4Interface`** and **`ipaddress.IPv6Interface`** construction with tuple arguments. Original patch and tests by louisom.

## Build

- [gh-89452](https://github.com/python/cpython/issues/89452) [https://github.com/python/cpython/issues/89452]: `gdbm-compat` is now preferred over `ndbm` if both are available on the system. This allows avoiding the problematic `ndbm.h` on macOS.

- [gh-91731](https://github.com/python/cpython/issues/91731) [https://github.com/python/cpython/issues/91731]: Python is now built with `-std=c11` compiler option, rather than `-std=c99`. Patch by Victor Stinner.
- [bpo-47152](https://bugs.python.org/issue?@action=redirect&bpo=47152) [https://bugs.python.org/issue?@action=redirect&bpo=47152]: Add script and make target for generating `sre_constants.h`.
- [bpo-47103](https://bugs.python.org/issue?@action=redirect&bpo=47103) [https://bugs.python.org/issue?@action=redirect&bpo=47103]: Windows `PGInstrument` builds now copy a required DLL into the output directory, making it easier to run the profile stage of a PGO build.

## Windows

- [bpo-46907](https://bugs.python.org/issue?@action=redirect&bpo=46907) [https://bugs.python.org/issue?@action=redirect&bpo=46907]: Update Windows installer to use SQLite 3.38.3.
- [bpo-47239](https://bugs.python.org/issue?@action=redirect&bpo=47239) [https://bugs.python.org/issue?@action=redirect&bpo=47239]: Fixed `-list` and `-list-paths` output for [Python Launcher for Windows](#) when used in an active virtual environment.
- [bpo-46907](https://bugs.python.org/issue?@action=redirect&bpo=46907) [https://bugs.python.org/issue?@action=redirect&bpo=46907]: Update Windows installer to use SQLite 3.38.2.
- [bpo-46785](https://bugs.python.org/issue?@action=redirect&bpo=46785) [https://bugs.python.org/issue?@action=redirect&bpo=46785]: Fix race condition between `os.stat()` and unlinking a file on Windows, by using errors codes returned by `FindFirstFileW()` when appropriate in `win32_xstat_impl`.
- [bpo-40859](https://bugs.python.org/issue?@action=redirect&bpo=40859) [https://bugs.python.org/issue?@action=redirect&bpo=40859]: Update Windows build to use xz-5.2.5

## macOS

- [bpo-46907](https://bugs.python.org/issue?@action=redirect&bpo=46907) [https://bugs.python.org/issue?@action=redirect&bpo=46907]: Update macOS installer to SQLite 3.38.4.

## Tools/Demos

- [gh-91583](https://github.com/python/cpython/issues/91583) [https://github.com/python/cpython/issues/91583]: Fix regression in the code generated by Argument Clinic for functions with the `defining_class` parameter.
- [gh-91575](https://github.com/python/cpython/issues/91575) [https://github.com/python/cpython/issues/91575]: Add script `Tools/scripts/generate_re_casefix.py` and the make target `regen-re` for generating additional data for case-insensitive matching according to the current Unicode version.
- [gh-91551](https://github.com/python/cpython/issues/91551) [https://github.com/python/cpython/issues/91551]: Remove the ancient Pynche color editor. It has moved to <https://gitlab.com/warsaw/pynche>

## C API

- [gh-88279](https://github.com/python/cpython/issues/88279) [https://github.com/python/cpython/issues/88279]: Deprecate the C functions: `PySys_SetArgv()`, `PySys_SetArgvEx()`, `PySys_SetPath()`. Patch by Victor Stinner.
- [gh-92154](https://github.com/python/cpython/issues/92154) [https://github.com/python/cpython/issues/92154]: Added the `PyCode_GetCode()` function. This function does the equivalent of the Python code `getattr(code_object, 'co_code')`.
- [gh-92173](https://github.com/python/cpython/issues/92173) [https://github.com/python/cpython/issues/92173]: Fix the closure argument to `PyEval_EvalCodeEx()`.
- [gh-91320](https://github.com/python/cpython/issues/91320) [https://github.com/python/cpython/issues/91320]: Fix C++ compiler warnings about “old-style cast” (`g++ -Wold-style-cast`) in the Python C API. Use `C++ reinterpret_cast<>` and `static_cast<>` casts when the Python C API is used in C++. Patch by Victor Stinner.
- [gh-80527](https://github.com/python/cpython/issues/80527) [https://github.com/python/cpython/issues/80527]: Mark functions as deprecated by [PEP 623](https://peps.python.org/pep-0623/) [https://peps.python.org/pep-0623/]: `PyUnicode_AS_DATA()`, `PyUnicode_AS_UNICODE()`, `PyUnicode_GET_DATA_SIZE()`, `PyUnicode_GET_SIZE()`. Patch by Victor Stinner.
- [gh-91768](https://github.com/python/cpython/issues/91768) [https://github.com/python/cpython/issues/91768]:

**Py\_REFCNT()**, **Py\_TYPE()**, **Py\_SIZE()** and **Py\_IS\_TYPE()** functions argument type is now `PyObject*`, rather than `const PyObject*`. Patch by Victor Stinner.

- [gh-91020](https://github.com/python/cpython/issues/91020) [https://github.com/python/cpython/issues/91020]: Add `PyBytes_Type.tp_alloc` to initialize `PyBytesObject.ob_shash` for bytes subclasses.
- [bpo-40421](https://bugs.python.org/issue?@action=redirect&bpo=40421) [https://bugs.python.org/issue?@action=redirect&bpo=40421]: Add `PyFrame_GetLasti` C-API function to access frame object's `f_lasti` attribute safely from C code.
- [bpo-35134](https://bugs.python.org/issue?@action=redirect&bpo=35134) [https://bugs.python.org/issue?@action=redirect&bpo=35134]: Remove the `Include/code.h` header file. C extensions should only include the main `<Python.h>` header file. Patch by Victor Stinner.
- [bpo-47169](https://bugs.python.org/issue?@action=redirect&bpo=47169) [https://bugs.python.org/issue?@action=redirect&bpo=47169]: **PyOS\_CheckStack()** is now exported in the Stable ABI on Windows.
- [bpo-47169](https://bugs.python.org/issue?@action=redirect&bpo=47169) [https://bugs.python.org/issue?@action=redirect&bpo=47169]: **PyThread\_get\_thread\_native\_id()** is excluded from the stable ABI on platforms where it doesn't exist (like Solaris).
- [bpo-46343](https://bugs.python.org/issue?@action=redirect&bpo=46343) [https://bugs.python.org/issue?@action=redirect&bpo=46343]: Added **PyErr\_GetHandledException()** and **PyErr\_SetHandledException()** as simpler alternatives to **PyErr\_GetExcInfo()** and **PyErr\_SetExcInfo()**.

They are included in the stable ABI.

## Python 3.11.0 alpha 7

*Release date: 2022-04-05*

## Core and Builtins

- [bpo-47212](https://bugs.python.org/issue?@action=redirect&bpo=47212) [https://bugs.python.org/issue?@action=redirect&bpo=47212]: Raise **IndentationError** instead of **SyntaxError** for a bare `except` with no following indent. Improve **SyntaxError** locations for an un-parenthesized generator used as arguments. Patch by Matthieu Dartiailh.
- [bpo-47186](https://bugs.python.org/issue?@action=redirect&bpo=47186) [https://bugs.python.org/issue?@action=redirect&bpo=47186]: Replace **JUMP\_IF\_NOT\_EG\_MATCH** by **CHECK\_EG\_MATCH** + `jump`.
- [bpo-47176](https://bugs.python.org/issue?@action=redirect&bpo=47176) [https://bugs.python.org/issue?@action=redirect&bpo=47176]: Emscripten builds cannot handle signals in the usual way due to platform limitations. Python can now handle signals. To use, set `Module.Py_EmscriptenSignalBuffer` to be a single byte `SharedArrayBuffer` and set `Py_EMSCRIPTEN_SIGNAL_HANDLING` to 1. Writing a number into the `SharedArrayBuffer` will cause the corresponding signal to be raised into the Python thread.
- [bpo-47186](https://bugs.python.org/issue?@action=redirect&bpo=47186) [https://bugs.python.org/issue?@action=redirect&bpo=47186]: Replace **JUMP\_IF\_NOT\_EXC\_MATCH** by **CHECK\_EXC\_MATCH** + `jump`.
- [bpo-47120](https://bugs.python.org/issue?@action=redirect&bpo=47120) [https://bugs.python.org/issue?@action=redirect&bpo=47120]: Replace the absolute jump opcode **JUMP\_NO\_INTERRUPT** by the relative **JUMP\_BACKWARD\_NO\_INTERRUPT**.
- [bpo-46841](https://bugs.python.org/issue?@action=redirect&bpo=46841) [https://bugs.python.org/issue?@action=redirect&bpo=46841]: Avoid unnecessary allocations when comparing code objects.
- [bpo-47182](https://bugs.python.org/issue?@action=redirect&bpo=47182) [https://bugs.python.org/issue?@action=redirect&bpo=47182]: Fix a crash when using a named unicode character like `"\N{digit nine}"` after the main interpreter has been initialized a second time.
- [bpo-47162](https://bugs.python.org/issue?@action=redirect&bpo=47162) [https://bugs.python.org/issue?@action=redirect&bpo=47162]: WebAssembly cannot deal with bad function pointer casts (different count or types of arguments). Python can now use call trampolines to mitigate the problem. Define **PY\_CALL\_TRAMPOLINE** to enable call

trampolines.

- [bpo-46775](https://bugs.python.org/issue?@action=redirect&bpo=46775) [https://bugs.python.org/issue?@action=redirect&bpo=46775]: Some Windows system error codes ( $\geq 10000$ ) are now mapped into the correct errno and may now raise a subclass of `OSError`. Patch by Donghee Na.
- [bpo-47129](https://bugs.python.org/issue?@action=redirect&bpo=47129) [https://bugs.python.org/issue?@action=redirect&bpo=47129]: Improve error messages in f-string syntax errors concerning empty expressions.
- [bpo-47117](https://bugs.python.org/issue?@action=redirect&bpo=47117) [https://bugs.python.org/issue?@action=redirect&bpo=47117]: Fix a crash if we fail to decode characters in interactive mode if the tokenizer buffers are uninitialized. Patch by Pablo Galindo.
- [bpo-47127](https://bugs.python.org/issue?@action=redirect&bpo=47127) [https://bugs.python.org/issue?@action=redirect&bpo=47127]: Speed up calls to c functions with keyword arguments by 25% with specialization. Patch by Kumar Aditya.
- [bpo-47120](https://bugs.python.org/issue?@action=redirect&bpo=47120) [https://bugs.python.org/issue?@action=redirect&bpo=47120]: Replaced `JUMP_ABSOLUTE` by the relative jump `JUMP_BACKWARD`.
- [bpo-42197](https://bugs.python.org/issue?@action=redirect&bpo=42197) [https://bugs.python.org/issue?@action=redirect&bpo=42197]: `PyFrame_FastToLocalsWithError()` and `PyFrame_LocalsToFast()` are no longer called during profiling nor tracing. C code can access the `f_locals` attribute of `PyFrameObject` by calling `PyFrame_GetLocals()`.
- [bpo-47070](https://bugs.python.org/issue?@action=redirect&bpo=47070) [https://bugs.python.org/issue?@action=redirect&bpo=47070]: Improve performance of `array_inplace_repeat` by reducing the number of invocations of `memcpy`. Refactor the `repeat` and `inplace_repeat` methods of `array`, `bytes`, `bytearray` and `unicodeobject` to use the common `_PyBytes_Repeat`.
- [bpo-47053](https://bugs.python.org/issue?@action=redirect&bpo=47053) [https://bugs.python.org/issue?@action=redirect&bpo=47053]: Reduce de-optimization in the specialized `BINARY_OP_INPLACE_ADD_UNICODE` opcode.
- [bpo-47045](https://bugs.python.org/issue?@action=redirect&bpo=47045) [https://bugs.python.org/issue?@action=redirect&bpo=47045]: Remove the `f_state` field from the `_PyInterpreterFrame` struct. Add the `owner` field to the `_PyInterpreterFrame` struct to make ownership explicit to

simplify clearing and deallocating frames and generators.

- [bpo-46968](https://bugs.python.org/issue?@action=redirect&bpo=46968) [https://bugs.python.org/issue?@action=redirect&bpo=46968]: Check for the existence of the “sys/auxv.h” header in [faulthandler](#) to avoid compilation problems in systems where this header doesn’t exist. Patch by Pablo Galindo
- [bpo-46329](https://bugs.python.org/issue?@action=redirect&bpo=46329) [https://bugs.python.org/issue?@action=redirect&bpo=46329]: Use low bit of `LOAD_GLOBAL` to indicate whether to push a `NULL` before the global. Helps streamline the call sequence a bit.
- [bpo-46841](https://bugs.python.org/issue?@action=redirect&bpo=46841) [https://bugs.python.org/issue?@action=redirect&bpo=46841]: Quicken bytecode in-place by storing it as part of the corresponding `PyCodeObject`.
- [bpo-47012](https://bugs.python.org/issue?@action=redirect&bpo=47012) [https://bugs.python.org/issue?@action=redirect&bpo=47012]: Speed up iteration of [bytes](#) and [bytearray](#) by 30%. Patch by Kumar Aditya.
- [bpo-47009](https://bugs.python.org/issue?@action=redirect&bpo=47009) [https://bugs.python.org/issue?@action=redirect&bpo=47009]: Improved the performance of `list.append()` and list comprehensions by optimizing for the common case, where no resize is needed. Patch by Dennis Sweeney.
- [bpo-47005](https://bugs.python.org/issue?@action=redirect&bpo=47005) [https://bugs.python.org/issue?@action=redirect&bpo=47005]: Improve performance of `bytearray_repeat` and `bytearray_irepeat` by reducing the number of invocations of `memcpy`.
- [bpo-46829](https://bugs.python.org/issue?@action=redirect&bpo=46829) [https://bugs.python.org/issue?@action=redirect&bpo=46829]: Deprecate passing a message into [asyncio.Future.cancel\(\)](#) and [asyncio.Task.cancel\(\)](#)
- [bpo-46993](https://bugs.python.org/issue?@action=redirect&bpo=46993) [https://bugs.python.org/issue?@action=redirect&bpo=46993]: Speed up [bytearray](#) creation from [list](#) and [tuple](#) by 40%. Patch by Kumar Aditya.
- [bpo-39829](https://bugs.python.org/issue?@action=redirect&bpo=39829) [https://bugs.python.org/issue?@action=redirect&bpo=39829]: Removed the `__len__()` call when initializing a list and moved initializing to `list_extend`. Patch by Jeremiah Pascual.
- [bpo-46944](https://bugs.python.org/issue?@action=redirect&bpo=46944) [https://bugs.python.org/issue?@action=redirect&bpo=46944]: Speed up throwing exception in generator with [METH\\_FASTCALL](#) calling convention. Patch by Kumar Aditya.

- [bpo-46841](https://bugs.python.org/issue?@action=redirect&bpo=46841) [https://bugs.python.org/issue?@action=redirect&bpo=46841]: Modify `STORE_SUBSCR` to use an inline cache entry (rather than its oparg) as an adaptive counter.
- [bpo-46841](https://bugs.python.org/issue?@action=redirect&bpo=46841) [https://bugs.python.org/issue?@action=redirect&bpo=46841]: Use inline caching for `PRECALL` and `CALL`, and remove the internal machinery for managing the (now unused) non-inline caches.
- [bpo-46881](https://bugs.python.org/issue?@action=redirect&bpo=46881) [https://bugs.python.org/issue?@action=redirect&bpo=46881]: Statically allocate and initialize the latin1 characters.
- [bpo-46838](https://bugs.python.org/issue?@action=redirect&bpo=46838) [https://bugs.python.org/issue?@action=redirect&bpo=46838]: Improve syntax errors for incorrect function definitions. Patch by Pablo Galindo
- [bpo-43721](https://bugs.python.org/issue?@action=redirect&bpo=43721) [https://bugs.python.org/issue?@action=redirect&bpo=43721]: Fix docstrings of `getter`, `setter`, and `deleter` to clarify that they create a new copy of the property.
- [bpo-43224](https://bugs.python.org/issue?@action=redirect&bpo=43224) [https://bugs.python.org/issue?@action=redirect&bpo=43224]: Make grammar changes required for PEP 646.

## Library

- [bpo-47208](https://bugs.python.org/issue?@action=redirect&bpo=47208) [https://bugs.python.org/issue?@action=redirect&bpo=47208]: Allow vendors to override `CTYPES_MAX_ARGCOUNT`.
- [bpo-23689](https://bugs.python.org/issue?@action=redirect&bpo=23689) [https://bugs.python.org/issue?@action=redirect&bpo=23689]: `re` module: fix memory leak when a match is terminated by a signal or memory allocation failure. Patch by Ma Lin.
- [bpo-47167](https://bugs.python.org/issue?@action=redirect&bpo=47167) [https://bugs.python.org/issue?@action=redirect&bpo=47167]: Allow overriding a future compliance check in `asyncio.Task`.
- [bpo-47151](https://bugs.python.org/issue?@action=redirect&bpo=47151) [https://bugs.python.org/issue?@action=redirect&bpo=47151]: When subprocess tries to use `vfork`, it now falls back to `fork` if `vfork` returns an error. This

allows use in situations where `vfork` isn't allowed by the OS kernel.

- [bpo-47152](https://bugs.python.org/issue?@action=redirect&bpo=47152) [https://bugs.python.org/issue?@action=redirect&bpo=47152]: Convert the `re` module into a package. Deprecate modules `sre_compile`, `sre_constants` and `sre_parse`.
- [bpo-4833](https://bugs.python.org/issue?@action=redirect&bpo=4833) [https://bugs.python.org/issue?@action=redirect&bpo=4833]: Add `ZipFile.mkdir()`
- [bpo-27929](https://bugs.python.org/issue?@action=redirect&bpo=27929) [https://bugs.python.org/issue?@action=redirect&bpo=27929]: Fix `asyncio.loop.sock_connect()` to only resolve names for `socket.AF_INET` or `socket.AF_INET6` families. Resolution may not make sense for other families, like `socket.AF_BLUETOOTH` and `socket.AF_UNIX`.
- [bpo-14265](https://bugs.python.org/issue?@action=redirect&bpo=14265) [https://bugs.python.org/issue?@action=redirect&bpo=14265]: Adds the fully qualified test name to unittest output
- [bpo-47061](https://bugs.python.org/issue?@action=redirect&bpo=47061) [https://bugs.python.org/issue?@action=redirect&bpo=47061]: Deprecate the `aifc` module.
- [bpo-39622](https://bugs.python.org/issue?@action=redirect&bpo=39622) [https://bugs.python.org/issue?@action=redirect&bpo=39622]: Handle Ctrl + C in asyncio programs to interrupt the main task.
- [bpo-47101](https://bugs.python.org/issue?@action=redirect&bpo=47101) [https://bugs.python.org/issue?@action=redirect&bpo=47101]: `hashlib.algorithms_available` now lists only algorithms that are provided by activated crypto providers on OpenSSL 3.0. Legacy algorithms are not listed unless the legacy provider has been loaded into the default OSSL context.
- [bpo-47099](https://bugs.python.org/issue?@action=redirect&bpo=47099) [https://bugs.python.org/issue?@action=redirect&bpo=47099]: All `URLError` exception messages raised in `urllib.request.URLopener` now contain a colon between `ftp error` and the rest of the

message. Previously, `open_ftp()` missed the colon. Patch by Oleg Iarygin.

- [bpo-47099](https://bugs.python.org/issue?@action=redirect&bpo=47099) [https://bugs.python.org/issue?@action=redirect&bpo=47099]: Exception chaining is changed from `Exception.with_traceback()` / `sys.exc_info()` to [PEP 3134](https://peps.python.org/pep-3134/) [https://peps.python.org/pep-3134/]. Patch by Oleg Iarygin.
- [bpo-47095](https://bugs.python.org/issue?@action=redirect&bpo=47095) [https://bugs.python.org/issue?@action=redirect&bpo=47095]: `hashlib`'s internal `_blake2` module now prefers `libb2` from <https://www.blake2.net/> over Python's vendored copy of `blake2`.
- [bpo-47098](https://bugs.python.org/issue?@action=redirect&bpo=47098) [https://bugs.python.org/issue?@action=redirect&bpo=47098]: The Keccak Code Package for `hashlib`'s internal `_sha3` module has been replaced with `tiny_sha3`. The module is used as fallback when Python is built without OpenSSL.
- [bpo-47088](https://bugs.python.org/issue?@action=redirect&bpo=47088) [https://bugs.python.org/issue?@action=redirect&bpo=47088]: Implement `typing.LiteralString`, part of [PEP 675](https://peps.python.org/pep-0675/) [https://peps.python.org/pep-0675/]. Patch by Jelle Zijlstra.
- [bpo-42885](https://bugs.python.org/issue?@action=redirect&bpo=42885) [https://bugs.python.org/issue?@action=redirect&bpo=42885]: Optimize `re.search()`, `re.split()`, `re.findall()`, `re.finditer()` and `re.sub()` for regular expressions starting with `\A` or `^`.
- [bpo-23691](https://bugs.python.org/issue?@action=redirect&bpo=23691) [https://bugs.python.org/issue?@action=redirect&bpo=23691]: Protect the `re.finditer()` iterator from re-entering.
- [bpo-47067](https://bugs.python.org/issue?@action=redirect&bpo=47067) [https://bugs.python.org/issue?@action=redirect&bpo=47067]: Optimize calling `GenericAlias` objects by using [PEP 590](https://peps.python.org/pep-0590/) [https://peps.python.org/pep-0590/] `vectorcall` and by replacing `PyObject_SetAttrString` with `PyObject_SetAttr`.
- [bpo-28080](https://bugs.python.org/issue?@action=redirect&bpo=28080) [https://bugs.python.org/issue?@action=redirect&bpo=28080]

@action=redirect&bpo=28080]: Add the *metadata\_encoding* parameter in the `zipfile.ZipFile` constructor and the `--metadata-encoding` option in the `zipfile` CLI to allow reading zipfiles using non-standard codecs to encode the filenames within the archive.

- [bpo-47000](https://bugs.python.org/issue?@action=redirect&bpo=47000) [https://bugs.python.org/issue?@action=redirect&bpo=47000]: Make `io.text_encoding()` returns “utf-8” when UTF-8 mode is enabled.
- [bpo-42369](https://bugs.python.org/issue?@action=redirect&bpo=42369) [https://bugs.python.org/issue?@action=redirect&bpo=42369]: Fix thread safety of `zipfile._SharedFile.tell()` to avoid a “zipfile.BadZipFile: Bad CRC-32 for file” exception when reading a `ZipFile` from multiple threads.
- [bpo-38256](https://bugs.python.org/issue?@action=redirect&bpo=38256) [https://bugs.python.org/issue?@action=redirect&bpo=38256]: Fix `binascii.crc32()` when it is compiled to use zlib’s `crc32` to work properly on inputs 4 + GiB in length instead of returning the wrong result. The workaround prior to this was to always feed the function data in increments smaller than 4GiB or to just call the `zlib` module function.

We also have `binascii.crc32()` release the GIL when computing on larger inputs as `zlib.crc32()` and `hashlib` do.

This also boosts performance on Windows as it now uses the `zlib` `crc32` implementation for `binascii.crc32()` for a 2-3x speedup.

That the `stdlib` has a `crc32` API in two modules is a known historical oddity. This moves us closer to a single implementation behind them.

- [bpo-47066](https://bugs.python.org/issue?@action=redirect&bpo=47066) [https://bugs.python.org/issue?@action=redirect&bpo=47066]: Global inline flags (e.g. `(?i)`) can now only be used at the start of the regular expressions. Using them not at the start of expression was deprecated since Python 3.6.

- [bpo-39394](https://bugs.python.org/issue?@action=redirect&bpo=39394) [https://bugs.python.org/issue?@action=redirect&bpo=39394]: A warning about inline flags not at the start of the regular expression now contains the position of the flag.
- [bpo-433030](https://bugs.python.org/issue?@action=redirect&bpo=433030) [https://bugs.python.org/issue?@action=redirect&bpo=433030]: Add support of atomic grouping (`(?>...)`) and possessive quantifiers (`*+, ++, ?+, {m,n}+`) in **regular expressions**.
- [bpo-47062](https://bugs.python.org/issue?@action=redirect&bpo=47062) [https://bugs.python.org/issue?@action=redirect&bpo=47062]: Implement **`asyncio.Runner`** context manager.
- [bpo-46382](https://bugs.python.org/issue?@action=redirect&bpo=46382) [https://bugs.python.org/issue?@action=redirect&bpo=46382]: **`dataclass()`** `slots=True` now correctly omits slots already defined in base classes. Patch by Arie Bovenberg.
- [bpo-47057](https://bugs.python.org/issue?@action=redirect&bpo=47057) [https://bugs.python.org/issue?@action=redirect&bpo=47057]: Use FASTCALL convention for `FutureIter.throw()`
- [bpo-47061](https://bugs.python.org/issue?@action=redirect&bpo=47061) [https://bugs.python.org/issue?@action=redirect&bpo=47061]: Deprecate the various modules listed by **PEP 594** [https://peps.python.org/pep-0594/]:  
  
aifc, asynchat, asyncore, audioop, cgi, cgitb, chunk, crypt, imghdr, msilib, nntplib, nis, ossaudiodev, pipes, smtpd, sndhdr, spwd, sunau, telnetlib, uu, xdrlib
- [bpo-34790](https://bugs.python.org/issue?@action=redirect&bpo=34790) [https://bugs.python.org/issue?@action=redirect&bpo=34790]: Remove passing coroutine objects to **`asyncio.wait()`**.
- [bpo-47039](https://bugs.python.org/issue?@action=redirect&bpo=47039) [https://bugs.python.org/issue?@action=redirect&bpo=47039]: Normalize `repr()` of `asyncio` future and task objects.
- [bpo-2604](https://bugs.python.org/issue?@action=redirect&bpo=2604) [https://bugs.python.org/issue?@action=redirect&bpo=2604]: Fix bug where doctests using globals would fail when run

multiple times.

- [bpo-45150](https://bugs.python.org/issue?@action=redirect&bpo=45150) [https://bugs.python.org/issue?@action=redirect&bpo=45150]: Add `hashlib.file_digest()` helper for efficient hashing of file object.
- [bpo-34861](https://bugs.python.org/issue?@action=redirect&bpo=34861) [https://bugs.python.org/issue?@action=redirect&bpo=34861]: Made cumtime the default sorting key for cProfile
- [bpo-45997](https://bugs.python.org/issue?@action=redirect&bpo=45997) [https://bugs.python.org/issue?@action=redirect&bpo=45997]: Fix `asyncio.Semaphore` re-acquiring FIFO order.
- [bpo-47022](https://bugs.python.org/issue?@action=redirect&bpo=47022) [https://bugs.python.org/issue?@action=redirect&bpo=47022]: The `asynchat`, `asyncore` and `smtpd` modules have been deprecated since at least Python 3.6. Their documentation and deprecation warnings and have now been updated to note they will be removed in Python 3.12 (PEP 594 [https://peps.python.org/pep-0594/]).
- [bpo-43253](https://bugs.python.org/issue?@action=redirect&bpo=43253) [https://bugs.python.org/issue?@action=redirect&bpo=43253]: Fix a crash when closing transports where the underlying socket handle is already invalid on the Proactor event loop.
- [bpo-40280](https://bugs.python.org/issue?@action=redirect&bpo=40280) [https://bugs.python.org/issue?@action=redirect&bpo=40280]: `select.select()` now passes NULL to `select` for each empty fdset.
- [bpo-47004](https://bugs.python.org/issue?@action=redirect&bpo=47004) [https://bugs.python.org/issue?@action=redirect&bpo=47004]: Apply bugfixes from `importlib_metadata` 4.11.3, including bugfix for `EntryPoint.extras`, which was returning match objects and not the extras strings.
- [bpo-46998](https://bugs.python.org/issue?@action=redirect&bpo=46998) [https://bugs.python.org/issue?@action=redirect&bpo=46998]: Allow subclassing of `typing.Any`. Patch by Shantanu Jain.
- [bpo-46995](https://bugs.python.org/issue?@action=redirect&bpo=46995) [https://bugs.python.org/issue?@action=redirect&bpo=46995]

@action=redirect&bpo=46995]: Deprecate missing **asyncio.Task.set\_name()** for third-party task implementations, schedule making it mandatory in Python 3.13.

- [bpo-46994](https://bugs.python.org/issue?@action=redirect&bpo=46994) [https://bugs.python.org/issue?@action=redirect&bpo=46994]: Accept explicit contextvars.Context in **asyncio.create\_task()** and **asyncio.loop.create\_task()**.
- [bpo-46981](https://bugs.python.org/issue?@action=redirect&bpo=46981) [https://bugs.python.org/issue?@action=redirect&bpo=46981]: `typing.get_args(typing.Tuple[()])` now returns `()` instead of `((),)`.
- [bpo-46968](https://bugs.python.org/issue?@action=redirect&bpo=46968) [https://bugs.python.org/issue?@action=redirect&bpo=46968]: Add `os.sysconf_names['SC_MINSIGSTKSZ']`.
- [bpo-46985](https://bugs.python.org/issue?@action=redirect&bpo=46985) [https://bugs.python.org/issue?@action=redirect&bpo=46985]: Upgrade pip wheel bundled with ensurepip (pip 22.0.4)
- [bpo-46968](https://bugs.python.org/issue?@action=redirect&bpo=46968) [https://bugs.python.org/issue?@action=redirect&bpo=46968]: **faulthandler**: On Linux 5.14 and newer, dynamically determine size of signal handler stack size CPython allocates using `getauxval(AT_MINSIGSTKSZ)`. This change allows for Python extension's request to Linux kernel to use AMX\_TILE instruction set on Sapphire Rapids Xeon processor to succeed, unblocking use of the ISA in frameworks.
- [bpo-46917](https://bugs.python.org/issue?@action=redirect&bpo=46917) [https://bugs.python.org/issue?@action=redirect&bpo=46917]: The **math.nan** value is now always available. Patch by Victor Stinner.
- [bpo-46955](https://bugs.python.org/issue?@action=redirect&bpo=46955) [https://bugs.python.org/issue?@action=redirect&bpo=46955]: Expose **asyncio.base\_events.Server** as **asyncio.Server**. Patch by Stefan Zabka.

- [bpo-23325](https://bugs.python.org/issue?@action=redirect&bpo=23325) [https://bugs.python.org/issue?@action=redirect&bpo=23325]: The `signal` module no longer assumes that `SIG_IGN` and `SIG_DFL` are small int singletons.
- [bpo-46932](https://bugs.python.org/issue?@action=redirect&bpo=46932) [https://bugs.python.org/issue?@action=redirect&bpo=46932]: Update bundled libexpat to 2.4.7
- [bpo-46933](https://bugs.python.org/issue?@action=redirect&bpo=46933) [https://bugs.python.org/issue?@action=redirect&bpo=46933]: The `pwd` module is now optional. `os.path.expanduser()` returns the path when the `pwd` module is not available.
- [bpo-40059](https://bugs.python.org/issue?@action=redirect&bpo=40059) [https://bugs.python.org/issue?@action=redirect&bpo=40059]: [PEP 680](https://peps.python.org/pep-0680/) [https://peps.python.org/pep-0680/], the `tomllib` module. Adds support for parsing TOML.
- [bpo-464471](https://bugs.python.org/issue?@action=redirect&bpo=464471) [https://bugs.python.org/issue?@action=redirect&bpo=464471]: `asyncio.timeout()` and `asyncio.timeout_at()` context managers added. Patch by Tin Tvrtković and Andrew Svetlov.
- [bpo-46805](https://bugs.python.org/issue?@action=redirect&bpo=46805) [https://bugs.python.org/issue?@action=redirect&bpo=46805]: Added raw datagram socket functions for asyncio: `sock_sendto()`, `sock_recvfrom()` and `sock_recvfrom_into()`.
- [bpo-46644](https://bugs.python.org/issue?@action=redirect&bpo=46644) [https://bugs.python.org/issue?@action=redirect&bpo=46644]: No longer require valid typeforms to be callable. This allows `typing.Annotated` to wrap `typing.ParamSpecArgs` and `dataclasses.InitVar`. Patch by Gregory Beauregard.
- [bpo-46581](https://bugs.python.org/issue?@action=redirect&bpo=46581) [https://bugs.python.org/issue?@action=redirect&bpo=46581]: Brings `ParamSpec` propagation for `GenericAlias` in line with `Concatenate` (and others).
- [bpo-45413](https://bugs.python.org/issue?@action=redirect&bpo=45413) [https://bugs.python.org/issue?@action=redirect&bpo=45413]: Define `posix_venv` and `nt_venv`

[sysconfig installation schemes](#) to be used for bootstrapping new virtual environments. Add *venv* sysconfig installation scheme to get the appropriate one of the above. The schemes are identical to the pre-existing *posix\_prefix* and *nt* install schemes. The **venv** module now uses the *venv* scheme to create new virtual environments instead of hardcoding the paths depending only on the platform. Downstream Python distributors customizing the *posix\_prefix* or *nt* install scheme in a way that is not compatible with the install scheme used in virtual environments are encouraged not to customize the *venv* schemes. When Python itself runs in a virtual environment, [sysconfig.get\\_default\\_scheme\(\)](#) and [sysconfig.get\\_preferred\\_scheme\(\)](#) with `key="prefix"` returns *venv*.

- [bpo-43224](#) [<https://bugs.python.org/issue?@action=redirect&bpo=43224>]: Implement support for PEP 646 in `typing.py`.
- [bpo-43224](#) [<https://bugs.python.org/issue?@action=redirect&bpo=43224>]: Allow unpacking `types.GenericAlias` objects, e.g. `*tuple[int, str]`.
- [bpo-46557](#) [<https://bugs.python.org/issue?@action=redirect&bpo=46557>]: Warnings captured by the logging module are now logged without a format string to prevent systems that group logs by the `msg` argument from grouping captured warnings together.
- [bpo-41370](#) [<https://bugs.python.org/issue?@action=redirect&bpo=41370>]: [typing.get\\_type\\_hints\(\)](#) now supports evaluating strings as forward references in [PEP 585 generic aliases](#).
- [bpo-46607](#) [<https://bugs.python.org/issue?@action=redirect&bpo=46607>]: Add **DeprecationWarning** to **LegacyInterpolation**, deprecated in the docstring since Python 3.2. Will be removed in Python 3.13. Use **BasicInterpolation** or **ExtendedInterpolation** instead.

- [bpo-26120](https://bugs.python.org/issue?@action=redirect&bpo=26120) [https://bugs.python.org/issue?@action=redirect&bpo=26120]: **pydoc** now excludes `__future__` imports from the module's data items.
- [bpo-46480](https://bugs.python.org/issue?@action=redirect&bpo=46480) [https://bugs.python.org/issue?@action=redirect&bpo=46480]: Add **`typing.assert_type()`**. Patch by Jelle Zijlstra.
- [bpo-46421](https://bugs.python.org/issue?@action=redirect&bpo=46421) [https://bugs.python.org/issue?@action=redirect&bpo=46421]: Fix a unittest issue where if the command was invoked as `python -m unittest` and the filename(s) began with a dot (`.`), a `ValueError` is returned.
- [bpo-46245](https://bugs.python.org/issue?@action=redirect&bpo=46245) [https://bugs.python.org/issue?@action=redirect&bpo=46245]: Add optional parameter *dirfd* in **`shutil.rmtree()`**.
- [bpo-22859](https://bugs.python.org/issue?@action=redirect&bpo=22859) [https://bugs.python.org/issue?@action=redirect&bpo=22859]: **`usageExit()`** is marked deprecated, to be removed in 3.13.
- [bpo-46170](https://bugs.python.org/issue?@action=redirect&bpo=46170) [https://bugs.python.org/issue?@action=redirect&bpo=46170]: Improve the error message when you try to subclass an instance of **`typing.NewType`**.
- [bpo-40296](https://bugs.python.org/issue?@action=redirect&bpo=40296) [https://bugs.python.org/issue?@action=redirect&bpo=40296]: Fix supporting generic aliases in **`pydoc`**.
- [bpo-20392](https://bugs.python.org/issue?@action=redirect&bpo=20392) [https://bugs.python.org/issue?@action=redirect&bpo=20392]: Fix inconsistency with uppercase file extensions in **`MimeTypes.guess_type()`**. Patch by Kumar Aditya.
- [bpo-46030](https://bugs.python.org/issue?@action=redirect&bpo=46030) [https://bugs.python.org/issue?@action=redirect&bpo=46030]: Add `LOCAL_CREDS`, `LOCAL_CREDS_PERSISTENT` and `SCM_CREDS2` FreeBSD constants to the socket module.
- [bpo-44439](https://bugs.python.org/issue?@action=redirect&bpo=44439) [https://bugs.python.org/issue?@action=redirect&bpo=44439]: Fix `.write()` method of a

member file in `ZipFile`, when the input data is an object that supports the buffer protocol, the file length may be wrong.

- [bpo-45171](https://bugs.python.org/issue?@action=redirect&bpo=45171) [https://bugs.python.org/issue?@action=redirect&bpo=45171]: Fix handling of the `stacklevel` argument to logging functions in the `logging` module so that it is consistent across all logging functions and, as advertised, similar to the `stacklevel` argument used in `warn()`.
- [bpo-24959](https://bugs.python.org/issue?@action=redirect&bpo=24959) [https://bugs.python.org/issue?@action=redirect&bpo=24959]: Fix bug where `unittest` sometimes drops frames from tracebacks of exceptions raised in tests.
- [bpo-44859](https://bugs.python.org/issue?@action=redirect&bpo=44859) [https://bugs.python.org/issue?@action=redirect&bpo=44859]: Raise more accurate and [PEP 249](https://peps.python.org/pep-0249/) [https://peps.python.org/pep-0249/] compatible exceptions in `sqlite3`.
  - Raise `InterfaceError` instead of `ProgrammingError` for `SQLITE_MISUSE` errors.
  - Don't overwrite `BufferError` with `ValueError` when conversion to BLOB fails.
  - Raise `ProgrammingError` instead of `Warning` if user tries to `execute()` more than one SQL statement.
  - Raise `ProgrammingError` instead of `ValueError` if an SQL query contains null characters.
- [bpo-44493](https://bugs.python.org/issue?@action=redirect&bpo=44493) [https://bugs.python.org/issue?@action=redirect&bpo=44493]: Add missing terminated NUL in `sockaddr_un`'s length

This was potentially observable when using non-abstract `AF_UNIX` datagram sockets to processes written in another programming language.

- [bpo-41930](https://bugs.python.org/issue?@action=redirect&bpo=41930) [https://bugs.python.org/issue?@action=redirect&bpo=41930]: Add `serialize()` and

`deserialize()` support to `sqlite3`. Patch by Erlend E. Aasland.

- [bpo-33178](https://bugs.python.org/issue?@action=redirect&bpo=33178) [https://bugs.python.org/issue?@action=redirect&bpo=33178]: Added `ctypes.BigEndianUnion` and `ctypes.LittleEndianUnion` classes, as originally documented in the library docs but not yet implemented.
- [bpo-43352](https://bugs.python.org/issue?@action=redirect&bpo=43352) [https://bugs.python.org/issue?@action=redirect&bpo=43352]: Add an `Barrier` object in synchronization primitives of `asyncio` Lib in order to be consistant with `Barrier` from *threading* and *multiprocessing* libs\*
- [bpo-35859](https://bugs.python.org/issue?@action=redirect&bpo=35859) [https://bugs.python.org/issue?@action=redirect&bpo=35859]: `re` module, fix a few bugs about capturing group. In rare cases, capturing group gets an incorrect string. Patch by Ma Lin.

## Documentation

- [bpo-45099](https://bugs.python.org/issue?@action=redirect&bpo=45099) [https://bugs.python.org/issue?@action=redirect&bpo=45099]: Document internal `asyncio` API.
- [bpo-47126](https://bugs.python.org/issue?@action=redirect&bpo=47126) [https://bugs.python.org/issue?@action=redirect&bpo=47126]: Update PEP URLs to [PEP 676](https://peps.python.org/pep-0676/) [https://peps.python.org/pep-0676/]’s new canonical form.
- [bpo-47040](https://bugs.python.org/issue?@action=redirect&bpo=47040) [https://bugs.python.org/issue?@action=redirect&bpo=47040]: Clarified the old Python versions compatiblity note of `binascii.crc32()` / `zlib.adler32()` / `zlib.crc32()` functions.
- [bpo-46033](https://bugs.python.org/issue?@action=redirect&bpo=46033) [https://bugs.python.org/issue?@action=redirect&bpo=46033]: Clarify `for` statement execution in its doc.
- [bpo-45790](https://bugs.python.org/issue?@action=redirect&bpo=45790) [https://bugs.python.org/issue?@action=redirect&bpo=45790]: Adjust inaccurate phrasing in [Defining Extension Types: Tutorial](#) about the `ob_base` field and the macros used to access its contents.
- [bpo-42340](https://bugs.python.org/issue?@action=redirect&bpo=42340) [https://bugs.python.org/issue?@action=redirect&bpo=42340]: Document that in some circumstances `KeyboardInterrupt` may cause the code to

enter an inconsistent state. Provided a sample workaround to avoid it if needed.

- [bpo-41233](https://bugs.python.org/issue?@action=redirect&bpo=41233) [https://bugs.python.org/issue?@action=redirect&bpo=41233]: Link the `errno`s referenced in `Doc/library/exceptions.rst` to their respective section in `Doc/library/errno.rst`, and vice versa. Previously this was only done for `EINTR` and `InterruptedError`. Patch by Yan “yyyyyyyan” Orestes.

## Tests

- [bpo-47205](https://bugs.python.org/issue?@action=redirect&bpo=47205) [https://bugs.python.org/issue?@action=redirect&bpo=47205]: Skip test for `sched_getaffinity()` and `sched_setaffinity()` error case on FreeBSD.
- [bpo-46126](https://bugs.python.org/issue?@action=redirect&bpo=46126) [https://bugs.python.org/issue?@action=redirect&bpo=46126]: Restore ‘descriptions’ when running tests internally.
- [bpo-47104](https://bugs.python.org/issue?@action=redirect&bpo=47104) [https://bugs.python.org/issue?@action=redirect&bpo=47104]: Rewrite `asyncio.to_thread()` tests to use `unittest.IsolatedAsyncioTestCase`.
- [bpo-40280](https://bugs.python.org/issue?@action=redirect&bpo=40280) [https://bugs.python.org/issue?@action=redirect&bpo=40280]: The test suite is now passing on the Emscripten platform. All fork, socket, and subprocess-based tests are skipped.
- [bpo-47037](https://bugs.python.org/issue?@action=redirect&bpo=47037) [https://bugs.python.org/issue?@action=redirect&bpo=47037]: Skip `strftime("%4Y")` feature test on Windows. It can cause an assertion error in debug builds.
- [bpo-46587](https://bugs.python.org/issue?@action=redirect&bpo=46587) [https://bugs.python.org/issue?@action=redirect&bpo=46587]: Skip tests if platform’s `strftime` does not support non-portable glibc extensions.
- [bpo-47015](https://bugs.python.org/issue?@action=redirect&bpo=47015) [https://bugs.python.org/issue?@action=redirect&bpo=47015]: A test case for `os.sendfile()` is converted from deprecated `asyncore` (see [PEP 594](https://peps.python.org/pep-0594/) [https://peps.python.org/pep-0594/]) to `asyncio`. Patch by Oleg Iarygin.

## Build

- [bpo-40280](https://bugs.python.org/issue?@action=redirect&bpo=40280) [https://bugs.python.org/issue?@action=redirect&bpo=40280]: Add configure option `--enable-wasm-dynamic-linking` to enable `dlopen` and `MAIN_MODULE / SIDE_MODULE` on `wasm32-emscripten`.
- [bpo-46023](https://bugs.python.org/issue?@action=redirect&bpo=46023) [https://bugs.python.org/issue?@action=redirect&bpo=46023]: `makesetup` now detects and skips all duplicated module definitions. The first entry wins.
- [bpo-40280](https://bugs.python.org/issue?@action=redirect&bpo=40280) [https://bugs.python.org/issue?@action=redirect&bpo=40280]: Add `SOABI` `wasm32-emscripten` for Emscripten and `wasm32-wasi` for WASI on 32bit WASM as well as `wasm64` counter parts.
- [bpo-47032](https://bugs.python.org/issue?@action=redirect&bpo=47032) [https://bugs.python.org/issue?@action=redirect&bpo=47032]: Ensure Windows install builds fail correctly with a non-zero exit code when part of the build fails.
- [bpo-47024](https://bugs.python.org/issue?@action=redirect&bpo=47024) [https://bugs.python.org/issue?@action=redirect&bpo=47024]: Update OpenSSL to 1.1.1n for macOS installers and all Windows builds.
- [bpo-46996](https://bugs.python.org/issue?@action=redirect&bpo=46996) [https://bugs.python.org/issue?@action=redirect&bpo=46996]: The `tkinter` package now requires Tcl/Tk version 8.5.12 or newer.
- [bpo-46973](https://bugs.python.org/issue?@action=redirect&bpo=46973) [https://bugs.python.org/issue?@action=redirect&bpo=46973]: Add `regen-configure` make target to regenerate configure script with Christian's container image `quay.io/tiran/cpython_autoconf:269`.
- [bpo-46917](https://bugs.python.org/issue?@action=redirect&bpo=46917) [https://bugs.python.org/issue?@action=redirect&bpo=46917]: Building Python now requires support of IEEE 754 floating point numbers. Patch by Victor Stinner.
- [bpo-45774](https://bugs.python.org/issue?@action=redirect&bpo=45774) [https://bugs.python.org/issue?@action=redirect&bpo=45774]: `configure` now verifies that all SQLite C APIs needed for the `sqlite3` extension module are found.

## Windows

- [bpo-47194](https://bugs.python.org/issue?@action=redirect&bpo=47194) [https://bugs.python.org/issue?@action=redirect&bpo=47194]: Update `zlib` to v1.2.12 to resolve CVE-2018-25032.

- [bpo-47171](https://bugs.python.org/issue?@action=redirect&bpo=47171) [https://bugs.python.org/issue?@action=redirect&bpo=47171]: Enables installing the `py.exe` launcher on Windows ARM64.
- [bpo-46566](https://bugs.python.org/issue?@action=redirect&bpo=46566) [https://bugs.python.org/issue?@action=redirect&bpo=46566]: Upgraded [Python Launcher for Windows](#) to support a new `-V:company/tag` argument for full [PEP 514](https://peps.python.org/pep-0514/) [https://peps.python.org/pep-0514/] support and to detect ARM64 installs. The `-64` suffix on arguments is deprecated, but still selects any non-32-bit install. Setting **PYLAUNCHER\_ALLOW\_INSTALL** and specifying a version that is not installed will attempt to install the requested version from the Microsoft Store.
- [bpo-47086](https://bugs.python.org/issue?@action=redirect&bpo=47086) [https://bugs.python.org/issue?@action=redirect&bpo=47086]: The installer for Windows now includes documentation as loose HTML files rather than a single compiled `.chm` file.
- [bpo-46907](https://bugs.python.org/issue?@action=redirect&bpo=46907) [https://bugs.python.org/issue?@action=redirect&bpo=46907]: Update Windows installer to use SQLite 3.38.1.
- [bpo-44549](https://bugs.python.org/issue?@action=redirect&bpo=44549) [https://bugs.python.org/issue?@action=redirect&bpo=44549]: Update bzip2 to 1.0.8 in Windows builds to mitigate CVE-2016-3189 and CVE-2019-12900
- [bpo-46948](https://bugs.python.org/issue?@action=redirect&bpo=46948) [https://bugs.python.org/issue?@action=redirect&bpo=46948]: Prevent CVE-2022-26488 by ensuring the Add to PATH option in the Windows installer uses the correct path when being repaired.

## macOS

- [bpo-46890](https://bugs.python.org/issue?@action=redirect&bpo=46890) [https://bugs.python.org/issue?@action=redirect&bpo=46890]: Fix a regression in the setting of `sys._base_executable` in framework builds, and thereby fix a regression in [venv](#) virtual environments with such builds.
- [bpo-46907](https://bugs.python.org/issue?@action=redirect&bpo=46907) [https://bugs.python.org/issue?@action=redirect&bpo=46907]: Update macOS installer to SQLite 3.38.1.

## Tools/Demos

- [bpo-40280](https://bugs.python.org/issue?@action=redirect&bpo=40280) [https://bugs.python.org/issue?@action=redirect&bpo=40280]: Replace Emscripten's limited shell with Katie Bell's browser-ui REPL from python-wasm project.

## C API

- [bpo-40421](https://bugs.python.org/issue?@action=redirect&bpo=40421) [https://bugs.python.org/issue?@action=redirect&bpo=40421]: Add `PyFrame_GetBuiltins`, `PyFrame_GetGenerator` and `PyFrame_GetGlobals` C-API functions to access frame object attributes safely from C code.
- [bpo-46850](https://bugs.python.org/issue?@action=redirect&bpo=46850) [https://bugs.python.org/issue?@action=redirect&bpo=46850]: Move the private `_PyFrameEvalFunction` type, and private `_PyInterpreterState_GetEvalFrameFunc()` and `_PyInterpreterState_SetEvalFrameFunc()` functions to the internal C API. The `_PyFrameEvalFunction` callback function type now uses the `_PyInterpreterFrame` type which is part of the internal C API. Patch by Victor Stinner.
- [bpo-46850](https://bugs.python.org/issue?@action=redirect&bpo=46850) [https://bugs.python.org/issue?@action=redirect&bpo=46850]: Move the private undocumented `_PyEval_EvalFrameDefault()` function to the internal C API. The function now uses the `_PyInterpreterFrame` type which is part of the internal C API. Patch by Victor Stinner.
- [bpo-46850](https://bugs.python.org/issue?@action=redirect&bpo=46850) [https://bugs.python.org/issue?@action=redirect&bpo=46850]: Remove the private undocumented function `_PyEval_CallTracing()` from the C API. Call the public `sys.call_tracing()` function instead. Patch by Victor Stinner.
- [bpo-46850](https://bugs.python.org/issue?@action=redirect&bpo=46850) [https://bugs.python.org/issue?@action=redirect&bpo=46850]: Remove the private undocumented function `_PyEval_GetCoroutineOriginTrackingDepth()` from the C API. Call the public `sys.get_coroutine_origin_tracking_depth()`

function instead. Patch by Victor Stinner.

- [bpo-46850](https://bugs.python.org/issue?@action=redirect&bpo=46850) [https://bugs.python.org/issue?@action=redirect&bpo=46850]: Remove the following private undocumented functions from the C API:

- `_PyEval_GetAsyncGenFirstiter()`
  - `_PyEval_GetAsyncGenFinalizer()`
  - `_PyEval_SetAsyncGenFirstiter()`
  - `_PyEval_SetAsyncGenFinalizer()`

Call the public `sys.get_asyncgen_hooks()` and `sys.set_asyncgen_hooks()` functions instead. Patch by Victor Stinner.

- [bpo-46987](https://bugs.python.org/issue?@action=redirect&bpo=46987) [https://bugs.python.org/issue?@action=redirect&bpo=46987]: Remove private functions `_PySys_GetObjectId()` and `_PySys_SetObjectId()`. Patch by Dong-hee Na.
- [bpo-46906](https://bugs.python.org/issue?@action=redirect&bpo=46906) [https://bugs.python.org/issue?@action=redirect&bpo=46906]: Add new functions to pack and unpack C double (serialize and deserialize):  
`PyFloat_Pack2()`, `PyFloat_Pack4()`,  
`PyFloat_Pack8()`, `PyFloat_Unpack2()`,  
`PyFloat_Unpack4()` and `PyFloat_Unpack8()`. Patch by Victor Stinner.

## Python 3.11.0 alpha 6

*Release date: 2022-03-07*

### Core and Builtins

- [bpo-46940](https://bugs.python.org/issue?@action=redirect&bpo=46940) [https://bugs.python.org/issue?@action=redirect&bpo=46940]: Avoid overriding `AttributeError` metadata information for nested attribute access calls. Patch by Pablo Galindo.
- [bpo-46927](https://bugs.python.org/issue?@action=redirect&bpo=46927) [https://bugs.python.org/issue?@action=redirect&bpo=46927]

@action=redirect&bpo=46927]: Include the type's name in the error message for subscripting non-generic types.

- [bpo-46921](https://bugs.python.org/issue?@action=redirect&bpo=46921) [https://bugs.python.org/issue?@action=redirect&bpo=46921]: Support vectorcall for `super()`. Patch by Ken Jin.
- [bpo-46841](https://bugs.python.org/issue?@action=redirect&bpo=46841) [https://bugs.python.org/issue?@action=redirect&bpo=46841]: Fix incorrect handling of inline cache entries when specializing `BINARY_OP`.
- [bpo-46841](https://bugs.python.org/issue?@action=redirect&bpo=46841) [https://bugs.python.org/issue?@action=redirect&bpo=46841]: Use an oparg to simplify the construction of helpful error messages in `GET_AWAITABLE`.
- [bpo-46903](https://bugs.python.org/issue?@action=redirect&bpo=46903) [https://bugs.python.org/issue?@action=redirect&bpo=46903]: Make sure that str subclasses can be used as attribute names for instances with virtual dictionaries. Fixes regression in 3.11alpha
- [bpo-46841](https://bugs.python.org/issue?@action=redirect&bpo=46841) [https://bugs.python.org/issue?@action=redirect&bpo=46841]: Add more detailed specialization failure stats for `COMPARE_OP` followed by `EXTENDED_ARG`.
- [bpo-46891](https://bugs.python.org/issue?@action=redirect&bpo=46891) [https://bugs.python.org/issue?@action=redirect&bpo=46891]: Fix bug introduced during 3.11alpha where subclasses of `types.ModuleType` with `__slots__` were not initialized correctly, resulting in an interpreter crash.
- [bpo-46841](https://bugs.python.org/issue?@action=redirect&bpo=46841) [https://bugs.python.org/issue?@action=redirect&bpo=46841]: Use inline caching for `LOAD_ATTR`, `LOAD_METHOD`, and `STORE_ATTR`.
- [bpo-46841](https://bugs.python.org/issue?@action=redirect&bpo=46841) [https://bugs.python.org/issue?@action=redirect&bpo=46841]: Use inline cache for `BINARY_SUBSCR`.
- [bpo-46841](https://bugs.python.org/issue?@action=redirect&bpo=46841) [https://bugs.python.org/issue?@action=redirect&bpo=46841]: Use inline caching for `COMPARE_OP`.

- [bpo-46864](https://bugs.python.org/issue?@action=redirect&bpo=46864) [https://bugs.python.org/issue?@action=redirect&bpo=46864]: Deprecate `PyBytesObject.ob_shash`. It will be removed in Python 3.13.
- [bpo-46841](https://bugs.python.org/issue?@action=redirect&bpo=46841) [https://bugs.python.org/issue?@action=redirect&bpo=46841]: Use inline caching for **UNPACK\_SEQUENCE**.
- [bpo-46845](https://bugs.python.org/issue?@action=redirect&bpo=46845) [https://bugs.python.org/issue?@action=redirect&bpo=46845]: Reduces dict size by removing hash value from hash table when all inserted keys are Unicode. For example, `sys.getsizeof(dict.fromkeys("abcdefg"))` becomes 272 bytes from 352 bytes on 64bit platform.
- [bpo-46841](https://bugs.python.org/issue?@action=redirect&bpo=46841) [https://bugs.python.org/issue?@action=redirect&bpo=46841]: Use inline cache for **LOAD\_GLOBAL**.
- [bpo-46852](https://bugs.python.org/issue?@action=redirect&bpo=46852) [https://bugs.python.org/issue?@action=redirect&bpo=46852]: Rename the private undocumented `float.__set_format__()` method to `float.__setformat__()` to fix a typo introduced in Python 3.7. The method is only used by `test_float`. Patch by Victor Stinner.
- [bpo-46852](https://bugs.python.org/issue?@action=redirect&bpo=46852) [https://bugs.python.org/issue?@action=redirect&bpo=46852]: Remove the undocumented private `float.__set_format__()` method, previously known as `float.__setformat__()` in Python 3.7. Its docstring said: “You probably don’t want to use this function. It exists mainly to be used in Python’s test suite.” Patch by Victor Stinner.
- [bpo-40116](https://bugs.python.org/issue?@action=redirect&bpo=40116) [https://bugs.python.org/issue?@action=redirect&bpo=40116]: Fix regression that `dict.update(other)` may don’t respect iterate order of other when other is key sharing dict.
- [bpo-46712](https://bugs.python.org/issue?@action=redirect&bpo=46712) [https://bugs.python.org/issue?@action=redirect&bpo=46712]

@action=redirect&bpo=46712]: Share global string identifiers in deep-frozen modules.

- [bpo-46430](https://bugs.python.org/issue?@action=redirect&bpo=46430) [https://bugs.python.org/issue?@action=redirect&bpo=46430]: Fix memory leak in interned strings of deep-frozen modules.
- [bpo-46841](https://bugs.python.org/issue?@action=redirect&bpo=46841) [https://bugs.python.org/issue?@action=redirect&bpo=46841]: Store **BINARY\_OP** caches inline using a new **CACHE** instruction.
- [bpo-45107](https://bugs.python.org/issue?@action=redirect&bpo=45107) [https://bugs.python.org/issue?@action=redirect&bpo=45107]: Specialize **LOAD\_METHOD** for instances with a dict.
- [bpo-44337](https://bugs.python.org/issue?@action=redirect&bpo=44337) [https://bugs.python.org/issue?@action=redirect&bpo=44337]: Reduce the memory usage of specialized **LOAD\_ATTR** and **STORE\_ATTR** instructions.
- [bpo-46729](https://bugs.python.org/issue?@action=redirect&bpo=46729) [https://bugs.python.org/issue?@action=redirect&bpo=46729]: Add number of sub-exceptions to **BaseException.\_\_str\_\_()**.
- [bpo-45885](https://bugs.python.org/issue?@action=redirect&bpo=45885) [https://bugs.python.org/issue?@action=redirect&bpo=45885]: Don't un-adapt **COMPARE\_OP** when collecting specialization stats.
- [bpo-46329](https://bugs.python.org/issue?@action=redirect&bpo=46329) [https://bugs.python.org/issue?@action=redirect&bpo=46329]: Fix specialization stats gathering for **PRECALL** instructions.
- [bpo-46794](https://bugs.python.org/issue?@action=redirect&bpo=46794) [https://bugs.python.org/issue?@action=redirect&bpo=46794]: Bump up the libexpat version into 2.4.6
- [bpo-46823](https://bugs.python.org/issue?@action=redirect&bpo=46823) [https://bugs.python.org/issue?@action=redirect&bpo=46823]: Implement a specialized combined opcode **LOAD\_FAST\_\_LOAD\_ATTR\_INSTANCE\_VALUE**. Patch by Dennis Sweeney.
- [bpo-46820](https://bugs.python.org/issue?@action=redirect&bpo=46820) [https://bugs.python.org/issue?@action=redirect&bpo=46820]

@action=redirect&bpo=46820]: Fix parsing a numeric literal immediately (without spaces) followed by “not in” keywords, like in `1not in x`. Now the parser only emits a warning, not a syntax error.

- [bpo-46329](https://bugs.python.org/issue?@action=redirect&bpo=46329) [https://bugs.python.org/issue?@action=redirect&bpo=46329]: Move `KW_NAMES` before `PRECALL` instruction in call sequence. Change operand of `CALL` to match `PRECALL` for easier specialization.
- [bpo-46808](https://bugs.python.org/issue?@action=redirect&bpo=46808) [https://bugs.python.org/issue?@action=redirect&bpo=46808]: Remove the `NEXT_BLOCK` macro from `compile.c`, and make the compiler automatically generate implicit blocks when they are needed.
- [bpo-46329](https://bugs.python.org/issue?@action=redirect&bpo=46329) [https://bugs.python.org/issue?@action=redirect&bpo=46329]: Add `PUSH_NULL` instruction. This is used as a prefix when evaluating a callable, so that the stack has the same shape for methods and other calls. `PRECALL_FUNCTION` and `PRECALL_METHOD` are merged into a single `PRECALL` instruction.

There is no change in semantics.

- [bpo-46762](https://bugs.python.org/issue?@action=redirect&bpo=46762) [https://bugs.python.org/issue?@action=redirect&bpo=46762]: Fix an assert failure in debug builds when a ‘<’, ‘>’, or ‘=’ is the last character in an f-string that’s missing a closing right brace.
- [bpo-46730](https://bugs.python.org/issue?@action=redirect&bpo=46730) [https://bugs.python.org/issue?@action=redirect&bpo=46730]: Message of `AttributeError` caused by getting, setting or deleting a property without the corresponding function now mentions that the attribute is in fact a property and also specifies type of the class that it belongs to.
- [bpo-46724](https://bugs.python.org/issue?@action=redirect&bpo=46724) [https://bugs.python.org/issue?@action=redirect&bpo=46724]: Make sure that all backwards jumps use the `JUMP_ABSOLUTE` instruction, rather than `JUMP_FORWARD` with an argument of `(2**32)+offset`.

- [bpo-46732](https://bugs.python.org/issue?@action=redirect&bpo=46732) [https://bugs.python.org/issue?@action=redirect&bpo=46732]: Correct the docstring for the `__bool__()` method. Patch by Jelle Zijlstra.
- [bpo-46072](https://bugs.python.org/issue?@action=redirect&bpo=46072) [https://bugs.python.org/issue?@action=redirect&bpo=46072]: Add more detailed specialization failure statistics for `BINARY_OP`.
- [bpo-46707](https://bugs.python.org/issue?@action=redirect&bpo=46707) [https://bugs.python.org/issue?@action=redirect&bpo=46707]: Avoid potential exponential backtracking when producing some syntax errors involving lots of brackets. Patch by Pablo Galindo.
- [bpo-46323](https://bugs.python.org/issue?@action=redirect&bpo=46323) [https://bugs.python.org/issue?@action=redirect&bpo=46323]: `ctypes` now allocates memory on the stack instead of on the heap to pass arguments while calling a Python callback function. Patch by Dong-hee Na.
- [bpo-45923](https://bugs.python.org/issue?@action=redirect&bpo=45923) [https://bugs.python.org/issue?@action=redirect&bpo=45923]: Add a quickened form of `RESUME` that skips quickening checks.
- [bpo-46702](https://bugs.python.org/issue?@action=redirect&bpo=46702) [https://bugs.python.org/issue?@action=redirect&bpo=46702]: Specialize `UNPACK_SEQUENCE` for `tuple` and `list` unpackings.
- [bpo-46072](https://bugs.python.org/issue?@action=redirect&bpo=46072) [https://bugs.python.org/issue?@action=redirect&bpo=46072]: Opcode pair stats are now gathered with `--enable-pystats`. Defining `DYNAMIC_EXECUTION_PROFILE` or `DXPAIRS` no longer has any effect.
- [bpo-46675](https://bugs.python.org/issue?@action=redirect&bpo=46675) [https://bugs.python.org/issue?@action=redirect&bpo=46675]: Allow more than 16 items in a split dict before it is combined. The limit is now 254.
- [bpo-40479](https://bugs.python.org/issue?@action=redirect&bpo=40479) [https://bugs.python.org/issue?@action=redirect&bpo=40479]: Add a missing call to `va_end()` in `Modules/_hashopenssl.c`.
- [bpo-46323](https://bugs.python.org/issue?@action=redirect&bpo=46323) [https://bugs.python.org/issue?@action=redirect&bpo=46323]

@action=redirect&bpo=46323]: Use `PyObject_Vectorcall()` while calling ctypes callback function. Patch by Dong-hee Na.

- [bpo-46615](https://bugs.python.org/issue?@action=redirect&bpo=46615) [https://bugs.python.org/issue?@action=redirect&bpo=46615]: When iterating over sets internally in `setobject.c`, acquire strong references to the resulting items from the set. This prevents crashes in corner-cases of various set operations where the set gets mutated.
- [bpo-45828](https://bugs.python.org/issue?@action=redirect&bpo=45828) [https://bugs.python.org/issue?@action=redirect&bpo=45828]: The bytecode compiler now attempts to apply runtime stack manipulations at compile-time (whenever it is feasible to do so).
- [bpo-30496](https://bugs.python.org/issue?@action=redirect&bpo=30496) [https://bugs.python.org/issue?@action=redirect&bpo=30496]: Fixed a minor portability issue in the implementation of `PyLong_FromLong()`, and added a fast path for single-digit integers to `PyLong_FromLongLong()`.

## Library

- [bpo-25707](https://bugs.python.org/issue?@action=redirect&bpo=25707) [https://bugs.python.org/issue?@action=redirect&bpo=25707]: Fixed a file leak in `xml.etree.ElementTree.iterparse()` when the iterator is not exhausted. Patch by Jacob Walls.
- [bpo-46877](https://bugs.python.org/issue?@action=redirect&bpo=46877) [https://bugs.python.org/issue?@action=redirect&bpo=46877]: Export `unittest.doModuleCleanups()` in `unittest`. Patch by Kumar Aditya.
- [bpo-46848](https://bugs.python.org/issue?@action=redirect&bpo=46848) [https://bugs.python.org/issue?@action=redirect&bpo=46848]: For performance, use the optimized string-searching implementations from `find()` and `rfind()` for `find()` and `rfind()`.
- [bpo-46736](https://bugs.python.org/issue?@action=redirect&bpo=46736) [https://bugs.python.org/issue?@action=redirect&bpo=46736]: `SimpleHTTPRequestHandler` now uses HTML5 grammar. Patch by Dong-hee Na.

- [bpo-44886](https://bugs.python.org/issue?@action=redirect&bpo=44886) [https://bugs.python.org/issue?@action=redirect&bpo=44886]: Inherit asyncio proactor datagram transport from `asyncio.DatagramTransport`.
- [bpo-46827](https://bugs.python.org/issue?@action=redirect&bpo=46827) [https://bugs.python.org/issue?@action=redirect&bpo=46827]: Support UDP sockets in `asyncio.loop.sock_connect()` for selector-based event loops. Patch by Thomas Grainger.
- [bpo-46811](https://bugs.python.org/issue?@action=redirect&bpo=46811) [https://bugs.python.org/issue?@action=redirect&bpo=46811]: Make test suite support Expat >= 2.4.5
- [bpo-46252](https://bugs.python.org/issue?@action=redirect&bpo=46252) [https://bugs.python.org/issue?@action=redirect&bpo=46252]: Raise `TypeError` if `ssl.SSLSocket` is passed to transport-based APIs.
- [bpo-46784](https://bugs.python.org/issue?@action=redirect&bpo=46784) [https://bugs.python.org/issue?@action=redirect&bpo=46784]: Fix libexpat symbols collisions with user dynamically loaded or statically linked libexpat in embedded Python.
- [bpo-46786](https://bugs.python.org/issue?@action=redirect&bpo=46786) [https://bugs.python.org/issue?@action=redirect&bpo=46786]: The HTML serialisation in `xml.etree.ElementTree` now writes `embed`, `source`, `track` and `wbr` as empty tags, as defined in HTML 5.
- [bpo-39327](https://bugs.python.org/issue?@action=redirect&bpo=39327) [https://bugs.python.org/issue?@action=redirect&bpo=39327]: `shutil.rmtree()` can now work with VirtualBox shared folders when running from the guest operating-system.
- [bpo-45390](https://bugs.python.org/issue?@action=redirect&bpo=45390) [https://bugs.python.org/issue?@action=redirect&bpo=45390]: Propagate `asyncio.CancelledError` message from inner task to outer awaiter.
- [bpo-46756](https://bugs.python.org/issue?@action=redirect&bpo=46756) [https://bugs.python.org/issue?@action=redirect&bpo=46756]: Fix a bug in `urllib.request.HTTPPasswordMgr.find_user_password()` and

`urllib.request.HTTPPasswordMgrWithPriorAuth.is_auth`

which allowed to bypass authorization. For example, access to URI `example.org/foobar` was allowed if the user was authorized for URI `example.org/foo`.

- [bpo-46737](https://bugs.python.org/issue?@action=redirect&bpo=46737) [https://bugs.python.org/issue?@action=redirect&bpo=46737]: `random.gauss()` and `random.normalvariate()` now have default arguments.
- [bpo-46752](https://bugs.python.org/issue?@action=redirect&bpo=46752) [https://bugs.python.org/issue?@action=redirect&bpo=46752]: Add task groups to `asyncio` (structured concurrency, inspired by Trio's nurseries). This also introduces a change to task cancellation, where a cancelled task can't be cancelled again until it calls `.uncancel()`.
- [bpo-46724](https://bugs.python.org/issue?@action=redirect&bpo=46724) [https://bugs.python.org/issue?@action=redirect&bpo=46724]: Fix `dis` behavior on negative jump offsets.
- [bpo-46333](https://bugs.python.org/issue?@action=redirect&bpo=46333) [https://bugs.python.org/issue?@action=redirect&bpo=46333]: The `__repr__()` method of `typing.ForwardRef` now includes the `module` parameter of `typing.ForwardRef` when it is set.
- [bpo-46643](https://bugs.python.org/issue?@action=redirect&bpo=46643) [https://bugs.python.org/issue?@action=redirect&bpo=46643]: In `typing.get_type_hints()`, support evaluating stringified `ParamSpecArgs` and `ParamSpecKwargs` annotations. Patch by Gregory Beauregard.
- [bpo-45863](https://bugs.python.org/issue?@action=redirect&bpo=45863) [https://bugs.python.org/issue?@action=redirect&bpo=45863]: When the `tarfile` module creates a pax format archive, it will put an integer representation of timestamps in the ustar header (if possible) for the benefit of older unarchivers, in addition to the existing full-precision timestamps in the pax extended header.
- [bpo-46066](https://bugs.python.org/issue?@action=redirect&bpo=46066) [https://bugs.python.org/issue?@action=redirect&bpo=46066]: Deprecate kwargs-based syntax for `typing.TypedDict` definitions. It had confusing

semantics when specifying totality, and was largely unused.  
Patch by Jingchen Ye.

- [bpo-46676](https://bugs.python.org/issue?@action=redirect&bpo=46676) [https://bugs.python.org/issue?@action=redirect&bpo=46676]: Make `typing.ParamSpec` args and kwargs equal to themselves. Patch by Gregory Beauregard.
- [bpo-46323](https://bugs.python.org/issue?@action=redirect&bpo=46323) [https://bugs.python.org/issue?@action=redirect&bpo=46323]: `ctypes.CFUNCTYPE()` and `ctypes.WINFUNCTYPE()` now fail to create the type if its `_argtypes_` member contains too many arguments. Previously, the error was only raised when calling a function. Patch by Victor Stinner.
- [bpo-46672](https://bugs.python.org/issue?@action=redirect&bpo=46672) [https://bugs.python.org/issue?@action=redirect&bpo=46672]: Fix `NameError` in `asyncio.gather()` when initial type check fails.
- [bpo-46659](https://bugs.python.org/issue?@action=redirect&bpo=46659) [https://bugs.python.org/issue?@action=redirect&bpo=46659]: The `calendar.LocaleTextCalendar` and `calendar.LocaleHTMLCalendar` classes now use `locale.getlocale()`, instead of using `locale.getdefaultlocale()`, if no locale is specified. Patch by Victor Stinner.
- [bpo-46659](https://bugs.python.org/issue?@action=redirect&bpo=46659) [https://bugs.python.org/issue?@action=redirect&bpo=46659]: The `locale.getdefaultlocale()` function is deprecated and will be removed in Python 3.13. Use `locale.setlocale()`, `locale.getpreferredencoding(False)` and `locale.getlocale()` functions instead. Patch by Victor Stinner.
- [bpo-46655](https://bugs.python.org/issue?@action=redirect&bpo=46655) [https://bugs.python.org/issue?@action=redirect&bpo=46655]: In `typing.get_type_hints()`, support evaluating bare stringified `TypeAlias` annotations. Patch by Gregory Beauregard.

- [bpo-45948](https://bugs.python.org/issue?@action=redirect&bpo=45948) [https://bugs.python.org/issue?@action=redirect&bpo=45948]: Fixed a discrepancy in the C implementation of the `xml.etree.ElementTree` module. Now, instantiating an `xml.etree.ElementTree.XMLParser` with a `target=None` keyword provides a default `xml.etree.ElementTree.TreeBuilder` target as the Python implementation does.
- [bpo-46626](https://bugs.python.org/issue?@action=redirect&bpo=46626) [https://bugs.python.org/issue?@action=redirect&bpo=46626]: Expose Linux's `IP_BIND_ADDRESS_NO_PORT` option in `socket`.

- [bpo-46521](https://bugs.python.org/issue?@action=redirect&bpo=46521) [https://bugs.python.org/issue?@action=redirect&bpo=46521]: Fix a bug in the `codeop` module that was incorrectly identifying invalid code involving string quotes as valid code.

- [bpo-46571](https://bugs.python.org/issue?@action=redirect&bpo=46571) [https://bugs.python.org/issue?@action=redirect&bpo=46571]: Improve `typing.no_type_check()`.

Now it does not modify external classes and functions. We also now correctly mark classmethods as not to be type checked.

- [bpo-46400](https://bugs.python.org/issue?@action=redirect&bpo=46400) [https://bugs.python.org/issue?@action=redirect&bpo=46400]: `expat`: Update libexpat from 2.4.1 to 2.4.4
- [bpo-46556](https://bugs.python.org/issue?@action=redirect&bpo=46556) [https://bugs.python.org/issue?@action=redirect&bpo=46556]: Deprecate undocumented support for using a `pathlib.Path` object as a context manager.
- [bpo-46534](https://bugs.python.org/issue?@action=redirect&bpo=46534) [https://bugs.python.org/issue?@action=redirect&bpo=46534]: Implement [PEP 673](https://peps.python.org/pep-0673/) [https://peps.python.org/pep-0673/] `typing.Self`. Patch by James Hilton-Balfe.
- [bpo-46522](https://bugs.python.org/issue?@action=redirect&bpo=46522) [https://bugs.python.org/issue?@action=redirect&bpo=46522]: Make various module

`__getattr__` `AttributeErrors` more closely match a typical `AttributeError`

- [bpo-46475](https://bugs.python.org/issue?@action=redirect&bpo=46475) [https://bugs.python.org/issue?@action=redirect&bpo=46475]: Add `typing.Never` and `typing.assert_never()`. Patch by Jelle Zijlstra.
- [bpo-46333](https://bugs.python.org/issue?@action=redirect&bpo=46333) [https://bugs.python.org/issue?@action=redirect&bpo=46333]: The `__eq__()` and `__hash__()` methods of `typing.ForwardRef` now honor the `module` parameter of `typing.ForwardRef`. Forward references from different modules are now differentiated.
- [bpo-46246](https://bugs.python.org/issue?@action=redirect&bpo=46246) [https://bugs.python.org/issue?@action=redirect&bpo=46246]: Add missing `__slots__` to `importlib.metadata.DeprecatedList`. Patch by Arie Bovenberg.
- [bpo-46232](https://bugs.python.org/issue?@action=redirect&bpo=46232) [https://bugs.python.org/issue?@action=redirect&bpo=46232]: The `ssl` module now handles certificates with bit strings in DN correctly.
- [bpo-46195](https://bugs.python.org/issue?@action=redirect&bpo=46195) [https://bugs.python.org/issue?@action=redirect&bpo=46195]: `typing.get_type_hints()` no longer adds `Optional` to parameters with `None` as a default. This aligns to changes to PEP 484 in <https://github.com/python/peps/pull/689>
- [bpo-31369](https://bugs.python.org/issue?@action=redirect&bpo=31369) [https://bugs.python.org/issue?@action=redirect&bpo=31369]: Add `RegexFlag` to `re.__all__` and documented it. Add `NOFLAG` to indicate no flags being set.
- [bpo-45898](https://bugs.python.org/issue?@action=redirect&bpo=45898) [https://bugs.python.org/issue?@action=redirect&bpo=45898]: `ctypes` no longer defines `ffi_type_*` symbols in `cfield.c`. The symbols have been provided by `libffi` for over a decade.
- [bpo-44953](https://bugs.python.org/issue?@action=redirect&bpo=44953) [https://bugs.python.org/issue?@action=redirect&bpo=44953]: Calling `operator.itemgetter` objects and `operator.attrgetter` objects is now faster

due to use of the vectorcall calling convention.

- [bpo-44289](https://bugs.python.org/issue?@action=redirect&bpo=44289) [https://bugs.python.org/issue?@action=redirect&bpo=44289]: Fix an issue with `is_tarfile()` method when using *fileobj* argument: position in the *fileobj* was advanced forward which made it unreadable with `tarfile.TarFile.open()`.
- [bpo-44011](https://bugs.python.org/issue?@action=redirect&bpo=44011) [https://bugs.python.org/issue?@action=redirect&bpo=44011]: Reimplement SSL/TLS support in *asyncio*, borrow the implementation from *uvloop* library.
- [bpo-41086](https://bugs.python.org/issue?@action=redirect&bpo=41086) [https://bugs.python.org/issue?@action=redirect&bpo=41086]: Make the `configparser.ConfigParser` constructor raise `TypeError` if the `interpolation` parameter is not of type `configparser.Interpolation`
- [bpo-29418](https://bugs.python.org/issue?@action=redirect&bpo=29418) [https://bugs.python.org/issue?@action=redirect&bpo=29418]: Implement `inspect.ismethodwrapper()` and fix `inspect.isroutine()` for cases where *methodwrapper* is given. Patch by Hakan Çelik.
- [bpo-14156](https://bugs.python.org/issue?@action=redirect&bpo=14156) [https://bugs.python.org/issue?@action=redirect&bpo=14156]: `argparse.FileType` now supports an argument of '-' in binary mode, returning the `.buffer` attribute of `sys.stdin/sys.stdout` as appropriate. Modes including 'x' and 'a' are treated equivalently to 'w' when argument is '-'. Patch contributed by Josh Rosenberg

## Documentation

- [bpo-42238](https://bugs.python.org/issue?@action=redirect&bpo=42238) [https://bugs.python.org/issue?@action=redirect&bpo=42238]: `Doc/tools/rstlint.py` has moved to its own repository and is now packaged on PyPI as `sphinx-lint`.

## Tests

- [bpo-46913](https://bugs.python.org/issue?@action=redirect&bpo=46913) [https://bugs.python.org/issue?@action=redirect&bpo=46913]

@action=redirect&bpo=46913]: Fix `test_faulthandler.test_sigfpe()` if Python is built with undefined behavior sanitizer (UBSAN): disable UBSAN on the `faulthandler_sigfpe()` function. Patch by Victor Stinner.

- [bpo-46760](https://bugs.python.org/issue?@action=redirect&bpo=46760) [https://bugs.python.org/issue?@action=redirect&bpo=46760]: Remove bytecode offsets from expected values in `test.test_dis` module. Reduces the obstacles to modifying the VM or compiler.
- [bpo-46708](https://bugs.python.org/issue?@action=redirect&bpo=46708) [https://bugs.python.org/issue?@action=redirect&bpo=46708]: Prevent default asyncio event loop policy modification warning after `test_asyncio` execution.
- [bpo-46678](https://bugs.python.org/issue?@action=redirect&bpo=46678) [https://bugs.python.org/issue?@action=redirect&bpo=46678]: The function `make_legacy_pyc` in `Lib/test/support/import_helper.py` no longer fails when `PYTHONPYCACHEPREFIX` is set to a directory on a different device from where tempfiles are stored.
- [bpo-46623](https://bugs.python.org/issue?@action=redirect&bpo=46623) [https://bugs.python.org/issue?@action=redirect&bpo=46623]: Skip `test_pair()` and `test_speech128()` of `test_zlib` on s390x since they fail if zlib uses the s390x hardware accelerator. Patch by Victor Stinner.

## Build

- [bpo-46860](https://bugs.python.org/issue?@action=redirect&bpo=46860) [https://bugs.python.org/issue?@action=redirect&bpo=46860]: Respect `--with-suffix` when building on case-insensitive file systems.
- [bpo-46656](https://bugs.python.org/issue?@action=redirect&bpo=46656) [https://bugs.python.org/issue?@action=redirect&bpo=46656]: Building Python now requires a C11 compiler. Optional C11 features are not required. Patch by Victor Stinner.
- [bpo-46656](https://bugs.python.org/issue?@action=redirect&bpo=46656) [https://bugs.python.org/issue?@action=redirect&bpo=46656]: Building Python now requires support for floating point Not-a-Number (NaN): remove the `Py_NO_NAN` macro. Patch by Victor Stinner.
- [bpo-46640](https://bugs.python.org/issue?@action=redirect&bpo=46640) [https://bugs.python.org/issue?@action=redirect&bpo=46640]: Building Python now requires a C99 `<math.h>` header file providing a `NAN` constant, or the `__builtin_nan()` built-in function. Patch by Victor Stinner.

- [bpo-46608](https://bugs.python.org/issue?@action=redirect&bpo=46608) [https://bugs.python.org/issue?@action=redirect&bpo=46608]: Exclude marshalled-frozen data if deep-freezing to save 300 KB disk space. This includes adding a new `is_package` field to `_frozen`. Patch by Kumar Aditya.
- [bpo-40280](https://bugs.python.org/issue?@action=redirect&bpo=40280) [https://bugs.python.org/issue?@action=redirect&bpo=40280]: Fix wasm32-emscripten test failures and platform issues. - Disable syscalls that are not supported or don't work, e.g. `wait`, `getrusage`, `prlimit`, `mkfifo`, `mknod`, `setres[gu]id`, `setgroups`. - Use `fd_count` to count open fds. - Add more checks for subprocess and fork. - Add workarounds for missing `_multiprocessing` and failing `socket.accept()`. - Enable `bzip2`. - Disable large file support. - Disable `signal.alarm`.
- [bpo-46430](https://bugs.python.org/issue?@action=redirect&bpo=46430) [https://bugs.python.org/issue?@action=redirect&bpo=46430]: Intern strings in deep-frozen modules. Patch by Kumar Aditya.

## Windows

- [bpo-46744](https://bugs.python.org/issue?@action=redirect&bpo=46744) [https://bugs.python.org/issue?@action=redirect&bpo=46744]: The default all users install directory for ARM64 is now under the native Program Files folder, rather than Program Files (Arm) which is intended for ARM (32-bit) files.
- [bpo-46567](https://bugs.python.org/issue?@action=redirect&bpo=46567) [https://bugs.python.org/issue?@action=redirect&bpo=46567]: Adds Tcl and Tk support for Windows ARM64. This also adds IDLE to the installation.
- [bpo-46638](https://bugs.python.org/issue?@action=redirect&bpo=46638) [https://bugs.python.org/issue?@action=redirect&bpo=46638]: Ensures registry virtualization is consistently disabled. For 3.10 and earlier, it remains enabled (some registry writes are protected), while for 3.11 and later it is disabled (registry modifications affect all applications).

## IDLE

- [bpo-46630](https://bugs.python.org/issue?@action=redirect&bpo=46630) [https://bugs.python.org/issue?@action=redirect&bpo=46630]: Make query dialogs on Windows start with a cursor in the entry box.
- [bpo-45447](https://bugs.python.org/issue?@action=redirect&bpo=45447) [https://bugs.python.org/issue?@action=redirect&bpo=45447]

@action=redirect&bpo=45447]: Apply IDLE syntax highlighting to **pyi** files. Patch by Alex Waygood and Terry Jan Reedy.

## C API

- [bpo-46748](https://bugs.python.org/issue?@action=redirect&bpo=46748) [https://bugs.python.org/issue?@action=redirect&bpo=46748]: Python's public headers no longer import `<stdbool.h>`, leaving code that embedd/extends Python free to define `bool`, `true` and `false`.
- [bpo-46836](https://bugs.python.org/issue?@action=redirect&bpo=46836) [https://bugs.python.org/issue?@action=redirect&bpo=46836]: Move the **PyFrameObject** type definition (`struct _frame`) to the internal C API `pycore_frame.h` header file. Patch by Victor Stinner.
- [bpo-45459](https://bugs.python.org/issue?@action=redirect&bpo=45459) [https://bugs.python.org/issue?@action=redirect&bpo=45459]: Rename `Include/buffer.h` header file to `Include/pybuffer.h` to avoid conflicts with projects having an existing `buffer.h` header file. Patch by Victor Stinner.
- [bpo-45412](https://bugs.python.org/issue?@action=redirect&bpo=45412) [https://bugs.python.org/issue?@action=redirect&bpo=45412]: Remove the `HAVE_PY_SET_53BIT_PRECISION` macro (moved to the internal C API). Patch by Victor Stinner.
- [bpo-46613](https://bugs.python.org/issue?@action=redirect&bpo=46613) [https://bugs.python.org/issue?@action=redirect&bpo=46613]: Added function **PyType\_GetModuleByDef()**, which allows access to module state when a method's defining class is not available.

## Python 3.11.0 alpha 5

*Release date: 2022-02-03*

### Core and Builtins

- [bpo-45773](https://bugs.python.org/issue?@action=redirect&bpo=45773) [https://bugs.python.org/issue?@action=redirect&bpo=45773]: Remove two invalid “peephole” optimizations from the bytecode compiler.
- [bpo-46564](https://bugs.python.org/issue?@action=redirect&bpo=46564) [https://bugs.python.org/issue?@action=redirect&bpo=46564]: Do not create frame objects when

creating **super** object. Patch by Kumar Aditya.

- [bpo-45885](https://bugs.python.org/issue?@action=redirect&bpo=45885) [https://bugs.python.org/issue?@action=redirect&bpo=45885]: Added more fined-grained specialization failure stats regarding the `COMPARE_OP` bytecode.
- [bpo-44977](https://bugs.python.org/issue?@action=redirect&bpo=44977) [https://bugs.python.org/issue?@action=redirect&bpo=44977]: The delegation of `int()` to `__trunc__()` is now deprecated. Calling `int(a)` when `type(a)` implements `__trunc__()` but not `__int__()` or `__index__()` now raises a **DeprecationWarning**.
- [bpo-46458](https://bugs.python.org/issue?@action=redirect&bpo=46458) [https://bugs.python.org/issue?@action=redirect&bpo=46458]: Reorder code emitted by the compiler for a **try-except** block so that the **else** block's code immediately follows the **try** body (without a jump). This is more optimal for the happy path.
- [bpo-46527](https://bugs.python.org/issue?@action=redirect&bpo=46527) [https://bugs.python.org/issue?@action=redirect&bpo=46527]: Allow passing `iterable` as a keyword argument to `enumerate()` again. Patch by Jelle Zijlstra.
- [bpo-46528](https://bugs.python.org/issue?@action=redirect&bpo=46528) [https://bugs.python.org/issue?@action=redirect&bpo=46528]: Replace several stack manipulation instructions (`DUP_TOP`, `DUP_TOP_TWO`, `ROT_TWO`, `ROT_THREE`, `ROT_FOUR`, and `ROT_N`) with new **COPY** and **SWAP** instructions.
- [bpo-46329](https://bugs.python.org/issue?@action=redirect&bpo=46329) [https://bugs.python.org/issue?@action=redirect&bpo=46329]: Use two or three bytecodes to implement most calls.

Calls without named arguments are implemented as a sequence of two instructions: `PRECALL`; `CALL`. Calls with named arguments are implemented as a sequence of three instructions: `PRECALL`; `KW_NAMES`; `CALL`. There are two different `PRECALL` instructions: `PRECALL_FUNCTION` and `PRECALL_METHOD`. The latter pairs with `LOAD_METHOD`.

This partition into pre-call and call allows better specialization, and thus better performance ultimately.

There is no change in semantics.

- [bpo-46503](https://bugs.python.org/issue?@action=redirect&bpo=46503) [https://bugs.python.org/issue?@action=redirect&bpo=46503]: Fix an assert when parsing some invalid N escape sequences in f-strings.
- [bpo-46431](https://bugs.python.org/issue?@action=redirect&bpo=46431) [https://bugs.python.org/issue?@action=redirect&bpo=46431]: Improve error message on invalid calls to **BaseExceptionGroup.\_\_new\_\_()**.
- [bpo-46476](https://bugs.python.org/issue?@action=redirect&bpo=46476) [https://bugs.python.org/issue?@action=redirect&bpo=46476]: Fix memory leak in code objects generated by deepfreeze. Patch by Kumar Aditya.
- [bpo-46481](https://bugs.python.org/issue?@action=redirect&bpo=46481) [https://bugs.python.org/issue?@action=redirect&bpo=46481]: Speed up calls to **weakref.ref.\_\_call\_\_()** by using the [PEP 590](https://peps.python.org/pep-0590/) [https://peps.python.org/pep-0590/] **vectorcall** calling convention. Patch by Dong-hee Na.
- [bpo-46417](https://bugs.python.org/issue?@action=redirect&bpo=46417) [https://bugs.python.org/issue?@action=redirect&bpo=46417]: Fix a race condition on setting a type **\_\_bases\_\_** attribute: the internal function **add\_subclass()** now gets the **PyTypeObject.tp\_subclasses** member after calling **PyWeakref\_NewRef()** which can trigger a garbage collection which can indirectly modify **PyTypeObject.tp\_subclasses**. Patch by Victor Stinner.
- [bpo-46417](https://bugs.python.org/issue?@action=redirect&bpo=46417) [https://bugs.python.org/issue?@action=redirect&bpo=46417]: **python -X showrefcount** now shows the total reference count after clearing and destroyed the main Python interpreter. Previously, it was shown before. Patch by Victor Stinner.
- [bpo-43683](https://bugs.python.org/issue?@action=redirect&bpo=43683) [https://bugs.python.org/issue?@action=redirect&bpo=43683]: Add **ASYNC\_GEN\_WRAP** opcode to wrap the value to be yielded in async generators. Removes

the need to special case async generators in the `YIELD_VALUE` instruction.

- [bpo-46407](https://bugs.python.org/issue?@action=redirect&bpo=46407) [https://bugs.python.org/issue?@action=redirect&bpo=46407]: Optimize some modulo operations in `Objects/longobject.c`. Patch by Jeremiah Vivian.
- [bpo-46409](https://bugs.python.org/issue?@action=redirect&bpo=46409) [https://bugs.python.org/issue?@action=redirect&bpo=46409]: Add new `RETURN_GENERATOR` bytecode to make generators. Simplifies calling Python functions in the VM, as they no longer any need to special case generator functions.

Also add `JUMP_NO_INTERRUPT` bytecode that acts like `JUMP_ABSOLUTE`, but does not check for interrupts.

- [bpo-46406](https://bugs.python.org/issue?@action=redirect&bpo=46406) [https://bugs.python.org/issue?@action=redirect&bpo=46406]: The integer division `//` implementation has been optimized to better let the compiler understand its constraints. It can be 20% faster on the amd64 platform when dividing an int by a value smaller than `2**30`.
- [bpo-46383](https://bugs.python.org/issue?@action=redirect&bpo=46383) [https://bugs.python.org/issue?@action=redirect&bpo=46383]: Fix invalid signature of `_zoneinfo's module_free` function to resolve a crash on wasm32-emscripten platform.
- [bpo-46361](https://bugs.python.org/issue?@action=redirect&bpo=46361) [https://bugs.python.org/issue?@action=redirect&bpo=46361]: Ensure that “small” integers created by `int.from_bytes()` and `decimal.Decimal` are properly cached.
- [bpo-46161](https://bugs.python.org/issue?@action=redirect&bpo=46161) [https://bugs.python.org/issue?@action=redirect&bpo=46161]: Fix the class building error when the arguments are constants and `CALL_FUNCTION_EX` is used.
- [bpo-46028](https://bugs.python.org/issue?@action=redirect&bpo=46028) [https://bugs.python.org/issue?@action=redirect&bpo=46028]: Fixes calculation of `sys._base_executable` when inside a virtual environment that uses symlinks with different binary names than the base

environment provides.

- [bpo-46091](https://bugs.python.org/issue?@action=redirect&bpo=46091) [https://bugs.python.org/issue?@action=redirect&bpo=46091]: Correctly calculate indentation levels for lines with whitespace character that are ended by line continuation characters. Patch by Pablo Galindo
- [bpo-30512](https://bugs.python.org/issue?@action=redirect&bpo=30512) [https://bugs.python.org/issue?@action=redirect&bpo=30512]: Add CAN Socket support for NetBSD.
- [bpo-46045](https://bugs.python.org/issue?@action=redirect&bpo=46045) [https://bugs.python.org/issue?@action=redirect&bpo=46045]: Do not use POSIX semaphores on NetBSD
- [bpo-44024](https://bugs.python.org/issue?@action=redirect&bpo=44024) [https://bugs.python.org/issue?@action=redirect&bpo=44024]: Improve the exc:**`TypeError`** message for non-string second arguments passed to the built-in functions **`getattr()`** and **`hasattr()`**. Patch by Géry Ogam.

## Library

- [bpo-46624](https://bugs.python.org/issue?@action=redirect&bpo=46624) [https://bugs.python.org/issue?@action=redirect&bpo=46624]: Restore support for non-integer arguments of **`random.randrange()`** and **`random.randint()`**.
- [bpo-46591](https://bugs.python.org/issue?@action=redirect&bpo=46591) [https://bugs.python.org/issue?@action=redirect&bpo=46591]: Make the IDLE doc URL on the About IDLE dialog clickable.
- [bpo-46565](https://bugs.python.org/issue?@action=redirect&bpo=46565) [https://bugs.python.org/issue?@action=redirect&bpo=46565]: Remove loop variables that are leaking into modules' namespaces.
- [bpo-46553](https://bugs.python.org/issue?@action=redirect&bpo=46553) [https://bugs.python.org/issue?@action=redirect&bpo=46553]: In **`typing.get_type_hints()`**, support evaluating bare stringified `ClassVar` annotations. Patch by Gregory Beauregard.
- [bpo-46544](https://bugs.python.org/issue?@action=redirect&bpo=46544) [https://bugs.python.org/issue?@action=redirect&bpo=46544]: Don't leak `x & uspace`

intermediate vars in `textwrap.TextWrapper`.

- [bpo-46487](https://bugs.python.org/issue?@action=redirect&bpo=46487) [https://bugs.python.org/issue?@action=redirect&bpo=46487]: Add the `get_write_buffer_limits` method to `asyncio.transports.WriteTransport` and to the SSL transport.
- [bpo-45173](https://bugs.python.org/issue?@action=redirect&bpo=45173) [https://bugs.python.org/issue?@action=redirect&bpo=45173]: Note the configparser deprecations will be removed in Python 3.12.
- [bpo-45162](https://bugs.python.org/issue?@action=redirect&bpo=45162) [https://bugs.python.org/issue?@action=redirect&bpo=45162]: The deprecated `unittest` APIs removed in 3.11a1 have been temporarily restored to be removed in 3.12 while cleanups in external projects go in.
- [bpo-46539](https://bugs.python.org/issue?@action=redirect&bpo=46539) [https://bugs.python.org/issue?@action=redirect&bpo=46539]: In `typing.get_type_hints()`, support evaluating stringified `ClassVar` and `Final` annotations inside `Annotated`. Patch by Gregory Beauregard.
- [bpo-46510](https://bugs.python.org/issue?@action=redirect&bpo=46510) [https://bugs.python.org/issue?@action=redirect&bpo=46510]: Add missing test for `types.TracebackType` and `types.FrameType`. Calculate them directly from the caught exception without calling `sys.exc_info()`.
- [bpo-46491](https://bugs.python.org/issue?@action=redirect&bpo=46491) [https://bugs.python.org/issue?@action=redirect&bpo=46491]: Allow `typing.Annotated` to wrap `typing.Final` and `typing.ClassVar`. Patch by Gregory Beauregard.
- [bpo-46483](https://bugs.python.org/issue?@action=redirect&bpo=46483) [https://bugs.python.org/issue?@action=redirect&bpo=46483]: Remove `__class_getitem__()` from `pathlib.PurePath` as this class was not supposed to be generic.
- [bpo-46436](https://bugs.python.org/issue?@action=redirect&bpo=46436) [https://bugs.python.org/issue?@action=redirect&bpo=46436]: Fix command-line option `-d/--directory` in module `http.server` which is ignored when combined with command-line option `--cgi`. Patch by Géry Ogam.
- [bpo-41403](https://bugs.python.org/issue?@action=redirect&bpo=41403) [https://bugs.python.org/issue?@action=redirect&bpo=41403]: Make `mock.patch()` raise a `TypeError` with a relevant error message on invalid arg. Previously it allowed a cryptic `AttributeError` to escape.

- [bpo-46474](https://bugs.python.org/issue?@action=redirect&bpo=46474) [https://bugs.python.org/issue?@action=redirect&bpo=46474]: In `importlib.metadata.EntryPoint.pattern`, avoid potential REDoS by limiting ambiguity in consecutive whitespace.
- [bpo-46474](https://bugs.python.org/issue?@action=redirect&bpo=46474) [https://bugs.python.org/issue?@action=redirect&bpo=46474]: Removed private method from `importlib.metadata.Path`. Sync with `importlib_metadata 4.10.0`.
- [bpo-46470](https://bugs.python.org/issue?@action=redirect&bpo=46470) [https://bugs.python.org/issue?@action=redirect&bpo=46470]: Remove unused branch from `typing._remove_dups_flatten`
- [bpo-46469](https://bugs.python.org/issue?@action=redirect&bpo=46469) [https://bugs.python.org/issue?@action=redirect&bpo=46469]: `asyncio` generic classes now return `types.GenericAlias` in `__class_getitem__` instead of the same class.
- [bpo-41906](https://bugs.python.org/issue?@action=redirect&bpo=41906) [https://bugs.python.org/issue?@action=redirect&bpo=41906]: Support passing filter instances in the `filters` values of `handlers` and `loggers` in the dictionary passed to `logging.config.dictConfig()`.
- [bpo-46422](https://bugs.python.org/issue?@action=redirect&bpo=46422) [https://bugs.python.org/issue?@action=redirect&bpo=46422]: Use `dis.Positions` in `dis.Instruction` instead of a regular tuple.
- [bpo-46434](https://bugs.python.org/issue?@action=redirect&bpo=46434) [https://bugs.python.org/issue?@action=redirect&bpo=46434]: `pdb` now gracefully handles help when `__doc__` is missing, for example when run with pregenerated optimized `.pyc` files.
- [bpo-43869](https://bugs.python.org/issue?@action=redirect&bpo=43869) [https://bugs.python.org/issue?@action=redirect&bpo=43869]: Python uses the same time Epoch on all platforms. Add an explicit unit test to ensure that it's the case. Patch by Victor Stinner.
- [bpo-46414](https://bugs.python.org/issue?@action=redirect&bpo=46414) [https://bugs.python.org/issue?@action=redirect&bpo=46414]: Add `typing.reveal_type()`. Patch by Jelle Zijlstra.
- [bpo-40280](https://bugs.python.org/issue?@action=redirect&bpo=40280) [https://bugs.python.org/issue?@action=redirect&bpo=40280]: `subprocess` now imports Windows-specific imports when `msvcrt` module is available, and POSIX-specific imports on all other platforms. This gives a clean exception when `_posixsubprocess` is not available (e.g. Emscripten browser target).

- [bpo-40066](https://bugs.python.org/issue?@action=redirect&bpo=40066) [https://bugs.python.org/issue?@action=redirect&bpo=40066]: `IntEnum`, `IntFlag`, and `StrEnum` use the mixed-in type for their `str()` and `format()` output.
- [bpo-46316](https://bugs.python.org/issue?@action=redirect&bpo=46316) [https://bugs.python.org/issue?@action=redirect&bpo=46316]: Optimize `pathlib.Path.iterdir()` by removing an unnecessary check for special entries.
- [bpo-29688](https://bugs.python.org/issue?@action=redirect&bpo=29688) [https://bugs.python.org/issue?@action=redirect&bpo=29688]: Document `pathlib.Path.absolute()` (which has always existed).
- [bpo-43012](https://bugs.python.org/issue?@action=redirect&bpo=43012) [https://bugs.python.org/issue?@action=redirect&bpo=43012]: The `pathlib` module's obsolete and internal `_Accessor` class has been removed to prepare the terrain for upcoming enhancements to the module.
- [bpo-46258](https://bugs.python.org/issue?@action=redirect&bpo=46258) [https://bugs.python.org/issue?@action=redirect&bpo=46258]: Speed up `math.isqrt()` for small positive integers by replacing two division steps with a lookup table.
- [bpo-46242](https://bugs.python.org/issue?@action=redirect&bpo=46242) [https://bugs.python.org/issue?@action=redirect&bpo=46242]: Improve error message when creating a new `enum.Enum` type subclassing an existing `Enum` with `_member_names_` using `enum.Enum.__call__()`.
- [bpo-43118](https://bugs.python.org/issue?@action=redirect&bpo=43118) [https://bugs.python.org/issue?@action=redirect&bpo=43118]: Fix a bug in `inspect.signature()` that was causing it to fail on some subclasses of classes with a `__text_signature__` referencing module globals. Patch by Weipeng Hong.
- [bpo-26552](https://bugs.python.org/issue?@action=redirect&bpo=26552) [https://bugs.python.org/issue?@action=redirect&bpo=26552]: Fixed case where failing `asyncio.ensure_future()` did not close the coroutine. Patch by Kumar Aditya.
- [bpo-21987](https://bugs.python.org/issue?@action=redirect&bpo=21987) [https://bugs.python.org/issue?@action=redirect&bpo=21987]: Fix an issue with `tarfile.TarFile.getmember()` getting a directory name with a trailing slash.
- [bpo-46124](https://bugs.python.org/issue?@action=redirect&bpo=46124) [https://bugs.python.org/issue?@action=redirect&bpo=46124]: Update `zoneinfo` to rely on `importlib.resources` traversable API.

- [bpo-46103](https://bugs.python.org/issue?@action=redirect&bpo=46103) [https://bugs.python.org/issue?@action=redirect&bpo=46103]: Now `inspect.getmembers()` only gets `__bases__` attribute from class type. Patch by Weipeng Hong.
- [bpo-46080](https://bugs.python.org/issue?@action=redirect&bpo=46080) [https://bugs.python.org/issue?@action=redirect&bpo=46080]: Fix exception in argparse help text generation if a `argparse.BooleanOptionalAction` argument's default is `argparse.SUPPRESS` and it has help specified. Patch by Felix Fontein.
- [bpo-44791](https://bugs.python.org/issue?@action=redirect&bpo=44791) [https://bugs.python.org/issue?@action=redirect&bpo=44791]: Fix substitution of `ParamSpec` in `Concatenate` with different parameter expressions. Substitution with a list of types returns now a tuple of types. Substitution with `Concatenate` returns now a `Concatenate` with concatenated lists of arguments.

## Documentation

- [bpo-46463](https://bugs.python.org/issue?@action=redirect&bpo=46463) [https://bugs.python.org/issue?@action=redirect&bpo=46463]: Fixes `escape4chm.py` script used when building the CHM documentation file

## Tests

- [bpo-43478](https://bugs.python.org/issue?@action=redirect&bpo=43478) [https://bugs.python.org/issue?@action=redirect&bpo=43478]: Mocks can no longer be provided as the specs for other Mocks. As a result, an already-mocked object cannot be passed to `mock.Mock()`. This can uncover bugs in tests since these Mock-derived Mocks will always pass certain tests (e.g. `isinstance`) and builtin assert functions (e.g. `assert_called_once_with`) will unconditionally pass.
- [bpo-46616](https://bugs.python.org/issue?@action=redirect&bpo=46616) [https://bugs.python.org/issue?@action=redirect&bpo=46616]: Ensures `test_importlib.test_windows` cleans up registry keys after completion.
- [bpo-44359](https://bugs.python.org/issue?@action=redirect&bpo=44359) [https://bugs.python.org/issue?@action=redirect&bpo=44359]: `test_ftplib` now silently ignores socket errors to prevent logging unhandled threading exceptions. Patch by Victor Stinner.
- [bpo-46600](https://bugs.python.org/issue?@action=redirect&bpo=46600) [https://bugs.python.org/issue?@action=redirect&bpo=46600]

- @action=redirect&bpo=46600]: Fix `test_gdb.test_pycfunction()` for Python built with `clang -Og`. Tolerate inlined functions in the gdb traceback. Patch by Victor Stinner.
- [bpo-46542](https://bugs.python.org/issue?@action=redirect&bpo=46542) [https://bugs.python.org/issue?@action=redirect&bpo=46542]: Fix a Python crash in `test_lib2to3` when using Python built in debug mode: limit the recursion limit. Patch by Victor Stinner.
- [bpo-46576](https://bugs.python.org/issue?@action=redirect&bpo=46576) [https://bugs.python.org/issue?@action=redirect&bpo=46576]: `test_peg_generator` now disables compiler optimization when testing compilation of its own C extensions to significantly speed up the testing on non-debug builds of CPython.
- [bpo-46542](https://bugs.python.org/issue?@action=redirect&bpo=46542) [https://bugs.python.org/issue?@action=redirect&bpo=46542]: Fix `test_json` tests checking for **RecursionError**: modify these tests to use `support.infinite_recursion()`. Patch by Victor Stinner.
- [bpo-13886](https://bugs.python.org/issue?@action=redirect&bpo=13886) [https://bugs.python.org/issue?@action=redirect&bpo=13886]: Skip `test_builtin` PTY tests on non-ASCII characters if the `readline` module is loaded. The `readline` module changes `input()` behavior, but `test_builtin` is not intended to test the `readline` module. Patch by Victor Stinner.
- [bpo-40280](https://bugs.python.org/issue?@action=redirect&bpo=40280) [https://bugs.python.org/issue?@action=redirect&bpo=40280]: Add **`test.support.requires_fork()`** decorators to mark tests that require a working **`os.fork()`**.
- [bpo-40280](https://bugs.python.org/issue?@action=redirect&bpo=40280) [https://bugs.python.org/issue?@action=redirect&bpo=40280]: Add **`test.support.requires_subprocess()`** decorator to mark tests which require working **`subprocess`** module or `os.spawn*`. The `wasm32-emscrip` platform has no support for processes.
- [bpo-46126](https://bugs.python.org/issue?@action=redirect&bpo=46126) [https://bugs.python.org/issue?@action=redirect&bpo=46126]: Disable ‘descriptions’ when running tests internally.

## Build

- [bpo-46602](https://bugs.python.org/issue?@action=redirect&bpo=46602) [https://bugs.python.org/issue?@action=redirect&bpo=46602]

@action=redirect&bpo=46602]: Tidied up configure.ac so that conftest.c is truncated rather than appended. This assists in the case where the 'rm' of conftest.c fails to happen between tests. Downstream issues such as a clobbered SOABI can result.

- [bpo-46600](https://bugs.python.org/issue?@action=redirect&bpo=46600) [https://bugs.python.org/issue?@action=redirect&bpo=46600]: Fix the test checking if the C compiler supports -Og option in the ./configure script to also use -Og on clang which supports it. Patch by Victor Stinner.
- [bpo-38472](https://bugs.python.org/issue?@action=redirect&bpo=38472) [https://bugs.python.org/issue?@action=redirect&bpo=38472]: Fix GCC detection in setup.py when cross-compiling. The C compiler is now run with LC\_ALL=C. Previously, the detection failed with a German locale.
- [bpo-46513](https://bugs.python.org/issue?@action=redirect&bpo=46513) [https://bugs.python.org/issue?@action=redirect&bpo=46513]: **configure** no longer uses AC\_C\_CHAR\_UNSIGNED macro and pyconfig.h no longer defines reserved symbol \_\_CHAR\_UNSIGNED\_\_.
- [bpo-46471](https://bugs.python.org/issue?@action=redirect&bpo=46471) [https://bugs.python.org/issue?@action=redirect&bpo=46471]: Use global singletons for single byte bytes objects in deepfreeze.
- [bpo-46443](https://bugs.python.org/issue?@action=redirect&bpo=46443) [https://bugs.python.org/issue?@action=redirect&bpo=46443]: Deepfreeze now uses cached small integers as it saves some space for common small integers.
- [bpo-46429](https://bugs.python.org/issue?@action=redirect&bpo=46429) [https://bugs.python.org/issue?@action=redirect&bpo=46429]: Merge all deep-frozen files into one for space savings. Patch by Kumar Aditya.
- [bpo-45569](https://bugs.python.org/issue?@action=redirect&bpo=45569) [https://bugs.python.org/issue?@action=redirect&bpo=45569]: The build now defaults to using 30-bit digits for Python integers. Previously either 15-bit or 30-bit digits would be selected, depending on the platform. 15-bit digits may still be selected using the --enable-big-digits=15 option to the configure script, or by defining PYLONG\_BITS\_IN\_DIGIT in pyconfig.h.
- [bpo-45925](https://bugs.python.org/issue?@action=redirect&bpo=45925) [https://bugs.python.org/issue?@action=redirect&bpo=45925]: Update Windows installer to use SQLite 3.37.2.
- [bpo-43112](https://bugs.python.org/issue?@action=redirect&bpo=43112) [https://bugs.python.org/issue?@action=redirect&bpo=43112]: Detect musl libc as a separate

SOABI (tagged as `linux-musl`).

## Windows

- [bpo-33125](https://bugs.python.org/issue?@action=redirect&bpo=33125) [https://bugs.python.org/issue?@action=redirect&bpo=33125]: The traditional EXE/MSI based installer for Windows is now available for ARM64
- [bpo-46362](https://bugs.python.org/issue?@action=redirect&bpo=46362) [https://bugs.python.org/issue?@action=redirect&bpo=46362]: `os.path.abspath("C:CON")` is now fixed to return `"\\.CON"`, not the same path. The regression was true of all legacy DOS devices such as COM1, LPT1, or NUL.
- [bpo-44934](https://bugs.python.org/issue?@action=redirect&bpo=44934) [https://bugs.python.org/issue?@action=redirect&bpo=44934]: The installer now offers a command-line only option to add the installation directory to the end of **PATH** instead of at the start.

## macOS

- [bpo-45925](https://bugs.python.org/issue?@action=redirect&bpo=45925) [https://bugs.python.org/issue?@action=redirect&bpo=45925]: Update macOS installer to SQLite 3.37.2.

## IDLE

- [bpo-45296](https://bugs.python.org/issue?@action=redirect&bpo=45296) [https://bugs.python.org/issue?@action=redirect&bpo=45296]: Clarify close, quit, and exit in IDLE. In the File menu, 'Close' and 'Exit' are now 'Close Window' (the current one) and 'Exit' is now 'Exit IDLE' (by closing all windows). In Shell, 'quit()' and 'exit()' mean 'close Shell'. If there are no other windows, this also exits IDLE.

## C API

- [bpo-40170](https://bugs.python.org/issue?@action=redirect&bpo=40170) [https://bugs.python.org/issue?@action=redirect&bpo=40170]: Remove the `PyHeapType_GET_MEMBERS()` macro. It was exposed in the public C API by mistake, it must only be used by Python internally. Use the `PyTypeObject.tp_members` member

instead. Patch by Victor Stinner.

- [bpo-40170](https://bugs.python.org/issue?@action=redirect&bpo=40170) [https://bugs.python.org/issue?@action=redirect&bpo=40170]: Move `_Py_GetAllocatedBlocks()` and `_PyObject_DebugMallocStats()` private functions to the internal C API. Patch by Victor Stinner.
- [bpo-46433](https://bugs.python.org/issue?@action=redirect&bpo=46433) [https://bugs.python.org/issue?@action=redirect&bpo=46433]: The internal function `_PyType_GetModuleByDef` now correctly handles inheritance patterns involving static types.
- [bpo-45459](https://bugs.python.org/issue?@action=redirect&bpo=45459) [https://bugs.python.org/issue?@action=redirect&bpo=45459]: `Py_buffer` and various `Py_buffer` related functions are now part of the limited API and stable ABI.
- [bpo-14916](https://bugs.python.org/issue?@action=redirect&bpo=14916) [https://bugs.python.org/issue?@action=redirect&bpo=14916]: Fixed bug in the tokenizer that prevented `PyRun_InteractiveOne` from parsing from the provided FD.

## Python 3.11.0 alpha 4

*Release date: 2022-01-13*

### Core and Builtins

- [bpo-46070](https://bugs.python.org/issue?@action=redirect&bpo=46070) [https://bugs.python.org/issue?@action=redirect&bpo=46070]: `Py_EndInterpreter()` now explicitly untracks all objects currently tracked by the GC. Previously, if an object was used later by another interpreter, calling `PyObject_GC_UnTrack()` on the object crashed if the previous or the next object of the `PyGC_Head` structure became a dangling pointer. Patch by Victor Stinner.
- [bpo-46347](https://bugs.python.org/issue?@action=redirect&bpo=46347) [https://bugs.python.org/issue?@action=redirect&bpo=46347]: Fix memory leak in `PyEval_EvalCodeEx`.
- [bpo-46339](https://bugs.python.org/issue?@action=redirect&bpo=46339) [https://bugs.python.org/issue?@action=redirect&bpo=46339]: Fix a crash in the parser when retrieving the error text for multi-line f-strings expressions that do not start in the first line of the string. Patch by Pablo

## Galindo

- [bpo-46331](https://bugs.python.org/issue?@action=redirect&bpo=46331) [https://bugs.python.org/issue?@action=redirect&bpo=46331]: Do not set line number of instruction storing doc-string. Fixes regression introduced in 3.11 alpha.
- [bpo-46314](https://bugs.python.org/issue?@action=redirect&bpo=46314) [https://bugs.python.org/issue?@action=redirect&bpo=46314]: Remove spurious “call” event when creating a lambda function that was accidentally introduced in 3.11a4.
- [bpo-46289](https://bugs.python.org/issue?@action=redirect&bpo=46289) [https://bugs.python.org/issue?@action=redirect&bpo=46289]: ASDL declaration of `FormattedValue` has changed to reflect `conversion` field is not optional.
- [bpo-46297](https://bugs.python.org/issue?@action=redirect&bpo=46297) [https://bugs.python.org/issue?@action=redirect&bpo=46297]: Fixed an interpreter crash on bootup with multiple `PythonPaths` set in the Windows registry. Patch by Derzsi Dániel.
- [bpo-46237](https://bugs.python.org/issue?@action=redirect&bpo=46237) [https://bugs.python.org/issue?@action=redirect&bpo=46237]: Fix the line number of tokenizer errors inside f-strings. Patch by Pablo Galindo.
- [bpo-46263](https://bugs.python.org/issue?@action=redirect&bpo=46263) [https://bugs.python.org/issue?@action=redirect&bpo=46263]: We always expect the “`use_frozen_modules`” config to be set, now that `getpath.c` was rewritten in pure Python and the logic improved.
- [bpo-46006](https://bugs.python.org/issue?@action=redirect&bpo=46006) [https://bugs.python.org/issue?@action=redirect&bpo=46006]: Fix a regression when a type method like `__init__()` is modified in a subinterpreter. Fix a regression in `_PyUnicode_EqualToASCIIId()` and type `update_slot()`. Revert the change which made the Unicode dictionary of interned strings compatible with subinterpreters: the internal interned dictionary is shared again by all interpreters. Patch by Victor Stinner.
- [bpo-45923](https://bugs.python.org/issue?@action=redirect&bpo=45923) [https://bugs.python.org/issue?@action=redirect&bpo=45923]

@action=redirect&bpo=45923]: Add RESUME opcode. This is a logical no-op. It is emitted by the compiler anywhere a Python function can be entered. It is used by the interpreter to perform tracing and optimizer checks.

- [bpo-46208](https://bugs.python.org/issue?@action=redirect&bpo=46208) [https://bugs.python.org/issue?@action=redirect&bpo=46208]: Fix the regression of `os.path.normpath("A/../../B")` not returning expected `../B` but `B`.
- [bpo-46240](https://bugs.python.org/issue?@action=redirect&bpo=46240) [https://bugs.python.org/issue?@action=redirect&bpo=46240]: Correct the error message for unclosed parentheses when the tokenizer doesn't reach the end of the source when the error is reported. Patch by Pablo Galindo
- [bpo-46009](https://bugs.python.org/issue?@action=redirect&bpo=46009) [https://bugs.python.org/issue?@action=redirect&bpo=46009]: Remove the `GEN_START` opcode.
- [bpo-46235](https://bugs.python.org/issue?@action=redirect&bpo=46235) [https://bugs.python.org/issue?@action=redirect&bpo=46235]: Certain sequence multiplication operations like `[0] * 1_000` are now faster due to reference-counting optimizations. Patch by Dennis Sweeney.
- [bpo-46221](https://bugs.python.org/issue?@action=redirect&bpo=46221) [https://bugs.python.org/issue?@action=redirect&bpo=46221]: **PREP\_RERAISE\_STAR** no longer pushes `lasti` to the stack.
- [bpo-46202](https://bugs.python.org/issue?@action=redirect&bpo=46202) [https://bugs.python.org/issue?@action=redirect&bpo=46202]: Remove **POP\_EXCEPT\_AND\_RERAISE** and replace it by an equivalent sequence of other opcodes.
- [bpo-46085](https://bugs.python.org/issue?@action=redirect&bpo=46085) [https://bugs.python.org/issue?@action=redirect&bpo=46085]: Fix iterator cache mechanism of **OrderedDict**.
- [bpo-46055](https://bugs.python.org/issue?@action=redirect&bpo=46055) [https://bugs.python.org/issue?@action=redirect&bpo=46055]: Speed up shifting operation involving integers less than **PyLong\_BASE**. Patch by Xinhang Xu.

- [bpo-46110](https://bugs.python.org/issue?@action=redirect&bpo=46110) [https://bugs.python.org/issue?@action=redirect&bpo=46110]: Add a maximum recursion check to the PEG parser to avoid stack overflow. Patch by Pablo Galindo
- [bpo-46107](https://bugs.python.org/issue?@action=redirect&bpo=46107) [https://bugs.python.org/issue?@action=redirect&bpo=46107]: Fix bug where **ExceptionGroup.split()** and **ExceptionGroup.subgroup()** did not copy the exception group's `__note__` field to the parts.
- [bpo-45711](https://bugs.python.org/issue?@action=redirect&bpo=45711) [https://bugs.python.org/issue?@action=redirect&bpo=45711]: The interpreter state's representation of handled exceptions (a.k.a `exc_info`, or `_PyErr_StackItem`) now has only the `exc_value` field, `exc_type` and `exc_traceback` have been removed as their values can be derived from `exc_value`.
- [bpo-44525](https://bugs.python.org/issue?@action=redirect&bpo=44525) [https://bugs.python.org/issue?@action=redirect&bpo=44525]: Replace the four call bytecode instructions which one pre-call instruction and two call instructions.

Removes `CALL_FUNCTION`, `CALL_FUNCTION_KW`, `CALL_METHOD` and `CALL_METHOD_KW`.

Adds `CALL_NO_KW` and `CALL_KW` call instructions, and `PRECALL_METHOD` prefix for pairing with `LOAD_METHOD`.

- [bpo-46039](https://bugs.python.org/issue?@action=redirect&bpo=46039) [https://bugs.python.org/issue?@action=redirect&bpo=46039]: Remove the `YIELD_FROM` instruction and replace it with the `SEND` instruction which performs the same operation, but without the loop.
- [bpo-45635](https://bugs.python.org/issue?@action=redirect&bpo=45635) [https://bugs.python.org/issue?@action=redirect&bpo=45635]: The code called from **`_PyErr_Display()`** was refactored to improve error handling. It now exits immediately upon an unrecoverable error.
- [bpo-46054](https://bugs.python.org/issue?@action=redirect&bpo=46054) [https://bugs.python.org/issue?@action=redirect&bpo=46054]

@action=redirect&bpo=46054]: Fix parser error when parsing non-utf8 characters in source files. Patch by Pablo Galindo.

- [bpo-46042](https://bugs.python.org/issue?@action=redirect&bpo=46042) [https://bugs.python.org/issue?@action=redirect&bpo=46042]: Improve the location of the caret in **SyntaxError** exceptions emitted by the symbol table. Patch by Pablo Galindo.
- [bpo-46049](https://bugs.python.org/issue?@action=redirect&bpo=46049) [https://bugs.python.org/issue?@action=redirect&bpo=46049]: Ensure `._pth` files work as intended on platforms other than Windows.
- [bpo-46048](https://bugs.python.org/issue?@action=redirect&bpo=46048) [https://bugs.python.org/issue?@action=redirect&bpo=46048]: Fixes parsing of `._pth` files on startup so that single-character paths are correctly read.
- [bpo-37971](https://bugs.python.org/issue?@action=redirect&bpo=37971) [https://bugs.python.org/issue?@action=redirect&bpo=37971]: Fix a bug where the line numbers given in a traceback when a decorator application raised an exception were wrong.
- [bpo-46031](https://bugs.python.org/issue?@action=redirect&bpo=46031) [https://bugs.python.org/issue?@action=redirect&bpo=46031]: Add **POP\_JUMP\_IF\_NOT\_NONE** and **POP\_JUMP\_IF\_NONE** opcodes to speed up conditional jumps.
- [bpo-45654](https://bugs.python.org/issue?@action=redirect&bpo=45654) [https://bugs.python.org/issue?@action=redirect&bpo=45654]: Deepfreeze **runpy**, patch by Kumar Aditya.
- [bpo-46025](https://bugs.python.org/issue?@action=redirect&bpo=46025) [https://bugs.python.org/issue?@action=redirect&bpo=46025]: Fix a crash in the **atexit** module involving functions that unregister themselves before raising exceptions. Patch by Pablo Galindo.
- [bpo-46000](https://bugs.python.org/issue?@action=redirect&bpo=46000) [https://bugs.python.org/issue?@action=redirect&bpo=46000]: Improve compatibility of the **curses** module with NetBSD curses.
- [bpo-44525](https://bugs.python.org/issue?@action=redirect&bpo=44525) [https://bugs.python.org/issue?@action=redirect&bpo=44525]: Specialize the **CALL\_FUNCTION**

instruction for calls to builtin types with a single argument. Speeds up `range(x)`, `list(x)`, and specifically `type(obj)`.

- [bpo-42918](https://bugs.python.org/issue?@action=redirect&bpo=42918) [https://bugs.python.org/issue?@action=redirect&bpo=42918]: Fix bug where the built-in `compile()` function did not always raise a `SyntaxError` when passed multiple statements in 'single' mode. Patch by Weipeng Hong.
- [bpo-45953](https://bugs.python.org/issue?@action=redirect&bpo=45953) [https://bugs.python.org/issue?@action=redirect&bpo=45953]: The main interpreter in `_PyRuntimeState.interpreters` is now statically allocated (as part of `_PyRuntime`). Likewise for the initial thread state of each interpreter. This means less allocation during runtime init, as well as better memory locality for these key state objects.
- [bpo-45292](https://bugs.python.org/issue?@action=redirect&bpo=45292) [https://bugs.python.org/issue?@action=redirect&bpo=45292]: Complete the [PEP 654](https://peps.python.org/pep-0654/) [https://peps.python.org/pep-0654/] implementation: add `except*`.
- [bpo-43413](https://bugs.python.org/issue?@action=redirect&bpo=43413) [https://bugs.python.org/issue?@action=redirect&bpo=43413]: Revert changes in `set.__init__`. Subclass of `set` needs to define a `__init__()` method if it defines a `__new__()` method with additional keyword parameters.
- [bpo-43931](https://bugs.python.org/issue?@action=redirect&bpo=43931) [https://bugs.python.org/issue?@action=redirect&bpo=43931]: Added the `Py_Version` constant which bears the same value as `PY_VERSION_HEX`. Patch by Gabriele N. Tornetta.

## Library

- [bpo-46342](https://bugs.python.org/issue?@action=redirect&bpo=46342) [https://bugs.python.org/issue?@action=redirect&bpo=46342]: The `@typing.final` decorator now sets the `__final__` attribute on the decorated object to allow runtime introspection. Patch by Jelle Zijlstra.
- [bpo-46328](https://bugs.python.org/issue?@action=redirect&bpo=46328) [https://bugs.python.org/issue?@action=redirect&bpo=46328]

@action=redirect&bpo=46328]: Added the `sys.exception()` method which returns the active exception instance.

- [bpo-46307](https://bugs.python.org/issue?@action=redirect&bpo=46307) [https://bugs.python.org/issue?@action=redirect&bpo=46307]: Add `string.Template.is_valid()` and `string.Template.get_identifiers()` methods.
- [bpo-46306](https://bugs.python.org/issue?@action=redirect&bpo=46306) [https://bugs.python.org/issue?@action=redirect&bpo=46306]: Assume that `types.CodeType` always has `types.CodeType.co_firstlineno` in `doctest`.
- [bpo-40479](https://bugs.python.org/issue?@action=redirect&bpo=40479) [https://bugs.python.org/issue?@action=redirect&bpo=40479]: Fix `hashlib usedforsecurity` option to work correctly with OpenSSL 3.0.0 in FIPS mode.
- [bpo-46070](https://bugs.python.org/issue?@action=redirect&bpo=46070) [https://bugs.python.org/issue?@action=redirect&bpo=46070]: Fix possible segfault when importing the `asyncio` module from different sub-interpreters in parallel. Patch by Erlend E. Aasland.
- [bpo-46244](https://bugs.python.org/issue?@action=redirect&bpo=46244) [https://bugs.python.org/issue?@action=redirect&bpo=46244]: Removed `__slots__` from `typing.ParamSpec` and `typing.TypeVar`. They served no purpose. Patch by Arie Bovenberg.
- [bpo-46278](https://bugs.python.org/issue?@action=redirect&bpo=46278) [https://bugs.python.org/issue?@action=redirect&bpo=46278]: Reflect `context` argument in `AbstractEventLoop.call_*()` methods. Loop implementations already support it.
- [bpo-46269](https://bugs.python.org/issue?@action=redirect&bpo=46269) [https://bugs.python.org/issue?@action=redirect&bpo=46269]: Remove special-casing of `__new__` in `enum.Enum.__dir__()`.
- [bpo-46266](https://bugs.python.org/issue?@action=redirect&bpo=46266) [https://bugs.python.org/issue?@action=redirect&bpo=46266]: Improve day constants in `calendar`.

Now all constants (**MONDAY** ... **SUNDAY**) are documented,

tested, and added to `__all__`.

- [bpo-46257](https://bugs.python.org/issue?@action=redirect&bpo=46257) [https://bugs.python.org/issue?@action=redirect&bpo=46257]: Optimized the mean, variance, and stdev functions in the statistics module. If the input is an iterator, it is consumed in a single pass rather than eating memory by conversion to a list. The single pass algorithm is about twice as fast as the previous two pass code.
- [bpo-41011](https://bugs.python.org/issue?@action=redirect&bpo=41011) [https://bugs.python.org/issue?@action=redirect&bpo=41011]: Added two new variables to *pyvenv.cfg* which is generated by **venv** module: *executable* for the executable and *command* for the command line used to create the environment.
- [bpo-46239](https://bugs.python.org/issue?@action=redirect&bpo=46239) [https://bugs.python.org/issue?@action=redirect&bpo=46239]: Improve error message when importing **asyncio.windows\_events** on non-Windows.
- [bpo-46238](https://bugs.python.org/issue?@action=redirect&bpo=46238) [https://bugs.python.org/issue?@action=redirect&bpo=46238]: Reuse `_winapi` constants in `asyncio.windows_events`.
- [bpo-46222](https://bugs.python.org/issue?@action=redirect&bpo=46222) [https://bugs.python.org/issue?@action=redirect&bpo=46222]: Adding `SF_NOCACHE` sendfile constant for FreeBSD for the `posixmodule`.
- [bpo-37295](https://bugs.python.org/issue?@action=redirect&bpo=37295) [https://bugs.python.org/issue?@action=redirect&bpo=37295]: Add fast path for `0 <= k <= n <= 67` for **math.comb()**.
- [bpo-46176](https://bugs.python.org/issue?@action=redirect&bpo=46176) [https://bugs.python.org/issue?@action=redirect&bpo=46176]: Adding the `MAP_STACK` constant for the `mmap` module.
- [bpo-43424](https://bugs.python.org/issue?@action=redirect&bpo=43424) [https://bugs.python.org/issue?@action=redirect&bpo=43424]: Deprecate **webbrowser.MacOSXOSAScript.\_name** and use `name` instead.
- [bpo-45321](https://bugs.python.org/issue?@action=redirect&bpo=45321) [https://bugs.python.org/issue?@action=redirect&bpo=45321]

@action=redirect&bpo=45321]: Added missing error codes to module `xml.parsers.expat.errors`.

- [bpo-46125](https://bugs.python.org/issue?@action=redirect&bpo=46125) [https://bugs.python.org/issue?@action=redirect&bpo=46125]: Refactor tests to test traversable API directly. Includes changes from importlib 5.4.0.
- [bpo-46118](https://bugs.python.org/issue?@action=redirect&bpo=46118) [https://bugs.python.org/issue?@action=redirect&bpo=46118]: Moved importlib.resources and its related functionality to a package.
- [bpo-37578](https://bugs.python.org/issue?@action=redirect&bpo=37578) [https://bugs.python.org/issue?@action=redirect&bpo=37578]: Add *include\_hidden* parameter to `glob()` and `iglob()` to match hidden files and directories when using special characters like `*`, `**`, `?` and `[]`.
- [bpo-20369](https://bugs.python.org/issue?@action=redirect&bpo=20369) [https://bugs.python.org/issue?@action=redirect&bpo=20369]: `concurrent.futures.wait()` no longer blocks forever when given duplicate Futures. Patch by Kumar Aditya.
- [bpo-46105](https://bugs.python.org/issue?@action=redirect&bpo=46105) [https://bugs.python.org/issue?@action=redirect&bpo=46105]: Honor spec when generating requirement specs with urls and extras (importlib\_metadata 4.8.3).
- [bpo-44893](https://bugs.python.org/issue?@action=redirect&bpo=44893) [https://bugs.python.org/issue?@action=redirect&bpo=44893]: EntryPoint objects are no longer tuples. Recommended means to access is by attribute (`'name'`, `'group'`) or accessor (`'load()'`). Access by index is deprecated and will raise deprecation warning.
- [bpo-22815](https://bugs.python.org/issue?@action=redirect&bpo=22815) [https://bugs.python.org/issue?@action=redirect&bpo=22815]: Print unexpected successes together with failures and errors in summary in `unittest.TextTestResult`.
- [bpo-22047](https://bugs.python.org/issue?@action=redirect&bpo=22047) [https://bugs.python.org/issue?@action=redirect&bpo=22047]: Calling `add_argument_group()` on an argument group is deprecated. Calling `add_argument_group()` or

`add_mutually_exclusive_group()` on a mutually exclusive group is deprecated.

These features were never supported and do not always work correctly. The functions exist on the API by accident through inheritance and will be removed in the future.

- [bpo-26952](https://bugs.python.org/issue?@action=redirect&bpo=26952) [https://bugs.python.org/issue?@action=redirect&bpo=26952]: `argparse` raises `ValueError` with clear message when trying to render usage for an empty mutually exclusive group. Previously it raised a cryptic `IndexError`.
- [bpo-45615](https://bugs.python.org/issue?@action=redirect&bpo=45615) [https://bugs.python.org/issue?@action=redirect&bpo=45615]: Functions in the `traceback` module raise `TypeError` rather than `AttributeError` when an exception argument is not of type `BaseException`.
- [bpo-16594](https://bugs.python.org/issue?@action=redirect&bpo=16594) [https://bugs.python.org/issue?@action=redirect&bpo=16594]: Add `allow_reuse_port` flag in `socketserver`.
- [bpo-27718](https://bugs.python.org/issue?@action=redirect&bpo=27718) [https://bugs.python.org/issue?@action=redirect&bpo=27718]: Fix help for the `signal` module. Some functions (e.g. `signal()` and `getsignal()`) were omitted.
- [bpo-46032](https://bugs.python.org/issue?@action=redirect&bpo=46032) [https://bugs.python.org/issue?@action=redirect&bpo=46032]: The `registry()` method of `functools.singledispatch()` functions checks now the first argument or the first parameter annotation and raises a `TypeError` if it is not supported. Previously unsupported “types” were ignored (e.g. `typing.List[int]`) or caused an error at calling time (e.g. `list[int]`).
- [bpo-46014](https://bugs.python.org/issue?@action=redirect&bpo=46014) [https://bugs.python.org/issue?@action=redirect&bpo=46014]: Add ability to use `typing.Union` and `types.UnionType` as dispatch argument to `functools.singledispatch`. Patch provided by Yurii Karabas.

- [bpo-27062](https://bugs.python.org/issue?@action=redirect&bpo=27062) [https://bugs.python.org/issue?@action=redirect&bpo=27062]: Add `__all__` to `inspect`, patch by Kumar Aditya.
- [bpo-46018](https://bugs.python.org/issue?@action=redirect&bpo=46018) [https://bugs.python.org/issue?@action=redirect&bpo=46018]: Ensure that `math.expml()` does not raise on underflow.
- [bpo-46016](https://bugs.python.org/issue?@action=redirect&bpo=46016) [https://bugs.python.org/issue?@action=redirect&bpo=46016]: Adding `F_DUP2FD` and `F_DUP2FD_CLOEXEC` constants from FreeBSD into the `fcntl` module.
- [bpo-45755](https://bugs.python.org/issue?@action=redirect&bpo=45755) [https://bugs.python.org/issue?@action=redirect&bpo=45755]: `typing` generic aliases now reveal the class attributes of the original generic class when passed to `dir()`. This was the behavior up to Python 3.6, but was changed in 3.7-3.9.
- [bpo-45874](https://bugs.python.org/issue?@action=redirect&bpo=45874) [https://bugs.python.org/issue?@action=redirect&bpo=45874]: The empty query string, consisting of no query arguments, is now handled correctly in `urllib.parse.parse_qs`. This caused problems before when strict parsing was enabled.
- [bpo-44674](https://bugs.python.org/issue?@action=redirect&bpo=44674) [https://bugs.python.org/issue?@action=redirect&bpo=44674]: Change how dataclasses disallows mutable default values. It used to use a list of known types (list, dict, set). Now it disallows unhashable objects to be defaults. It's using unhashability as a proxy for mutability. Patch by Eric V. Smith, idea by Raymond Hettinger.
- [bpo-23882](https://bugs.python.org/issue?@action=redirect&bpo=23882) [https://bugs.python.org/issue?@action=redirect&bpo=23882]: Remove namespace package (PEP 420) support from unittest discovery. It was introduced in Python 3.4 but has been broken since Python 3.7.
- [bpo-25066](https://bugs.python.org/issue?@action=redirect&bpo=25066) [https://bugs.python.org/issue?@action=redirect&bpo=25066]: Added a `__repr__()` method to `multiprocessing.Event` objects, patch by Kumar Aditya.

- [bpo-45643](https://bugs.python.org/issue?@action=redirect&bpo=45643) [https://bugs.python.org/issue?@action=redirect&bpo=45643]: Added `signal.SIGSTKFLT` on platforms where this signal is defined.
- [bpo-44092](https://bugs.python.org/issue?@action=redirect&bpo=44092) [https://bugs.python.org/issue?@action=redirect&bpo=44092]: Fetch across rollback no longer raises `InterfaceError`. Instead we leave it to the SQLite library to handle these cases. Patch by Erlend E. Aasland.
- [bpo-42413](https://bugs.python.org/issue?@action=redirect&bpo=42413) [https://bugs.python.org/issue?@action=redirect&bpo=42413]: Replace `concurrent.futures.TimeoutError` and `asyncio.TimeoutError` with builtin `TimeoutError`, keep these names as deprecated aliases.

## Documentation

- [bpo-46196](https://bugs.python.org/issue?@action=redirect&bpo=46196) [https://bugs.python.org/issue?@action=redirect&bpo=46196]: Document method `cmd.Cmd.columnize()`.
- [bpo-46120](https://bugs.python.org/issue?@action=redirect&bpo=46120) [https://bugs.python.org/issue?@action=redirect&bpo=46120]: State that `|` is preferred for readability over `Union` in the `typing` docs.
- [bpo-46109](https://bugs.python.org/issue?@action=redirect&bpo=46109) [https://bugs.python.org/issue?@action=redirect&bpo=46109]: Extracted `importlib.resources` and `importlib.resources.abc` documentation into separate files.
- [bpo-19737](https://bugs.python.org/issue?@action=redirect&bpo=19737) [https://bugs.python.org/issue?@action=redirect&bpo=19737]: Update the documentation for the `globals()` function.

## Tests

- [bpo-46296](https://bugs.python.org/issue?@action=redirect&bpo=46296) [https://bugs.python.org/issue?@action=redirect&bpo=46296]: Add a test case for `enum` with `_use_args_ == True` and `_member_type_ == object`.
- [bpo-46205](https://bugs.python.org/issue?@action=redirect&bpo=46205) [https://bugs.python.org/issue?@action=redirect&bpo=46205]: Fix hang in `runtest_mp` due to race condition

- [bpo-46263](https://bugs.python.org/issue?@action=redirect&bpo=46263) [https://bugs.python.org/issue?@action=redirect&bpo=46263]: Fix `test_capi` on FreeBSD 14-dev: instruct `jemalloc` to not fill freed memory with junk byte.
- [bpo-46262](https://bugs.python.org/issue?@action=redirect&bpo=46262) [https://bugs.python.org/issue?@action=redirect&bpo=46262]: Cover `ValueError` path in tests for `enum.Flag._missing_()`.
- [bpo-46150](https://bugs.python.org/issue?@action=redirect&bpo=46150) [https://bugs.python.org/issue?@action=redirect&bpo=46150]: Now `fakename` in `test_pathlib.PosixPathTest.test_expanduser` is checked to be non-existent.
- [bpo-46129](https://bugs.python.org/issue?@action=redirect&bpo=46129) [https://bugs.python.org/issue?@action=redirect&bpo=46129]: Rewrite `asyncio.locks` tests with `unittest.IsolatedAsyncioTestCase` usage.
- [bpo-23819](https://bugs.python.org/issue?@action=redirect&bpo=23819) [https://bugs.python.org/issue?@action=redirect&bpo=23819]: Fixed `asyncio` tests in python optimized mode. Patch by Kumar Aditya.
- [bpo-46114](https://bugs.python.org/issue?@action=redirect&bpo=46114) [https://bugs.python.org/issue?@action=redirect&bpo=46114]: Fix test case for OpenSSL 3.0.1 version. OpenSSL 3.0 uses `0xMNN00P0L`.

## Build

- [bpo-44133](https://bugs.python.org/issue?@action=redirect&bpo=44133) [https://bugs.python.org/issue?@action=redirect&bpo=44133]: When Python is configured with `--without-static-libpython`, the Python static library (`libpython.a`) is no longer built. Patch by Victor Stinner.
- [bpo-44133](https://bugs.python.org/issue?@action=redirect&bpo=44133) [https://bugs.python.org/issue?@action=redirect&bpo=44133]: When Python is built without `--enable-shared`, the `python` program is now linked to object files, rather than being linked to the Python static library (`libpython.a`), to make sure that all symbols are exported. Previously, the linker omitted some symbols like the `Py_FrozenMain()` function. Patch by Victor Stinner.
- [bpo-40280](https://bugs.python.org/issue?@action=redirect&bpo=40280) [https://bugs.python.org/issue?@action=redirect&bpo=40280]: The `configure` script has a new option `--with-emscripten-target` to select browser or node as Emscripten build target.
- [bpo-46315](https://bugs.python.org/issue?@action=redirect&bpo=46315) [https://bugs.python.org/issue?@action=redirect&bpo=46315]: Added and fixed `#ifdef HAVE_FEATURE` checks for functionality that is not available

on WASI platform.

- [bpo-45723](https://bugs.python.org/issue?@action=redirect&bpo=45723) [https://bugs.python.org/issue?@action=redirect&bpo=45723]: Fixed a regression in `configure` check for `select.epoll()`.
- [bpo-46263](https://bugs.python.org/issue?@action=redirect&bpo=46263) [https://bugs.python.org/issue?@action=redirect&bpo=46263]: `configure` no longer sets `MULTIARCH` on FreeBSD platforms.
- [bpo-46106](https://bugs.python.org/issue?@action=redirect&bpo=46106) [https://bugs.python.org/issue?@action=redirect&bpo=46106]: Updated OpenSSL to 1.1.1m in Windows builds, macOS installer builds, and CI. Patch by Kumar Aditya.
- [bpo-46088](https://bugs.python.org/issue?@action=redirect&bpo=46088) [https://bugs.python.org/issue?@action=redirect&bpo=46088]: Automatically detect or install bootstrap Python runtime when building from Visual Studio.
- [bpo-46072](https://bugs.python.org/issue?@action=redirect&bpo=46072) [https://bugs.python.org/issue?@action=redirect&bpo=46072]: Add a `--with-pystats` `configure` option to turn on internal statistics gathering.
- [bpo-40280](https://bugs.python.org/issue?@action=redirect&bpo=40280) [https://bugs.python.org/issue?@action=redirect&bpo=40280]: A new directory `Tools/wasm` contains WebAssembly-related helpers like `config.site` override for `wasm32-emscrip`ten, `wasm` assets generator to bundle the `stdlib`, and a `README`.
- [bpo-46023](https://bugs.python.org/issue?@action=redirect&bpo=46023) [https://bugs.python.org/issue?@action=redirect&bpo=46023]: **makesetup** no longer builds extensions that have been marked as *disabled*. This allows users to disable modules in `Modules/Setup.local`.
- [bpo-45949](https://bugs.python.org/issue?@action=redirect&bpo=45949) [https://bugs.python.org/issue?@action=redirect&bpo=45949]: Use pure Python `freeze_module` for all but `importlib` bootstrap files. `--with-freeze-module` **configure** option is no longer needed for cross builds.

## Windows

- [bpo-46217](https://bugs.python.org/issue?@action=redirect&bpo=46217) [https://bugs.python.org/issue?@action=redirect&bpo=46217]: Removed parameter that is unsupported on Windows 8.1 and early Windows 10 and may have caused build or runtime failures.

## macOS

- [bpo-40477](https://bugs.python.org/issue?@action=redirect&bpo=40477) [https://bugs.python.org/issue?@action=redirect&bpo=40477]: The Python Launcher app for macOS now properly launches scripts and, if necessary, the Terminal app when running on recent macOS releases.

## C API

- [bpo-46236](https://bugs.python.org/issue?@action=redirect&bpo=46236) [https://bugs.python.org/issue?@action=redirect&bpo=46236]: Fix a bug in `PyFunction_GetAnnotations()` that caused it to return a tuple instead of a dict.
- [bpo-46140](https://bugs.python.org/issue?@action=redirect&bpo=46140) [https://bugs.python.org/issue?@action=redirect&bpo=46140]: `PyBuffer_GetPointer()`, `PyBuffer_FromContiguous()`, `PyBuffer_ToContiguous()` and `PyMemoryView_FromBuffer()` now take buffer info by `const Py_buffer *` instead of `Py_buffer *`, as they do not need mutability. `PyBuffer_FromContiguous()` also now takes the source buffer as `const void *`, and similarly `PyBuffer_GetPointer()` takes the strides as `const Py_ssize_t *`.
- [bpo-45855](https://bugs.python.org/issue?@action=redirect&bpo=45855) [https://bugs.python.org/issue?@action=redirect&bpo=45855]: Document that the `no_block` argument to `PyCapsule_Import()` is a no-op now.
- [bpo-45855](https://bugs.python.org/issue?@action=redirect&bpo=45855) [https://bugs.python.org/issue?@action=redirect&bpo=45855]: Replaced deprecated usage of `PyImport_ImportModuleNoBlock()` with `PyImport_ImportModule()` in stdlib modules. Patch by Kumar Aditya.
- [bpo-46007](https://bugs.python.org/issue?@action=redirect&bpo=46007) [https://bugs.python.org/issue?@action=redirect&bpo=46007]: The `PyUnicode_CHECK_INTERNED()` macro has been excluded from the limited C API. It was never usable there, because it used internal structures which are not available in the limited C API. Patch by Victor Stinner.

## Python 3.11.0 alpha 3

*Release date: 2021-12-08*

## Core and Builtins

- [bpo-46009](https://bugs.python.org/issue?@action=redirect&bpo=46009) [https://bugs.python.org/issue?@action=redirect&bpo=46009]: Restore behavior from 3.9 and earlier when sending non-None to newly started generator. In 3.9 this did not affect the state of the generator. In 3.10.0 and 3.10.1 `gen_func().send(0)` is equivalent to `gen_func().throw(TypeError(...))` which exhausts the generator. In 3.10.2 onward, the behavior has been reverted to that of 3.9.
- [bpo-46004](https://bugs.python.org/issue?@action=redirect&bpo=46004) [https://bugs.python.org/issue?@action=redirect&bpo=46004]: Fix the **SyntaxError** location for errors involving for loops with invalid targets. Patch by Pablo Galindo
- [bpo-45711](https://bugs.python.org/issue?@action=redirect&bpo=45711) [https://bugs.python.org/issue?@action=redirect&bpo=45711]: **\_\_PyErr\_ChainStackItem()** no longer normalizes `exc_info` (including setting the traceback on the exception instance) because `exc_info` is always normalized.
- [bpo-45607](https://bugs.python.org/issue?@action=redirect&bpo=45607) [https://bugs.python.org/issue?@action=redirect&bpo=45607]: The `__note__` field was added to **BaseException**. It is `None` by default but can be set to a string which is added to the exception's traceback.
- [bpo-45947](https://bugs.python.org/issue?@action=redirect&bpo=45947) [https://bugs.python.org/issue?@action=redirect&bpo=45947]: Place pointers to dict and values immediately before GC header. This reduces number of dependent memory loads to access either dict or values from 3 to 1.
- [bpo-45915](https://bugs.python.org/issue?@action=redirect&bpo=45915) [https://bugs.python.org/issue?@action=redirect&bpo=45915]: `is_valid_fd` now uses faster `fcntl(fd, F_GETFD)` on Linux, macOS, and Windows.
- [bpo-44530](https://bugs.python.org/issue?@action=redirect&bpo=44530) [https://bugs.python.org/issue?@action=redirect&bpo=44530]: Reverts a change to the `code.__new__` **audit event** from an earlier prerelease.

- [bpo-42268](https://bugs.python.org/issue?@action=redirect&bpo=42268) [https://bugs.python.org/issue?@action=redirect&bpo=42268]: Fail the configure step if the selected compiler doesn't support memory sanitizer. Patch by Pablo Galindo
- [bpo-45711](https://bugs.python.org/issue?@action=redirect&bpo=45711) [https://bugs.python.org/issue?@action=redirect&bpo=45711]: The three values of `exc_info` are now always consistent with each other. In particular, the `type` and `traceback` fields are now derived from the exception instance. This impacts the return values of `sys.exc_info()` and `PyErr_GetExcInfo()` if the exception instance is modified while the exception is handled, as well as `PyErr_SetExcInfo()`, which now ignores the `type` and `traceback` arguments provided to it.
- [bpo-45727](https://bugs.python.org/issue?@action=redirect&bpo=45727) [https://bugs.python.org/issue?@action=redirect&bpo=45727]: Refine the custom syntax error that suggests that a comma may be missing to trigger only when the expressions are detected between parentheses or brackets. Patch by Pablo Galindo
- [bpo-45885](https://bugs.python.org/issue?@action=redirect&bpo=45885) [https://bugs.python.org/issue?@action=redirect&bpo=45885]: Specialized the `COMPARE_OP` opcode using the PEP 659 machinery.
- [bpo-45786](https://bugs.python.org/issue?@action=redirect&bpo=45786) [https://bugs.python.org/issue?@action=redirect&bpo=45786]: Allocate space for the interpreter frame in the frame object, to avoid an additional allocation when the frame object outlives the frame activation.
- [bpo-45614](https://bugs.python.org/issue?@action=redirect&bpo=45614) [https://bugs.python.org/issue?@action=redirect&bpo=45614]: Fix `traceback` display for exceptions with invalid module name.
- [bpo-45813](https://bugs.python.org/issue?@action=redirect&bpo=45813) [https://bugs.python.org/issue?@action=redirect&bpo=45813]: Fix crash when calling `coro.cr_frame.clear()` after coroutine has been freed.
- [bpo-45811](https://bugs.python.org/issue?@action=redirect&bpo=45811) [https://bugs.python.org/issue?@action=redirect&bpo=45811]: Improve the tokenizer errors when encountering invisible control characters in the parser.

## Patch by Pablo Galindo

- [bpo-45848](https://bugs.python.org/issue?@action=redirect&bpo=45848) [https://bugs.python.org/issue?@action=redirect&bpo=45848]: Allow the parser to obtain error lines directly from encoded files. Patch by Pablo Galindo
- [bpo-45709](https://bugs.python.org/issue?@action=redirect&bpo=45709) [https://bugs.python.org/issue?@action=redirect&bpo=45709]: Restore behavior from 3.10 when tracing an exception raised within a with statement.
- [bpo-44525](https://bugs.python.org/issue?@action=redirect&bpo=44525) [https://bugs.python.org/issue?@action=redirect&bpo=44525]: Adds new **COPY\_FREE\_VARS** opcode, to make copying of free variables from function to frame explicit. Helps optimization of calls to Python function.
- [bpo-45829](https://bugs.python.org/issue?@action=redirect&bpo=45829) [https://bugs.python.org/issue?@action=redirect&bpo=45829]: Specialize **BINARY\_SUBSCR** for classes with a `__getitem__` method implemented in Python
- [bpo-45826](https://bugs.python.org/issue?@action=redirect&bpo=45826) [https://bugs.python.org/issue?@action=redirect&bpo=45826]: Fixed a crash when calling `.with_traceback(None)` on `NameError`. This occurs internally in `unittest.TestCase.assertRaises()`.
- [bpo-45822](https://bugs.python.org/issue?@action=redirect&bpo=45822) [https://bugs.python.org/issue?@action=redirect&bpo=45822]: Fixed a bug in the parser that was causing it to not respect **PEP 263** [https://peps.python.org/pep-0263/] coding cookies when no flags are provided. Patch by Pablo Galindo
- [bpo-45820](https://bugs.python.org/issue?@action=redirect&bpo=45820) [https://bugs.python.org/issue?@action=redirect&bpo=45820]: Fix a segfault when the parser fails without reading any input. Patch by Pablo Galindo
- [bpo-45636](https://bugs.python.org/issue?@action=redirect&bpo=45636) [https://bugs.python.org/issue?@action=redirect&bpo=45636]: Simplify the implementation of **BINARY\_OP** by indexing into an array of function pointers (rather than switching on the oparg).
- [bpo-42540](https://bugs.python.org/issue?@action=redirect&bpo=42540) [https://bugs.python.org/issue?@action=redirect&bpo=42540]: Fix crash when `os.fork()` is

called with an active non-default memory allocator.

- [bpo-45738](https://bugs.python.org/issue?@action=redirect&bpo=45738) [https://bugs.python.org/issue?@action=redirect&bpo=45738]: Fix computation of error location for invalid continuation characters in the parser. Patch by Pablo Galindo.
- [bpo-45636](https://bugs.python.org/issue?@action=redirect&bpo=45636) [https://bugs.python.org/issue?@action=redirect&bpo=45636]: Remove an existing “fast path” for old-style string formatting, since it no longer appears to have any measurable impact.
- [bpo-45753](https://bugs.python.org/issue?@action=redirect&bpo=45753) [https://bugs.python.org/issue?@action=redirect&bpo=45753]: Make recursion checks a bit more efficient by tracking amount of calls left before overflow.
- [bpo-45773](https://bugs.python.org/issue?@action=redirect&bpo=45773) [https://bugs.python.org/issue?@action=redirect&bpo=45773]: Fix a compiler hang when attempting to optimize certain jump patterns.
- [bpo-45764](https://bugs.python.org/issue?@action=redirect&bpo=45764) [https://bugs.python.org/issue?@action=redirect&bpo=45764]: The parser now gives a better error message when leaving out the opening parenthesis ( after a `def`-statement:

```
>>> def f:
      File "<stdin>", line 1
        def f:
            ^
SyntaxError: expected '('
```

- [bpo-45609](https://bugs.python.org/issue?@action=redirect&bpo=45609) [https://bugs.python.org/issue?@action=redirect&bpo=45609]: Specialized the `STORE_SUBSCR` opcode using the PEP 659 machinery.
- [bpo-45636](https://bugs.python.org/issue?@action=redirect&bpo=45636) [https://bugs.python.org/issue?@action=redirect&bpo=45636]: Replace all numeric `BINARY_*` and `INPLACE_*` instructions with a single **`BINARY_OP`** implementation.
- [bpo-45582](https://bugs.python.org/issue?@action=redirect&bpo=45582) [https://bugs.python.org/issue?@action=redirect&bpo=45582]

@action=redirect&bpo=45582]: Path calculation (known as `getpath`) has been reimplemented as a frozen Python module. This should have no visible impact, but may affect calculation of all paths referenced in `sys` and `sysconfig`.

- [bpo-45450](https://bugs.python.org/issue?@action=redirect&bpo=45450) [https://bugs.python.org/issue?@action=redirect&bpo=45450]: Improve the syntax error message for parenthesized arguments. Patch by Pablo Galindo.

## Library

- [bpo-27946](https://bugs.python.org/issue?@action=redirect&bpo=27946) [https://bugs.python.org/issue?@action=redirect&bpo=27946]: Fix possible crash when getting an attribute of class: `xml.etree.ElementTree.Element` simultaneously with replacing the `attrib` dict.
- [bpo-45711](https://bugs.python.org/issue?@action=redirect&bpo=45711) [https://bugs.python.org/issue?@action=redirect&bpo=45711]: Make `asyncio` normalize exceptions as soon as they are captured with `PyErr_Fetch()`, and before they are stored as an `exc_info` triplet. This brings `asyncio` in line with the rest of the codebase, where an `exc_info` triplet is always normalized.
- [bpo-23819](https://bugs.python.org/issue?@action=redirect&bpo=23819) [https://bugs.python.org/issue?@action=redirect&bpo=23819]: Replaced asserts with exceptions in `asyncio`, patch by Kumar Aditya.
- [bpo-13236](https://bugs.python.org/issue?@action=redirect&bpo=13236) [https://bugs.python.org/issue?@action=redirect&bpo=13236]: `unittest.TextTestResult` and `unittest.TextTestRunner` flush now the output stream more often.
- [bpo-45917](https://bugs.python.org/issue?@action=redirect&bpo=45917) [https://bugs.python.org/issue?@action=redirect&bpo=45917]: Added `math.exp2()`, which returns 2 raised to the power of x.
- [bpo-37658](https://bugs.python.org/issue?@action=redirect&bpo=37658) [https://bugs.python.org/issue?@action=redirect&bpo=37658]: Fix issue when on certain conditions `asyncio.wait_for()` may allow a coroutine to complete successfully, but fail to return the result, potentially causing memory leaks or other issues.

- [bpo-45876](https://bugs.python.org/issue?@action=redirect&bpo=45876) [https://bugs.python.org/issue?@action=redirect&bpo=45876]: Improve the accuracy of `stdev()` and `pstdev()` in the statistics module. When the inputs are floats or fractions, the output is a correctly rounded float
- [bpo-44649](https://bugs.python.org/issue?@action=redirect&bpo=44649) [https://bugs.python.org/issue?@action=redirect&bpo=44649]: Handle `dataclass(slots=True)` with a field that has default a default value, but for which `init=False`.
- [bpo-45803](https://bugs.python.org/issue?@action=redirect&bpo=45803) [https://bugs.python.org/issue?@action=redirect&bpo=45803]: Added missing `kw_only` parameter to `dataclasses.make_dataclass()`.
- [bpo-45837](https://bugs.python.org/issue?@action=redirect&bpo=45837) [https://bugs.python.org/issue?@action=redirect&bpo=45837]: The `turtle.RawTurtle.settiltangle()` is deprecated since Python 3.1, it now emits a deprecation warning and will be removed in Python 3.13.

Use `turtle.RawTurtle.tiltangle()` instead.

`turtle.RawTurtle.tiltangle()` was earlier incorrectly marked as deprecated, its docstring has been corrected.

Patch by Hugo van Kemenade.

- [bpo-45831](https://bugs.python.org/issue?@action=redirect&bpo=45831) [https://bugs.python.org/issue?@action=redirect&bpo=45831]: `faulthandler` can now write ASCII-only strings (like filenames and function names) with a single `write()` syscall when dumping a traceback. It reduces the risk of getting an unreadable dump when two threads or two processes dump a traceback to the same file (like `stderr`) at the same time. Patch by Victor Stinner.
- [bpo-45828](https://bugs.python.org/issue?@action=redirect&bpo=45828) [https://bugs.python.org/issue?@action=redirect&bpo=45828]: `sqlite` C callbacks now use unraisable exceptions if callback tracebacks are enabled. Patch by Erlend E. Aasland.
- [bpo-41735](https://bugs.python.org/issue?@action=redirect&bpo=41735) [https://bugs.python.org/issue?@action=redirect&bpo=41735]

@action=redirect&bpo=41735]: Fix thread lock in `zlib.Decompress.flush()` method before `PyObject_GetBuffer`.

- [bpo-45235](https://bugs.python.org/issue?@action=redirect&bpo=45235) [https://bugs.python.org/issue?@action=redirect&bpo=45235]: Reverted an argparse bugfix that caused regression in the handling of default arguments for subparsers. This prevented leaf level arguments from taking precedence over root level arguments.
- [bpo-45754](https://bugs.python.org/issue?@action=redirect&bpo=45754) [https://bugs.python.org/issue?@action=redirect&bpo=45754]: Fix a regression in Python 3.11a1 and 3.11a2 where `sqlite3` incorrectly would use `SQLITE_LIMIT_LENGTH` when checking SQL statement lengths. Now, `SQLITE_LIMIT_SQL_LENGTH` is used. Patch by Erlend E. Aasland.
- [bpo-45766](https://bugs.python.org/issue?@action=redirect&bpo=45766) [https://bugs.python.org/issue?@action=redirect&bpo=45766]: Added *proportional* option to `statistics.linear_regression()`.
- [bpo-45765](https://bugs.python.org/issue?@action=redirect&bpo=45765) [https://bugs.python.org/issue?@action=redirect&bpo=45765]: In `importlib.metadata`, fix distribution discovery for an empty path.
- [bpo-45757](https://bugs.python.org/issue?@action=redirect&bpo=45757) [https://bugs.python.org/issue?@action=redirect&bpo=45757]: Fix bug where `dis` produced an incorrect oparg when `EXTENDED_ARG` is followed by an opcode that does not use its argument.
- [bpo-45644](https://bugs.python.org/issue?@action=redirect&bpo=45644) [https://bugs.python.org/issue?@action=redirect&bpo=45644]: In-place JSON file formatting using `python3 -m json.tool infile infile` now works correctly, previously it left the file empty. Patch by Chris Wesseling.
- [bpo-45703](https://bugs.python.org/issue?@action=redirect&bpo=45703) [https://bugs.python.org/issue?@action=redirect&bpo=45703]: When a namespace package is imported before another module from the same namespace is created/installed in a different `sys.path` location while the program is running, calling the

`importlib.invalidate_caches()` function will now also guarantee the new module is noticed.

- [bpo-45535](https://bugs.python.org/issue?@action=redirect&bpo=45535) [https://bugs.python.org/issue?@action=redirect&bpo=45535]: Improve output of `dir()` with Enums.
- [bpo-45664](https://bugs.python.org/issue?@action=redirect&bpo=45664) [https://bugs.python.org/issue?@action=redirect&bpo=45664]: Fix `types.resolve_bases()` and `types.new_class()` for `types.GenericAlias` instance as a base.
- [bpo-45663](https://bugs.python.org/issue?@action=redirect&bpo=45663) [https://bugs.python.org/issue?@action=redirect&bpo=45663]: Fix `dataclasses.is_dataclass()` for dataclasses which are subclasses of `types.GenericAlias`.
- [bpo-45662](https://bugs.python.org/issue?@action=redirect&bpo=45662) [https://bugs.python.org/issue?@action=redirect&bpo=45662]: Fix the repr of `dataclasses.InitVar` with a type alias to the built-in class, e.g. `InitVar[list[int]]`.
- [bpo-43137](https://bugs.python.org/issue?@action=redirect&bpo=43137) [https://bugs.python.org/issue?@action=redirect&bpo=43137]: Launch GNOME web browsers via gio tool instead of obsolete gvfs-open
- [bpo-45429](https://bugs.python.org/issue?@action=redirect&bpo=45429) [https://bugs.python.org/issue?@action=redirect&bpo=45429]: On Windows, `time.sleep()` now uses a waitable timer which supports high-resolution timers. Patch by Dong-hee Na and Eryk Sun.
- [bpo-37295](https://bugs.python.org/issue?@action=redirect&bpo=37295) [https://bugs.python.org/issue?@action=redirect&bpo=37295]: Optimize `math.comb()` and `math.perm()`.
- [bpo-45514](https://bugs.python.org/issue?@action=redirect&bpo=45514) [https://bugs.python.org/issue?@action=redirect&bpo=45514]: Deprecated legacy functions in `importlib.resources`.
- [bpo-45507](https://bugs.python.org/issue?@action=redirect&bpo=45507) [https://bugs.python.org/issue?@action=redirect&bpo=45507]: Add tests for truncated/missing

trailers in `gzip.decompress` implementation.

- [bpo-45359](https://bugs.python.org/issue?@action=redirect&bpo=45359) [https://bugs.python.org/issue?@action=redirect&bpo=45359]: Implement [PEP 585](https://peps.python.org/pep-0585/) [https://peps.python.org/pep-0585/] for `graphlib.TopologicalSorter`.
- [bpo-44733](https://bugs.python.org/issue?@action=redirect&bpo=44733) [https://bugs.python.org/issue?@action=redirect&bpo=44733]: Add `max_tasks_per_child` to `concurrent.futures.ProcessPoolExecutor`. This allows users to specify the maximum number of tasks a single process should execute before the process needs to be restarted.
- [bpo-28806](https://bugs.python.org/issue?@action=redirect&bpo=28806) [https://bugs.python.org/issue?@action=redirect&bpo=28806]: Improve `netrc` library. `netrc` file no longer needs to contain all tokens. And if the login name is anonymous, security check is no longer need.
- [bpo-43498](https://bugs.python.org/issue?@action=redirect&bpo=43498) [https://bugs.python.org/issue?@action=redirect&bpo=43498]: Avoid a possible “*RuntimeError: dictionary changed size during iteration*” when adjusting the process count of `ProcessPoolExecutor`.
- [bpo-42158](https://bugs.python.org/issue?@action=redirect&bpo=42158) [https://bugs.python.org/issue?@action=redirect&bpo=42158]: Add MIME types for N-quads, N-triples, Notation3 and TriG to `mimetypes`.
- [bpo-30533](https://bugs.python.org/issue?@action=redirect&bpo=30533) [https://bugs.python.org/issue?@action=redirect&bpo=30533]: Add `inspect.getmembers_static()`, it return all members without triggering dynamic lookup via the descriptor protocol. Patch by Weipeng Hong.

## Documentation

- [bpo-42238](https://bugs.python.org/issue?@action=redirect&bpo=42238) [https://bugs.python.org/issue?@action=redirect&bpo=42238]: make `-C Doc suspicious` will be removed soon in favor of `make -C Doc check`, mark it as deprecated.
- [bpo-45840](https://bugs.python.org/issue?@action=redirect&bpo=45840) [https://bugs.python.org/issue?@action=redirect&bpo=45840]

@action=redirect&bpo=45840]: Improve cross-references in the documentation for the data model.

- [bpo-45640](https://bugs.python.org/issue?@action=redirect&bpo=45640) [https://bugs.python.org/issue?@action=redirect&bpo=45640]: Properly marked-up grammar tokens in the documentation are now clickable and take you to the definition of a given piece of grammar. Patch by Arthur Milchior.
- [bpo-45788](https://bugs.python.org/issue?@action=redirect&bpo=45788) [https://bugs.python.org/issue?@action=redirect&bpo=45788]: Link doc for sys.prefix to sysconfig doc on installation paths.
- [bpo-45772](https://bugs.python.org/issue?@action=redirect&bpo=45772) [https://bugs.python.org/issue?@action=redirect&bpo=45772]: `socket.socket` documentation is corrected to a class from a function.
- [bpo-45392](https://bugs.python.org/issue?@action=redirect&bpo=45392) [https://bugs.python.org/issue?@action=redirect&bpo=45392]: Update the docstring of the `type` built-in to remove a redundant line and to mention keyword arguments for the constructor.
- [bpo-45250](https://bugs.python.org/issue?@action=redirect&bpo=45250) [https://bugs.python.org/issue?@action=redirect&bpo=45250]: Update the documentation to note that CPython does not consistently require iterators to define `__iter__`.
- [bpo-25381](https://bugs.python.org/issue?@action=redirect&bpo=25381) [https://bugs.python.org/issue?@action=redirect&bpo=25381]: In the extending chapter of the extending doc, update a paragraph about the global variables containing exception information.
- [bpo-43905](https://bugs.python.org/issue?@action=redirect&bpo=43905) [https://bugs.python.org/issue?@action=redirect&bpo=43905]: Expanded `astuple()` and `asdict()` docs, warning about deepcopy being applied and providing a workaround.

## Tests

- [bpo-45695](https://bugs.python.org/issue?@action=redirect&bpo=45695) [https://bugs.python.org/issue?@action=redirect&bpo=45695]: Out-of-tree builds with a read-only source directory are now tested by CI.
- [bpo-19460](https://bugs.python.org/issue?@action=redirect&bpo=19460) [https://bugs.python.org/issue?@action=redirect&bpo=19460]: Add new Test for `Lib/email/mime/nonmultipart.py:MIMENonMultipart`.
- [bpo-45835](https://bugs.python.org/issue?@action=redirect&bpo=45835) [https://bugs.python.org/issue?@action=redirect&bpo=45835]: Fix race condition in `test_queue`

tests with multiple “feeder” threads.

- [bpo-45783](https://bugs.python.org/issue?@action=redirect&bpo=45783) [https://bugs.python.org/issue?@action=redirect&bpo=45783]: The test for the freeze tool now handles file moves and deletions.
- [bpo-45745](https://bugs.python.org/issue?@action=redirect&bpo=45745) [https://bugs.python.org/issue?@action=redirect&bpo=45745]: Remove the `--findleaks` command line option of regrtest: use the `--fail-env-changed` option instead. Since Python 3.7, it was a deprecated alias to the `--fail-env-changed` option.
- [bpo-45701](https://bugs.python.org/issue?@action=redirect&bpo=45701) [https://bugs.python.org/issue?@action=redirect&bpo=45701]: Add tests with `tuple` type with `functools.lru_cache()` to `test_functools`.

## Build

- [bpo-44035](https://bugs.python.org/issue?@action=redirect&bpo=44035) [https://bugs.python.org/issue?@action=redirect&bpo=44035]: CI now verifies that autoconf files have been regenerated with a current and unpatched autoconf package.
- [bpo-45950](https://bugs.python.org/issue?@action=redirect&bpo=45950) [https://bugs.python.org/issue?@action=redirect&bpo=45950]: The build system now uses a `_bootstrap_python` interpreter for freezing and deepfreezing again. To speed up build process the build tools `_bootstrap_python` and `_freeze_module` are no longer build with LTO.
- [bpo-45881](https://bugs.python.org/issue?@action=redirect&bpo=45881) [https://bugs.python.org/issue?@action=redirect&bpo=45881]: The `configure` script now accepts `--with-build-python` and `--with-freeze-module` options to make cross compiling easier.
- [bpo-40280](https://bugs.python.org/issue?@action=redirect&bpo=40280) [https://bugs.python.org/issue?@action=redirect&bpo=40280]: Emscripten platform now uses `.wasm` suffix by default.
- [bpo-40280](https://bugs.python.org/issue?@action=redirect&bpo=40280) [https://bugs.python.org/issue?@action=redirect&bpo=40280]: Disable unusable core extension modules on WASM/Emscripten targets.
- [bpo-40280](https://bugs.python.org/issue?@action=redirect&bpo=40280) [https://bugs.python.org/issue?@action=redirect&bpo=40280]

@action=redirect&bpo=40280]: configure now checks for socket shutdown function. The check makes it possible to disable SYS\_shutdown with ac\_cv\_func\_shutdown=no in CONFIG\_SITE.

- [bpo-40280](https://bugs.python.org/issue?@action=redirect&bpo=40280) [https://bugs.python.org/issue?@action=redirect&bpo=40280]: configure now checks for functions fork1, getegid, geteuid, getgid, getppid, getuid, opendir, pipe, system, wait, ttyname.
- [bpo-33393](https://bugs.python.org/issue?@action=redirect&bpo=33393) [https://bugs.python.org/issue?@action=redirect&bpo=33393]: Update config.guess to 2021-06-03 and config.sub to 2021-08-14. Makefile now has an update-config target to make updating more convenient.
- [bpo-45866](https://bugs.python.org/issue?@action=redirect&bpo=45866) [https://bugs.python.org/issue?@action=redirect&bpo=45866]: make regen-all now produces the same output when run from a directory other than the source tree: when building Python out of the source tree. pegen now strips directory of the “generated by pygen from <FILENAME>” header Patch by Victor Stinner.
- [bpo-40280](https://bugs.python.org/issue?@action=redirect&bpo=40280) [https://bugs.python.org/issue?@action=redirect&bpo=40280]: configure now accepts machine wasm32 or wasm64 and OS wasi or emscripten for cross building, e.g. wasm32-unknown-emscripten, wasm32-wasi, or wasm32-unknown-wasi.
- [bpo-41498](https://bugs.python.org/issue?@action=redirect&bpo=41498) [https://bugs.python.org/issue?@action=redirect&bpo=41498]: Python now compiles on platforms without sigset\_t. Several functions in [signal](#) are not available when sigset\_t is missing.

Based on patch by Roman Yurchak for pyodide.

- [bpo-45881](https://bugs.python.org/issue?@action=redirect&bpo=45881) [https://bugs.python.org/issue?@action=redirect&bpo=45881]: setup.py now uses CC from environment first to discover multiarch and cross compile paths.

- [bpo-45886](https://bugs.python.org/issue?@action=redirect&bpo=45886) [https://bugs.python.org/issue?@action=redirect&bpo=45886]: The `_freeze_module` program path can now be overridden on the command line, e.g. `make FREEZE_MODULE=../x86_64/Program/_freeze_module`.
- [bpo-45873](https://bugs.python.org/issue?@action=redirect&bpo=45873) [https://bugs.python.org/issue?@action=redirect&bpo=45873]: Get rid of the `_bootstrap_python` build step. The `deepfreeze.py` script is now run using `$(PYTHON_FOR_REGEN)` which can be Python 3.7 or newer (on Windows, 3.8 or newer).
- [bpo-45847](https://bugs.python.org/issue?@action=redirect&bpo=45847) [https://bugs.python.org/issue?@action=redirect&bpo=45847]: Port builtin hashlib extensions to `PY_STDLIB_MOD` macro and `addext()`.
- [bpo-45723](https://bugs.python.org/issue?@action=redirect&bpo=45723) [https://bugs.python.org/issue?@action=redirect&bpo=45723]: Add `autoconf` helpers for saving and restoring environment variables:
  - `SAVE_ENV`: Save `$CFLAGS`, `$LDFLAGS`, `$LIBS`, and `$CPPFLAGS`.
  - `RESTORE_ENV`: Restore `$CFLAGS`, `$LDFLAGS`, `$LIBS`, and `$CPPFLAGS`.
  - `WITH_SAVE_ENV([SCRIPT])`: Run `SCRIPT` wrapped with `SAVE_ENV` and `RESTORE_ENV`.

Patch by Erlend E. Aasland.

- [bpo-45573](https://bugs.python.org/issue?@action=redirect&bpo=45573) [https://bugs.python.org/issue?@action=redirect&bpo=45573]: Mandatory core modules, that are required to bootstrap Python, are now in `Modules/Setup.bootstrap`.
- [bpo-45573](https://bugs.python.org/issue?@action=redirect&bpo=45573) [https://bugs.python.org/issue?@action=redirect&bpo=45573]: `configure` now creates `Modules/Setup.stdlib` with conditionally enabled/disabled extension module lines. The file is not used, yet.
- [bpo-45573](https://bugs.python.org/issue?@action=redirect&bpo=45573) [https://bugs.python.org/issue?@action=redirect&bpo=45573]: `configure` now uses a unified

format to set state, compiler flags, and linker flags in Makefile. The new macro `PY_STDLIB_MOD` sets three variables that are consumed by `Modules/Setup` and `setup.py`.

- [bpo-45816](https://bugs.python.org/issue?@action=redirect&bpo=45816) [https://bugs.python.org/issue?@action=redirect&bpo=45816]: Python now supports building with Visual Studio 2022 (MSVC v143, VS Version 17.0). Patch by Jeremiah Vivian.
- [bpo-45800](https://bugs.python.org/issue?@action=redirect&bpo=45800) [https://bugs.python.org/issue?@action=redirect&bpo=45800]: Settings for **pyexpat** C extension are now detected by `configure`. The bundled `expat` library is built in `Makefile`.
- [bpo-45798](https://bugs.python.org/issue?@action=redirect&bpo=45798) [https://bugs.python.org/issue?@action=redirect&bpo=45798]: Settings for **decimal** internal C extension are now detected by `configure`. The bundled `libmpdec` library is built in `Makefile`.
- [bpo-45723](https://bugs.python.org/issue?@action=redirect&bpo=45723) [https://bugs.python.org/issue?@action=redirect&bpo=45723]: **configure** has a new option `--with-pkg-config` to disable or require `pkg-config`.
- [bpo-45774](https://bugs.python.org/issue?@action=redirect&bpo=45774) [https://bugs.python.org/issue?@action=redirect&bpo=45774]: The build dependencies for **sqliite3** are now detected by `configure` and `pkg-config`. Patch by Erlend E. Aasland.
- [bpo-45763](https://bugs.python.org/issue?@action=redirect&bpo=45763) [https://bugs.python.org/issue?@action=redirect&bpo=45763]: The build dependencies for **zlib**, **bz2**, and **lzma** are now detected by `configure`.
- [bpo-45747](https://bugs.python.org/issue?@action=redirect&bpo=45747) [https://bugs.python.org/issue?@action=redirect&bpo=45747]: `gdbm` and `dbm` build dependencies are now detected by `configure`.
- [bpo-45743](https://bugs.python.org/issue?@action=redirect&bpo=45743) [https://bugs.python.org/issue?@action=redirect&bpo=45743]: On macOS, the build system no longer passes `search_paths_first` to the linker. The flag has been the default since Xcode 4 / macOS 10.6.

- [bpo-45723](https://bugs.python.org/issue?@action=redirect&bpo=45723) [https://bugs.python.org/issue?@action=redirect&bpo=45723]: `configure.ac` is now compatible with `autoconf 2.71`. Deprecated checks `STDC_HEADERS` and `AC_HEADER_TIME` have been removed.
- [bpo-45723](https://bugs.python.org/issue?@action=redirect&bpo=45723) [https://bugs.python.org/issue?@action=redirect&bpo=45723]: `configure` now prints a warning when `pkg-config` is missing.
- [bpo-45731](https://bugs.python.org/issue?@action=redirect&bpo=45731) [https://bugs.python.org/issue?@action=redirect&bpo=45731]: `configure --enable-loadable-sqlite-extensions` is now handled by new `PY_SQLITE_ENABLE_LOAD_EXTENSION` macro instead of logic in `setup.py`.
- [bpo-45723](https://bugs.python.org/issue?@action=redirect&bpo=45723) [https://bugs.python.org/issue?@action=redirect&bpo=45723]: `configure.ac` now uses custom helper macros and `AC_CACHE_CHECK` to simplify and speed up `configure` runs.
- [bpo-45696](https://bugs.python.org/issue?@action=redirect&bpo=45696) [https://bugs.python.org/issue?@action=redirect&bpo=45696]: Skip the marshal step for frozen modules by generating C code that produces a set of ready-to-use code objects. This speeds up startup time by another 10% or more.
- [bpo-45561](https://bugs.python.org/issue?@action=redirect&bpo=45561) [https://bugs.python.org/issue?@action=redirect&bpo=45561]: Run smelly.py tool from `$(srcdir)`.

## Windows

- [bpo-46105](https://bugs.python.org/issue?@action=redirect&bpo=46105) [https://bugs.python.org/issue?@action=redirect&bpo=46105]: Fixed calculation of `sys.path` in a venv on Windows.
- [bpo-45901](https://bugs.python.org/issue?@action=redirect&bpo=45901) [https://bugs.python.org/issue?@action=redirect&bpo=45901]: When installed through the Microsoft Store and set as the default app for `*.py` files, command line arguments will now be passed to Python when invoking a script without explicitly launching Python (that is, `script.py args` rather than `python script.py args`).
- [bpo-45616](https://bugs.python.org/issue?@action=redirect&bpo=45616) [https://bugs.python.org/issue?@action=redirect&bpo=45616]

@action=redirect&bpo=45616]: Fix Python Launcher’s ability to distinguish between versions 3.1 and 3.10 when either one is explicitly requested. Previously, 3.1 would be used if 3.10 was requested but not installed, and 3.10 would be used if 3.1 was requested but 3.10 was installed.

- [bpo-45850](https://bugs.python.org/issue?@action=redirect&bpo=45850) [https://bugs.python.org/issue?@action=redirect&bpo=45850]: Implement changes to build with deep-frozen modules on Windows. Note that we now require Python 3.10 as the “bootstrap” or “host” Python.
- [bpo-45732](https://bugs.python.org/issue?@action=redirect&bpo=45732) [https://bugs.python.org/issue?@action=redirect&bpo=45732]: Updates bundled Tcl/Tk to 8.6.12.
- [bpo-45720](https://bugs.python.org/issue?@action=redirect&bpo=45720) [https://bugs.python.org/issue?@action=redirect&bpo=45720]: Internal reference to `shlwapi.dll` was dropped to help improve startup time. This DLL will no longer be loaded at the start of every Python process.

## macOS

- [bpo-45732](https://bugs.python.org/issue?@action=redirect&bpo=45732) [https://bugs.python.org/issue?@action=redirect&bpo=45732]: Update python.org macOS installer to use Tcl/Tk 8.6.12.

## C API

- [bpo-39026](https://bugs.python.org/issue?@action=redirect&bpo=39026) [https://bugs.python.org/issue?@action=redirect&bpo=39026]: Fix Python.h to build C extensions with Xcode: remove a relative include from `Include/cpython/pystate.h`.

# Python 3.11.0 alpha 2

*Release date: 2021-11-05*

## Core and Builtins

- [bpo-45716](https://bugs.python.org/issue?@action=redirect&bpo=45716) [https://bugs.python.org/issue?@action=redirect&bpo=45716]: Improve the **SyntaxError**

message when using `True`, `None` or `False` as keywords in a function call. Patch by Pablo Galindo.

- [bpo-45688](https://bugs.python.org/issue?@action=redirect&bpo=45688) [https://bugs.python.org/issue?@action=redirect&bpo=45688]: `sys.stdlib_module_names` now contains the macOS-specific module `_scproxy`.
- [bpo-45379](https://bugs.python.org/issue?@action=redirect&bpo=45379) [https://bugs.python.org/issue?@action=redirect&bpo=45379]: Clarify `ImportError` message when we try to explicitly import a frozen module but frozen modules are disabled.
- [bpo-44525](https://bugs.python.org/issue?@action=redirect&bpo=44525) [https://bugs.python.org/issue?@action=redirect&bpo=44525]: Specialize simple calls to Python functions (no starargs, keyword dict, or closure)
- [bpo-45530](https://bugs.python.org/issue?@action=redirect&bpo=45530) [https://bugs.python.org/issue?@action=redirect&bpo=45530]: Cases of sorting using tuples as keys may now be significantly faster in some cases. Patch by Tim Peters.

The order of the result may differ from earlier releases if the tuple elements don't define a total ordering (see [Value comparisons](#) for information on total ordering). It's generally true that the result of sorting simply isn't well-defined in the absence of a total ordering on list elements.

- [bpo-45526](https://bugs.python.org/issue?@action=redirect&bpo=45526) [https://bugs.python.org/issue?@action=redirect&bpo=45526]: In `obmalloc`, set `ADDRESS_BITS` to not ignore any bits (ignored 16 before). That is safer in the case that the kernel gives user-space virtual addresses that span a range greater than 48 bits.
- [bpo-30570](https://bugs.python.org/issue?@action=redirect&bpo=30570) [https://bugs.python.org/issue?@action=redirect&bpo=30570]: Fixed a crash in `issubclass()` from infinite recursion when searching pathological `__bases__` tuples.
- [bpo-45521](https://bugs.python.org/issue?@action=redirect&bpo=45521) [https://bugs.python.org/issue?@action=redirect&bpo=45521]: Fix a bug in the `obmalloc` radix tree code. On 64-bit machines, the bug causes the tree to hold

46-bits of virtual addresses, rather than the intended 48-bits.

- [bpo-45494](https://bugs.python.org/issue?@action=redirect&bpo=45494) [https://bugs.python.org/issue?@action=redirect&bpo=45494]: Fix parser crash when reporting errors involving invalid continuation characters. Patch by Pablo Galindo.
- [bpo-45445](https://bugs.python.org/issue?@action=redirect&bpo=45445) [https://bugs.python.org/issue?@action=redirect&bpo=45445]: Python now fails to initialize if it finds an invalid **-x** option in the command line. Patch by Pablo Galindo.
- [bpo-45340](https://bugs.python.org/issue?@action=redirect&bpo=45340) [https://bugs.python.org/issue?@action=redirect&bpo=45340]: Object attributes are held in an array instead of a dictionary. An object's dictionary are created lazily, only when needed. Reduces the memory consumption of a typical Python object by about 30%. Patch by Mark Shannon.
- [bpo-45408](https://bugs.python.org/issue?@action=redirect&bpo=45408) [https://bugs.python.org/issue?@action=redirect&bpo=45408]: Fix a crash in the parser when reporting tokenizer errors that occur at the same time unclosed parentheses are detected. Patch by Pablo Galindo.
- [bpo-29410](https://bugs.python.org/issue?@action=redirect&bpo=29410) [https://bugs.python.org/issue?@action=redirect&bpo=29410]: Add SipHash13 for string hash algorithm and use it by default.
- [bpo-45385](https://bugs.python.org/issue?@action=redirect&bpo=45385) [https://bugs.python.org/issue?@action=redirect&bpo=45385]: Fix reference leak from `descr_check`. Patch by Dong-hee Na.
- [bpo-45367](https://bugs.python.org/issue?@action=redirect&bpo=45367) [https://bugs.python.org/issue?@action=redirect&bpo=45367]: Specialized the `BINARY_MULTIPLY` opcode to `BINARY_MULTIPLY_INT` and `BINARY_MULTIPLY_FLOAT` using the PEP 659 machinery.
- [bpo-21736](https://bugs.python.org/issue?@action=redirect&bpo=21736) [https://bugs.python.org/issue?@action=redirect&bpo=21736]: Frozen stdlib modules now have `__file__` to the .py file they would otherwise be loaded from, if possible. For packages, `__path__` now has the

correct entry instead of being an empty list, which allows unfrozen submodules to be imported. These are set only if the stdlib directory is known when the runtime is initialized.

Note that the file at `__file__` is not guaranteed to exist.

None of this affects non-stdlib frozen modules nor, for now, frozen modules imported using

`PyImport_ImportFrozenModule()`. Also, at the moment `co_filename` is not updated for the module.

- [bpo-45020](https://bugs.python.org/issue?@action=redirect&bpo=45020) [https://bugs.python.org/issue?@action=redirect&bpo=45020]: For frozen stdlib modules, record the original module name as `module.__spec__.loader_state.origname`. If the value is different than `module.__spec__.name` then the module was defined as an alias in `Tools/scripts/freeze_modules.py`. If it is `None` then the module comes from a source file outside the stdlib.
- [bpo-45324](https://bugs.python.org/issue?@action=redirect&bpo=45324) [https://bugs.python.org/issue?@action=redirect&bpo=45324]: In `FrozenImporter.find_spec()`, we now preserve the information needed in `exec_module()` to load the module. This change mostly impacts internal details, rather than changing the importer's behavior.
- [bpo-45292](https://bugs.python.org/issue?@action=redirect&bpo=45292) [https://bugs.python.org/issue?@action=redirect&bpo=45292]: Implement [PEP 654](https://peps.python.org/pep-0654/) [https://peps.python.org/pep-0654/]. Add **ExceptionGroup** and **BaseExceptionGroup**. Update traceback display code.
- [bpo-40116](https://bugs.python.org/issue?@action=redirect&bpo=40116) [https://bugs.python.org/issue?@action=redirect&bpo=40116]: Change to the implementation of split dictionaries. Classes where the instances differ either in the exact set of attributes, or in the order in which those attributes are set, can still share keys. This should have no observable effect on users of Python or the C-API. Patch by Mark Shannon.
- [bpo-44050](https://bugs.python.org/issue?@action=redirect&bpo=44050) [https://bugs.python.org/issue?@action=redirect&bpo=44050]: Extensions that indicate they use global state (by setting `m_size` to -1) can again be used in multiple interpreters. This reverts to behavior of Python 3.8.

- [bpo-44525](https://bugs.python.org/issue?@action=redirect&bpo=44525) [https://bugs.python.org/issue?@action=redirect&bpo=44525]: Setup initial specialization infrastructure for the `CALL_FUNCTION` opcode. Implemented initial specializations for C function calls:
  - `CALL_FUNCTION_BUILTIN_O` for `METH_O` flag.
  - `CALL_FUNCTION_BUILTIN_FAST` for `METH_FASTCALL` flag without keywords.
  - `CALL_FUNCTION_LEN` for `len()`.
  - `CALL_FUNCTION_ISINSTANCE` for `isinstance(o, t)`.
- [bpo-44511](https://bugs.python.org/issue?@action=redirect&bpo=44511) [https://bugs.python.org/issue?@action=redirect&bpo=44511]: Improve the generated bytecode for class and mapping patterns.
- [bpo-43706](https://bugs.python.org/issue?@action=redirect&bpo=43706) [https://bugs.python.org/issue?@action=redirect&bpo=43706]: Speed up calls to `enumerate()` by using the [PEP 590](https://peps.python.org/pep-0590/) [https://peps.python.org/pep-0590/] `vectorcall` calling convention. Patch by Dong-hee Na.

## Library

- [bpo-45679](https://bugs.python.org/issue?@action=redirect&bpo=45679) [https://bugs.python.org/issue?@action=redirect&bpo=45679]: Fix caching of multi-value **typing.Literal**. `Literal[True, 2]` is no longer equal to `Literal[1, 2]`.
- [bpo-42064](https://bugs.python.org/issue?@action=redirect&bpo=42064) [https://bugs.python.org/issue?@action=redirect&bpo=42064]: Convert **sqlite3** to multi-phase initialisation (PEP 489). Patches by Erlend E. Aasland.
- [bpo-45438](https://bugs.python.org/issue?@action=redirect&bpo=45438) [https://bugs.python.org/issue?@action=redirect&bpo=45438]: Fix typing.Signature string representation for generic builtin types.
- [bpo-45613](https://bugs.python.org/issue?@action=redirect&bpo=45613) [https://bugs.python.org/issue?@action=redirect&bpo=45613]: **sqlite3** now sets **sqlite3.threadafety** based on the default threading mode the underlying SQLite library has been compiled with. Patch by Erlend E. Aasland.

- [bpo-45574](https://bugs.python.org/issue?@action=redirect&bpo=45574) [https://bugs.python.org/issue?@action=redirect&bpo=45574]: Fix warning about `print_escape` being unused.
- [bpo-45581](https://bugs.python.org/issue?@action=redirect&bpo=45581) [https://bugs.python.org/issue?@action=redirect&bpo=45581]: `sqlite3.connect()` now correctly raises `MemoryError` if the underlying SQLite API signals memory error. Patch by Erlend E. Aasland.
- [bpo-45557](https://bugs.python.org/issue?@action=redirect&bpo=45557) [https://bugs.python.org/issue?@action=redirect&bpo=45557]: `pprint.pprint()` now handles `underscore_numbers` correctly. Previously it was always setting it to `False`.
- [bpo-44019](https://bugs.python.org/issue?@action=redirect&bpo=44019) [https://bugs.python.org/issue?@action=redirect&bpo=44019]: Add `operator.call()` to `operator.__all__`. Patch by Kreuzsada.
- [bpo-42174](https://bugs.python.org/issue?@action=redirect&bpo=42174) [https://bugs.python.org/issue?@action=redirect&bpo=42174]: `shutil.get_terminal_size()` now falls back to sane values if the column or line count are 0.
- [bpo-35673](https://bugs.python.org/issue?@action=redirect&bpo=35673) [https://bugs.python.org/issue?@action=redirect&bpo=35673]: Improve the introspectability of the `__loader__` attribute for namespace packages. `importlib.machinery.NamespaceLoader` is now public, and implements the `importlib.abc.InspectLoader` interface. `_NamespaceLoader` is kept for backward compatibility.
- [bpo-45515](https://bugs.python.org/issue?@action=redirect&bpo=45515) [https://bugs.python.org/issue?@action=redirect&bpo=45515]: Add references to `zoneinfo` in the `datetime` documentation, mostly replacing outdated references to `dateutil.tz`. Change by Paul Ganssle.
- [bpo-45475](https://bugs.python.org/issue?@action=redirect&bpo=45475) [https://bugs.python.org/issue?@action=redirect&bpo=45475]: Reverted optimization of iterating `gzip.GzipFile`, `bz2.BZ2File`, and `lzma.LZMAFile` (see [bpo-43787](https://bugs.python.org/issue?@action=redirect&bpo=43787) [https://bugs.python.org/issue?@action=redirect&bpo=43787]) because it caused regression when

user iterate them without having reference of them. Patch by Inada Naoki.

- [bpo-45489](https://bugs.python.org/issue?@action=redirect&bpo=45489) [https://bugs.python.org/issue?@action=redirect&bpo=45489]: Update **ForwardRef** to support `|` operator. Patch by Dong-hee Na.
- [bpo-42222](https://bugs.python.org/issue?@action=redirect&bpo=42222) [https://bugs.python.org/issue?@action=redirect&bpo=42222]: Removed deprecated support for float arguments in *randrange()*.
- [bpo-45428](https://bugs.python.org/issue?@action=redirect&bpo=45428) [https://bugs.python.org/issue?@action=redirect&bpo=45428]: Fix a regression in `py_compile` when reading filenames from standard input.
- [bpo-45467](https://bugs.python.org/issue?@action=redirect&bpo=45467) [https://bugs.python.org/issue?@action=redirect&bpo=45467]: Fix incremental decoder and stream reader in the “raw-unicode-escape” codec. Previously they failed if the escape sequence was split.
- [bpo-45461](https://bugs.python.org/issue?@action=redirect&bpo=45461) [https://bugs.python.org/issue?@action=redirect&bpo=45461]: Fix incremental decoder and stream reader in the “unicode-escape” codec. Previously they failed if the escape sequence was split.
- [bpo-45239](https://bugs.python.org/issue?@action=redirect&bpo=45239) [https://bugs.python.org/issue?@action=redirect&bpo=45239]: Fixed **`email.utils.parsedate_tz()`** crashing with **`UnboundLocalError`** on certain invalid input instead of returning `None`. Patch by Ben Hoyt.
- [bpo-45417](https://bugs.python.org/issue?@action=redirect&bpo=45417) [https://bugs.python.org/issue?@action=redirect&bpo=45417]: Fix quadratic behaviour in the `enum` module: Creation of enum classes with a lot of entries was quadratic.
- [bpo-45249](https://bugs.python.org/issue?@action=redirect&bpo=45249) [https://bugs.python.org/issue?@action=redirect&bpo=45249]: Fix the behaviour of **`traceback.print_exc()`** when displaying the caret when the `end_offset` in the exception is set to 0. Patch by Pablo Galindo

- [bpo-45416](https://bugs.python.org/issue?@action=redirect&bpo=45416) [https://bugs.python.org/issue?@action=redirect&bpo=45416]: Fix use of `asyncio.Condition` with explicit `asyncio.Lock` objects, which was a regression due to removal of explicit loop arguments. Patch by Joongi Kim.
- [bpo-20028](https://bugs.python.org/issue?@action=redirect&bpo=20028) [https://bugs.python.org/issue?@action=redirect&bpo=20028]: Empty escapechar/quotechar is not allowed when initializing `csv.Dialect`. Patch by Vajrasky Kok and Dong-hee Na.
- [bpo-44904](https://bugs.python.org/issue?@action=redirect&bpo=44904) [https://bugs.python.org/issue?@action=redirect&bpo=44904]: Fix bug in the `doctest` module that caused it to fail if a docstring included an example with a `classmethod` property. Patch by Alex Waygood.
- [bpo-45406](https://bugs.python.org/issue?@action=redirect&bpo=45406) [https://bugs.python.org/issue?@action=redirect&bpo=45406]: Make `inspect.getmodule()` catch `FileNotFoundError` raised by `:func:inspect.getabsfile`, and return `None` to indicate that the module could not be determined.
- [bpo-45411](https://bugs.python.org/issue?@action=redirect&bpo=45411) [https://bugs.python.org/issue?@action=redirect&bpo=45411]: Add extensions for files containing subtitles - `.srt` & `.vtt` - to the `mimetypes.py` module.
- [bpo-10716](https://bugs.python.org/issue?@action=redirect&bpo=10716) [https://bugs.python.org/issue?@action=redirect&bpo=10716]: Migrated pydoc to HTML5 (without changing the look of it). Side effect is to update `xmlrpc's ServerHTMLDoc` which now uses the CSS too. `cgib` now relies less on pydoc (as it can't use the CSS file).
- [bpo-27580](https://bugs.python.org/issue?@action=redirect&bpo=27580) [https://bugs.python.org/issue?@action=redirect&bpo=27580]: Add support of null characters in `csv`.
- [bpo-45262](https://bugs.python.org/issue?@action=redirect&bpo=45262) [https://bugs.python.org/issue?@action=redirect&bpo=45262]: Prevent use-after-free in `asyncio`. Make sure the cached running loop holder gets cleared on `dealloc` to prevent use-after-free in `get_running_loop`

- [bpo-45386](https://bugs.python.org/issue?@action=redirect&bpo=45386) [https://bugs.python.org/issue?@action=redirect&bpo=45386]: Make `xmlrpc.client` more robust to C runtimes where the underlying C `strftime` function results in a `ValueError` when testing for year formatting options.
- [bpo-20028](https://bugs.python.org/issue?@action=redirect&bpo=20028) [https://bugs.python.org/issue?@action=redirect&bpo=20028]: Improve error message of `csv.Dialect` when initializing. Patch by Vajrasky Kok and Dong-hee Na.
- [bpo-45343](https://bugs.python.org/issue?@action=redirect&bpo=45343) [https://bugs.python.org/issue?@action=redirect&bpo=45343]: Update bundled pip to 21.2.4 and setuptools to 58.1.0
- [bpo-45328](https://bugs.python.org/issue?@action=redirect&bpo=45328) [https://bugs.python.org/issue?@action=redirect&bpo=45328]: Fixed `http.client.HTTPConnection` to work properly in OSs that don't support the `TCP_NODELAY` socket option.
- [bpo-45243](https://bugs.python.org/issue?@action=redirect&bpo=45243) [https://bugs.python.org/issue?@action=redirect&bpo=45243]: Add `setlimit()` and `getlimit()` to `sqlite3.Connection` for setting and getting SQLite limits by connection basis. Patch by Erlend E. Aasland.
- [bpo-45320](https://bugs.python.org/issue?@action=redirect&bpo=45320) [https://bugs.python.org/issue?@action=redirect&bpo=45320]: Removed from the `inspect` module:
  - the `getargspec` function, deprecated since Python 3.0;
    - use `inspect.signature()` or `inspect.getfullargspec()` instead.
  - the `formatargspec` function, deprecated since Python 3.5; use the `inspect.signature()` function and `Signature` object directly.
  - the undocumented `Signature.from_callable` and `Signature.from_function` functions, deprecated since Python 3.5; use the

`Signature.from_callable()` method instead.

Patch by Hugo van Kemenade.

- [bpo-45192](https://bugs.python.org/issue?@action=redirect&bpo=45192) [https://bugs.python.org/issue?@action=redirect&bpo=45192]: Fix the `tempfile._infer_return_type` function so that the `dir` argument of the `tempfile` functions accepts an object implementing the `os.PathLike` protocol.

Patch by Kyungmin Lee.

- [bpo-45160](https://bugs.python.org/issue?@action=redirect&bpo=45160) [https://bugs.python.org/issue?@action=redirect&bpo=45160]: When tracing a tkinter variable used by a `ttk.OptionMenu`, callbacks are no longer made twice.
- [bpo-25625](https://bugs.python.org/issue?@action=redirect&bpo=25625) [https://bugs.python.org/issue?@action=redirect&bpo=25625]: Added non parallel-safe `chdir()` context manager to change the current working directory and then restore it on exit. Simple wrapper around `chdir()`.
- [bpo-24139](https://bugs.python.org/issue?@action=redirect&bpo=24139) [https://bugs.python.org/issue?@action=redirect&bpo=24139]: Add support for SQLite extended result codes in `sqlite3.Error`. Patch by Erlend E. Aasland.
- [bpo-24444](https://bugs.python.org/issue?@action=redirect&bpo=24444) [https://bugs.python.org/issue?@action=redirect&bpo=24444]: Fixed an error raised in `argparse` help display when help for an option is set to 1 + blank spaces or when `choices` arg is an empty container.
- [bpo-44547](https://bugs.python.org/issue?@action=redirect&bpo=44547) [https://bugs.python.org/issue?@action=redirect&bpo=44547]: Implement `Fraction.__int__`, so that a `fractions.Fraction` instance `f` passes an `isinstance(f, typing.SupportsInt)` check.
- [bpo-40321](https://bugs.python.org/issue?@action=redirect&bpo=40321) [https://bugs.python.org/issue?@action=redirect&bpo=40321]: Adds support for HTTP 308 redirects to `urllib`. See [RFC 7538](https://datatracker.ietf.org/) [https://datatracker.ietf.org/

[doc/html/rfc7538.html](https://docs.python.org/3/doc/html/rfc7538.html)] for details. Patch by Jochem Schenklopper.

- [bpo-41374](#) [<https://bugs.python.org/issue?@action=redirect&bpo=41374>]: Ensure that `socket.TCP_*` constants are exposed on Cygwin 3.1.6 and greater.
- [bpo-35970](#) [<https://bugs.python.org/issue?@action=redirect&bpo=35970>]: Add help flag to the `base64` module's command line interface. Patch contributed by Robert Kuska.

## Documentation

- [bpo-45726](#) [<https://bugs.python.org/issue?@action=redirect&bpo=45726>]: Improve documentation for `functools.singledispatch()` and `functools.singledispatchmethod`.
- [bpo-45680](#) [<https://bugs.python.org/issue?@action=redirect&bpo=45680>]: Amend the docs on `GenericAlias` objects to clarify that non-container classes can also implement `__class_getitem__`. Patch contributed by Alex Waygood.
- [bpo-45618](#) [<https://bugs.python.org/issue?@action=redirect&bpo=45618>]: Update Sphinx version used to build the documentation to 4.2.0. Patch by Maciej Olko.
- [bpo-45655](#) [<https://bugs.python.org/issue?@action=redirect&bpo=45655>]: Add a new “relevant PEPs” section to the top of the documentation for the `typing` module. Patch by Alex Waygood.
- [bpo-45604](#) [<https://bugs.python.org/issue?@action=redirect&bpo=45604>]: Add `level` argument to `multiprocessing.log_to_stderr` function docs.
- [bpo-45516](#) [<https://bugs.python.org/issue?@action=redirect&bpo=45516>]: Add protocol description to the `importlib.abc.TraversableResources` documentation.
- [bpo-45464](#) [<https://bugs.python.org/issue?@action=redirect&bpo=45464>]: Mention in the documentation of [Built-in Exceptions](#) that inheriting from multiple exception types in a single subclass is not recommended due to possible

memory layout incompatibility.

- [bpo-45449](https://bugs.python.org/issue?@action=redirect&bpo=45449) [https://bugs.python.org/issue?@action=redirect&bpo=45449]: Add note about [PEP 585](https://peps.python.org/pep-0585/) [https://peps.python.org/pep-0585/] in `collections.abc`.
- [bpo-45516](https://bugs.python.org/issue?@action=redirect&bpo=45516) [https://bugs.python.org/issue?@action=redirect&bpo=45516]: Add protocol description to the `importlib.abc.Traversable` documentation.
- [bpo-20692](https://bugs.python.org/issue?@action=redirect&bpo=20692) [https://bugs.python.org/issue?@action=redirect&bpo=20692]: Add Programming FAQ entry explaining that int literal attribute access requires either a space after or parentheses around the literal.

## Tests

- [bpo-45678](https://bugs.python.org/issue?@action=redirect&bpo=45678) [https://bugs.python.org/issue?@action=redirect&bpo=45678]: Add tests for scenarios in which `functools singledispatchmethod` is stacked on top of a method that has already been wrapped by two other decorators. Patch by Alex Waygood.
- [bpo-45578](https://bugs.python.org/issue?@action=redirect&bpo=45578) [https://bugs.python.org/issue?@action=redirect&bpo=45578]: Add tests for `dis.distb()`
- [bpo-45678](https://bugs.python.org/issue?@action=redirect&bpo=45678) [https://bugs.python.org/issue?@action=redirect&bpo=45678]: Add tests to ensure that `functools.singledispatchmethod` correctly wraps the attributes of the target function.
- [bpo-45668](https://bugs.python.org/issue?@action=redirect&bpo=45668) [https://bugs.python.org/issue?@action=redirect&bpo=45668]: PGO tests now pass when Python is built without test extension modules.
- [bpo-45577](https://bugs.python.org/issue?@action=redirect&bpo=45577) [https://bugs.python.org/issue?@action=redirect&bpo=45577]: Add subtests for all `pickle` protocols in `test_zoneinfo`.
- [bpo-45566](https://bugs.python.org/issue?@action=redirect&bpo=45566) [https://bugs.python.org/issue?@action=redirect&bpo=45566]: Fix `test_frozen_pickle` in `test_dataclasses` to check all `pickle` versions.
- [bpo-43592](https://bugs.python.org/issue?@action=redirect&bpo=43592) [https://bugs.python.org/issue?@action=redirect&bpo=43592]: `test.libregtest` now raises the soft resource limit for the maximum number of file descriptors when the default is too low for our test suite as was often the case on macOS.
- [bpo-39679](https://bugs.python.org/issue?@action=redirect&bpo=39679) [https://bugs.python.org/issue?@action=redirect&bpo=39679]

@action=redirect&bpo=39679]: Add more test cases for **@functools.single\_dispatchmethod** when combined with **@classmethod** or **@staticmethod**.

- [bpo-45410](https://bugs.python.org/issue?@action=redirect&bpo=45410) [https://bugs.python.org/issue?@action=redirect&bpo=45410]: When libregtest spawns a worker process, stderr is now written into stdout to keep messages order. Use a single pipe for stdout and stderr, rather than two pipes. Previously, messages were out of order which made analysis of buildbot logs harder Patch by Victor Stinner.
- [bpo-45402](https://bugs.python.org/issue?@action=redirect&bpo=45402) [https://bugs.python.org/issue?@action=redirect&bpo=45402]: Fix test\_tools.test\_sundry() when Python is built out of tree: fix how the freeze\_modules.py tool locates the \_freeze\_module program. Patch by Victor Stinner.
- [bpo-45403](https://bugs.python.org/issue?@action=redirect&bpo=45403) [https://bugs.python.org/issue?@action=redirect&bpo=45403]: Fix test\_sys.test\_stdlib\_dir() when Python is built outside the source tree: compare normalized paths. Patch by Victor Stinner.
- [bpo-45400](https://bugs.python.org/issue?@action=redirect&bpo=45400) [https://bugs.python.org/issue?@action=redirect&bpo=45400]: Fix test\_name\_error\_suggestions\_do\_not\_trigger\_for\_too\_many\_locals() of test\_exceptions if a directory name contains “a1” (like “Python-3.11.0a1”): use a stricter regular expression. Patch by Victor Stinner.
- [bpo-10572](https://bugs.python.org/issue?@action=redirect&bpo=10572) [https://bugs.python.org/issue?@action=redirect&bpo=10572]: Rename **sqlite3** tests from test\_sqlite to test\_sqlite3, and relocate them to Lib/test/test\_sqlite3. Patch by Erlend E. Aasland.

## Build

- [bpo-43158](https://bugs.python.org/issue?@action=redirect&bpo=43158) [https://bugs.python.org/issue?@action=redirect&bpo=43158]: setup.py now uses values from configure script to build the \_uuid extension module. Configure now detects util-linux’s libuuid, too.
- [bpo-45666](https://bugs.python.org/issue?@action=redirect&bpo=45666) [https://bugs.python.org/issue?@action=redirect&bpo=45666]: Fix warning of swprintf and %s usage in \_testembed.c
- [bpo-45548](https://bugs.python.org/issue?@action=redirect&bpo=45548) [https://bugs.python.org/issue?@action=redirect&bpo=45548]: Modules/Setup and Modules/makesetup have been improved. The Setup file

now contains working rules for all extensions. Outdated comments have been removed. Rules defined by `makesetup` track dependencies correctly.

- [bpo-45548](https://bugs.python.org/issue?@action=redirect&bpo=45548) [https://bugs.python.org/issue?@action=redirect&bpo=45548]: The `math` and `cmath` implementation now require a C99 compatible `libm` and no longer ship with workarounds for missing `acosh`, `asinh`, `atanh`, `expm1`, and `log1p` functions.
- [bpo-45595](https://bugs.python.org/issue?@action=redirect&bpo=45595) [https://bugs.python.org/issue?@action=redirect&bpo=45595]: `setup.py` and `makesetup` now track build dependencies on all Python header files and module specific header files.
- [bpo-45571](https://bugs.python.org/issue?@action=redirect&bpo=45571) [https://bugs.python.org/issue?@action=redirect&bpo=45571]: `Modules/Setup` now use `PY_CFLAGS_NODIST` instead of `PY_CFLAGS` to compile shared modules.
- [bpo-45570](https://bugs.python.org/issue?@action=redirect&bpo=45570) [https://bugs.python.org/issue?@action=redirect&bpo=45570]: `pyexpat` and `_elementtree` no longer define obsolete macros `HAVE_EXPAT_CONFIG_H` and `USE_PYEXPAT_CAPI`. `XML_POOR_ENTROPY` is now defined in `expat_config.h`.
- [bpo-43974](https://bugs.python.org/issue?@action=redirect&bpo=43974) [https://bugs.python.org/issue?@action=redirect&bpo=43974]: `setup.py` no longer defines `Py_BUILD_CORE_MODULE`. Instead every module, that uses the internal API, defines the macro.
- [bpo-45548](https://bugs.python.org/issue?@action=redirect&bpo=45548) [https://bugs.python.org/issue?@action=redirect&bpo=45548]: Fill in missing entries in `Modules/Setup`.
- [bpo-45532](https://bugs.python.org/issue?@action=redirect&bpo=45532) [https://bugs.python.org/issue?@action=redirect&bpo=45532]: Update `sys.version` to use `main` as fallback information. Patch by Jeong YunWon.
- [bpo-45536](https://bugs.python.org/issue?@action=redirect&bpo=45536) [https://bugs.python.org/issue?@action=redirect&bpo=45536]: The `configure` script now checks whether OpenSSL headers and libraries provide required APIs. Most common APIs are verified. The check detects outdated or missing OpenSSL. Failures do not stop `configure`.
- [bpo-45221](https://bugs.python.org/issue?@action=redirect&bpo=45221) [https://bugs.python.org/issue?@action=redirect&bpo=45221]: Fixed regression in handling of `LDFLAGS` and `CPPFLAGS` options where

`argparse.parse_known_args()` could interpret an option as one of the built-in command line argument, for example `-h` for help.

- [bpo-45440](https://bugs.python.org/issue?@action=redirect&bpo=45440) [https://bugs.python.org/issue?@action=redirect&bpo=45440]: Building Python now requires a C99 `<math.h>` header file providing the following functions: `copysign()`, `hypot()`, `isfinite()`, `isinf()`, `isnan()`, `round()`. Patch by Victor Stinner.
- [bpo-45405](https://bugs.python.org/issue?@action=redirect&bpo=45405) [https://bugs.python.org/issue?@action=redirect&bpo=45405]: Prevent internal configure error when running configure with recent versions of non-Apple clang. Patch by David Bohman.
- [bpo-45433](https://bugs.python.org/issue?@action=redirect&bpo=45433) [https://bugs.python.org/issue?@action=redirect&bpo=45433]: Avoid linking libpython with libcrypt.

## Windows

- [bpo-43652](https://bugs.python.org/issue?@action=redirect&bpo=43652) [https://bugs.python.org/issue?@action=redirect&bpo=43652]: Update Tcl/Tk to 8.6.11, actually this time. The previous update incorrectly included 8.6.10.
- [bpo-45337](https://bugs.python.org/issue?@action=redirect&bpo=45337) [https://bugs.python.org/issue?@action=redirect&bpo=45337]: venv now warns when the created environment may need to be accessed at a different path, due to redirections, links or junctions. It also now correctly installs or upgrades components when the alternate path is required.
- [bpo-43851](https://bugs.python.org/issue?@action=redirect&bpo=43851) [https://bugs.python.org/issue?@action=redirect&bpo=43851]: Build SQLite SQLITE\_OMIT\_AUTOINIT on Windows. Patch by Erlend E. Aasland.

## macOS

- [bpo-44828](https://bugs.python.org/issue?@action=redirect&bpo=44828) [https://bugs.python.org/issue?@action=redirect&bpo=44828]: Avoid tkinter file dialog failure on macOS 12 Monterey when using the Tk 8.6.11 provided by python.org macOS installers. Patch by Marc Culler of the Tk project.

## IDLE

- [bpo-45495](https://bugs.python.org/issue?@action=redirect&bpo=45495) [https://bugs.python.org/issue?@action=redirect&bpo=45495]: Add context keywords ‘case’ and ‘match’ to completions list.

## C API

- [bpo-29103](https://bugs.python.org/issue?@action=redirect&bpo=29103) [https://bugs.python.org/issue?@action=redirect&bpo=29103]: **PyType\_FromSpec\*** now copies the class name from the spec to a buffer owned by the class, so the original can be safely deallocated. Patch by Petr Viktorin.
- [bpo-45522](https://bugs.python.org/issue?@action=redirect&bpo=45522) [https://bugs.python.org/issue?@action=redirect&bpo=45522]: The internal freelists for frame, float, list, dict, async generators, and context objects can now be disabled.
- [bpo-35134](https://bugs.python.org/issue?@action=redirect&bpo=35134) [https://bugs.python.org/issue?@action=redirect&bpo=35134]: Exclude **PyWeakref\_GET\_OBJECT()** from the limited C API. It never worked since the **PyWeakReference** structure is opaque in the limited C API.
- [bpo-35081](https://bugs.python.org/issue?@action=redirect&bpo=35081) [https://bugs.python.org/issue?@action=redirect&bpo=35081]: Move the `interpreteridobject.h` header file from `Include/` to `Include/internal/`. It only provides private functions. Patch by Victor Stinner.
- [bpo-35134](https://bugs.python.org/issue?@action=redirect&bpo=35134) [https://bugs.python.org/issue?@action=redirect&bpo=35134]: The non-limited API files `cellobject.h`, `classobject.h`, `context.h`, `funcobject.h`, `genobject.h` and `longintrepr.h` have been moved to the `Include/cpython` directory. Moreover, the `eval.h` header file was removed. These files must not be included directly, as they are already included in `Python.h`: [Include Files](#). If they have been included directly, consider including `Python.h` instead. Patch by Victor Stinner.

- [bpo-45474](https://bugs.python.org/issue?@action=redirect&bpo=45474) [https://bugs.python.org/issue?@action=redirect&bpo=45474]: The following items are no longer available when `Py_LIMITED_API` is defined:
  - `PyMarshal_WriteLongToFile()`
  - `PyMarshal_WriteObjectToFile()`
  - `PyMarshal_ReadObjectFromString()`
  - `PyMarshal_WriteObjectToString()`
  - the `Py_MARSHAL_VERSION` macro

These are not part of the [limited API](#).

Patch by Victor Stinner.

- [bpo-45434](https://bugs.python.org/issue?@action=redirect&bpo=45434) [https://bugs.python.org/issue?@action=redirect&bpo=45434]: Remove the `pystrex.h` header file. It only contains private functions. C extensions should only include the main `<Python.h>` header file. Patch by Victor Stinner.
- [bpo-45440](https://bugs.python.org/issue?@action=redirect&bpo=45440) [https://bugs.python.org/issue?@action=redirect&bpo=45440]: Remove the `Py_FORCE_DOUBLE()` macro. It was used by the `Py_IS_INFINITY()` macro. Patch by Victor Stinner.
- [bpo-45434](https://bugs.python.org/issue?@action=redirect&bpo=45434) [https://bugs.python.org/issue?@action=redirect&bpo=45434]: `<Python.h>` no longer includes the header files `<stdlib.h>`, `<stdio.h>`, `<errno.h>` and `<string.h>` when the `Py_LIMITED_API` macro is set to `0x030b0000` (Python 3.11) or higher. C extensions should explicitly include the header files after `#include <Python.h>`. Patch by Victor Stinner.
- [bpo-41123](https://bugs.python.org/issue?@action=redirect&bpo=41123) [https://bugs.python.org/issue?@action=redirect&bpo=41123]: Remove `Py_UNICODE_COPY()` and `Py_UNICODE_FILL()` macros, deprecated since Python 3.3. Use `PyUnicode_CopyCharacters()` or `memcpy()` (`wchar_t* string`), and `PyUnicode_Fill()` functions instead. Patch by Victor Stinner.
- [bpo-45412](https://bugs.python.org/issue?@action=redirect&bpo=45412) [https://bugs.python.org/issue?@action=redirect&bpo=45412]

@action=redirect&bpo=45412]: Remove the following math macros using the `errno` variable:

- `Py_ADJUST_ERANGE1()`
- `Py_ADJUST_ERANGE2()`
- `Py_OVERFLOWED()`
- `Py_SET_ERANGE_IF_OVERFLOW()`
- `Py_SET_ERRNO_ON_MATH_ERROR()`

Patch by Victor Stinner.

- [bpo-45395](https://bugs.python.org/issue?@action=redirect&bpo=45395) [https://bugs.python.org/issue?@action=redirect&bpo=45395]: Custom frozen modules (the array set to `PyImport_FrozenModules`) are now treated as additions, rather than replacing all the default frozen modules. Frozen stdlib modules can still be disabled by setting the “code” field of the custom array entry to `NULL`.
- [bpo-43760](https://bugs.python.org/issue?@action=redirect&bpo=43760) [https://bugs.python.org/issue?@action=redirect&bpo=43760]: Add new `PyThreadState_EnterTracing()`, and `PyThreadState_LeaveTracing()` functions to the limited C API to suspend and resume tracing and profiling. Patch by Victor Stinner.
- [bpo-44220](https://bugs.python.org/issue?@action=redirect&bpo=44220) [https://bugs.python.org/issue?@action=redirect&bpo=44220]: `PyStructSequence_UnnamedField` is added to the Stable ABI.

## Python 3.11.0 alpha 1

*Release date: 2021-10-05*

### Security

- [bpo-42278](https://bugs.python.org/issue?@action=redirect&bpo=42278) [https://bugs.python.org/issue?@action=redirect&bpo=42278]: Replaced usage of `tempfile.mktemp()` with `TemporaryDirectory` to avoid a potential race condition.

- [bpo-44600](https://bugs.python.org/issue?@action=redirect&bpo=44600) [https://bugs.python.org/issue?@action=redirect&bpo=44600]: Fix incorrect line numbers while tracing some failed patterns in `match` statements. Patch by Charles Burkland.
- [bpo-41180](https://bugs.python.org/issue?@action=redirect&bpo=41180) [https://bugs.python.org/issue?@action=redirect&bpo=41180]: Add auditing events to the `marshal` module, and stop raising `code.__init__` events for every unmarshalled code object. Directly instantiated code objects will continue to raise an event, and audit event handlers should inspect or collect the raw marshal data. This reduces a significant performance overhead when loading from `.pyc` files.
- [bpo-44394](https://bugs.python.org/issue?@action=redirect&bpo=44394) [https://bugs.python.org/issue?@action=redirect&bpo=44394]: Update the vendored copy of libexpat to 2.4.1 (from 2.2.8) to get the fix for the CVE-2013-0340 “Billion Laughs” vulnerability. This copy is most used on Windows and macOS.
- [bpo-43124](https://bugs.python.org/issue?@action=redirect&bpo=43124) [https://bugs.python.org/issue?@action=redirect&bpo=43124]: Made the internal `putcmd` function in `smtplib` sanitize input for presence of `\r` and `\n` characters to avoid (unlikely) command injection.
- [bpo-44022](https://bugs.python.org/issue?@action=redirect&bpo=44022) [https://bugs.python.org/issue?@action=redirect&bpo=44022]: `http.client` now avoids infinitely reading potential HTTP headers after a `100 Continue` status response from the server.

## Core and Builtins

- [bpo-43760](https://bugs.python.org/issue?@action=redirect&bpo=43760) [https://bugs.python.org/issue?@action=redirect&bpo=43760]: The number of hardware branches per instruction dispatch is reduced from two to one by adding a special instruction for tracing. Patch by Mark Shannon.
- [bpo-45061](https://bugs.python.org/issue?@action=redirect&bpo=45061) [https://bugs.python.org/issue?@action=redirect&bpo=45061]: Add a deallocator to the `bool` type to detect refcount bugs in C extensions which call `Py_DECREF(Py_True)` or `Py_DECREF(Py_False)` by mistake. Detect also refcount bugs when the empty tuple singleton or the Unicode empty string singleton is destroyed by mistake. Patch by Victor Stinner.

- [bpo-24076](https://bugs.python.org/issue?@action=redirect&bpo=24076) [https://bugs.python.org/issue?@action=redirect&bpo=24076]: `sum()` was further optimised for summing up single digit integers.
- [bpo-45190](https://bugs.python.org/issue?@action=redirect&bpo=45190) [https://bugs.python.org/issue?@action=redirect&bpo=45190]: Update Unicode databases to Unicode 14.0.0.
- [bpo-45167](https://bugs.python.org/issue?@action=redirect&bpo=45167) [https://bugs.python.org/issue?@action=redirect&bpo=45167]: Fix deepcopying of `types.GenericAlias` objects.
- [bpo-45155](https://bugs.python.org/issue?@action=redirect&bpo=45155) [https://bugs.python.org/issue?@action=redirect&bpo=45155]: `int.to_bytes()` and `int.from_bytes()` now take a default value of "big" for the `byteorder` argument. `int.to_bytes()` also takes a default value of 1 for the `length` argument.
- [bpo-44219](https://bugs.python.org/issue?@action=redirect&bpo=44219) [https://bugs.python.org/issue?@action=redirect&bpo=44219]: Release the GIL while performing `isatty` system calls on arbitrary file descriptors. In particular, this affects `os.isatty()`, `os.device_encoding()` and `io.TextIOWrapper`. By extension, `io.open()` in text mode is also affected. This change solves a deadlock in `os.isatty()`. Patch by Vincent Michel in [bpo-44219](https://bugs.python.org/issue?@action=redirect&bpo=44219) [https://bugs.python.org/issue?@action=redirect&bpo=44219].
- [bpo-44959](https://bugs.python.org/issue?@action=redirect&bpo=44959) [https://bugs.python.org/issue?@action=redirect&bpo=44959]: Added fallback to extension modules with 'sl' suffix on HP-UX
- [bpo-45121](https://bugs.python.org/issue?@action=redirect&bpo=45121) [https://bugs.python.org/issue?@action=redirect&bpo=45121]: Fix issue where `Protocol.__init__` raises `RecursionError` when it's called directly or via `super()`. Patch provided by Yurii Karabas.
- [bpo-44348](https://bugs.python.org/issue?@action=redirect&bpo=44348) [https://bugs.python.org/issue?@action=redirect&bpo=44348]: The deallocator function of the `BaseException` type now uses the trashcan mechanism to

prevent stack overflow. For example, when a **RecursionError** instance is raised, it can be linked to another **RecursionError** through the `__context__` attribute or the `__traceback__` attribute, and then a chain of exceptions is created. When the chain is destroyed, nested deallocator function calls can crash with a stack overflow if the chain is too long compared to the available stack memory. Patch by Victor Stinner.

- [bpo-45123](https://bugs.python.org/issue?@action=redirect&bpo=45123) [https://bugs.python.org/issue?@action=redirect&bpo=45123]: Fix `PyAiter_Check` to only check for the `_anext_` presence (not for `_aiter_`). Rename `PyAiter_Check` to `PyAlter_Check`, `PyObject_GetAiter` -> `PyObject_GetAlter`.
- [bpo-1514420](https://bugs.python.org/issue?@action=redirect&bpo=1514420) [https://bugs.python.org/issue?@action=redirect&bpo=1514420]: Interpreter no longer attempts to open files with names in angle brackets (like “<string>” or “<stdin>”) when formatting an exception.
- [bpo-41031](https://bugs.python.org/issue?@action=redirect&bpo=41031) [https://bugs.python.org/issue?@action=redirect&bpo=41031]: Match C and Python code formatting of unprintable exceptions and exceptions in the `__main__` module.
- [bpo-37330](https://bugs.python.org/issue?@action=redirect&bpo=37330) [https://bugs.python.org/issue?@action=redirect&bpo=37330]: `open()`, `io.open()`, `codecs.open()` and `fileinput.FileInput` no longer accept 'U' (“universal newline”) in the file mode. This flag was deprecated since Python 3.3. Patch by Victor Stinner.
- [bpo-45083](https://bugs.python.org/issue?@action=redirect&bpo=45083) [https://bugs.python.org/issue?@action=redirect&bpo=45083]: When the interpreter renders an exception, its name now has a complete qualname. Previously only the class name was concatenated to the module name, which sometimes resulted in an incorrect full name being displayed.

(This issue impacted only the C code exception rendering, the **traceback** module was using qualname already).

- [bpo-34561](https://bugs.python.org/issue?@action=redirect&bpo=34561) [https://bugs.python.org/issue?@action=redirect&bpo=34561]: List sorting now uses the merge-ordering strategy from Munro and Wild's `powersort()`. Unlike the former strategy, this is provably near-optimal in the entropy of the distribution of run lengths. Most uses of `list.sort()` probably won't see a significant time difference, but may see significant improvements in cases where the former strategy was exceptionally poor. However, as these are all fast linear-time approximations to a problem that's inherently at best quadratic-time to solve truly optimally, it's also possible to contrive cases where the former strategy did better.
- [bpo-45056](https://bugs.python.org/issue?@action=redirect&bpo=45056) [https://bugs.python.org/issue?@action=redirect&bpo=45056]: Compiler now removes trailing unused constants from `co_consts`.
- [bpo-45020](https://bugs.python.org/issue?@action=redirect&bpo=45020) [https://bugs.python.org/issue?@action=redirect&bpo=45020]: Add a new command line option, `"-X frozen_modules=[on|off]"` to opt out of (or into) using optional frozen modules. This defaults to "on" (or "off" if it's running out of the source tree).
- [bpo-45012](https://bugs.python.org/issue?@action=redirect&bpo=45012) [https://bugs.python.org/issue?@action=redirect&bpo=45012]: In `posix`, release GIL during `stat()`, `lstat()`, and `fstatat()` syscalls made by `os.DirEntry.stat()`. Patch by Stanisław Skonieczny.
- [bpo-45018](https://bugs.python.org/issue?@action=redirect&bpo=45018) [https://bugs.python.org/issue?@action=redirect&bpo=45018]: Fixed pickling of range iterators that iterated for over  $2^{32}$  times.
- [bpo-45000](https://bugs.python.org/issue?@action=redirect&bpo=45000) [https://bugs.python.org/issue?@action=redirect&bpo=45000]: A `SyntaxError` is now raised when trying to delete `__debug__`. Patch by Dong-hee Na.
- [bpo-44963](https://bugs.python.org/issue?@action=redirect&bpo=44963) [https://bugs.python.org/issue?@action=redirect&bpo=44963]: Implement `send()` and `throw()` methods for `anext_awaitable` objects. Patch by Pablo Galindo.

- [bpo-44962](https://bugs.python.org/issue?@action=redirect&bpo=44962) [https://bugs.python.org/issue?@action=redirect&bpo=44962]: Fix a race in WeakKeyDictionary, WeakValueDictionary and WeakSet when two threads attempt to commit the last pending removal. This fixes `asyncio.create_task` and fixes a data loss in `asyncio.run` where `shutdown_asyncgens` is not run
- [bpo-24234](https://bugs.python.org/issue?@action=redirect&bpo=24234) [https://bugs.python.org/issue?@action=redirect&bpo=24234]: Implement the `__bytes__()` special method on the `bytes` type, so a bytes object `b` passes an `isinstance(b, typing.SupportsBytes)` check.
- [bpo-24234](https://bugs.python.org/issue?@action=redirect&bpo=24234) [https://bugs.python.org/issue?@action=redirect&bpo=24234]: Implement the `__complex__()` special method on the `complex` type, so a complex number `z` passes an `isinstance(z, typing.SupportsComplex)` check.
- [bpo-44954](https://bugs.python.org/issue?@action=redirect&bpo=44954) [https://bugs.python.org/issue?@action=redirect&bpo=44954]: Fixed a corner case bug where the result of `float.fromhex('0x.8p-1074')` was rounded the wrong way.
- [bpo-44947](https://bugs.python.org/issue?@action=redirect&bpo=44947) [https://bugs.python.org/issue?@action=redirect&bpo=44947]: Refine the syntax error for trailing commas in import statements. Patch by Pablo Galindo.
- [bpo-44945](https://bugs.python.org/issue?@action=redirect&bpo=44945) [https://bugs.python.org/issue?@action=redirect&bpo=44945]: Specialize the `BINARY_ADD` instruction using the PEP 659 machinery. Adds five new instructions:
  - `BINARY_ADD_ADAPTIVE`
  - `BINARY_ADD_FLOAT`
  - `BINARY_ADD_INT`
  - `BINARY_ADD_UNICODE`
  - `BINARY_ADD_UNICODE_INPLACE_FAST`
- [bpo-44929](https://bugs.python.org/issue?@action=redirect&bpo=44929) [https://bugs.python.org/issue?@action=redirect&bpo=44929]: Fix some edge cases of

`enum.Flag` string representation in the REPL. Patch by Pablo Galindo.

- [bpo-44914](https://bugs.python.org/issue?@action=redirect&bpo=44914) [https://bugs.python.org/issue?@action=redirect&bpo=44914]: Class version tags are no longer recycled.

This means that a version tag serves as a unique identifier for the state of a class. We rely on this for effective specialization of the `LOAD_ATTR` and other instructions.

- [bpo-44698](https://bugs.python.org/issue?@action=redirect&bpo=44698) [https://bugs.python.org/issue?@action=redirect&bpo=44698]: Restore behaviour of complex exponentiation with integer-valued exponent of type `float` or `complex`.
- [bpo-44895](https://bugs.python.org/issue?@action=redirect&bpo=44895) [https://bugs.python.org/issue?@action=redirect&bpo=44895]: A debug variable **`PYTHONDUMPREFSFILE`** is added for creating a dump file which is generated by `--with-trace-refs`. Patch by Dong-hee Na.
- [bpo-44900](https://bugs.python.org/issue?@action=redirect&bpo=44900) [https://bugs.python.org/issue?@action=redirect&bpo=44900]: Add five superinstructions for PEP 659 quickening:
  - `LOAD_FAST LOAD_FAST`
  - `STORE_FAST LOAD_FAST`
  - `LOAD_FAST LOAD_CONST`
  - `LOAD_CONST LOAD_FAST`
  - `STORE_FAST STORE_FAST`
- [bpo-44889](https://bugs.python.org/issue?@action=redirect&bpo=44889) [https://bugs.python.org/issue?@action=redirect&bpo=44889]: Initial implementation of adaptive specialization of `LOAD_METHOD`. The following specialized forms were added:
  - `LOAD_METHOD_CACHED`
  - `LOAD_METHOD_MODULE`
  - `LOAD_METHOD_CLASS`

- [bpo-44890](https://bugs.python.org/issue?@action=redirect&bpo=44890) [https://bugs.python.org/issue?@action=redirect&bpo=44890]: Specialization stats are always collected in debug builds.
- [bpo-44885](https://bugs.python.org/issue?@action=redirect&bpo=44885) [https://bugs.python.org/issue?@action=redirect&bpo=44885]: Correct the ast locations of f-strings with format specs and repeated expressions. Patch by Pablo Galindo
- [bpo-44878](https://bugs.python.org/issue?@action=redirect&bpo=44878) [https://bugs.python.org/issue?@action=redirect&bpo=44878]: Remove the loop from the bytecode interpreter. All instructions end with a DISPATCH macro, so the loop is now redundant.
- [bpo-44878](https://bugs.python.org/issue?@action=redirect&bpo=44878) [https://bugs.python.org/issue?@action=redirect&bpo=44878]: Remove switch statement for interpreter loop when using computed gotos. This makes sure that we only have one dispatch table in the interpreter.
- [bpo-44874](https://bugs.python.org/issue?@action=redirect&bpo=44874) [https://bugs.python.org/issue?@action=redirect&bpo=44874]: Deprecate the old trashcan macros (`Py_TRASHCAN_SAFE_BEGIN/Py_TRASHCAN_SAFE_END`). They should be replaced by the new macros `Py_TRASHCAN_BEGIN` and `Py_TRASHCAN_END`.
- [bpo-44872](https://bugs.python.org/issue?@action=redirect&bpo=44872) [https://bugs.python.org/issue?@action=redirect&bpo=44872]: Use new trashcan macros (`Py_TRASHCAN_BEGIN/END`) in `frameobject.c` instead of the old ones (`Py_TRASHCAN_SAFE_BEGIN/END`).
- [bpo-33930](https://bugs.python.org/issue?@action=redirect&bpo=33930) [https://bugs.python.org/issue?@action=redirect&bpo=33930]: Fix segmentation fault with deep recursion when cleaning method objects. Patch by Augusto Goulart and Pablo Galindo.
- [bpo-25782](https://bugs.python.org/issue?@action=redirect&bpo=25782) [https://bugs.python.org/issue?@action=redirect&bpo=25782]: Fix bug where `PyErr_SetObject` hangs when the current exception has a cycle in its context chain.

- [bpo-44856](https://bugs.python.org/issue?@action=redirect&bpo=44856) [https://bugs.python.org/issue?@action=redirect&bpo=44856]: Fix reference leaks in the error paths of `update_bases()` and `__build_class__`. Patch by Pablo Galindo.
- [bpo-44826](https://bugs.python.org/issue?@action=redirect&bpo=44826) [https://bugs.python.org/issue?@action=redirect&bpo=44826]: Initial implementation of adaptive specialization of `STORE_ATTR`

Three specialized forms of `STORE_ATTR` are added:

- `STORE_ATTR_SLOT`
- `STORE_ATTR_SPLIT_KEYS`
- `STORE_ATTR_WITH_HINT`

- [bpo-44838](https://bugs.python.org/issue?@action=redirect&bpo=44838) [https://bugs.python.org/issue?@action=redirect&bpo=44838]: Fixed a bug that was causing the parser to raise an incorrect custom `SyntaxError` for invalid ‘if’ expressions. Patch by Pablo Galindo.
- [bpo-44821](https://bugs.python.org/issue?@action=redirect&bpo=44821) [https://bugs.python.org/issue?@action=redirect&bpo=44821]: Create instance dictionaries (`_dict_`) eagerly, to improve regularity of object layout and assist specialization.
- [bpo-44792](https://bugs.python.org/issue?@action=redirect&bpo=44792) [https://bugs.python.org/issue?@action=redirect&bpo=44792]: Improve syntax errors for if expressions. Patch by Miguel Brito
- [bpo-34013](https://bugs.python.org/issue?@action=redirect&bpo=34013) [https://bugs.python.org/issue?@action=redirect&bpo=34013]: Generalize the invalid legacy statement custom error message (like the one generated when “print” is called without parentheses) to include more generic expressions. Patch by Pablo Galindo
- [bpo-44732](https://bugs.python.org/issue?@action=redirect&bpo=44732) [https://bugs.python.org/issue?@action=redirect&bpo=44732]: Rename `types.Union` to `types.UnionType`.
- [bpo-44725](https://bugs.python.org/issue?@action=redirect&bpo=44725) [https://bugs.python.org/issue?@action=redirect&bpo=44725]: Expose specialization stats in

python via `_opcode.get_specialization_stats()`.

- [bpo-44717](https://bugs.python.org/issue?@action=redirect&bpo=44717) [https://bugs.python.org/issue?@action=redirect&bpo=44717]: Improve `AttributeError` on circular imports of submodules.
- [bpo-44698](https://bugs.python.org/issue?@action=redirect&bpo=44698) [https://bugs.python.org/issue?@action=redirect&bpo=44698]: Fix undefined behaviour in complex object exponentiation.
- [bpo-44653](https://bugs.python.org/issue?@action=redirect&bpo=44653) [https://bugs.python.org/issue?@action=redirect&bpo=44653]: Support `typing` types in parameter substitution in the union type.
- [bpo-44676](https://bugs.python.org/issue?@action=redirect&bpo=44676) [https://bugs.python.org/issue?@action=redirect&bpo=44676]: Add ability to serialise `types.Union` objects. Patch provided by Yurii Karabas.
- [bpo-44633](https://bugs.python.org/issue?@action=redirect&bpo=44633) [https://bugs.python.org/issue?@action=redirect&bpo=44633]: Parameter substitution of the union type with wrong types now raises `TypeError` instead of returning `NotImplemented`.
- [bpo-44661](https://bugs.python.org/issue?@action=redirect&bpo=44661) [https://bugs.python.org/issue?@action=redirect&bpo=44661]: Update `property_descr_set` to use `vectorcall` if possible. Patch by Dong-hee Na.
- [bpo-44662](https://bugs.python.org/issue?@action=redirect&bpo=44662) [https://bugs.python.org/issue?@action=redirect&bpo=44662]: Add `__module__` to `types.Union`. This also fixes `types.Union` issues with `typing.Annotated`. Patch provided by Yurii Karabas.
- [bpo-44655](https://bugs.python.org/issue?@action=redirect&bpo=44655) [https://bugs.python.org/issue?@action=redirect&bpo=44655]: Include the name of the type in `unset_slots_` attribute errors. Patch by Pablo Galindo
- [bpo-44655](https://bugs.python.org/issue?@action=redirect&bpo=44655) [https://bugs.python.org/issue?@action=redirect&bpo=44655]: Don't include a missing attribute with the same name as the failing one when offering suggestions for missing attributes. Patch by Pablo Galindo
- [bpo-44646](https://bugs.python.org/issue?@action=redirect&bpo=44646) [https://bugs.python.org/issue?@action=redirect&bpo=44646]

@action=redirect&bpo=44646]: Fix the hash of the union type: it no longer depends on the order of arguments.

- [bpo-44636](https://bugs.python.org/issue?@action=redirect&bpo=44636) [https://bugs.python.org/issue?@action=redirect&bpo=44636]: Collapse union of equal types. E.g. the result of `int | int` is now `int`. Fix comparison of the union type with non-hashable objects. E.g. `int | str == {}` no longer raises a `TypeError`.
- [bpo-44611](https://bugs.python.org/issue?@action=redirect&bpo=44611) [https://bugs.python.org/issue?@action=redirect&bpo=44611]: On Windows, `os.urandom()` uses `BCryptGenRandom` API instead of `CryptGenRandom` API which is deprecated from Microsoft Windows API. Patch by Dong-hee Na.
- [bpo-44635](https://bugs.python.org/issue?@action=redirect&bpo=44635) [https://bugs.python.org/issue?@action=redirect&bpo=44635]: Convert `None` to `type(None)` in the union type constructor.
- [bpo-26280](https://bugs.python.org/issue?@action=redirect&bpo=26280) [https://bugs.python.org/issue?@action=redirect&bpo=26280]: Implement adaptive specialization for `BINARY_SUBSCR`

Three specialized forms of `BINARY_SUBSCR` are added:

- `BINARY_SUBSCR_LIST_INT`
- `BINARY_SUBSCR_TUPLE_INT`
- `BINARY_SUBSCR_DICT`

- [bpo-44589](https://bugs.python.org/issue?@action=redirect&bpo=44589) [https://bugs.python.org/issue?@action=redirect&bpo=44589]: Mapping patterns in `match` statements with two or more equal literal keys will now raise a `SyntaxError` at compile-time.
- [bpo-44606](https://bugs.python.org/issue?@action=redirect&bpo=44606) [https://bugs.python.org/issue?@action=redirect&bpo=44606]: Fix `__instancecheck__` and `__subclasscheck__` for the union type.
- [bpo-42073](https://bugs.python.org/issue?@action=redirect&bpo=42073) [https://bugs.python.org/issue?@action=redirect&bpo=42073]: The `@classmethod` decorator can now wrap other classmethod-like descriptors.

- [bpo-41972](https://bugs.python.org/issue?@action=redirect&bpo=41972) [https://bugs.python.org/issue?@action=redirect&bpo=41972]: Tuned the string-searching algorithm of fastsearch.h to have a shorter inner loop for most cases.
- [bpo-44590](https://bugs.python.org/issue?@action=redirect&bpo=44590) [https://bugs.python.org/issue?@action=redirect&bpo=44590]: All necessary data for executing a Python function (local variables, stack, etc) is now kept in a per-thread stack. Frame objects are lazily allocated on demand. This increases performance by about 7% on the standard benchmark suite. Introspection and debugging are unaffected as frame objects are always available when needed. Patch by Mark Shannon.
- [bpo-44584](https://bugs.python.org/issue?@action=redirect&bpo=44584) [https://bugs.python.org/issue?@action=redirect&bpo=44584]: The threading debug (**PYTHONTHREADDEBUG** environment variable) is deprecated in Python 3.10 and will be removed in Python 3.12. This feature requires a debug build of Python. Patch by Victor Stinner.
- [bpo-43895](https://bugs.python.org/issue?@action=redirect&bpo=43895) [https://bugs.python.org/issue?@action=redirect&bpo=43895]: An obsolete internal cache of shared object file handles added in 1995 that attempted, but did not guarantee, that a .so would not be dlopen'ed twice to work around flaws in mid-1990s posix-ish operating systems has been removed from dynload\_shlib.c.
- [bpo-44490](https://bugs.python.org/issue?@action=redirect&bpo=44490) [https://bugs.python.org/issue?@action=redirect&bpo=44490]: **typing** now searches for type parameters in `types.Union` objects. `get_type_hints` will also properly resolve annotations with nested `types.Union` objects. Patch provided by Yurii Karabas.
- [bpo-43950](https://bugs.python.org/issue?@action=redirect&bpo=43950) [https://bugs.python.org/issue?@action=redirect&bpo=43950]: Code objects can now provide the column information for instructions when available. This is leveraged during traceback printing to show the expressions responsible for errors.

Contributed by Pablo Galindo, Batuhan Taskaya and Ammar

Askar as part of **PEP 657** [https://peps.python.org/pep-0657/].

- **bpo-44562** [https://bugs.python.org/issue?@action=redirect&bpo=44562]: Remove uses of **PyObject\_GC\_Del()** in error path when initializing **types.GenericAlias**.
- **bpo-41486** [https://bugs.python.org/issue?@action=redirect&bpo=41486]: Fix a memory consumption and copying performance regression in earlier 3.10 beta releases if someone used an output buffer larger than 4GiB with **zlib.decompress** on input data that expands that large.
- **bpo-43908** [https://bugs.python.org/issue?@action=redirect&bpo=43908]: Heap types with the **Py\_TPFLAGS\_IMMUTABLETYPE** flag can now inherit the **PEP 590** [https://peps.python.org/pep-0590/] **vectorcall** protocol. Previously, this was only possible for **static types**. Patch by Erlend E. Aasland.
- **bpo-44553** [https://bugs.python.org/issue?@action=redirect&bpo=44553]: Implement GC methods for **types.Union** to break reference cycles and prevent memory leaks.
- **bpo-44490** [https://bugs.python.org/issue?@action=redirect&bpo=44490]: Add **\_\_parameters\_\_** attribute and **\_\_getitem\_\_** operator to **types.Union**. Patch provided by Yurii Karabas.
- **bpo-44523** [https://bugs.python.org/issue?@action=redirect&bpo=44523]: Remove the pass-through for **hash()** of **weakref.proxy** objects to prevent unintended consequences when the original referred object dies while the proxy is part of a hashable object. Patch by Pablo Galindo.
- **bpo-44483** [https://bugs.python.org/issue?@action=redirect&bpo=44483]: Fix a crash in **types.Union** objects when creating a union of an object with bad **\_\_module\_\_** field.

- [bpo-44486](https://bugs.python.org/issue?@action=redirect&bpo=44486) [https://bugs.python.org/issue?@action=redirect&bpo=44486]: Modules will always have a dictionary, even when created by `types.ModuleType.__new__()`
- [bpo-44472](https://bugs.python.org/issue?@action=redirect&bpo=44472) [https://bugs.python.org/issue?@action=redirect&bpo=44472]: Fix ltrace functionality when exceptions are raised. Patch by Pablo Galindo
- [bpo-12022](https://bugs.python.org/issue?@action=redirect&bpo=12022) [https://bugs.python.org/issue?@action=redirect&bpo=12022]: A **`TypeError`** is now raised instead of an **`AttributeError`** in **`with`** and **`async with`** statements for objects which do not support the **`context manager`** or **`asynchronous context manager`** protocols correspondingly.
- [bpo-44297](https://bugs.python.org/issue?@action=redirect&bpo=44297) [https://bugs.python.org/issue?@action=redirect&bpo=44297]: Make sure that the line number is set when entering a comprehension scope. Ensures that backtraces including generator expressions show the correct line number.
- [bpo-44456](https://bugs.python.org/issue?@action=redirect&bpo=44456) [https://bugs.python.org/issue?@action=redirect&bpo=44456]: Improve the syntax error when mixing positional and keyword patterns. Patch by Pablo Galindo.
- [bpo-44409](https://bugs.python.org/issue?@action=redirect&bpo=44409) [https://bugs.python.org/issue?@action=redirect&bpo=44409]: Fix error location information for tokenizer errors raised on initialization of the tokenizer. Patch by Pablo Galindo.
- [bpo-44396](https://bugs.python.org/issue?@action=redirect&bpo=44396) [https://bugs.python.org/issue?@action=redirect&bpo=44396]: Fix a possible crash in the tokenizer when raising syntax errors for unclosed strings. Patch by Pablo Galindo.
- [bpo-44376](https://bugs.python.org/issue?@action=redirect&bpo=44376) [https://bugs.python.org/issue?@action=redirect&bpo=44376]: Exact integer exponentiation (like `i**2` or `pow(i, 2)`) with a small exponent is much faster, due to reducing overhead in such cases.

- [bpo-44313](https://bugs.python.org/issue?@action=redirect&bpo=44313) [https://bugs.python.org/issue?@action=redirect&bpo=44313]: Directly imported objects and modules (through import and from import statements) don't generate `LOAD_METHOD/CALL_METHOD` for directly accessed objects on their namespace. They now use the regular `LOAD_ATTR/CALL_FUNCTION`.
- [bpo-44338](https://bugs.python.org/issue?@action=redirect&bpo=44338) [https://bugs.python.org/issue?@action=redirect&bpo=44338]: Implement adaptive specialization for `LOAD_GLOBAL`

Two specialized forms of `LOAD_GLOBAL` are added:

- `LOAD_GLOBAL_MODULE`
- `LOAD_GLOBAL_BUILTIN`

- [bpo-44368](https://bugs.python.org/issue?@action=redirect&bpo=44368) [https://bugs.python.org/issue?@action=redirect&bpo=44368]: Improve syntax errors for invalid “as” targets. Patch by Pablo Galindo
- [bpo-44349](https://bugs.python.org/issue?@action=redirect&bpo=44349) [https://bugs.python.org/issue?@action=redirect&bpo=44349]: Fix an edge case when displaying text from files with encoding in syntax errors. Patch by Pablo Galindo.
- [bpo-44337](https://bugs.python.org/issue?@action=redirect&bpo=44337) [https://bugs.python.org/issue?@action=redirect&bpo=44337]: Initial implementation of adaptive specialization of `LOAD_ATTR`

Four specialized forms of `LOAD_ATTR` are added:

- `LOAD_ATTR_SLOT`
- `LOAD_ATTR_SPLIT_KEYS`
- `LOAD_ATTR_WITH_HINT`
- `LOAD_ATTR_MODULE`

- [bpo-44335](https://bugs.python.org/issue?@action=redirect&bpo=44335) [https://bugs.python.org/issue?@action=redirect&bpo=44335]: Fix a regression when identifying incorrect characters in syntax errors. Patch by Pablo Galindo
- [bpo-43693](https://bugs.python.org/issue?@action=redirect&bpo=43693) [https://bugs.python.org/issue?@action=redirect&bpo=43693]: Computation of the offsets of cell

variables is done in the compiler instead of at runtime. This reduces the overhead of handling cell and free variables, especially in the case where a variable is both an argument and cell variable.

- [bpo-44317](https://bugs.python.org/issue?@action=redirect&bpo=44317) [https://bugs.python.org/issue?@action=redirect&bpo=44317]: Improve tokenizer error with improved locations. Patch by Pablo Galindo.
- [bpo-44304](https://bugs.python.org/issue?@action=redirect&bpo=44304) [https://bugs.python.org/issue?@action=redirect&bpo=44304]: Fix a crash in the **sqlite3** module that happened when the garbage collector clears **sqlite.Statement** objects. Patch by Pablo Galindo
- [bpo-44305](https://bugs.python.org/issue?@action=redirect&bpo=44305) [https://bugs.python.org/issue?@action=redirect&bpo=44305]: Improve error message for `try` blocks without `except` or `finally` blocks. Patch by Pablo Galindo.
- [bpo-43413](https://bugs.python.org/issue?@action=redirect&bpo=43413) [https://bugs.python.org/issue?@action=redirect&bpo=43413]: Constructors of subclasses of some builtin classes (e.g. **tuple**, **list**, **frozenset**) no longer accept arbitrary keyword arguments. [reverted in 3.11a4] Subclass of **set** can now define a `__new__()` method with additional keyword parameters without overriding also `__init__()`.
- [bpo-43667](https://bugs.python.org/issue?@action=redirect&bpo=43667) [https://bugs.python.org/issue?@action=redirect&bpo=43667]: Improve Unicode support in non-UTF locales on Oracle Solaris. This issue does not affect other Solaris systems.
- [bpo-43693](https://bugs.python.org/issue?@action=redirect&bpo=43693) [https://bugs.python.org/issue?@action=redirect&bpo=43693]: A new opcode `MAKE_CELL` has been added that effectively moves some of the work done on function entry into the compiler and into the eval loop. In addition to creating the required cell objects, the new opcode converts relevant arguments (and other locals) to cell variables on function entry.
- [bpo-44232](https://bugs.python.org/issue?@action=redirect&bpo=44232) [https://bugs.python.org/issue?@action=redirect&bpo=44232]

@action=redirect&bpo=44232]: Fix a regression in `type()` when a metaclass raises an exception. The C function `type_new()` must properly report the exception when a metaclass constructor raises an exception and the winner class is not the metaclass. Patch by Victor Stinner.

- [bpo-44201](https://bugs.python.org/issue?@action=redirect&bpo=44201) [https://bugs.python.org/issue?@action=redirect&bpo=44201]: Avoid side effects of checking for specialized syntax errors in the REPL that was causing it to ask for extra tokens after a syntax error had been detected. Patch by Pablo Galindo
- [bpo-43693](https://bugs.python.org/issue?@action=redirect&bpo=43693) [https://bugs.python.org/issue?@action=redirect&bpo=43693]: PyCodeObject gained `co_fastlocalnames` and `co_fastlocalkinds` as the authoritative source of fast locals info. Marshaled code objects have changed accordingly.
- [bpo-44184](https://bugs.python.org/issue?@action=redirect&bpo=44184) [https://bugs.python.org/issue?@action=redirect&bpo=44184]: Fix a crash at Python exit when a deallocator function removes the last strong reference to a heap type. Patch by Victor Stinner.
- [bpo-44187](https://bugs.python.org/issue?@action=redirect&bpo=44187) [https://bugs.python.org/issue?@action=redirect&bpo=44187]: Implement quickening in the interpreter. This offers no advantages as yet, but is an enabler of future optimizations. See PEP 659 for full explanation.
- [bpo-44180](https://bugs.python.org/issue?@action=redirect&bpo=44180) [https://bugs.python.org/issue?@action=redirect&bpo=44180]: The parser doesn't report generic syntax errors that happen in a position further away than the one it reached in the first pass. Patch by Pablo Galindo
- [bpo-44168](https://bugs.python.org/issue?@action=redirect&bpo=44168) [https://bugs.python.org/issue?@action=redirect&bpo=44168]: Fix error message in the parser involving keyword arguments with invalid expressions. Patch by Pablo Galindo
- [bpo-44156](https://bugs.python.org/issue?@action=redirect&bpo=44156) [https://bugs.python.org/issue?@action=redirect&bpo=44156]: String caches in `compile.c` are now subinterpreter compatible.

- [bpo-44143](https://bugs.python.org/issue?@action=redirect&bpo=44143) [https://bugs.python.org/issue?@action=redirect&bpo=44143]: Fixed a crash in the parser that manifest when raising tokenizer errors when an existing exception was present. Patch by Pablo Galindo.
- [bpo-44032](https://bugs.python.org/issue?@action=redirect&bpo=44032) [https://bugs.python.org/issue?@action=redirect&bpo=44032]: Move ‘fast’ locals and other variables from the frame object to a per-thread datastack.
- [bpo-44114](https://bugs.python.org/issue?@action=redirect&bpo=44114) [https://bugs.python.org/issue?@action=redirect&bpo=44114]: Fix incorrect dictkeys\_reversed and dictitems\_reversed function signatures in C code, which broke webassembly builds.
- [bpo-44110](https://bugs.python.org/issue?@action=redirect&bpo=44110) [https://bugs.python.org/issue?@action=redirect&bpo=44110]: Improve `str.__getitem__()` error message
- [bpo-26110](https://bugs.python.org/issue?@action=redirect&bpo=26110) [https://bugs.python.org/issue?@action=redirect&bpo=26110]: Add `CALL_METHOD_KW` opcode to speed up method calls with keyword arguments. Idea originated from PyPy. A side effect is executing `CALL_METHOD` is now branchless in the evaluation loop.
- [bpo-28307](https://bugs.python.org/issue?@action=redirect&bpo=28307) [https://bugs.python.org/issue?@action=redirect&bpo=28307]: Compiler now optimizes simple C-style formatting with literal format containing only format codes `%s`, `%r` and `%a` by converting them to f-string expressions.
- [bpo-43149](https://bugs.python.org/issue?@action=redirect&bpo=43149) [https://bugs.python.org/issue?@action=redirect&bpo=43149]: Correct the syntax error message regarding multiple exception types to not refer to “exception groups”. Patch by Pablo Galindo
- [bpo-43822](https://bugs.python.org/issue?@action=redirect&bpo=43822) [https://bugs.python.org/issue?@action=redirect&bpo=43822]: The parser will prioritize tokenizer errors over custom syntax errors when raising exceptions. Patch by Pablo Galindo.
- [bpo-40222](https://bugs.python.org/issue?@action=redirect&bpo=40222) [https://bugs.python.org/issue?@action=redirect&bpo=40222]

@action=redirect&bpo=40222]: “Zero cost” exception handling.

- Uses a lookup table to determine how to handle exceptions.
- Removes SETUP\_FINALLY and POP\_TOP block instructions, eliminating the runtime overhead of try statements.
- Reduces the size of the frame object by about 60%.

Patch by Mark Shannon

- [bpo-43918](https://bugs.python.org/issue?@action=redirect&bpo=43918) [https://bugs.python.org/issue?@action=redirect&bpo=43918]: Document the signature and default argument in the docstring of the new `anext` builtin.
- [bpo-43833](https://bugs.python.org/issue?@action=redirect&bpo=43833) [https://bugs.python.org/issue?@action=redirect&bpo=43833]: Emit a deprecation warning if the numeric literal is immediately followed by one of keywords: `and`, `else`, `for`, `if`, `in`, `is`, or `or`. Raise a syntax error with more informative message if it is immediately followed by other keyword or identifier.
- [bpo-43879](https://bugs.python.org/issue?@action=redirect&bpo=43879) [https://bugs.python.org/issue?@action=redirect&bpo=43879]: Add `native_thread_id` to `PyThreadState`. Patch by Gabriele N. Tornetta.
- [bpo-43693](https://bugs.python.org/issue?@action=redirect&bpo=43693) [https://bugs.python.org/issue?@action=redirect&bpo=43693]: Compute cell offsets relative to locals in compiler. Allows the interpreter to treat locals and cells as a single array, which is slightly more efficient. Also make the `LOAD_CLOSURE` opcode an alias for `LOAD_FAST`. Preserving `LOAD_CLOSURE` helps keep bytecode a bit more readable.
- [bpo-17792](https://bugs.python.org/issue?@action=redirect&bpo=17792) [https://bugs.python.org/issue?@action=redirect&bpo=17792]: More accurate error messages for access of unbound locals or free vars.
- [bpo-28146](https://bugs.python.org/issue?@action=redirect&bpo=28146) [https://bugs.python.org/issue?@action=redirect&bpo=28146]: Fix a confusing error message in

`str.format()`.

- [bpo-11105](https://bugs.python.org/issue?@action=redirect&bpo=11105) [https://bugs.python.org/issue?@action=redirect&bpo=11105]: When compiling `ast.AST` objects with recursive references through `compile()`, the interpreter doesn't crash anymore instead it raises a `RecursionError`.
- [bpo-39091](https://bugs.python.org/issue?@action=redirect&bpo=39091) [https://bugs.python.org/issue?@action=redirect&bpo=39091]: Fix crash when using passing a non-exception to a generator's `throw()` method. Patch by Noah Ozer
- [bpo-33346](https://bugs.python.org/issue?@action=redirect&bpo=33346) [https://bugs.python.org/issue?@action=redirect&bpo=33346]: Asynchronous comprehensions are now allowed inside comprehensions in asynchronous functions. Outer comprehensions implicitly become asynchronous.

## Library

- [bpo-45371](https://bugs.python.org/issue?@action=redirect&bpo=45371) [https://bugs.python.org/issue?@action=redirect&bpo=45371]: Fix clang rpath issue in `distutils`. The UnixCCompiler now uses correct clang option to add a runtime library directory (rpath) to a shared library.
- [bpo-45329](https://bugs.python.org/issue?@action=redirect&bpo=45329) [https://bugs.python.org/issue?@action=redirect&bpo=45329]: Fix freed memory access in `pyexpat.xmlparser` when building it with an installed expat library `<= 2.2.0`.
- [bpo-41710](https://bugs.python.org/issue?@action=redirect&bpo=41710) [https://bugs.python.org/issue?@action=redirect&bpo=41710]: On Unix, if the `sem_clockwait()` function is available in the C library (glibc 2.30 and newer), the `threading.Lock.acquire()` method now uses the monotonic clock (`time.CLOCK_MONOTONIC`) for the timeout, rather than using the system clock (`time.CLOCK_REALTIME`), to not be affected by system clock changes. Patch by Victor Stinner.

- [bpo-1596321](https://bugs.python.org/issue?@action=redirect&bpo=1596321) [https://bugs.python.org/issue?@action=redirect&bpo=1596321]: Fix the **threading.\_shutdown()** function when the **threading** module was imported first from a thread different than the main thread: no longer log an error at Python exit.
- [bpo-45274](https://bugs.python.org/issue?@action=redirect&bpo=45274) [https://bugs.python.org/issue?@action=redirect&bpo=45274]: Fix a race condition in the **Thread.join()** method of the **threading** module. If the function is interrupted by a signal and the signal handler raises an exception, make sure that the thread remains in a consistent state to prevent a deadlock. Patch by Victor Stinner.
- [bpo-21302](https://bugs.python.org/issue?@action=redirect&bpo=21302) [https://bugs.python.org/issue?@action=redirect&bpo=21302]: In Unix operating systems, **time.sleep()** now uses the **nanosleep()** function, if **clock\_nanosleep()** is not available but **nanosleep()** is available. **nanosleep()** allows to sleep with nanosecond precision.
- [bpo-21302](https://bugs.python.org/issue?@action=redirect&bpo=21302) [https://bugs.python.org/issue?@action=redirect&bpo=21302]: On Windows, **time.sleep()** now uses a waitable timer which has a resolution of 100 nanoseconds ( $10^{-7}$  seconds). Previously, it had a resolution of 1 millisecond ( $10^{-3}$  seconds). Patch by Benjamin Szőke and Victor Stinner.
- [bpo-45238](https://bugs.python.org/issue?@action=redirect&bpo=45238) [https://bugs.python.org/issue?@action=redirect&bpo=45238]: Fix **unittest.IsolatedAsyncioTestCase.debug()**: it runs now asynchronous methods and callbacks.
- [bpo-36674](https://bugs.python.org/issue?@action=redirect&bpo=36674) [https://bugs.python.org/issue?@action=redirect&bpo=36674]: **unittest.TestCase.debug()** raises now a **unittest.SkipTest** if the class or the test method are decorated with the skipping decorator.
- [bpo-45235](https://bugs.python.org/issue?@action=redirect&bpo=45235) [https://bugs.python.org/issue?@action=redirect&bpo=45235]: Fix an issue where **argparse** would not preserve values in a provided namespace when

using a subparser with defaults.

- [bpo-45183](https://bugs.python.org/issue?@action=redirect&bpo=45183) [https://bugs.python.org/issue?@action=redirect&bpo=45183]: Have `zipimport.zipimporter.find_spec()` not raise an exception when the underlying zip file has been deleted and the internal cache has been reset via `invalidate_cache()`.
- [bpo-45234](https://bugs.python.org/issue?@action=redirect&bpo=45234) [https://bugs.python.org/issue?@action=redirect&bpo=45234]: Fixed a regression in `copyfile()`, `copy()`, `copy2()` raising `FileNotFoundError` when source is a directory, which should raise `IsADirectoryError`
- [bpo-45228](https://bugs.python.org/issue?@action=redirect&bpo=45228) [https://bugs.python.org/issue?@action=redirect&bpo=45228]: Fix stack buffer overflow in parsing J1939 network address.
- [bpo-45225](https://bugs.python.org/issue?@action=redirect&bpo=45225) [https://bugs.python.org/issue?@action=redirect&bpo=45225]: use map function instead of `genexpr` in capwords.
- [bpo-42135](https://bugs.python.org/issue?@action=redirect&bpo=42135) [https://bugs.python.org/issue?@action=redirect&bpo=42135]: Fix typo: `importlib.find_loader` is really slated for removal in Python 3.12 not 3.10, like the others in PR 25169.

Patch by Hugo van Kemenade.

- [bpo-20524](https://bugs.python.org/issue?@action=redirect&bpo=20524) [https://bugs.python.org/issue?@action=redirect&bpo=20524]: Improves error messages on `.format()` operation for `str`, `float`, `int`, and `complex`. New format now shows the problematic pattern and the object type.
- [bpo-45168](https://bugs.python.org/issue?@action=redirect&bpo=45168) [https://bugs.python.org/issue?@action=redirect&bpo=45168]: Change `dis.dis()` output to omit op arg values that cannot be resolved due to `co_consts`, `co_names` etc not being provided. Previously the oparg itself was repeated in the value field, which is not useful and can be confusing.

- [bpo-21302](https://bugs.python.org/issue?@action=redirect&bpo=21302) [https://bugs.python.org/issue?@action=redirect&bpo=21302]: In Unix operating systems, `time.sleep()` now uses the `clock_nanosleep()` function, if available, which allows to sleep for an interval specified with nanosecond precision.
- [bpo-45173](https://bugs.python.org/issue?@action=redirect&bpo=45173) [https://bugs.python.org/issue?@action=redirect&bpo=45173]: Remove from the `configparser` module: the `SafeConfigParser` class, the `filename` property of the `ParsingError` class, the `readfp()` method of the `ConfigParser` class, deprecated since Python 3.2.

Patch by Hugo van Kemenade.

- [bpo-44987](https://bugs.python.org/issue?@action=redirect&bpo=44987) [https://bugs.python.org/issue?@action=redirect&bpo=44987]: Pure ASCII strings are now normalized in constant time by `unicodedata.normalize()`. Patch by Dong-hee Na.
- [bpo-35474](https://bugs.python.org/issue?@action=redirect&bpo=35474) [https://bugs.python.org/issue?@action=redirect&bpo=35474]: Calling `mimetypes.guess_all_extensions()` with `strict=False` no longer affects the result of the following call with `strict=True`. Also, mutating the returned list no longer affects the global state.
- [bpo-45166](https://bugs.python.org/issue?@action=redirect&bpo=45166) [https://bugs.python.org/issue?@action=redirect&bpo=45166]: `typing.get_type_hints()` now works with `Final` wrapped in `ForwardRef`.
- [bpo-45162](https://bugs.python.org/issue?@action=redirect&bpo=45162) [https://bugs.python.org/issue?@action=redirect&bpo=45162]: Remove many old deprecated `unittest` features:
  - “fail\*” and “assert\*” aliases of `TestCase` methods.
  - Broken from start `TestCase` method `assertDictContainsSubset()`.
  - Ignored `<unittest.TestLoader.loadTestsFromModule>`

`TestLoader.loadTestsFromModule()` parameter `use_load_tests`.

- Old alias `_TextTestResult` of `TextTestResult`.

- [bpo-38371](https://bugs.python.org/issue?@action=redirect&bpo=38371) [https://bugs.python.org/issue?@action=redirect&bpo=38371]: Remove the deprecated `split()` method of `_tkinter.TkappType`. Patch by Erlend E. Aasland.
- [bpo-20499](https://bugs.python.org/issue?@action=redirect&bpo=20499) [https://bugs.python.org/issue?@action=redirect&bpo=20499]: Improve the speed and accuracy of `statistics.pvariance()`.
- [bpo-45132](https://bugs.python.org/issue?@action=redirect&bpo=45132) [https://bugs.python.org/issue?@action=redirect&bpo=45132]: Remove `__getitem__()` methods of `xml.dom.pulldom.DOMEventStream`, `wsgiref.util.FileWrapper` and `fileinput.FileInput`, deprecated since Python 3.9.

Patch by Hugo van Kemenade.

- [bpo-45129](https://bugs.python.org/issue?@action=redirect&bpo=45129) [https://bugs.python.org/issue?@action=redirect&bpo=45129]: Due to significant security concerns, the `reuse_address` parameter of `asyncio.loop.create_datagram_endpoint()`, disabled in Python 3.9, is now entirely removed. This is because of the behavior of the socket option `SO_REUSEADDR` in UDP.

Patch by Hugo van Kemenade.

- [bpo-45124](https://bugs.python.org/issue?@action=redirect&bpo=45124) [https://bugs.python.org/issue?@action=redirect&bpo=45124]: The `bdist_msi` command, deprecated in Python 3.9, is now removed.

Use `bdist_wheel` (wheel packages) instead.

Patch by Hugo van Kemenade.

- [bpo-30856](https://bugs.python.org/issue?@action=redirect&bpo=30856) [https://bugs.python.org/issue?@action=redirect&bpo=30856]: `unittest.TestResult` methods `addFailure()`, `addError()`, `addSkip()` and

**addSubTest ()** are now called immediately after raising an exception in test or finishing a subtest. Previously they were called only after finishing the test clean up.

- **bpo-45034** [<https://bugs.python.org/issue?@action=redirect&bpo=45034>]: Changes how error is formatted for `struct.pack` with `'H'` and `'h'` modes and too large / small numbers. Now it shows the actual numeric limits, while previously it was showing arithmetic expressions.
- **bpo-25894** [<https://bugs.python.org/issue?@action=redirect&bpo=25894>]: **unittest** now always reports skipped and failed subtests separately: separate characters in default mode and separate lines in verbose mode. Also the test description is now output for errors in test method, class and module cleanups.
- **bpo-45081** [<https://bugs.python.org/issue?@action=redirect&bpo=45081>]: Fix issue when dataclasses that inherit from `typing.Protocol` subclasses have wrong `__init__`. Patch provided by Yurii Karabas.
- **bpo-45085** [<https://bugs.python.org/issue?@action=redirect&bpo=45085>]: The `binhex` module, deprecated in Python 3.9, is now removed. The following **binascii** functions, deprecated in Python 3.9, are now also removed:
  - `a2b_hqx()`, `b2a_hqx()`;
  - `rlecode_hqx()`, `rledecode_hqx()`.

The **`binascii.crc_hqx()`** function remains available.

Patch by Victor Stinner.

- **bpo-40360** [<https://bugs.python.org/issue?@action=redirect&bpo=40360>]: The **`lib2to3`** package is now deprecated and may not be able to parse Python 3.10 or newer. See the **PEP 617** [<https://peps.python.org/pep-0617/>] (New PEG parser for CPython). Patch by Victor Stinner.
- **bpo-45075** [<https://bugs.python.org/issue?@action=redirect&bpo=45075>]

@action=redirect&bpo=45075]: Rename

`traceback.StackSummary.format_frame()` to  
`traceback.StackSummary.format_frame_summary()`.  
This method was added for 3.11 so it was not released yet.

Updated code and docs to better distinguish frame and  
FrameSummary.

- [bpo-31299](https://bugs.python.org/issue?@action=redirect&bpo=31299) [https://bugs.python.org/issue?  
@action=redirect&bpo=31299]: Add option to completely drop  
frames from a traceback by returning `None` from a  
`format_frame()` override.
- [bpo-41620](https://bugs.python.org/issue?@action=redirect&bpo=41620) [https://bugs.python.org/issue?  
@action=redirect&bpo=41620]: `run()` now always return a  
`TestResult` instance. Previously it returned `None` if the  
test class or method was decorated with a skipping decorator.
- [bpo-45021](https://bugs.python.org/issue?@action=redirect&bpo=45021) [https://bugs.python.org/issue?  
@action=redirect&bpo=45021]: Fix a potential deadlock at  
shutdown of forked children when using  
`concurrent.futures` module
- [bpo-43913](https://bugs.python.org/issue?@action=redirect&bpo=43913) [https://bugs.python.org/issue?  
@action=redirect&bpo=43913]: Fix bugs in cleaning up classes  
and modules in `unittest`:
  - Functions registered with `addModuleCleanup()`  
were not called unless the user defines  
`tearDownModule()` in their test module.
  - Functions registered with `addClassCleanup()` were  
not called if `tearDownClass` is set to `None`.
  - Buffering in `TestResult` did not work with functions  
registered with `addClassCleanup()` and  
`addModuleCleanup()`.
  - Errors in functions registered with  
`addClassCleanup()` and `addModuleCleanup()`  
were not handled correctly in buffered and debug  
modes.
  - Errors in `setUpModule()` and functions registered  
with `addModuleCleanup()` were reported in wrong

order.

○ And several lesser bugs.

- [bpo-45030](https://bugs.python.org/issue?@action=redirect&bpo=45030) [https://bugs.python.org/issue?@action=redirect&bpo=45030]: Fix integer overflow in pickling and copying the range iterator.
- [bpo-45001](https://bugs.python.org/issue?@action=redirect&bpo=45001) [https://bugs.python.org/issue?@action=redirect&bpo=45001]: Made email date parsing more robust against malformed input, namely a whitespace-only `Date:` header. Patch by Wouter Bolsterlee.
- [bpo-45010](https://bugs.python.org/issue?@action=redirect&bpo=45010) [https://bugs.python.org/issue?@action=redirect&bpo=45010]: Remove support of special method `__div__` in `unittest.mock`. It is not used in Python 3.
- [bpo-39218](https://bugs.python.org/issue?@action=redirect&bpo=39218) [https://bugs.python.org/issue?@action=redirect&bpo=39218]: Improve accuracy of variance calculations by using `x*x` instead of `x**2`.
- [bpo-43613](https://bugs.python.org/issue?@action=redirect&bpo=43613) [https://bugs.python.org/issue?@action=redirect&bpo=43613]: Improve the speed of `gzip.compress()` and `gzip.decompress()` by compressing and decompressing at once in memory instead of in a streamed fashion.
- [bpo-37596](https://bugs.python.org/issue?@action=redirect&bpo=37596) [https://bugs.python.org/issue?@action=redirect&bpo=37596]: Ensure that `set` and `frozenset` objects are always `marshalled` reproducibly.
- [bpo-44019](https://bugs.python.org/issue?@action=redirect&bpo=44019) [https://bugs.python.org/issue?@action=redirect&bpo=44019]: A new function `operator.call` has been added, such that `operator.call(obj, *args, **kwargs) == obj(*args, **kwargs)`.
- [bpo-42255](https://bugs.python.org/issue?@action=redirect&bpo=42255) [https://bugs.python.org/issue?@action=redirect&bpo=42255]: `webbrowser.MacOSX` is deprecated and will be removed in Python 3.13. It is untested and undocumented and also not used by `webbrowser` itself. Patch by Dong-hee Na.

- [bpo-44955](https://bugs.python.org/issue?@action=redirect&bpo=44955) [https://bugs.python.org/issue?@action=redirect&bpo=44955]: Method `stopTestRun()` is now always called in pair with method `startTestRun()` for `TestResult` objects implicitly created in `run()`. Previously it was not called for test methods and classes decorated with a skipping decorator.
- [bpo-39039](https://bugs.python.org/issue?@action=redirect&bpo=39039) [https://bugs.python.org/issue?@action=redirect&bpo=39039]: `tarfile.open` raises `ReadError` when a zlib error occurs during file extraction.
- [bpo-44935](https://bugs.python.org/issue?@action=redirect&bpo=44935) [https://bugs.python.org/issue?@action=redirect&bpo=44935]: `subprocess` on Solaris now also uses `os.posix_spawn()` for better performance.
- [bpo-44911](https://bugs.python.org/issue?@action=redirect&bpo=44911) [https://bugs.python.org/issue?@action=redirect&bpo=44911]: `IsolatedAsyncioTestCase` will no longer throw an exception while cancelling leaked tasks. Patch by Bar Harel.
- [bpo-41322](https://bugs.python.org/issue?@action=redirect&bpo=41322) [https://bugs.python.org/issue?@action=redirect&bpo=41322]: Added `DeprecationWarning` for tests and async tests that return a value! = None (as this may indicate an improperly written test, for example a test written as a generator function).
- [bpo-44524](https://bugs.python.org/issue?@action=redirect&bpo=44524) [https://bugs.python.org/issue?@action=redirect&bpo=44524]: Make exception message more useful when subclass from typing special form alias. Patch provided by Yurii Karabas.
- [bpo-38956](https://bugs.python.org/issue?@action=redirect&bpo=38956) [https://bugs.python.org/issue?@action=redirect&bpo=38956]: `argparse.BooleanOptionalAction`'s default value is no longer printed twice when used with `argparse.ArgumentDefaultsHelpFormatter`.
- [bpo-44860](https://bugs.python.org/issue?@action=redirect&bpo=44860) [https://bugs.python.org/issue?@action=redirect&bpo=44860]: Fix the `posix_user` scheme in `sysconfig` to not depend on `sys.platlibdir`.

- [bpo-44859](https://bugs.python.org/issue?@action=redirect&bpo=44859) [https://bugs.python.org/issue?@action=redirect&bpo=44859]: Improve error handling in **sqlite3** and raise more accurate exceptions.
  - **MemoryError** is now raised instead of **sqlite3.Warning** when memory is not enough for encoding a statement to UTF-8 in `Connection.__call__()` and `Cursor.execute()`.
  - **UnicodeEncodeError** is now raised instead of **sqlite3.Warning** when the statement contains surrogate characters in `Connection.__call__()` and `Cursor.execute()`.
  - **TypeError** is now raised instead of **ValueError** for non-string script argument in `Cursor.executescript()`.
  - **ValueError** is now raised for script containing the null character instead of truncating it in `Cursor.executescript()`.
  - Correctly handle exceptions raised when getting boolean value of the result of the progress handler.
  - Add many tests covering different corner cases.
- [bpo-44581](https://bugs.python.org/issue?@action=redirect&bpo=44581) [https://bugs.python.org/issue?@action=redirect&bpo=44581]: Upgrade bundled pip to 21.2.3 and setuptools to 57.4.0
- [bpo-44849](https://bugs.python.org/issue?@action=redirect&bpo=44849) [https://bugs.python.org/issue?@action=redirect&bpo=44849]: Fix the **os.set\_inheritable()** function on FreeBSD 14 for file descriptor opened with the **O\_PATH** flag: ignore the **EBADF** error on `ioctl()`, fallback on the `fcntl()` implementation. Patch by Victor Stinner.
- [bpo-44605](https://bugs.python.org/issue?@action=redirect&bpo=44605) [https://bugs.python.org/issue?@action=redirect&bpo=44605]: The `@functools.total_ordering()` decorator now works with metaclasses.
- [bpo-44524](https://bugs.python.org/issue?@action=redirect&bpo=44524) [https://bugs.python.org/issue?@action=redirect&bpo=44524]: Fixed an issue wherein the `__name__` and `__qualname__` attributes of subscribed

specialforms could be `None`.

- [bpo-44839](https://bugs.python.org/issue?@action=redirect&bpo=44839) [https://bugs.python.org/issue?@action=redirect&bpo=44839]: **MemoryError** raised in user-defined functions will now produce a `MemoryError` in **sqlite3**. **OverflowError** will now be converted to **DataError**. Previously **OperationalError** was produced in these cases.
- [bpo-44822](https://bugs.python.org/issue?@action=redirect&bpo=44822) [https://bugs.python.org/issue?@action=redirect&bpo=44822]: **sqlite3** user-defined functions and aggregators returning **strings** with embedded NUL characters are no longer truncated. Patch by Erlend E. Aasland.
- [bpo-44801](https://bugs.python.org/issue?@action=redirect&bpo=44801) [https://bugs.python.org/issue?@action=redirect&bpo=44801]: Ensure that the **ParamSpec** variable in `Callable` can only be substituted with a parameters expression (a list of types, an ellipsis, `ParamSpec` or `Concatenate`).
- [bpo-44806](https://bugs.python.org/issue?@action=redirect&bpo=44806) [https://bugs.python.org/issue?@action=redirect&bpo=44806]: Non-protocol subclasses of **typing.Protocol** ignore now the `__init__` method inherited from protocol base classes.
- [bpo-27275](https://bugs.python.org/issue?@action=redirect&bpo=27275) [https://bugs.python.org/issue?@action=redirect&bpo=27275]: **collections.OrderedDict.popitem()** and **collections.OrderedDict.pop()** no longer call `__getitem__` and `__delitem__` methods of the `OrderedDict` subclasses.
- [bpo-44793](https://bugs.python.org/issue?@action=redirect&bpo=44793) [https://bugs.python.org/issue?@action=redirect&bpo=44793]: Fix checking the number of arguments when subscribe a generic type with `ParamSpec` parameter.
- [bpo-44784](https://bugs.python.org/issue?@action=redirect&bpo=44784) [https://bugs.python.org/issue?@action=redirect&bpo=44784]: In `importlib.metadata` tests, override warnings behavior under expected

## DeprecationWarnings (importlib\_metadata 4.6.3).

- [bpo-44667](https://bugs.python.org/issue?@action=redirect&bpo=44667) [https://bugs.python.org/issue?@action=redirect&bpo=44667]: The `tokenize.tokenize()` doesn't incorrectly generate a `NEWLINE` token if the source doesn't end with a new line character but the last line is a comment, as the function is already generating a `NL` token. Patch by Pablo Galindo
- [bpo-44771](https://bugs.python.org/issue?@action=redirect&bpo=44771) [https://bugs.python.org/issue?@action=redirect&bpo=44771]: Added `importlib.simple` module implementing adapters from a low-level resources reader interface to a `TraversableResources` interface. Legacy API (`path`, `contents`, ...) is now supported entirely by the `.files()` API with a compatibility shim supplied for resource loaders without that functionality. Feature parity with `importlib_resources` 5.2.
- [bpo-44752](https://bugs.python.org/issue?@action=redirect&bpo=44752) [https://bugs.python.org/issue?@action=redirect&bpo=44752]: `rcompleter` does not call `getattr()` on `property` objects to avoid the side-effect of evaluating the corresponding method.
- [bpo-44747](https://bugs.python.org/issue?@action=redirect&bpo=44747) [https://bugs.python.org/issue?@action=redirect&bpo=44747]: Refactor usage of `sys._getframe` in `typing` module. Patch provided by Yurii Karabas.
- [bpo-42378](https://bugs.python.org/issue?@action=redirect&bpo=42378) [https://bugs.python.org/issue?@action=redirect&bpo=42378]: Fixes the issue with log file being overwritten when `logging.FileHandler` is used in `atexit` with `filemode` set to `'w'`. Note this will cause the message in `atexit` not being logged if the log stream is already closed due to shutdown of logging.
- [bpo-44720](https://bugs.python.org/issue?@action=redirect&bpo=44720) [https://bugs.python.org/issue?@action=redirect&bpo=44720]: `weakref.proxy` objects referencing non-iterators now raise `TypeError` rather than dereferencing the null `tp_iternext` slot and crashing.
- [bpo-44704](https://bugs.python.org/issue?@action=redirect&bpo=44704) [https://bugs.python.org/issue?@action=redirect&bpo=44704]

@action=redirect&bpo=44704]: The implementation of `collections.abc.Set.__hash__()` now matches that of `frozenset.__hash__()`.

- [bpo-44666](https://bugs.python.org/issue?@action=redirect&bpo=44666) [https://bugs.python.org/issue?@action=redirect&bpo=44666]: Fixed issue in [compileall.compile\\_file\(\)](#) when `sys.stdout` is redirected. Patch by Stefan Hölzl.
- [bpo-44688](https://bugs.python.org/issue?@action=redirect&bpo=44688) [https://bugs.python.org/issue?@action=redirect&bpo=44688]: [sqlite3.Connection.create\\_collation\(\)](#) now accepts non-ASCII collation names. Patch by Erlend E. Aasland.
- [bpo-44690](https://bugs.python.org/issue?@action=redirect&bpo=44690) [https://bugs.python.org/issue?@action=redirect&bpo=44690]: Adopt *binascii.a2b\_base64*'s strict mode in *base64.b64decode*.
- [bpo-42854](https://bugs.python.org/issue?@action=redirect&bpo=42854) [https://bugs.python.org/issue?@action=redirect&bpo=42854]: Fixed a bug in the `_ssl` module that was throwing `OverflowError` when using `_ssl._SSLSocket.write()` and `_ssl._SSLSocket.read()` for a big value of the `len` parameter. Patch by Pablo Galindo
- [bpo-44686](https://bugs.python.org/issue?@action=redirect&bpo=44686) [https://bugs.python.org/issue?@action=redirect&bpo=44686]: Replace `unittest.mock._importer` with `pkgutil.resolve_name`.
- [bpo-44353](https://bugs.python.org/issue?@action=redirect&bpo=44353) [https://bugs.python.org/issue?@action=redirect&bpo=44353]: Make `NewType.__call__` faster by implementing it in C. Patch provided by Yurii Karabas.
- [bpo-44682](https://bugs.python.org/issue?@action=redirect&bpo=44682) [https://bugs.python.org/issue?@action=redirect&bpo=44682]: Change the [pdb](#) *commands* directive to disallow setting commands for an invalid breakpoint and to display an appropriate error.

- [bpo-44353](https://bugs.python.org/issue?@action=redirect&bpo=44353) [https://bugs.python.org/issue?@action=redirect&bpo=44353]: Refactor `typing.NewType` from function into callable class. Patch provided by Yurii Karabas.
- [bpo-44678](https://bugs.python.org/issue?@action=redirect&bpo=44678) [https://bugs.python.org/issue?@action=redirect&bpo=44678]: Added a separate error message for discontinuous padding in `binascii.a2b_base64` strict mode.
- [bpo-44524](https://bugs.python.org/issue?@action=redirect&bpo=44524) [https://bugs.python.org/issue?@action=redirect&bpo=44524]: Add missing `__name__` and `__qualname__` attributes to `typing` module classes. Patch provided by Yurii Karabas.
- [bpo-40897](https://bugs.python.org/issue?@action=redirect&bpo=40897) [https://bugs.python.org/issue?@action=redirect&bpo=40897]: Give priority to using the current class constructor in `inspect.signature()`. Patch by Weipeng Hong.
- [bpo-44638](https://bugs.python.org/issue?@action=redirect&bpo=44638) [https://bugs.python.org/issue?@action=redirect&bpo=44638]: Add a reference to the zipp project and hint as to how to use it.
- [bpo-44648](https://bugs.python.org/issue?@action=redirect&bpo=44648) [https://bugs.python.org/issue?@action=redirect&bpo=44648]: Fixed wrong error being thrown by `inspect.getsource()` when examining a class in the interactive session. Instead of `TypeError`, it should be `OSError` with appropriate error message.
- [bpo-44608](https://bugs.python.org/issue?@action=redirect&bpo=44608) [https://bugs.python.org/issue?@action=redirect&bpo=44608]: Fix memory leak in `_tkinter._flatten()` if it is called with a sequence or set, but not list or tuple.
- [bpo-44594](https://bugs.python.org/issue?@action=redirect&bpo=44594) [https://bugs.python.org/issue?@action=redirect&bpo=44594]: Fix an edge case of `ExitStack` and `AsyncExitStack` exception chaining. They will now match with block behavior when `__context__` is explicitly set to `None` when the exception is in flight.
- [bpo-42799](https://bugs.python.org/issue?@action=redirect&bpo=42799) [https://bugs.python.org/issue?@action=redirect&bpo=42799]: In `fnmatch`, the cache size for

compiled regex patterns (`functools.lru_cache()`) was bumped up from 256 to 32768, affecting functions: `fnmatch.fnmatch()`, `fnmatch.fnmatchcase()`, `fnmatch.filter()`.

- [bpo-41928](https://bugs.python.org/issue?@action=redirect&bpo=41928) [https://bugs.python.org/issue?@action=redirect&bpo=41928]: Update `shutil.copyfile()` to raise `FileNotFoundError` instead of confusing `IsADirectoryError` when a path ending with a `os.path.sep` does not exist; `shutil.copy()` and `shutil.copy2()` are also affected.
- [bpo-44569](https://bugs.python.org/issue?@action=redirect&bpo=44569) [https://bugs.python.org/issue?@action=redirect&bpo=44569]: Added the `StackSummary.format_frame()` function in `traceback`. This allows users to customize the way individual lines are formatted in tracebacks without re-implementing logic to handle recursive tracebacks.
- [bpo-44566](https://bugs.python.org/issue?@action=redirect&bpo=44566) [https://bugs.python.org/issue?@action=redirect&bpo=44566]: handle `StopIteration` subclass raised from `@contextlib.contextmanager` generator
- [bpo-44558](https://bugs.python.org/issue?@action=redirect&bpo=44558) [https://bugs.python.org/issue?@action=redirect&bpo=44558]: Make the implementation consistency of `indexOf()` between C and Python versions. Patch by Dong-hee Na.
- [bpo-41249](https://bugs.python.org/issue?@action=redirect&bpo=41249) [https://bugs.python.org/issue?@action=redirect&bpo=41249]: Fixes `TypedDict` to work with `typing.get_type_hints()` and postponed evaluation of annotations across modules.
- [bpo-44554](https://bugs.python.org/issue?@action=redirect&bpo=44554) [https://bugs.python.org/issue?@action=redirect&bpo=44554]: Refactor argument processing in `pdb.main()` to simplify detection of errors in input loading and clarify behavior around module or script invocation.
- [bpo-34798](https://bugs.python.org/issue?@action=redirect&bpo=34798) [https://bugs.python.org/issue?@action=redirect&bpo=34798]: Break up paragraph about `pprint.PrettyPrinter` construction parameters to make

it easier to read.

- [bpo-44539](https://bugs.python.org/issue?@action=redirect&bpo=44539) [https://bugs.python.org/issue?@action=redirect&bpo=44539]: Added support for recognizing JPEG files without JFIF or Exif markers.
- [bpo-44461](https://bugs.python.org/issue?@action=redirect&bpo=44461) [https://bugs.python.org/issue?@action=redirect&bpo=44461]: Fix bug with `pdb`'s handling of import error due to a package which does not have a `__main__` module
- [bpo-43625](https://bugs.python.org/issue?@action=redirect&bpo=43625) [https://bugs.python.org/issue?@action=redirect&bpo=43625]: Fix a bug in the detection of CSV file headers by `csv.Sniffer.has_header()` and improve documentation of same.
- [bpo-44516](https://bugs.python.org/issue?@action=redirect&bpo=44516) [https://bugs.python.org/issue?@action=redirect&bpo=44516]: Update vendored pip to 21.1.3
- [bpo-42892](https://bugs.python.org/issue?@action=redirect&bpo=42892) [https://bugs.python.org/issue?@action=redirect&bpo=42892]: Fixed an exception thrown while parsing a malformed multipart email by `email.message.EmailMessage`.
- [bpo-44468](https://bugs.python.org/issue?@action=redirect&bpo=44468) [https://bugs.python.org/issue?@action=redirect&bpo=44468]: `typing.get_type_hints()` now finds annotations in classes and base classes with unexpected `__module__`. Previously, it skipped those MRO elements.
- [bpo-44491](https://bugs.python.org/issue?@action=redirect&bpo=44491) [https://bugs.python.org/issue?@action=redirect&bpo=44491]: Allow clearing the `sqlite3` authorizer callback by passing `None` to `set_authorizer()`. Patch by Erlend E. Aasland.
- [bpo-43977](https://bugs.python.org/issue?@action=redirect&bpo=43977) [https://bugs.python.org/issue?@action=redirect&bpo=43977]: Set the proper `Py_TPFLAGS_MAPPING` and `Py_TPFLAGS_SEQUENCE` flags for subclasses created before a parent has been registered as a `collections.abc.Mapping` or `collections.abc.Sequence`.

- [bpo-44482](https://bugs.python.org/issue?@action=redirect&bpo=44482) [https://bugs.python.org/issue?@action=redirect&bpo=44482]: Fix very unlikely resource leak in `glob` in alternate Python implementations.
- [bpo-44466](https://bugs.python.org/issue?@action=redirect&bpo=44466) [https://bugs.python.org/issue?@action=redirect&bpo=44466]: The `faulthandler` module now detects if a fatal error occurs during a garbage collector collection. Patch by Victor Stinner.
- [bpo-44471](https://bugs.python.org/issue?@action=redirect&bpo=44471) [https://bugs.python.org/issue?@action=redirect&bpo=44471]: A `TypeError` is now raised instead of an `AttributeError` in `contextlib.ExitStack.enter_context()` and `contextlib.AsyncExitStack.enter_async_context()` for objects which do not support the `context manager` or `asynchronous context manager` protocols correspondingly.
- [bpo-44404](https://bugs.python.org/issue?@action=redirect&bpo=44404) [https://bugs.python.org/issue?@action=redirect&bpo=44404]: `tkinter`'s `after()` method now supports callables without the `__name__` attribute.
- [bpo-41546](https://bugs.python.org/issue?@action=redirect&bpo=41546) [https://bugs.python.org/issue?@action=redirect&bpo=41546]: Make `pprint` (like the builtin `print`) not attempt to write to `stdout` when it is `None`.
- [bpo-44458](https://bugs.python.org/issue?@action=redirect&bpo=44458) [https://bugs.python.org/issue?@action=redirect&bpo=44458]: `BUFFER_BLOCK_SIZE` is now declared static, to avoid linking collisions when `bz2`, `lmza` or `zlib` are statically linked.
- [bpo-44464](https://bugs.python.org/issue?@action=redirect&bpo=44464) [https://bugs.python.org/issue?@action=redirect&bpo=44464]: Remove exception for `flake8` in deprecated `importlib.metadata` interfaces. Sync with `importlib_metadata` 4.6.
- [bpo-44446](https://bugs.python.org/issue?@action=redirect&bpo=44446) [https://bugs.python.org/issue?@action=redirect&bpo=44446]: Take into account that `lineno` might be `None` in `traceback.FrameSummary`.
- [bpo-44439](https://bugs.python.org/issue?@action=redirect&bpo=44439) [https://bugs.python.org/issue?@action=redirect&bpo=44439]: Fix in `bz2.BZ2File.write()` /

**lzma.LZMAFile.write()** methods, when the input data is an object that supports the buffer protocol, the file length may be wrong.

- [bpo-44434](https://bugs.python.org/issue?@action=redirect&bpo=44434) [https://bugs.python.org/issue?@action=redirect&bpo=44434]: **\_thread.start\_new\_thread()** no longer calls **PyThread\_exit\_thread()** explicitly at the thread exit, the call was redundant. On Linux with the glibc, **pthread\_exit()** aborts the whole process if **dlopen()** fails to open **libgcc\_s.so** file (ex: **EMFILE** error). Patch by Victor Stinner.
- [bpo-42972](https://bugs.python.org/issue?@action=redirect&bpo=42972) [https://bugs.python.org/issue?@action=redirect&bpo=42972]: The **\_thread.RLock** type now fully implement the GC protocol: add a traverse function and the **Py\_TPFLAGS\_HAVE\_GC** flag. Patch by Victor Stinner.
- [bpo-44422](https://bugs.python.org/issue?@action=redirect&bpo=44422) [https://bugs.python.org/issue?@action=redirect&bpo=44422]: The **threading.enumerate()** function now uses a reentrant lock to prevent a hang on reentrant call. Patch by Victor Stinner.
- [bpo-38291](https://bugs.python.org/issue?@action=redirect&bpo=38291) [https://bugs.python.org/issue?@action=redirect&bpo=38291]: Importing **typing.io** or **typing.re** now prints a **DeprecationWarning**.
- [bpo-37880](https://bugs.python.org/issue?@action=redirect&bpo=37880) [https://bugs.python.org/issue?@action=redirect&bpo=37880]: **argparse** actions **store\_const** and **append\_const** each receive a default value of **None** when the **const** kwarg is not provided. Previously, this raised a **TypeError**.
- [bpo-44389](https://bugs.python.org/issue?@action=redirect&bpo=44389) [https://bugs.python.org/issue?@action=redirect&bpo=44389]: Fix deprecation of **ssl.OP\_NO\_TLSv1\_3**
- [bpo-27827](https://bugs.python.org/issue?@action=redirect&bpo=27827) [https://bugs.python.org/issue?@action=redirect&bpo=27827]: **pathlib.PureWindowsPath.is\_reserved()** now identifies a greater range of reserved filenames, including those with trailing spaces or colons.

- [bpo-44395](https://bugs.python.org/issue?@action=redirect&bpo=44395) [https://bugs.python.org/issue?@action=redirect&bpo=44395]: Fix `as_string()` to pass `unixfrom` properly. Patch by Dong-hee Na.
- [bpo-34266](https://bugs.python.org/issue?@action=redirect&bpo=34266) [https://bugs.python.org/issue?@action=redirect&bpo=34266]: Handle exceptions from parsing the arg of `pdb`'s `run/restart` command.
- [bpo-44362](https://bugs.python.org/issue?@action=redirect&bpo=44362) [https://bugs.python.org/issue?@action=redirect&bpo=44362]: Improve `ssl` module's deprecation messages, error reporting, and documentation for deprecations.
- [bpo-44342](https://bugs.python.org/issue?@action=redirect&bpo=44342) [https://bugs.python.org/issue?@action=redirect&bpo=44342]: [Enum] Change pickling from by-value to by-name.
- [bpo-44356](https://bugs.python.org/issue?@action=redirect&bpo=44356) [https://bugs.python.org/issue?@action=redirect&bpo=44356]: [Enum] Allow multiple data-type mixins if they are all the same.
- [bpo-44351](https://bugs.python.org/issue?@action=redirect&bpo=44351) [https://bugs.python.org/issue?@action=redirect&bpo=44351]: Restore back `parse_makefile()` in `distutils.sysconfig` because it behaves differently than the similar implementation in `sysconfig`.
- [bpo-35800](https://bugs.python.org/issue?@action=redirect&bpo=35800) [https://bugs.python.org/issue?@action=redirect&bpo=35800]: `smtplib.MailmanProxy` is now removed as it is unusable without an external module, `mailman`. Patch by Dong-hee Na.
- [bpo-44357](https://bugs.python.org/issue?@action=redirect&bpo=44357) [https://bugs.python.org/issue?@action=redirect&bpo=44357]: Added a function that returns cube root of the given number `math.cbrt()`
- [bpo-44339](https://bugs.python.org/issue?@action=redirect&bpo=44339) [https://bugs.python.org/issue?@action=redirect&bpo=44339]: Change `math.pow( $\pm 0.0$ , -math.inf)` to return `inf` instead of raising `ValueError`. This brings the special-case handling of `math.pow` into compliance with the IEEE 754 standard.

- [bpo-44242](https://bugs.python.org/issue?@action=redirect&bpo=44242) [https://bugs.python.org/issue?@action=redirect&bpo=44242]: Remove missing flag check from Enum creation and move into a `verify` decorator.
- [bpo-44246](https://bugs.python.org/issue?@action=redirect&bpo=44246) [https://bugs.python.org/issue?@action=redirect&bpo=44246]: In `importlib.metadata`, restore compatibility in the result from `Distribution.entry_points (EntryPoints)` to honor expectations in older implementations and issuing deprecation warnings for these cases: A. `EntryPoints` objects are once again mutable, allowing for `sort()` and other list-based mutation operations. Avoid deprecation warnings by casting to a mutable sequence (e.g. `list(dist.entry_points).sort()`). B. `EntryPoints` results once again allow for access by index. To avoid deprecation warnings, cast the result to a Sequence first (e.g. `tuple(dist.entry_points)[0]`).
- [bpo-44246](https://bugs.python.org/issue?@action=redirect&bpo=44246) [https://bugs.python.org/issue?@action=redirect&bpo=44246]: In `importlib.metadata.entry_points`, de-duplication of distributions no longer requires loading the full metadata for `PathDistribution` objects, improving entry point loading performance by  $\sim 10\times$ .
- [bpo-43858](https://bugs.python.org/issue?@action=redirect&bpo=43858) [https://bugs.python.org/issue?@action=redirect&bpo=43858]: Added a function that returns a copy of a dict of logging levels:  
`logging.getLevelNamesMapping()`
- [bpo-44260](https://bugs.python.org/issue?@action=redirect&bpo=44260) [https://bugs.python.org/issue?@action=redirect&bpo=44260]: The `random.Random` constructor no longer reads system entropy without need.
- [bpo-44254](https://bugs.python.org/issue?@action=redirect&bpo=44254) [https://bugs.python.org/issue?@action=redirect&bpo=44254]: On Mac, give `turtledemo` button text a color that works on both light or dark background. Programmers cannot control the latter.
- [bpo-44258](https://bugs.python.org/issue?@action=redirect&bpo=44258) [https://bugs.python.org/issue?@action=redirect&bpo=44258]: Support PEP 515 for `Fraction`'s

initialization from string.

- [bpo-44235](https://bugs.python.org/issue?@action=redirect&bpo=44235) [https://bugs.python.org/issue?@action=redirect&bpo=44235]: Remove deprecated functions in the `gettext`. Patch by Dong-hee Na.
- [bpo-38693](https://bugs.python.org/issue?@action=redirect&bpo=38693) [https://bugs.python.org/issue?@action=redirect&bpo=38693]: Prefer f-strings to `.format` in `importlib.resources`.
- [bpo-33693](https://bugs.python.org/issue?@action=redirect&bpo=33693) [https://bugs.python.org/issue?@action=redirect&bpo=33693]: `Importlib.metadata` now prefers f-strings to `.format`.
- [bpo-44241](https://bugs.python.org/issue?@action=redirect&bpo=44241) [https://bugs.python.org/issue?@action=redirect&bpo=44241]: Incorporate minor tweaks from `importlib_metadata` 4.1: `SimplePath` protocol, support for `Metadata` 2.2.
- [bpo-43216](https://bugs.python.org/issue?@action=redirect&bpo=43216) [https://bugs.python.org/issue?@action=redirect&bpo=43216]: Remove the `@asyncio.coroutine decorator` enabling legacy generator-based coroutines to be compatible with `async/await` code; remove `asyncio.coroutines.CoroWrapper` used for wrapping legacy coroutine objects in the debug mode. The decorator has been deprecated since Python 3.8 and the removal was initially scheduled for Python 3.10. Patch by Illia Volochii.
- [bpo-44210](https://bugs.python.org/issue?@action=redirect&bpo=44210) [https://bugs.python.org/issue?@action=redirect&bpo=44210]: Make `importlib.metadata._meta.PackageMetadata` public.
- [bpo-43643](https://bugs.python.org/issue?@action=redirect&bpo=43643) [https://bugs.python.org/issue?@action=redirect&bpo=43643]: Declare `readers.MultiplexedPath.name` as a property per the spec.
- [bpo-27334](https://bugs.python.org/issue?@action=redirect&bpo=27334) [https://bugs.python.org/issue?@action=redirect&bpo=27334]: The `sqlite3` context manager now performs a rollback (thus releasing the database lock) if commit failed. Patch by Luca Citi and Erlend E. Aasland.

- [bpo-4928](https://bugs.python.org/issue?@action=redirect&bpo=4928) [https://bugs.python.org/issue?@action=redirect&bpo=4928]: Documented existing behavior on POSIX: NamedTemporaryFiles are not deleted when creating process is killed with SIGKILL
- [bpo-44154](https://bugs.python.org/issue?@action=redirect&bpo=44154) [https://bugs.python.org/issue?@action=redirect&bpo=44154]: Optimize `fractions.Fraction` pickling for large components.
- [bpo-33433](https://bugs.python.org/issue?@action=redirect&bpo=33433) [https://bugs.python.org/issue?@action=redirect&bpo=33433]: For IPv4 mapped IPv6 addresses ([RFC 4291](https://datatracker.ietf.org/doc/html/rfc4291.html) [https://datatracker.ietf.org/doc/html/rfc4291.html] Section 2.5.5.2), the `ipaddress.IPv6Address.is_private` check is deferred to the mapped IPv4 address. This solves a bug where public mapped IPv4 addresses were considered private by the IPv6 check.
- [bpo-44150](https://bugs.python.org/issue?@action=redirect&bpo=44150) [https://bugs.python.org/issue?@action=redirect&bpo=44150]: Add optional *weights* argument to `statistics.fmean()`.
- [bpo-44142](https://bugs.python.org/issue?@action=redirect&bpo=44142) [https://bugs.python.org/issue?@action=redirect&bpo=44142]: `ast.unparse()` will now drop the redundant parentheses when tuples used as assignment targets (e.g in for loops).
- [bpo-44145](https://bugs.python.org/issue?@action=redirect&bpo=44145) [https://bugs.python.org/issue?@action=redirect&bpo=44145]: `hmac` computations were not releasing the GIL while calling the OpenSSL `HMAC_Update` C API (a new feature in 3.9). This unintentionally prevented parallel computation as other `hashlib` algorithms support.
- [bpo-44095](https://bugs.python.org/issue?@action=redirect&bpo=44095) [https://bugs.python.org/issue?@action=redirect&bpo=44095]: `zipfile.Path` now supports `zipfile.Path.stem`, `zipfile.Path.suffixes`, and `zipfile.Path.suffix` attributes.
- [bpo-44077](https://bugs.python.org/issue?@action=redirect&bpo=44077) [https://bugs.python.org/issue?@action=redirect&bpo=44077]: It's now possible to receive the type of service (ToS), a.k.a. differentiated services (DS), a.k.a.

differentiated services code point (DSCP) and explicit congestion notification (ECN) IP header fields with `socket.IP_RECVTOS`.

- [bpo-37788](https://bugs.python.org/issue?@action=redirect&bpo=37788) [https://bugs.python.org/issue?@action=redirect&bpo=37788]: Fix a reference leak when a Thread object is never joined.
- [bpo-38908](https://bugs.python.org/issue?@action=redirect&bpo=38908) [https://bugs.python.org/issue?@action=redirect&bpo=38908]: Subclasses of `typing.Protocol` which only have data variables declared will now raise a `TypeError` when checked with `isinstance` unless they are decorated with `runtime_checkable()`. Previously, these checks passed silently. Patch provided by Yurii Karabas.
- [bpo-44098](https://bugs.python.org/issue?@action=redirect&bpo=44098) [https://bugs.python.org/issue?@action=redirect&bpo=44098]: `typing.ParamSpec` will no longer be found in the `__parameters__` of most `typing` generics except in valid use locations specified by [PEP 612](https://peps.python.org/pep-0612/) [https://peps.python.org/pep-0612/]. This prevents incorrect usage like `typing.List[P][int]`. This change means incorrect usage which may have passed silently in 3.10 beta 1 and earlier will now error.
- [bpo-44089](https://bugs.python.org/issue?@action=redirect&bpo=44089) [https://bugs.python.org/issue?@action=redirect&bpo=44089]: Allow subclassing `csv.Error` in 3.10 (it was allowed in 3.9 and earlier but was disallowed in early versions of 3.10).
- [bpo-44081](https://bugs.python.org/issue?@action=redirect&bpo=44081) [https://bugs.python.org/issue?@action=redirect&bpo=44081]: `ast.unparse()` now doesn't use redundant spaces to separate `lambda` and the `:` if there are no parameters.
- [bpo-44061](https://bugs.python.org/issue?@action=redirect&bpo=44061) [https://bugs.python.org/issue?@action=redirect&bpo=44061]: Fix regression in previous release when calling `pkgutil.iter_modules()` with a list of `pathlib.Path` objects
- [bpo-44059](https://bugs.python.org/issue?@action=redirect&bpo=44059) [https://bugs.python.org/issue?@action=redirect&bpo=44059]

@action=redirect&bpo=44059]: Register the SerenityOS Browser in the **webbrowser** module.

- **bpo-36515** [<https://bugs.python.org/issue?@action=redirect&bpo=36515>]: The **hashlib** module no longer does unaligned memory accesses when compiled for ARM platforms.
- **bpo-40465** [<https://bugs.python.org/issue?@action=redirect&bpo=40465>]: Remove random module features deprecated in Python 3.9.
- **bpo-44018** [<https://bugs.python.org/issue?@action=redirect&bpo=44018>]: **random.seed()** no longer mutates bytearray inputs.
- **bpo-38352** [<https://bugs.python.org/issue?@action=redirect&bpo=38352>]: Add **IO**, **BinaryIO**, **TextIO**, **Match**, and **Pattern** to **typing.\_\_all\_\_**. Patch by Jelle Zijlstra.
- **bpo-44002** [<https://bugs.python.org/issue?@action=redirect&bpo=44002>]: **urllib.parse** now uses **functool.lru\_cache()** for its internal URL splitting and quoting caches instead of rolling its own like its the '90s.

The undocumented internal **urllib.parse** Quoted class API is now deprecated, for removal in 3.14.

- **bpo-43972** [<https://bugs.python.org/issue?@action=redirect&bpo=43972>]: When **http.server.SimpleHTTPRequestHandler** sends a 301 (Moved Permanently) for a directory path not ending with **/**, add a **Content-Length: 0** header. This improves the behavior for certain clients.
- **bpo-28528** [<https://bugs.python.org/issue?@action=redirect&bpo=28528>]: Fix a bug in **pdb** where **checkline()** raises **AttributeError** if it is called after **reset()**.

- [bpo-43853](https://bugs.python.org/issue?@action=redirect&bpo=43853) [https://bugs.python.org/issue?@action=redirect&bpo=43853]: Improved string handling for **sqlite3** user-defined functions and aggregates:
  - It is now possible to pass strings with embedded null characters to UDFs
  - Conversion failures now correctly raise **MemoryError**

Patch by Erlend E. Aasland.

- [bpo-43666](https://bugs.python.org/issue?@action=redirect&bpo=43666) [https://bugs.python.org/issue?@action=redirect&bpo=43666]: AIX: **Lib/\_aix\_support.get\_platform()** may fail in an AIX WPAR. The fileset bos.rte appears to have a builddate in both LPAR and WPAR so this fileset is queried rather than bos.mp64. To prevent a similar situation (no builddate in ODM) a value (9988) sufficient for completing a build is provided. Patch by M Felt.
- [bpo-43650](https://bugs.python.org/issue?@action=redirect&bpo=43650) [https://bugs.python.org/issue?@action=redirect&bpo=43650]: Fix **MemoryError** in **shutil.unpack\_archive()** which fails inside **shutil.\_unpack\_zipfile()** on large files. Patch by Igor Bolshakov.
- [bpo-43612](https://bugs.python.org/issue?@action=redirect&bpo=43612) [https://bugs.python.org/issue?@action=redirect&bpo=43612]: **zlib.compress()** now accepts a **wbits** parameter which allows users to compress data as a raw deflate block without zlib headers and trailers in one go. Previously this required instantiating a **zlib.compressobj**. It also provides a faster alternative to **gzip.compress** when **wbits=31** is used.
- [bpo-43392](https://bugs.python.org/issue?@action=redirect&bpo=43392) [https://bugs.python.org/issue?@action=redirect&bpo=43392]: **importlib.\_bootstrap.\_find\_and\_load()** now implements a two-step check to avoid locking when modules have been already imported and are ready. This improves performance of repeated calls to **importlib.import\_module()** and **importlib.\_\_import\_\_()**.

- [bpo-43318](https://bugs.python.org/issue?@action=redirect&bpo=43318) [https://bugs.python.org/issue?@action=redirect&bpo=43318]: Fix a bug where `pdb` does not always echo cleared breakpoints.
- [bpo-43234](https://bugs.python.org/issue?@action=redirect&bpo=43234) [https://bugs.python.org/issue?@action=redirect&bpo=43234]: Prohibit passing non-`concurrent.futures.ThreadPoolExecutor` executors to `loop.set_default_executor()` following a deprecation in Python 3.8. Patch by Illia Volochii.
- [bpo-43232](https://bugs.python.org/issue?@action=redirect&bpo=43232) [https://bugs.python.org/issue?@action=redirect&bpo=43232]: Prohibit previously deprecated potentially disruptive operations on `asyncio.trsock.TransportSocket`. Patch by Illia Volochii.
- [bpo-30077](https://bugs.python.org/issue?@action=redirect&bpo=30077) [https://bugs.python.org/issue?@action=redirect&bpo=30077]: Added support for Apple's aifc/sowt pseudo-compression
- [bpo-42971](https://bugs.python.org/issue?@action=redirect&bpo=42971) [https://bugs.python.org/issue?@action=redirect&bpo=42971]: Add definition of `errno.EQFULL` for platforms that define this constant (such as macOS).
- [bpo-43086](https://bugs.python.org/issue?@action=redirect&bpo=43086) [https://bugs.python.org/issue?@action=redirect&bpo=43086]: Added a new optional `strict_mode` parameter to `binascii.a2b_base64`. When `strict_mode` is set to `True`, the `a2b_base64` function will accept only valid base64 content. More details about what "valid base64 content" is, can be found in the function's documentation.
- [bpo-43024](https://bugs.python.org/issue?@action=redirect&bpo=43024) [https://bugs.python.org/issue?@action=redirect&bpo=43024]: Improve the help signature of `traceback.print_exception()`, `traceback.format_exception()` and `traceback.format_exception_only()`.
- [bpo-33809](https://bugs.python.org/issue?@action=redirect&bpo=33809) [https://bugs.python.org/issue?@action=redirect&bpo=33809]: Add the

`traceback.TracebackException.print()` method which prints the formatted exception information.

- [bpo-42862](https://bugs.python.org/issue?@action=redirect&bpo=42862) [https://bugs.python.org/issue?@action=redirect&bpo=42862]: `sqlite3` now utilizes `functools.lru_cache()` to implement the connection statement cache. As a small optimisation, the default statement cache size has been increased from 100 to 128. Patch by Erlend E. Aasland.
- [bpo-41818](https://bugs.python.org/issue?@action=redirect&bpo=41818) [https://bugs.python.org/issue?@action=redirect&bpo=41818]: Soumendra Ganguly: add `termios.tcgetwinsize()`, `termios.tcsetwinsize()`.
- [bpo-40497](https://bugs.python.org/issue?@action=redirect&bpo=40497) [https://bugs.python.org/issue?@action=redirect&bpo=40497]: `subprocess.check_output()` now raises `ValueError` when the invalid keyword argument `check` is passed by user code. Previously such use would fail later with a `TypeError`. Patch by Rémi Lapeyre.
- [bpo-37449](https://bugs.python.org/issue?@action=redirect&bpo=37449) [https://bugs.python.org/issue?@action=redirect&bpo=37449]: `ensurepip` now uses `importlib.resources.files()` traversable APIs
- [bpo-40956](https://bugs.python.org/issue?@action=redirect&bpo=40956) [https://bugs.python.org/issue?@action=redirect&bpo=40956]: Use Argument Clinic in `sqlite3`. Patches by Erlend E. Aasland.
- [bpo-41730](https://bugs.python.org/issue?@action=redirect&bpo=41730) [https://bugs.python.org/issue?@action=redirect&bpo=41730]: `DeprecationWarning` is now raised when importing `tkinter.tix`, which has been deprecated in documentation since Python 3.6.
- [bpo-20684](https://bugs.python.org/issue?@action=redirect&bpo=20684) [https://bugs.python.org/issue?@action=redirect&bpo=20684]: Remove unused `_signature_get_bound_param` function from `inspect` - by Anthony Sottile.
- [bpo-41402](https://bugs.python.org/issue?@action=redirect&bpo=41402) [https://bugs.python.org/issue?@action=redirect&bpo=41402]: Fix `email.message.EmailMessage.set_content()` when

called with binary data and 7bit content transfer encoding.

- [bpo-32695](https://bugs.python.org/issue?@action=redirect&bpo=32695) [https://bugs.python.org/issue?@action=redirect&bpo=32695]: The *compresslevel* and *preset* keyword arguments of `tarfile.open()` are now both documented and tested.
- [bpo-41137](https://bugs.python.org/issue?@action=redirect&bpo=41137) [https://bugs.python.org/issue?@action=redirect&bpo=41137]: Use utf-8 encoding while reading .pdbrc files. Patch by Srinivas Reddy Thatiparthi
- [bpo-24391](https://bugs.python.org/issue?@action=redirect&bpo=24391) [https://bugs.python.org/issue?@action=redirect&bpo=24391]: Improved reprs of `threading` synchronization objects: `Semaphore`, `BoundedSemaphore`, `Event` and `Barrier`.
- [bpo-5846](https://bugs.python.org/issue?@action=redirect&bpo=5846) [https://bugs.python.org/issue?@action=redirect&bpo=5846]: Deprecated the following `unittest` functions, scheduled for removal in Python 3.13:
  - `findTestCases()`
  - `makeSuite()`
  - `getTestCaseNames()`

Use `TestLoader` methods instead:

- `unittest.TestLoader.loadTestsFromModule()`
- `unittest.TestLoader.loadTestsFromTestCase()`
- `unittest.TestLoader.getTestCaseNames()`

Patch by Erlend E. Aasland.

- [bpo-40563](https://bugs.python.org/issue?@action=redirect&bpo=40563) [https://bugs.python.org/issue?@action=redirect&bpo=40563]: Support pathlike objects on dbm/shelve. Patch by Hakan Çelik and Henry-Joseph Audéoud.
- [bpo-34990](https://bugs.python.org/issue?@action=redirect&bpo=34990) [https://bugs.python.org/issue?@action=redirect&bpo=34990]: Fixed a Y2k38 bug in the `compileall` module where it would fail to compile files with a modification time after the year 2038.
- [bpo-39549](https://bugs.python.org/issue?@action=redirect&bpo=39549) [https://bugs.python.org/issue?@action=redirect&bpo=39549]

@action=redirect&bpo=39549]: Whereas the code for `reprlib.Repr` had previously used a hardcoded string value of `'...'`, this PR updates it to use of a “fillvalue” attribute, whose value defaults to `'...'` and can be reset in either individual `reprlib.Repr` instances or in subclasses thereof.

- [bpo-37022](https://bugs.python.org/issue?@action=redirect&bpo=37022) [https://bugs.python.org/issue?@action=redirect&bpo=37022]: `pdb` now displays exceptions from `repr()` with its `p` and `pp` commands.
- [bpo-38840](https://bugs.python.org/issue?@action=redirect&bpo=38840) [https://bugs.python.org/issue?@action=redirect&bpo=38840]: Fix `test___all__` on platforms lacking a shared memory implementation.
- [bpo-39359](https://bugs.python.org/issue?@action=redirect&bpo=39359) [https://bugs.python.org/issue?@action=redirect&bpo=39359]: Add one missing check that the password is a bytes object for an encrypted zipfile.
- [bpo-38741](https://bugs.python.org/issue?@action=redirect&bpo=38741) [https://bugs.python.org/issue?@action=redirect&bpo=38741]: `configparser`: using `']'` inside a section header will no longer cut the section name short at the `']'`
- [bpo-38415](https://bugs.python.org/issue?@action=redirect&bpo=38415) [https://bugs.python.org/issue?@action=redirect&bpo=38415]: Added missing behavior to `contextlib.asynccontextmanager()` to match `contextlib.contextmanager()` so decorated functions can themselves be decorators.
- [bpo-30256](https://bugs.python.org/issue?@action=redirect&bpo=30256) [https://bugs.python.org/issue?@action=redirect&bpo=30256]: Pass multiprocessing `BaseProxy` argument `manager_owned` through `AutoProxy`.
- [bpo-27513](https://bugs.python.org/issue?@action=redirect&bpo=27513) [https://bugs.python.org/issue?@action=redirect&bpo=27513]: `email.utils.getaddresses()` now accepts `email.header.Header` objects along with string values. Patch by Zackery Spytz.
- [bpo-16379](https://bugs.python.org/issue?@action=redirect&bpo=16379) [https://bugs.python.org/issue?@action=redirect&bpo=16379]: Add SQLite error code and name

to `sqlite3` exceptions. Patch by Aviv Palivoda, Daniel Shahaf, and Erlend E. Aasland.

- [bpo-26228](https://bugs.python.org/issue?@action=redirect&bpo=26228) [https://bugs.python.org/issue?@action=redirect&bpo=26228]: `pty.spawn` no longer hangs on FreeBSD, macOS, and Solaris.
- [bpo-33349](https://bugs.python.org/issue?@action=redirect&bpo=33349) [https://bugs.python.org/issue?@action=redirect&bpo=33349]: `lib2to3` now recognizes `async` generators everywhere.
- [bpo-29298](https://bugs.python.org/issue?@action=redirect&bpo=29298) [https://bugs.python.org/issue?@action=redirect&bpo=29298]: Fix `TypeError` when required subparsers without `dest` do not receive arguments. Patch by Anthony Sottile.

## Documentation

- [bpo-45216](https://bugs.python.org/issue?@action=redirect&bpo=45216) [https://bugs.python.org/issue?@action=redirect&bpo=45216]: Remove extra documentation listing methods in `difflib`. It was rendering twice in `pydoc` and was outdated in some places.
- [bpo-45024](https://bugs.python.org/issue?@action=redirect&bpo=45024) [https://bugs.python.org/issue?@action=redirect&bpo=45024]: `collections.abc` documentation has been expanded to explicitly cover how instance and subclass checks work, with additional doctest examples and an exhaustive list of ABCs which test membership purely by presence of the right `special methods`. Patch by Raymond Hettinger.
- [bpo-44957](https://bugs.python.org/issue?@action=redirect&bpo=44957) [https://bugs.python.org/issue?@action=redirect&bpo=44957]: Promote PEP 604 union syntax by using it where possible. Also, mention `X | Y` more prominently in section about `Union` and mention `X | None` at all in section about `Optional`.
- [bpo-16580](https://bugs.python.org/issue?@action=redirect&bpo=16580) [https://bugs.python.org/issue?@action=redirect&bpo=16580]: Added code equivalents for the `int.to_bytes()` and `int.from_bytes()` methods, as well as tests ensuring that these code equivalents are valid.
- [bpo-44903](https://bugs.python.org/issue?@action=redirect&bpo=44903) [https://bugs.python.org/issue?@action=redirect&bpo=44903]: Removed the `othergui.rst` file, any

references to it, and the list of GUI frameworks in the FAQ. In their place I've added links to the Python Wiki **page on GUI frameworks**.

- [bpo-33479](https://bugs.python.org/issue?@action=redirect&bpo=33479) [https://bugs.python.org/issue?@action=redirect&bpo=33479]: Tkinter documentation has been greatly expanded with new “Architecture” and “Threading model” sections.
- [bpo-36700](https://bugs.python.org/issue?@action=redirect&bpo=36700) [https://bugs.python.org/issue?@action=redirect&bpo=36700]: [base64](#) RFC references were updated to point to [RFC 4648](https://datatracker.ietf.org/doc/html/rfc4648.html) [https://datatracker.ietf.org/doc/html/rfc4648.html]; a section was added to point users to the new “security considerations” section of the RFC.
- [bpo-44740](https://bugs.python.org/issue?@action=redirect&bpo=44740) [https://bugs.python.org/issue?@action=redirect&bpo=44740]: Replaced occurrences of uppercase “Web” and “Internet” with lowercase versions per the 2016 revised Associated Press Style Book.
- [bpo-44693](https://bugs.python.org/issue?@action=redirect&bpo=44693) [https://bugs.python.org/issue?@action=redirect&bpo=44693]: Update the definition of `__future__` in the glossary by replacing the confusing word “pseudo-module” with a more accurate description.
- [bpo-35183](https://bugs.python.org/issue?@action=redirect&bpo=35183) [https://bugs.python.org/issue?@action=redirect&bpo=35183]: Add typical examples to `os.path.splitext` docs
- [bpo-30511](https://bugs.python.org/issue?@action=redirect&bpo=30511) [https://bugs.python.org/issue?@action=redirect&bpo=30511]: Clarify that `shutil.make_archive()` is not thread-safe due to reliance on changing the current working directory.
- [bpo-44561](https://bugs.python.org/issue?@action=redirect&bpo=44561) [https://bugs.python.org/issue?@action=redirect&bpo=44561]: Update of three expired hyperlinks in `Doc/distributing/index.rst`: “Project structure”, “Building and packaging the project”, and “Uploading the project to the Python Packaging Index”.
- [bpo-44651](https://bugs.python.org/issue?@action=redirect&bpo=44651) [https://bugs.python.org/issue?@action=redirect&bpo=44651]: Delete entry “coercion” in `Doc/glossary.rst` for its outdated definition.
- [bpo-42958](https://bugs.python.org/issue?@action=redirect&bpo=42958) [https://bugs.python.org/issue?@action=redirect&bpo=42958]: Updated the docstring and docs of `filecmp.cmp()` to be more accurate and less confusing especially in respect to *shallow* arg.
- [bpo-44631](https://bugs.python.org/issue?@action=redirect&bpo=44631) [https://bugs.python.org/issue?@action=redirect&bpo=44631]

@action=redirect&bpo=44631]: Refactored the `repr()` code of the `_Environ` (os module).

- [bpo-44613](https://bugs.python.org/issue?@action=redirect&bpo=44613) [https://bugs.python.org/issue?@action=redirect&bpo=44613]: `importlib.metadata` is no longer provisional.
- [bpo-44558](https://bugs.python.org/issue?@action=redirect&bpo=44558) [https://bugs.python.org/issue?@action=redirect&bpo=44558]: Match the docstring and python implementation of `countOf()` to the behavior of its c implementation.
- [bpo-44544](https://bugs.python.org/issue?@action=redirect&bpo=44544) [https://bugs.python.org/issue?@action=redirect&bpo=44544]: List all kwargs for `textwrap.wrap()`, `textwrap.fill()`, and `textwrap.shorten()`. Now, there are nav links to attributes of `TextWrap`, which makes navigation much easier while minimizing duplication in the documentation.
- [bpo-38062](https://bugs.python.org/issue?@action=redirect&bpo=38062) [https://bugs.python.org/issue?@action=redirect&bpo=38062]: Clarify that `atexit` uses equality comparisons internally.
- [bpo-40620](https://bugs.python.org/issue?@action=redirect&bpo=40620) [https://bugs.python.org/issue?@action=redirect&bpo=40620]: Convert examples in tutorial `controlflow.rst` section 4.3 to be interpreter-demo style.
- [bpo-43066](https://bugs.python.org/issue?@action=redirect&bpo=43066) [https://bugs.python.org/issue?@action=redirect&bpo=43066]: Added a warning to `zipfile` docs: `filename` arg with a leading slash may cause archive to be un-openable on Windows systems.
- [bpo-39452](https://bugs.python.org/issue?@action=redirect&bpo=39452) [https://bugs.python.org/issue?@action=redirect&bpo=39452]: Rewrote `Doc/library/__main__.rst`. Broadened scope of the document to explicitly discuss and differentiate between `__main__.py` in packages versus the `__name__ == '__main__'` expression (and the idioms that surround it).
- [bpo-13814](https://bugs.python.org/issue?@action=redirect&bpo=13814) [https://bugs.python.org/issue?@action=redirect&bpo=13814]: In the Design FAQ, answer “Why don’t generators support the `with` statement?”
- [bpo-27752](https://bugs.python.org/issue?@action=redirect&bpo=27752) [https://bugs.python.org/issue?@action=redirect&bpo=27752]: Documentation of `csv.Dialect` is more descriptive.
- [bpo-44453](https://bugs.python.org/issue?@action=redirect&bpo=44453) [https://bugs.python.org/issue?@action=redirect&bpo=44453]: Fix documentation for the return type of `sysconfig.get_path()`.

- [bpo-44392](https://bugs.python.org/issue?@action=redirect&bpo=44392) [https://bugs.python.org/issue?@action=redirect&bpo=44392]: Added a new section in the C API documentation for types used in type hinting. Documented `Py_GenericAlias` and `Py_GenericAliasType`.
- [bpo-38291](https://bugs.python.org/issue?@action=redirect&bpo=38291) [https://bugs.python.org/issue?@action=redirect&bpo=38291]: Mark `typing.io` and `typing.re` as deprecated since Python 3.8 in the documentation. They were never properly supported by type checkers.
- [bpo-44322](https://bugs.python.org/issue?@action=redirect&bpo=44322) [https://bugs.python.org/issue?@action=redirect&bpo=44322]: Document that `SyntaxError` args have a details tuple and that details are adjusted for errors in f-string field replacement expressions.
- [bpo-42392](https://bugs.python.org/issue?@action=redirect&bpo=42392) [https://bugs.python.org/issue?@action=redirect&bpo=42392]: Document the deprecation and removal of the `loop` parameter for many functions and classes in [asyncio](#).
- [bpo-44195](https://bugs.python.org/issue?@action=redirect&bpo=44195) [https://bugs.python.org/issue?@action=redirect&bpo=44195]: Corrected references to `TraversableResources` in docs. There is no `TraversableReader`.
- [bpo-41963](https://bugs.python.org/issue?@action=redirect&bpo=41963) [https://bugs.python.org/issue?@action=redirect&bpo=41963]: Document that `ConfigParser` strips off comments when reading configuration files.
- [bpo-44072](https://bugs.python.org/issue?@action=redirect&bpo=44072) [https://bugs.python.org/issue?@action=redirect&bpo=44072]: Correct where in the numeric ABC hierarchy `**` support is added, i.e., in `numbers.Complex`, not `numbers.Integral`.
- [bpo-43558](https://bugs.python.org/issue?@action=redirect&bpo=43558) [https://bugs.python.org/issue?@action=redirect&bpo=43558]: Add the remark to [dataclasses](#) documentation that the `__init__()` of any base class has to be called in `__post_init__()`, along with a code example.
- [bpo-44025](https://bugs.python.org/issue?@action=redirect&bpo=44025) [https://bugs.python.org/issue?@action=redirect&bpo=44025]: Clarify when `'_'` in match statements is a keyword, and when not.
- [bpo-41706](https://bugs.python.org/issue?@action=redirect&bpo=41706) [https://bugs.python.org/issue?@action=redirect&bpo=41706]: Fix docs about how methods like `__add__` are invoked when evaluating operator expressions.
- [bpo-41621](https://bugs.python.org/issue?@action=redirect&bpo=41621) [https://bugs.python.org/issue?@action=redirect&bpo=41621]

- @action=redirect&bpo=41621]: Document that `collections.defaultdict` parameter `default_factory` defaults to `None` and is positional-only.
- [bpo-41576](https://bugs.python.org/issue?@action=redirect&bpo=41576) [https://bugs.python.org/issue?@action=redirect&bpo=41576]: document `BaseException` in favor of bare `except`
  - [bpo-21760](https://bugs.python.org/issue?@action=redirect&bpo=21760) [https://bugs.python.org/issue?@action=redirect&bpo=21760]: The description for `__file__` fixed. Patch by Furkan Onder
  - [bpo-39498](https://bugs.python.org/issue?@action=redirect&bpo=39498) [https://bugs.python.org/issue?@action=redirect&bpo=39498]: Add a “Security Considerations” index which links to standard library modules that have explicitly documented security considerations.
  - [bpo-33479](https://bugs.python.org/issue?@action=redirect&bpo=33479) [https://bugs.python.org/issue?@action=redirect&bpo=33479]: Remove the unqualified claim that `tkinter` is `threadsafe`. It has not been true for several years and likely never was. An explanation of what is true may be added later, after more discussion, and possibly after patching `_tkinter.c`,

## Tests

- [bpo-40173](https://bugs.python.org/issue?@action=redirect&bpo=40173) [https://bugs.python.org/issue?@action=redirect&bpo=40173]: Fix `test.support.import_helper.import_fresh_module()`.
- [bpo-45280](https://bugs.python.org/issue?@action=redirect&bpo=45280) [https://bugs.python.org/issue?@action=redirect&bpo=45280]: Add a test case for empty `typing.NamedTuple`.
- [bpo-45269](https://bugs.python.org/issue?@action=redirect&bpo=45269) [https://bugs.python.org/issue?@action=redirect&bpo=45269]: Cover case when invalid `markers` type is supplied to `c_make_encoder`.
- [bpo-45128](https://bugs.python.org/issue?@action=redirect&bpo=45128) [https://bugs.python.org/issue?@action=redirect&bpo=45128]: Fix `test_multiprocessing_fork` failure due to `test_logging` and `sys.modules` manipulation.
- [bpo-45209](https://bugs.python.org/issue?@action=redirect&bpo=45209) [https://bugs.python.org/issue?@action=redirect&bpo=45209]

@action=redirect&bpo=45209]: Fix UserWarning:  
resource\_tracker warning in  
\_test\_multiprocessing.\_TestSharedMemory.test\_shared

- [bpo-45185](https://bugs.python.org/issue?@action=redirect&bpo=45185) [https://bugs.python.org/issue?  
@action=redirect&bpo=45185]: Enables TestEnumerations  
test cases in test\_ssl suite.
- [bpo-45195](https://bugs.python.org/issue?@action=redirect&bpo=45195) [https://bugs.python.org/issue?  
@action=redirect&bpo=45195]: Fix test\_readline.test\_nonascii():  
sometimes, the newline character is not written at the end, so  
don't expect it in the output. Patch by Victor Stinner.
- [bpo-45156](https://bugs.python.org/issue?@action=redirect&bpo=45156) [https://bugs.python.org/issue?  
@action=redirect&bpo=45156]: Fixes infinite loop on  
**unittest.mock.seal()** of mocks created by  
**create\_autospec()**.
- [bpo-45125](https://bugs.python.org/issue?@action=redirect&bpo=45125) [https://bugs.python.org/issue?  
@action=redirect&bpo=45125]: Improves pickling tests and docs  
of SharedMemory and SharableList objects.
- [bpo-44860](https://bugs.python.org/issue?@action=redirect&bpo=44860) [https://bugs.python.org/issue?  
@action=redirect&bpo=44860]: Update  
test\_sysconfig.test\_user\_similar() for the  
posix\_user scheme: platlib doesn't use **sys.platlibdir**.  
Patch by Victor Stinner.
- [bpo-45052](https://bugs.python.org/issue?@action=redirect&bpo=45052) [https://bugs.python.org/issue?  
@action=redirect&bpo=45052]:  
WithProcessesTestSharedMemory.test\_shared\_memory\_ba  
test was ignored, because self.assertEqual(sms.size,  
sms2.size) line was failing. It is now removed and test is  
unskipped.

The main motivation for this line to be removed from the test  
is that the size of SharedMemory is not ever guaranteed  
to be the same. It is decided by the platform.

- [bpo-44895](https://bugs.python.org/issue?@action=redirect&bpo=44895) [https://bugs.python.org/issue?  
@action=redirect&bpo=44895]: libregtest now clears the type

cache later to reduce the risk of false alarm when checking for reference leaks. Previously, the type cache was cleared too early and libregtest raised a false alarm about reference leaks under very specific conditions. Patch by Irit Katriel and Victor Stinner.

- [bpo-45042](https://bugs.python.org/issue?@action=redirect&bpo=45042) [https://bugs.python.org/issue?@action=redirect&bpo=45042]: Fixes that test classes decorated with `@hashlib_helper.requires_hashdigest` were skipped all the time.
- [bpo-25130](https://bugs.python.org/issue?@action=redirect&bpo=25130) [https://bugs.python.org/issue?@action=redirect&bpo=25130]: Add calls of `gc.collect()` in tests to support PyPy.
- [bpo-45011](https://bugs.python.org/issue?@action=redirect&bpo=45011) [https://bugs.python.org/issue?@action=redirect&bpo=45011]: Made tests relying on the `_asyncio` C extension module optional to allow running on alternative Python implementations. Patch by Serhiy Storchaka.
- [bpo-44949](https://bugs.python.org/issue?@action=redirect&bpo=44949) [https://bugs.python.org/issue?@action=redirect&bpo=44949]: Fix auto history tests of `test_readline`: sometimes, the newline character is not written at the end, so don't expect it in the output.
- [bpo-44891](https://bugs.python.org/issue?@action=redirect&bpo=44891) [https://bugs.python.org/issue?@action=redirect&bpo=44891]: Tests were added to clarify `id()` is preserved when `obj * 1` is used on `str` and `bytes` objects. Patch by Nikita Sobolev.
- [bpo-44852](https://bugs.python.org/issue?@action=redirect&bpo=44852) [https://bugs.python.org/issue?@action=redirect&bpo=44852]: Add ability to wholesale silence `DeprecationWarnings` while running the regression test suite.
- [bpo-40928](https://bugs.python.org/issue?@action=redirect&bpo=40928) [https://bugs.python.org/issue?@action=redirect&bpo=40928]: Notify users running `test_decimal` regression tests on macOS of potential harmless “malloc can't allocate region” messages spewed by `test_decimal`.
- [bpo-44734](https://bugs.python.org/issue?@action=redirect&bpo=44734) [https://bugs.python.org/issue?@action=redirect&bpo=44734]

@action=redirect&bpo=44734]: Fixed floating point precision issue in turtle tests.

- [bpo-44708](https://bugs.python.org/issue?@action=redirect&bpo=44708) [https://bugs.python.org/issue?@action=redirect&bpo=44708]: Regression tests, when run with -w, are now re-running only the affected test methods instead of re-running the entire test file.
- [bpo-42095](https://bugs.python.org/issue?@action=redirect&bpo=42095) [https://bugs.python.org/issue?@action=redirect&bpo=42095]: Added interop tests for Apple plists: generate plist files with Python plistlib and parse with Apple plutil; and the other way round.
- [bpo-44647](https://bugs.python.org/issue?@action=redirect&bpo=44647) [https://bugs.python.org/issue?@action=redirect&bpo=44647]: Added a permanent Unicode-valued environment variable to regression tests to ensure they handle this use case in the future. If your test environment breaks because of that, report a bug to us, and temporarily set PYTHONREGRTTEST\_UNICODE\_GUARD=0 in your test environment.
- [bpo-44515](https://bugs.python.org/issue?@action=redirect&bpo=44515) [https://bugs.python.org/issue?@action=redirect&bpo=44515]: Adjust recently added contextlib tests to avoid assuming the use of a refcounted GC
- [bpo-44287](https://bugs.python.org/issue?@action=redirect&bpo=44287) [https://bugs.python.org/issue?@action=redirect&bpo=44287]: Fix asyncio test\_popen() of test\_windows\_utils by using a longer timeout. Use military grade battle-tested `test.support.SHORT_TIMEOUT` timeout rather than a hardcoded timeout of 10 seconds: it's 30 seconds by default, but it is made longer on slow buildbots. Patch by Victor Stinner.
- [bpo-44451](https://bugs.python.org/issue?@action=redirect&bpo=44451) [https://bugs.python.org/issue?@action=redirect&bpo=44451]: Reset DeprecationWarning filters in `test.test_importlib.test_metadata_api.APITests.test_to avoid StopIteration error if DeprecationWarnings are ignored.`
- [bpo-44363](https://bugs.python.org/issue?@action=redirect&bpo=44363) [https://bugs.python.org/issue?@action=redirect&bpo=44363]

@action=redirect&bpo=44363]: Account for address sanitizer in test\_capi. test\_capi now passes when run GCC address sanitizer.

- [bpo-44364](https://bugs.python.org/issue?@action=redirect&bpo=44364) [https://bugs.python.org/issue?@action=redirect&bpo=44364]: Add non integral tests for `math.sqrt()` function.
- [bpo-43921](https://bugs.python.org/issue?@action=redirect&bpo=43921) [https://bugs.python.org/issue?@action=redirect&bpo=43921]: Fix test\_ssl.test\_wrong\_cert\_tls13(): use `suppress_ragged_eofs=False`, since `read()` can raise `ssl.SSLEOFError` on Windows. Patch by Victor Stinner.
- [bpo-43921](https://bugs.python.org/issue?@action=redirect&bpo=43921) [https://bugs.python.org/issue?@action=redirect&bpo=43921]: Fix test\_pha\_required\_nocert() of test\_ssl: catch two more EOF cases (when the `recv()` method returns an empty string). Patch by Victor Stinner.
- [bpo-44131](https://bugs.python.org/issue?@action=redirect&bpo=44131) [https://bugs.python.org/issue?@action=redirect&bpo=44131]: Add test\_frozenmain to test\_embed to test the `Py_FrozenMain()` C function. Patch by Victor Stinner.
- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: Ignore error string case in `test_file_not_exists()`.
- [bpo-42083](https://bugs.python.org/issue?@action=redirect&bpo=42083) [https://bugs.python.org/issue?@action=redirect&bpo=42083]: Add test to check that `PyStructSequence_NewType` accepts a `PyStructSequence_Desc` with `doc` field set to `NULL`.
- [bpo-35753](https://bugs.python.org/issue?@action=redirect&bpo=35753) [https://bugs.python.org/issue?@action=redirect&bpo=35753]: Fix crash in doctest when doctest parses modules that include unwrappable functions by skipping those functions.
- [bpo-30256](https://bugs.python.org/issue?@action=redirect&bpo=30256) [https://bugs.python.org/issue?@action=redirect&bpo=30256]: Add test for nested queues when using multiprocessing shared objects

AutoProxy[Queue] inside ListProxy and DictProxy

## Build

- [bpo-45220](https://bugs.python.org/issue?@action=redirect&bpo=45220) [https://bugs.python.org/issue?@action=redirect&bpo=45220]: Avoid building with the Windows 11 SDK previews automatically. This may be overridden by setting the `DefaultWindowsSDKVersion` environment variable before building.
- [bpo-45020](https://bugs.python.org/issue?@action=redirect&bpo=45020) [https://bugs.python.org/issue?@action=redirect&bpo=45020]: Freeze stdlib modules that are imported during startup. This provides significant performance improvements to startup. If necessary, use the previously added “-X frozen\_modules=off” commandline option to force importing the source modules.
- [bpo-45188](https://bugs.python.org/issue?@action=redirect&bpo=45188) [https://bugs.python.org/issue?@action=redirect&bpo=45188]: Windows builds now regenerate frozen modules as the first part of the build. Previously the regeneration was later in the build, which would require it to be restarted if any modules had changed.
- [bpo-45163](https://bugs.python.org/issue?@action=redirect&bpo=45163) [https://bugs.python.org/issue?@action=redirect&bpo=45163]: Fixes Haiku platform build.
- [bpo-45067](https://bugs.python.org/issue?@action=redirect&bpo=45067) [https://bugs.python.org/issue?@action=redirect&bpo=45067]: The `ncurses` function `extended_color_content` was introduced in 2017

(<https://invisible-island.net/ncurses/NEWS.html#index-t20170401>). The

`ncurses-devel` package in CentOS 7 had a older version `ncurses` resulted in compilation error. For compiling `ncurses` with extended color support, we verify the version of the `ncurses` library `>= 20170401`.

- [bpo-45019](https://bugs.python.org/issue?@action=redirect&bpo=45019) [https://bugs.python.org/issue?@action=redirect&bpo=45019]: Generate lines in relevant files for frozen modules. Up until now each of the files had to be

edited manually. This change makes it easier to add to and modify the frozen modules.

- [bpo-44340](https://bugs.python.org/issue?@action=redirect&bpo=44340) [https://bugs.python.org/issue?@action=redirect&bpo=44340]: Add support for building with clang thin lto via `-with-lto=thin/full`. Patch by Dong-hee Na and Brett Holman.
- [bpo-44535](https://bugs.python.org/issue?@action=redirect&bpo=44535) [https://bugs.python.org/issue?@action=redirect&bpo=44535]: Enable building using a Visual Studio 2022 install on Windows.
- [bpo-43298](https://bugs.python.org/issue?@action=redirect&bpo=43298) [https://bugs.python.org/issue?@action=redirect&bpo=43298]: Improved error message when building without a Windows SDK installed.
- [bpo-44381](https://bugs.python.org/issue?@action=redirect&bpo=44381) [https://bugs.python.org/issue?@action=redirect&bpo=44381]: The Windows build now accepts **EnableControlFlowGuard** set to `guard` to enable CFG.
- [bpo-41282](https://bugs.python.org/issue?@action=redirect&bpo=41282) [https://bugs.python.org/issue?@action=redirect&bpo=41282]: Fix broken `make install` that caused standard library extension modules to be unnecessarily and incorrectly rebuilt during the install phase of cpython.

## Windows

- [bpo-45375](https://bugs.python.org/issue?@action=redirect&bpo=45375) [https://bugs.python.org/issue?@action=redirect&bpo=45375]: Fixes an assertion failure due to searching for the standard library in unnormalised paths.
- [bpo-45022](https://bugs.python.org/issue?@action=redirect&bpo=45022) [https://bugs.python.org/issue?@action=redirect&bpo=45022]: Update Windows release to include libffi 3.4.2
- [bpo-45007](https://bugs.python.org/issue?@action=redirect&bpo=45007) [https://bugs.python.org/issue?@action=redirect&bpo=45007]: Update to OpenSSL 1.1.1l in Windows build
- [bpo-44848](https://bugs.python.org/issue?@action=redirect&bpo=44848) [https://bugs.python.org/issue?@action=redirect&bpo=44848]: Upgrade Windows installer to use SQLite 3.36.0.
- [bpo-44572](https://bugs.python.org/issue?@action=redirect&bpo=44572) [https://bugs.python.org/issue?@action=redirect&bpo=44572]

@action=redirect&bpo=44572]: Avoid consuming standard input in the **platform** module

- **bpo-44582** [<https://bugs.python.org/issue?@action=redirect&bpo=44582>]: Accelerate speed of **mimetypes** initialization using a native implementation of the registry scan.
- **bpo-41299** [<https://bugs.python.org/issue?@action=redirect&bpo=41299>]: Fix 16 milliseconds jitter when using timeouts in **threading**, such as with **threading.Lock.acquire()** or **threading.Condition.wait()**.
- **bpo-42686** [<https://bugs.python.org/issue?@action=redirect&bpo=42686>]: Build **sqlite3** with math functions enabled. Patch by Erlend E. Aasland.
- **bpo-40263** [<https://bugs.python.org/issue?@action=redirect&bpo=40263>]: This is a follow-on bug from <https://bugs.python.org/issue26903>. Once that is applied we run into an off-by-one assertion problem. The assert was not correct.

## macOS

- **bpo-45007** [<https://bugs.python.org/issue?@action=redirect&bpo=45007>]: Update macOS installer builds to use OpenSSL 1.1.1l.
- **bpo-34602** [<https://bugs.python.org/issue?@action=redirect&bpo=34602>]: When building CPython on macOS with `./configure --with-undefined-behavior-sanitizer --with-pydebug`, the stack size is now quadrupled to allow for the entire test suite to pass.
- **bpo-44848** [<https://bugs.python.org/issue?@action=redirect&bpo=44848>]: Update macOS installer to use SQLite 3.36.0.
- **bpo-44689** [<https://bugs.python.org/issue?@action=redirect&bpo=44689>]: **ctypes.util.find\_library()** now works correctly on macOS 11 Big Sur even if Python is built on an older version of macOS. Previously, when built on older macOS systems, `find_library` was not able to find macOS system libraries when running on Big Sur due to changes in how system

libraries are stored.

- [bpo-41972](https://bugs.python.org/issue?@action=redirect&bpo=41972) [https://bugs.python.org/issue?@action=redirect&bpo=41972]: The framework build's user header path in sysconfig is changed to add a 'pythonX.Y' component to match distutils's behavior.
- [bpo-43109](https://bugs.python.org/issue?@action=redirect&bpo=43109) [https://bugs.python.org/issue?@action=redirect&bpo=43109]: Allow `--with-lto` configure option to work with Apple-supplied Xcode or Command Line Tools.
- [bpo-34932](https://bugs.python.org/issue?@action=redirect&bpo=34932) [https://bugs.python.org/issue?@action=redirect&bpo=34932]: Add `socket.TCP_KEEPALIVE` support for macOS. Patch by Shane Harvey.

## IDLE

- [bpo-45296](https://bugs.python.org/issue?@action=redirect&bpo=45296) [https://bugs.python.org/issue?@action=redirect&bpo=45296]: On Windows, change exit/quit message to suggest Ctrl-D, which works, instead of `<Ctrl-Z Return>`, which does not work in IDLE.
- [bpo-45193](https://bugs.python.org/issue?@action=redirect&bpo=45193) [https://bugs.python.org/issue?@action=redirect&bpo=45193]: Make completion boxes appear on Ubuntu again.
- [bpo-40128](https://bugs.python.org/issue?@action=redirect&bpo=40128) [https://bugs.python.org/issue?@action=redirect&bpo=40128]: Mostly fix completions on macOS when not using tcl/tk 8.6.11 (as with 3.9). The added `update_idletask` call should be harmless and possibly helpful otherwise.
- [bpo-33962](https://bugs.python.org/issue?@action=redirect&bpo=33962) [https://bugs.python.org/issue?@action=redirect&bpo=33962]: Move the indent space setting from the Font tab to the new Windows tab. Patch by Mark Roseman and Terry Jan Reedy.
- [bpo-40468](https://bugs.python.org/issue?@action=redirect&bpo=40468) [https://bugs.python.org/issue?@action=redirect&bpo=40468]: Split the settings dialog General tab into Windows and Shell/ED tabs. Move help sources, which extend the Help menu, to the Extensions tab. Make space for new options and shorten the dialog. The latter makes the dialog better fit small screens.
- [bpo-41611](https://bugs.python.org/issue?@action=redirect&bpo=41611) [https://bugs.python.org/issue?@action=redirect&bpo=41611]: Avoid uncaught exceptions in `AutoCompleteWindow.winconfig_event()`.
- [bpo-41611](https://bugs.python.org/issue?@action=redirect&bpo=41611) [https://bugs.python.org/issue?@action=redirect&bpo=41611]

@action=redirect&bpo=41611]: Fix IDLE sometimes freezing upon tab-completion on macOS.

- [bpo-44010](https://bugs.python.org/issue?@action=redirect&bpo=44010) [https://bugs.python.org/issue?@action=redirect&bpo=44010]: Highlight the new `match` statement's **soft keywords**: `match`, `case`, and `_`. However, this highlighting is not perfect and will be incorrect in some rare cases, including some `_`s in `case` patterns.
- [bpo-44026](https://bugs.python.org/issue?@action=redirect&bpo=44026) [https://bugs.python.org/issue?@action=redirect&bpo=44026]: Include interpreter's typo fix suggestions in message line for NameErrors and AttributeErrors. Patch by E. Paine.

## Tools/Demos

- [bpo-44786](https://bugs.python.org/issue?@action=redirect&bpo=44786) [https://bugs.python.org/issue?@action=redirect&bpo=44786]: Fix a warning in regular expression in the c-analyzer script.
- [bpo-44967](https://bugs.python.org/issue?@action=redirect&bpo=44967) [https://bugs.python.org/issue?@action=redirect&bpo=44967]: pydoc now returns a non-zero status code when a module cannot be found.
- [bpo-44978](https://bugs.python.org/issue?@action=redirect&bpo=44978) [https://bugs.python.org/issue?@action=redirect&bpo=44978]: Allow the Argument Clinic tool to handle `__complex__` special methods.
- [bpo-43425](https://bugs.python.org/issue?@action=redirect&bpo=43425) [https://bugs.python.org/issue?@action=redirect&bpo=43425]: Removed the 'test2to3' demo project that demonstrated using lib2to3 to support Python 2.x and Python 3.x from a single source in a distutils package. Patch by Dong-hee Na
- [bpo-44074](https://bugs.python.org/issue?@action=redirect&bpo=44074) [https://bugs.python.org/issue?@action=redirect&bpo=44074]: Make patchcheck automatically detect the correct base branch name (previously it was hardcoded to 'master')
- [bpo-20291](https://bugs.python.org/issue?@action=redirect&bpo=20291) [https://bugs.python.org/issue?@action=redirect&bpo=20291]: Added support for variadic positional parameters in Argument Clinic.

## C API

- [bpo-41710](https://bugs.python.org/issue?@action=redirect&bpo=41710) [https://bugs.python.org/issue?@action=redirect&bpo=41710]: The

`PyThread_acquire_lock_timed()` function now clamps the timeout if it is too large, rather than aborting the process. Patch by Victor Stinner.

- [bpo-44687](https://bugs.python.org/issue?@action=redirect&bpo=44687) [https://bugs.python.org/issue?@action=redirect&bpo=44687]: `BufferedReader.peek()` no longer raises `ValueError` when the entire file has already been buffered.
- [bpo-45116](https://bugs.python.org/issue?@action=redirect&bpo=45116) [https://bugs.python.org/issue?@action=redirect&bpo=45116]: Add the `Py_ALWAYS_INLINE` macro to ask the compiler to always inline a static inline function. The compiler can ignore it and decides to not inline the function. Patch by Victor Stinner.
- [bpo-45094](https://bugs.python.org/issue?@action=redirect&bpo=45094) [https://bugs.python.org/issue?@action=redirect&bpo=45094]: Add the `Py_NO_INLINE` macro to disable inlining on a function. Patch by Victor Stinner.
- [bpo-45061](https://bugs.python.org/issue?@action=redirect&bpo=45061) [https://bugs.python.org/issue?@action=redirect&bpo=45061]: Add a deallocator to the `bool` type to detect refcount bugs in C extensions which call `Py_DECREF(Py_True);` or `Py_DECREF(Py_False);` by mistake. Patch by Victor Stinner.
- [bpo-42035](https://bugs.python.org/issue?@action=redirect&bpo=42035) [https://bugs.python.org/issue?@action=redirect&bpo=42035]: Add a new `PyType_GetQualName()` function to get type's qualified name.
- [bpo-41103](https://bugs.python.org/issue?@action=redirect&bpo=41103) [https://bugs.python.org/issue?@action=redirect&bpo=41103]: Reverts removal of the old buffer protocol because they are part of stable ABI.
- [bpo-44751](https://bugs.python.org/issue?@action=redirect&bpo=44751) [https://bugs.python.org/issue?@action=redirect&bpo=44751]: Remove `crypt.h` include from the public `Python.h` header.
- [bpo-42747](https://bugs.python.org/issue?@action=redirect&bpo=42747) [https://bugs.python.org/issue?@action=redirect&bpo=42747]: The `Py_TPFLAGS_HAVE_VERSION_TAG` type flag now does

nothing. The `Py_TPFLAGS_HAVE_AM_SEND` flag (which was added in 3.10) is removed. Both were unnecessary because it is not possible to have type objects with the relevant fields missing.

- [bpo-44530](https://bugs.python.org/issue?@action=redirect&bpo=44530) [https://bugs.python.org/issue?@action=redirect&bpo=44530]: Added the `co_qualname` to the `PyCodeObject` structure to propagate the qualified name from the compiler to code objects.

Patch by Gabriele N. Tornetta

- [bpo-44441](https://bugs.python.org/issue?@action=redirect&bpo=44441) [https://bugs.python.org/issue?@action=redirect&bpo=44441]: `Py_RunMain()` now resets `PyImport_Inittab` to its initial value at exit. It must be possible to call `PyImport_AppendInittab()` or `PyImport_ExtendInittab()` at each Python initialization. Patch by Victor Stinner.

- [bpo-39947](https://bugs.python.org/issue?@action=redirect&bpo=39947) [https://bugs.python.org/issue?@action=redirect&bpo=39947]: Remove 4 private trashcan C API functions which were only kept for the backward compatibility of the stable ABI with Python 3.8 and older, since the trashcan API was not usable with the limited C API on Python 3.8 and older. The trashcan API was excluded from the limited C API in Python 3.9.

Removed functions:

- `_PyTrash_deposit_object()`
- `_PyTrash_destroy_chain()`
- `_PyTrash_thread_deposit_object()`
- `_PyTrash_thread_destroy_chain()`

The trashcan C API was never usable with the limited C API, since old trashcan macros accessed directly `PyThreadState` members like `_tstate->trash_delete_nesting`, whereas the `PyThreadState` structure is opaque in the limited C API.

Exclude also the `PyTrash_UNWIND_LEVEL` constant from

the C API.

Patch by Victor Stinner.

- [bpo-40939](https://bugs.python.org/issue?@action=redirect&bpo=40939) [https://bugs.python.org/issue?@action=redirect&bpo=40939]: Removed documentation for the removed `PyParser_*` C API.
- [bpo-43795](https://bugs.python.org/issue?@action=redirect&bpo=43795) [https://bugs.python.org/issue?@action=redirect&bpo=43795]: The list in [Contents of Limited API](#) now shows the public name `PyFrameObject` rather than `_frame`. The non-existing entry `_node` no longer appears in the list.
- [bpo-44378](https://bugs.python.org/issue?@action=redirect&bpo=44378) [https://bugs.python.org/issue?@action=redirect&bpo=44378]: `Py_IS_TYPE()` no longer uses `Py_TYPE()` to avoid a compiler warning: no longer cast `const PyObject*` to `PyObject*`. Patch by Victor Stinner.
- [bpo-39573](https://bugs.python.org/issue?@action=redirect&bpo=39573) [https://bugs.python.org/issue?@action=redirect&bpo=39573]: Convert the `Py_TYPE()` and `Py_SIZE()` macros to static inline functions. The `Py_SET_TYPE()` and `Py_SET_SIZE()` functions must now be used to set an object type and size. Patch by Victor Stinner.
- [bpo-44263](https://bugs.python.org/issue?@action=redirect&bpo=44263) [https://bugs.python.org/issue?@action=redirect&bpo=44263]: The `PyType_Ready()` function now raises an error if a type is defined with the `Py_TPFLAGS_HAVE_GC` flag set but has no traverse function (`PyTypeObject.tp_traverse`). Patch by Victor Stinner.
- [bpo-43795](https://bugs.python.org/issue?@action=redirect&bpo=43795) [https://bugs.python.org/issue?@action=redirect&bpo=43795]: The undocumented function `Py_FrozenMain()` is removed from the Limited API.
- [bpo-44113](https://bugs.python.org/issue?@action=redirect&bpo=44113) [https://bugs.python.org/issue?@action=redirect&bpo=44113]: Deprecate the following functions to configure the Python initialization:

- `PySys_AddWarnOptionUnicode()`

- `PySys_AddWarnOption()`
- `PySys_AddXOption()`
- `PySys_HasWarnOptions()`
- `Py_SetPath()`
- `Py_SetProgramName()`
- `Py_SetPythonHome()`
- `Py_SetStandardStreamEncoding()`
- `_Py_SetProgramFullPath()`

Use the new **PyConfig** API of the **Python Initialization Configuration** instead (**PEP 587** [<https://peps.python.org/pep-0587/>]).

- **bpo-44094** [<https://bugs.python.org/issue?@action=redirect&bpo=44094>]: **Remove**  
`PyErr_SetFromErrnoWithUnicodeFilename()`,  
`PyErr_SetFromWindowsErrWithUnicodeFilename()`,  
 and  
`PyErr_SetExcFromWindowsErrWithUnicodeFilename()`.  
 They are not documented and have been deprecated since Python 3.3.
- **bpo-43795** [<https://bugs.python.org/issue?@action=redirect&bpo=43795>]: **PyCodec\_Unregister()** is now properly exported as a function in the Windows Stable ABI DLL.
- **bpo-44029** [<https://bugs.python.org/issue?@action=redirect&bpo=44029>]: **Remove deprecated**  
**Py\_UNICODE APIs:** `PyUnicode_Encode`,  
`PyUnicode_EncodeUTF7`, `PyUnicode_EncodeUTF8`,  
`PyUnicode_EncodeUTF16`, `PyUnicode_EncodeUTF32`,  
`PyUnicode_EncodeLatin1`, `PyUnicode_EncodeMBCS`,  
`PyUnicode_EncodeDecimal`,  
`PyUnicode_EncodeRawUnicodeEscape`,  
`PyUnicode_EncodeCharmap`,  
`PyUnicode_EncodeUnicodeEscape`,  
`PyUnicode_TransformDecimalToASCII`,  
`PyUnicode_TranslateCharmap`,  
`PyUnicodeEncodeError_Create`,  
`PyUnicodeTranslateError_Create`. See **PEP 393** [<https://>

[peps.python.org/pep-0393/](https://peps.python.org/pep-0393/)] and **PEP 624** [<https://peps.python.org/pep-0624/>] for reference.

- **bpo-42035** [<https://bugs.python.org/issue?@action=redirect&bpo=42035>]: Add a new **PyType\_GetName()** function to get type's short name.

## Python 3.10.0 beta 1

*Release date: 2021-05-03*

### Security

- **bpo-43434** [<https://bugs.python.org/issue?@action=redirect&bpo=43434>]: Creating **sqlite3.Connection** objects now also produces **sqlite3.connect** and **sqlite3.connect/handle** **auditing events**. Previously these events were only produced by **sqlite3.connect()** calls. Patch by Erlend E. Aasland.
- **bpo-43998** [<https://bugs.python.org/issue?@action=redirect&bpo=43998>]: The **ssl** module sets more secure cipher suites defaults. Ciphers without forward secrecy and with SHA-1 MAC are disabled by default. Security level 2 prohibits weak RSA, DH, and ECC keys with less than 112 bits of security. **SSLContext** defaults to minimum protocol version TLS 1.2. Settings are based on Hynek Schlawack's research.
- **bpo-43882** [<https://bugs.python.org/issue?@action=redirect&bpo=43882>]: The presence of newline or tab characters in parts of a URL could allow some forms of attacks.

Following the controlling specification for URLs defined by WHATWG **urllib.parse()** now removes ASCII newlines and tabs from URLs, preventing such attacks.

- **bpo-43472** [<https://bugs.python.org/issue?@action=redirect&bpo=43472>]: Ensures interpreter-level audit

hooks receive the `cpython.PyInterpreterState_New` event when called through the `_xxsubinterpreters` module.

- [bpo-43362](https://bugs.python.org/issue?@action=redirect&bpo=43362) [https://bugs.python.org/issue?@action=redirect&bpo=43362]: Fix invalid free in `_sha3` module. The issue was introduced in 3.10.0a1. Python 3.9 and earlier are not affected.
- [bpo-43762](https://bugs.python.org/issue?@action=redirect&bpo=43762) [https://bugs.python.org/issue?@action=redirect&bpo=43762]: Add audit events for `sqlite3.connect()/handle()`, `sqlite3.Connection.enable_load_extension()`, and `sqlite3.Connection.load_extension()`. Patch by Erlend E. Aasland.
- [bpo-43756](https://bugs.python.org/issue?@action=redirect&bpo=43756) [https://bugs.python.org/issue?@action=redirect&bpo=43756]: Add new audit event `glob.glob/2` to incorporate the new *root\_dir* and *dir\_fd* arguments added to `glob.glob()` and `glob.iglob()`.
- [bpo-36384](https://bugs.python.org/issue?@action=redirect&bpo=36384) [https://bugs.python.org/issue?@action=redirect&bpo=36384]: `ipaddress` module no longer accepts any leading zeros in IPv4 address strings. Leading zeros are ambiguous and interpreted as octal notation by some libraries. For example the legacy function `socket.inet_aton()` treats leading zeros as octal notation. glibc implementation of modern `inet_pton()` does not accept any leading zeros. For a while the `ipaddress` module used to accept ambiguous leading zeros.
- [bpo-43075](https://bugs.python.org/issue?@action=redirect&bpo=43075) [https://bugs.python.org/issue?@action=redirect&bpo=43075]: Fix Regular Expression Denial of Service (ReDoS) vulnerability in `urllib.request.AbstractBasicAuthHandler`. The ReDoS-vulnerable regex has quadratic worst-case complexity and it allows cause a denial of service when identifying crafted invalid RFCs. This ReDoS issue is on the client side and needs remote attackers to control the HTTP server.
- [bpo-42800](https://bugs.python.org/issue?@action=redirect&bpo=42800) [https://bugs.python.org/issue?@action=redirect&bpo=42800]

@action=redirect&bpo=42800]: Audit hooks are now fired for `frame.f_code`, `traceback.tb_frame`, and generator code/frame attribute access.

- [bpo-37363](https://bugs.python.org/issue?@action=redirect&bpo=37363) [https://bugs.python.org/issue?@action=redirect&bpo=37363]: Add audit events to the `http.client` module.

## Core and Builtins

- [bpo-43977](https://bugs.python.org/issue?@action=redirect&bpo=43977) [https://bugs.python.org/issue?@action=redirect&bpo=43977]: Prevent classes being both a sequence and a mapping when pattern matching.
- [bpo-43977](https://bugs.python.org/issue?@action=redirect&bpo=43977) [https://bugs.python.org/issue?@action=redirect&bpo=43977]: Use `tp_flags` on the class object to determine if the subject is a sequence or mapping when pattern matching. Avoids the need to import `collections.abc` when pattern matching.
- [bpo-43892](https://bugs.python.org/issue?@action=redirect&bpo=43892) [https://bugs.python.org/issue?@action=redirect&bpo=43892]: Restore proper validation of complex literal value patterns when parsing `match` blocks.
- [bpo-43933](https://bugs.python.org/issue?@action=redirect&bpo=43933) [https://bugs.python.org/issue?@action=redirect&bpo=43933]: Set `frame.f_lineno` to the line number of the 'with' keyword when executing the call to `__exit__`.
- [bpo-43933](https://bugs.python.org/issue?@action=redirect&bpo=43933) [https://bugs.python.org/issue?@action=redirect&bpo=43933]: If the current position in a frame has no line number then set the `f_lineno` attribute to `None`, instead of `-1`, to conform to PEP 626. This should not normally be possible, but might occur in some unusual circumstances.
- [bpo-43963](https://bugs.python.org/issue?@action=redirect&bpo=43963) [https://bugs.python.org/issue?@action=redirect&bpo=43963]: Importing the `_signal` module in a subinterpreter has no longer side effects.
- [bpo-42739](https://bugs.python.org/issue?@action=redirect&bpo=42739) [https://bugs.python.org/issue?@action=redirect&bpo=42739]: The internal representation of line number tables is changed to not use sentinels, and an explicit length parameter is added to the out of process API function `PyLineTable_InitAddressRange`. This makes the handling of line number tables more robust in some

circumstances.

- [bpo-43908](https://bugs.python.org/issue?@action=redirect&bpo=43908) [https://bugs.python.org/issue?@action=redirect&bpo=43908]: Make **re** types immutable. Patch by Erlend E. Aasland.
- [bpo-43908](https://bugs.python.org/issue?@action=redirect&bpo=43908) [https://bugs.python.org/issue?@action=redirect&bpo=43908]: Make the **array.array** type immutable. Patch by Erlend E. Aasland.
- [bpo-43901](https://bugs.python.org/issue?@action=redirect&bpo=43901) [https://bugs.python.org/issue?@action=redirect&bpo=43901]: Change class and module objects to lazy-create empty annotations dicts on demand. The annotations dicts are stored in the object's `__dict__` for backwards compatibility.
- [bpo-43892](https://bugs.python.org/issue?@action=redirect&bpo=43892) [https://bugs.python.org/issue?@action=redirect&bpo=43892]: Match patterns now use new dedicated AST nodes (`MatchValue`, `MatchSingleton`, `MatchSequence`, `MatchStar`, `MatchMapping`, `MatchClass`) rather than reusing expression AST nodes. `MatchAs` and `MatchOr` are now defined as pattern nodes rather than as expression nodes. Patch by Nick Coghlan.
- [bpo-42725](https://bugs.python.org/issue?@action=redirect&bpo=42725) [https://bugs.python.org/issue?@action=redirect&bpo=42725]: Usage of `await/yield/yield from` and named expressions within an annotation is now forbidden when PEP 563 is activated.
- [bpo-43754](https://bugs.python.org/issue?@action=redirect&bpo=43754) [https://bugs.python.org/issue?@action=redirect&bpo=43754]: When performing structural pattern matching ([PEP 634](https://peps.python.org/pep-0634/) [https://peps.python.org/pep-0634/]), captured names are now left unbound until the *entire* pattern has matched successfully.
- [bpo-42737](https://bugs.python.org/issue?@action=redirect&bpo=42737) [https://bugs.python.org/issue?@action=redirect&bpo=42737]: Annotations for complex targets (everything beside simple names) no longer cause any runtime effects with `from __future__ import annotations`.
- [bpo-43914](https://bugs.python.org/issue?@action=redirect&bpo=43914) [https://bugs.python.org/issue?@action=redirect&bpo=43914]: **SyntaxError** exceptions raised by the interpreter will highlight the full error range of the expression that constitutes the syntax error itself, instead of just where the problem is detected. Patch by Pablo Galindo.
- [bpo-38605](https://bugs.python.org/issue?@action=redirect&bpo=38605) [https://bugs.python.org/issue?@action=redirect&bpo=38605]: Revert making `from`

`__future__` import annotations the default. This follows the Steering Council decision to postpone PEP 563 changes to at least Python 3.11. See the original email for more information regarding the decision: <https://mail.python.org/archives/list/python-dev@python.org/thread/CLVXXPQ2T2LQ5MP2Y53VVQFCXYWQJHKZ/>. Patch by Pablo Galindo.

- [bpo-43475](https://bugs.python.org/issue?@action=redirect&bpo=43475) [https://bugs.python.org/issue?@action=redirect&bpo=43475]: Hashes of NaN values now depend on object identity. Formerly, they always hashed to 0 even though NaN values are not equal to one another. Having the same hash for unequal values caused pile-ups in hash tables.
- [bpo-43859](https://bugs.python.org/issue?@action=redirect&bpo=43859) [https://bugs.python.org/issue?@action=redirect&bpo=43859]: Improve the error message for **IndentationError** exceptions. Patch by Pablo Galindo
- [bpo-41323](https://bugs.python.org/issue?@action=redirect&bpo=41323) [https://bugs.python.org/issue?@action=redirect&bpo=41323]: Constant tuple folding in bytecode optimizer now reuses tuple in constant table.
- [bpo-43846](https://bugs.python.org/issue?@action=redirect&bpo=43846) [https://bugs.python.org/issue?@action=redirect&bpo=43846]: Data stack usage is much reduced for large literal and call expressions.
- [bpo-38530](https://bugs.python.org/issue?@action=redirect&bpo=38530) [https://bugs.python.org/issue?@action=redirect&bpo=38530]: When printing **NameError** raised by the interpreter, **PyErr\_Display()** will offer suggestions of similar variable names in the function that the exception was raised from. Patch by Pablo Galindo
- [bpo-43823](https://bugs.python.org/issue?@action=redirect&bpo=43823) [https://bugs.python.org/issue?@action=redirect&bpo=43823]: Improve syntax errors for invalid dictionary literals. Patch by Pablo Galindo.
- [bpo-43822](https://bugs.python.org/issue?@action=redirect&bpo=43822) [https://bugs.python.org/issue?@action=redirect&bpo=43822]: Improve syntax errors in the parser for missing commas between expressions. Patch by Pablo Galindo.
- [bpo-43798](https://bugs.python.org/issue?@action=redirect&bpo=43798) [https://bugs.python.org/issue?@action=redirect&bpo=43798]: **ast.alias** nodes now include source location metadata attributes e.g. `lineno`, `col_offset`.
- [bpo-43797](https://bugs.python.org/issue?@action=redirect&bpo=43797) [https://bugs.python.org/issue?@action=redirect&bpo=43797]: Improve **SyntaxError** error messages for invalid comparisons. Patch by Pablo Galindo.

- [bpo-43760](https://bugs.python.org/issue?@action=redirect&bpo=43760) [https://bugs.python.org/issue?@action=redirect&bpo=43760]: Move the flag for checking whether tracing is enabled to the C stack, from the heap. Should speed up dispatch in the interpreter.
- [bpo-43682](https://bugs.python.org/issue?@action=redirect&bpo=43682) [https://bugs.python.org/issue?@action=redirect&bpo=43682]: Static methods (`@staticmethod`) and class methods (`@classmethod`) now inherit the method attributes (`__module__`, `__name__`, `__qualname__`, `__doc__`, `__annotations__`) and have a new `__wrapped__` attribute. Patch by Victor Stinner.
- [bpo-43751](https://bugs.python.org/issue?@action=redirect&bpo=43751) [https://bugs.python.org/issue?@action=redirect&bpo=43751]: Fixed a bug where `anext(aio, default)` would erroneously return `None`.
- [bpo-42128](https://bugs.python.org/issue?@action=redirect&bpo=42128) [https://bugs.python.org/issue?@action=redirect&bpo=42128]: `__match_args__` is no longer allowed to be a list.
- [bpo-43683](https://bugs.python.org/issue?@action=redirect&bpo=43683) [https://bugs.python.org/issue?@action=redirect&bpo=43683]: Add `GEN_START` opcode. Marks start of generator, including `async`, or coroutine and handles sending values to a newly created generator or coroutine.
- [bpo-43105](https://bugs.python.org/issue?@action=redirect&bpo=43105) [https://bugs.python.org/issue?@action=redirect&bpo=43105]: `Importlib` now resolves relative paths when creating module spec objects from file locations.
- [bpo-43682](https://bugs.python.org/issue?@action=redirect&bpo=43682) [https://bugs.python.org/issue?@action=redirect&bpo=43682]: Static methods (`@staticmethod`) are now callable as regular functions. Patch by Victor Stinner.
- [bpo-42609](https://bugs.python.org/issue?@action=redirect&bpo=42609) [https://bugs.python.org/issue?@action=redirect&bpo=42609]: Prevented crashes in the AST validator and optimizer when compiling some absurdly long expressions like `" +0 " * 1000000`. `RecursionError` is now raised instead.
- [bpo-38530](https://bugs.python.org/issue?@action=redirect&bpo=38530) [https://bugs.python.org/issue?@action=redirect&bpo=38530]: When printing `AttributeError`, `PyErr_Display()` will offer suggestions of similar attribute names in the object that the exception was raised from. Patch by Pablo Galindo

## Library

- [bpo-44015](https://bugs.python.org/issue?@action=redirect&bpo=44015) [https://bugs.python.org/issue?@action=redirect&bpo=44015]: In `@dataclass()`, raise a `TypeError` if `KW_ONLY` is specified more than once.
- [bpo-25478](https://bugs.python.org/issue?@action=redirect&bpo=25478) [https://bugs.python.org/issue?@action=redirect&bpo=25478]: Added a `total()` method to `collections.Counter()` to compute the sum of the counts.
- [bpo-43733](https://bugs.python.org/issue?@action=redirect&bpo=43733) [https://bugs.python.org/issue?@action=redirect&bpo=43733]: Change `netrc.netrc` to use UTF-8 encoding before using locale encoding.
- [bpo-43979](https://bugs.python.org/issue?@action=redirect&bpo=43979) [https://bugs.python.org/issue?@action=redirect&bpo=43979]: Removed an unnecessary list comprehension before looping from `urllib.parse.parse_qs()`. Patch by Christoph Zwerschke and Dong-hee Na.
- [bpo-43993](https://bugs.python.org/issue?@action=redirect&bpo=43993) [https://bugs.python.org/issue?@action=redirect&bpo=43993]: Update bundled pip to 21.1.1.
- [bpo-43957](https://bugs.python.org/issue?@action=redirect&bpo=43957) [https://bugs.python.org/issue?@action=redirect&bpo=43957]: `[Enum]` Deprecate `TypeError` when non-member is used in a containment check; In 3.12 `True` or `False` will be returned instead, and containment will return `True` if the value is either a member of that enum or one of its members' value.
- [bpo-42904](https://bugs.python.org/issue?@action=redirect&bpo=42904) [https://bugs.python.org/issue?@action=redirect&bpo=42904]: For backwards compatibility with previous minor versions of Python, if `typing.get_type_hints()` receives no namespace dictionary arguments, `typing.get_type_hints()` will search through the global then local namespaces during evaluation of stringized type annotations (string forward references) inside a class.
- [bpo-43945](https://bugs.python.org/issue?@action=redirect&bpo=43945) [https://bugs.python.org/issue?@action=redirect&bpo=43945]: `[Enum]` Deprecate non-standard `mixin.format()` behavior: in 3.12 the enum member, not the member's value, will be used for `format()` calls.

- [bpo-41139](https://bugs.python.org/issue?@action=redirect&bpo=41139) [https://bugs.python.org/issue?@action=redirect&bpo=41139]: Deprecate undocumented `cgi.log()` API.
- [bpo-43937](https://bugs.python.org/issue?@action=redirect&bpo=43937) [https://bugs.python.org/issue?@action=redirect&bpo=43937]: Fixed the `turtle` module working with non-default root window.
- [bpo-43930](https://bugs.python.org/issue?@action=redirect&bpo=43930) [https://bugs.python.org/issue?@action=redirect&bpo=43930]: Update bundled pip to 21.1 and setuptools to 56.0.0
- [bpo-43907](https://bugs.python.org/issue?@action=redirect&bpo=43907) [https://bugs.python.org/issue?@action=redirect&bpo=43907]: Fix a bug in the pure-Python pickle implementation when using protocol 5, where bytearray instances that occur several time in the pickled object graph would incorrectly unpickle into repeated copies of the bytearray object.
- [bpo-43926](https://bugs.python.org/issue?@action=redirect&bpo=43926) [https://bugs.python.org/issue?@action=redirect&bpo=43926]: In `importlib.metadata`, provide a uniform interface to `Description`, allow for any field to be encoded with multiline values, remove continuation lines from multiline values, and add a `.json` property for easy access to the PEP 566 JSON-compatible form. Sync with `importlib_metadata 4.0`.
- [bpo-43920](https://bugs.python.org/issue?@action=redirect&bpo=43920) [https://bugs.python.org/issue?@action=redirect&bpo=43920]: OpenSSL 3.0.0: `load_verify_locations()` now returns a consistent error message when cadata contains no valid certificate.
- [bpo-43607](https://bugs.python.org/issue?@action=redirect&bpo=43607) [https://bugs.python.org/issue?@action=redirect&bpo=43607]: `urllib` can now convert Windows paths with `\\?\\` prefixes into URL paths.
- [bpo-43817](https://bugs.python.org/issue?@action=redirect&bpo=43817) [https://bugs.python.org/issue?@action=redirect&bpo=43817]: Add `inspect.get_annotations()`, which safely computes the annotations defined on an object. It works around the quirks of accessing the annotations from various types of objects,

and makes very few assumptions about the object passed in. `inspect.get_annotations()` can also correctly un-stringize stringized annotations.

`inspect.signature()`, `inspect.from_callable()`, and `inspect.from_function()` now call `inspect.get_annotations()` to retrieve annotations. This means `inspect.signature()` and `inspect.from_callable()` can now un-stringize stringized annotations, too.

- [bpo-43284](https://bugs.python.org/issue?@action=redirect&bpo=43284) [https://bugs.python.org/issue?@action=redirect&bpo=43284]: `platform.win32_ver` derives the windows version from `sys.getwindowsversion().platform_version` which in turn derives the version from `kernel32.dll` (which can be of a different version than Windows itself). Therefore change the `platform.win32_ver` to determine the version using the platform module's `_syscmd_ver` private function to return an accurate version.
- [bpo-42854](https://bugs.python.org/issue?@action=redirect&bpo=42854) [https://bugs.python.org/issue?@action=redirect&bpo=42854]: The `ssl` module now uses `SSL_read_ex` and `SSL_write_ex` internally. The functions support reading and writing of data larger than 2 GB. Writing zero-length data no longer fails with a protocol violation error.
- [bpo-42333](https://bugs.python.org/issue?@action=redirect&bpo=42333) [https://bugs.python.org/issue?@action=redirect&bpo=42333]: Port `_ssl` extension module to multiphase initialization.
- [bpo-43880](https://bugs.python.org/issue?@action=redirect&bpo=43880) [https://bugs.python.org/issue?@action=redirect&bpo=43880]: `ssl` now raises `DeprecationWarning` for `OP_NO_SSL/TLS*` options, old TLS versions, old protocols, and other features that have been deprecated since Python 3.6, 3.7, or OpenSSL 1.1.0.
- [bpo-41559](https://bugs.python.org/issue?@action=redirect&bpo=41559) [https://bugs.python.org/issue?@action=redirect&bpo=41559]: [PEP 612](https://peps.python.org/pep-0612/) [https://peps.python.org/pep-0612/] is now implemented purely in Python; builtin

`types.GenericAlias` objects no longer include `typing.ParamSpec` in `__parameters__` (with the exception of `collections.abc.Callable`'s `GenericAlias`). This means previously invalid uses of `ParamSpec` (such as `list[P]`) which worked in earlier versions of Python 3.10 alpha, will now raise `TypeError` during substitution.

- [bpo-43867](https://bugs.python.org/issue?@action=redirect&bpo=43867) [https://bugs.python.org/issue?@action=redirect&bpo=43867]: The `multiprocessing.Server` class now explicitly catches `SystemExit` and closes the client connection in this case. It happens when the `Server.serve_client()` method reaches the end of file (EOF).
- [bpo-40443](https://bugs.python.org/issue?@action=redirect&bpo=40443) [https://bugs.python.org/issue?@action=redirect&bpo=40443]: Remove unused imports: `pyclbr` no longer uses `copy`, and `typing` no longer uses `ast`. Patch by Victor Stinner.
- [bpo-43820](https://bugs.python.org/issue?@action=redirect&bpo=43820) [https://bugs.python.org/issue?@action=redirect&bpo=43820]: Remove an unneeded copy of the namespace passed to `dataclasses.make_dataclass()`.
- [bpo-43787](https://bugs.python.org/issue?@action=redirect&bpo=43787) [https://bugs.python.org/issue?@action=redirect&bpo=43787]: Add `__iter__()` method to `bz2.BZ2File`, `gzip.GzipFile`, and `lzma.LZMAFile`. It makes iterating them about 2x faster. Patch by Inada Naoki.
- [bpo-43680](https://bugs.python.org/issue?@action=redirect&bpo=43680) [https://bugs.python.org/issue?@action=redirect&bpo=43680]: Deprecate `io.OpenWrapper` and `_pyio.OpenWrapper`: use `io.open` and `_pyio.open` instead. Until Python 3.9, `_pyio.open` was not a static method and `builtins.open` was set to `OpenWrapper` to not become a bound method when set to a class variable. `_io.open` is a built-in function whereas `_pyio.open` is a Python function. In Python 3.10, `_pyio.open()` is now a static method, and `builtins.open()` is now `io.open()`.
- [bpo-43680](https://bugs.python.org/issue?@action=redirect&bpo=43680) [https://bugs.python.org/issue?@action=redirect&bpo=43680]: The Python `_pyio.open()`

function becomes a static method to behave as `io.open()` built-in function: don't become a bound method when stored as a class variable. It becomes possible since static methods are now callable in Python 3.10. Moreover, `_pyio.OpenWrapper()` becomes a simple alias to `_pyio.open()`. Patch by Victor Stinner.

- [bpo-41515](https://bugs.python.org/issue?@action=redirect&bpo=41515) [https://bugs.python.org/issue?@action=redirect&bpo=41515]: Fix `KeyError` raised in `typing.get_type_hints()` due to synthetic modules that don't appear in `sys.modules`.
- [bpo-43776](https://bugs.python.org/issue?@action=redirect&bpo=43776) [https://bugs.python.org/issue?@action=redirect&bpo=43776]: When `subprocess.Popen` args are provided as a string or as `pathlib.Path`, the `Popen` instance repr now shows the right thing.
- [bpo-42248](https://bugs.python.org/issue?@action=redirect&bpo=42248) [https://bugs.python.org/issue?@action=redirect&bpo=42248]: `[Enum]` ensure exceptions raised in `__missing__` are released
- [bpo-43744](https://bugs.python.org/issue?@action=redirect&bpo=43744) [https://bugs.python.org/issue?@action=redirect&bpo=43744]: fix issue with enum member name matching the start of a private variable name
- [bpo-43772](https://bugs.python.org/issue?@action=redirect&bpo=43772) [https://bugs.python.org/issue?@action=redirect&bpo=43772]: Fixed the return value of `TypeVar.__ror__`. Patch by Jelle Zijlstra.
- [bpo-43764](https://bugs.python.org/issue?@action=redirect&bpo=43764) [https://bugs.python.org/issue?@action=redirect&bpo=43764]: Add `match_args` parameter to `@dataclass` decorator to allow suppression of `__match_args__` generation.
- [bpo-43799](https://bugs.python.org/issue?@action=redirect&bpo=43799) [https://bugs.python.org/issue?@action=redirect&bpo=43799]: OpenSSL 3.0.0: define `OPENSSL_API_COMPAT 1.1.1` to suppress deprecation warnings. Python requires OpenSSL 1.1.1 APIs.
- [bpo-43478](https://bugs.python.org/issue?@action=redirect&bpo=43478) [https://bugs.python.org/issue?@action=redirect&bpo=43478]: Mocks can no longer be used as

the specs for other Mocks. As a result, an already-mocked object cannot have an attribute mocked using `autospec=True` or be the subject of a `create_autospec(...)` call. This can uncover bugs in tests since these Mock-derived Mocks will always pass certain tests (e.g. `isinstance()`) and builtin assert functions (e.g. `assert_called_once_with()`) will unconditionally pass.

- [bpo-43794](https://bugs.python.org/issue?@action=redirect&bpo=43794) [https://bugs.python.org/issue?@action=redirect&bpo=43794]: Add `ssl.OP_IGNORE_UNEXPECTED_EOF` constants (OpenSSL 3.0.0)
- [bpo-43785](https://bugs.python.org/issue?@action=redirect&bpo=43785) [https://bugs.python.org/issue?@action=redirect&bpo=43785]: Improve `bz2.BZ2File` performance by removing the `RLock` from `BZ2File`. This makes `BZ2File` thread unsafe in the face of multiple simultaneous readers or writers, just like its equivalent classes in `gzip` and `lzma` have always been. Patch by Inada Naoki.
- [bpo-43789](https://bugs.python.org/issue?@action=redirect&bpo=43789) [https://bugs.python.org/issue?@action=redirect&bpo=43789]: OpenSSL 3.0.0: Don't call the password callback function a second time when first call has signaled an error condition.
- [bpo-43788](https://bugs.python.org/issue?@action=redirect&bpo=43788) [https://bugs.python.org/issue?@action=redirect&bpo=43788]: The header files for `ssl` error codes are now OpenSSL version-specific. Exceptions will now show correct reason and library codes. The `make_ssl_data.py` script has been rewritten to use OpenSSL's text file with error codes.
- [bpo-43766](https://bugs.python.org/issue?@action=redirect&bpo=43766) [https://bugs.python.org/issue?@action=redirect&bpo=43766]: Implement [PEP 647](https://peps.python.org/pep-0647/) [https://peps.python.org/pep-0647/] in the `typing` module by adding **TypeGuard**.
- [bpo-25264](https://bugs.python.org/issue?@action=redirect&bpo=25264) [https://bugs.python.org/issue?@action=redirect&bpo=25264]: `os.path.realpath()` now accepts a *strict* keyword-only argument. When set to `True`, **OSError** is raised if a path doesn't exist or a symlink loop is

encountered.

- [bpo-43780](https://bugs.python.org/issue?@action=redirect&bpo=43780) [https://bugs.python.org/issue?@action=redirect&bpo=43780]: In `importlib.metadata`, incorporate changes from `importlib_metadata 3.10`: Add mtime-based caching during distribution discovery. Flagged use of dict result from `entry_points()` as deprecated.
- The `P.args` and `P.kwargs` attributes of `typing.ParamSpec` are now instances of the new classes `typing.ParamSpecArgs` and `typing.ParamSpecKwargs`, which enables a more useful `repr()`. Patch by Jelle Zijlstra.
- [bpo-43731](https://bugs.python.org/issue?@action=redirect&bpo=43731) [https://bugs.python.org/issue?@action=redirect&bpo=43731]: Add an `encoding` parameter `logging.fileConfig()`.
- [bpo-43712](https://bugs.python.org/issue?@action=redirect&bpo=43712) [https://bugs.python.org/issue?@action=redirect&bpo=43712]: Add `encoding` and `errors` parameters to `fileinput.input()` and `fileinput.FileInput`.
- [bpo-38659](https://bugs.python.org/issue?@action=redirect&bpo=38659) [https://bugs.python.org/issue?@action=redirect&bpo=38659]: A `simple_enum` decorator is added to the `enum` module to convert a normal class into an `Enum`. `test_simple_enum` added to test simple enums against a corresponding normal `Enum`. Standard library modules updated to use `simple_enum`.
- [bpo-43764](https://bugs.python.org/issue?@action=redirect&bpo=43764) [https://bugs.python.org/issue?@action=redirect&bpo=43764]: Fix an issue where `__match_args__` generation could fail for some `dataclasses`.
- [bpo-43752](https://bugs.python.org/issue?@action=redirect&bpo=43752) [https://bugs.python.org/issue?@action=redirect&bpo=43752]: Fix `sqlite3` regression for zero-sized blobs with converters, where `b""` was returned instead of `None`. The regression was introduced by PR 24723. Patch by Erlend E. Aasland.

- [bpo-43655](https://bugs.python.org/issue?@action=redirect&bpo=43655) [https://bugs.python.org/issue?@action=redirect&bpo=43655]: **tkinter** dialog windows are now recognized as dialogs by window managers on macOS and X Window.
- [bpo-43723](https://bugs.python.org/issue?@action=redirect&bpo=43723) [https://bugs.python.org/issue?@action=redirect&bpo=43723]: The following `threading` methods are now deprecated and should be replaced:

- `currentThread => threading.current_thread()`
- `activeCount => threading.active_count()`
- `Condition.notifyAll => threading.Condition.notify_all()`
- `Event.isSet => threading.Event.is_set()`
- `Thread.setName => threading.Thread.name`
- `thread.getName => threading.Thread.name`
- `Thread.isDaemon => threading.Thread.daemon`
- `Thread.setDaemon => threading.Thread.daemon`

Patch by Jelle Zijlstra.

- [bpo-2135](https://bugs.python.org/issue?@action=redirect&bpo=2135) [https://bugs.python.org/issue?@action=redirect&bpo=2135]: Deprecate `find_module()` and `find_loader()` implementations in `importlib` and `zipimport`.
- [bpo-43534](https://bugs.python.org/issue?@action=redirect&bpo=43534) [https://bugs.python.org/issue?@action=redirect&bpo=43534]: **`turtle.textinput()`** and **`turtle.numinput()`** create now a transient window working on behalf of the canvas window.
- [bpo-43532](https://bugs.python.org/issue?@action=redirect&bpo=43532) [https://bugs.python.org/issue?@action=redirect&bpo=43532]: Add the ability to specify keyword-only fields to dataclasses. These fields will become keyword-only arguments to the generated `__init__`.
- [bpo-43522](https://bugs.python.org/issue?@action=redirect&bpo=43522) [https://bugs.python.org/issue?@action=redirect&bpo=43522]: Fix problem with **`hostname_checks_common_name`**. OpenSSL does not copy

hostflags from *struct SSL\_CTX* to *struct SSL*.

- [bpo-8978](https://bugs.python.org/issue?@action=redirect&bpo=8978) [https://bugs.python.org/issue?@action=redirect&bpo=8978]: Improve error message for `tarfile.open()` when `lzma` / `bz2` are unavailable. Patch by Anthony Sottile.
- [bpo-42967](https://bugs.python.org/issue?@action=redirect&bpo=42967) [https://bugs.python.org/issue?@action=redirect&bpo=42967]: Allow `bytes` separator argument in `urllib.parse.parse_qs` and `urllib.parse.parse_qs1` when parsing `str` query strings. Previously, this raised a `TypeError`.
- [bpo-43296](https://bugs.python.org/issue?@action=redirect&bpo=43296) [https://bugs.python.org/issue?@action=redirect&bpo=43296]: Improve `sqlite3` error handling: `sqlite3_value_blob()` errors that set `SQLITE_NOMEM` now raise `MemoryError`. Patch by Erlend E. Aasland.
- [bpo-43312](https://bugs.python.org/issue?@action=redirect&bpo=43312) [https://bugs.python.org/issue?@action=redirect&bpo=43312]: New functions `sysconfig.get_preferred_scheme()` and `sysconfig.get_default_scheme()` are added to query a platform for its preferred “user”, “home”, and “prefix” (default) scheme names.
- [bpo-43265](https://bugs.python.org/issue?@action=redirect&bpo=43265) [https://bugs.python.org/issue?@action=redirect&bpo=43265]: Improve `sqlite3.Connection.backup()` error handling. The error message for non-existent target database names is now unknown database <database name> instead of SQL logic error. Patch by Erlend E. Aasland.
- [bpo-41282](https://bugs.python.org/issue?@action=redirect&bpo=41282) [https://bugs.python.org/issue?@action=redirect&bpo=41282]: Install schemes in `distutils.command.install` are now loaded from `sysconfig`.
- [bpo-41282](https://bugs.python.org/issue?@action=redirect&bpo=41282) [https://bugs.python.org/issue?@action=redirect&bpo=41282]: `distutils.sysconfig` has been merged to `sysconfig`.

- [bpo-43176](https://bugs.python.org/issue?@action=redirect&bpo=43176) [https://bugs.python.org/issue?@action=redirect&bpo=43176]: Fixed processing of a dataclass that inherits from a frozen dataclass with no fields. It is now correctly detected as an error.
- [bpo-43080](https://bugs.python.org/issue?@action=redirect&bpo=43080) [https://bugs.python.org/issue?@action=redirect&bpo=43080]: `pprint` now has support for `dataclasses.dataclass`. Patch by Lewis Gaul.
- [bpo-39950](https://bugs.python.org/issue?@action=redirect&bpo=39950) [https://bugs.python.org/issue?@action=redirect&bpo=39950]: Add `pathlib.Path.hardlink_to()` method that supersedes `link_to()`. The new method has the same argument order as `symlink_to()`.
- [bpo-42904](https://bugs.python.org/issue?@action=redirect&bpo=42904) [https://bugs.python.org/issue?@action=redirect&bpo=42904]: `typing.get_type_hints()` now checks the local namespace of a class when evaluating [PEP 563](https://peps.python.org/pep-0563/) [https://peps.python.org/pep-0563/] annotations inside said class.
- [bpo-42269](https://bugs.python.org/issue?@action=redirect&bpo=42269) [https://bugs.python.org/issue?@action=redirect&bpo=42269]: Add `slots` parameter to `dataclasses.dataclass` decorator to automatically generate `__slots__` for class. Patch provided by Yurii Karabas.
- [bpo-39529](https://bugs.python.org/issue?@action=redirect&bpo=39529) [https://bugs.python.org/issue?@action=redirect&bpo=39529]: Deprecated use of `asyncio.get_event_loop()` without running event loop. Emit deprecation warning for `asyncio` functions which implicitly create a `Future` or `Task` objects if there is no running event loop and no explicit `loop` argument is passed: `ensure_future()`, `wrap_future()`, `gather()`, `shield()`, `as_completed()` and constructors of `Future`, `Task`, `StreamReader`, `StreamReaderProtocol`.
- [bpo-18369](https://bugs.python.org/issue?@action=redirect&bpo=18369) [https://bugs.python.org/issue?@action=redirect&bpo=18369]: Certificate and PrivateKey classes were added to the `ssl` module. Certificates and keys can now be loaded from memory buffer, too.

- [bpo-41486](https://bugs.python.org/issue?@action=redirect&bpo=41486) [https://bugs.python.org/issue?@action=redirect&bpo=41486]: Use a new output buffer management code for **bz2** / **lzma** / **zlib** modules, and add `.readall()` function to `_compression.DecompressReader` class. These bring some performance improvements. Patch by Ma Lin.
- [bpo-31870](https://bugs.python.org/issue?@action=redirect&bpo=31870) [https://bugs.python.org/issue?@action=redirect&bpo=31870]: The **`ssl.get_server_certificate()`** function now has a *timeout* parameter.
- [bpo-41735](https://bugs.python.org/issue?@action=redirect&bpo=41735) [https://bugs.python.org/issue?@action=redirect&bpo=41735]: Fix thread locks in **zlib** module may go wrong in rare case. Patch by Ma Lin.
- [bpo-36470](https://bugs.python.org/issue?@action=redirect&bpo=36470) [https://bugs.python.org/issue?@action=redirect&bpo=36470]: Fix dataclasses with `InitVars` and **`replace()`**. Patch by Claudiu Popa.
- [bpo-40849](https://bugs.python.org/issue?@action=redirect&bpo=40849) [https://bugs.python.org/issue?@action=redirect&bpo=40849]: Expose `X509_V_FLAG_PARTIAL_CHAIN` **ssl** flag
- [bpo-35114](https://bugs.python.org/issue?@action=redirect&bpo=35114) [https://bugs.python.org/issue?@action=redirect&bpo=35114]: **`ssl.RAND_status()`** now returns a boolean value (as documented) instead of `1` or `0`.
- [bpo-39906](https://bugs.python.org/issue?@action=redirect&bpo=39906) [https://bugs.python.org/issue?@action=redirect&bpo=39906]: **`pathlib.Path.stat()`** and **`chmod()`** now accept a *follow\_symlinks* keyword-only argument for consistency with corresponding functions in the **os** module.
- [bpo-39899](https://bugs.python.org/issue?@action=redirect&bpo=39899) [https://bugs.python.org/issue?@action=redirect&bpo=39899]: **`os.path.expanduser()`** now refuses to guess Windows home directories if the basename of current user's home directory does not match their username.

**`pathlib.Path.expanduser()`** and **`home()`** now consistently raise **`RuntimeError`** exception when a home

directory cannot be resolved. Previously a `KeyError` exception could be raised on Windows when the "USERNAME" environment variable was unset.

- [bpo-36076](https://bugs.python.org/issue?@action=redirect&bpo=36076) [https://bugs.python.org/issue?@action=redirect&bpo=36076]: Added SNI support to `ssl.get_server_certificate()`.
- [bpo-38490](https://bugs.python.org/issue?@action=redirect&bpo=38490) [https://bugs.python.org/issue?@action=redirect&bpo=38490]: Covariance, Pearson's correlation, and simple linear regression functionality was added to statistics module. Patch by Tymoteusz Wołodźko.
- [bpo-33731](https://bugs.python.org/issue?@action=redirect&bpo=33731) [https://bugs.python.org/issue?@action=redirect&bpo=33731]: Provide a `locale.localize()` function, which converts a normalized number string into a locale format.
- [bpo-32745](https://bugs.python.org/issue?@action=redirect&bpo=32745) [https://bugs.python.org/issue?@action=redirect&bpo=32745]: Fix a regression in the handling of ctypes' `ctypes.c_wchar_p` type: embedded null characters would cause a `ValueError` to be raised. Patch by Zackery Spytz.

## Documentation

- [bpo-43987](https://bugs.python.org/issue?@action=redirect&bpo=43987) [https://bugs.python.org/issue?@action=redirect&bpo=43987]: Add "Annotations Best Practices" document as a new HOWTO.
- [bpo-43977](https://bugs.python.org/issue?@action=redirect&bpo=43977) [https://bugs.python.org/issue?@action=redirect&bpo=43977]: Document the new `Py_TPFLAGS_MAPPING` and `Py_TPFLAGS_SEQUENCE` type flags.
- [bpo-43959](https://bugs.python.org/issue?@action=redirect&bpo=43959) [https://bugs.python.org/issue?@action=redirect&bpo=43959]: The documentation on the `PyContextVar` C-API was clarified.
- [bpo-43938](https://bugs.python.org/issue?@action=redirect&bpo=43938) [https://bugs.python.org/issue?@action=redirect&bpo=43938]: Update dataclasses documentation to express that `FrozenInstanceError` is derived from `AttributeError`.

- [bpo-43778](https://bugs.python.org/issue?@action=redirect&bpo=43778) [https://bugs.python.org/issue?@action=redirect&bpo=43778]: Fix the Sphinx glossary\_search extension: create the `_static/` sub-directory if it doesn't exist.
- [bpo-43755](https://bugs.python.org/issue?@action=redirect&bpo=43755) [https://bugs.python.org/issue?@action=redirect&bpo=43755]: Update documentation to reflect that unparenthesized lambda expressions can no longer be the expression part in an `if` clause in comprehensions and generator expressions since Python 3.9.
- [bpo-43739](https://bugs.python.org/issue?@action=redirect&bpo=43739) [https://bugs.python.org/issue?@action=redirect&bpo=43739]: Fixing the example code in `Doc/extending/extending.rst` to declare and initialize the `pmodule` variable to be of the right type.

## Tests

- [bpo-43961](https://bugs.python.org/issue?@action=redirect&bpo=43961) [https://bugs.python.org/issue?@action=redirect&bpo=43961]: Fix `test_logging.test_namer_rotator_inheritance()` on Windows: use `os.replace()` rather than `os.rename()`. Patch by Victor Stinner.
- [bpo-43842](https://bugs.python.org/issue?@action=redirect&bpo=43842) [https://bugs.python.org/issue?@action=redirect&bpo=43842]: Fix a race condition in the SMTP test of `test_logging`. Don't close a file descriptor (socket) from a different thread while `asyncore.loop()` is polling the file descriptor. Patch by Victor Stinner.
- [bpo-43843](https://bugs.python.org/issue?@action=redirect&bpo=43843) [https://bugs.python.org/issue?@action=redirect&bpo=43843]: `test.libregtest` now marks a test as `ENV_CHANGED` (altered the execution environment) if a thread raises an exception but does not catch it. It sets a hook on `threading.excepthook()`. Use `--fail-env-changed` option to mark the test as failed. Patch by Victor Stinner.
- [bpo-43811](https://bugs.python.org/issue?@action=redirect&bpo=43811) [https://bugs.python.org/issue?@action=redirect&bpo=43811]: Tests multiple OpenSSL versions on GitHub Actions. Use `ccache` to speed up testing.
- [bpo-43791](https://bugs.python.org/issue?@action=redirect&bpo=43791) [https://bugs.python.org/issue?@action=redirect&bpo=43791]: OpenSSL 3.0.0: Disable testing of legacy protocols TLS 1.0 and 1.1. Tests are failing with `TLSV1_ALERT_INTERNAL_ERROR`.

## Build

- [bpo-43567](https://bugs.python.org/issue?@action=redirect&bpo=43567) [https://bugs.python.org/issue?@action=redirect&bpo=43567]: Improved generated code refresh (AST/tokens/opcodes/keywords) on Windows.
- [bpo-43669](https://bugs.python.org/issue?@action=redirect&bpo=43669) [https://bugs.python.org/issue?@action=redirect&bpo=43669]: Implement [PEP 644](https://peps.python.org/pep-0644/) [https://peps.python.org/pep-0644/]. Python now requires OpenSSL 1.1.1 or newer.

## Windows

- [bpo-35306](https://bugs.python.org/issue?@action=redirect&bpo=35306) [https://bugs.python.org/issue?@action=redirect&bpo=35306]: Adds additional arguments to `os.startfile()` function.
- [bpo-43538](https://bugs.python.org/issue?@action=redirect&bpo=43538) [https://bugs.python.org/issue?@action=redirect&bpo=43538]: Avoid raising errors from `pathlib.Path.exists()` when passed an invalid filename.
- [bpo-38822](https://bugs.python.org/issue?@action=redirect&bpo=38822) [https://bugs.python.org/issue?@action=redirect&bpo=38822]: Fixed `os.stat()` failing on inaccessible directories with a trailing slash, rather than falling back to the parent directory's metadata. This implicitly affected `os.path.exists()` and `os.path.isdir()`.
- [bpo-26227](https://bugs.python.org/issue?@action=redirect&bpo=26227) [https://bugs.python.org/issue?@action=redirect&bpo=26227]: Fixed decoding of host names in `socket.gethostbyaddr()` and `socket.gethostbyname_ex()`.
- [bpo-40432](https://bugs.python.org/issue?@action=redirect&bpo=40432) [https://bugs.python.org/issue?@action=redirect&bpo=40432]: Updated pegen regeneration script on Windows to find and use Python 3.8 or higher. Prior to this, pegen regeneration already required 3.8 or higher, but the script may have used lower versions of Python.
- [bpo-43745](https://bugs.python.org/issue?@action=redirect&bpo=43745) [https://bugs.python.org/issue?@action=redirect&bpo=43745]: Actually updates Windows release to OpenSSL 1.1.1k. Earlier releases were mislabelled and actually included 1.1.1i again.
- [bpo-43652](https://bugs.python.org/issue?@action=redirect&bpo=43652) [https://bugs.python.org/issue?@action=redirect&bpo=43652]: Update Tcl and Tk to 8.6.11 in Windows installer.

- [bpo-43492](https://bugs.python.org/issue?@action=redirect&bpo=43492) [https://bugs.python.org/issue?@action=redirect&bpo=43492]: Upgrade Windows installer to use SQLite 3.35.5.
- [bpo-30555](https://bugs.python.org/issue?@action=redirect&bpo=30555) [https://bugs.python.org/issue?@action=redirect&bpo=30555]: Fix WindowsConsoleIO errors in the presence of fd redirection. Patch by Segev Finer.

## macOS

- [bpo-42119](https://bugs.python.org/issue?@action=redirect&bpo=42119) [https://bugs.python.org/issue?@action=redirect&bpo=42119]: Fix check for macOS SDK paths when building Python. Narrow search to match contents of SDKs, namely only files in `/System/Library`, `/System/IOSSupport`, and `/usr` other than `/usr/local`. Previously, anything under `/System` was assumed to be in an SDK which causes problems with the new file system layout in 10.15+ where user file systems may appear to be mounted under `/System`. Paths in `/Library` were also incorrectly treated as SDK locations.
- [bpo-43568](https://bugs.python.org/issue?@action=redirect&bpo=43568) [https://bugs.python.org/issue?@action=redirect&bpo=43568]: Drop support for `MACOSX_DEPLOYMENT_TARGET < 10.3`
- [bpo-44009](https://bugs.python.org/issue?@action=redirect&bpo=44009) [https://bugs.python.org/issue?@action=redirect&bpo=44009]: Provide “python3.x-intel64” executable to allow reliably forcing macOS universal2 framework builds to run under Rosetta 2 Intel-64 emulation on Apple Silicon Macs. This can be useful for testing or when universal2 wheels are not yet available.
- [bpo-43851](https://bugs.python.org/issue?@action=redirect&bpo=43851) [https://bugs.python.org/issue?@action=redirect&bpo=43851]: Build SQLite with `SQLITE_OMIT_AUTOINIT` on macOS. Patch by Erlend E. Aasland.
- [bpo-43492](https://bugs.python.org/issue?@action=redirect&bpo=43492) [https://bugs.python.org/issue?@action=redirect&bpo=43492]: Update macOS installer to use SQLite 3.35.4.
- [bpo-42235](https://bugs.python.org/issue?@action=redirect&bpo=42235) [https://bugs.python.org/issue?@action=redirect&bpo=42235]: `Mac/BuildScript/build-installer.py` will now use “`--enable-optimizations`” and “`--with-lto`” when building on macOS 10.15 or later.

## IDLE

- [bpo-37903](https://bugs.python.org/issue?@action=redirect&bpo=37903) [https://bugs.python.org/issue?@action=redirect&bpo=37903]: Add mouse actions to the shell sidebar. Left click and optional drag selects one or more lines, as with the editor line number sidebar. Right click after selecting raises a context menu with ‘copy with prompts’. This zips together prompts from the sidebar with lines from the selected text.
- [bpo-43981](https://bugs.python.org/issue?@action=redirect&bpo=43981) [https://bugs.python.org/issue?@action=redirect&bpo=43981]: Fix reference leak in test\_sidebar and test\_squeezer. Patches by Terry Jan Reedy and Pablo Galindo
- [bpo-37892](https://bugs.python.org/issue?@action=redirect&bpo=37892) [https://bugs.python.org/issue?@action=redirect&bpo=37892]: Indent IDLE Shell input with spaces instead of tabs
- [bpo-43655](https://bugs.python.org/issue?@action=redirect&bpo=43655) [https://bugs.python.org/issue?@action=redirect&bpo=43655]: IDLE dialog windows are now recognized as dialogs by window managers on macOS and X Window.
- [bpo-37903](https://bugs.python.org/issue?@action=redirect&bpo=37903) [https://bugs.python.org/issue?@action=redirect&bpo=37903]: IDLE’s shell now shows prompts in a separate side-bar.

## C API

- [bpo-43916](https://bugs.python.org/issue?@action=redirect&bpo=43916) [https://bugs.python.org/issue?@action=redirect&bpo=43916]: Add a new **Py\_TPFLAGS\_DISALLOW\_INSTANTIATION** type flag to disallow creating type instances. Patch by Victor Stinner.
- [bpo-43774](https://bugs.python.org/issue?@action=redirect&bpo=43774) [https://bugs.python.org/issue?@action=redirect&bpo=43774]: Remove the now unused PYMALLOC\_DEBUG macro. Debug hooks on memory allocators are now installed by default if Python is built in debug mode (if `Py_DEBUG` macro is defined). Moreover, they can now be used on Python build in release mode (ex: using `PYTHONMALLOC=debug` environment variable).
- [bpo-43962](https://bugs.python.org/issue?@action=redirect&bpo=43962) [https://bugs.python.org/issue?@action=redirect&bpo=43962]: `_PyInterpreterState_IDIncref()` now calls `_PyInterpreterState_IDInitref()` and always increments

`id_refcount`. Previously, calling `_xxsubinterpreters.get_current()` could create an `id_refcount` inconsistency when a `_xxsubinterpreters.InterpreterID` object was deallocated. Patch by Victor Stinner.

- [bpo-28254](https://bugs.python.org/issue?@action=redirect&bpo=28254) [https://bugs.python.org/issue?@action=redirect&bpo=28254]: Add new C-API functions to control the state of the garbage collector: `PyGC_Enable()`, `PyGC_Disable()`, `PyGC_IsEnabled()`, corresponding to the functions in the `gc` module.
- [bpo-43908](https://bugs.python.org/issue?@action=redirect&bpo=43908) [https://bugs.python.org/issue?@action=redirect&bpo=43908]: Introduce `Py_TPFLAGS_IMMUTABLETYPE` flag for immutable type objects, and modify `PyType_Ready()` to set it for static types. Patch by Erlend E. Aasland.
- [bpo-43795](https://bugs.python.org/issue?@action=redirect&bpo=43795) [https://bugs.python.org/issue?@action=redirect&bpo=43795]: `PyMem_Calloc()` is now available in the limited C API (`Py_LIMITED_API`).
- [bpo-43868](https://bugs.python.org/issue?@action=redirect&bpo=43868) [https://bugs.python.org/issue?@action=redirect&bpo=43868]: `PyOS_ReadlineFunctionPointer()` is no longer exported by limited C API headers and by `python3.dll` on Windows. Like any function that takes `FILE*`, it is not part of the stable ABI.
- [bpo-43795](https://bugs.python.org/issue?@action=redirect&bpo=43795) [https://bugs.python.org/issue?@action=redirect&bpo=43795]: Stable ABI and limited API definitions are generated from a central manifest ([PEP 652](https://peps.python.org/pep-0652/) [https://peps.python.org/pep-0652/]).
- [bpo-43753](https://bugs.python.org/issue?@action=redirect&bpo=43753) [https://bugs.python.org/issue?@action=redirect&bpo=43753]: Add the `Py_Is(x, y)` function to test if the `x` object is the `y` object, the same as `x is y` in Python. Add also the `Py_IsNone()`, `Py_IsTrue()`, `Py_IsFalse()` functions to test if an object is, respectively, the `None` singleton, the `True` singleton or the `False` singleton. Patch by Victor Stinner.

## Python 3.10.0 alpha 7

*Release date: 2021-04-05*

## Security

- [bpo-42988](https://bugs.python.org/issue?@action=redirect&bpo=42988) [https://bugs.python.org/issue?@action=redirect&bpo=42988]: CVE-2021-3426: Remove the `getFile` feature of the `pydoc` module which could be abused to read arbitrary files on the disk (directory traversal vulnerability). Moreover, even source code of Python modules can contain sensitive data like passwords. Vulnerability reported by David Schwörer.
- [bpo-43285](https://bugs.python.org/issue?@action=redirect&bpo=43285) [https://bugs.python.org/issue?@action=redirect&bpo=43285]: `ftplib` no longer trusts the IP address value returned from the server in response to the PASV command by default. This prevents a malicious FTP server from using the response to probe IPv4 address and port combinations on the client network.

Code that requires the former vulnerable behavior may set a `trust_server_pasv_ipv4_address` attribute on their `ftplib.FTP` instances to `True` to re-enable it.

- [bpo-43439](https://bugs.python.org/issue?@action=redirect&bpo=43439) [https://bugs.python.org/issue?@action=redirect&bpo=43439]: Add audit hooks for `gc.get_objects()`, `gc.get_referrers()` and `gc.get_referents()`. Patch by Pablo Galindo.

## Core and Builtins

- [bpo-27129](https://bugs.python.org/issue?@action=redirect&bpo=27129) [https://bugs.python.org/issue?@action=redirect&bpo=27129]: Update CPython bytecode magic number.
- [bpo-43672](https://bugs.python.org/issue?@action=redirect&bpo=43672) [https://bugs.python.org/issue?@action=redirect&bpo=43672]: Raise `ImportWarning` when calling `find_loader()`.
- [bpo-43660](https://bugs.python.org/issue?@action=redirect&bpo=43660) [https://bugs.python.org/issue?@action=redirect&bpo=43660]: Fix crash that happens when replacing `sys.stderr` with a callable that can remove the object while an exception is being printed. Patch by Pablo Galindo.

- [bpo-27129](https://bugs.python.org/issue?@action=redirect&bpo=27129) [https://bugs.python.org/issue?@action=redirect&bpo=27129]: The bytecode interpreter uses instruction, rather byte, offsets internally. This reduces the number of EXTENDED\_ARG instructions needed and streamlines instruction dispatch a bit.
- [bpo-40645](https://bugs.python.org/issue?@action=redirect&bpo=40645) [https://bugs.python.org/issue?@action=redirect&bpo=40645]: Fix reference leak in the `_hashopenssl` extension. Patch by Pablo Galindo.
- [bpo-42134](https://bugs.python.org/issue?@action=redirect&bpo=42134) [https://bugs.python.org/issue?@action=redirect&bpo=42134]: Calls to `find_module()` by the import system now raise `ImportWarning`.
- [bpo-41064](https://bugs.python.org/issue?@action=redirect&bpo=41064) [https://bugs.python.org/issue?@action=redirect&bpo=41064]: Improve the syntax error for invalid usage of double starred elements (`**`) in f-strings. Patch by Pablo Galindo.
- [bpo-43575](https://bugs.python.org/issue?@action=redirect&bpo=43575) [https://bugs.python.org/issue?@action=redirect&bpo=43575]: Speed up calls to `map()` by using the [PEP 590](https://peps.python.org/pep-0590/) [https://peps.python.org/pep-0590/] `vectorcall` calling convention. Patch by Dong-hee Na.
- [bpo-42137](https://bugs.python.org/issue?@action=redirect&bpo=42137) [https://bugs.python.org/issue?@action=redirect&bpo=42137]: The import system now prefers using `__spec__` for `ModuleType.__repr__` over `module_repr()`.
- [bpo-43452](https://bugs.python.org/issue?@action=redirect&bpo=43452) [https://bugs.python.org/issue?@action=redirect&bpo=43452]: Added micro-optimizations to `_PyType_Lookup()` to improve cache lookup performance in the common case of cache hits.
- [bpo-43555](https://bugs.python.org/issue?@action=redirect&bpo=43555) [https://bugs.python.org/issue?@action=redirect&bpo=43555]: Report the column offset for `SyntaxError` for invalid line continuation characters. Patch by Pablo Galindo.
- [bpo-43517](https://bugs.python.org/issue?@action=redirect&bpo=43517) [https://bugs.python.org/issue?@action=redirect&bpo=43517]: Fix misdetection of circular

imports when using `from pkg.mod import attr`, which caused false positives in non-trivial multi-threaded code.

- [bpo-43497](https://bugs.python.org/issue?@action=redirect&bpo=43497) [https://bugs.python.org/issue?@action=redirect&bpo=43497]: Emit `SyntaxWarnings` for assertions with tuple constants, this is a regression introduced in python3.7
- [bpo-39316](https://bugs.python.org/issue?@action=redirect&bpo=39316) [https://bugs.python.org/issue?@action=redirect&bpo=39316]: Tracing now has correct line numbers for attribute accesses when the attribute is on a different line from the object. Improves debugging and profiling for multi-line method chains.
- [bpo-35883](https://bugs.python.org/issue?@action=redirect&bpo=35883) [https://bugs.python.org/issue?@action=redirect&bpo=35883]: Python no longer fails at startup with a fatal error if a command line argument contains an invalid Unicode character. The `Py_DecodeLocale()` function now escapes byte sequences which would be decoded as Unicode characters outside the [U+0000; U+10ffff] range.
- [bpo-43410](https://bugs.python.org/issue?@action=redirect&bpo=43410) [https://bugs.python.org/issue?@action=redirect&bpo=43410]: Fix a bug that was causing the parser to crash when emitting syntax errors when reading input from stdin. Patch by Pablo Galindo
- [bpo-43406](https://bugs.python.org/issue?@action=redirect&bpo=43406) [https://bugs.python.org/issue?@action=redirect&bpo=43406]: Fix a possible race condition where `PyErr_CheckSignals` tries to execute a non-Python signal handler.
- [bpo-42128](https://bugs.python.org/issue?@action=redirect&bpo=42128) [https://bugs.python.org/issue?@action=redirect&bpo=42128]: Add `__match_args__` to **structsequence** based classes. Patch by Pablo Galindo.
- [bpo-43390](https://bugs.python.org/issue?@action=redirect&bpo=43390) [https://bugs.python.org/issue?@action=redirect&bpo=43390]: CPython now sets the `SA_ONSTACK` flag in `PyOS_setsig` for the VM's default signal handlers. This is friendlier to other in-process code that an extension module or embedding use could pull in (such as

Golang's `cgo`) where tiny thread stacks are the norm and `sigaltstack()` has been used to provide for signal handlers. This is a no-op change for the vast majority of processes that don't use `sigaltstack`.

- [bpo-43287](https://bugs.python.org/issue?@action=redirect&bpo=43287) [https://bugs.python.org/issue?@action=redirect&bpo=43287]: Speed up calls to `filter()` by using the [PEP 590](https://peps.python.org/pep-0590/) [https://peps.python.org/pep-0590/] `vectorcall` calling convention. Patch by Dong-hee Na.
- [bpo-37448](https://bugs.python.org/issue?@action=redirect&bpo=37448) [https://bugs.python.org/issue?@action=redirect&bpo=37448]: Add a radix tree based memory map to track in-use obmalloc arenas. Use to replace the old implementation of `address_in_range()`. The radix tree approach makes it easy to increase pool sizes beyond the OS page size. Boosting the pool and arena size allows obmalloc to handle a significantly higher percentage of requests from its ultra-fast paths.

It also has the advantage of eliminating the memory unsanitary behavior of the previous `address_in_range()`. The old `address_in_range()` was marked with the annotations `_Py_NO_SANITIZE_ADDRESS`, `_Py_NO_SANITIZE_THREAD`, and `_Py_NO_SANITIZE_MEMORY`. Those annotations are no longer needed.

To disable the radix tree map, set a preprocessor flag as follows: `-DWITH_PYMALLOC_RADIX_TREE=0`.

Co-authored-by: Tim Peters <[tim.peters@gmail.com](mailto:tim.peters@gmail.com)>

- [bpo-29988](https://bugs.python.org/issue?@action=redirect&bpo=29988) [https://bugs.python.org/issue?@action=redirect&bpo=29988]: Only handle asynchronous exceptions and requests to drop the GIL when returning from a call or on the back edges of loops. Makes sure that `__exit__()` is always called in with statements, even for interrupts.

## Library

- [bpo-43720](https://bugs.python.org/issue?@action=redirect&bpo=43720) [https://bugs.python.org/issue?@action=redirect&bpo=43720]

@action=redirect&bpo=43720]: Document various stdlib deprecations in `imp`, `pkgutil`, and `importlib.util` for removal in Python 3.12.

- [bpo-43433](https://bugs.python.org/issue?@action=redirect&bpo=43433) [https://bugs.python.org/issue?@action=redirect&bpo=43433]: `xmlrpc.client.ServerProxy` no longer ignores query and fragment in the URL of the server.
- [bpo-31956](https://bugs.python.org/issue?@action=redirect&bpo=31956) [https://bugs.python.org/issue?@action=redirect&bpo=31956]: The `index()` method of `array.array` now has optional *start* and *stop* parameters.
- [bpo-40066](https://bugs.python.org/issue?@action=redirect&bpo=40066) [https://bugs.python.org/issue?@action=redirect&bpo=40066]: Enum: adjust `repr()` to show only enum and member name (not value, nor angle brackets) and `str()` to show only member name. Update and improve documentation to match.
- [bpo-42136](https://bugs.python.org/issue?@action=redirect&bpo=42136) [https://bugs.python.org/issue?@action=redirect&bpo=42136]: Deprecate all `module_repr()` methods found in `importlib` as their use is being phased out by Python 3.12.
- [bpo-35930](https://bugs.python.org/issue?@action=redirect&bpo=35930) [https://bugs.python.org/issue?@action=redirect&bpo=35930]: Raising an exception raised in a “future” instance will create reference cycles.
- [bpo-41369](https://bugs.python.org/issue?@action=redirect&bpo=41369) [https://bugs.python.org/issue?@action=redirect&bpo=41369]: Finish updating the vendored `libmpdec` to version 2.5.1. Patch by Stefan Krah.
- [bpo-43422](https://bugs.python.org/issue?@action=redirect&bpo=43422) [https://bugs.python.org/issue?@action=redirect&bpo=43422]: Revert the `_decimal` C API which was added in [bpo-41324](https://bugs.python.org/issue?@action=redirect&bpo=41324) [https://bugs.python.org/issue?@action=redirect&bpo=41324].
- [bpo-43577](https://bugs.python.org/issue?@action=redirect&bpo=43577) [https://bugs.python.org/issue?@action=redirect&bpo=43577]: Fix deadlock when using `ssl.SSLContext` debug callback with `ssl.SSLContext.sni_callback()`.

- [bpo-43571](https://bugs.python.org/issue?@action=redirect&bpo=43571) [https://bugs.python.org/issue?@action=redirect&bpo=43571]: It's now possible to create MPTCP sockets with IPPROTO\_MPTCP
- [bpo-43542](https://bugs.python.org/issue?@action=redirect&bpo=43542) [https://bugs.python.org/issue?@action=redirect&bpo=43542]: image/heic and image/heif were added to [mimetypes](#).
- [bpo-40645](https://bugs.python.org/issue?@action=redirect&bpo=40645) [https://bugs.python.org/issue?@action=redirect&bpo=40645]: The [hmac](#) module now uses OpenSSL's HMAC implementation when digestmod argument is a hash name or builtin hash function.
- [bpo-43510](https://bugs.python.org/issue?@action=redirect&bpo=43510) [https://bugs.python.org/issue?@action=redirect&bpo=43510]: Implement [PEP 597](https://peps.python.org/pep-0597/) [https://peps.python.org/pep-0597/]: Add EncodingWarning warning, -X warn\_default\_encoding option, [PYTHONWARNDEFAULTENCODING](#) environment variable and encoding="locale" argument value.
- [bpo-43521](https://bugs.python.org/issue?@action=redirect&bpo=43521) [https://bugs.python.org/issue?@action=redirect&bpo=43521]: ast.unparse can now render NaNs and empty sets.
- [bpo-42914](https://bugs.python.org/issue?@action=redirect&bpo=42914) [https://bugs.python.org/issue?@action=redirect&bpo=42914]: [pprint.pprint\(\)](#) gains a new boolean underscore\_numbers optional argument to emit integers with thousands separated by an underscore character for improved readability (for example 1\_000\_000 instead of 1000000).
- [bpo-41361](https://bugs.python.org/issue?@action=redirect&bpo=41361) [https://bugs.python.org/issue?@action=redirect&bpo=41361]: [rotate\(\)](#) calls are now slightly faster due to faster argument parsing.
- [bpo-43423](https://bugs.python.org/issue?@action=redirect&bpo=43423) [https://bugs.python.org/issue?@action=redirect&bpo=43423]: [subprocess.communicate\(\)](#) no longer raises an IndexError when there is an empty stdout or stderr IO buffer during a timeout on Windows.
- [bpo-27820](https://bugs.python.org/issue?@action=redirect&bpo=27820) [https://bugs.python.org/issue?@action=redirect&bpo=27820]

@action=redirect&bpo=27820]: Fixed long-standing bug of smtpplib.SMTP where doing AUTH LOGIN with initial\_response\_ok=False will fail.

The cause is that SMTP.auth\_login\_always\_ returns a password if provided with a challenge string, thus non-compliant with the standard for AUTH LOGIN.

Also fixes bug with the test for smtpd.

- [bpo-43445](https://bugs.python.org/issue?@action=redirect&bpo=43445) [https://bugs.python.org/issue?@action=redirect&bpo=43445]: Add frozen modules to **sys.stdlib\_module\_names**. For example, add `"_frozen_importlib"` and `"_frozen_importlib_external"` names.
- [bpo-43245](https://bugs.python.org/issue?@action=redirect&bpo=43245) [https://bugs.python.org/issue?@action=redirect&bpo=43245]: Add keyword arguments support to `ChainMap.new_child()`.
- [bpo-29982](https://bugs.python.org/issue?@action=redirect&bpo=29982) [https://bugs.python.org/issue?@action=redirect&bpo=29982]: Add optional parameter *ignore\_cleanup\_errors* to **tempfile.TemporaryDirectory()** and allow multiple **cleanup()** attempts. Contributed by C.A.M. Gerlach.
- [bpo-43428](https://bugs.python.org/issue?@action=redirect&bpo=43428) [https://bugs.python.org/issue?@action=redirect&bpo=43428]: Include changes from **importlib\_metadata 3.7** [https://importlib-metadata.readthedocs.io/en/latest/history.html#v3-7-0]:

Performance enhancements to distribution discovery.

`entry_points` only returns unique distributions.

Introduces new `EntryPoint` object for containing a set of entry points with convenience methods for selecting entry points by group or name. `entry_points` now returns this object if selection parameters are supplied but continues to return a dict object for compatibility. Users are encouraged to rely on the selection interface. The dict object result is likely

to be deprecated in the future.

Added `packages_distributions` function to return a mapping of packages to the distributions that provide them.

- [bpo-43332](https://bugs.python.org/issue?@action=redirect&bpo=43332) [https://bugs.python.org/issue?@action=redirect&bpo=43332]: Improves the networking efficiency of `http.client` when using a proxy via `set_tunnel()`. Fewer small send calls are made during connection setup.
- [bpo-43420](https://bugs.python.org/issue?@action=redirect&bpo=43420) [https://bugs.python.org/issue?@action=redirect&bpo=43420]: Improve performance of `fractions.Fraction` arithmetics for large components. Contributed by Sergey B. Kirpichev.
- [bpo-43356](https://bugs.python.org/issue?@action=redirect&bpo=43356) [https://bugs.python.org/issue?@action=redirect&bpo=43356]: Allow passing a signal number to `_thread.interrupt_main()`.
- [bpo-43399](https://bugs.python.org/issue?@action=redirect&bpo=43399) [https://bugs.python.org/issue?@action=redirect&bpo=43399]: Fix `ElementTree.extend` not working on iterators when using the Python implementation
- [bpo-43369](https://bugs.python.org/issue?@action=redirect&bpo=43369) [https://bugs.python.org/issue?@action=redirect&bpo=43369]: Improve `sqlite3` error handling: If `sqlite3_column_text()` and `sqlite3_column_blob()` set `SQLITE_NOMEM`, `MemoryError` is now raised. Patch by Erlend E. Aasland.
- [bpo-43368](https://bugs.python.org/issue?@action=redirect&bpo=43368) [https://bugs.python.org/issue?@action=redirect&bpo=43368]: Fix a regression introduced in PR 24562, where an empty bytestring was fetched as `None` instead of `b''` in `sqlite3`. Patch by Mariusz Felisiak.
- [bpo-41282](https://bugs.python.org/issue?@action=redirect&bpo=41282) [https://bugs.python.org/issue?@action=redirect&bpo=41282]: Fixed stacklevel of `DeprecationWarning` emitted from `import distutils`.
- [bpo-42129](https://bugs.python.org/issue?@action=redirect&bpo=42129) [https://bugs.python.org/issue?@action=redirect&bpo=42129]: `importlib.resources` now

honors namespace packages, merging resources from each location in the namespace as introduced in `importlib_resources` 3.2 and including incidental changes through 5.0.3.

- [bpo-43295](https://bugs.python.org/issue?@action=redirect&bpo=43295) [https://bugs.python.org/issue?@action=redirect&bpo=43295]: `datetime.datetime.strptime()` now raises `ValueError` instead of `IndexError` when matching `'z'` with the `%z` format specifier.
- [bpo-43125](https://bugs.python.org/issue?@action=redirect&bpo=43125) [https://bugs.python.org/issue?@action=redirect&bpo=43125]: Return empty string if `base64mime.body_encode` receive empty bytes
- [bpo-43084](https://bugs.python.org/issue?@action=redirect&bpo=43084) [https://bugs.python.org/issue?@action=redirect&bpo=43084]: `curses.window.enclose()` returns now `True` or `False` (as was documented) instead of `1` or `0`.
- [bpo-42994](https://bugs.python.org/issue?@action=redirect&bpo=42994) [https://bugs.python.org/issue?@action=redirect&bpo=42994]: Add MIME types for opus, AAC, 3gpp and 3gpp2
- [bpo-14678](https://bugs.python.org/issue?@action=redirect&bpo=14678) [https://bugs.python.org/issue?@action=redirect&bpo=14678]: Add an `invalidate_caches()` method to the `zipimport.zipimporter` class to support `importlib.invalidate_caches()`. Patch by Desmond Cheong.
- [bpo-42782](https://bugs.python.org/issue?@action=redirect&bpo=42782) [https://bugs.python.org/issue?@action=redirect&bpo=42782]: Fail fast in `shutil.move()` to avoid creating destination directories on failure.
- [bpo-40066](https://bugs.python.org/issue?@action=redirect&bpo=40066) [https://bugs.python.org/issue?@action=redirect&bpo=40066]: Enum's `repr()` and `str()` have changed: `repr()` is now `EnumClass.MemberName` and `str()` is `MemberName`. Additionally, `stdlib` Enum's whose contents are available as module attributes, such as `RegexFlag.IGNORECASE`, have their `repr()` as `module.name`, e.g. `re.IGNORECASE`.

- [bpo-26053](https://bugs.python.org/issue?@action=redirect&bpo=26053) [https://bugs.python.org/issue?@action=redirect&bpo=26053]: Fixed bug where the `pdb` interactive run command echoed the args from the shell command line, even if those have been overridden at the `pdb` prompt.
- [bpo-24160](https://bugs.python.org/issue?@action=redirect&bpo=24160) [https://bugs.python.org/issue?@action=redirect&bpo=24160]: Fixed bug where breakpoints did not persist across multiple debugger sessions in `pdb`'s interactive mode.
- [bpo-40701](https://bugs.python.org/issue?@action=redirect&bpo=40701) [https://bugs.python.org/issue?@action=redirect&bpo=40701]: When the `tempfile.tempdir` global variable is set to a value of type `bytes`, it is now handled consistently. Previously exceptions could be raised from some `tempfile` APIs when the directory did not already exist in this situation. Also ensures that the `tempfile.gettempdir()` and `tempfile.gettempdirb()` functions *always* return `str` and `bytes` respectively.
- [bpo-39342](https://bugs.python.org/issue?@action=redirect&bpo=39342) [https://bugs.python.org/issue?@action=redirect&bpo=39342]: Expose `X509_V_FLAG_ALLOW_PROXY_CERTS` as `VERIFY_ALLOW_PROXY_CERTS` to allow proxy certificate validation as explained in <https://www.openssl.org/docs/man1.1.1/man7/proxy-certificates.html>.
- [bpo-31861](https://bugs.python.org/issue?@action=redirect&bpo=31861) [https://bugs.python.org/issue?@action=redirect&bpo=31861]: Add `builtins.aiter` and `builtins.anext`. Patch by Joshua Bronson (@jab), Daniel Pope (@lordmauve), and Justin Wang (@justin39).

## Documentation

- [bpo-43199](https://bugs.python.org/issue?@action=redirect&bpo=43199) [https://bugs.python.org/issue?@action=redirect&bpo=43199]: Answer “Why is there no goto?” in the Design and History FAQ.
- [bpo-43407](https://bugs.python.org/issue?@action=redirect&bpo=43407) [https://bugs.python.org/issue?@action=redirect&bpo=43407]: Clarified that a result from

`time.monotonic()`, `time.perf_counter()`, `time.process_time()`, or `time.thread_time()` can be compared with the result from any following call to the same function - not just the next immediate call.

- [bpo-43354](https://bugs.python.org/issue?@action=redirect&bpo=43354) [https://bugs.python.org/issue?@action=redirect&bpo=43354]: Fix type documentation for `Fault.faultCode`; the type has to be `int` instead of `str`.
- [bpo-41933](https://bugs.python.org/issue?@action=redirect&bpo=41933) [https://bugs.python.org/issue?@action=redirect&bpo=41933]: Clarified wording of `s * n` in the Common Sequence Operations

## Tests

- [bpo-37945](https://bugs.python.org/issue?@action=redirect&bpo=37945) [https://bugs.python.org/issue?@action=redirect&bpo=37945]: Fix `test_getsetlocale_issue1813()` of `test_locale`: skip the test if `setlocale()` fails. Patch by Victor Stinner.
- [bpo-41561](https://bugs.python.org/issue?@action=redirect&bpo=41561) [https://bugs.python.org/issue?@action=redirect&bpo=41561]: Add workaround for Ubuntu's custom OpenSSL security level policy.

## Build

- [bpo-43179](https://bugs.python.org/issue?@action=redirect&bpo=43179) [https://bugs.python.org/issue?@action=redirect&bpo=43179]: Introduce and correctly use `ALIGNOF_X` in place of `SIZEOF_X` for alignment-related code in optimized string routines. Patch by Jessica Clarke.
- [bpo-43631](https://bugs.python.org/issue?@action=redirect&bpo=43631) [https://bugs.python.org/issue?@action=redirect&bpo=43631]: Update macOS, Windows, and CI to OpenSSL 1.1.1k.
- [bpo-43617](https://bugs.python.org/issue?@action=redirect&bpo=43617) [https://bugs.python.org/issue?@action=redirect&bpo=43617]: Improve `configure.ac`: Check for presence of `autoconf-archive` package and remove our copies of M4 macros.
- [bpo-43466](https://bugs.python.org/issue?@action=redirect&bpo=43466) [https://bugs.python.org/issue?@action=redirect&bpo=43466]: The `configure` script now supports `--with-openssl-rpath` option.
- [bpo-43372](https://bugs.python.org/issue?@action=redirect&bpo=43372) [https://bugs.python.org/issue?@action=redirect&bpo=43372]: Use `_freeze_importlib` to generate code for the `__hello__` module. This approach

ensures the code matches the interpreter version. Previously, `PYTHON_FOR_REGEN` was used to generate the code, which might be wrong. The marshal format for code objects has changed with [bpo-42246](https://bugs.python.org/issue?@action=redirect&bpo=42246) [https://bugs.python.org/issue?@action=redirect&bpo=42246], commit 877df851. Update the code and the expected code sizes in `ctypes` `test_frozenset`.

## Windows

- [bpo-43440](https://bugs.python.org/issue?@action=redirect&bpo=43440) [https://bugs.python.org/issue?@action=redirect&bpo=43440]: Build `sqlite3` with the `R*Tree` module enabled. Patch by Erlend E. Aasland.

## IDLE

- [bpo-42225](https://bugs.python.org/issue?@action=redirect&bpo=42225) [https://bugs.python.org/issue?@action=redirect&bpo=42225]: Document that IDLE can fail on Unix either from misconfigured IP masquerade rules or failure displaying complex colored (non-ascii) characters.

## C API

- [bpo-43688](https://bugs.python.org/issue?@action=redirect&bpo=43688) [https://bugs.python.org/issue?@action=redirect&bpo=43688]: The limited C API is now supported if Python is built in debug mode (if the `Py_DEBUG` macro is defined). In the limited C API, the `Py_INCREF()` and `Py_DECREF()` functions are now implemented as opaque function calls, rather than accessing directly the `PyObject.ob_refcnt` member, if Python is built in debug mode and the `Py_LIMITED_API` macro targets Python 3.10 or newer. It became possible to support the limited C API in debug mode because the `PyObject` structure is the same in release and debug mode since Python 3.8 (see [bpo-36465](https://bugs.python.org/issue?@action=redirect&bpo=36465) [https://bugs.python.org/issue?@action=redirect&bpo=36465]).

The limited C API is still not supported in the `--with-trace-refs` special build (`Py_TRACE_REFS` macro).

Patch by Victor Stinner.

- [bpo-43244](https://bugs.python.org/issue?@action=redirect&bpo=43244) [https://bugs.python.org/issue?@action=redirect&bpo=43244]: Remove the `pyarena.h` header file with functions:

- `PyArena_New()`
- `PyArena_Free()`
- `PyArena_Malloc()`
- `PyArena_AddPyObject()`

These functions were undocumented, excluded from the limited C API, and were only used internally by the compiler. Patch by Victor Stinner.

- [bpo-43244](https://bugs.python.org/issue?@action=redirect&bpo=43244) [https://bugs.python.org/issue?@action=redirect&bpo=43244]: Remove the compiler and parser functions using `struct _mod` type, because the public AST C API was removed:

- `PyAST_Compile()`
- `PyAST_CompileEx()`
- `PyAST_CompileObject()`
- `PyFuture_FromAST()`
- `PyFuture_FromASTObject()`
- `PyParser_ASTFromFile()`
- `PyParser_ASTFromFileObject()`
- `PyParser_ASTFromFilename()`
- `PyParser_ASTFromString()`
- `PyParser_ASTFromStringObject()`

These functions were undocumented and excluded from the limited C API. Patch by Victor Stinner.

- [bpo-43244](https://bugs.python.org/issue?@action=redirect&bpo=43244) [https://bugs.python.org/issue?@action=redirect&bpo=43244]: Remove `ast.h`, `asdl.h`, and `Python-ast.h` header files. These functions were undocumented and excluded from the limited C API. Most names defined by these header files were not prefixed by `Py` and so could create names conflicts. For example, `Python-ast.h` defined a `Yield` macro which was conflict with the `Yield` name used by the Windows `<winbase.h>` header. Use the Python `ast` module instead. Patch by Victor Stinner.

- [bpo-43541](https://bugs.python.org/issue?@action=redirect&bpo=43541) [https://bugs.python.org/issue?@action=redirect&bpo=43541]: Fix a `PyEval_EvalCodeEx()` regression: fix reference counting on builtins. Patch by Victor Stinner.
- [bpo-43244](https://bugs.python.org/issue?@action=redirect&bpo=43244) [https://bugs.python.org/issue?@action=redirect&bpo=43244]: Remove the `symtable.h` header file and the undocumented functions:
  - `PyST_GetScope()`
  - `PySymtable_Build()`
  - `PySymtable_BuildObject()`
  - `PySymtable_Free()`
  - `Py_SymtableString()`
  - `Py_SymtableStringObject()`

The `Py_SymtableString()` function was part the stable ABI by mistake but it could not be used, because the `symtable.h` header file was excluded from the limited C API.

The Python `symtable` module remains available and is unchanged.

Patch by Victor Stinner.

- [bpo-43244](https://bugs.python.org/issue?@action=redirect&bpo=43244) [https://bugs.python.org/issue?@action=redirect&bpo=43244]: Remove the `PyAST_Validate()` function. It is no longer possible to build a AST object (`mod_ty` type) with the public C API. The function was already excluded from the limited C API ([PEP 384](https://peps.python.org/pep-0384/) [https://peps.python.org/pep-0384/]). Patch by Victor Stinner.

## Python 3.10.0 alpha 6

*Release date: 2021-03-01*

### Security

- [bpo-42967](https://bugs.python.org/issue?@action=redirect&bpo=42967) [https://bugs.python.org/issue?@action=redirect&bpo=42967]

@action=redirect&bpo=42967]: Fix web cache poisoning vulnerability by defaulting the query args separator to `&`, and allowing the user to choose a custom separator.

## Core and Builtins

- [bpo-43321](https://bugs.python.org/issue?@action=redirect&bpo=43321) [https://bugs.python.org/issue?@action=redirect&bpo=43321]: Fix `SystemError` raised when `PyArg_Parse*()` is used with `#` but without `PY_SSIZE_T_CLEAN` defined.
- [bpo-36346](https://bugs.python.org/issue?@action=redirect&bpo=36346) [https://bugs.python.org/issue?@action=redirect&bpo=36346]: `PyArg_Parse*()` functions now emits `DeprecationWarning` when `u` or `Z` format is used. See [PEP 623](https://peps.python.org/pep-0623/) [https://peps.python.org/pep-0623/] for detail.
- [bpo-43277](https://bugs.python.org/issue?@action=redirect&bpo=43277) [https://bugs.python.org/issue?@action=redirect&bpo=43277]: Add a new `PySet_CheckExact()` function to the C-API to check if an object is an instance of `set` but not an instance of a subtype. Patch by Pablo Galindo.
- [bpo-42990](https://bugs.python.org/issue?@action=redirect&bpo=42990) [https://bugs.python.org/issue?@action=redirect&bpo=42990]: The `types.FunctionType` constructor now inherits the current builtins if the `globals` dictionary has no `"__builtins__"` key, rather than using `{"None": None}` as builtins: same behavior as `eval()` and `exec()` functions. Defining a function with `def function(...): ...` in Python is not affected, `globals` cannot be overridden with this syntax: it also inherits the current builtins. Patch by Victor Stinner.
- [bpo-42990](https://bugs.python.org/issue?@action=redirect&bpo=42990) [https://bugs.python.org/issue?@action=redirect&bpo=42990]: Functions have a new `__builtins__` attribute which is used to look for builtin symbols when a function is executed, instead of looking into `__globals__['__builtins__']`. Patch by Mark Shannon and Victor Stinner.
- [bpo-43149](https://bugs.python.org/issue?@action=redirect&bpo=43149) [https://bugs.python.org/issue?@action=redirect&bpo=43149]: Improve the error message in the parser for exception groups without parentheses. Patch by Pablo Galindo.
- [bpo-43121](https://bugs.python.org/issue?@action=redirect&bpo=43121) [https://bugs.python.org/issue?@action=redirect&bpo=43121]: Fixed an incorrect `SyntaxError`

message for missing comma in literals. Patch by Pablo Galindo.

- [bpo-42819](https://bugs.python.org/issue?@action=redirect&bpo=42819) [https://bugs.python.org/issue?@action=redirect&bpo=42819]: **readline**: Explicitly disable bracketed paste in the interactive interpreter, even if it's set in the inputrc, is enabled by default (eg GNU Readline 8.1), or a user calls `readline.read_init_file()`. The Python REPL has not implemented bracketed paste support. Also, bracketed mode writes the `"\x1b[?2004h"` escape sequence into stdout which causes test failures in applications that don't support it. It can still be explicitly enabled by calling `readline.parse_and_bind("set enable-bracketed-paste on")`. Patch by Dustin Rodrigues.
- [bpo-42808](https://bugs.python.org/issue?@action=redirect&bpo=42808) [https://bugs.python.org/issue?@action=redirect&bpo=42808]: Simple calls to `type(object)` are now faster due to the `vectorcall` calling convention. Patch by Dennis Sweeney.
- [bpo-42217](https://bugs.python.org/issue?@action=redirect&bpo=42217) [https://bugs.python.org/issue?@action=redirect&bpo=42217]: Make the compiler merges same `co_code` and `co_linetable` objects in a module like already did for `co_consts`.
- [bpo-41972](https://bugs.python.org/issue?@action=redirect&bpo=41972) [https://bugs.python.org/issue?@action=redirect&bpo=41972]: Substring search functions such as `str1 in str2` and `str2.find(str1)` now sometimes use the “Two-Way” string comparison algorithm to avoid quadratic behavior on long strings.
- [bpo-42128](https://bugs.python.org/issue?@action=redirect&bpo=42128) [https://bugs.python.org/issue?@action=redirect&bpo=42128]: Implement **PEP 634** [https://peps.python.org/pep-0634/] (structural pattern matching). Patch by Brandt Bucher.
- [bpo-40692](https://bugs.python.org/issue?@action=redirect&bpo=40692) [https://bugs.python.org/issue?@action=redirect&bpo=40692]: In the **`concurrent.futures.ProcessPoolExecutor`**, validate that **`multiprocess.synchronize()`** is available on a given platform and rely on that check in the **`concurrent.futures`** test suite so we can run tests that are unrelated to **`ProcessPoolExecutor`** on those platforms.
- [bpo-38302](https://bugs.python.org/issue?@action=redirect&bpo=38302) [https://bugs.python.org/issue?@action=redirect&bpo=38302]: If **`object.__ipow__()`** returns **`NotImplemented`**, the operator will correctly fall back to

`object.__pow__()` and `object.__rpow__()` as expected.

## Library

- [bpo-43316](https://bugs.python.org/issue?@action=redirect&bpo=43316) [https://bugs.python.org/issue?@action=redirect&bpo=43316]: The `python -m gzip` command line application now properly fails when detecting an unsupported extension. It exits with a non-zero exit code and prints an error message to stderr.
- [bpo-43317](https://bugs.python.org/issue?@action=redirect&bpo=43317) [https://bugs.python.org/issue?@action=redirect&bpo=43317]: Set the chunk size for the `gzip` module main function to `io.DEFAULT_BUFFER_SIZE`. This is slightly faster than the 1024 bytes constant that was used previously.
- [bpo-43146](https://bugs.python.org/issue?@action=redirect&bpo=43146) [https://bugs.python.org/issue?@action=redirect&bpo=43146]: Handle None in single-arg versions of `print_exception()` and `format_exception()`.
- [bpo-43260](https://bugs.python.org/issue?@action=redirect&bpo=43260) [https://bugs.python.org/issue?@action=redirect&bpo=43260]: Fix `TextIOWrapper` can not flush internal buffer forever after very large text is written.
- [bpo-43258](https://bugs.python.org/issue?@action=redirect&bpo=43258) [https://bugs.python.org/issue?@action=redirect&bpo=43258]: Prevent needless allocation of `sqlite3` aggregate function context when no rows match an aggregate query. Patch by Erlend E. Aasland.
- [bpo-43251](https://bugs.python.org/issue?@action=redirect&bpo=43251) [https://bugs.python.org/issue?@action=redirect&bpo=43251]: Improve `sqlite3` error handling: `sqlite3_column_name()` failures now result in `MemoryError`. Patch by Erlend E. Aasland.
- [bpo-40956](https://bugs.python.org/issue?@action=redirect&bpo=40956) [https://bugs.python.org/issue?@action=redirect&bpo=40956]: Fix segfault in `sqlite3.Connection.backup()` if no argument was provided. The regression was introduced by PR 23838. Patch by Erlend E. Aasland.
- [bpo-43172](https://bugs.python.org/issue?@action=redirect&bpo=43172) [https://bugs.python.org/issue?@action=redirect&bpo=43172]: The `readline` module now passes its tests when built directly against `libedit`. Existing irreconcilable API differences remain in `readline.get_begidx()` and

`readline.get_endidx()` behavior based on libreadline vs libedit use.

- [bpo-43163](https://bugs.python.org/issue?@action=redirect&bpo=43163) [https://bugs.python.org/issue?@action=redirect&bpo=43163]: Fix a bug in `codeop` that was causing it to not ask for more input when multi-line snippets have unclosed parentheses. Patch by Pablo Galindo
- [bpo-43162](https://bugs.python.org/issue?@action=redirect&bpo=43162) [https://bugs.python.org/issue?@action=redirect&bpo=43162]: deprecate unsupported ability to access enum members as attributes of other enum members
- [bpo-43146](https://bugs.python.org/issue?@action=redirect&bpo=43146) [https://bugs.python.org/issue?@action=redirect&bpo=43146]: Fix recent regression in None argument handling in `traceback` module functions.
- [bpo-43102](https://bugs.python.org/issue?@action=redirect&bpo=43102) [https://bugs.python.org/issue?@action=redirect&bpo=43102]: The namedtuple `_new_` method had its `_builtins_` set to None instead of an actual dictionary. This created problems for introspection tools.
- [bpo-43106](https://bugs.python.org/issue?@action=redirect&bpo=43106) [https://bugs.python.org/issue?@action=redirect&bpo=43106]: Added `O_EVTONLY`, `O_FSYNC`, `O_SYMLINK` and `O_NOFOLLOW_ANY` for macOS. Patch by Dong-hee Na.
- [bpo-42960](https://bugs.python.org/issue?@action=redirect&bpo=42960) [https://bugs.python.org/issue?@action=redirect&bpo=42960]: Adds `resource.RLIMIT_KQUEUES` constant from FreeBSD to the `resource` module.
- [bpo-42151](https://bugs.python.org/issue?@action=redirect&bpo=42151) [https://bugs.python.org/issue?@action=redirect&bpo=42151]: Make the pure Python implementation of `xml.etree.ElementTree` behave the same as the C implementation (`_elementtree`) regarding default attribute values (by not setting `specified_attributes=1`).
- [bpo-29753](https://bugs.python.org/issue?@action=redirect&bpo=29753) [https://bugs.python.org/issue?@action=redirect&bpo=29753]: In ctypes, now packed bitfields are calculated properly and the first item of packed bitfields is now shrank correctly.

## Documentation

- [bpo-27646](https://bugs.python.org/issue?@action=redirect&bpo=27646) [https://bugs.python.org/issue?@action=redirect&bpo=27646]: Clarify that ‘yield from <expr>’ works with any iterable, not just iterators.

- [bpo-36346](https://bugs.python.org/issue?@action=redirect&bpo=36346) [https://bugs.python.org/issue?@action=redirect&bpo=36346]: Update some deprecated unicode APIs which are documented as “will be removed in 4.0” to “3.12”. See [PEP 623](https://peps.python.org/pep-0623/) [https://peps.python.org/pep-0623/] for detail.

## Tests

- [bpo-43288](https://bugs.python.org/issue?@action=redirect&bpo=43288) [https://bugs.python.org/issue?@action=redirect&bpo=43288]: Fix test\_importlib to correctly skip Unicode file tests if the filesystem does not support them.

## Build

- [bpo-43174](https://bugs.python.org/issue?@action=redirect&bpo=43174) [https://bugs.python.org/issue?@action=redirect&bpo=43174]: Windows build now uses `/utf-8` compiler option.
- [bpo-43103](https://bugs.python.org/issue?@action=redirect&bpo=43103) [https://bugs.python.org/issue?@action=redirect&bpo=43103]: Add a new configure `--without-static-libpython` option to not build the `libpythonMAJOR.MINOR.a` static library and not install the `python.o` object file.
- [bpo-13501](https://bugs.python.org/issue?@action=redirect&bpo=13501) [https://bugs.python.org/issue?@action=redirect&bpo=13501]: The configure script can now use *libedit* instead of *readline* with the command line option `--with-readline=editline`.
- [bpo-42603](https://bugs.python.org/issue?@action=redirect&bpo=42603) [https://bugs.python.org/issue?@action=redirect&bpo=42603]: Make configure script use `pkg-config` to detect the location of Tcl/Tk headers and libraries, used to build `tkinter`.

On macOS, a Tcl/Tk configuration provided by `pkg-config` will be preferred over Tcl/Tk frameworks installed in `/System/Library/Frameworks`. If both exist and the latter is preferred, the appropriate `--with-tcltk=*` configuration options need to be explicitly set.

- [bpo-39448](https://bugs.python.org/issue?@action=redirect&bpo=39448) [https://bugs.python.org/issue?@action=redirect&bpo=39448]: Add the “regen-frozen” makefile

target that regenerates the code for the frozen `__hello__` module.

## Windows

- [bpo-43155](https://bugs.python.org/issue?@action=redirect&bpo=43155) [https://bugs.python.org/issue?@action=redirect&bpo=43155]: **PyCMethod\_New()** is now present in `python3.lib`.

## macOS

- [bpo-41837](https://bugs.python.org/issue?@action=redirect&bpo=41837) [https://bugs.python.org/issue?@action=redirect&bpo=41837]: Update macOS installer build to use OpenSSL 1.1.1j.

## IDLE

- [bpo-43283](https://bugs.python.org/issue?@action=redirect&bpo=43283) [https://bugs.python.org/issue?@action=redirect&bpo=43283]: Document why printing to IDLE's Shell is often slower than printing to a system terminal and that it can be made faster by pre-formatting a single string before printing.

## C API

- [bpo-43278](https://bugs.python.org/issue?@action=redirect&bpo=43278) [https://bugs.python.org/issue?@action=redirect&bpo=43278]: Always put compiler and system information on the first line of the REPL welcome message.
- [bpo-43270](https://bugs.python.org/issue?@action=redirect&bpo=43270) [https://bugs.python.org/issue?@action=redirect&bpo=43270]: Remove the private `_PyErr_OCCURRED()` macro: use the public **PyErr\_Occurred()** function instead.
- [bpo-35134](https://bugs.python.org/issue?@action=redirect&bpo=35134) [https://bugs.python.org/issue?@action=redirect&bpo=35134]: Move `odictobject.h`, `parser_interface.h`, `picklebufobject.h`, `pydebug.h`, and `pyfpe.h` into the `cpython/` directory. They must not be included directly, as they are already included by `Python.h`: [Include Files](#).
- [bpo-35134](https://bugs.python.org/issue?@action=redirect&bpo=35134) [https://bugs.python.org/issue?@action=redirect&bpo=35134]

@action=redirect&bpo=35134]: Move pyarena.h, pyctype.h, and pytime.h into the cpython/ directory. They must not be included directly, as they are already included by Python.h: [Include Files](#).

- [bpo-40170](#) [<https://bugs.python.org/issue?@action=redirect&bpo=40170>]: `PyExceptionClass_Name()` is now always declared as a function, in order to hide implementation details. The macro accessed `PyObject.tp_name` directly. Patch by Erlend E. Aasland.
- [bpo-43239](#) [<https://bugs.python.org/issue?@action=redirect&bpo=43239>]: The `PyCFunction_New()` function is now exported in the ABI when compiled with `-fvisibility=hidden`.
- [bpo-40170](#) [<https://bugs.python.org/issue?@action=redirect&bpo=40170>]: `PyIter_Check()` is now always declared as a function, in order to hide implementation details. The macro accessed `PyObject.tp_iternext` directly. Patch by Erlend E. Aasland.
- [bpo-40170](#) [<https://bugs.python.org/issue?@action=redirect&bpo=40170>]: Convert `PyDescr_IsData()` macro to a function to hide implementation details: The macro accessed `PyObject.tp_descr_set` directly. Patch by Erlend E. Aasland.
- [bpo-43181](#) [<https://bugs.python.org/issue?@action=redirect&bpo=43181>]: Convert `PyObject_TypeCheck()` macro to a static inline function. Patch by Erlend E. Aasland.

## Python 3.10.0 alpha 5

*Release date: 2021-02-02*

### Security

- [bpo-42938](#) [<https://bugs.python.org/issue?@action=redirect&bpo=42938>]: Avoid static buffers when computing the repr of `ctypes.c_double` and `ctypes.c_longdouble` values.

## Core and Builtins

- [bpo-42990](https://bugs.python.org/issue?@action=redirect&bpo=42990) [https://bugs.python.org/issue?@action=redirect&bpo=42990]: Refactor the `PyEval_` family of functions.
  - An new function `_PyEval_Vector` is added to simplify calls to Python from C.
  - `_PyEval_EvalCodeWithName` is removed
  - `PyEval_EvalCodeEx` is retained as part of the API, but is not used internally
- [bpo-38631](https://bugs.python.org/issue?@action=redirect&bpo=38631) [https://bugs.python.org/issue?@action=redirect&bpo=38631]: Replace `Py_FatalError()` calls in the compiler with regular `SystemError` exceptions. Patch by Victor Stinner.
- [bpo-42997](https://bugs.python.org/issue?@action=redirect&bpo=42997) [https://bugs.python.org/issue?@action=redirect&bpo=42997]: Improve error message for missing “.” before blocks. Patch by Pablo Galindo.
- [bpo-43017](https://bugs.python.org/issue?@action=redirect&bpo=43017) [https://bugs.python.org/issue?@action=redirect&bpo=43017]: Improve error message in the parser when using un-parenthesised tuples in comprehensions. Patch by Pablo Galindo.
- [bpo-42986](https://bugs.python.org/issue?@action=redirect&bpo=42986) [https://bugs.python.org/issue?@action=redirect&bpo=42986]: Fix parser crash when reporting syntax errors in f-string with newlines. Patch by Pablo Galindo.
- [bpo-40176](https://bugs.python.org/issue?@action=redirect&bpo=40176) [https://bugs.python.org/issue?@action=redirect&bpo=40176]: Syntax errors for unterminated string literals now point to the start of the string instead of reporting EOF/EOL.
- [bpo-42927](https://bugs.python.org/issue?@action=redirect&bpo=42927) [https://bugs.python.org/issue?@action=redirect&bpo=42927]: The inline cache for `LOAD_ATTR` now also optimizes access to attributes defined by `__slots__`. This makes reading such attribute up to 30% faster.
- [bpo-42864](https://bugs.python.org/issue?@action=redirect&bpo=42864) [https://bugs.python.org/issue?@action=redirect&bpo=42864]: Improve error messages in the parser when parentheses are not closed. Patch by Pablo Galindo.
- [bpo-42924](https://bugs.python.org/issue?@action=redirect&bpo=42924) [https://bugs.python.org/issue?@action=redirect&bpo=42924]: Fix `bytearray` repetition

incorrectly copying data from the start of the buffer, even if the data is offset within the buffer (e.g. after reassigning a slice at the start of the `bytearray` to a shorter byte string).

- [bpo-42882](https://bugs.python.org/issue?@action=redirect&bpo=42882) [https://bugs.python.org/issue?@action=redirect&bpo=42882]: Fix the `_PyUnicode_FromId()` function (`_Py_IDENTIFIER(var)` API) when `Py_Initialize()` / `Py_Finalize()` is called multiple times: preserve `_PyRuntime.unicode_ids.next_index` value.
- [bpo-42827](https://bugs.python.org/issue?@action=redirect&bpo=42827) [https://bugs.python.org/issue?@action=redirect&bpo=42827]: Fix a crash when working out the error line of a `SyntaxError` in some multi-line expressions.
- [bpo-42823](https://bugs.python.org/issue?@action=redirect&bpo=42823) [https://bugs.python.org/issue?@action=redirect&bpo=42823]: `frame.f_lineno` is correct even if `frame.f_trace` is set to `True`
- [bpo-37324](https://bugs.python.org/issue?@action=redirect&bpo=37324) [https://bugs.python.org/issue?@action=redirect&bpo=37324]: Remove deprecated aliases to `Collections Abstract Base Classes` from the `collections` module.
- [bpo-41994](https://bugs.python.org/issue?@action=redirect&bpo=41994) [https://bugs.python.org/issue?@action=redirect&bpo=41994]: Fixed possible leak in `import` when `sys.modules` is not a `dict`.
- [bpo-27772](https://bugs.python.org/issue?@action=redirect&bpo=27772) [https://bugs.python.org/issue?@action=redirect&bpo=27772]: In string formatting, preceding the `width` field by `'0'` no longer affects the default alignment for strings.

## Library

- [bpo-43108](https://bugs.python.org/issue?@action=redirect&bpo=43108) [https://bugs.python.org/issue?@action=redirect&bpo=43108]: Fixed a reference leak in the `curses` module. Patch by Pablo Galindo
- [bpo-43077](https://bugs.python.org/issue?@action=redirect&bpo=43077) [https://bugs.python.org/issue?@action=redirect&bpo=43077]: Update the bundled pip to 21.0.1 and setuptools to 52.0.0.
- [bpo-41282](https://bugs.python.org/issue?@action=redirect&bpo=41282) [https://bugs.python.org/issue?@action=redirect&bpo=41282]: Deprecate `distutils` in documentation and add warning on import.
- [bpo-43014](https://bugs.python.org/issue?@action=redirect&bpo=43014) [https://bugs.python.org/issue?@action=redirect&bpo=43014]: Improve performance of

**tokenize** by 20-30%. Patch by Anthony Sottile.

- [bpo-42323](https://bugs.python.org/issue?@action=redirect&bpo=42323) [https://bugs.python.org/issue?@action=redirect&bpo=42323]: Fix **math.nextafter()** for NaN on AIX.
- [bpo-42955](https://bugs.python.org/issue?@action=redirect&bpo=42955) [https://bugs.python.org/issue?@action=redirect&bpo=42955]: Add **sys.stdlib\_module\_names**, containing the list of the standard library module names. Patch by Victor Stinner.
- [bpo-42944](https://bugs.python.org/issue?@action=redirect&bpo=42944) [https://bugs.python.org/issue?@action=redirect&bpo=42944]: Fix `random.Random.sample` when `counts` argument is not `None`.
- [bpo-42934](https://bugs.python.org/issue?@action=redirect&bpo=42934) [https://bugs.python.org/issue?@action=redirect&bpo=42934]: Use **TracebackException**'s new compact param in **TestResult** to reduce time and memory consumed by traceback formatting.
- [bpo-42931](https://bugs.python.org/issue?@action=redirect&bpo=42931) [https://bugs.python.org/issue?@action=redirect&bpo=42931]: Add **randbytes()** to `random.__all__`.
- [bpo-38250](https://bugs.python.org/issue?@action=redirect&bpo=38250) [https://bugs.python.org/issue?@action=redirect&bpo=38250]: [Enum] Flags consisting of a single bit are now considered canonical, and will be the only flags returned from listing and iterating over a Flag class or a Flag member. Multi-bit flags are considered aliases; they will be returned from lookups and operations that result in their value. Iteration for both Flag and Flag members is in definition order.
- [bpo-42877](https://bugs.python.org/issue?@action=redirect&bpo=42877) [https://bugs.python.org/issue?@action=redirect&bpo=42877]: Added the compact parameter to the constructor of **traceback.TracebackException** to reduce time and memory for use cases that only need to call **TracebackException.format()** and **TracebackException.format\_exception\_only()**.
- [bpo-42923](https://bugs.python.org/issue?@action=redirect&bpo=42923) [https://bugs.python.org/issue?@action=redirect&bpo=42923]: The **Py\_FatalError()** function and the **faulthandler** module now dump the list of extension modules on a fatal error.
- [bpo-42848](https://bugs.python.org/issue?@action=redirect&bpo=42848) [https://bugs.python.org/issue?@action=redirect&bpo=42848]: Removed recursion from **TracebackException** to allow it to handle long exception chains.

- [bpo-42901](https://bugs.python.org/issue?@action=redirect&bpo=42901) [https://bugs.python.org/issue?@action=redirect&bpo=42901]: [Enum] move member creation from `EnumMeta.__new__` to `_proto_member.__set_name__`, allowing members to be created and visible in `__init_subclass__`.
- [bpo-42780](https://bugs.python.org/issue?@action=redirect&bpo=42780) [https://bugs.python.org/issue?@action=redirect&bpo=42780]: Fix `os.set_inheritable()` for `O_PATH` file descriptors on Linux.
- [bpo-42866](https://bugs.python.org/issue?@action=redirect&bpo=42866) [https://bugs.python.org/issue?@action=redirect&bpo=42866]: Fix a reference leak in the `getcodec()` function of CJK codecs. Patch by Victor Stinner.
- [bpo-42846](https://bugs.python.org/issue?@action=redirect&bpo=42846) [https://bugs.python.org/issue?@action=redirect&bpo=42846]: Convert the 6 CJK codec extension modules (`_codecs_cn`, `_codecs_hk`, `_codecs_iso2022`, `_codecs_jp`, `_codecs_kr` and `_codecs_tw`) to the multiphase initialization API ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]). Patch by Victor Stinner.
- [bpo-42851](https://bugs.python.org/issue?@action=redirect&bpo=42851) [https://bugs.python.org/issue?@action=redirect&bpo=42851]: remove `__init_subclass__` support for Enum members
- [bpo-42834](https://bugs.python.org/issue?@action=redirect&bpo=42834) [https://bugs.python.org/issue?@action=redirect&bpo=42834]: Make internal caches of the `_json` module compatible with subinterpreters.
- [bpo-41748](https://bugs.python.org/issue?@action=redirect&bpo=41748) [https://bugs.python.org/issue?@action=redirect&bpo=41748]: Fix `HTMLParser` parsing rules for element attributes containing commas with spaces. Patch by Karl Dubost.
- [bpo-40810](https://bugs.python.org/issue?@action=redirect&bpo=40810) [https://bugs.python.org/issue?@action=redirect&bpo=40810]: Require SQLite 3.7.15 or newer. Patch by Erlend E. Aasland.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Convert the `_multibytecodec` extension module (CJK codecs) to multi-phase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]). Patch by Erlend E. Aasland.
- [bpo-42802](https://bugs.python.org/issue?@action=redirect&bpo=42802) [https://bugs.python.org/issue?@action=redirect&bpo=42802]: The `distutils bdist_wininst` command deprecated in Python 3.8 has been removed. The `distutils bdist_wheel` command is now recommended to distribute binary packages on Windows.

- [bpo-24464](https://bugs.python.org/issue?@action=redirect&bpo=24464) [https://bugs.python.org/issue?@action=redirect&bpo=24464]: The undocumented built-in function `sqlite3.enable_shared_cache` is now deprecated, scheduled for removal in Python 3.12. Its use is strongly discouraged by the SQLite3 documentation. Patch by Erlend E. Aasland.
- [bpo-42384](https://bugs.python.org/issue?@action=redirect&bpo=42384) [https://bugs.python.org/issue?@action=redirect&bpo=42384]: Make `pdb` populate `sys.path[0]` exactly the same as regular python execution.
- [bpo-42383](https://bugs.python.org/issue?@action=redirect&bpo=42383) [https://bugs.python.org/issue?@action=redirect&bpo=42383]: Fix `pdb`: previously `pdb` would fail to restart the debugging target if it was specified using a relative path and the current directory changed.
- [bpo-42005](https://bugs.python.org/issue?@action=redirect&bpo=42005) [https://bugs.python.org/issue?@action=redirect&bpo=42005]: Fix CLI of `cProfile` and `profile` to catch `BrokenPipeError`.
- [bpo-41604](https://bugs.python.org/issue?@action=redirect&bpo=41604) [https://bugs.python.org/issue?@action=redirect&bpo=41604]: Don't decrement the reference count of the previous `user_ptr` when `set_panel_userptr` fails.
- [bpo-41149](https://bugs.python.org/issue?@action=redirect&bpo=41149) [https://bugs.python.org/issue?@action=redirect&bpo=41149]: Allow executing callables that have a boolean value of `False` when passed to `Threading.thread` as the target. Patch contributed by Barney Stratford.
- [bpo-38307](https://bugs.python.org/issue?@action=redirect&bpo=38307) [https://bugs.python.org/issue?@action=redirect&bpo=38307]: Add an 'end\_lineno' attribute to the Class and Function objects that appear in the tree returned by `pyclbr` functions. This and the existing 'lineno' attribute define the extent of class and def statements. Patch by Aviral Srivastava.
- [bpo-39273](https://bugs.python.org/issue?@action=redirect&bpo=39273) [https://bugs.python.org/issue?@action=redirect&bpo=39273]: The `BUTTON5_*` constants are now exposed in the `curses` module if available.
- [bpo-33289](https://bugs.python.org/issue?@action=redirect&bpo=33289) [https://bugs.python.org/issue?@action=redirect&bpo=33289]: Correct call to `tkinter.colorchooser` to return RGB triplet of ints instead of floats. Patch by Cheryl Sabella.

## Documentation

- [bpo-40304](https://bugs.python.org/issue?@action=redirect&bpo=40304) [https://bugs.python.org/issue?@action=redirect&bpo=40304]: Fix doc for `type(name, bases, dict)`. Patch by Boris Verkhovskiy and Éric Araujo.
- [bpo-42811](https://bugs.python.org/issue?@action=redirect&bpo=42811) [https://bugs.python.org/issue?@action=redirect&bpo=42811]: Updated `importlib.utils.resolve_name()` doc to use `__spec__.parent` instead of `__package__`. (Thanks Yair Frid.)

## Tests

- [bpo-40823](https://bugs.python.org/issue?@action=redirect&bpo=40823) [https://bugs.python.org/issue?@action=redirect&bpo=40823]: Use `unittest.TestLoader().loadTestsFromTestCase()` instead of `unittest.makeSuite()` in `sqlite3` tests. Patch by Erlend E. Aasland.
- [bpo-40810](https://bugs.python.org/issue?@action=redirect&bpo=40810) [https://bugs.python.org/issue?@action=redirect&bpo=40810]: In `sqlite3`, fix `CheckTraceCallbackContent` for SQLite pre 3.7.15.

## Build

- [bpo-43031](https://bugs.python.org/issue?@action=redirect&bpo=43031) [https://bugs.python.org/issue?@action=redirect&bpo=43031]: Pass `--timeout=$ (TESTTIMEOUT)` option to the default profile task `./python -m test --pgo` command.
- [bpo-36143](https://bugs.python.org/issue?@action=redirect&bpo=36143) [https://bugs.python.org/issue?@action=redirect&bpo=36143]: make `regen-all` now also runs `regen-keyword`. Patch by Victor Stinner.
- [bpo-42874](https://bugs.python.org/issue?@action=redirect&bpo=42874) [https://bugs.python.org/issue?@action=redirect&bpo=42874]: Removed the `grep -q` and `-E` flags in the `tzpath` validation section of the `configure` script to better accommodate users of some platforms (specifically Solaris 10).
- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: Add library search path by `wr-cc` in `add_cross_compiling_paths()` for VxWorks.

- [bpo-42856](https://bugs.python.org/issue?@action=redirect&bpo=42856) [https://bugs.python.org/issue?@action=redirect&bpo=42856]: Add `--with-wheel-pkg-dir=PATH` option to the `./configure` script. If specified, the `ensurepip` module looks for `setuptools` and `pip` wheel packages in this directory: if both are present, these wheel packages are used instead of `ensurepip` bundled wheel packages.

Some Linux distribution packaging policies recommend against bundling dependencies. For example, Fedora installs wheel packages in the `/usr/share/python-wheels/` directory and don't install the `ensurepip._bundled` package.

## Windows

- [bpo-41837](https://bugs.python.org/issue?@action=redirect&bpo=41837) [https://bugs.python.org/issue?@action=redirect&bpo=41837]: Updated Windows installer to include OpenSSL 1.1.1i
- [bpo-42584](https://bugs.python.org/issue?@action=redirect&bpo=42584) [https://bugs.python.org/issue?@action=redirect&bpo=42584]: Upgrade Windows installer to use SQLite 3.34.0.

## macOS

- [bpo-42504](https://bugs.python.org/issue?@action=redirect&bpo=42504) [https://bugs.python.org/issue?@action=redirect&bpo=42504]: Ensure that the value of `sysconfig.get_config_var('MACOSX_DEPLOYMENT_TARGET')` is always a string, even in when the value is parsable as an integer.

## IDLE

- [bpo-43008](https://bugs.python.org/issue?@action=redirect&bpo=43008) [https://bugs.python.org/issue?@action=redirect&bpo=43008]: Make IDLE invoke `sys.excepthook()` in normal, 2-process mode. Patch by Ken Hilton.
- [bpo-33065](https://bugs.python.org/issue?@action=redirect&bpo=33065) [https://bugs.python.org/issue?@action=redirect&bpo=33065]: Fix problem debugging user classes with `__repr__` method.

- [bpo-23544](https://bugs.python.org/issue?@action=redirect&bpo=23544) [https://bugs.python.org/issue?@action=redirect&bpo=23544]: Disable Debug = > Stack Viewer when user code is running or Debugger is active, to prevent hang or crash. Patch by Zackery Spytz.
- [bpo-32631](https://bugs.python.org/issue?@action=redirect&bpo=32631) [https://bugs.python.org/issue?@action=redirect&bpo=32631]: Finish zzdumy example extension module: make menu entries work; add docstrings and tests with 100% coverage.

## C API

- [bpo-42979](https://bugs.python.org/issue?@action=redirect&bpo=42979) [https://bugs.python.org/issue?@action=redirect&bpo=42979]: When Python is built in debug mode (with C assertions), calling a type slot like `sq_length` (`__len__()` in Python) now fails with a fatal error if the slot succeeded with an exception set, or failed with no exception set. The error message contains the slot, the type name, and the current exception (if an exception is set). Patch by Victor Stinner.
- [bpo-43030](https://bugs.python.org/issue?@action=redirect&bpo=43030) [https://bugs.python.org/issue?@action=redirect&bpo=43030]: Fixed a compiler warning in **`Py_UNICODE_ISSPACE()`** on platforms with signed `wchar_t`.

## Python 3.10.0 alpha 4

*Release date: 2021-01-04*

### Core and Builtins

- [bpo-42814](https://bugs.python.org/issue?@action=redirect&bpo=42814) [https://bugs.python.org/issue?@action=redirect&bpo=42814]: Fix undefined behavior in `Objects/genericaliasobject.c`.
- [bpo-42806](https://bugs.python.org/issue?@action=redirect&bpo=42806) [https://bugs.python.org/issue?@action=redirect&bpo=42806]: Fix the column offsets for f-strings **`ast`** nodes surrounded by parentheses and for nodes that spawn multiple lines. Patch by Pablo Galindo.
- [bpo-40631](https://bugs.python.org/issue?@action=redirect&bpo=40631) [https://bugs.python.org/issue?@action=redirect&bpo=40631]: Fix regression where a single

parenthesized starred expression was a valid assignment target.

- [bpo-27794](https://bugs.python.org/issue?@action=redirect&bpo=27794) [https://bugs.python.org/issue?@action=redirect&bpo=27794]: Improve the error message for failed writes/deletes to property objects. When possible, the attribute name is now shown. Patch provided by Yurii Karabas.
- [bpo-42745](https://bugs.python.org/issue?@action=redirect&bpo=42745) [https://bugs.python.org/issue?@action=redirect&bpo=42745]: Make the type attribute lookup cache per-interpreter. Patch by Victor Stinner.
- [bpo-42246](https://bugs.python.org/issue?@action=redirect&bpo=42246) [https://bugs.python.org/issue?@action=redirect&bpo=42246]: Jumps to jumps are not eliminated when it would break PEP 626.
- [bpo-42246](https://bugs.python.org/issue?@action=redirect&bpo=42246) [https://bugs.python.org/issue?@action=redirect&bpo=42246]: Make sure that the `f_lasti` and `f_lineno` attributes of a frame are set correctly when an exception is raised or re-raised. Required for PEP 626.
- [bpo-32381](https://bugs.python.org/issue?@action=redirect&bpo=32381) [https://bugs.python.org/issue?@action=redirect&bpo=32381]: The coding cookie (ex: `# coding: latin1`) is now ignored in the command passed to the `-c` command line option. Patch by Victor Stinner.
- [bpo-30858](https://bugs.python.org/issue?@action=redirect&bpo=30858) [https://bugs.python.org/issue?@action=redirect&bpo=30858]: Improve error location in expressions that contain assignments. Patch by Pablo Galindo and Lysandros Nikolaou.
- [bpo-42615](https://bugs.python.org/issue?@action=redirect&bpo=42615) [https://bugs.python.org/issue?@action=redirect&bpo=42615]: Remove jump commands made redundant by the deletion of unreachable bytecode blocks
- [bpo-42639](https://bugs.python.org/issue?@action=redirect&bpo=42639) [https://bugs.python.org/issue?@action=redirect&bpo=42639]: Make the `atexit` module state per-interpreter. It is now safe have more than one `atexit` module instance. Patch by Dong-hee Na and Victor Stinner.
- [bpo-32381](https://bugs.python.org/issue?@action=redirect&bpo=32381) [https://bugs.python.org/issue?@action=redirect&bpo=32381]: Fix encoding name when running a `.pyc` file on Windows: `PyRun_SimpleFileExFlags()` now uses the correct encoding to decode the filename.
- [bpo-42195](https://bugs.python.org/issue?@action=redirect&bpo=42195) [https://bugs.python.org/issue?@action=redirect&bpo=42195]: The `__args__` of the parameterized generics for `typing.Callable` and `collections.abc.Callable` are now consistent. The

`__args__` for `collections.abc.Callable` are now flattened while `typing.Callable`'s have not changed. To allow this change, `types.GenericAlias` can now be subclassed and `collections.abc.Callable`'s `__class_getitem__` will now return a subclass of `types.GenericAlias`. Tests for typing were also updated to not subclass things like `Callable[..., T]` as that is not a valid base class. Finally, both `Callables` no longer validate their argtypes, in `Callable[[argtypes], resulttype]` to prepare for [PEP 612](https://peps.python.org/pep-0612/) [https://peps.python.org/pep-0612/]. Patch by Ken Jin.

- [bpo-40137](https://bugs.python.org/issue?@action=redirect&bpo=40137) [https://bugs.python.org/issue?@action=redirect&bpo=40137]: Convert `functools` module to use `PyType_FromModuleAndSpec()`.
- [bpo-40077](https://bugs.python.org/issue?@action=redirect&bpo=40077) [https://bugs.python.org/issue?@action=redirect&bpo=40077]: Convert `array` to use heap types, and establish module state for these.
- [bpo-42008](https://bugs.python.org/issue?@action=redirect&bpo=42008) [https://bugs.python.org/issue?@action=redirect&bpo=42008]: Fix `_random.Random()` seeding.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port the `pyexpat` extension module to multi-phase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-40521](https://bugs.python.org/issue?@action=redirect&bpo=40521) [https://bugs.python.org/issue?@action=redirect&bpo=40521]: Make the Unicode dictionary of interned strings compatible with subinterpreters. Patch by Victor Stinner.
- [bpo-39465](https://bugs.python.org/issue?@action=redirect&bpo=39465) [https://bugs.python.org/issue?@action=redirect&bpo=39465]: Make `_PyUnicode_FromId()` function compatible with subinterpreters. Each interpreter now has an array of identifier objects (interned strings decoded from UTF-8). Patch by Victor Stinner.

## Library

- [bpo-42257](https://bugs.python.org/issue?@action=redirect&bpo=42257) [https://bugs.python.org/issue?@action=redirect&bpo=42257]: Handle empty string in variable executable in `platform.libc_ver()`
- [bpo-42772](https://bugs.python.org/issue?@action=redirect&bpo=42772) [https://bugs.python.org/issue?@action=redirect&bpo=42772]

@action=redirect&bpo=42772]: `randrange()` now raises a `TypeError` when `step` is specified without a `stop` argument. Formerly, it silently ignored the `step` argument.

- [bpo-42759](https://bugs.python.org/issue?@action=redirect&bpo=42759) [https://bugs.python.org/issue?@action=redirect&bpo=42759]: Fixed equality comparison of `tkinter.Variable` and `tkinter.font.Font`. Objects which belong to different Tcl interpreters are now always different, even if they have the same name.
- [bpo-42756](https://bugs.python.org/issue?@action=redirect&bpo=42756) [https://bugs.python.org/issue?@action=redirect&bpo=42756]: Configure LMTP Unix-domain socket to use socket global default timeout when a timeout is not explicitly provided.
- [bpo-23328](https://bugs.python.org/issue?@action=redirect&bpo=23328) [https://bugs.python.org/issue?@action=redirect&bpo=23328]: Allow `/` character in username, password fields on `_PROXY` envvars.
- [bpo-42740](https://bugs.python.org/issue?@action=redirect&bpo=42740) [https://bugs.python.org/issue?@action=redirect&bpo=42740]: `typing.get_args()` and `typing.get_origin()` now support [PEP 604](https://peps.python.org/pep-0604/) [https://peps.python.org/pep-0604/] union types and [PEP 612](https://peps.python.org/pep-0612/) [https://peps.python.org/pep-0612/] additions to `Callable`.
- [bpo-42655](https://bugs.python.org/issue?@action=redirect&bpo=42655) [https://bugs.python.org/issue?@action=redirect&bpo=42655]: `subprocess.extra_groups` is now correctly passed into `setgroups()` system call.
- [bpo-42727](https://bugs.python.org/issue?@action=redirect&bpo=42727) [https://bugs.python.org/issue?@action=redirect&bpo=42727]: `EnumMeta.__prepare__` now accepts `**kwds` to properly support `__init_subclass__`
- [bpo-38308](https://bugs.python.org/issue?@action=redirect&bpo=38308) [https://bugs.python.org/issue?@action=redirect&bpo=38308]: Add optional *weights* to `statistics.harmonic_mean()`.
- [bpo-42721](https://bugs.python.org/issue?@action=redirect&bpo=42721) [https://bugs.python.org/issue?@action=redirect&bpo=42721]: When simple query dialogs (`tkinter.simplesdialog`), message boxes (`tkinter.messagebox`) or color choose dialog

(`tkinter.ColorChooser`) are created without arguments *master* and *parent*, and the default root window is not yet created, and `NoDefaultRoot()` was not called, a new temporal hidden root window will be created automatically. It will not be set as the default root window and will be destroyed right after closing the dialog window. It will help to use these simple dialog windows in programs which do not need other GUI.

- [bpo-25246](https://bugs.python.org/issue?@action=redirect&bpo=25246) [https://bugs.python.org/issue?@action=redirect&bpo=25246]: Optimized `collections.deque.remove()`.
- [bpo-35728](https://bugs.python.org/issue?@action=redirect&bpo=35728) [https://bugs.python.org/issue?@action=redirect&bpo=35728]: Added a root parameter to `tkinter.font.nametofont()`.
- [bpo-15303](https://bugs.python.org/issue?@action=redirect&bpo=15303) [https://bugs.python.org/issue?@action=redirect&bpo=15303]: `tkinter` supports now widgets with boolean value `False`.
- [bpo-42681](https://bugs.python.org/issue?@action=redirect&bpo=42681) [https://bugs.python.org/issue?@action=redirect&bpo=42681]: Fixed range checks for color and pair numbers in `curses`.
- [bpo-42685](https://bugs.python.org/issue?@action=redirect&bpo=42685) [https://bugs.python.org/issue?@action=redirect&bpo=42685]: Improved placing of simple query windows in Tkinter (such as `tkinter.simpledialog.askinteger()`). They are now centered at the center of the parent window if it is specified and shown, otherwise at the center of the screen.
- [bpo-9694](https://bugs.python.org/issue?@action=redirect&bpo=9694) [https://bugs.python.org/issue?@action=redirect&bpo=9694]: Argparse help no longer uses the confusing phrase, “optional arguments”. It uses “options” instead.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port the `_thread` extension module to the multiphase initialization API ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]) and convert its static types to heap types.

- [bpo-37961](https://bugs.python.org/issue?@action=redirect&bpo=37961) [https://bugs.python.org/issue?@action=redirect&bpo=37961]: Fix crash in `tracemalloc.Traceback.__repr__()` (regressed in Python 3.9).
- [bpo-42630](https://bugs.python.org/issue?@action=redirect&bpo=42630) [https://bugs.python.org/issue?@action=redirect&bpo=42630]: `tkinter` functions and constructors which need a default root window raise now `RuntimeError` with descriptive message instead of obscure `AttributeError` or `NameError` if it is not created yet or cannot be created automatically.
- [bpo-42639](https://bugs.python.org/issue?@action=redirect&bpo=42639) [https://bugs.python.org/issue?@action=redirect&bpo=42639]: `atexit._run_exitfuncs()` now logs callback exceptions using `sys.unraisablehook`, rather than logging them directly into `sys.stderr` and raise the last exception.
- [bpo-42644](https://bugs.python.org/issue?@action=redirect&bpo=42644) [https://bugs.python.org/issue?@action=redirect&bpo=42644]: `logging.disable` will now validate the types and value of its parameter. It also now accepts strings representing the levels (as does `logging.setLevel`) instead of only the numerical values.
- [bpo-42639](https://bugs.python.org/issue?@action=redirect&bpo=42639) [https://bugs.python.org/issue?@action=redirect&bpo=42639]: At Python exit, if a callback registered with `atexit.register()` fails, its exception is now logged. Previously, only some exceptions were logged, and the last exception was always silently ignored.
- [bpo-36541](https://bugs.python.org/issue?@action=redirect&bpo=36541) [https://bugs.python.org/issue?@action=redirect&bpo=36541]: Fixed `lib2to3.pgen2` to be able to parse PEP-570 positional only argument syntax.
- [bpo-42382](https://bugs.python.org/issue?@action=redirect&bpo=42382) [https://bugs.python.org/issue?@action=redirect&bpo=42382]: In `importlib.metadata`: - `EntryPoint` objects now expose a `.dist` object referencing the `Distribution` when constructed from a `Distribution`. - Add support for package discovery under package normalization rules. - The object returned by `metadata()` now has a formally defined protocol called

PackageMetadata with declared support for the `.get_all()` method. - Synced with `importlib_metadata` 3.3.

- [bpo-41877](#) [<https://bugs.python.org/issue?@action=redirect&bpo=41877>]: A check is added against misspellings of `autospect`, `auto_spec` and `set_spec` being passed as arguments to `patch`, `patch.object` and `create_autospec`.
- [bpo-39717](#) [<https://bugs.python.org/issue?@action=redirect&bpo=39717>]: [tarfile] update nested exception raising to use `from None or from e`
- [bpo-41877](#) [<https://bugs.python.org/issue?@action=redirect&bpo=41877>]: `AttributeError` for suspected misspellings of assertions on mocks are now pointing out that the cause are misspelled assertions and also what to do if the misspelling is actually an intended attribute name. The `unittest.mock` document is also updated to reflect the current set of recognised misspellings.
- [bpo-41559](#) [<https://bugs.python.org/issue?@action=redirect&bpo=41559>]: Implemented [PEP 612](#) [<https://peps.python.org/pep-0612/>]: added `ParamSpec` and `Concatenate` to [typing](#). Patch by Ken Jin.
- [bpo-42385](#) [<https://bugs.python.org/issue?@action=redirect&bpo=42385>]: `StrEnum`: fix `_generate_next_value_` to return a str
- [bpo-31904](#) [<https://bugs.python.org/issue?@action=redirect&bpo=31904>]: Define `THREAD_STACK_SIZE` for `VxWorks`.
- [bpo-34750](#) [<https://bugs.python.org/issue?@action=redirect&bpo=34750>]: [Enum] `_EnumDict.update()` is now supported
- [bpo-42517](#) [<https://bugs.python.org/issue?@action=redirect&bpo=42517>]: Enum: private names do not become members / do not generate errors – they remain normal attributes

- [bpo-42678](https://bugs.python.org/issue?@action=redirect&bpo=42678) [https://bugs.python.org/issue?@action=redirect&bpo=42678]: `Enum: call __init_subclass__` after members have been added
- [bpo-28964](https://bugs.python.org/issue?@action=redirect&bpo=28964) [https://bugs.python.org/issue?@action=redirect&bpo=28964]: `ast.literal_eval()` adds line number information (if available) in error message for malformed nodes.
- [bpo-42470](https://bugs.python.org/issue?@action=redirect&bpo=42470) [https://bugs.python.org/issue?@action=redirect&bpo=42470]: `random.sample()` no longer warns on a sequence which is also a set.
- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: `posixpath.expanduser()` returns the input *path* unchanged if user home directory is None on VxWorks.
- [bpo-42388](https://bugs.python.org/issue?@action=redirect&bpo=42388) [https://bugs.python.org/issue?@action=redirect&bpo=42388]: Fix `subprocess.check_output(..., input=None)` behavior when `text=True` to be consistent with that of the documentation and `universal_newlines=True`.
- [bpo-34463](https://bugs.python.org/issue?@action=redirect&bpo=34463) [https://bugs.python.org/issue?@action=redirect&bpo=34463]: Fixed discrepancy between `traceback` and the interpreter in formatting of `SyntaxError` with `lineno` not set (`traceback` was changed to match interpreter).
- [bpo-42393](https://bugs.python.org/issue?@action=redirect&bpo=42393) [https://bugs.python.org/issue?@action=redirect&bpo=42393]: Raise `OverflowError` instead of silent truncation in `socket.ntohs()` and `socket.htons()`. Silent truncation was deprecated in Python 3.7. Patch by Erlend E. Aasland
- [bpo-42222](https://bugs.python.org/issue?@action=redirect&bpo=42222) [https://bugs.python.org/issue?@action=redirect&bpo=42222]: Harmonized `random.randrange()` argument handling to match `range()`.

○ The integer test and conversion in `randrange()` now

- uses `operator.index()`.
- Non-integer arguments to `randrange()` are deprecated.
- The `ValueError` is deprecated in favor of a `TypeError`.
- It now runs a little faster than before.

(Contributed by Raymond Hettinger and Serhiy Storchaka.)

- [bpo-42163](https://bugs.python.org/issue?@action=redirect&bpo=42163) [https://bugs.python.org/issue?@action=redirect&bpo=42163]: Restore compatibility for `uname_result` around `deepcopy` and `_replace`.
- [bpo-42090](https://bugs.python.org/issue?@action=redirect&bpo=42090) [https://bugs.python.org/issue?@action=redirect&bpo=42090]: `zipfile.Path.joinpath` now accepts arbitrary arguments, same as `pathlib.Path.joinpath`.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port the `_csv` module to the multi-phase initialization API ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-42059](https://bugs.python.org/issue?@action=redirect&bpo=42059) [https://bugs.python.org/issue?@action=redirect&bpo=42059]: `typing.TypedDict` types created using the alternative call-style syntax now correctly respect the `total` keyword argument when setting their `__required_keys__` and `__optional_keys__` class attributes.
- [bpo-41960](https://bugs.python.org/issue?@action=redirect&bpo=41960) [https://bugs.python.org/issue?@action=redirect&bpo=41960]: Add `globals` and `locals` parameters to the `inspect.signature()` and `inspect.Signature.from_callable()`.
- [bpo-41907](https://bugs.python.org/issue?@action=redirect&bpo=41907) [https://bugs.python.org/issue?@action=redirect&bpo=41907]: fix `format()` behavior for `IntFlag`
- [bpo-41891](https://bugs.python.org/issue?@action=redirect&bpo=41891) [https://bugs.python.org/issue?@action=redirect&bpo=41891]: Ensure `asyncio.wait_for` waits for

## task completion

- [bpo-24792](https://bugs.python.org/issue?@action=redirect&bpo=24792) [https://bugs.python.org/issue?@action=redirect&bpo=24792]: Fixed bug where **zipimporter** sometimes reports an incorrect cause of import errors.
- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: Fix site and sysconfig modules for VxWorks RTOS which has no home directories.
- [bpo-41462](https://bugs.python.org/issue?@action=redirect&bpo=41462) [https://bugs.python.org/issue?@action=redirect&bpo=41462]: Add **os.set\_blocking()** support for VxWorks RTOS.
- [bpo-40219](https://bugs.python.org/issue?@action=redirect&bpo=40219) [https://bugs.python.org/issue?@action=redirect&bpo=40219]: Lowered **tkinter.ttk.LabeledScale** dummy widget to prevent hiding part of the content label.
- [bpo-37193](https://bugs.python.org/issue?@action=redirect&bpo=37193) [https://bugs.python.org/issue?@action=redirect&bpo=37193]: Fixed memory leak in `socketserver.ThreadingMixIn` introduced in Python 3.7.
- [bpo-39068](https://bugs.python.org/issue?@action=redirect&bpo=39068) [https://bugs.python.org/issue?@action=redirect&bpo=39068]: Fix initialization race condition in **a85encode()** and **b85encode()** in **base64**. Patch by Brandon Stansbury.

## Documentation

- [bpo-17140](https://bugs.python.org/issue?@action=redirect&bpo=17140) [https://bugs.python.org/issue?@action=redirect&bpo=17140]: Add documentation for the **multiprocessing.pool.ThreadPool** class.
- [bpo-34398](https://bugs.python.org/issue?@action=redirect&bpo=34398) [https://bugs.python.org/issue?@action=redirect&bpo=34398]: Prominently feature listings from the glossary in documentation search results. Patch by Ammar Askar.

## Tests

- [bpo-42794](https://bugs.python.org/issue?@action=redirect&bpo=42794) [https://bugs.python.org/issue?@action=redirect&bpo=42794]: Update test\_nntplib to use official group name of news.aioe.org for testing. Patch by Dong-hee Na.
- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: Skip some asyncio tests on VxWorks.
- [bpo-42641](https://bugs.python.org/issue?@action=redirect&bpo=42641) [https://bugs.python.org/issue?@action=redirect&bpo=42641]: Enhance `test_select.test_select()`: it now takes 500 milliseconds rather than 10 seconds. Use Python rather than a shell to make the test more portable.
- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: Skip some tests in `_test_all_chown_common()` on VxWorks.
- [bpo-42199](https://bugs.python.org/issue?@action=redirect&bpo=42199) [https://bugs.python.org/issue?@action=redirect&bpo=42199]: Fix bytecode helper `assertNotInBytecode`.
- [bpo-41443](https://bugs.python.org/issue?@action=redirect&bpo=41443) [https://bugs.python.org/issue?@action=redirect&bpo=41443]: Add more attribute checking in `test_posix.py`
- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: Disable `os.popen` and impacted tests on VxWorks
- [bpo-41439](https://bugs.python.org/issue?@action=redirect&bpo=41439) [https://bugs.python.org/issue?@action=redirect&bpo=41439]: Port `test_ssl` and `test_uuid` to VxWorks RTOS.

## Build

- [bpo-42692](https://bugs.python.org/issue?@action=redirect&bpo=42692) [https://bugs.python.org/issue?@action=redirect&bpo=42692]: Fix `_builtin_available` check on older compilers. Patch by Joshua Root.
- [bpo-27640](https://bugs.python.org/issue?@action=redirect&bpo=27640) [https://bugs.python.org/issue?@action=redirect&bpo=27640]: Added `--disable-test-modules` option to the `configure` script: don't build nor install test modules. Patch by Xavier de Gaye, Thomas Petazzoni and Peixing Xin.
- [bpo-42604](https://bugs.python.org/issue?@action=redirect&bpo=42604) [https://bugs.python.org/issue?@action=redirect&bpo=42604]: Now all platforms use a value for

the “EXT\_SUFFIX” build variable derived from SOABI (for instance in freeBSD, “EXT\_SUFFIX” is now “.cpython-310d.so” instead of “.so”). Previously only Linux, Mac and VxWorks were using a value for “EXT\_SUFFIX” that included “SOABI”.

- [bpo-42598](https://bugs.python.org/issue?@action=redirect&bpo=42598) [https://bugs.python.org/issue?@action=redirect&bpo=42598]: Fix implicit function declarations in configure which could have resulted in incorrect configuration checks. Patch contributed by Joshua Root.
- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: Enable libpython3.so for VxWorks.
- [bpo-29076](https://bugs.python.org/issue?@action=redirect&bpo=29076) [https://bugs.python.org/issue?@action=redirect&bpo=29076]: Add fish shell support to macOS installer.

## macOS

- [bpo-42361](https://bugs.python.org/issue?@action=redirect&bpo=42361) [https://bugs.python.org/issue?@action=redirect&bpo=42361]: Update macOS installer build to use Tcl/Tk 8.6.11 (rc2, expected to be final release).
- [bpo-41837](https://bugs.python.org/issue?@action=redirect&bpo=41837) [https://bugs.python.org/issue?@action=redirect&bpo=41837]: Update macOS installer build to use OpenSSL 1.1.1i.
- [bpo-42584](https://bugs.python.org/issue?@action=redirect&bpo=42584) [https://bugs.python.org/issue?@action=redirect&bpo=42584]: Update macOS installer to use SQLite 3.34.0.

## Tools/Demos

- [bpo-42726](https://bugs.python.org/issue?@action=redirect&bpo=42726) [https://bugs.python.org/issue?@action=redirect&bpo=42726]: Fixed Python 3 compatibility issue with gdb/libpython.py handling of attribute dictionaries.
- [bpo-42613](https://bugs.python.org/issue?@action=redirect&bpo=42613) [https://bugs.python.org/issue?@action=redirect&bpo=42613]: Fix `freeze.py` tool to use the proper config and library directories. Patch by Victor Stinner.

## C API

- [bpo-42591](https://bugs.python.org/issue?@action=redirect&bpo=42591) [https://bugs.python.org/issue?@action=redirect&bpo=42591]

@action=redirect&bpo=42591]: Export the `Py_FrozenMain()` function: fix a Python 3.9.0 regression. Python 3.9 uses `-fvisibility=hidden` and the function was not exported explicitly and so not exported.

- [bpo-32381](https://bugs.python.org/issue?@action=redirect&bpo=32381) [https://bugs.python.org/issue?@action=redirect&bpo=32381]: Remove the private `_Py_fopen()` function which is no longer needed. Use `_Py_wfopen()` or `_Py_fopen_obj()` instead. Patch by Victor Stinner.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `resource` extension module to module state
- [bpo-42111](https://bugs.python.org/issue?@action=redirect&bpo=42111) [https://bugs.python.org/issue?@action=redirect&bpo=42111]: Update the `xxlimited` module to be a better example of how to use the limited C API.
- [bpo-40052](https://bugs.python.org/issue?@action=redirect&bpo=40052) [https://bugs.python.org/issue?@action=redirect&bpo=40052]: Fix an alignment build warning/error in function `PyVectorcall_Function()`. Patch by Andreas Schneider, Antoine Pitrou and Petr Viktorin.

## Python 3.10.0 alpha 3

*Release date: 2020-12-07*

### Security

- [bpo-40791](https://bugs.python.org/issue?@action=redirect&bpo=40791) [https://bugs.python.org/issue?@action=redirect&bpo=40791]: Add `volatile` to the accumulator variable in `hmac.compare_digest`, making constant-time-defeating optimizations less likely.

### Core and Builtins

- [bpo-42576](https://bugs.python.org/issue?@action=redirect&bpo=42576) [https://bugs.python.org/issue?@action=redirect&bpo=42576]: `types.GenericAlias` will now raise a `TypeError` when attempting to initialize with a keyword argument. Previously, this would cause the interpreter to crash if the interpreter was compiled with debug symbols. This does not affect interpreters compiled for

release. Patch by Ken Jin.

- [bpo-42536](https://bugs.python.org/issue?@action=redirect&bpo=42536) [https://bugs.python.org/issue?@action=redirect&bpo=42536]: Several built-in and standard library types now ensure that their internal result tuples are always tracked by the [garbage collector](#):

- `collections.OrderedDict.items()`
- `dict.items()`
- `enumerate()`
- `functools.reduce()`
- `itertools.combinations()`
- `itertools.combinations_with_replacement()`
- `itertools.permutations()`
- `itertools.product()`
- `itertools.zip_longest()`
- `zip()`

Previously, they could have become untracked by a prior garbage collection. Patch by Brandt Bucher.

- [bpo-42500](https://bugs.python.org/issue?@action=redirect&bpo=42500) [https://bugs.python.org/issue?@action=redirect&bpo=42500]: Improve handling of exceptions near recursion limit. Converts a number of Fatal Errors in RecursionErrors.
- [bpo-42246](https://bugs.python.org/issue?@action=redirect&bpo=42246) [https://bugs.python.org/issue?@action=redirect&bpo=42246]: PEP 626: After a return, the `f_lineno` attribute of a frame is always the last line executed.
- [bpo-42435](https://bugs.python.org/issue?@action=redirect&bpo=42435) [https://bugs.python.org/issue?@action=redirect&bpo=42435]: Speed up comparison of bytes objects with non-bytes objects when option `-b` is specified. Speed up comparison of bytearray objects with non-buffer object.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port the `_warnings` extension module to the multi-phase initialization API ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]). Patch by Victor Stinner.

- [bpo-41686](https://bugs.python.org/issue?@action=redirect&bpo=41686) [https://bugs.python.org/issue?@action=redirect&bpo=41686]: On Windows, the `SIGINT` event, `_PyOS_SigintEvent()`, is now created even if Python is configured to not install signal handlers (if `PyConfig.install_signal_handlers` equals to 0, or `Py_InitializeEx(0)`).
- [bpo-42381](https://bugs.python.org/issue?@action=redirect&bpo=42381) [https://bugs.python.org/issue?@action=redirect&bpo=42381]: Allow assignment expressions in set literals and set comprehensions as per PEP 572. Patch by Pablo Galindo.
- [bpo-42202](https://bugs.python.org/issue?@action=redirect&bpo=42202) [https://bugs.python.org/issue?@action=redirect&bpo=42202]: Change function parameters annotations internal representation to tuple of strings. Patch provided by Yurii Karabas.
- [bpo-42374](https://bugs.python.org/issue?@action=redirect&bpo=42374) [https://bugs.python.org/issue?@action=redirect&bpo=42374]: Fix a regression introduced by the new parser, where an unparenthesized walrus operator was not allowed within generator expressions.
- [bpo-42316](https://bugs.python.org/issue?@action=redirect&bpo=42316) [https://bugs.python.org/issue?@action=redirect&bpo=42316]: Allow an unparenthesized walrus in subscript indexes.
- [bpo-42349](https://bugs.python.org/issue?@action=redirect&bpo=42349) [https://bugs.python.org/issue?@action=redirect&bpo=42349]: Make sure that the compiler front-end produces a well-formed control flow graph. Be more aggressive in the compiler back-end, as it is now safe to do so.
- [bpo-42296](https://bugs.python.org/issue?@action=redirect&bpo=42296) [https://bugs.python.org/issue?@action=redirect&bpo=42296]: On Windows, fix a regression in signal handling which prevented to interrupt a program using `CTRL + C`. The signal handler can be run in a thread different than the Python thread, in which case the test deciding if the thread can handle signals is wrong.
- [bpo-42332](https://bugs.python.org/issue?@action=redirect&bpo=42332) [https://bugs.python.org/issue?@action=redirect&bpo=42332]: `types.GenericAlias` objects can now be the targets of weakrefs.

- [bpo-42282](https://bugs.python.org/issue?@action=redirect&bpo=42282) [https://bugs.python.org/issue?@action=redirect&bpo=42282]: Optimise constant subexpressions that appear as part of named expressions (previously the AST optimiser did not descend into named expressions). Patch by Nick Coghlan.
- [bpo-42266](https://bugs.python.org/issue?@action=redirect&bpo=42266) [https://bugs.python.org/issue?@action=redirect&bpo=42266]: Fixed a bug with the LOAD\_ATTR opcode cache that was not respecting monkey-patching a class-level attribute to make it a descriptor. Patch by Pablo Galindo.
- [bpo-40077](https://bugs.python.org/issue?@action=redirect&bpo=40077) [https://bugs.python.org/issue?@action=redirect&bpo=40077]: Convert `queue` to use heap types.
- [bpo-42246](https://bugs.python.org/issue?@action=redirect&bpo=42246) [https://bugs.python.org/issue?@action=redirect&bpo=42246]: Improved accuracy of line tracing events and `f_lineno` attribute of Frame objects. See PEP 626 for details.
- [bpo-40077](https://bugs.python.org/issue?@action=redirect&bpo=40077) [https://bugs.python.org/issue?@action=redirect&bpo=40077]: Convert `mmap` to use heap types.
- [bpo-42233](https://bugs.python.org/issue?@action=redirect&bpo=42233) [https://bugs.python.org/issue?@action=redirect&bpo=42233]: Allow `GenericAlias` objects to use `union type expressions`. This allows expressions like `list[int] | dict[float, str]` where previously a `TypeError` would have been thrown. This also fixes union type expressions not de-duplicating `GenericAlias` objects. (Contributed by Ken Jin in [bpo-42233](https://bugs.python.org/issue?@action=redirect&bpo=42233) [https://bugs.python.org/issue?@action=redirect&bpo=42233].)
- [bpo-26131](https://bugs.python.org/issue?@action=redirect&bpo=26131) [https://bugs.python.org/issue?@action=redirect&bpo=26131]: The import system triggers a `ImportWarning` when it falls back to using `load_module()`.

## Library

- [bpo-5054](https://bugs.python.org/issue?@action=redirect&bpo=5054) [https://bugs.python.org/issue?@action=redirect&bpo=5054]:

CGIHTTPRequestHandler.run\_cgi() HTTP\_ACCEPT improperly parsed. Replace the special purpose getallmatchingheaders with generic get\_all method and add relevant tests.

Original Patch by Martin Panter. Modified by Senthil Kumaran.

- [bpo-42562](https://bugs.python.org/issue?@action=redirect&bpo=42562) [https://bugs.python.org/issue?@action=redirect&bpo=42562]: Fix issue when dis failed to parse function that has no line numbers. Patch provided by Yurii Karabas.
- [bpo-17735](https://bugs.python.org/issue?@action=redirect&bpo=17735) [https://bugs.python.org/issue?@action=redirect&bpo=17735]: `inspect.findsource()` now raises `OSError` instead of `IndexError` when `co_lineno` of a code object is greater than the file length. This can happen, for example, when a file is edited after it was imported. PR by Irit Katriel.
- [bpo-42116](https://bugs.python.org/issue?@action=redirect&bpo=42116) [https://bugs.python.org/issue?@action=redirect&bpo=42116]: Fix handling of trailing comments by `inspect.getsource()`.
- [bpo-42532](https://bugs.python.org/issue?@action=redirect&bpo=42532) [https://bugs.python.org/issue?@action=redirect&bpo=42532]: Remove unexpected call of `__bool__` when passing a `spec_arg` argument to a Mock.
- [bpo-38200](https://bugs.python.org/issue?@action=redirect&bpo=38200) [https://bugs.python.org/issue?@action=redirect&bpo=38200]: Added `itertools.pairwise()`
- [bpo-41818](https://bugs.python.org/issue?@action=redirect&bpo=41818) [https://bugs.python.org/issue?@action=redirect&bpo=41818]: Fix `test_master_read()` so that it succeeds on all platforms that either raise `OSError` or return `b""` upon reading from master.
- [bpo-42487](https://bugs.python.org/issue?@action=redirect&bpo=42487) [https://bugs.python.org/issue?@action=redirect&bpo=42487]: `ChainMap.__iter__` no longer calls `__getitem__` on underlying maps
- [bpo-42482](https://bugs.python.org/issue?@action=redirect&bpo=42482) [https://bugs.python.org/issue?@action=redirect&bpo=42482]: `TracebackException` no

longer holds a reference to the exception's traceback object. Consequently, instances of `TracebackException` for equivalent but non-equal exceptions now compare as equal.

- [bpo-41818](https://bugs.python.org/issue?@action=redirect&bpo=41818) [https://bugs.python.org/issue?@action=redirect&bpo=41818]: Make `test_openpty()` avoid unexpected success due to number of rows and/or number of columns being `== 0`.
- [bpo-42392](https://bugs.python.org/issue?@action=redirect&bpo=42392) [https://bugs.python.org/issue?@action=redirect&bpo=42392]: Remove loop parameter from `asyncio.subprocess` and `asyncio.tasks` functions. Patch provided by Yurii Karabas.
- [bpo-42392](https://bugs.python.org/issue?@action=redirect&bpo=42392) [https://bugs.python.org/issue?@action=redirect&bpo=42392]: Remove loop parameter from `asyncio.open_connection` and `asyncio.start_server` functions. Patch provided by Yurii Karabas.
- [bpo-28468](https://bugs.python.org/issue?@action=redirect&bpo=28468) [https://bugs.python.org/issue?@action=redirect&bpo=28468]: Add [platform.freedesktop\\_os\\_release\(\)](#) function to parse `freedesktop.org` `os-release` files.
- [bpo-42299](https://bugs.python.org/issue?@action=redirect&bpo=42299) [https://bugs.python.org/issue?@action=redirect&bpo=42299]: Removed the `formatter` module, which was deprecated in Python 3.4. It is somewhat obsolete, little used, and not tested. It was originally scheduled to be removed in Python 3.6, but such removals were delayed until after Python 2.7 EOL. Existing users should copy whatever classes they use into their code. Patch by Dong-hee Na and Terry J. Reedy.
- [bpo-26131](https://bugs.python.org/issue?@action=redirect&bpo=26131) [https://bugs.python.org/issue?@action=redirect&bpo=26131]: Deprecate `zipimport.zipimporter.load_module()` in favour of `exec_module()`.
- [bpo-41818](https://bugs.python.org/issue?@action=redirect&bpo=41818) [https://bugs.python.org/issue?@action=redirect&bpo=41818]: Updated tests for the `pty` library.

`test_basic()` has been changed to `test_openpty()`; this additionally checks if slave `termios` and slave `winsize` are being set properly by `pty.openpty()`. In order to add support for FreeBSD, NetBSD, OpenBSD, and Darwin, this also adds `test_master_read()`, which demonstrates that `pty.spawn()` should not depend on an `OSError` to exit from its copy loop.

- [bpo-42392](https://bugs.python.org/issue?@action=redirect&bpo=42392) [https://bugs.python.org/issue?@action=redirect&bpo=42392]: Remove loop parameter from `__init__` in all `asyncio.locks` and `asyncio.Queue` classes. Patch provided by Yurii Karabas.
- [bpo-15450](https://bugs.python.org/issue?@action=redirect&bpo=15450) [https://bugs.python.org/issue?@action=redirect&bpo=15450]: Make `filecmp.dircmp` respect subclassing. Now the `filecmp.dircmp.subdirs` behaves as expected when subclassing `dircmp`.
- [bpo-42413](https://bugs.python.org/issue?@action=redirect&bpo=42413) [https://bugs.python.org/issue?@action=redirect&bpo=42413]: The exception `socket.timeout` is now an alias of `TimeoutError`.
- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: Support signal module on VxWorks.
- [bpo-42406](https://bugs.python.org/issue?@action=redirect&bpo=42406) [https://bugs.python.org/issue?@action=redirect&bpo=42406]: We fixed an issue in `pickle.whichmodule` in which importing `multiprocessing` could change the how pickle identifies which module an object belongs to, potentially breaking the unpickling of those objects.
- [bpo-42403](https://bugs.python.org/issue?@action=redirect&bpo=42403) [https://bugs.python.org/issue?@action=redirect&bpo=42403]: Simplify the `importlib` external bootstrap code: `importlib._bootstrap_external` now uses regular imports to import builtin modules. When it is imported, the builtin `__import__()` function is already fully working and so can be used to import builtin modules like `sys`. Patch by Victor Stinner.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]

@action=redirect&bpo=1635741]: Convert `_sre` module types to heap types (PEP 384). Patch by Erlend E. Aasland.

- [bpo-42375](https://bugs.python.org/issue?@action=redirect&bpo=42375) [https://bugs.python.org/issue?@action=redirect&bpo=42375]: subprocess module update for DragonFlyBSD support.
- [bpo-41713](https://bugs.python.org/issue?@action=redirect&bpo=41713) [https://bugs.python.org/issue?@action=redirect&bpo=41713]: Port the `_signal` extension module to the multi-phase initialization API (PEP 489 [https://peps.python.org/pep-0489/]). Patch by Victor Stinner and Mohamed Koubaa.
- [bpo-37205](https://bugs.python.org/issue?@action=redirect&bpo=37205) [https://bugs.python.org/issue?@action=redirect&bpo=37205]: `time.time()`, `time.perf_counter()` and `time.monotonic()` functions can no longer fail with a Python fatal error, instead raise a regular Python exception on failure.
- [bpo-42328](https://bugs.python.org/issue?@action=redirect&bpo=42328) [https://bugs.python.org/issue?@action=redirect&bpo=42328]: Fixed `tkinter.ttk.Style.map()`. The function accepts now the representation of the default state as empty sequence (as returned by `Style.map()`). The structure of the result is now the same on all platform and does not depend on the value of `wantobjects`.
- [bpo-42345](https://bugs.python.org/issue?@action=redirect&bpo=42345) [https://bugs.python.org/issue?@action=redirect&bpo=42345]: Fix various issues with `typing.Literal` parameter handling (flatten, deduplicate, use type to cache key). Patch provided by Yurii Karabas.
- [bpo-37205](https://bugs.python.org/issue?@action=redirect&bpo=37205) [https://bugs.python.org/issue?@action=redirect&bpo=37205]: `time.perf_counter()` on Windows and `time.monotonic()` on macOS are now system-wide. Previously, they used an offset computed at startup to reduce the precision loss caused by the float type. Use `time.perf_counter_ns()` and `time.monotonic_ns()` added in Python 3.7 to avoid this precision loss.

- [bpo-42318](https://bugs.python.org/issue?@action=redirect&bpo=42318) [https://bugs.python.org/issue?@action=redirect&bpo=42318]: Fixed support of non-BMP characters in `tkinter` on macOS.
- [bpo-42350](https://bugs.python.org/issue?@action=redirect&bpo=42350) [https://bugs.python.org/issue?@action=redirect&bpo=42350]: Fix the `threading.Thread` class at fork: do nothing if the thread is already stopped (ex: fork called at Python exit). Previously, an error was logged in the child process.
- [bpo-42333](https://bugs.python.org/issue?@action=redirect&bpo=42333) [https://bugs.python.org/issue?@action=redirect&bpo=42333]: Port `_ssl` extension module to heap types.
- [bpo-42014](https://bugs.python.org/issue?@action=redirect&bpo=42014) [https://bugs.python.org/issue?@action=redirect&bpo=42014]: The `onerror` callback from `shutil.rmtree` now receives correct function when `os.open` fails.
- [bpo-42237](https://bugs.python.org/issue?@action=redirect&bpo=42237) [https://bugs.python.org/issue?@action=redirect&bpo=42237]: Fix `os.sendfile()` on illumos.
- [bpo-42308](https://bugs.python.org/issue?@action=redirect&bpo=42308) [https://bugs.python.org/issue?@action=redirect&bpo=42308]: Add `threading.__excepthook__` to allow retrieving the original value of `threading.excepthook()` in case it is set to a broken or a different value. Patch by Mario Corchero.
- [bpo-42131](https://bugs.python.org/issue?@action=redirect&bpo=42131) [https://bugs.python.org/issue?@action=redirect&bpo=42131]: Implement PEP 451/spec methods on `zipimport.zipimporter`: `find_spec()`, `create_module()`, and `exec_module()`.

This also allows for the documented deprecation of `find_loader()`, `find_module()`, and `load_module()`.

- [bpo-41877](https://bugs.python.org/issue?@action=redirect&bpo=41877) [https://bugs.python.org/issue?@action=redirect&bpo=41877]: Mock objects which are not unsafe will now raise an `AttributeError` if an attribute with the prefix `assert`, `aseert`, or `asrt` is accessed, in addition to this already happening for the prefixes `assert` or `asrt`.

- [bpo-42264](https://bugs.python.org/issue?@action=redirect&bpo=42264) [https://bugs.python.org/issue?@action=redirect&bpo=42264]: `sqlite3.OptimizedUnicode` has been undocumented and obsolete since Python 3.3, when it was made an alias to `str`. It is now deprecated, scheduled for removal in Python 3.12.
- [bpo-42251](https://bugs.python.org/issue?@action=redirect&bpo=42251) [https://bugs.python.org/issue?@action=redirect&bpo=42251]: Added `threading.gettrace()` and `threading.getprofile()` to retrieve the functions set by `threading.settrace()` and `threading.setprofile()` respectively. Patch by Mario Corchero.
- [bpo-42249](https://bugs.python.org/issue?@action=redirect&bpo=42249) [https://bugs.python.org/issue?@action=redirect&bpo=42249]: Fixed writing binary Plist files larger than 4 GiB.
- [bpo-42236](https://bugs.python.org/issue?@action=redirect&bpo=42236) [https://bugs.python.org/issue?@action=redirect&bpo=42236]: On Unix, the `os.device_encoding()` function now returns `'UTF-8'` rather than the device encoding if the [Python UTF-8 Mode](#) is enabled.
- [bpo-41754](https://bugs.python.org/issue?@action=redirect&bpo=41754) [https://bugs.python.org/issue?@action=redirect&bpo=41754]: webbrowser: Ignore `NotADirectoryError` when calling `xdg-settings`.
- [bpo-42183](https://bugs.python.org/issue?@action=redirect&bpo=42183) [https://bugs.python.org/issue?@action=redirect&bpo=42183]: Fix a stack overflow error for `asyncio Task` or `Future repr()`.

The overflow occurs under some circumstances when a `Task` or `Future` recursively returns itself.

- [bpo-42140](https://bugs.python.org/issue?@action=redirect&bpo=42140) [https://bugs.python.org/issue?@action=redirect&bpo=42140]: Improve `asyncio.wait` function to create the futures set just one time.
- [bpo-42133](https://bugs.python.org/issue?@action=redirect&bpo=42133) [https://bugs.python.org/issue?@action=redirect&bpo=42133]: Update various modules in the

stdlib to fall back on `__spec__.loader` when `__loader__` isn't defined on a module.

- [bpo-26131](https://bugs.python.org/issue?@action=redirect&bpo=26131) [https://bugs.python.org/issue?@action=redirect&bpo=26131]: The `load_module()` methods found in `importlib` now trigger a `DeprecationWarning`.
- [bpo-39825](https://bugs.python.org/issue?@action=redirect&bpo=39825) [https://bugs.python.org/issue?@action=redirect&bpo=39825]: Windows: Change `sysconfig.get_config_var('EXT_SUFFIX')` to the expected full `platform_tag.extension` format. Previously it was hard-coded to `.pyd`, now it is compatible with `distutils.sysconfig` and will result in something like `.cp38-win_amd64.pyd`. This brings windows into conformance with the other platforms.
- [bpo-26389](https://bugs.python.org/issue?@action=redirect&bpo=26389) [https://bugs.python.org/issue?@action=redirect&bpo=26389]: The `traceback.format_exception()`, `traceback.format_exception_only()`, and `traceback.print_exception()` functions can now take an exception object as a positional-only argument.
- [bpo-41889](https://bugs.python.org/issue?@action=redirect&bpo=41889) [https://bugs.python.org/issue?@action=redirect&bpo=41889]: Enum: fix regression involving inheriting a multiply inherited enum
- [bpo-41861](https://bugs.python.org/issue?@action=redirect&bpo=41861) [https://bugs.python.org/issue?@action=redirect&bpo=41861]: Convert `sqlite3` to use heap types (PEP 384). Patch by Erlend E. Aasland.
- [bpo-40624](https://bugs.python.org/issue?@action=redirect&bpo=40624) [https://bugs.python.org/issue?@action=redirect&bpo=40624]: Added support for the `XPath !=` operator in `xml.etree`
- [bpo-28850](https://bugs.python.org/issue?@action=redirect&bpo=28850) [https://bugs.python.org/issue?@action=redirect&bpo=28850]: Fix `pprint.PrettyPrinter.format()` overrides being ignored for contents of small containers. The `pprint._safe_repr()` function was removed.

- [bpo-41625](https://bugs.python.org/issue?@action=redirect&bpo=41625) [https://bugs.python.org/issue?@action=redirect&bpo=41625]: Expose the `splice()` as `os.splice()` in the `os` module. Patch by Pablo Galindo
- [bpo-34215](https://bugs.python.org/issue?@action=redirect&bpo=34215) [https://bugs.python.org/issue?@action=redirect&bpo=34215]: Clarify the error message for `asyncio.IncompleteReadError` when `expected` is `None`.
- [bpo-41543](https://bugs.python.org/issue?@action=redirect&bpo=41543) [https://bugs.python.org/issue?@action=redirect&bpo=41543]: Add `async` context manager support for `contextlib.nullcontext`.
- [bpo-21041](https://bugs.python.org/issue?@action=redirect&bpo=21041) [https://bugs.python.org/issue?@action=redirect&bpo=21041]: `pathlib.PurePath.parents` now supports negative indexing. Patch contributed by Yaroslav Pankovych.
- [bpo-41332](https://bugs.python.org/issue?@action=redirect&bpo=41332) [https://bugs.python.org/issue?@action=redirect&bpo=41332]: Added missing `connect_accepted_socket()` method to `asyncio.AbstractEventLoop`.
- [bpo-12800](https://bugs.python.org/issue?@action=redirect&bpo=12800) [https://bugs.python.org/issue?@action=redirect&bpo=12800]: Extracting a symlink from a tarball should succeed and overwrite the symlink if it already exists. The fix is to remove the existing file or symlink before extraction. Based on patch by Chris AtLee, Jeffrey Kintscher, and Senthil Kumaran.
- [bpo-40968](https://bugs.python.org/issue?@action=redirect&bpo=40968) [https://bugs.python.org/issue?@action=redirect&bpo=40968]: `urllib.request` and `http.client` now send `http/1.1` ALPN extension during TLS handshake when no custom context is supplied.
- [bpo-41001](https://bugs.python.org/issue?@action=redirect&bpo=41001) [https://bugs.python.org/issue?@action=redirect&bpo=41001]: Add `func:os.eventfd` to provide a low level interface for Linux's event notification file descriptor.
- [bpo-40816](https://bugs.python.org/issue?@action=redirect&bpo=40816) [https://bugs.python.org/issue?@action=redirect&bpo=40816]

@action=redirect&bpo=40816]: Add AsyncContextDecorator to contextlib to support async context manager as a decorator.

- [bpo-40550](https://bugs.python.org/issue?@action=redirect&bpo=40550) [https://bugs.python.org/issue?@action=redirect&bpo=40550]: Fix time-of-check/time-of-action issue in subprocess.Popen.send\_signal.
- [bpo-39411](https://bugs.python.org/issue?@action=redirect&bpo=39411) [https://bugs.python.org/issue?@action=redirect&bpo=39411]: Add an is\_async identifier to **pyclbr**'s Function objects. Patch by Batuhan Taskaya
- [bpo-35498](https://bugs.python.org/issue?@action=redirect&bpo=35498) [https://bugs.python.org/issue?@action=redirect&bpo=35498]: Add slice support to **pathlib.PurePath.parents**.

## Documentation

- [bpo-42238](https://bugs.python.org/issue?@action=redirect&bpo=42238) [https://bugs.python.org/issue?@action=redirect&bpo=42238]: Tentative to deprecate `make suspicious` by first removing it from the CI and documentation builds, but keeping it around for manual uses.
- [bpo-42153](https://bugs.python.org/issue?@action=redirect&bpo=42153) [https://bugs.python.org/issue?@action=redirect&bpo=42153]: Fix the URL for the IMAP protocol documents.
- [bpo-41028](https://bugs.python.org/issue?@action=redirect&bpo=41028) [https://bugs.python.org/issue?@action=redirect&bpo=41028]: Language and version switchers, previously maintained in every cpython branches, are now handled by docsbuild-script.

## Tests

- [bpo-41473](https://bugs.python.org/issue?@action=redirect&bpo=41473) [https://bugs.python.org/issue?@action=redirect&bpo=41473]: Re-enable `test_gdb` on gdb 9.2 and newer: [https://bugzilla.redhat.com/show\\_bug.cgi?id=1866884](https://bugzilla.redhat.com/show_bug.cgi?id=1866884) bug is fixed in gdb 10.1.
- [bpo-42553](https://bugs.python.org/issue?@action=redirect&bpo=42553) [https://bugs.python.org/issue?@action=redirect&bpo=42553]: Fix `test_asyncio.test_call_later()` race condition: don't measure asyncio performance in the `call_later()` unit test. The test failed randomly on the CI.

- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: Fix test\_netrc on VxWorks: create temporary directories using temp\_cwd().
- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: skip test\_getaddrinfo\_ipv6\_scopeid\_symbolic and test\_getnameinfo\_ipv6\_scopeid\_symbolic on VxWorks
- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: skip test\_test of test\_mailcap on VxWorks
- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: add shell requirement for test\_pipes
- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: skip some tests related to fifo on VxWorks
- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: Fix test\_doctest.py failures for VxWorks.
- [bpo-40754](https://bugs.python.org/issue?@action=redirect&bpo=40754) [https://bugs.python.org/issue?@action=redirect&bpo=40754]: Include \_testinternalcapi module in Windows installer for test suite
- [bpo-41561](https://bugs.python.org/issue?@action=redirect&bpo=41561) [https://bugs.python.org/issue?@action=redirect&bpo=41561]: test\_ssl: skip test\_min\_max\_version\_mismatch when TLS 1.0 is not available
- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: Fix os module failures for VxWorks RTOS.
- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: Fix fifo test cases for VxWorks RTOS.

## Build

- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: remove libnet dependency from detect\_socket() for VxWorks
- [bpo-42398](https://bugs.python.org/issue?@action=redirect&bpo=42398) [https://bugs.python.org/issue?@action=redirect&bpo=42398]: Fix a race condition in “make regen-all” when make -jN option is used to run jobs in

parallel. The `clinic.py` script now only use atomic write to write files. Moreover, generated files are now left unchanged if the content does not change, to not change the file modification time.

- [bpo-41617](https://bugs.python.org/issue?@action=redirect&bpo=41617) [https://bugs.python.org/issue?@action=redirect&bpo=41617]: Fix building `pycore_bitutils.h` internal header on old clang version without `__builtin_bswap16()` (ex: Xcode 4.6.3 on Mac OS X 10.7). Patch by Joshua Root and Victor Stinner.
- [bpo-38823](https://bugs.python.org/issue?@action=redirect&bpo=38823) [https://bugs.python.org/issue?@action=redirect&bpo=38823]: It is no longer possible to build the `_ctypes` extension module without `wchar_t` type: remove `CTYPES_UNICODE` macro. Anyway, the `wchar_t` type is required to build Python. Patch by Victor Stinner.
- [bpo-42087](https://bugs.python.org/issue?@action=redirect&bpo=42087) [https://bugs.python.org/issue?@action=redirect&bpo=42087]: Support was removed for AIX 5.3 and below. See [bpo-40680](https://bugs.python.org/issue?@action=redirect&bpo=40680) [https://bugs.python.org/issue?@action=redirect&bpo=40680].
- [bpo-40998](https://bugs.python.org/issue?@action=redirect&bpo=40998) [https://bugs.python.org/issue?@action=redirect&bpo=40998]: Addressed three compiler warnings found by undefined behavior sanitizer (ubsan).

## Windows

- [bpo-42120](https://bugs.python.org/issue?@action=redirect&bpo=42120) [https://bugs.python.org/issue?@action=redirect&bpo=42120]: Remove macro definition of `copysign` (to `_copysign`) in headers.
- [bpo-38506](https://bugs.python.org/issue?@action=redirect&bpo=38506) [https://bugs.python.org/issue?@action=redirect&bpo=38506]: The Windows launcher now properly handles Python 3.10 when listing installed Python versions.

## macOS

- [bpo-42504](https://bugs.python.org/issue?@action=redirect&bpo=42504) [https://bugs.python.org/issue?@action=redirect&bpo=42504]: Fix build on macOS Big Sur when `MACOSX_DEPLOYMENT_TARGET = 11`
- [bpo-41116](https://bugs.python.org/issue?@action=redirect&bpo=41116) [https://bugs.python.org/issue?@action=redirect&bpo=41116]: Ensure

`distutils.unixxxcompiler.find_library_file` can find system provided libraries on macOS 11.

- [bpo-41100](https://bugs.python.org/issue?@action=redirect&bpo=41100) [https://bugs.python.org/issue?@action=redirect&bpo=41100]: Add support for macOS 11 and Apple Silicon systems.

It is now possible to build “Universal 2” binaries using “`--enable-universalsdk --with-universal-archs=universal2`”.

Binaries build on later macOS versions can be deployed back to older versions (tested up to macOS 10.9), when using the correct deployment target. This is tested using Xcode 11 and later.

- [bpo-42232](https://bugs.python.org/issue?@action=redirect&bpo=42232) [https://bugs.python.org/issue?@action=redirect&bpo=42232]: Added Darwin specific `madvise` options to `mmap` module.
- [bpo-38443](https://bugs.python.org/issue?@action=redirect&bpo=38443) [https://bugs.python.org/issue?@action=redirect&bpo=38443]: The `--enable-universalsdk` and `--with-universal-archs` options for the configure script now check that the specified architectures can be used.

## IDLE

- [bpo-42508](https://bugs.python.org/issue?@action=redirect&bpo=42508) [https://bugs.python.org/issue?@action=redirect&bpo=42508]: Keep IDLE running on macOS. Remove obsolete workaround that prevented running files with shortcuts when using new universal2 installers built on macOS 11.
- [bpo-42426](https://bugs.python.org/issue?@action=redirect&bpo=42426) [https://bugs.python.org/issue?@action=redirect&bpo=42426]: Fix reporting offset of the RE error in searchengine.
- [bpo-42415](https://bugs.python.org/issue?@action=redirect&bpo=42415) [https://bugs.python.org/issue?@action=redirect&bpo=42415]: Get docstrings for IDLE calltips more often by using `inspect.getdoc`.

## Tools/Demos

- [bpo-42212](https://bugs.python.org/issue?@action=redirect&bpo=42212) [https://bugs.python.org/issue?@action=redirect&bpo=42212]

@action=redirect&bpo=42212]: The smelly.py script now also checks the Python dynamic library and extension modules, not only the Python static library. Make also the script more verbose: explain what it does.

- [bpo-36310](https://bugs.python.org/issue?@action=redirect&bpo=36310) [https://bugs.python.org/issue?@action=redirect&bpo=36310]: Allow `Tools/i18n/pygettext.py` to detect calls to `gettext` in f-strings.

## C API

- [bpo-42423](https://bugs.python.org/issue?@action=redirect&bpo=42423) [https://bugs.python.org/issue?@action=redirect&bpo=42423]: The `PyType_FromSpecWithBases()` and `PyType_FromModuleAndSpec()` functions now accept a single class as the *bases* argument.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `select` extension module to multiphase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `_posixsubprocess` extension module to multiphase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `_posixshm` extension module to multiphase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `_struct` extension module to multiphase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `spwd` extension module to multiphase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `gc` extension module to multiphase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]

@action=redirect&bpo=1635741]: Port `_queue` extension module to multiphase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/])

- [bpo-39573](https://bugs.python.org/issue?@action=redirect&bpo=39573) [https://bugs.python.org/issue?@action=redirect&bpo=39573]: Convert `Py_TYPE()` and `Py_SIZE()` back to macros to allow using them as an l-value. Many third party C extension modules rely on the ability of using `Py_TYPE()` and `Py_SIZE()` to set an object type and size: `Py_TYPE(obj) = type;` and `Py_SIZE(obj) = size;`.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `symtable` extension module to multiphase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/])
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `grp` and `pwd` extension modules to multiphase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/])
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `_random` extension module to multiphase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/])
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `_hashlib` extension module to multiphase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/])
- [bpo-41713](https://bugs.python.org/issue?@action=redirect&bpo=41713) [https://bugs.python.org/issue?@action=redirect&bpo=41713]: Removed the undocumented `PyOS_InitInterrupts()` function. Initializing Python already implicitly installs signal handlers: see [PyConfig.install\\_signal\\_handlers](#). Patch by Victor Stinner.
- [bpo-40170](https://bugs.python.org/issue?@action=redirect&bpo=40170) [https://bugs.python.org/issue?@action=redirect&bpo=40170]: The `Py_TRASHCAN_BEGIN` macro no longer accesses `PyObject` attributes, but now can get the condition by calling the new private `_PyTrash_cond()` function which hides implementation details.
- [bpo-42260](https://bugs.python.org/issue?@action=redirect&bpo=42260) [https://bugs.python.org/issue?@action=redirect&bpo=42260]: `Py_GetPath()`,

`Py_GetPrefix()`, `Py_GetExecPrefix()`, `Py_GetProgramFullPath()`, `Py_GetPythonHome()` and `Py_GetProgramName()` functions now return `NULL` if called before `Py_Initialize()` (before Python is initialized). Use the new [Python Initialization Configuration API](#) to get the [Python Path Configuration](#).. Patch by Victor Stinner.

- [bpo-42260](https://bugs.python.org/issue?@action=redirect&bpo=42260) [https://bugs.python.org/issue?@action=redirect&bpo=42260]: The `PyConfig_Read()` function now only parses `PyConfig.argv` arguments once: `PyConfig.parse_argv` is set to 2 after arguments are parsed. Since Python arguments are stripped from `PyConfig.argv`, parsing arguments twice would parse the application options as Python options.
- [bpo-42262](https://bugs.python.org/issue?@action=redirect&bpo=42262) [https://bugs.python.org/issue?@action=redirect&bpo=42262]: Added `Py_NewRef()` and `Py_XNewRef()` functions to increment the reference count of an object and return the object. Patch by Victor Stinner.
- [bpo-42260](https://bugs.python.org/issue?@action=redirect&bpo=42260) [https://bugs.python.org/issue?@action=redirect&bpo=42260]: When `Py_Initialize()` is called twice, the second call now updates more `sys` attributes for the configuration, rather than only `sys.argv`. Patch by Victor Stinner.
- [bpo-41832](https://bugs.python.org/issue?@action=redirect&bpo=41832) [https://bugs.python.org/issue?@action=redirect&bpo=41832]: The `PyType_FromModuleAndSpec()` function now accepts `NULL` `tp_doc` slot.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Added `PyModule_AddObjectRef()` function: similar to `PyModule_AddObject()` but don't steal a reference to the value on success. Patch by Victor Stinner.
- [bpo-42171](https://bugs.python.org/issue?@action=redirect&bpo=42171) [https://bugs.python.org/issue?@action=redirect&bpo=42171]: The `METH_FASTCALL` calling convention is added to the limited API. The functions `PyModule_AddType()`, `PyType_FromModuleAndSpec()`, `PyType_GetModule()` and `PyType_GetModuleState()` are added to the limited API on Windows.
- [bpo-42085](https://bugs.python.org/issue?@action=redirect&bpo=42085) [https://bugs.python.org/issue?@action=redirect&bpo=42085]: Add dedicated entry to

PyAsyncMethods for sending values

- [bpo-41073](https://bugs.python.org/issue?@action=redirect&bpo=41073) [https://bugs.python.org/issue?@action=redirect&bpo=41073]: `PyType_GetSlot()` can now accept static types.
- [bpo-30459](https://bugs.python.org/issue?@action=redirect&bpo=30459) [https://bugs.python.org/issue?@action=redirect&bpo=30459]: `PyList_SET_ITEM()`, `PyTuple_SET_ITEM()` and `PyCell_SET()` macros can no longer be used as l-value or r-value. For example, `x = PyList_SET_ITEM(a, b, c)` and `PyList_SET_ITEM(a, b, c) = x` now fail with a compiler error. It prevents bugs like `if (PyList_SET_ITEM(a, b, c) < 0) ... test`. Patch by Zackery Spytz and Victor Stinner.

## Python 3.10.0 alpha 2

*Release date: 2020-11-03*

### Security

- [bpo-42103](https://bugs.python.org/issue?@action=redirect&bpo=42103) [https://bugs.python.org/issue?@action=redirect&bpo=42103]: Prevented potential DoS attack via CPU and RAM exhaustion when processing malformed Apple Property List files in binary format.
- [bpo-42051](https://bugs.python.org/issue?@action=redirect&bpo=42051) [https://bugs.python.org/issue?@action=redirect&bpo=42051]: The `plistlib` module no longer accepts entity declarations in XML plist files to avoid XML vulnerabilities. This should not affect users as entity declarations are not used in regular plist files.

### Core and Builtins

- [bpo-42236](https://bugs.python.org/issue?@action=redirect&bpo=42236) [https://bugs.python.org/issue?@action=redirect&bpo=42236]: If the `nl_langinfo(CODESET)` function returns an empty string, Python now uses UTF-8 as the filesystem encoding. Patch by Victor Stinner.
- [bpo-42218](https://bugs.python.org/issue?@action=redirect&bpo=42218) [https://bugs.python.org/issue?@action=redirect&bpo=42218]: Fixed a bug in the PEG parser that was causing crashes in debug mode. Now errors are checked

in left-recursive rules to avoid cases where such errors do not get handled in time and appear as long-distance crashes in other places.

- [bpo-42214](https://bugs.python.org/issue?@action=redirect&bpo=42214) [https://bugs.python.org/issue?@action=redirect&bpo=42214]: Fixed a possible crash in the PEG parser when checking for the ‘!’ token in the `barry_as_flufl` rule. Patch by Pablo Galindo.
- [bpo-42206](https://bugs.python.org/issue?@action=redirect&bpo=42206) [https://bugs.python.org/issue?@action=redirect&bpo=42206]: Propagate and raise the errors caused by `PyAST_Validate()` in the parser.
- [bpo-41796](https://bugs.python.org/issue?@action=redirect&bpo=41796) [https://bugs.python.org/issue?@action=redirect&bpo=41796]: The `ast` module internal state is now per interpreter. Patch by Victor Stinner.
- [bpo-42143](https://bugs.python.org/issue?@action=redirect&bpo=42143) [https://bugs.python.org/issue?@action=redirect&bpo=42143]: Fix handling of errors during creation of `PyFunctionObject`, which resulted in operations on uninitialized memory. Patch by Yonatan Goldschmidt.
- [bpo-41659](https://bugs.python.org/issue?@action=redirect&bpo=41659) [https://bugs.python.org/issue?@action=redirect&bpo=41659]: Fix a bug in the parser, where a curly brace following a `primary` didn’t fail immediately. This led to invalid expressions like `a {b}` to throw a `SyntaxError` with a wrong offset, or invalid expressions ending with a curly brace like `a {` to not fail immediately in the REPL.
- [bpo-42150](https://bugs.python.org/issue?@action=redirect&bpo=42150) [https://bugs.python.org/issue?@action=redirect&bpo=42150]: Fix possible buffer overflow in the new parser when checking for continuation lines. Patch by Pablo Galindo.
- [bpo-42123](https://bugs.python.org/issue?@action=redirect&bpo=42123) [https://bugs.python.org/issue?@action=redirect&bpo=42123]: Run the parser two times. On the first run, disable all the rules that only generate better error messages to gain performance. If there’s a parse failure, run the parser a second time with those enabled.
- [bpo-42093](https://bugs.python.org/issue?@action=redirect&bpo=42093) [https://bugs.python.org/issue?@action=redirect&bpo=42093]: The `LOAD_ATTR` instruction now uses new “per opcode cache” mechanism and it is about 36% faster now. Patch by Pablo Galindo and Yuri Selivanov.
- [bpo-42030](https://bugs.python.org/issue?@action=redirect&bpo=42030) [https://bugs.python.org/issue?@action=redirect&bpo=42030]: Support for the legacy AIX-

specific shared library loading support has been removed. All versions of AIX since 4.3 have supported and defaulted to using the common Unix mechanism instead.

- [bpo-41984](https://bugs.python.org/issue?@action=redirect&bpo=41984) [https://bugs.python.org/issue?@action=redirect&bpo=41984]: The garbage collector now tracks all user-defined classes. Patch by Brandt Bucher.
- [bpo-41993](https://bugs.python.org/issue?@action=redirect&bpo=41993) [https://bugs.python.org/issue?@action=redirect&bpo=41993]: Fixed potential issues with removing not completely initialized module from `sys.modules` when import fails.
- [bpo-41979](https://bugs.python.org/issue?@action=redirect&bpo=41979) [https://bugs.python.org/issue?@action=redirect&bpo=41979]: Star-unpacking is now allowed for with item's targets in the PEG parser.
- [bpo-41974](https://bugs.python.org/issue?@action=redirect&bpo=41974) [https://bugs.python.org/issue?@action=redirect&bpo=41974]: Removed special methods `__int__`, `__float__`, `__floordiv__`, `__mod__`, `__divmod__`, `__rfloordiv__`, `__rmod__` and `__rdivmod__` of the `complex` class. They always raised a `TypeError`.
- [bpo-41902](https://bugs.python.org/issue?@action=redirect&bpo=41902) [https://bugs.python.org/issue?@action=redirect&bpo=41902]: Micro optimization when compute `sq_item` and `mp_subscript` of `range`. Patch by Dong-hee Na.
- [bpo-41894](https://bugs.python.org/issue?@action=redirect&bpo=41894) [https://bugs.python.org/issue?@action=redirect&bpo=41894]: When loading a native module and a load failure occurs, prevent a possible `UnicodeDecodeError` when not running in a UTF-8 locale by decoding the load error message using the current locale's encoding.
- [bpo-41902](https://bugs.python.org/issue?@action=redirect&bpo=41902) [https://bugs.python.org/issue?@action=redirect&bpo=41902]: Micro optimization for `range.index` if step is 1. Patch by Dong-hee Na.
- [bpo-41435](https://bugs.python.org/issue?@action=redirect&bpo=41435) [https://bugs.python.org/issue?@action=redirect&bpo=41435]: Add `sys._current_exceptions()` function to retrieve a dictionary mapping each thread's identifier to the topmost exception currently active in that thread at the time the function is called.
- [bpo-38605](https://bugs.python.org/issue?@action=redirect&bpo=38605) [https://bugs.python.org/issue?@action=redirect&bpo=38605]: Enable `from __future__`

import annotations ([PEP 563](https://peps.python.org/pep-0563/) [https://peps.python.org/pep-0563/]) by default. The values found in `__annotations__` dicts are now strings, e.g. `{"x": "int"}` instead of `{"x": int}`.

## Library

- [bpo-35455](https://bugs.python.org/issue?@action=redirect&bpo=35455) [https://bugs.python.org/issue?@action=redirect&bpo=35455]: On Solaris, `thread_time()` is now implemented with `gethrvtime()` because `clock_gettime(CLOCK_THREAD_CPUTIME_ID)` is not always available. Patch by Jakub Kulik.
- [bpo-42233](https://bugs.python.org/issue?@action=redirect&bpo=42233) [https://bugs.python.org/issue?@action=redirect&bpo=42233]: The `repr()` of `typing` types containing [Generic Alias Types](#) previously did not show the parameterized types in the `GenericAlias`. They have now been changed to do so.
- [bpo-29566](https://bugs.python.org/issue?@action=redirect&bpo=29566) [https://bugs.python.org/issue?@action=redirect&bpo=29566]: `binhex.binhex()` consistently writes macOS 9 line endings.
- [bpo-26789](https://bugs.python.org/issue?@action=redirect&bpo=26789) [https://bugs.python.org/issue?@action=redirect&bpo=26789]: The `logging.FileHandler` class now keeps a reference to the builtin `open()` function to be able to open or reopen the file during Python finalization. Fix errors like: `NameError: name 'open' is not defined`. Patch by Victor Stinner.
- [bpo-42157](https://bugs.python.org/issue?@action=redirect&bpo=42157) [https://bugs.python.org/issue?@action=redirect&bpo=42157]: Removed the `unicodedata.ucnhash_CAPI` attribute which was an internal PyCapsule object. The related private `_PyUnicode_Name_CAPI` structure was moved to the internal C API. Patch by Victor Stinner.
- [bpo-42157](https://bugs.python.org/issue?@action=redirect&bpo=42157) [https://bugs.python.org/issue?@action=redirect&bpo=42157]: Convert the `unicodedata` extension module to the multiphase initialization API ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]) and convert the

`unicodedata.UCD` static type to a heap type. Patch by Mohamed Koubaa and Victor Stinner.

- [bpo-42146](https://bugs.python.org/issue?@action=redirect&bpo=42146) [https://bugs.python.org/issue?@action=redirect&bpo=42146]: Fix memory leak in `subprocess.Popen()` in case an uid (gid) specified in `user (group, extra_groups)` overflows `uid_t (gid_t)`.
- [bpo-42103](https://bugs.python.org/issue?@action=redirect&bpo=42103) [https://bugs.python.org/issue?@action=redirect&bpo=42103]: `InvalidFileException` and `RecursionError` are now the only errors caused by loading malformed binary Plist file (previously `ValueError` and `TypeError` could be raised in some specific cases).
- [bpo-41490](https://bugs.python.org/issue?@action=redirect&bpo=41490) [https://bugs.python.org/issue?@action=redirect&bpo=41490]: In `importlib.resources`, `.path` method is more aggressive about releasing handles to `zipfile` objects early, enabling use-cases like `certifi` to leave the context open but delete the underlying zip file.
- [bpo-41052](https://bugs.python.org/issue?@action=redirect&bpo=41052) [https://bugs.python.org/issue?@action=redirect&bpo=41052]: Pickling heap types implemented in C with protocols 0 and 1 raises now an error instead of producing incorrect data.
- [bpo-42089](https://bugs.python.org/issue?@action=redirect&bpo=42089) [https://bugs.python.org/issue?@action=redirect&bpo=42089]: In `importlib.metadata.PackageNotFoundError`, make reference to the package metadata being missing to improve the user experience.
- [bpo-41491](https://bugs.python.org/issue?@action=redirect&bpo=41491) [https://bugs.python.org/issue?@action=redirect&bpo=41491]: `plistlib`: fix parsing XML plists with hexadecimal integer values
- [bpo-42065](https://bugs.python.org/issue?@action=redirect&bpo=42065) [https://bugs.python.org/issue?@action=redirect&bpo=42065]: Fix an incorrectly formatted error from `_codecs.charmap_decode()` when called with a mapped value outside the range of valid Unicode code points. PR by Max Bernstein.

- [bpo-41966](https://bugs.python.org/issue?@action=redirect&bpo=41966) [https://bugs.python.org/issue?@action=redirect&bpo=41966]: Fix pickling pure Python `datetime.time` subclasses. Patch by Dean Inwood.
- [bpo-19270](https://bugs.python.org/issue?@action=redirect&bpo=19270) [https://bugs.python.org/issue?@action=redirect&bpo=19270]: `sched.scheduler.cancel()` will now cancel the correct event, if two events with same priority are scheduled for the same time. Patch by Bar Harel.
- [bpo-28660](https://bugs.python.org/issue?@action=redirect&bpo=28660) [https://bugs.python.org/issue?@action=redirect&bpo=28660]: `textwrap.wrap()` now attempts to break long words after hyphens when `break_long_words=True` and `break_on_hyphens=True`.
- [bpo-35823](https://bugs.python.org/issue?@action=redirect&bpo=35823) [https://bugs.python.org/issue?@action=redirect&bpo=35823]: Use `vfork()` instead of `fork()` for `subprocess.Popen()` on Linux to improve performance in cases where it is deemed safe.
- [bpo-42043](https://bugs.python.org/issue?@action=redirect&bpo=42043) [https://bugs.python.org/issue?@action=redirect&bpo=42043]: Add support for `zipfile.Path` inheritance. `zipfile.Path.is_file()` now returns `False` for non-existent names. `zipfile.Path` objects now expose a `.filename` attribute and rely on that to resolve `.name` and `.parent` when the `Path` object is at the root of the `zipfile`.
- [bpo-42021](https://bugs.python.org/issue?@action=redirect&bpo=42021) [https://bugs.python.org/issue?@action=redirect&bpo=42021]: Fix possible ref leaks in `sqlite3` module init.
- [bpo-39101](https://bugs.python.org/issue?@action=redirect&bpo=39101) [https://bugs.python.org/issue?@action=redirect&bpo=39101]: Fixed tests using `IsolatedAsyncioTestCase` from hanging on `BaseExceptions`.
- [bpo-41976](https://bugs.python.org/issue?@action=redirect&bpo=41976) [https://bugs.python.org/issue?@action=redirect&bpo=41976]: Fixed a bug that was causing `ctypes.util.find_library()` to return `None` when trying to locate a library in an environment when `gcc >= 9` is available and `ldconfig` is not. Patch by Pablo Galindo

- [bpo-41943](https://bugs.python.org/issue?@action=redirect&bpo=41943) [https://bugs.python.org/issue?@action=redirect&bpo=41943]: Fix bug where `TestCase.assertLogs` doesn't correctly filter messages by level.
- [bpo-41923](https://bugs.python.org/issue?@action=redirect&bpo=41923) [https://bugs.python.org/issue?@action=redirect&bpo=41923]: Implement [PEP 613](https://peps.python.org/pep-0613/) [https://peps.python.org/pep-0613/], introducing `typing.TypeAlias` annotation.
- [bpo-41905](https://bugs.python.org/issue?@action=redirect&bpo=41905) [https://bugs.python.org/issue?@action=redirect&bpo=41905]: A new function in `abc`: *update\_abstractmethods* to re-calculate an abstract class's abstract status. In addition, *dataclass* has been changed to call this function.
- [bpo-23706](https://bugs.python.org/issue?@action=redirect&bpo=23706) [https://bugs.python.org/issue?@action=redirect&bpo=23706]: Added *newline* parameter to `pathlib.Path.write_text()`.
- [bpo-41876](https://bugs.python.org/issue?@action=redirect&bpo=41876) [https://bugs.python.org/issue?@action=redirect&bpo=41876]: Tkinter font class repr uses font name
- [bpo-41831](https://bugs.python.org/issue?@action=redirect&bpo=41831) [https://bugs.python.org/issue?@action=redirect&bpo=41831]: `str()` for the `type` attribute of the `tkinter.Event` object always returns now the numeric code returned by Tk instead of the name of the event type.
- [bpo-39337](https://bugs.python.org/issue?@action=redirect&bpo=39337) [https://bugs.python.org/issue?@action=redirect&bpo=39337]: `encodings.normalize_encoding()` now ignores non-ASCII characters.
- [bpo-41747](https://bugs.python.org/issue?@action=redirect&bpo=41747) [https://bugs.python.org/issue?@action=redirect&bpo=41747]: Ensure all methods that generated from `dataclasses.dataclass()` objects now have the proper `__qualname__` attribute referring to the class they belong to. Patch by Batuhan Taskaya.
- [bpo-30681](https://bugs.python.org/issue?@action=redirect&bpo=30681) [https://bugs.python.org/issue?@action=redirect&bpo=30681]: Handle exceptions caused by

unparsable date headers when using email “default” policy.  
Patch by Tim Bell, Georges Toth

- [bpo-41586](https://bugs.python.org/issue?@action=redirect&bpo=41586) [https://bugs.python.org/issue?@action=redirect&bpo=41586]: Add `F_SETPIPE_SZ` and `F_GETPIPE_SZ` to `fcntl` module. Allow setting pipesize on `subprocess.Popen`.
- [bpo-41229](https://bugs.python.org/issue?@action=redirect&bpo=41229) [https://bugs.python.org/issue?@action=redirect&bpo=41229]: Add `contextlib.aclosing` for deterministic cleanup of async generators which is analogous to `contextlib.closing` for non-async generators. Patch by Joongi Kim and John Belmonte.
- [bpo-16396](https://bugs.python.org/issue?@action=redirect&bpo=16396) [https://bugs.python.org/issue?@action=redirect&bpo=16396]: Allow `ctypes.wintypes` to be imported on non-Windows systems.
- [bpo-4356](https://bugs.python.org/issue?@action=redirect&bpo=4356) [https://bugs.python.org/issue?@action=redirect&bpo=4356]: Add a key function to the `bisect` module.
- [bpo-40592](https://bugs.python.org/issue?@action=redirect&bpo=40592) [https://bugs.python.org/issue?@action=redirect&bpo=40592]: `shutil.which()` now ignores empty entries in `PATHEXT` instead of treating them as a match.
- [bpo-40492](https://bugs.python.org/issue?@action=redirect&bpo=40492) [https://bugs.python.org/issue?@action=redirect&bpo=40492]: Fix `--outfile` for `cProfile` / `profile` not writing the output file in the original directory when the program being profiled changes the working directory. PR by Anthony Sottile.
- [bpo-34204](https://bugs.python.org/issue?@action=redirect&bpo=34204) [https://bugs.python.org/issue?@action=redirect&bpo=34204]: The `shelve` module now uses `pickle.DEFAULT_PROTOCOL` by default instead of `pickle` protocol 3.
- [bpo-27321](https://bugs.python.org/issue?@action=redirect&bpo=27321) [https://bugs.python.org/issue?@action=redirect&bpo=27321]: Fixed `KeyError` exception when flattening an email to a string attempts to replace a non-existent Content-Transfer-Encoding header.

- [bpo-38976](https://bugs.python.org/issue?@action=redirect&bpo=38976) [https://bugs.python.org/issue?@action=redirect&bpo=38976]: The [http.cookiejar](#) module now supports the parsing of cookies in CURL-style cookiejar files through MozillaCookieJar on all platforms. Previously, such cookie entries would be silently ignored when loading a cookiejar with such entries.

Additionally, the HTTP Only attribute is persisted in the object, and will be correctly written to file if the MozillaCookieJar object is subsequently dumped.

## Documentation

- [bpo-42061](https://bugs.python.org/issue?@action=redirect&bpo=42061) [https://bugs.python.org/issue?@action=redirect&bpo=42061]: Document `_format_` functionality for IP addresses.
- [bpo-41910](https://bugs.python.org/issue?@action=redirect&bpo=41910) [https://bugs.python.org/issue?@action=redirect&bpo=41910]: Document the default implementation of `object.__eq__`.
- [bpo-42010](https://bugs.python.org/issue?@action=redirect&bpo=42010) [https://bugs.python.org/issue?@action=redirect&bpo=42010]: Clarify that subscription expressions are also valid for certain [classes](#) and [types](#) in the standard library, and for user-defined classes and types if the classmethod `__class_getitem__()` is provided.
- [bpo-41805](https://bugs.python.org/issue?@action=redirect&bpo=41805) [https://bugs.python.org/issue?@action=redirect&bpo=41805]: Documented [generic alias type](#) and [types.GenericAlias](#). Also added an entry in glossary for [generic types](#).
- [bpo-39693](https://bugs.python.org/issue?@action=redirect&bpo=39693) [https://bugs.python.org/issue?@action=redirect&bpo=39693]: Fix tarfile's extractfile documentation
- [bpo-39416](https://bugs.python.org/issue?@action=redirect&bpo=39416) [https://bugs.python.org/issue?@action=redirect&bpo=39416]: Document some restrictions on the default string representations of numeric classes.

## Tests

- [bpo-41739](https://bugs.python.org/issue?@action=redirect&bpo=41739) [https://bugs.python.org/issue?@action=redirect&bpo=41739]: Fix `test_logging.test_race_between_set_target_and_flush()`: the test

now waits until all threads complete to avoid leaking running threads.

- [bpo-41970](https://bugs.python.org/issue?@action=redirect&bpo=41970) [https://bugs.python.org/issue?@action=redirect&bpo=41970]: Avoid a test failure in `test_lib2to3` if the module has already imported at the time the test executes. Patch by Pablo Galindo.
- [bpo-41944](https://bugs.python.org/issue?@action=redirect&bpo=41944) [https://bugs.python.org/issue?@action=redirect&bpo=41944]: Tests for CJK codecs no longer call `eval()` on content received via HTTP.
- [bpo-41306](https://bugs.python.org/issue?@action=redirect&bpo=41306) [https://bugs.python.org/issue?@action=redirect&bpo=41306]: Fixed a failure in `test_tk.test_widgets.ScaleTest` happening when executing the test with Tk 8.6.10.

## Build

- [bpo-38980](https://bugs.python.org/issue?@action=redirect&bpo=38980) [https://bugs.python.org/issue?@action=redirect&bpo=38980]: Add `-fno-semantic-interposition` to both the compile and link line when building with `--enable-optimizations`. Patch by Victor Stinner and Pablo Galindo.

## Windows

- [bpo-38439](https://bugs.python.org/issue?@action=redirect&bpo=38439) [https://bugs.python.org/issue?@action=redirect&bpo=38439]: Updates the icons for IDLE in the Windows Store package.
- [bpo-38252](https://bugs.python.org/issue?@action=redirect&bpo=38252) [https://bugs.python.org/issue?@action=redirect&bpo=38252]: Use 8-byte step to detect ASCII sequence in 64-bit Windows build.
- [bpo-39107](https://bugs.python.org/issue?@action=redirect&bpo=39107) [https://bugs.python.org/issue?@action=redirect&bpo=39107]: Update Tcl and Tk to 8.6.10 in Windows installer.
- [bpo-41557](https://bugs.python.org/issue?@action=redirect&bpo=41557) [https://bugs.python.org/issue?@action=redirect&bpo=41557]: Update Windows installer to use SQLite 3.33.0.
- [bpo-38324](https://bugs.python.org/issue?@action=redirect&bpo=38324) [https://bugs.python.org/issue?@action=redirect&bpo=38324]: Avoid Unicode errors when accessing certain locale data on Windows.

## macOS

- [bpo-41471](https://bugs.python.org/issue?@action=redirect&bpo=41471) [https://bugs.python.org/issue?@action=redirect&bpo=41471]: Ignore invalid prefix lengths in system proxy excludes.

## IDLE

- [bpo-33987](https://bugs.python.org/issue?@action=redirect&bpo=33987) [https://bugs.python.org/issue?@action=redirect&bpo=33987]: Mostly finish using ttk widgets, mainly for editor, settings, and searches. Some patches by Mark Roseman.
- [bpo-40511](https://bugs.python.org/issue?@action=redirect&bpo=40511) [https://bugs.python.org/issue?@action=redirect&bpo=40511]: Typing opening and closing parentheses inside the parentheses of a function call will no longer cause unnecessary “flashing” off and on of an existing open call-tip, e.g. when typed in a string literal.
- [bpo-38439](https://bugs.python.org/issue?@action=redirect&bpo=38439) [https://bugs.python.org/issue?@action=redirect&bpo=38439]: Add a 256 × 256 pixel IDLE icon to the Windows .ico file. Created by Andrew Clover. Remove the low-color gif variations from the .ico file.

## C API

- [bpo-42157](https://bugs.python.org/issue?@action=redirect&bpo=42157) [https://bugs.python.org/issue?@action=redirect&bpo=42157]: The private `_PyUnicode_Name_CAPI` structure of the PyCapsule API `unicodedata.ucnhash_CAPI` has been moved to the internal C API. Patch by Victor Stinner.
- [bpo-42015](https://bugs.python.org/issue?@action=redirect&bpo=42015) [https://bugs.python.org/issue?@action=redirect&bpo=42015]: Fix potential crash in deallocating method objects when dynamically allocated `PyMethodDef`’s lifetime is managed through the `self` argument of a `PyCFunction`.
- [bpo-40423](https://bugs.python.org/issue?@action=redirect&bpo=40423) [https://bugs.python.org/issue?@action=redirect&bpo=40423]: The `subprocess` module and `os.closerange` will now use the `close_range(low, high, flags)` syscall when it is available for more efficient closing of ranges of descriptors.
- [bpo-41845](https://bugs.python.org/issue?@action=redirect&bpo=41845) [https://bugs.python.org/issue?@action=redirect&bpo=41845]

@action=redirect&bpo=41845]: **PyObject\_GenericGetDict()** is available again in the limited API when targeting 3.10 or later.

- [bpo-40422](https://bugs.python.org/issue?@action=redirect&bpo=40422) [https://bugs.python.org/issue?@action=redirect&bpo=40422]: Add **\_Py\_closerange** function to provide performant closing of a range of file descriptors.
- [bpo-41986](https://bugs.python.org/issue?@action=redirect&bpo=41986) [https://bugs.python.org/issue?@action=redirect&bpo=41986]: **Py\_FileSystemDefaultEncodeErrors** and **Py\_UTF8Mode** are available again in limited API.
- [bpo-41756](https://bugs.python.org/issue?@action=redirect&bpo=41756) [https://bugs.python.org/issue?@action=redirect&bpo=41756]: Add **PyIter\_Send** function to allow sending value into generator/coroutine/iterator without raising StopIteration exception to signal return.
- [bpo-41784](https://bugs.python.org/issue?@action=redirect&bpo=41784) [https://bugs.python.org/issue?@action=redirect&bpo=41784]: Added **PyUnicode\_AsUTF8AndSize** to the limited C API.

## Python 3.10.0 alpha 1

*Release date: 2020-10-05*

### Security

- [bpo-41304](https://bugs.python.org/issue?@action=redirect&bpo=41304) [https://bugs.python.org/issue?@action=redirect&bpo=41304]: Fixes **python3x.\_pth** being ignored on Windows, caused by the fix for [bpo-29778](https://bugs.python.org/issue?@action=redirect&bpo=29778) [https://bugs.python.org/issue?@action=redirect&bpo=29778] (CVE-2020-15801).
- [bpo-41162](https://bugs.python.org/issue?@action=redirect&bpo=41162) [https://bugs.python.org/issue?@action=redirect&bpo=41162]: Audit hooks are now cleared later during finalization to avoid missing events.
- [bpo-29778](https://bugs.python.org/issue?@action=redirect&bpo=29778) [https://bugs.python.org/issue?@action=redirect&bpo=29778]: Ensure **python3.dll** is loaded from correct locations when Python is embedded (CVE-2020-15523).
- [bpo-41004](https://bugs.python.org/issue?@action=redirect&bpo=41004) [https://bugs.python.org/issue?@action=redirect&bpo=41004]: The **\_hash\_()** methods of **ipaddress.IPv4Interface** and **ipaddress.IPv6Interface**

incorrectly generated constant hash values of 32 and 128 respectively. This resulted in always causing hash collisions. The fix uses `hash()` to generate hash values for the tuple of (address, mask length, network address).

- [bpo-39603](https://bugs.python.org/issue?@action=redirect&bpo=39603) [https://bugs.python.org/issue?@action=redirect&bpo=39603]: Prevent http header injection by rejecting control characters in `http.client.putrequest(...)`.

## Core and Builtins

- [bpo-41909](https://bugs.python.org/issue?@action=redirect&bpo=41909) [https://bugs.python.org/issue?@action=redirect&bpo=41909]: Fixed stack overflow in `issubclass()` and `isinstance()` when getting the `__bases__` attribute leads to infinite recursion.
- [bpo-41922](https://bugs.python.org/issue?@action=redirect&bpo=41922) [https://bugs.python.org/issue?@action=redirect&bpo=41922]: Speed up calls to `reversed()` by using the [PEP 590](https://peps.python.org/pep-0590/) [https://peps.python.org/pep-0590/] `vectorcall` calling convention. Patch by Dong-hee Na.
- [bpo-41873](https://bugs.python.org/issue?@action=redirect&bpo=41873) [https://bugs.python.org/issue?@action=redirect&bpo=41873]: Calls to `float()` are now faster due to the `vectorcall` calling convention. Patch by Dennis Sweeney.
- [bpo-41870](https://bugs.python.org/issue?@action=redirect&bpo=41870) [https://bugs.python.org/issue?@action=redirect&bpo=41870]: Speed up calls to `bool()` by using the [PEP 590](https://peps.python.org/pep-0590/) [https://peps.python.org/pep-0590/] `vectorcall` calling convention. Patch by Dong-hee Na.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port the `_bisect` module to the multi-phase initialization API ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-39934](https://bugs.python.org/issue?@action=redirect&bpo=39934) [https://bugs.python.org/issue?@action=redirect&bpo=39934]: Correctly count control blocks in 'except' in compiler. Ensures that a syntax error, rather a fatal error, occurs for deeply nested, named exception handlers.
- [bpo-41780](https://bugs.python.org/issue?@action=redirect&bpo=41780) [https://bugs.python.org/issue?@action=redirect&bpo=41780]

@action=redirect&bpo=41780]: Fix `__dir__()` of `types.GenericAlias`. Patch by Batuhan Taskaya.

- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port the `_lsprof` extension module to multi-phase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port the `cmath` extension module to multi-phase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port the `_scproxy` extension module to multi-phase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port the `termios` extension module to multi-phase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Convert the `_sha256` extension module types to heap types.
- [bpo-41690](https://bugs.python.org/issue?@action=redirect&bpo=41690) [https://bugs.python.org/issue?@action=redirect&bpo=41690]: Fix a possible stack overflow in the parser when parsing functions and classes with a huge amount of arguments. Patch by Pablo Galindo.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port the `_overlapped` extension module to multi-phase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port the `_curses_panel` extension module to multi-phase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).

- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [<https://bugs.python.org/issue?@action=redirect&bpo=1635741>]: Port the `_opcode` extension module to multi-phase initialization ([PEP 489](https://peps.python.org/pep-0489/) [<https://peps.python.org/pep-0489/>])).
- [bpo-41681](https://bugs.python.org/issue?@action=redirect&bpo=41681) [<https://bugs.python.org/issue?@action=redirect&bpo=41681>]: Fixes the wrong error description in the error raised by using `2` , in format string in f-string and `str.format()` .
- [bpo-41675](https://bugs.python.org/issue?@action=redirect&bpo=41675) [<https://bugs.python.org/issue?@action=redirect&bpo=41675>]: The implementation of `signal.siginterrupt()` now uses `sigaction()` (if it is available in the system) instead of the deprecated `siginterrupt()` . Patch by Pablo Galindo.
- [bpo-41670](https://bugs.python.org/issue?@action=redirect&bpo=41670) [<https://bugs.python.org/issue?@action=redirect&bpo=41670>]: Prevent line trace being skipped on platforms not compiled with `USE_COMPUTED_GOTOS`. Fixes issue where some lines nested within a try-except block were not being traced on Windows.
- [bpo-41654](https://bugs.python.org/issue?@action=redirect&bpo=41654) [<https://bugs.python.org/issue?@action=redirect&bpo=41654>]: Fix a crash that occurred when destroying subclasses of `MemoryError`. Patch by Pablo Galindo.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [<https://bugs.python.org/issue?@action=redirect&bpo=1635741>]: Port the `zlib` extension module to multi-phase initialization ([PEP 489](https://peps.python.org/pep-0489/) [<https://peps.python.org/pep-0489/>])).
- [bpo-41631](https://bugs.python.org/issue?@action=redirect&bpo=41631) [<https://bugs.python.org/issue?@action=redirect&bpo=41631>]: The `_ast` module uses again a global state. Using a module state per module instance is causing subtle practical problems. For example, the Mercurial project replaces the `__import__()` function to implement lazy import, whereas Python expected that `import _ast` always return a fully initialized `_ast` module.
- [bpo-40077](https://bugs.python.org/issue?@action=redirect&bpo=40077) [<https://bugs.python.org/issue?@action=redirect&bpo=40077>]

@action=redirect&bpo=40077]: Convert `__operator` to use `PyType_FromSpec()`.

- [bpo-1653741](https://bugs.python.org/issue/1653741) [https://bugs.python.org/issue/?@action=redirect&bpo=1653741]: Port `__sha3` to multi-phase init. Convert static types to heap types.
- [bpo-1635741](https://bugs.python.org/issue/1635741) [https://bugs.python.org/issue/?@action=redirect&bpo=1635741]: Port the `__blake2` extension module to the multi-phase initialization API ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-41533](https://bugs.python.org/issue/41533) [https://bugs.python.org/issue/?@action=redirect&bpo=41533]: Free the stack allocated in `va_build_stack` if `do_mkstack` fails and the stack is not a `small_stack`.
- [bpo-41531](https://bugs.python.org/issue/41531) [https://bugs.python.org/issue/?@action=redirect&bpo=41531]: Fix a bug that was dropping keys when compiling dict literals with more than 0xFFFF elements. Patch by Pablo Galindo.
- [bpo-41525](https://bugs.python.org/issue/41525) [https://bugs.python.org/issue/?@action=redirect&bpo=41525]: The output of `python --help` contains now only ASCII characters.
- [bpo-1635741](https://bugs.python.org/issue/1635741) [https://bugs.python.org/issue/?@action=redirect&bpo=1635741]: Port the `__sha1`, `__sha512`, and `__md5` extension modules to multi-phase initialization API ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-41431](https://bugs.python.org/issue/41431) [https://bugs.python.org/issue/?@action=redirect&bpo=41431]: Optimize `dict_merge()` for copying dict (e.g. `dict(d)` and `{ }.update(d)`).
- [bpo-41428](https://bugs.python.org/issue/41428) [https://bugs.python.org/issue/?@action=redirect&bpo=41428]: Implement PEP 604. This supports `(int | str)` etc. in place of `Union[str, int]`.
- [bpo-41340](https://bugs.python.org/issue/41340) [https://bugs.python.org/issue/?@action=redirect&bpo=41340]: Removed fallback implementation

for strdup.

- [bpo-38156](https://bugs.python.org/issue?@action=redirect&bpo=38156) [https://bugs.python.org/issue?@action=redirect&bpo=38156]: Handle interrupts that come after EOF correctly in `PyOS_StdioReadline`.
- [bpo-41342](https://bugs.python.org/issue?@action=redirect&bpo=41342) [https://bugs.python.org/issue?@action=redirect&bpo=41342]: `round()` with integer argument is now faster (9–60%).
- [bpo-41334](https://bugs.python.org/issue?@action=redirect&bpo=41334) [https://bugs.python.org/issue?@action=redirect&bpo=41334]: Constructors `str()`, `bytes()` and `bytearray()` are now faster (around 30–40% for small objects).
- [bpo-41295](https://bugs.python.org/issue?@action=redirect&bpo=41295) [https://bugs.python.org/issue?@action=redirect&bpo=41295]: Resolve a regression in CPython 3.8.4 where defining “`_setattr_`” in a multi-inheritance setup and calling up the hierarchy chain could fail if builtins/extension types were involved in the base types.
- [bpo-41323](https://bugs.python.org/issue?@action=redirect&bpo=41323) [https://bugs.python.org/issue?@action=redirect&bpo=41323]: Bytecode optimizations are performed directly on the control flow graph. This will result in slightly more compact code objects in some circumstances.
- [bpo-41247](https://bugs.python.org/issue?@action=redirect&bpo=41247) [https://bugs.python.org/issue?@action=redirect&bpo=41247]: Always cache the running loop holder when running `asyncio.set_running_loop`.
- [bpo-41252](https://bugs.python.org/issue?@action=redirect&bpo=41252) [https://bugs.python.org/issue?@action=redirect&bpo=41252]: Fix incorrect refcounting in `_ssl.c`’s `_servername_callback()`.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `multiprocessing` to multi-phase initialization
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `winapi` to multiphase initialization

- [bpo-41215](https://bugs.python.org/issue?@action=redirect&bpo=41215) [https://bugs.python.org/issue?@action=redirect&bpo=41215]: Use non-NULL default values in the PEG parser keyword list to overcome a bug that was preventing Python from being properly compiled when using the XLC compiler. Patch by Pablo Galindo.
- [bpo-41218](https://bugs.python.org/issue?@action=redirect&bpo=41218) [https://bugs.python.org/issue?@action=redirect&bpo=41218]: Python 3.8.3 had a regression where compiling with `ast.PyCF_ALLOW_TOP_LEVEL_AWAIT` would aggressively mark list comprehension with `CO_COROUTINE`. Now only list comprehension making use of `async/await` will tagged as so.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port **faulthandler** to multiphase initialization.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port **sha256** to multiphase initialization
- [bpo-41175](https://bugs.python.org/issue?@action=redirect&bpo=41175) [https://bugs.python.org/issue?@action=redirect&bpo=41175]: Guard against a NULL pointer dereference within `bytearrayobject` triggered by the `bytearray() + bytearray()` operation.
- [bpo-41100](https://bugs.python.org/issue?@action=redirect&bpo=41100) [https://bugs.python.org/issue?@action=redirect&bpo=41100]: add arm64 to the allowable Mac OS arches in `mpdecimal.h`
- [bpo-41094](https://bugs.python.org/issue?@action=redirect&bpo=41094) [https://bugs.python.org/issue?@action=redirect&bpo=41094]: Fix decoding errors with audit when open files with non-ASCII names on non-UTF-8 locale.
- [bpo-39960](https://bugs.python.org/issue?@action=redirect&bpo=39960) [https://bugs.python.org/issue?@action=redirect&bpo=39960]: The “hackcheck” that prevents sneaking around a type’s `__setattr__()` by calling the superclass method was rewritten to allow C implemented heap types.
- [bpo-41084](https://bugs.python.org/issue?@action=redirect&bpo=41084) [https://bugs.python.org/issue?@action=redirect&bpo=41084]: Prefix the error message with ‘f-

string: `'`, when parsing an f-string expression which throws a **SyntaxError**.

- [bpo-40521](https://bugs.python.org/issue?@action=redirect&bpo=40521) [https://bugs.python.org/issue?@action=redirect&bpo=40521]: Empty frozensets are no longer singletons.
- [bpo-41076](https://bugs.python.org/issue?@action=redirect&bpo=41076) [https://bugs.python.org/issue?@action=redirect&bpo=41076]: Pre-feed the parser with the location of the f-string expression, not the f-string itself, which allows us to skip the shifting of the AST node locations after the parsing is completed.
- [bpo-41056](https://bugs.python.org/issue?@action=redirect&bpo=41056) [https://bugs.python.org/issue?@action=redirect&bpo=41056]: Fixes a reference to deallocated stack space during startup when constructing `sys.path` involving a relative symlink when code was supplied via `-c`. (discovered via Coverity)
- [bpo-41061](https://bugs.python.org/issue?@action=redirect&bpo=41061) [https://bugs.python.org/issue?@action=redirect&bpo=41061]: Fix incorrect expressions and asserts in hashtable code and tests.
- [bpo-41052](https://bugs.python.org/issue?@action=redirect&bpo=41052) [https://bugs.python.org/issue?@action=redirect&bpo=41052]: Opt out serialization/deserialization for `_random.Random`
- [bpo-40939](https://bugs.python.org/issue?@action=redirect&bpo=40939) [https://bugs.python.org/issue?@action=redirect&bpo=40939]: Rename **PyPegen\*** functions to **PyParser\***, so that we can remove the old set of **PyParser\*** functions that were using the old parser, but keep everything backwards-compatible.
- [bpo-35975](https://bugs.python.org/issue?@action=redirect&bpo=35975) [https://bugs.python.org/issue?@action=redirect&bpo=35975]: Stefan Behnel reported that `cf_feature_version` is used even when `PyCF_ONLY_AST` is not set. This is against the intention and against the documented behavior, so it's been fixed.
- [bpo-40939](https://bugs.python.org/issue?@action=redirect&bpo=40939) [https://bugs.python.org/issue?@action=redirect&bpo=40939]: Remove the remaining files from

the old parser and the **symbol** module.

- [bpo-40077](https://bugs.python.org/issue?@action=redirect&bpo=40077) [https://bugs.python.org/issue?@action=redirect&bpo=40077]: Convert **`_bz2`** to use **`PyType_FromSpec()`**.
- [bpo-41006](https://bugs.python.org/issue?@action=redirect&bpo=41006) [https://bugs.python.org/issue?@action=redirect&bpo=41006]: The `encodings.latin_1` module is no longer imported at startup. Now it is only imported when it is the filesystem encoding or the stdio encoding.
- [bpo-40636](https://bugs.python.org/issue?@action=redirect&bpo=40636) [https://bugs.python.org/issue?@action=redirect&bpo=40636]: **`zip()`** now supports **PEP 618** [https://peps.python.org/pep-0618/]’s `strict` parameter, which raises a **`ValueError`** if the arguments are exhausted at different lengths. Patch by Brandt Bucher.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port **`_gdbm`** to multiphase initialization.
- [bpo-40985](https://bugs.python.org/issue?@action=redirect&bpo=40985) [https://bugs.python.org/issue?@action=redirect&bpo=40985]: Fix a bug that caused the **`SyntaxError`** text to be empty when a file ends with a line ending in a line continuation character (i.e. backslash). The error text should contain the text of the last line.
- [bpo-40958](https://bugs.python.org/issue?@action=redirect&bpo=40958) [https://bugs.python.org/issue?@action=redirect&bpo=40958]: Fix a possible buffer overflow in the PEG parser when gathering information for emitting syntax errors. Patch by Pablo Galindo.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port **`_dbm`** to multiphase initialization.
- [bpo-40957](https://bugs.python.org/issue?@action=redirect&bpo=40957) [https://bugs.python.org/issue?@action=redirect&bpo=40957]: Fix refleak in `_Py_fopen_obj()` when `PySys_Audit()` fails

- [bpo-40950](https://bugs.python.org/issue?@action=redirect&bpo=40950) [https://bugs.python.org/issue?@action=redirect&bpo=40950]: Add a state to the **nis** module (**PEP 3121** [https://peps.python.org/pep-3121/]) and apply the multiphase initialization. Patch by Dong-hee Na.
- [bpo-40947](https://bugs.python.org/issue?@action=redirect&bpo=40947) [https://bugs.python.org/issue?@action=redirect&bpo=40947]: The Python **Path Configuration** now takes **PyConfig.platlibdir** in account.
- [bpo-40939](https://bugs.python.org/issue?@action=redirect&bpo=40939) [https://bugs.python.org/issue?@action=redirect&bpo=40939]: Remove the old parser, the **parser** module and all associated support code, command-line options and environment variables. Patch by Pablo Galindo.
- [bpo-40847](https://bugs.python.org/issue?@action=redirect&bpo=40847) [https://bugs.python.org/issue?@action=redirect&bpo=40847]: Fix a bug where a line with only a line continuation character is not considered a blank line at tokenizer level. In such cases, more than a single **NEWLINE** token was emitted. The old parser was working around the issue, but the new parser threw a **SyntaxError** for valid input due to this. For example, an empty line following a line continuation character was interpreted as a **SyntaxError**.
- [bpo-40890](https://bugs.python.org/issue?@action=redirect&bpo=40890) [https://bugs.python.org/issue?@action=redirect&bpo=40890]: Each dictionary view now has a mapping attribute that provides a **types.MappingProxyType** wrapping the original dictionary. Patch contributed by Dennis Sweeney.
- [bpo-40889](https://bugs.python.org/issue?@action=redirect&bpo=40889) [https://bugs.python.org/issue?@action=redirect&bpo=40889]: Improved the performance of symmetric difference operations on dictionary item views. Patch by Dennis Sweeney.
- [bpo-40904](https://bugs.python.org/issue?@action=redirect&bpo=40904) [https://bugs.python.org/issue?@action=redirect&bpo=40904]: Fix possible segfault in the new PEG parser when parsing f-string containing yield statements with no value (f"{yield}"). Patch by Pablo Galindo
- [bpo-40903](https://bugs.python.org/issue?@action=redirect&bpo=40903) [https://bugs.python.org/issue?@action=redirect&bpo=40903]

@action=redirect&bpo=40903]: Fixed a possible segfault in the new PEG parser when producing error messages for invalid assignments of the form `p=p=`. Patch by Pablo Galindo

- [bpo-40880](https://bugs.python.org/issue?@action=redirect&bpo=40880) [https://bugs.python.org/issue?@action=redirect&bpo=40880]: Fix invalid memory read in the new parser when checking newlines in string literals. Patch by Pablo Galindo.
- [bpo-40883](https://bugs.python.org/issue?@action=redirect&bpo=40883) [https://bugs.python.org/issue?@action=redirect&bpo=40883]: Fix memory leak in when parsing f-strings in the new parser. Patch by Pablo Galindo
- [bpo-40870](https://bugs.python.org/issue?@action=redirect&bpo=40870) [https://bugs.python.org/issue?@action=redirect&bpo=40870]: Raise `ValueError` when validating custom AST's where the constants `True`, `False` and `None` are used within a `ast.Name` node.
- [bpo-40854](https://bugs.python.org/issue?@action=redirect&bpo=40854) [https://bugs.python.org/issue?@action=redirect&bpo=40854]: Allow overriding `sys.platlibdir` via a new `PYTHONPLATLIBDIR` environment variable.
- [bpo-40826](https://bugs.python.org/issue?@action=redirect&bpo=40826) [https://bugs.python.org/issue?@action=redirect&bpo=40826]: Fix GIL usage in `PyOS_Readline()`: lock the GIL to set an exception and pass the Python thread state when checking if there is a pending signal.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `fcntl` to multiphase initialization.
- [bpo-19468](https://bugs.python.org/issue?@action=redirect&bpo=19468) [https://bugs.python.org/issue?@action=redirect&bpo=19468]: Delete unnecessary instance check in `importlib.reload()`. Patch by Furkan Önder.
- [bpo-40824](https://bugs.python.org/issue?@action=redirect&bpo=40824) [https://bugs.python.org/issue?@action=redirect&bpo=40824]: Unexpected errors in calling the `__iter__` method are no longer masked by `TypeError` in the `in` operator and functions `contains()`, `indexOf()`

and `countOf()` of the `operator` module.

- [bpo-40792](https://bugs.python.org/issue?@action=redirect&bpo=40792) [https://bugs.python.org/issue?@action=redirect&bpo=40792]: `Attributes` `start`, `stop` and `step` of the `range` object now always has exact type `int`. Previously, they could have been an instance of a subclass of `int`.
- [bpo-40780](https://bugs.python.org/issue?@action=redirect&bpo=40780) [https://bugs.python.org/issue?@action=redirect&bpo=40780]: Fix a corner case where g-style string formatting of a float failed to remove trailing zeros.
- [bpo-38964](https://bugs.python.org/issue?@action=redirect&bpo=38964) [https://bugs.python.org/issue?@action=redirect&bpo=38964]: When there's a `SyntaxError` in the expression part of an fstring, the `filename` attribute of the `SyntaxError` gets correctly set to the name of the file the fstring resides in.
- [bpo-40750](https://bugs.python.org/issue?@action=redirect&bpo=40750) [https://bugs.python.org/issue?@action=redirect&bpo=40750]: Support the “-d” debug flag in the new PEG parser. Patch by Pablo Galindo
- [bpo-40217](https://bugs.python.org/issue?@action=redirect&bpo=40217) [https://bugs.python.org/issue?@action=redirect&bpo=40217]: Instances of types created with `PyType_FromSpecWithBases()` will no longer automatically visit their class object when traversing references in the garbage collector. The user is expected to manually visit the object's class. Patch by Pablo Galindo.
- [bpo-39573](https://bugs.python.org/issue?@action=redirect&bpo=39573) [https://bugs.python.org/issue?@action=redirect&bpo=39573]: `Py_TYPE()` is changed to the inline static function. Patch by Dong-hee Na.
- [bpo-40696](https://bugs.python.org/issue?@action=redirect&bpo=40696) [https://bugs.python.org/issue?@action=redirect&bpo=40696]: Fix a hang that can arise after `generator.throw()` due to a cycle in the exception context chain.
- [bpo-40521](https://bugs.python.org/issue?@action=redirect&bpo=40521) [https://bugs.python.org/issue?@action=redirect&bpo=40521]: Each interpreter now has its own free lists, singletons and caches:

- Free lists: float, tuple, list, dict, frame, context, asynchronous generator, MemoryError.
- Singletons: empty tuple, empty bytes string, empty Unicode string, single byte character, single Unicode (latin1) character.
- Slice cache.

They are no longer shared by all interpreters.

- [bpo-40679](https://bugs.python.org/issue?@action=redirect&bpo=40679) [https://bugs.python.org/issue?@action=redirect&bpo=40679]: Certain **TypeError** messages about missing or extra arguments now include the function's **qualified name**. Patch by Dennis Sweeney.
- [bpo-29590](https://bugs.python.org/issue?@action=redirect&bpo=29590) [https://bugs.python.org/issue?@action=redirect&bpo=29590]: Make the stack trace correct after calling **generator.throw()** on a generator that has yielded from a **yield from**.
- [bpo-4022](https://bugs.python.org/issue?@action=redirect&bpo=4022) [https://bugs.python.org/issue?@action=redirect&bpo=4022]: Improve performance of generators by not raising internal StopIteration.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port **mmap** to multiphase initialization.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port **\_lzma** to multiphase initialization.
- [bpo-37999](https://bugs.python.org/issue?@action=redirect&bpo=37999) [https://bugs.python.org/issue?@action=redirect&bpo=37999]: Builtin and extension functions that take integer arguments no longer accept **Decimals**, **Fractions** and other objects that can be converted to integers only with a loss (e.g. that have the **\_\_int\_\_()** method but do not have the **\_\_index\_\_()** method).
- [bpo-29882](https://bugs.python.org/issue?@action=redirect&bpo=29882) [https://bugs.python.org/issue?@action=redirect&bpo=29882]: Add **int.bit\_count()**, counting the number of ones in the binary representation of

an integer. Patch by Niklas Fiekas.

- [bpo-36982](https://bugs.python.org/issue?@action=redirect&bpo=36982) [https://bugs.python.org/issue?@action=redirect&bpo=36982]: Use ncurses extended color functions when available to support terminals with 256 colors, and add the new function `courses.has_extended_color_support()` to indicate whether extended color support is provided by the underlying ncurses library.
- [bpo-19569](https://bugs.python.org/issue?@action=redirect&bpo=19569) [https://bugs.python.org/issue?@action=redirect&bpo=19569]: Add the private macros `_Py_COMP_DIAG_PUSH`, `_Py_COMP_DIAG_IGNORE_DEPR_DECLS`, and `_Py_COMP_DIAG_POP`.
- [bpo-26680](https://bugs.python.org/issue?@action=redirect&bpo=26680) [https://bugs.python.org/issue?@action=redirect&bpo=26680]: The `int` type now supports the `x.is_integer()` method for compatibility with `float`.

## Library

- [bpo-41900](https://bugs.python.org/issue?@action=redirect&bpo=41900) [https://bugs.python.org/issue?@action=redirect&bpo=41900]: C14N 2.0 serialisation in `xml.etree.ElementTree` failed for unprefixed attributes when a default namespace was defined.
- [bpo-41887](https://bugs.python.org/issue?@action=redirect&bpo=41887) [https://bugs.python.org/issue?@action=redirect&bpo=41887]: Strip leading spaces and tabs on `ast.literal_eval()`. Also document stripping of spaces and tabs for `eval()`.
- [bpo-41773](https://bugs.python.org/issue?@action=redirect&bpo=41773) [https://bugs.python.org/issue?@action=redirect&bpo=41773]: Note in documentation that `random.choices()` doesn't support non-finite weights, raise `ValueError` when given non-finite weights.
- [bpo-41840](https://bugs.python.org/issue?@action=redirect&bpo=41840) [https://bugs.python.org/issue?@action=redirect&bpo=41840]: Fix a bug in the `symtable` module that was causing module-scope global variables to not be reported as both local and global. Patch by Pablo Galindo.

- [bpo-41842](https://bugs.python.org/issue?@action=redirect&bpo=41842) [https://bugs.python.org/issue?@action=redirect&bpo=41842]: Add `codecs.unregister()` function to unregister a codec search function.
- [bpo-40564](https://bugs.python.org/issue?@action=redirect&bpo=40564) [https://bugs.python.org/issue?@action=redirect&bpo=40564]: In `zipfile.Path`, mutate the passed `ZipFile` object type instead of making a copy. Prevents issues when both the local copy and the caller's copy attempt to close the same file handle.
- [bpo-40670](https://bugs.python.org/issue?@action=redirect&bpo=40670) [https://bugs.python.org/issue?@action=redirect&bpo=40670]: More reliable validation of statements in `timeit.Timer`. It now accepts “empty” statements (only whitespaces and comments) and rejects misindented statements.
- [bpo-41833](https://bugs.python.org/issue?@action=redirect&bpo=41833) [https://bugs.python.org/issue?@action=redirect&bpo=41833]: The `threading.Thread` constructor now uses the target name if the *target* argument is specified but the *name* argument is omitted.
- [bpo-41817](https://bugs.python.org/issue?@action=redirect&bpo=41817) [https://bugs.python.org/issue?@action=redirect&bpo=41817]: fix `tkinter.EventType` Enum so all members are strings, and none are tuples
- [bpo-41810](https://bugs.python.org/issue?@action=redirect&bpo=41810) [https://bugs.python.org/issue?@action=redirect&bpo=41810]: `types.EllipsisType`, `types.NotImplementedType` and `types.NoneType` have been reintroduced, providing a new set of types readily interpretable by static type checkers.
- [bpo-41815](https://bugs.python.org/issue?@action=redirect&bpo=41815) [https://bugs.python.org/issue?@action=redirect&bpo=41815]: Fix SQLite3 segfault when backing up closed database. Patch contributed by Peter David McCormick.
- [bpo-41816](https://bugs.python.org/issue?@action=redirect&bpo=41816) [https://bugs.python.org/issue?@action=redirect&bpo=41816]: `StrEnum` added: it ensures that all members are already strings or string candidates
- [bpo-41517](https://bugs.python.org/issue?@action=redirect&bpo=41517) [https://bugs.python.org/issue?@action=redirect&bpo=41517]

@action=redirect&bpo=41517]: fix bug allowing Enums to be extended via multiple inheritance

- [bpo-39587](#) [https://bugs.python.org/issue?@action=redirect&bpo=39587]: use the correct mix-in data type when constructing Enums

- [bpo-41792](#) [https://bugs.python.org/issue?@action=redirect&bpo=41792]: Add `is_typeddict` function to `typing.py` to check if a type is a `TypedDict` class

Previously there was no way to check that without using private API. See the **relevant issue in python/typing**

- [bpo-41789](#) [https://bugs.python.org/issue?@action=redirect&bpo=41789]: Honor `object` overrides in `Enum` class creation (specifically, `__str__`, `__repr__`, `__format__`, and `__reduce_ex__`).
- [bpo-32218](#) [https://bugs.python.org/issue?@action=redirect&bpo=32218]: `enum.Flag` and `enum.IntFlag` members are now iterable
- [bpo-39651](#) [https://bugs.python.org/issue?@action=redirect&bpo=39651]: Fix a race condition in the `call_soon_threadsafe()` method of `asyncio.ProactorEventLoop`: do nothing if the self-pipe socket has been closed.
- [bpo-1635741](#) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port the `marshal` extension module to the multi-phase initialization API ([PEP 489](#) [https://peps.python.org/pep-0489/]).
- [bpo-1635741](#) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port the `_string` extension module to the multi-phase initialization API ([PEP 489](#) [https://peps.python.org/pep-0489/]).
- [bpo-41732](#) [https://bugs.python.org/issue?

@action=redirect&bpo=41732]: Added an **iterator** to **memoryview**.

- **bpo-41720** [<https://bugs.python.org/issue?@action=redirect&bpo=41720>]: Fixed **turtle.Vec2D.\_\_rmul\_\_()** for arguments which are not int or float.
- **bpo-41696** [<https://bugs.python.org/issue?@action=redirect&bpo=41696>]: Fix handling of debug mode in **asyncio.run()**. This allows setting PYTHONASYNCIODEBUG or `-X dev` to enable asyncio debug mode when using **asyncio.run()**.
- **bpo-41687** [<https://bugs.python.org/issue?@action=redirect&bpo=41687>]: Fix implementation of sendfile to be compatible with Solaris.
- **bpo-41662** [<https://bugs.python.org/issue?@action=redirect&bpo=41662>]: No longer override exceptions raised in **\_\_len\_\_()** of a sequence of parameters in **sqlite3** with **ProgrammingError**.
- **bpo-39010** [<https://bugs.python.org/issue?@action=redirect&bpo=39010>]: Restarting a **ProactorEventLoop** on Windows no longer logs spurious **ConnectionResetErrors**.
- **bpo-41638** [<https://bugs.python.org/issue?@action=redirect&bpo=41638>]: **ProgrammingError** message for absent parameter in **sqlite3** contains now the name of the parameter instead of its index when parameters are supplied as a dict.
- **bpo-41662** [<https://bugs.python.org/issue?@action=redirect&bpo=41662>]: Fixed crash when mutate list of parameters during iteration in **sqlite3**.
- **bpo-41513** [<https://bugs.python.org/issue?@action=redirect&bpo=41513>]: Improved the accuracy of **math.hypot()**. Internally, each step is computed with extra

precision so that the result is now almost always correctly rounded.

- [bpo-41609](https://bugs.python.org/issue?@action=redirect&bpo=41609) [https://bugs.python.org/issue?@action=redirect&bpo=41609]: The `pdb` `whatis` command correctly reports instance methods as ‘Method’ rather than ‘Function’.
- [bpo-39994](https://bugs.python.org/issue?@action=redirect&bpo=39994) [https://bugs.python.org/issue?@action=redirect&bpo=39994]: Fixed `pprint`’s handling of dict subclasses that override `__repr__`.
- [bpo-32751](https://bugs.python.org/issue?@action=redirect&bpo=32751) [https://bugs.python.org/issue?@action=redirect&bpo=32751]: When cancelling the task due to a timeout, `asyncio.wait_for()` will now wait until the cancellation is complete also in the case when `timeout` is `<= 0`, like it does with positive timeouts.
- [bpo-37658](https://bugs.python.org/issue?@action=redirect&bpo=37658) [https://bugs.python.org/issue?@action=redirect&bpo=37658]: `asyncio.wait_for()` now properly handles races between cancellation of itself and the completion of the wrapped awaitable.
- [bpo-40782](https://bugs.python.org/issue?@action=redirect&bpo=40782) [https://bugs.python.org/issue?@action=redirect&bpo=40782]: Change the method `asyncio.AbstractEventLoop.run_in_executor` to not be a coroutine.
- [bpo-41520](https://bugs.python.org/issue?@action=redirect&bpo=41520) [https://bugs.python.org/issue?@action=redirect&bpo=41520]: Fix `codeop` regression that prevented turning compile warnings into errors.
- [bpo-41528](https://bugs.python.org/issue?@action=redirect&bpo=41528) [https://bugs.python.org/issue?@action=redirect&bpo=41528]: `turtle` uses `math` module functions to convert degrees to radians and vice versa and to calculate vector norm
- [bpo-41513](https://bugs.python.org/issue?@action=redirect&bpo=41513) [https://bugs.python.org/issue?@action=redirect&bpo=41513]: Minor algorithmic improvement to `math.hypot()` and `math.dist()` giving small gains in speed and accuracy.

- [bpo-41503](https://bugs.python.org/issue?@action=redirect&bpo=41503) [https://bugs.python.org/issue?@action=redirect&bpo=41503]: Fixed a race between setTarget and flush in logging.handlers.MemoryHandler.
- [bpo-41497](https://bugs.python.org/issue?@action=redirect&bpo=41497) [https://bugs.python.org/issue?@action=redirect&bpo=41497]: Fix potential UnicodeDecodeError in dis module.
- [bpo-41467](https://bugs.python.org/issue?@action=redirect&bpo=41467) [https://bugs.python.org/issue?@action=redirect&bpo=41467]: On Windows, fix asyncio recv\_into() return value when the socket/pipe is closed (**BrokenPipeError**): return 0 rather than an empty byte string (b'').
- [bpo-41425](https://bugs.python.org/issue?@action=redirect&bpo=41425) [https://bugs.python.org/issue?@action=redirect&bpo=41425]: Make tkinter doc example runnable.
- [bpo-41421](https://bugs.python.org/issue?@action=redirect&bpo=41421) [https://bugs.python.org/issue?@action=redirect&bpo=41421]: Make an algebraic simplification to random.paretovariate(). It now is slightly less subject to round-off error and is slightly faster. Inputs that used to cause ZeroDivisionError now cause an OverflowError instead.
- [bpo-41440](https://bugs.python.org/issue?@action=redirect&bpo=41440) [https://bugs.python.org/issue?@action=redirect&bpo=41440]: Add **os.cpu\_count()** support for VxWorks RTOS.
- [bpo-41316](https://bugs.python.org/issue?@action=redirect&bpo=41316) [https://bugs.python.org/issue?@action=redirect&bpo=41316]: Fix the **tarfile** module to write only basename of TAR file to GZIP compression header.
- [bpo-41384](https://bugs.python.org/issue?@action=redirect&bpo=41384) [https://bugs.python.org/issue?@action=redirect&bpo=41384]: Raise TclError instead of TypeError when an unknown option is passed to tkinter.OptionMenu.
- [bpo-41317](https://bugs.python.org/issue?@action=redirect&bpo=41317) [https://bugs.python.org/issue?@action=redirect&bpo=41317]: Use add\_done\_callback() in asyncio.loop.sock\_accept() to unsubscribe reader early on cancellation.

- [bpo-41364](https://bugs.python.org/issue?@action=redirect&bpo=41364) [https://bugs.python.org/issue?@action=redirect&bpo=41364]: Reduce import overhead of `uuid`.
- [bpo-35328](https://bugs.python.org/issue?@action=redirect&bpo=35328) [https://bugs.python.org/issue?@action=redirect&bpo=35328]: Set the environment variable `VIRTUAL_ENV_PROMPT` at `venv` activation.
- [bpo-41341](https://bugs.python.org/issue?@action=redirect&bpo=41341) [https://bugs.python.org/issue?@action=redirect&bpo=41341]: Recursive evaluation of `typing.ForwardRef` in `get_type_hints`.
- [bpo-41344](https://bugs.python.org/issue?@action=redirect&bpo=41344) [https://bugs.python.org/issue?@action=redirect&bpo=41344]: Prevent creating `shared_memory.SharedMemory` objects with `size=0`.
- [bpo-41333](https://bugs.python.org/issue?@action=redirect&bpo=41333) [https://bugs.python.org/issue?@action=redirect&bpo=41333]: `collections.OrderedDict.pop()` is now 2 times faster.
- [bpo-41288](https://bugs.python.org/issue?@action=redirect&bpo=41288) [https://bugs.python.org/issue?@action=redirect&bpo=41288]: Unpickling invalid `NEWOBJ_EX` opcode with the C implementation raises now `UnpicklingError` instead of crashing.
- [bpo-39017](https://bugs.python.org/issue?@action=redirect&bpo=39017) [https://bugs.python.org/issue?@action=redirect&bpo=39017]: Avoid infinite loop when reading specially crafted TAR files using the `tarfile` module (CVE-2019-20907).
- [bpo-41273](https://bugs.python.org/issue?@action=redirect&bpo=41273) [https://bugs.python.org/issue?@action=redirect&bpo=41273]: Speed up any transport using `_ProactorReadPipeTransport` by calling `recv_into` instead of `recv`, thus not creating a new buffer for each `recv` call in the transport's read loop.
- [bpo-41235](https://bugs.python.org/issue?@action=redirect&bpo=41235) [https://bugs.python.org/issue?@action=redirect&bpo=41235]: Fix the error handling in `ssl.SSLContext.load_dh_params()`.
- [bpo-41207](https://bugs.python.org/issue?@action=redirect&bpo=41207) [https://bugs.python.org/issue?@action=redirect&bpo=41207]

@action=redirect&bpo=41207]: In distutils.spawn, restore expectation that DistutilsExecError is raised when the command is not found.

- [bpo-29727](https://bugs.python.org/issue?@action=redirect&bpo=29727) [https://bugs.python.org/issue?@action=redirect&bpo=29727]: Register `array.array` as a `MutableSequence`. Patch by Pablo Galindo.
- [bpo-39168](https://bugs.python.org/issue?@action=redirect&bpo=39168) [https://bugs.python.org/issue?@action=redirect&bpo=39168]: Remove the `__new__` method of `typing.Generic`.
- [bpo-41194](https://bugs.python.org/issue?@action=redirect&bpo=41194) [https://bugs.python.org/issue?@action=redirect&bpo=41194]: Fix a crash in the `_ast` module: it can no longer be loaded more than once. It now uses a global state rather than a module state.
- [bpo-41195](https://bugs.python.org/issue?@action=redirect&bpo=41195) [https://bugs.python.org/issue?@action=redirect&bpo=41195]: Add read-only `ssl.SSLContext.security_level` attribute to retrieve the context's security level.
- [bpo-41193](https://bugs.python.org/issue?@action=redirect&bpo=41193) [https://bugs.python.org/issue?@action=redirect&bpo=41193]: The `write_history()` `atexit` function of the readline completer now ignores any `OSError` to ignore error if the filesystem is read-only, instead of only ignoring `FileNotFoundError` and `PermissionError`.
- [bpo-41182](https://bugs.python.org/issue?@action=redirect&bpo=41182) [https://bugs.python.org/issue?@action=redirect&bpo=41182]: `selector`: use `DefaultSelector` based upon implementation
- [bpo-41161](https://bugs.python.org/issue?@action=redirect&bpo=41161) [https://bugs.python.org/issue?@action=redirect&bpo=41161]: The decimal module now requires `libmpdec-2.5.0`. Users of `--with-system-libmpdec` should update their system library.
- [bpo-40874](https://bugs.python.org/issue?@action=redirect&bpo=40874) [https://bugs.python.org/issue?@action=redirect&bpo=40874]: The decimal module now requires `libmpdec-2.5.0`.

- [bpo-41138](https://bugs.python.org/issue?@action=redirect&bpo=41138) [https://bugs.python.org/issue?@action=redirect&bpo=41138]: Fixed the `trace` module CLI for Python source files with non-UTF-8 encoding.
- [bpo-31082](https://bugs.python.org/issue?@action=redirect&bpo=31082) [https://bugs.python.org/issue?@action=redirect&bpo=31082]: Use the term “iterable” in the docstring for `functools.reduce()`.
- [bpo-40521](https://bugs.python.org/issue?@action=redirect&bpo=40521) [https://bugs.python.org/issue?@action=redirect&bpo=40521]: Remove freelist from `collections.deque()`.
- [bpo-31938](https://bugs.python.org/issue?@action=redirect&bpo=31938) [https://bugs.python.org/issue?@action=redirect&bpo=31938]: Fix default-value signatures of several functions in the `select` module - by Anthony Sottile.
- [bpo-41068](https://bugs.python.org/issue?@action=redirect&bpo=41068) [https://bugs.python.org/issue?@action=redirect&bpo=41068]: Fixed reading files with non-ASCII names from ZIP archive directly after writing them.
- [bpo-41058](https://bugs.python.org/issue?@action=redirect&bpo=41058) [https://bugs.python.org/issue?@action=redirect&bpo=41058]: `pdb.find_function()` now correctly determines the source file encoding.
- [bpo-41056](https://bugs.python.org/issue?@action=redirect&bpo=41056) [https://bugs.python.org/issue?@action=redirect&bpo=41056]: Invalid file descriptor values are now prevented from being passed to `os.fpathconf`. (discovered by Coverity)
- [bpo-41056](https://bugs.python.org/issue?@action=redirect&bpo=41056) [https://bugs.python.org/issue?@action=redirect&bpo=41056]: Fix a NULL pointer dereference within the `ssl` module during a `MemoryError` in the `keylog` callback. (discovered by Coverity)
- [bpo-41056](https://bugs.python.org/issue?@action=redirect&bpo=41056) [https://bugs.python.org/issue?@action=redirect&bpo=41056]: Fixed an instance where a `MemoryError` within the `zoneinfo` module might not be reported or not reported at its source. (found by Coverity)
- [bpo-41048](https://bugs.python.org/issue?@action=redirect&bpo=41048) [https://bugs.python.org/issue?@action=redirect&bpo=41048]:

`mimetypes.read_mime_types()` function reads the rule file using UTF-8 encoding, not the locale encoding. Patch by Srinivas Reddy Thatiparthi.

- [bpo-41043](https://bugs.python.org/issue?@action=redirect&bpo=41043) [https://bugs.python.org/issue?@action=redirect&bpo=41043]: Fixed the use of `glob()` in the `stdlib`: literal part of the path is now always correctly escaped.
- [bpo-41025](https://bugs.python.org/issue?@action=redirect&bpo=41025) [https://bugs.python.org/issue?@action=redirect&bpo=41025]: Fixed an issue preventing the C implementation of `zoneinfo.ZoneInfo` from being subclassed.
- [bpo-35018](https://bugs.python.org/issue?@action=redirect&bpo=35018) [https://bugs.python.org/issue?@action=redirect&bpo=35018]: Add the `xml.sax.handler.LexicalHandler` class that is present in other SAX XML implementations.
- [bpo-41002](https://bugs.python.org/issue?@action=redirect&bpo=41002) [https://bugs.python.org/issue?@action=redirect&bpo=41002]: Improve performance of `HTTPResponse.read` with a given amount. Patch by Bruce Merry.
- [bpo-40448](https://bugs.python.org/issue?@action=redirect&bpo=40448) [https://bugs.python.org/issue?@action=redirect&bpo=40448]: `ensurepip` now disables the use of `pip` cache when installing the bundled versions of `pip` and `setuptools`. Patch by Krzysztof Konopko.
- [bpo-40967](https://bugs.python.org/issue?@action=redirect&bpo=40967) [https://bugs.python.org/issue?@action=redirect&bpo=40967]: Removed `asyncio.Task.current_task()` and `asyncio.Task.all_tasks()`. Patch contributed by Rémi Lapeyre.
- [bpo-40924](https://bugs.python.org/issue?@action=redirect&bpo=40924) [https://bugs.python.org/issue?@action=redirect&bpo=40924]: Ensure `importlib.resources.path` returns an extant path for the `SourceFileLoader`'s resource reader. Avoids the regression identified in master while a long-term solution is devised.

- [bpo-40955](https://bugs.python.org/issue?@action=redirect&bpo=40955) [https://bugs.python.org/issue?@action=redirect&bpo=40955]: Fix a minor memory leak in **subprocess** module when `extra_groups` was specified.
- [bpo-40855](https://bugs.python.org/issue?@action=redirect&bpo=40855) [https://bugs.python.org/issue?@action=redirect&bpo=40855]: The standard deviation and variance functions in the statistics module were ignoring their `mu` and `xbar` arguments.
- [bpo-40939](https://bugs.python.org/issue?@action=redirect&bpo=40939) [https://bugs.python.org/issue?@action=redirect&bpo=40939]: Use the new PEG parser when generating the stdlib **keyword** module.
- [bpo-23427](https://bugs.python.org/issue?@action=redirect&bpo=23427) [https://bugs.python.org/issue?@action=redirect&bpo=23427]: Add **`sys.orig_argv`** attribute: the list of the original command line arguments passed to the Python executable.
- [bpo-33689](https://bugs.python.org/issue?@action=redirect&bpo=33689) [https://bugs.python.org/issue?@action=redirect&bpo=33689]: Ignore empty or whitespace-only lines in `.pth` files. This matches the documented behavior. Before, empty lines caused the site-packages dir to appear multiple times in `sys.path`. By Ido Michael, contributors Malcolm Smith and Tal Einat.
- [bpo-40884](https://bugs.python.org/issue?@action=redirect&bpo=40884) [https://bugs.python.org/issue?@action=redirect&bpo=40884]: Added a **`defaults`** parameter to **`logging.Formatter`**, to allow specifying default values for custom fields. Patch by Asaf Alon and Bar Harel.
- [bpo-40876](https://bugs.python.org/issue?@action=redirect&bpo=40876) [https://bugs.python.org/issue?@action=redirect&bpo=40876]: Clarify error message in the **`csv`** module.
- [bpo-39791](https://bugs.python.org/issue?@action=redirect&bpo=39791) [https://bugs.python.org/issue?@action=redirect&bpo=39791]: Refresh `importlib.metadata` from `importlib_metadata` 1.6.1.
- [bpo-40807](https://bugs.python.org/issue?@action=redirect&bpo=40807) [https://bugs.python.org/issue?@action=redirect&bpo=40807]: Stop `codeop._maybe_compile`, used by `code.InteractiveInterpreter` (and IDLE). from emitting

each warning three times.

- [bpo-32604](https://bugs.python.org/issue?@action=redirect&bpo=32604) [https://bugs.python.org/issue?@action=redirect&bpo=32604]: Fix reference leak in the `select` module when the module is imported in a subinterpreter.
- [bpo-39791](https://bugs.python.org/issue?@action=redirect&bpo=39791) [https://bugs.python.org/issue?@action=redirect&bpo=39791]: Built-in loaders (`SourceFileLoader` and `ZipImporter`) now supply `TraversableResources` implementations for `ResourceReader`, and the fallback function has been removed.
- [bpo-39314](https://bugs.python.org/issue?@action=redirect&bpo=39314) [https://bugs.python.org/issue?@action=redirect&bpo=39314]: `rlcompleter.Completer` and the standard Python shell now close the parenthesis for functions that take no arguments. Patch contributed by Rémi Lapeyre.
- [bpo-17005](https://bugs.python.org/issue?@action=redirect&bpo=17005) [https://bugs.python.org/issue?@action=redirect&bpo=17005]: The topological sort functionality that was introduced initially in the `functools` module has been moved to a new `graphlib` module to better accommodate the new tools and keep the original scope of the `functools` module. Patch by Pablo Galindo
- [bpo-40834](https://bugs.python.org/issue?@action=redirect&bpo=40834) [https://bugs.python.org/issue?@action=redirect&bpo=40834]: Fix truncate when sending str object with `xxsubinterpreters.channel_send`.
- [bpo-40755](https://bugs.python.org/issue?@action=redirect&bpo=40755) [https://bugs.python.org/issue?@action=redirect&bpo=40755]: Add rich comparisons to `collections.Counter()`.
- [bpo-26407](https://bugs.python.org/issue?@action=redirect&bpo=26407) [https://bugs.python.org/issue?@action=redirect&bpo=26407]: Unexpected errors in calling the `__iter__` method are no longer masked by `TypeError` in `csv.reader()`, `csv.writer.writerow()` and `csv.writer.writerows()`.
- [bpo-39384](https://bugs.python.org/issue?@action=redirect&bpo=39384) [https://bugs.python.org/issue?@action=redirect&bpo=39384]: Fixed `email.contentmanager` to

allow `set_content()` to set a null string.

- [bpo-40744](https://bugs.python.org/issue?@action=redirect&bpo=40744) [https://bugs.python.org/issue?@action=redirect&bpo=40744]: The `sqlite3` module uses SQLite API functions that require SQLite v3.7.3 or higher. This patch removes support for older SQLite versions, and explicitly requires SQLite 3.7.3 both at build, compile and runtime. Patch by Sergey Fedoseev and Erlend E. Aasland.
- [bpo-40777](https://bugs.python.org/issue?@action=redirect&bpo=40777) [https://bugs.python.org/issue?@action=redirect&bpo=40777]: Initialize `PyDateTime_IsoCalendarDateType.tp_base` at run-time to avoid errors on some compilers.
- [bpo-38488](https://bugs.python.org/issue?@action=redirect&bpo=38488) [https://bugs.python.org/issue?@action=redirect&bpo=38488]: Update `ensurepip` to install `pip 20.1.1` and `setuptools 47.1.0`.
- [bpo-40792](https://bugs.python.org/issue?@action=redirect&bpo=40792) [https://bugs.python.org/issue?@action=redirect&bpo=40792]: The result of `operator.index()` now always has exact type `int`. Previously, the result could have been an instance of a subclass of `int`.
- [bpo-40767](https://bugs.python.org/issue?@action=redirect&bpo=40767) [https://bugs.python.org/issue?@action=redirect&bpo=40767]: `webbrowser` now properly finds the default browser in pure Wayland systems by checking the `WAYLAND_DISPLAY` environment variable. Patch contributed by J  r  my Attali.
- [bpo-40791](https://bugs.python.org/issue?@action=redirect&bpo=40791) [https://bugs.python.org/issue?@action=redirect&bpo=40791]: `hashlib.compare_digest()` uses OpenSSL's `CRYPTO_memcmp()` function when OpenSSL is available.
- [bpo-40795](https://bugs.python.org/issue?@action=redirect&bpo=40795) [https://bugs.python.org/issue?@action=redirect&bpo=40795]: `ctypes` module: If `ctypes` fails to convert the result of a callback or if a `ctypes` callback function raises an exception, `sys.unraisablehook` is now called with an exception set. Previously, the error was logged into `stderr` by `PyErr_Print()`.

- [bpo-16995](https://bugs.python.org/issue?@action=redirect&bpo=16995) [https://bugs.python.org/issue?@action=redirect&bpo=16995]: Add `base64.b32hexencode()` and `base64.b32hexdecode()` to support the Base32 Encoding with Extended Hex Alphabet.
- [bpo-30008](https://bugs.python.org/issue?@action=redirect&bpo=30008) [https://bugs.python.org/issue?@action=redirect&bpo=30008]: Fix `ssl` code to be compatible with OpenSSL 1.1.x builds that use `no-deprecated` and `--api=1.1.0`.
- [bpo-30064](https://bugs.python.org/issue?@action=redirect&bpo=30064) [https://bugs.python.org/issue?@action=redirect&bpo=30064]: Fix `asyncio loop.sock_*` race condition issue
- [bpo-40759](https://bugs.python.org/issue?@action=redirect&bpo=40759) [https://bugs.python.org/issue?@action=redirect&bpo=40759]: Deprecate the `symbol` module.
- [bpo-40756](https://bugs.python.org/issue?@action=redirect&bpo=40756) [https://bugs.python.org/issue?@action=redirect&bpo=40756]: The second argument (extra) of `LoggerAdapter.__init__` now defaults to `None`.
- [bpo-37129](https://bugs.python.org/issue?@action=redirect&bpo=37129) [https://bugs.python.org/issue?@action=redirect&bpo=37129]: Add a new `os.RWF_APPEND` flag for `os.pwritev()`.
- [bpo-40737](https://bugs.python.org/issue?@action=redirect&bpo=40737) [https://bugs.python.org/issue?@action=redirect&bpo=40737]: Fix possible reference leak for `sqlite3` initialization.
- [bpo-40726](https://bugs.python.org/issue?@action=redirect&bpo=40726) [https://bugs.python.org/issue?@action=redirect&bpo=40726]: Handle cases where the `end_lineno` is `None` on `ast.increment_lineno()`.
- [bpo-40698](https://bugs.python.org/issue?@action=redirect&bpo=40698) [https://bugs.python.org/issue?@action=redirect&bpo=40698]: `distutils` upload creates SHA2-256 and Blake2b-256 digests. MD5 digests is skipped if platform blocks MD5.
- [bpo-40695](https://bugs.python.org/issue?@action=redirect&bpo=40695) [https://bugs.python.org/issue?@action=redirect&bpo=40695]: `hashlib` no longer falls back to builtin hash implementations when OpenSSL provides a hash

digest and the algorithm is blocked by security policy.

- [bpo-9216](https://bugs.python.org/issue?@action=redirect&bpo=9216) [https://bugs.python.org/issue?@action=redirect&bpo=9216]: func:`hashlib.new` passed `usedforsecurity` to OpenSSL EVP constructor `_hashlib.new().test_hashlib` and `test_smtp lib` handle strict security policy better.
- [bpo-40614](https://bugs.python.org/issue?@action=redirect&bpo=40614) [https://bugs.python.org/issue?@action=redirect&bpo=40614]: `ast.parse()` will not parse self documenting expressions in f-strings when passed `feature_version` is less than `(3, 8)`.
- [bpo-40626](https://bugs.python.org/issue?@action=redirect&bpo=40626) [https://bugs.python.org/issue?@action=redirect&bpo=40626]: Add h5 file extension as MIME Type application/x-hdf5, as per HDF Group recommendation for HDF5 formatted data files. Patch contributed by Mark Schwab.
- [bpo-25920](https://bugs.python.org/issue?@action=redirect&bpo=25920) [https://bugs.python.org/issue?@action=redirect&bpo=25920]: On macOS, when building Python for macOS 10.4 and older, which wasn't the case for python.org macOS installer, `socket.getaddrinfo()` no longer uses an internal lock to prevent race conditions when calling `getaddrinfo()` which is thread-safe since macOS 10.5. Python 3.9 requires macOS 10.6 or newer. The internal lock caused random hang on fork when another thread was calling `socket.getaddrinfo()`. The lock was also used on FreeBSD older than 5.3, OpenBSD older than 201311 and NetBSD older than 4.
- [bpo-40671](https://bugs.python.org/issue?@action=redirect&bpo=40671) [https://bugs.python.org/issue?@action=redirect&bpo=40671]: Prepare `_hashlib` for [PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/] and use `PyModule_AddType()`.
- [bpo-32309](https://bugs.python.org/issue?@action=redirect&bpo=32309) [https://bugs.python.org/issue?@action=redirect&bpo=32309]: Added a new `coroutine asyncio.to_thread()`. It is mainly used for running IO-bound functions in a separate thread to avoid blocking the event loop, and essentially works as a high-level version of `run_in_executor()` that can directly take keyword

arguments.

- [bpo-36543](https://bugs.python.org/issue?@action=redirect&bpo=36543) [https://bugs.python.org/issue?@action=redirect&bpo=36543]: Restored the deprecated **xml.etree.cElementTree** module.
- [bpo-40611](https://bugs.python.org/issue?@action=redirect&bpo=40611) [https://bugs.python.org/issue?@action=redirect&bpo=40611]: **MAP\_POPULATE** constant has now been added to the list of exported **mmap** module flags.
- [bpo-39881](https://bugs.python.org/issue?@action=redirect&bpo=39881) [https://bugs.python.org/issue?@action=redirect&bpo=39881]: PEP 554 for use in the test suite. (Patch By Joanna Nanjey)
- [bpo-13097](https://bugs.python.org/issue?@action=redirect&bpo=13097) [https://bugs.python.org/issue?@action=redirect&bpo=13097]: **ctypes** now raises an **ArgumentError** when a callback is invoked with more than 1024 arguments.
- [bpo-39385](https://bugs.python.org/issue?@action=redirect&bpo=39385) [https://bugs.python.org/issue?@action=redirect&bpo=39385]: A new test assertion context-manager, **unittest.assertNoLogs()** will ensure a given block of code emits no log messages using the logging module. Contributed by Kit Yan Choi.
- [bpo-23082](https://bugs.python.org/issue?@action=redirect&bpo=23082) [https://bugs.python.org/issue?@action=redirect&bpo=23082]: Updated the error message and docs of **PurePath.relative\_to()** to better reflect the function behaviour.
- [bpo-40318](https://bugs.python.org/issue?@action=redirect&bpo=40318) [https://bugs.python.org/issue?@action=redirect&bpo=40318]: Use **SQLite3** trace v2 API, if it is available.
- [bpo-40105](https://bugs.python.org/issue?@action=redirect&bpo=40105) [https://bugs.python.org/issue?@action=redirect&bpo=40105]: **ZipFile** truncates files to avoid corruption when a shorter comment is provided in append ("a") mode. Patch by Jan Mazur.
- [bpo-40084](https://bugs.python.org/issue?@action=redirect&bpo=40084) [https://bugs.python.org/issue?@action=redirect&bpo=40084]: Fix **Enum.\_\_dir\_\_**:

`dir(Enum.member)` now includes attributes as well as methods.

- [bpo-31122](https://bugs.python.org/issue?@action=redirect&bpo=31122) [https://bugs.python.org/issue?@action=redirect&bpo=31122]: `ssl.wrap_socket()` now raises `ssl.SSLEOFError` rather than `OSError` when peer closes connection during TLS negotiation
- [bpo-39728](https://bugs.python.org/issue?@action=redirect&bpo=39728) [https://bugs.python.org/issue?@action=redirect&bpo=39728]: fix default `__missing__` so a duplicate `ValueError` is not set as the `__context__` of the original `ValueError`
- [bpo-39244](https://bugs.python.org/issue?@action=redirect&bpo=39244) [https://bugs.python.org/issue?@action=redirect&bpo=39244]: Fixed `multiprocessing.context.get_all_start_methods` to properly return the default method first on macOS.
- [bpo-39040](https://bugs.python.org/issue?@action=redirect&bpo=39040) [https://bugs.python.org/issue?@action=redirect&bpo=39040]: Fix parsing of invalid mime headers parameters by collapsing whitespace between encoded words in a bare-quote-string.
- [bpo-38731](https://bugs.python.org/issue?@action=redirect&bpo=38731) [https://bugs.python.org/issue?@action=redirect&bpo=38731]: Add `--quiet` option to command-line interface of `py_compile`. Patch by Gregory Chevchenko.
- [bpo-35714](https://bugs.python.org/issue?@action=redirect&bpo=35714) [https://bugs.python.org/issue?@action=redirect&bpo=35714]: `struct.error` is now raised if there is a null character in a `struct` format string.
- [bpo-38144](https://bugs.python.org/issue?@action=redirect&bpo=38144) [https://bugs.python.org/issue?@action=redirect&bpo=38144]: Added the `root_dir` and `dir_fd` parameters in `glob.glob()`.
- [bpo-26543](https://bugs.python.org/issue?@action=redirect&bpo=26543) [https://bugs.python.org/issue?@action=redirect&bpo=26543]: Fix `IMAP4.noop()` when debug mode is enabled (ex: `imaplib.Debug = 3`).
- [bpo-12178](https://bugs.python.org/issue?@action=redirect&bpo=12178) [https://bugs.python.org/issue?@action=redirect&bpo=12178]

@action=redirect&bpo=12178]: `csv.writer()` now correctly escapes *escapechar* when input contains *escapechar*. Patch by Catalin Iacob, Berker Peksag, and Itay Elbirt.

- [bpo-36290](https://bugs.python.org/issue?@action=redirect&bpo=36290) [https://bugs.python.org/issue?@action=redirect&bpo=36290]: AST nodes are now raising `TypeError` on conflicting keyword arguments. Patch contributed by Rémi Lapeyre.
- [bpo-33944](https://bugs.python.org/issue?@action=redirect&bpo=33944) [https://bugs.python.org/issue?@action=redirect&bpo=33944]: Added `site.py` site-packages tracing in verbose mode.
- [bpo-35078](https://bugs.python.org/issue?@action=redirect&bpo=35078) [https://bugs.python.org/issue?@action=redirect&bpo=35078]: Refactor `formatweekday`, `formatmonthname` methods in `LocaleHTMLCalendar` and `LocaleTextCalendar` classes in `calendar` module to call the base class methods. This enables customizable CSS classes for `LocaleHTMLCalendar`. Patch by Srinivas Reddy Thatiparthi
- [bpo-29620](https://bugs.python.org/issue?@action=redirect&bpo=29620) [https://bugs.python.org/issue?@action=redirect&bpo=29620]: `assertWarns()` no longer raises a `RuntimeException` when accessing a module's `__warningregistry__` causes importation of a new module, or when a new module is imported in another thread. Patch by Kernc.
- [bpo-31844](https://bugs.python.org/issue?@action=redirect&bpo=31844) [https://bugs.python.org/issue?@action=redirect&bpo=31844]: Remove `ParserBase.error()` method from the private and undocumented `_markupbase` module. `html.parser.HTMLParser` is the only subclass of `ParserBase` and its `error()` implementation was deprecated in Python 3.4 and removed in Python 3.5.
- [bpo-34226](https://bugs.python.org/issue?@action=redirect&bpo=34226) [https://bugs.python.org/issue?@action=redirect&bpo=34226]: Fix `cgi.parse_multipart` without `content_length`. Patch by Roger Duran
- [bpo-33660](https://bugs.python.org/issue?@action=redirect&bpo=33660) [https://bugs.python.org/issue?@action=redirect&bpo=33660]: Fix `pathlib.PosixPath` to resolve a relative path located on the root directory properly.

- [bpo-28557](https://bugs.python.org/issue?@action=redirect&bpo=28557) [https://bugs.python.org/issue?@action=redirect&bpo=28557]: Improve the error message for a misbehaving `rawio.readinto`
- [bpo-26680](https://bugs.python.org/issue?@action=redirect&bpo=26680) [https://bugs.python.org/issue?@action=redirect&bpo=26680]: The `d.is_integer()` method is added to the `Decimal` type, for compatibility with other number types.
- [bpo-26680](https://bugs.python.org/issue?@action=redirect&bpo=26680) [https://bugs.python.org/issue?@action=redirect&bpo=26680]: The `x.is_integer()` method is incorporated into the abstract types of the numeric tower, `Real`, `Rational` and `Integral`, with appropriate default implementations.

## Documentation

- [bpo-41428](https://bugs.python.org/issue?@action=redirect&bpo=41428) [https://bugs.python.org/issue?@action=redirect&bpo=41428]: Add documentation for [PEP 604](https://peps.python.org/pep-0604/) [https://peps.python.org/pep-0604/] (Allow writing union types as `X | Y`).
- [bpo-41774](https://bugs.python.org/issue?@action=redirect&bpo=41774) [https://bugs.python.org/issue?@action=redirect&bpo=41774]: In Programming FAQ “Sequences (Tuples/Lists)” section, add “How do you remove multiple items from a list”.
- [bpo-35293](https://bugs.python.org/issue?@action=redirect&bpo=35293) [https://bugs.python.org/issue?@action=redirect&bpo=35293]: Fix `RemovedInSphinx40Warning` when building the documentation. Patch by Dong-hee Na.
- [bpo-37149](https://bugs.python.org/issue?@action=redirect&bpo=37149) [https://bugs.python.org/issue?@action=redirect&bpo=37149]: Change Shipman tkinter doc link from archive.org to TkDocs. (The doc has been removed from the NMT server.) The new link responds much faster and includes a short explanatory note.
- [bpo-41726](https://bugs.python.org/issue?@action=redirect&bpo=41726) [https://bugs.python.org/issue?@action=redirect&bpo=41726]: Update the refcounts info of `PyType_FromModuleAndSpec`.
- [bpo-41624](https://bugs.python.org/issue?@action=redirect&bpo=41624) [https://bugs.python.org/issue?@action=redirect&bpo=41624]: Fix the signature of [typing.Coroutine](#).
- [bpo-40204](https://bugs.python.org/issue?@action=redirect&bpo=40204) [https://bugs.python.org/issue?@action=redirect&bpo=40204]

@action=redirect&bpo=40204]: Enable Sphinx 3.2

c\_allow\_pre\_v3 option and disable

c\_warn\_on\_allowed\_pre\_v3 option to make the documentation compatible with Sphinx 2 and Sphinx 3.

- [bpo-41045](https://bugs.python.org/issue?@action=redirect&bpo=41045) [https://bugs.python.org/issue?@action=redirect&bpo=41045]: Add documentation for debug feature of f-strings.
- [bpo-41314](https://bugs.python.org/issue?@action=redirect&bpo=41314) [https://bugs.python.org/issue?@action=redirect&bpo=41314]: Changed the release when `from __future__ import annotations` becomes the default from 4.0 to 3.10 (following a change in PEP 563).
- [bpo-40979](https://bugs.python.org/issue?@action=redirect&bpo=40979) [https://bugs.python.org/issue?@action=redirect&bpo=40979]: Refactored `typing.rst`, arranging more than 70 classes, functions, and decorators into new sub-sections.
- [bpo-40552](https://bugs.python.org/issue?@action=redirect&bpo=40552) [https://bugs.python.org/issue?@action=redirect&bpo=40552]: Fix in tutorial section 4.2. Code snippet is now correct.
- [bpo-39883](https://bugs.python.org/issue?@action=redirect&bpo=39883) [https://bugs.python.org/issue?@action=redirect&bpo=39883]: Make code, examples, and recipes in the Python documentation be licensed under the more permissive BSD0 license in addition to the existing Python 2.0 license.
- [bpo-37703](https://bugs.python.org/issue?@action=redirect&bpo=37703) [https://bugs.python.org/issue?@action=redirect&bpo=37703]: Updated Documentation to comprehensively elaborate on the behaviour of `gather.cancel()`

## Tests

- [bpo-41939](https://bugs.python.org/issue?@action=redirect&bpo=41939) [https://bugs.python.org/issue?@action=redirect&bpo=41939]: Fix `test_site.test_license_exists_at_url()`: call `urllib.request.urlcleanup()` to reset the global `urllib.request._opener`. Patch by Victor Stinner.
- [bpo-41731](https://bugs.python.org/issue?@action=redirect&bpo=41731) [https://bugs.python.org/issue?@action=redirect&bpo=41731]: Make `test_cmd_line_script` pass with option `'-vv'`.
- [bpo-41602](https://bugs.python.org/issue?@action=redirect&bpo=41602) [https://bugs.python.org/issue?@action=redirect&bpo=41602]: Add tests for SIGINT handling in

the runpy module.

- [bpo-41521](https://bugs.python.org/issue?@action=redirect&bpo=41521) [https://bugs.python.org/issue?@action=redirect&bpo=41521]: **test.support**: Rename `blacklist` parameter of `check_all__()` to `not_exported`.
- [bpo-41477](https://bugs.python.org/issue?@action=redirect&bpo=41477) [https://bugs.python.org/issue?@action=redirect&bpo=41477]: Make ctypes optional in `test_genericalias`.
- [bpo-41085](https://bugs.python.org/issue?@action=redirect&bpo=41085) [https://bugs.python.org/issue?@action=redirect&bpo=41085]: Fix integer overflow in the `array.array.index()` method on 64-bit Windows for index larger than `2**31`.
- [bpo-41069](https://bugs.python.org/issue?@action=redirect&bpo=41069) [https://bugs.python.org/issue?@action=redirect&bpo=41069]: **test.support.TESTFN** and the current directory for tests when run via `test.regrtest` contain now non-ascii characters if possible.
- [bpo-38377](https://bugs.python.org/issue?@action=redirect&bpo=38377) [https://bugs.python.org/issue?@action=redirect&bpo=38377]: On Linux, skip tests using multiprocessing if the current user cannot create a file in `/dev/shm/` directory. Add the `skip_if_broken_multiprocessing_synchronize()` function to the **test.support** module.
- [bpo-41009](https://bugs.python.org/issue?@action=redirect&bpo=41009) [https://bugs.python.org/issue?@action=redirect&bpo=41009]: Fix use of `support.require_{linux|mac|freebsd}_version()` decorators as class decorator.
- [bpo-41003](https://bugs.python.org/issue?@action=redirect&bpo=41003) [https://bugs.python.org/issue?@action=redirect&bpo=41003]: Fix `test_copyreg` when numpy is installed: `test.pickletester` now saves/restores warnings filters when importing `numpy`, to ignore filters installed by `numpy`.
- [bpo-40964](https://bugs.python.org/issue?@action=redirect&bpo=40964) [https://bugs.python.org/issue?@action=redirect&bpo=40964]: Disable remote **imaplib** tests, host `cyrus.andrew.cmu.edu` is blocking incoming connections.
- [bpo-40927](https://bugs.python.org/issue?@action=redirect&bpo=40927) [https://bugs.python.org/issue?@action=redirect&bpo=40927]: Fix `test_binhex` when run twice: it now uses `import_fresh_module()` to ensure that it raises `DeprecationWarning` each time.
- [bpo-17258](https://bugs.python.org/issue?@action=redirect&bpo=17258) [https://bugs.python.org/issue?@action=redirect&bpo=17258]: Skip some **multiprocessing**

tests when MD5 hash digest is blocked.

- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: Increase LOOPBACK\_TIMEOUT to 10 for VxWorks RTOS.
- [bpo-38169](https://bugs.python.org/issue?@action=redirect&bpo=38169) [https://bugs.python.org/issue?@action=redirect&bpo=38169]: Increase code coverage for SharedMemory and ShareableList
- [bpo-34401](https://bugs.python.org/issue?@action=redirect&bpo=34401) [https://bugs.python.org/issue?@action=redirect&bpo=34401]: Make test\_gdb properly run on HP-UX. Patch by Michael Osipov.

## Build

- [bpo-38249](https://bugs.python.org/issue?@action=redirect&bpo=38249) [https://bugs.python.org/issue?@action=redirect&bpo=38249]: Update **Py\_UNREACHABLE** to use `_builtin_unreachable()` if only the compiler is able to use it. Patch by Dong-hee Na.
- [bpo-41617](https://bugs.python.org/issue?@action=redirect&bpo=41617) [https://bugs.python.org/issue?@action=redirect&bpo=41617]: Fix `pycore_bitutils.h` header file to support old clang versions: `__builtin_bswap16()` is not available in LLVM clang 3.0.
- [bpo-40204](https://bugs.python.org/issue?@action=redirect&bpo=40204) [https://bugs.python.org/issue?@action=redirect&bpo=40204]: Pin Sphinx version to 2.3.1 in Doc/Makefile.
- [bpo-36020](https://bugs.python.org/issue?@action=redirect&bpo=36020) [https://bugs.python.org/issue?@action=redirect&bpo=36020]: The C99 functions **`snprintf()`** and **`vsnprintf()`** are now required to build Python.
- [bpo-40684](https://bugs.python.org/issue?@action=redirect&bpo=40684) [https://bugs.python.org/issue?@action=redirect&bpo=40684]: `make install` now uses the `PLATLIBDIR` variable for the destination `lib-dynload/` directory when `./configure --with-platlibdir` is used.
- [bpo-40683](https://bugs.python.org/issue?@action=redirect&bpo=40683) [https://bugs.python.org/issue?@action=redirect&bpo=40683]: Fixed an issue where the **`zoneinfo`** module and its tests were not included when Python is installed with `make`.

## Windows

- [bpo-41744](https://bugs.python.org/issue?@action=redirect&bpo=41744) [https://bugs.python.org/issue?@action=redirect&bpo=41744]

@action=redirect&bpo=41744]: Fixes automatic import of props file when using the Nuget package.

- [bpo-41627](https://bugs.python.org/issue?@action=redirect&bpo=41627) [https://bugs.python.org/issue?@action=redirect&bpo=41627]: The user site directory for 32-bit now includes a `-32` suffix to distinguish it from the 64-bit interpreter's directory.
- [bpo-41526](https://bugs.python.org/issue?@action=redirect&bpo=41526) [https://bugs.python.org/issue?@action=redirect&bpo=41526]: Fixed layout of final page of the installer by removing the special thanks to Mark Hammond (with his permission).
- [bpo-41492](https://bugs.python.org/issue?@action=redirect&bpo=41492) [https://bugs.python.org/issue?@action=redirect&bpo=41492]: Fixes the description that appears in UAC prompts.
- [bpo-40948](https://bugs.python.org/issue?@action=redirect&bpo=40948) [https://bugs.python.org/issue?@action=redirect&bpo=40948]: Improve post-install message to direct people to the “py” command.
- [bpo-41412](https://bugs.python.org/issue?@action=redirect&bpo=41412) [https://bugs.python.org/issue?@action=redirect&bpo=41412]: The installer will now fail to install on Windows 7 and Windows 8. Further, the UCRT dependency is now always downloaded on demand.
- [bpo-40741](https://bugs.python.org/issue?@action=redirect&bpo=40741) [https://bugs.python.org/issue?@action=redirect&bpo=40741]: Update Windows release to include SQLite 3.32.3.
- [bpo-41142](https://bugs.python.org/issue?@action=redirect&bpo=41142) [https://bugs.python.org/issue?@action=redirect&bpo=41142]: **msilib** now supports creating CAB files with non-ASCII file path and adding files with non-ASCII file path to them.
- [bpo-41074](https://bugs.python.org/issue?@action=redirect&bpo=41074) [https://bugs.python.org/issue?@action=redirect&bpo=41074]: Fixed support of non-ASCII names in functions **msilib.OpenDatabase()** and **msilib.init\_database()** and non-ASCII SQL in method **msilib.Database.OpenView()**.
- [bpo-41039](https://bugs.python.org/issue?@action=redirect&bpo=41039) [https://bugs.python.org/issue?@action=redirect&bpo=41039]: Stable ABI redirection DLL (python3.dll) now uses `#pragma comment(linker)` for re-exporting.
- [bpo-40164](https://bugs.python.org/issue?@action=redirect&bpo=40164) [https://bugs.python.org/issue?@action=redirect&bpo=40164]: Updates Windows OpenSSL to 1.1.1g
- [bpo-39631](https://bugs.python.org/issue?@action=redirect&bpo=39631) [https://bugs.python.org/issue?@action=redirect&bpo=39631]

@action=redirect&bpo=39631]: Changes the registered MIME type for .py files on Windows to text/x-python instead of text/plain.

- [bpo-40677](https://bugs.python.org/issue?@action=redirect&bpo=40677) [https://bugs.python.org/issue?@action=redirect&bpo=40677]: Manually define IO\_REPARSE\_TAG\_APPEXECLINK in case some old Windows SDK doesn't have it.
- [bpo-37556](https://bugs.python.org/issue?@action=redirect&bpo=37556) [https://bugs.python.org/issue?@action=redirect&bpo=37556]: Extend py.exe help to mention overrides via venv, shebang, environmental variables & ini files.

## macOS

- [bpo-41557](https://bugs.python.org/issue?@action=redirect&bpo=41557) [https://bugs.python.org/issue?@action=redirect&bpo=41557]: Update macOS installer to use SQLite 3.33.0.
- [bpo-39580](https://bugs.python.org/issue?@action=redirect&bpo=39580) [https://bugs.python.org/issue?@action=redirect&bpo=39580]: Avoid opening Finder window if running installer from the command line. Patch contributed by Rick Heil.
- [bpo-41100](https://bugs.python.org/issue?@action=redirect&bpo=41100) [https://bugs.python.org/issue?@action=redirect&bpo=41100]: Fix configure error when building on macOS 11. Note that the current Python release was released shortly after the first developer preview of macOS 11 (Big Sur); there are other known issues with building and running on the developer preview. Big Sur is expected to be fully supported in a future bugfix release of Python 3.8.x and with 3.9.0.
- [bpo-40741](https://bugs.python.org/issue?@action=redirect&bpo=40741) [https://bugs.python.org/issue?@action=redirect&bpo=40741]: Update macOS installer to use SQLite 3.32.3.
- [bpo-41005](https://bugs.python.org/issue?@action=redirect&bpo=41005) [https://bugs.python.org/issue?@action=redirect&bpo=41005]: fixed an XDG settings issue not allowing macos to open browser in webbrowser.py
- [bpo-40741](https://bugs.python.org/issue?@action=redirect&bpo=40741) [https://bugs.python.org/issue?@action=redirect&bpo=40741]: Update macOS installer to use SQLite 3.32.2.

## IDLE

- [bpo-41775](https://bugs.python.org/issue?@action=redirect&bpo=41775) [https://bugs.python.org/issue?@action=redirect&bpo=41775]: Use ‘IDLE Shell’ as shell title
- [bpo-35764](https://bugs.python.org/issue?@action=redirect&bpo=35764) [https://bugs.python.org/issue?@action=redirect&bpo=35764]: Rewrite the Calltips doc section.
- [bpo-40181](https://bugs.python.org/issue?@action=redirect&bpo=40181) [https://bugs.python.org/issue?@action=redirect&bpo=40181]: In calltips, stop reminding that ‘/’ marks the end of positional-only arguments.
- [bpo-41468](https://bugs.python.org/issue?@action=redirect&bpo=41468) [https://bugs.python.org/issue?@action=redirect&bpo=41468]: Improve IDLE run crash error message (which users should never see).
- [bpo-41373](https://bugs.python.org/issue?@action=redirect&bpo=41373) [https://bugs.python.org/issue?@action=redirect&bpo=41373]: Save files loaded with no line ending, as when blank, or different line endings, by setting its line ending to the system default. Fix regression in 3.8.4 and 3.9.0b4.
- [bpo-41300](https://bugs.python.org/issue?@action=redirect&bpo=41300) [https://bugs.python.org/issue?@action=redirect&bpo=41300]: Save files with non-ascii chars. Fix regression released in 3.9.0b4 and 3.8.4.
- [bpo-37765](https://bugs.python.org/issue?@action=redirect&bpo=37765) [https://bugs.python.org/issue?@action=redirect&bpo=37765]: Add keywords to module name completion list. Rewrite Completions section of IDLE doc.
- [bpo-41152](https://bugs.python.org/issue?@action=redirect&bpo=41152) [https://bugs.python.org/issue?@action=redirect&bpo=41152]: The encoding of `stdin`, `stdout` and `stderr` in IDLE is now always UTF-8.
- [bpo-41144](https://bugs.python.org/issue?@action=redirect&bpo=41144) [https://bugs.python.org/issue?@action=redirect&bpo=41144]: Make Open Module open a special module such as `os.path`.
- [bpo-39885](https://bugs.python.org/issue?@action=redirect&bpo=39885) [https://bugs.python.org/issue?@action=redirect&bpo=39885]: Make context menu Cut and Copy work again when right-clicking within a selection.
- [bpo-40723](https://bugs.python.org/issue?@action=redirect&bpo=40723) [https://bugs.python.org/issue?@action=redirect&bpo=40723]: Make `test_idle` pass when run after import.

## C API

- [bpo-41936](https://bugs.python.org/issue?@action=redirect&bpo=41936) [https://bugs.python.org/issue?@action=redirect&bpo=41936]: Removed undocumented macros `Py_ALLOW_RECURSION` and `Py_END_ALLOW_RECURSION` and the `recursion_critical` field of the

**PyInterpreterState** structure.

- **bpo-41692** [<https://bugs.python.org/issue?@action=redirect&bpo=41692>]: The **PyUnicode\_InternImmortal()** function is now deprecated and will be removed in Python 3.12: use **PyUnicode\_InternInPlace()** instead. Patch by Victor Stinner.
- **bpo-41842** [<https://bugs.python.org/issue?@action=redirect&bpo=41842>]: Add **PyCodec\_Unregister()** function to unregister a codec search function.
- **bpo-41834** [<https://bugs.python.org/issue?@action=redirect&bpo=41834>]: Remove the **\_Py\_CheckRecursionLimit** variable: it has been replaced by **ceval.recursion\_limit** of the **PyInterpreterState** structure. Patch by Victor Stinner.
- **bpo-41689** [<https://bugs.python.org/issue?@action=redirect&bpo=41689>]: Types created with **PyType\_FromSpec()** now make any signature in their **tp\_doc** slot accessible from **\_\_text\_signature\_\_**.
- **bpo-41524** [<https://bugs.python.org/issue?@action=redirect&bpo=41524>]: Fix bug in **PyOS\_mystrnicmp** and **PyOS\_mystricmp** that incremented pointers beyond the end of a string.
- **bpo-41324** [<https://bugs.python.org/issue?@action=redirect&bpo=41324>]: Add a minimal decimal capsule API. The API supports fast conversions between Decimals up to 38 digits and their triple representation as a C struct.
- **bpo-30155** [<https://bugs.python.org/issue?@action=redirect&bpo=30155>]: Add **PyDateTime\_DATE\_GET\_TZINFO()** and **PyDateTime\_TIME\_GET\_TZINFO()** macros for accessing the **tzinfo** attributes of **datetime.datetime** and **datetime.time** objects.
- **bpo-40170** [<https://bugs.python.org/issue?@action=redirect&bpo=40170>]: Revert **PyType\_HasFeature()** change: it reads again directly the **PyTypeObject.tp\_flags** member when the limited C API is not used, rather than always calling **PyType\_GetFlags()** which hides implementation details.
- **bpo-41123** [<https://bugs.python.org/issue?@action=redirect&bpo=41123>]

- @action=redirect&bpo=41123]: Remove `PyUnicode_AsUnicodeCopy`.
- [bpo-41123](https://bugs.python.org/issue?@action=redirect&bpo=41123) [https://bugs.python.org/issue?@action=redirect&bpo=41123]: Removed `PyLong_FromUnicode()`.
- [bpo-41123](https://bugs.python.org/issue?@action=redirect&bpo=41123) [https://bugs.python.org/issue?@action=redirect&bpo=41123]: Removed `PyUnicode_GetMax()`.
- [bpo-41123](https://bugs.python.org/issue?@action=redirect&bpo=41123) [https://bugs.python.org/issue?@action=redirect&bpo=41123]: Removed `Py_UNICODE_str*` functions manipulating `Py_UNICODE*` strings.
- [bpo-41103](https://bugs.python.org/issue?@action=redirect&bpo=41103) [https://bugs.python.org/issue?@action=redirect&bpo=41103]: `PyObject_AsCharBuffer()`, `PyObject_AsReadBuffer()`, `PyObject_CheckReadBuffer()`, and `PyObject_AsWriteBuffer()` are removed. Please migrate to new buffer protocol; [PyObject\\_GetBuffer\(\)](#) and [PyBuffer\\_Release\(\)](#).
- [bpo-36346](https://bugs.python.org/issue?@action=redirect&bpo=36346) [https://bugs.python.org/issue?@action=redirect&bpo=36346]: Raises `DeprecationWarning` for `PyUnicode_FromUnicode(NULL, size)` and `PyUnicode_FromStringAndSize(NULL, size)` with `size > 0`.
- [bpo-36346](https://bugs.python.org/issue?@action=redirect&bpo=36346) [https://bugs.python.org/issue?@action=redirect&bpo=36346]: Mark `Py_UNICODE_COPY`, `Py_UNICODE_FILL`, `PyUnicode_WSTR_LENGTH`, `PyUnicode_FromUnicode`, `PyUnicode_AsUnicode`, and `PyUnicode_AsUnicodeAndSize` as deprecated in C. Remove `Py_UNICODE_MATCH` which was deprecated and broken since Python 3.3.
- [bpo-40989](https://bugs.python.org/issue?@action=redirect&bpo=40989) [https://bugs.python.org/issue?@action=redirect&bpo=40989]: The `PyObject_INIT()` and `PyObject_INIT_VAR()` macros become aliases to, respectively, [PyObject\\_Init\(\)](#) and [PyObject\\_InitVar\(\)](#) functions.
- [bpo-36020](https://bugs.python.org/issue?@action=redirect&bpo=36020) [https://bugs.python.org/issue?@action=redirect&bpo=36020]: On Windows, `#include "pyerrors.h"` no longer defines `snprintf` and `vsnprintf` macros.
- [bpo-40943](https://bugs.python.org/issue?@action=redirect&bpo=40943) [https://bugs.python.org/issue?@action=redirect&bpo=40943]

@action=redirect&bpo=40943]: The `PY_SSIZE_T_CLEAN` macro must now be defined to use `PyArg_ParseTuple()` and `Py_BuildValue()` formats which use `#: es#, et#, s#, u#, y#, z#, U#` and `Z#`. See [Parsing arguments and building values](#) and the [PEP 353](https://peps.python.org/pep-0353/) [https://peps.python.org/pep-0353/].

- [bpo-40910](https://bugs.python.org/issue?@action=redirect&bpo=40910) [https://bugs.python.org/issue?@action=redirect&bpo=40910]: Export explicitly the `Py_GetArgcArgv()` function to the C API and document the function. Previously, it was exported implicitly which no longer works since Python is built with `-fvisibility=hidden`.
- [bpo-40724](https://bugs.python.org/issue?@action=redirect&bpo=40724) [https://bugs.python.org/issue?@action=redirect&bpo=40724]: Allow defining buffer slots in type specs.
- [bpo-40679](https://bugs.python.org/issue?@action=redirect&bpo=40679) [https://bugs.python.org/issue?@action=redirect&bpo=40679]: Fix a `_PyEval_EvalCode()` crash if *qualname* argument is NULL.
- [bpo-40839](https://bugs.python.org/issue?@action=redirect&bpo=40839) [https://bugs.python.org/issue?@action=redirect&bpo=40839]: Calling `PyDict_GetItem()` without GIL held had been allowed for historical reason. It is no longer allowed.
- [bpo-40826](https://bugs.python.org/issue?@action=redirect&bpo=40826) [https://bugs.python.org/issue?@action=redirect&bpo=40826]: `PyOS_InterruptOccurred()` now fails with a fatal error if it is called with the GIL released.
- [bpo-40792](https://bugs.python.org/issue?@action=redirect&bpo=40792) [https://bugs.python.org/issue?@action=redirect&bpo=40792]: The result of `PyNumber_Index()` now always has exact type `int`. Previously, the result could have been an instance of a subclass of `int`.
- [bpo-39573](https://bugs.python.org/issue?@action=redirect&bpo=39573) [https://bugs.python.org/issue?@action=redirect&bpo=39573]: Convert `Py_REFCNT()` and `Py_SIZE()` macros to static inline functions. They cannot be used as l-value anymore: use `Py_SET_REFCNT()` and `Py_SET_SIZE()` to set an object reference count and size. This change is backward incompatible on purpose, to prepare the C API for an opaque `PyObject` structure.
- [bpo-40703](https://bugs.python.org/issue?@action=redirect&bpo=40703) [https://bugs.python.org/issue?@action=redirect&bpo=40703]: The `PyType_FromSpec*()`

functions no longer overwrite the type's “`_module_`” attribute if it is set via “`Py_tp_members`” or “`Py_tp_getset`”.

- [bpo-39583](https://bugs.python.org/issue?@action=redirect&bpo=39583) [https://bugs.python.org/issue?@action=redirect&bpo=39583]: Remove superfluous “extern C” declarations from `Include/cpython/*.h`.

## Python 3.9.0 beta 1

*Release date: 2020-05-19*

### Security

- [bpo-40501](https://bugs.python.org/issue?@action=redirect&bpo=40501) [https://bugs.python.org/issue?@action=redirect&bpo=40501]: `uuid` no longer uses `ctypes` to load `libuuid` or `rpcrt4.dll` at runtime.

### Core and Builtins

- [bpo-40663](https://bugs.python.org/issue?@action=redirect&bpo=40663) [https://bugs.python.org/issue?@action=redirect&bpo=40663]: Correctly generate annotations where parentheses are omitted but required (e.g: `Type[(str, int, *other)]`).
- [bpo-40596](https://bugs.python.org/issue?@action=redirect&bpo=40596) [https://bugs.python.org/issue?@action=redirect&bpo=40596]: Fixed `str.isidentifier()` for non-canonicalized strings containing non-BMP characters on Windows.
- [bpo-40593](https://bugs.python.org/issue?@action=redirect&bpo=40593) [https://bugs.python.org/issue?@action=redirect&bpo=40593]: Improved syntax errors for invalid characters in source code.
- [bpo-40585](https://bugs.python.org/issue?@action=redirect&bpo=40585) [https://bugs.python.org/issue?@action=redirect&bpo=40585]: Fixed a bug when using `codeop.compile_command()` that was causing exceptions to be swallowed with the new parser. Patch by Pablo Galindo
- [bpo-40566](https://bugs.python.org/issue?@action=redirect&bpo=40566) [https://bugs.python.org/issue?@action=redirect&bpo=40566]: Apply [PEP 573](https://peps.python.org/pep-0573/) [https://peps.python.org/pep-0573/] to `abc`.
- [bpo-40502](https://bugs.python.org/issue?@action=redirect&bpo=40502) [https://bugs.python.org/issue?@action=redirect&bpo=40502]: Initialize `n->n_col_offset`. (Patch by Joanna Nanjey)

- [bpo-40527](https://bugs.python.org/issue?@action=redirect&bpo=40527) [https://bugs.python.org/issue?@action=redirect&bpo=40527]: Fix command line argument parsing: no longer write errors multiple times into stderr.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port [errno](#) to multiphase initialization ([PEP 489](#) [https://peps.python.org/pep-0489/]).
- [bpo-40523](https://bugs.python.org/issue?@action=redirect&bpo=40523) [https://bugs.python.org/issue?@action=redirect&bpo=40523]: Add pass-throughs for [hash\(\)](#) and [reversed\(\)](#) to [weakref.proxy](#) objects. Patch by Pablo Galindo.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port [syslog](#) to multiphase initialization ([PEP 489](#) [https://peps.python.org/pep-0489/]).
- [bpo-40246](https://bugs.python.org/issue?@action=redirect&bpo=40246) [https://bugs.python.org/issue?@action=redirect&bpo=40246]: Reporting a specialised error message for invalid string prefixes, which was introduced in [bpo-40246](#) [https://bugs.python.org/issue?@action=redirect&bpo=40246], is being reverted due to backwards compatibility concerns for strings that immediately follow a reserved keyword without whitespace between them. Constructs like `bg="#d00" if clear else"#fca"` were failing to parse, which is not an acceptable breakage on such short notice.
- [bpo-40417](https://bugs.python.org/issue?@action=redirect&bpo=40417) [https://bugs.python.org/issue?@action=redirect&bpo=40417]: Fix imp module deprecation warning when PyImport\_ReloadModule is called. Patch by Robert Rouhani.
- [bpo-40408](https://bugs.python.org/issue?@action=redirect&bpo=40408) [https://bugs.python.org/issue?@action=redirect&bpo=40408]: Fixed support of nested type variables in GenericAlias (e.g. `list[list[T]]`).
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `_stat` module to multiphase initialization ([PEP 489](#) [https://peps.python.org/pep-0489/]).
- [bpo-29587](https://bugs.python.org/issue?@action=redirect&bpo=29587) [https://bugs.python.org/issue?@action=redirect&bpo=29587]: Enable implicit exception chaining when calling [generator.throw\(\)](#).
- [bpo-40328](https://bugs.python.org/issue?@action=redirect&bpo=40328) [https://bugs.python.org/issue?@action=redirect&bpo=40328]: Add tools for generating mappings headers for CJKCodecs.
- [bpo-40228](https://bugs.python.org/issue?@action=redirect&bpo=40228) [https://bugs.python.org/issue?@action=redirect&bpo=40228]

@action=redirect&bpo=40228]: Setting `frame.f_lineno` is now robust w.r.t. changes in the source-to-bytecode compiler

- [bpo-38880](https://bugs.python.org/issue?@action=redirect&bpo=38880) [https://bugs.python.org/issue?@action=redirect&bpo=38880]: Added the ability to list interpreters associated with channel ends in the internal `subinterpreters` module.
- [bpo-37986](https://bugs.python.org/issue?@action=redirect&bpo=37986) [https://bugs.python.org/issue?@action=redirect&bpo=37986]: Improve performance of `PyLong_FromDouble()` for values that fit into long.

## Library

- [bpo-40662](https://bugs.python.org/issue?@action=redirect&bpo=40662) [https://bugs.python.org/issue?@action=redirect&bpo=40662]: Fixed `ast.get_source_segment()` for ast nodes that have incomplete location information. Patch by Irit Katriel.
- [bpo-40665](https://bugs.python.org/issue?@action=redirect&bpo=40665) [https://bugs.python.org/issue?@action=redirect&bpo=40665]: Convert `bisect` to use `Argument Clinic`.
- [bpo-40536](https://bugs.python.org/issue?@action=redirect&bpo=40536) [https://bugs.python.org/issue?@action=redirect&bpo=40536]: Added the `available_timezones()` function to the `zoneinfo` module. Patch by Paul Ganssle.
- [bpo-40645](https://bugs.python.org/issue?@action=redirect&bpo=40645) [https://bugs.python.org/issue?@action=redirect&bpo=40645]: The `hmac.HMAC` exposes internal implementation details. The attributes `digest_cons`, `inner`, and `outer` are deprecated and will be removed in the future.
- [bpo-40645](https://bugs.python.org/issue?@action=redirect&bpo=40645) [https://bugs.python.org/issue?@action=redirect&bpo=40645]: The internal module `_hashlib` wraps and exposes OpenSSL's HMAC API. The new code will be used in Python 3.10 after the internal implementation details of the pure Python HMAC module are no longer part of the public API.
- [bpo-40637](https://bugs.python.org/issue?@action=redirect&bpo=40637) [https://bugs.python.org/issue?@action=redirect&bpo=40637]: Builtin hash modules can now be disabled or selectively enabled with `configure --with-builtin-hashlib-hashes=sha3,blake1` or `--without-builtin-hashlib-hashes`.
- [bpo-37630](https://bugs.python.org/issue?@action=redirect&bpo=37630) [https://bugs.python.org/issue?@action=redirect&bpo=37630]

@action=redirect&bpo=37630]: The [hashlib](#) module can now use SHA3 hashes and SHAKE XOF from OpenSSL when available.

- [bpo-40479](#) [https://bugs.python.org/issue?@action=redirect&bpo=40479]: The [hashlib](#) now compiles with OpenSSL 3.0.0-alpha2.
- [bpo-40257](#) [https://bugs.python.org/issue?@action=redirect&bpo=40257]: Revert changes to [inspect.getdoc\(\)](#).
- [bpo-40607](#) [https://bugs.python.org/issue?@action=redirect&bpo=40607]: When cancelling a task due to timeout, [asyncio.wait\\_for\(\)](#) will now propagate the exception if an error happens during cancellation. Patch by Roman Skurikhin.
- [bpo-40612](#) [https://bugs.python.org/issue?@action=redirect&bpo=40612]: Fix edge cases in SyntaxError formatting. If the offset is  $\leq 0$ , no caret is printed. If the offset is  $>$  line length, the caret is printed pointing just after the last character.
- [bpo-40597](#) [https://bugs.python.org/issue?@action=redirect&bpo=40597]: If text content lines are longer than `policy.max_line_length`, always use a content-encoding to make sure they are wrapped.
- [bpo-40571](#) [https://bugs.python.org/issue?@action=redirect&bpo=40571]: Added `functools.cache()` as a simpler, more discoverable way to access the unbounded cache variant of `lru_cache(maxsize=None)`.
- [bpo-40503](#) [https://bugs.python.org/issue?@action=redirect&bpo=40503]: [PEP 615](#) [https://peps.python.org/pep-0615/], the [zoneinfo](#) module. Adds support for the IANA time zone database.
- [bpo-40397](#) [https://bugs.python.org/issue?@action=redirect&bpo=40397]: Removed attributes `__args__` and `__parameters__` from special generic aliases like `typing.List` (not subscripted).
- [bpo-40549](#) [https://bugs.python.org/issue?@action=redirect&bpo=40549]: Convert `posixmodule.c` (“posix” or “nt” module) to the multiphase initialization (PEP 489).
- [bpo-31033](#) [https://bugs.python.org/issue?@action=redirect&bpo=31033]: Add a `msg` argument to

**Future.cancel()** and **Task.cancel()**.

- [bpo-40541](https://bugs.python.org/issue?@action=redirect&bpo=40541) [https://bugs.python.org/issue?@action=redirect&bpo=40541]: Added an optional *counts* parameter to `random.sample()`.
- [bpo-40515](https://bugs.python.org/issue?@action=redirect&bpo=40515) [https://bugs.python.org/issue?@action=redirect&bpo=40515]: The `ssl` and `hashlib` modules now actively check that OpenSSL is build with thread support. Python 3.7.0 made thread support mandatory and no longer works safely with a no-thread builds.
- [bpo-31033](https://bugs.python.org/issue?@action=redirect&bpo=31033) [https://bugs.python.org/issue?@action=redirect&bpo=31033]: When a `asyncio.Task` is cancelled, the exception traceback now chains all the way back to where the task was first interrupted.
- [bpo-40504](https://bugs.python.org/issue?@action=redirect&bpo=40504) [https://bugs.python.org/issue?@action=redirect&bpo=40504]: `functools.lru_cache()` objects can now be the targets of weakrefs.
- [bpo-40559](https://bugs.python.org/issue?@action=redirect&bpo=40559) [https://bugs.python.org/issue?@action=redirect&bpo=40559]: Fix possible memory leak in the C implementation of `asyncio.Task`.
- [bpo-40480](https://bugs.python.org/issue?@action=redirect&bpo=40480) [https://bugs.python.org/issue?@action=redirect&bpo=40480]: `fnmatch.fnmatch()` could take exponential time in the presence of multiple `*` pattern characters. This was repaired by generating more elaborate regular expressions to avoid futile backtracking.
- [bpo-40495](https://bugs.python.org/issue?@action=redirect&bpo=40495) [https://bugs.python.org/issue?@action=redirect&bpo=40495]: `compileall` is now able to use hardlinks to prevent duplicates in a case when `.pyc` files for different optimization levels have the same content.
- [bpo-40457](https://bugs.python.org/issue?@action=redirect&bpo=40457) [https://bugs.python.org/issue?@action=redirect&bpo=40457]: The `ssl` module now support OpenSSL builds without TLS 1.0 and 1.1 methods.
- [bpo-40355](https://bugs.python.org/issue?@action=redirect&bpo=40355) [https://bugs.python.org/issue?@action=redirect&bpo=40355]: Improve error reporting in `ast.literal_eval()` in the presence of malformed `ast.Dict` nodes instead of silently ignoring any non-conforming elements. Patch by Curtis Bucher.
- [bpo-40465](https://bugs.python.org/issue?@action=redirect&bpo=40465) [https://bugs.python.org/issue?@action=redirect&bpo=40465]: Deprecated the optional *random* argument to `random.shuffle()`.
- [bpo-40459](https://bugs.python.org/issue?@action=redirect&bpo=40459) [https://bugs.python.org/issue?@action=redirect&bpo=40459]

- @action=redirect&bpo=40459]: `platform.win32_ver()` now produces correct *p*type strings instead of empty strings.
- [bpo-39435](https://bugs.python.org/issue?@action=redirect&bpo=39435) [https://bugs.python.org/issue?@action=redirect&bpo=39435]: The first argument of `pickle.loads()` is now positional-only.
  - [bpo-39305](https://bugs.python.org/issue?@action=redirect&bpo=39305) [https://bugs.python.org/issue?@action=redirect&bpo=39305]: Update `nntplib` to merge `nntplib.NNTP` and `nntplib._NNTPBase`. Patch by Donghee Na.
  - [bpo-32494](https://bugs.python.org/issue?@action=redirect&bpo=32494) [https://bugs.python.org/issue?@action=redirect&bpo=32494]: Update `dbm.gnu` to use `gdbm_count` if possible when calling `len()`. Patch by Donghee Na.
  - [bpo-40453](https://bugs.python.org/issue?@action=redirect&bpo=40453) [https://bugs.python.org/issue?@action=redirect&bpo=40453]: Add `isolated=True` keyword-only parameter to `_xxsubinterpreters.create()`. An isolated subinterpreter cannot spawn threads, spawn a child process or call `os.fork()`.
  - [bpo-40286](https://bugs.python.org/issue?@action=redirect&bpo=40286) [https://bugs.python.org/issue?@action=redirect&bpo=40286]: Remove `_random.Random.randbytes()`: the C implementation of `randbytes()`. Implement the method in Python to ease subclassing: `randbytes()` now directly reuses `getrandbits()`.
  - [bpo-40394](https://bugs.python.org/issue?@action=redirect&bpo=40394) [https://bugs.python.org/issue?@action=redirect&bpo=40394]: Added default arguments to `difflib.SequenceMatcher.find_longest_match()`.
  - [bpo-39995](https://bugs.python.org/issue?@action=redirect&bpo=39995) [https://bugs.python.org/issue?@action=redirect&bpo=39995]: Fix a race condition in `concurrent.futures._ThreadWakeup`: access to `_ThreadWakeup` is now protected with the shutdown lock.
  - [bpo-30966](https://bugs.python.org/issue?@action=redirect&bpo=30966) [https://bugs.python.org/issue?@action=redirect&bpo=30966]: `Process.shutdown(wait=True)` of `concurrent.futures` now closes explicitly the result queue.
  - [bpo-30966](https://bugs.python.org/issue?@action=redirect&bpo=30966) [https://bugs.python.org/issue?@action=redirect&bpo=30966]: Add a new `close()` method to the `SimpleQueue` class to explicitly close the queue.
  - [bpo-39966](https://bugs.python.org/issue?@action=redirect&bpo=39966) [https://bugs.python.org/issue?@action=redirect&bpo=39966]

@action=redirect&bpo=39966]: Revert [bpo-25597](https://bugs.python.org/issue/?@action=redirect&bpo=25597) [<https://bugs.python.org/issue/?@action=redirect&bpo=25597>].

[unittest.mock.MagicMock](#) with wraps' set uses default return values for magic methods.

- [bpo-39791](https://bugs.python.org/issue/?@action=redirect&bpo=39791) [<https://bugs.python.org/issue/?@action=redirect&bpo=39791>]: Added `files()` function to `importlib.resources` with support for subdirectories in package data, matching backport in `importlib_resources` 1.5.
- [bpo-40375](https://bugs.python.org/issue/?@action=redirect&bpo=40375) [<https://bugs.python.org/issue/?@action=redirect&bpo=40375>]: [imaplib.IMAP4.unselect\(\)](#) is added. Patch by Dong-hee Na.
- [bpo-40389](https://bugs.python.org/issue/?@action=redirect&bpo=40389) [<https://bugs.python.org/issue/?@action=redirect&bpo=40389>]: `repr()` now returns `typing.Optional[T]` when called for `typing.Union` of two types, one of which is `NoneType`.
- [bpo-40291](https://bugs.python.org/issue/?@action=redirect&bpo=40291) [<https://bugs.python.org/issue/?@action=redirect&bpo=40291>]: Add support for CAN\_J1939 sockets (available on Linux 5.4+)
- [bpo-40273](https://bugs.python.org/issue/?@action=redirect&bpo=40273) [<https://bugs.python.org/issue/?@action=redirect&bpo=40273>]: [types.MappingProxyType](#) is now reversible.
- [bpo-39075](https://bugs.python.org/issue/?@action=redirect&bpo=39075) [<https://bugs.python.org/issue/?@action=redirect&bpo=39075>]: The repr for [types.SimpleNamespace](#) is now insertion ordered rather than alphabetical.
- [bpo-40192](https://bugs.python.org/issue/?@action=redirect&bpo=40192) [<https://bugs.python.org/issue/?@action=redirect&bpo=40192>]: On AIX, [thread\\_time\(\)](#) is now implemented with `thread_cputime()` which has nanosecond resolution, rather than `clock_gettime(CLOCK_THREAD_CPUTIME_ID)` which has a resolution of 10 milliseconds. Patch by Batuhan Taskaya.
- [bpo-40025](https://bugs.python.org/issue/?@action=redirect&bpo=40025) [<https://bugs.python.org/issue/?@action=redirect&bpo=40025>]: Raise `TypeError` when `_generate_next_value_` is defined after members. Patch by Ethan Onstott.
- [bpo-39058](https://bugs.python.org/issue/?@action=redirect&bpo=39058) [<https://bugs.python.org/issue/?@action=redirect&bpo=39058>]: In the `argparse` module, the repr for `Namespace()` and other argument holders now displayed in the order attributes were added. Formerly, it displayed in alphabetical order even though argument order is preserved

the user visible parts of the module.

- [bpo-24416](https://bugs.python.org/issue?@action=redirect&bpo=24416) [https://bugs.python.org/issue?@action=redirect&bpo=24416]: The `isocalendar()` methods of `datetime.date` and `datetime.datetime` now return a named tuple instead of a `tuple`.

## Documentation

- [bpo-34790](https://bugs.python.org/issue?@action=redirect&bpo=34790) [https://bugs.python.org/issue?@action=redirect&bpo=34790]: Add version of removal for explicit passing of coros to `asyncio.wait()`'s documentation
- [bpo-40561](https://bugs.python.org/issue?@action=redirect&bpo=40561) [https://bugs.python.org/issue?@action=redirect&bpo=40561]: Provide docstrings for webbrowser open functions.
- [bpo-40499](https://bugs.python.org/issue?@action=redirect&bpo=40499) [https://bugs.python.org/issue?@action=redirect&bpo=40499]: Mention that `asyncio.wait()` requires a non-empty set of awaitables.
- [bpo-39705](https://bugs.python.org/issue?@action=redirect&bpo=39705) [https://bugs.python.org/issue?@action=redirect&bpo=39705]: Tutorial example for `sorted()` in the Loop Techniques section is given a better explanation. Also a new example is included to explain `sorted()`'s basic behavior.
- [bpo-39435](https://bugs.python.org/issue?@action=redirect&bpo=39435) [https://bugs.python.org/issue?@action=redirect&bpo=39435]: Fix an incorrect signature for `pickle.loads()` in the docs

## Tests

- [bpo-40055](https://bugs.python.org/issue?@action=redirect&bpo=40055) [https://bugs.python.org/issue?@action=redirect&bpo=40055]: `distutils.tests` now saves/restores warnings filters to leave them unchanged. Importing tests imports `docutils` which imports `pkg_resources` which adds a warnings filter.
- [bpo-40436](https://bugs.python.org/issue?@action=redirect&bpo=40436) [https://bugs.python.org/issue?@action=redirect&bpo=40436]: `test_gdb` and `test.pythoninfo` now check `gdb` command exit code.

## Build

- [bpo-40653](https://bugs.python.org/issue?@action=redirect&bpo=40653) [https://bugs.python.org/issue?@action=redirect&bpo=40653]: Move `_dirnameW` out of `HAVE_SYMLINK` to fix a potential compiling issue.
- [bpo-40514](https://bugs.python.org/issue?@action=redirect&bpo=40514) [https://bugs.python.org/issue?@action=redirect&bpo=40514]: Add `--with-experimental-isolated-subinterpreters` build option to configure: better isolate subinterpreters, experimental build mode.

## Windows

- [bpo-40650](https://bugs.python.org/issue?@action=redirect&bpo=40650) [https://bugs.python.org/issue?@action=redirect&bpo=40650]: Include `winsock2.h` in `pytime.c` for `timeval`.
- [bpo-40458](https://bugs.python.org/issue?@action=redirect&bpo=40458) [https://bugs.python.org/issue?@action=redirect&bpo=40458]: Increase reserved stack space to prevent overflow crash on Windows.
- [bpo-39148](https://bugs.python.org/issue?@action=redirect&bpo=39148) [https://bugs.python.org/issue?@action=redirect&bpo=39148]: Add IPv6 support to `asyncio` datagram endpoints in `ProactorEventLoop`. Change the raised exception for unknown address families to `ValueError` as it's not coming from Windows API.

## macOS

- [bpo-34956](https://bugs.python.org/issue?@action=redirect&bpo=34956) [https://bugs.python.org/issue?@action=redirect&bpo=34956]: When building Python on macOS from source, `_tkinter` now links with non-system `Tcl` and `Tk` frameworks if they are installed in `/Library/Frameworks`, as had been the case on older releases of macOS. If a macOS SDK is explicitly configured, by using `--enable-universalsdk=` or `-isysroot`, only the SDK itself is searched. The default behavior can still be overridden with `--with-tcltk-includes` and `--with-tcltk-libs`.
- [bpo-35569](https://bugs.python.org/issue?@action=redirect&bpo=35569) [https://bugs.python.org/issue?@action=redirect&bpo=35569]: Expose RFC 3542 IPv6 socket options.

## Tools/Demos

- [bpo-40479](https://bugs.python.org/issue?@action=redirect&bpo=40479) [https://bugs.python.org/issue?@action=redirect&bpo=40479]: Update multissltest helper to test with latest OpenSSL 1.0.2, 1.1.0, 1.1.1, and 3.0.0-alpha.
- [bpo-40431](https://bugs.python.org/issue?@action=redirect&bpo=40431) [https://bugs.python.org/issue?@action=redirect&bpo=40431]: Fix a syntax typo in `turtledemo` that now raises a `SyntaxError`.
- [bpo-40163](https://bugs.python.org/issue?@action=redirect&bpo=40163) [https://bugs.python.org/issue?@action=redirect&bpo=40163]: Fix multissltest tool. OpenSSL has changed download URL for old releases. The multissltest tool now tries to download from current and old download URLs.

## C API

- [bpo-39465](https://bugs.python.org/issue?@action=redirect&bpo=39465) [https://bugs.python.org/issue?@action=redirect&bpo=39465]: Remove the `_PyUnicode_ClearStaticStrings()` function from the C API.
- [bpo-38787](https://bugs.python.org/issue?@action=redirect&bpo=38787) [https://bugs.python.org/issue?@action=redirect&bpo=38787]: Add `PyCFunction_CheckExact()` macro for exact type checks now that we allow subtypes of `PyCFunction`, as well as `PyCMethod_CheckExact()` and `PyCMethod_Check()` for the new `PyCMethod` subtype.
- [bpo-40545](https://bugs.python.org/issue?@action=redirect&bpo=40545) [https://bugs.python.org/issue?@action=redirect&bpo=40545]: Declare `_PyErr_GetTopmostException()` with `PyAPI_FUNC()` to properly export the function in the C API. The function remains private (`_Py`) prefix.
- [bpo-40412](https://bugs.python.org/issue?@action=redirect&bpo=40412) [https://bugs.python.org/issue?@action=redirect&bpo=40412]: Nullify `inittab_copy` during finalization, preventing future interpreter initializations in an embedded situation from crashing. Patch by Gregory Szorc.
- [bpo-40429](https://bugs.python.org/issue?@action=redirect&bpo=40429) [https://bugs.python.org/issue?@action=redirect&bpo=40429]: The `PyThreadState_GetFrame()` function now returns a strong reference to the frame.
- [bpo-40428](https://bugs.python.org/issue?@action=redirect&bpo=40428) [https://bugs.python.org/issue?@action=redirect&bpo=40428]: Remove the following functions from the C API. Call `PyGC_Collect()` explicitly to free all free lists.  
  - `PyAsyncGen_ClearFreeLists()`

- `PyContext_ClearFreeList()`
- `PyDict_ClearFreeList()`
- `PyFloat_ClearFreeList()`
- `PyFrame_ClearFreeList()`
- `PyList_ClearFreeList()`
- `PySet_ClearFreeList()`
- `PyTuple_ClearFreeList()`
- [bpo-40421](https://bugs.python.org/issue?@action=redirect&bpo=40421) [https://bugs.python.org/issue?@action=redirect&bpo=40421]: New `PyFrame_GetBack()` function: get the frame next outer frame.
- [bpo-40421](https://bugs.python.org/issue?@action=redirect&bpo=40421) [https://bugs.python.org/issue?@action=redirect&bpo=40421]: New `PyFrame_GetCode()` function: return a borrowed reference to the frame code.
- [bpo-40217](https://bugs.python.org/issue?@action=redirect&bpo=40217) [https://bugs.python.org/issue?@action=redirect&bpo=40217]: Ensure that instances of types created with `PyType_FromSpecWithBases()` will visit its class object when traversing references in the garbage collector (implemented as an extension of the provided `tp_traverse`). Patch by Pablo Galindo.
- [bpo-38787](https://bugs.python.org/issue?@action=redirect&bpo=38787) [https://bugs.python.org/issue?@action=redirect&bpo=38787]: Module C state is now accessible from C-defined heap type methods ([PEP 573](https://peps.python.org/pep-0573/) [https://peps.python.org/pep-0573/]). Patch by Marcel Plch and Petr Viktorin.

## Python 3.9.0 alpha 6

*Release date: 2020-04-27*

### Security

- [bpo-40121](https://bugs.python.org/issue?@action=redirect&bpo=40121) [https://bugs.python.org/issue?@action=redirect&bpo=40121]: Fixes audit events raised on creating a new socket.
- [bpo-39073](https://bugs.python.org/issue?@action=redirect&bpo=39073) [https://bugs.python.org/issue?@action=redirect&bpo=39073]: Disallow CR or LF in `email.headerregistry.Address` arguments to guard against header injection attacks.
- [bpo-39503](https://bugs.python.org/issue?@action=redirect&bpo=39503) [https://bugs.python.org/issue?@action=redirect&bpo=39503]

@action=redirect&bpo=39503]: CVE-2020-8492: The **AbstractBasicAuthHandler** class of the **urllib.request** module uses an inefficient regular expression which can be exploited by an attacker to cause a denial of service. Fix the regex to prevent the catastrophic backtracking. Vulnerability reported by Ben Caller and Matt Schwager.

## Core and Builtins

- [bpo-40313](https://bugs.python.org/issue?@action=redirect&bpo=40313) [https://bugs.python.org/issue?@action=redirect&bpo=40313]: Improve the performance of `bytes.hex()`.
- [bpo-40334](https://bugs.python.org/issue?@action=redirect&bpo=40334) [https://bugs.python.org/issue?@action=redirect&bpo=40334]: Switch to a new parser, based on PEG. For more details see PEP 617. To temporarily switch back to the old parser, use `-X oldparser` or `PYTHONOLDPARSER=1`. In Python 3.10 we will remove the old parser completely, including the `parser` module (already deprecated) and anything that depends on it.
- [bpo-40267](https://bugs.python.org/issue?@action=redirect&bpo=40267) [https://bugs.python.org/issue?@action=redirect&bpo=40267]: Fix the tokenizer to display the correct error message, when there is a `SyntaxError` on the last input character and no newline follows. It used to be **unexpected EOF while parsing**, while it should be **invalid syntax**.
- [bpo-39522](https://bugs.python.org/issue?@action=redirect&bpo=39522) [https://bugs.python.org/issue?@action=redirect&bpo=39522]: Correctly unparse explicit `u` prefix for strings when postponed evaluation for annotations activated. Patch by Batuhan Taskaya.
- [bpo-40246](https://bugs.python.org/issue?@action=redirect&bpo=40246) [https://bugs.python.org/issue?@action=redirect&bpo=40246]: Report a specialized error message, **invalid string prefix**, when the tokenizer encounters a string with an invalid prefix.
- [bpo-40082](https://bugs.python.org/issue?@action=redirect&bpo=40082) [https://bugs.python.org/issue?@action=redirect&bpo=40082]: Fix the signal handler: it now always uses the main interpreter, rather than trying to get the current Python thread state.
- [bpo-37388](https://bugs.python.org/issue?@action=redirect&bpo=37388) [https://bugs.python.org/issue?@action=redirect&bpo=37388]: `str.encode()` and `str.decode()` no

longer check the encoding and errors in development mode or in debug mode during Python finalization. The codecs machinery can no longer work on very late calls to `str.encode()` and `str.decode()`.

- [bpo-40077](https://bugs.python.org/issue?@action=redirect&bpo=40077) [https://bugs.python.org/issue?@action=redirect&bpo=40077]: Fix possible reflinks in `_json`, memo of `PyScannerObject` should be traversed.
- [bpo-37207](https://bugs.python.org/issue?@action=redirect&bpo=37207) [https://bugs.python.org/issue?@action=redirect&bpo=37207]: Speed up calls to `dict()` by using the [PEP 590](https://peps.python.org/pep-0590/) [https://peps.python.org/pep-0590/] `vectorcall` calling convention.
- [bpo-40141](https://bugs.python.org/issue?@action=redirect&bpo=40141) [https://bugs.python.org/issue?@action=redirect&bpo=40141]: Add column and line information to `ast.keyword` nodes. Patch by Pablo Galindo.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port [resource](#) to multiphase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port [math](#) to multiphase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `_uuid` module to multiphase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-40077](https://bugs.python.org/issue?@action=redirect&bpo=40077) [https://bugs.python.org/issue?@action=redirect&bpo=40077]: Convert `json` module to use [PyType\\_FromSpec\(\)](#).
- [bpo-40067](https://bugs.python.org/issue?@action=redirect&bpo=40067) [https://bugs.python.org/issue?@action=redirect&bpo=40067]: Improve the error message for multiple star expressions in an assignment. Patch by Furkan Onder
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `_functools` module to multiphase initialization ([PEP 489](https://peps.python.org/pep-0489/)). Patch by Paulo Henrique Silva.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `operator` module to multiphase initialization ([PEP 489](https://peps.python.org/pep-0489/)). Patch by Paulo Henrique Silva.
- [bpo-20526](https://bugs.python.org/issue?@action=redirect&bpo=20526) [https://bugs.python.org/issue?@action=redirect&bpo=20526]

@action=redirect&bpo=20526]: Fix `PyThreadState_Clear()`. `PyThreadState.frame` is a borrowed reference, not a strong reference: `PyThreadState_Clear()` must not call `Py_CLEAR(tstate->frame)`.

- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port time module to multiphase initialization (**PEP 489** [https://peps.python.org/pep-0489/]). Patch by Paulo Henrique Silva.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `_weakref` extension module to multiphase initialization (**PEP 489** [https://peps.python.org/pep-0489/]).
- [bpo-40020](https://bugs.python.org/issue?@action=redirect&bpo=40020) [https://bugs.python.org/issue?@action=redirect&bpo=40020]: Fix a leak and subsequent crash in `parsetok.c` caused by `realloc` misuse on a rare codepath.
- [bpo-39939](https://bugs.python.org/issue?@action=redirect&bpo=39939) [https://bugs.python.org/issue?@action=redirect&bpo=39939]: Added `str.removeprefix` and `str.removesuffix` methods and corresponding `bytes`, `bytearray`, and `collections.UserString` methods to remove affixes from a string if present. See **PEP 616** [https://peps.python.org/pep-0616/] for a full description. Patch by Dennis Sweeney.
- [bpo-39481](https://bugs.python.org/issue?@action=redirect&bpo=39481) [https://bugs.python.org/issue?@action=redirect&bpo=39481]: Implement PEP 585. This supports `list[int]`, `tuple[str, ...]` etc.
- [bpo-32894](https://bugs.python.org/issue?@action=redirect&bpo=32894) [https://bugs.python.org/issue?@action=redirect&bpo=32894]: Support unparsing of infinity numbers in postponed annotations. Patch by Batuhan Taşkaya.
- [bpo-37207](https://bugs.python.org/issue?@action=redirect&bpo=37207) [https://bugs.python.org/issue?@action=redirect&bpo=37207]: Speed up calls to `list()` by using the **PEP 590** [https://peps.python.org/pep-0590/] `vectorcall` calling convention. Patch by Mark Shannon.

## Library

- [bpo-40398](https://bugs.python.org/issue?@action=redirect&bpo=40398) [https://bugs.python.org/issue?@action=redirect&bpo=40398]: `typing.get_args()` now always returns an empty tuple for special generic aliases.
- [bpo-40396](https://bugs.python.org/issue?@action=redirect&bpo=40396) [https://bugs.python.org/issue?@action=redirect&bpo=40396]

@action=redirect&bpo=40396]: Functions

`typing.get_origin()`, `typing.get_args()` and `typing.get_type_hints()` support now generic aliases like `list[int]`.

- [bpo-38061](https://bugs.python.org/issue?@action=redirect&bpo=38061) [https://bugs.python.org/issue?@action=redirect&bpo=38061]: Optimize the `subprocess` module on FreeBSD using `closefrom()`. A single `close(fd)` syscall is cheap, but when `sysconf(_SC_OPEN_MAX)` is high, the loop calling `close(fd)` on each file descriptor can take several milliseconds.

The workaround on FreeBSD to improve performance was to load and mount the `fdescfs` kernel module, but this is not enabled by default.

Initial patch by Ed Maste (emaste), Conrad Meyer (cem), Kyle Evans (kevans) and Kubilay Kocak (koobs): [https://bugs.freebsd.org/bugzilla/show\\_bug.cgi?id=242274](https://bugs.freebsd.org/bugzilla/show_bug.cgi?id=242274)

- [bpo-38061](https://bugs.python.org/issue?@action=redirect&bpo=38061) [https://bugs.python.org/issue?@action=redirect&bpo=38061]: On FreeBSD, `os.closerange(fd_low, fd_high)` now calls `closefrom(fd_low)` if `fd_high` is greater than or equal to `sysconf(_SC_OPEN_MAX)`.

Initial patch by Ed Maste (emaste), Conrad Meyer (cem), Kyle Evans (kevans) and Kubilay Kocak (koobs): [https://bugs.freebsd.org/bugzilla/show\\_bug.cgi?id=242274](https://bugs.freebsd.org/bugzilla/show_bug.cgi?id=242274)

- [bpo-40360](https://bugs.python.org/issue?@action=redirect&bpo=40360) [https://bugs.python.org/issue?@action=redirect&bpo=40360]: The `lib2to3` module is pending deprecation due to [PEP 617](https://peps.python.org/pep-0617/) [https://peps.python.org/pep-0617/].
- [bpo-40138](https://bugs.python.org/issue?@action=redirect&bpo=40138) [https://bugs.python.org/issue?@action=redirect&bpo=40138]: Fix the Windows implementation of `os.waitpid()` for exit code larger than `INT_MAX` >> 8. The exit status is now interpreted as an unsigned number.
- [bpo-39942](https://bugs.python.org/issue?@action=redirect&bpo=39942) [https://bugs.python.org/issue?@action=redirect&bpo=39942]

@action=redirect&bpo=39942]: Set “\_main\_” as the default module name when “\_name\_” is missing in **typing.TypeVar**. Patch by Weipeng Hong.

- **bpo-40275** [<https://bugs.python.org/issue?@action=redirect&bpo=40275>]: The **logging** package is now imported lazily in **unittest** only when the **assertLogs()** assertion is used.
- **bpo-40275** [<https://bugs.python.org/issue?@action=redirect&bpo=40275>]: The **asyncio** package is now imported lazily in **unittest** only when the **IsolatedAsyncioTestCase** class is used.
- **bpo-40330** [<https://bugs.python.org/issue?@action=redirect&bpo=40330>]: In **ShareableList.\_\_setitem\_\_()**, check the size of a new string item after encoding it to utf-8, not before.
- **bpo-40148** [<https://bugs.python.org/issue?@action=redirect&bpo=40148>]: Added **pathlib.Path.with\_stem()** to create a new Path with the stem replaced.
- **bpo-40325** [<https://bugs.python.org/issue?@action=redirect&bpo=40325>]: Deprecated support for set objects in **random.sample()**.
- **bpo-40257** [<https://bugs.python.org/issue?@action=redirect&bpo=40257>]: Improved help for the **typing** module. Docstrings are now shown for all special forms and special generic aliases (like **Union** and **List**). Using **help()** with generic alias like **List[int]** will show the help for the correspondent concrete type (**list** in this case).
- **bpo-40257** [<https://bugs.python.org/issue?@action=redirect&bpo=40257>]: **func.inspect.getdoc** no longer returns docstring inherited from the type of the object or from parent class if it is a class if it is not defined in the object itself. In **pydoc** the documentation string is now shown not only for class, function, method etc, but for any

object that has its own `__doc__` attribute.

- [bpo-40287](https://bugs.python.org/issue?@action=redirect&bpo=40287) [https://bugs.python.org/issue?@action=redirect&bpo=40287]: Fixed `SpooledTemporaryFile.seek()` to return the position.
- [bpo-40290](https://bugs.python.org/issue?@action=redirect&bpo=40290) [https://bugs.python.org/issue?@action=redirect&bpo=40290]: Added `zscore()` to `statistics.NormalDist()`.
- [bpo-40282](https://bugs.python.org/issue?@action=redirect&bpo=40282) [https://bugs.python.org/issue?@action=redirect&bpo=40282]: Allow `random.getrandbits(0)` to succeed and to return 0.
- [bpo-40286](https://bugs.python.org/issue?@action=redirect&bpo=40286) [https://bugs.python.org/issue?@action=redirect&bpo=40286]: Add `random.randbytes()` function and `random.Random.randbytes()` method to generate random bytes.
- [bpo-40277](https://bugs.python.org/issue?@action=redirect&bpo=40277) [https://bugs.python.org/issue?@action=redirect&bpo=40277]: `collections.namedtuple()` now provides a human-readable repr for its field accessors.
- [bpo-40270](https://bugs.python.org/issue?@action=redirect&bpo=40270) [https://bugs.python.org/issue?@action=redirect&bpo=40270]: The included copy of `sqlite3` on Windows is now compiled with the `json` extension. This allows the use of functions such as `json_object`.
- [bpo-29255](https://bugs.python.org/issue?@action=redirect&bpo=29255) [https://bugs.python.org/issue?@action=redirect&bpo=29255]: Wait in `KqueueSelector.select` when no fds are registered
- [bpo-40260](https://bugs.python.org/issue?@action=redirect&bpo=40260) [https://bugs.python.org/issue?@action=redirect&bpo=40260]: Ensure `modulefinder` uses `io.open_code()` and respects coding comments.
- [bpo-40234](https://bugs.python.org/issue?@action=redirect&bpo=40234) [https://bugs.python.org/issue?@action=redirect&bpo=40234]: Allow again to spawn daemon threads in subinterpreters (revert change which denied them).
- [bpo-39207](https://bugs.python.org/issue?@action=redirect&bpo=39207) [https://bugs.python.org/issue?@action=redirect&bpo=39207]: Workers in

**ProcessPoolExecutor** are now spawned on demand, only when there are no available idle workers to reuse. This optimizes startup overhead and reduces the amount of lost CPU time to idle workers. Patch by Kyle Stanley.

- [bpo-40091](https://bugs.python.org/issue?@action=redirect&bpo=40091) [https://bugs.python.org/issue?@action=redirect&bpo=40091]: Fix a hang at fork in the logging module: the new private `_at_fork_reinit()` method is now used to reinitialize locks at fork in the child process.
- [bpo-40149](https://bugs.python.org/issue?@action=redirect&bpo=40149) [https://bugs.python.org/issue?@action=redirect&bpo=40149]: Implement traverse and clear slots in `_abc._abc_data` type.
- [bpo-40208](https://bugs.python.org/issue?@action=redirect&bpo=40208) [https://bugs.python.org/issue?@action=redirect&bpo=40208]: Remove deprecated **`symtable.SymbolTable.has_exec()`**.
- [bpo-40196](https://bugs.python.org/issue?@action=redirect&bpo=40196) [https://bugs.python.org/issue?@action=redirect&bpo=40196]: Fix a bug in the **`symtable`** module that was causing incorrectly report global variables as local. Patch by Pablo Galindo.
- [bpo-40190](https://bugs.python.org/issue?@action=redirect&bpo=40190) [https://bugs.python.org/issue?@action=redirect&bpo=40190]: Add support for `_SC_AIX_REALMEM` to **`posix.sysconf()`**.
- [bpo-40182](https://bugs.python.org/issue?@action=redirect&bpo=40182) [https://bugs.python.org/issue?@action=redirect&bpo=40182]: Removed the `_field_types` attribute of the **`typing.NamedTuple`** class.
- [bpo-36517](https://bugs.python.org/issue?@action=redirect&bpo=36517) [https://bugs.python.org/issue?@action=redirect&bpo=36517]: Multiple inheritance with **`typing.NamedTuple`** now raises an error instead of silently ignoring other types.
- [bpo-40126](https://bugs.python.org/issue?@action=redirect&bpo=40126) [https://bugs.python.org/issue?@action=redirect&bpo=40126]: Fixed reverting multiple patches in `unittest.mock.Patcher`'s `__exit__()` is now never called if its `__enter__()` is failed. Returning true from `__exit__()` silences now the exception.

- [bpo-40094](https://bugs.python.org/issue?@action=redirect&bpo=40094) [https://bugs.python.org/issue?@action=redirect&bpo=40094]: CGIHTTPRequestHandler of http.server now logs the CGI script exit code, rather than the CGI script exit status of os.waitpid(). For example, if the script is killed by signal 11, it now logs: “CGI script exit code -11.”
- [bpo-40108](https://bugs.python.org/issue?@action=redirect&bpo=40108) [https://bugs.python.org/issue?@action=redirect&bpo=40108]: Improve the error message when trying to import a module using `runpy` and incorrently use the “.py” extension at the end of the module name. Patch by Pablo Galindo.
- [bpo-40094](https://bugs.python.org/issue?@action=redirect&bpo=40094) [https://bugs.python.org/issue?@action=redirect&bpo=40094]: Add `os.waitstatus_to_exitcode()` function: convert a wait status to an exit code.
- [bpo-40089](https://bugs.python.org/issue?@action=redirect&bpo=40089) [https://bugs.python.org/issue?@action=redirect&bpo=40089]: Fix `threading._after_fork()`: if `fork` was not called by a thread spawned by `threading.Thread`, `threading._after_fork()` now creates a `_MainThread` instance for `_main_thread`, instead of a `_DummyThread` instance.
- [bpo-40089](https://bugs.python.org/issue?@action=redirect&bpo=40089) [https://bugs.python.org/issue?@action=redirect&bpo=40089]: Add a private `_at_fork_reinit()` method to `_thread.Lock`, `_thread.RLock`, `threading.RLock` and `threading.Condition` classes: reinitialize the lock at fork in the child process, reset the lock to the unlocked state. Rename also the private `_reset_internal_locks()` method of `threading.Event` to `_at_fork_reinit()`.
- [bpo-25780](https://bugs.python.org/issue?@action=redirect&bpo=25780) [https://bugs.python.org/issue?@action=redirect&bpo=25780]: Expose `CAN_RAW_JOIN_FILTERS` in the `socket` module.
- [bpo-39503](https://bugs.python.org/issue?@action=redirect&bpo=39503) [https://bugs.python.org/issue?@action=redirect&bpo=39503]: `AbstractBasicAuthHandler` of `urllib.request` now parses all WWW-Authenticate HTTP headers and accepts multiple challenges per header:

use the realm of the first Basic challenge.

- [bpo-39812](https://bugs.python.org/issue?@action=redirect&bpo=39812) [https://bugs.python.org/issue?@action=redirect&bpo=39812]: Removed daemon threads from `concurrent.futures` by adding an internal `threading._register_atexit()`, which calls registered functions prior to joining all non-daemon threads. This allows for compatibility with subinterpreters, which don't support daemon threads.
- [bpo-40050](https://bugs.python.org/issue?@action=redirect&bpo=40050) [https://bugs.python.org/issue?@action=redirect&bpo=40050]: Fix `importlib._bootstrap_external`: avoid creating a new `winreg` builtin module if it's already available in `sys.modules`, and remove redundant imports.
- [bpo-40014](https://bugs.python.org/issue?@action=redirect&bpo=40014) [https://bugs.python.org/issue?@action=redirect&bpo=40014]: Fix `os.getgrouplist()`: if `getgrouplist()` function fails because the group list is too small, retry with a larger group list. On failure, the glibc implementation of `getgrouplist()` sets `ngroups` to the total number of groups. For other implementations, double the group list size.
- [bpo-40017](https://bugs.python.org/issue?@action=redirect&bpo=40017) [https://bugs.python.org/issue?@action=redirect&bpo=40017]: Add `time.CLOCK_TAI` constant if the operating system support it.
- [bpo-40016](https://bugs.python.org/issue?@action=redirect&bpo=40016) [https://bugs.python.org/issue?@action=redirect&bpo=40016]: In re docstring, clarify the relationship between inline and argument compile flags.
- [bpo-39953](https://bugs.python.org/issue?@action=redirect&bpo=39953) [https://bugs.python.org/issue?@action=redirect&bpo=39953]: Update internal table of OpenSSL error codes in the `ssl` module.
- [bpo-36144](https://bugs.python.org/issue?@action=redirect&bpo=36144) [https://bugs.python.org/issue?@action=redirect&bpo=36144]: Added [PEP 584](https://peps.python.org/pep-0584/) [https://peps.python.org/pep-0584/] operators to `weakref.WeakValueDictionary`.

- [bpo-36144](https://bugs.python.org/issue?@action=redirect&bpo=36144) [https://bugs.python.org/issue?@action=redirect&bpo=36144]: Added [PEP 584](https://peps.python.org/pep-0584/) [https://peps.python.org/pep-0584/] operators to [`weakref.WeakKeyDictionary`](#).
- [bpo-38891](https://bugs.python.org/issue?@action=redirect&bpo=38891) [https://bugs.python.org/issue?@action=redirect&bpo=38891]: Fix linear runtime behaviour of the `__getitem__` and `__setitem__` methods in [`multiprocessing.shared\_memory.ShareableList`](#). This avoids quadratic performance when iterating a `ShareableList`. Patch by Thomas Krennwallner.
- [bpo-39682](https://bugs.python.org/issue?@action=redirect&bpo=39682) [https://bugs.python.org/issue?@action=redirect&bpo=39682]: Remove undocumented support for *closing* a [`pathlib.Path`](#) object via its context manager. The context manager magic methods remain, but they are now a no-op, making `Path` objects immutable.
- [bpo-36144](https://bugs.python.org/issue?@action=redirect&bpo=36144) [https://bugs.python.org/issue?@action=redirect&bpo=36144]: Added [PEP 584](https://peps.python.org/pep-0584/) [https://peps.python.org/pep-0584/] operators (`|` and `|=`) to [`collections.ChainMap`](#).
- [bpo-39011](https://bugs.python.org/issue?@action=redirect&bpo=39011) [https://bugs.python.org/issue?@action=redirect&bpo=39011]: Normalization of line endings in `ElementTree` attributes was removed, as line endings which were replaced by entity numbers should be preserved in original form.
- [bpo-38410](https://bugs.python.org/issue?@action=redirect&bpo=38410) [https://bugs.python.org/issue?@action=redirect&bpo=38410]: Properly handle [`sys.audit\(\)`](#) failures in [`sys.set\_asyncgen\_hooks\(\)`](#).
- [bpo-36541](https://bugs.python.org/issue?@action=redirect&bpo=36541) [https://bugs.python.org/issue?@action=redirect&bpo=36541]: `lib2to3` now recognizes named assignment expressions (the walrus operator, `:=`)
- [bpo-35967](https://bugs.python.org/issue?@action=redirect&bpo=35967) [https://bugs.python.org/issue?@action=redirect&bpo=35967]: In platform, delay the invocation of `'uname -p'` until the processor attribute is requested.

- [bpo-35113](https://bugs.python.org/issue?@action=redirect&bpo=35113) [https://bugs.python.org/issue?@action=redirect&bpo=35113]: `inspect.getsource()` now returns correct source code for inner class with same name as module level class. Decorators are also returned as part of source of the class. Patch by Karthikeyan Singaravelan.
- [bpo-33262](https://bugs.python.org/issue?@action=redirect&bpo=33262) [https://bugs.python.org/issue?@action=redirect&bpo=33262]: Deprecate passing None as an argument for `shlex.split()`'s `s` parameter. Patch by Zackery Spytz.
- [bpo-31758](https://bugs.python.org/issue?@action=redirect&bpo=31758) [https://bugs.python.org/issue?@action=redirect&bpo=31758]: Prevent crashes when using an uninitialized `_elementtree.XMLParser` object. Patch by Oren Milman.

## Documentation

- [bpo-27635](https://bugs.python.org/issue?@action=redirect&bpo=27635) [https://bugs.python.org/issue?@action=redirect&bpo=27635]: The pickle documentation incorrectly claimed that `__new__` isn't called by default when unpickling.
- [bpo-39879](https://bugs.python.org/issue?@action=redirect&bpo=39879) [https://bugs.python.org/issue?@action=redirect&bpo=39879]: Updated `Data model` docs to include `dict()` insertion order preservation. Patch by Furkan Onder and Samy Lahfa.
- [bpo-38387](https://bugs.python.org/issue?@action=redirect&bpo=38387) [https://bugs.python.org/issue?@action=redirect&bpo=38387]: Document `PyDoc_STRVAR` macro in the C-API reference.
- [bpo-13743](https://bugs.python.org/issue?@action=redirect&bpo=13743) [https://bugs.python.org/issue?@action=redirect&bpo=13743]: Some methods within `xml.dom.minidom.Element` class are now better documented.

## Tests

- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: Set expected default encoding in `test_c_locale_coercion.py` for VxWorks RTOS.
- [bpo-40162](https://bugs.python.org/issue?@action=redirect&bpo=40162) [https://bugs.python.org/issue?@action=redirect&bpo=40162]: Update Travis CI configuration to

OpenSSL 1.1.1f.

- [bpo-40146](https://bugs.python.org/issue?@action=redirect&bpo=40146) [https://bugs.python.org/issue?@action=redirect&bpo=40146]: Update OpenSSL to 1.1.1f in Azure Pipelines.
- [bpo-40094](https://bugs.python.org/issue?@action=redirect&bpo=40094) [https://bugs.python.org/issue?@action=redirect&bpo=40094]: Add `test.support.wait_process()` function.
- [bpo-40003](https://bugs.python.org/issue?@action=redirect&bpo=40003) [https://bugs.python.org/issue?@action=redirect&bpo=40003]: `test.bisect_cmd` now copies Python command line options like `-O` or `-W`. Moreover, emit a warning if `test.bisect_cmd` is used with `-w/--verbose2` option.
- [bpo-39380](https://bugs.python.org/issue?@action=redirect&bpo=39380) [https://bugs.python.org/issue?@action=redirect&bpo=39380]: Add the encoding in `ftplib.FTP` and `ftplib.FTP_TLS` to the constructor as keyword-only and change the default from `latin-1` to `utf-8` to follow [RFC 2640](https://datatracker.ietf.org/doc/html/rfc2640) [https://datatracker.ietf.org/doc/html/rfc2640.html].
- [bpo-39793](https://bugs.python.org/issue?@action=redirect&bpo=39793) [https://bugs.python.org/issue?@action=redirect&bpo=39793]: Use the same domain when testing `make_msgid`. Patch by Batuhan Taskaya.
- [bpo-1812](https://bugs.python.org/issue?@action=redirect&bpo=1812) [https://bugs.python.org/issue?@action=redirect&bpo=1812]: Fix newline handling in `doctest.testfile` when loading from a package whose loader has a `get_data` method. Patch by Peter Donis.

## Build

- [bpo-38360](https://bugs.python.org/issue?@action=redirect&bpo=38360) [https://bugs.python.org/issue?@action=redirect&bpo=38360]: Support single-argument form of macOS `-isysroot` flag.
- [bpo-40158](https://bugs.python.org/issue?@action=redirect&bpo=40158) [https://bugs.python.org/issue?@action=redirect&bpo=40158]: Fix CPython MSBuild Properties in NuGet Package (build/native/python.props)
- [bpo-38527](https://bugs.python.org/issue?@action=redirect&bpo=38527) [https://bugs.python.org/issue?@action=redirect&bpo=38527]: Fix configure check on Solaris for “float word ordering”: sometimes, the correct “grep” command was not being used. Patch by Arnon Yaari.

## Windows

- [bpo-40164](https://bugs.python.org/issue?@action=redirect&bpo=40164) [https://bugs.python.org/issue?@action=redirect&bpo=40164]: Updates Windows to OpenSSL 1.1.1f
- [bpo-8901](https://bugs.python.org/issue?@action=redirect&bpo=8901) [https://bugs.python.org/issue?@action=redirect&bpo=8901]: Ignore the Windows registry when the `-E` option is used.

## macOS

- [bpo-38329](https://bugs.python.org/issue?@action=redirect&bpo=38329) [https://bugs.python.org/issue?@action=redirect&bpo=38329]: python.org macOS installers now update the Current version symlink of `/Library/Frameworks/Python.framework/Versions` for 3.9 installs. Previously, Current was only updated for Python 2.x installs. This should make it easier to embed Python 3 into other macOS applications.
- [bpo-40164](https://bugs.python.org/issue?@action=redirect&bpo=40164) [https://bugs.python.org/issue?@action=redirect&bpo=40164]: Update macOS installer builds to use OpenSSL 1.1.1g.

## IDLE

- [bpo-38439](https://bugs.python.org/issue?@action=redirect&bpo=38439) [https://bugs.python.org/issue?@action=redirect&bpo=38439]: Add a  $256 \times 256$  pixel IDLE icon to support more modern environments. Created by Andrew Clover. Delete the unused macOS `idle.icns` icon file.
- [bpo-38689](https://bugs.python.org/issue?@action=redirect&bpo=38689) [https://bugs.python.org/issue?@action=redirect&bpo=38689]: IDLE will no longer freeze when `inspect.signature` fails when fetching a calltip.

## Tools/Demos

- [bpo-40385](https://bugs.python.org/issue?@action=redirect&bpo=40385) [https://bugs.python.org/issue?@action=redirect&bpo=40385]: Removed the `checkpyc.py` tool. Please see `compileall` without force mode as a potential alternative.
- [bpo-40179](https://bugs.python.org/issue?@action=redirect&bpo=40179) [https://bugs.python.org/issue?@action=redirect&bpo=40179]: Fixed translation of `#elif` in `Argument Clinic`.
- [bpo-40094](https://bugs.python.org/issue?@action=redirect&bpo=40094) [https://bugs.python.org/issue?@action=redirect&bpo=40094]: Fix `which.py` script exit code: it

now uses `os.waitstatus_to_exitcode()` to convert `os.system()` exit status into an exit code.

## C API

- [bpo-40241](https://bugs.python.org/issue?@action=redirect&bpo=40241) [https://bugs.python.org/issue?@action=redirect&bpo=40241]: Move the `PyGC_Head` structure to the internal C API.
- [bpo-40170](https://bugs.python.org/issue?@action=redirect&bpo=40170) [https://bugs.python.org/issue?@action=redirect&bpo=40170]: Convert `PyObject_IS_GC()` macro to a function to hide implementation details.
- [bpo-40241](https://bugs.python.org/issue?@action=redirect&bpo=40241) [https://bugs.python.org/issue?@action=redirect&bpo=40241]: Add the functions `PyObject_GC_IsTracked()` and `PyObject_GC_IsFinalized()` to the public API to allow to query if Python objects are being currently tracked or have been already finalized by the garbage collector respectively. Patch by Pablo Galindo.
- [bpo-40170](https://bugs.python.org/issue?@action=redirect&bpo=40170) [https://bugs.python.org/issue?@action=redirect&bpo=40170]: The `PyObject_NEW()` macro becomes an alias to the `PyObject_New()` macro, and the `PyObject_NEW_VAR()` macro becomes an alias to the `PyObject_NewVar()` macro, to hide implementation details. They no longer access directly the `PyTypeObject.tp_basicsize` member.
- [bpo-40170](https://bugs.python.org/issue?@action=redirect&bpo=40170) [https://bugs.python.org/issue?@action=redirect&bpo=40170]: `PyType_HasFeature()` now always calls `PyType_GetFlags()` to hide implementation details. Previously, it accessed directly the `PyTypeObject.tp_flags` member when the limited C API was not used.
- [bpo-40170](https://bugs.python.org/issue?@action=redirect&bpo=40170) [https://bugs.python.org/issue?@action=redirect&bpo=40170]: Convert the `PyObject_GET_WEAKREFS_LISTPTR()` macro to a function to hide implementation details: the macro accessed directly to the `PyTypeObject.tp_weaklistoffset` member.
- [bpo-40170](https://bugs.python.org/issue?@action=redirect&bpo=40170) [https://bugs.python.org/issue?@action=redirect&bpo=40170]: Convert `PyObject_CheckBuffer()` macro to a function to hide implementation details: the macro accessed directly the

- [PyTypeObject.tp\\_as\\_buffer](#) member.
- [bpo-40170](#) [<https://bugs.python.org/issue?@action=redirect&bpo=40170>]: Always declare [PyIndex\\_Check\(\)](#) as an opaque function to hide implementation details: remove `PyIndex_Check()` macro. The macro accessed directly the [PyTypeObject.tp\\_as\\_number](#) member.
- [bpo-39947](#) [<https://bugs.python.org/issue?@action=redirect&bpo=39947>]: Add [PyThreadState\\_GetID\(\)](#) function: get the unique identifier of a Python thread state.

## Python 3.9.0 alpha 5

*Release date: 2020-03-23*

### Security

- [bpo-38576](#) [<https://bugs.python.org/issue?@action=redirect&bpo=38576>]: Disallow control characters in hostnames in `http.client`, addressing CVE-2019-18348. Such potentially malicious header injection URLs now cause a `InvalidURL` to be raised.

### Core and Builtins

- [bpo-40010](#) [<https://bugs.python.org/issue?@action=redirect&bpo=40010>]: Optimize pending calls in multithreaded applications. If a thread different than the main thread schedules a pending call ([Py\\_AddPendingCall\(\)](#)), the bytecode evaluation loop is no longer interrupted at each bytecode instruction to check for pending calls which cannot be executed. Only the main thread can execute pending calls.

Previously, the bytecode evaluation loop was interrupted at each instruction until the main thread executes pending calls.

- [bpo-1635741](#) [<https://bugs.python.org/issue?@action=redirect&bpo=1635741>]: Port `_weakref` extension module

to multiphase initialization (**PEP 489** [<https://peps.python.org/pep-0489/>]).

- **bpo-1635741** [<https://bugs.python.org/issue?@action=redirect&bpo=1635741>]: Port `_collections` module to multiphase initialization (**PEP 489** [<https://peps.python.org/pep-0489/>]).
- **bpo-40010** [<https://bugs.python.org/issue?@action=redirect&bpo=40010>]: Optimize signal handling in multithreaded applications. If a thread different than the main thread gets a signal, the bytecode evaluation loop is no longer interrupted at each bytecode instruction to check for pending signals which cannot be handled. Only the main thread of the main interpreter can handle signals.

Previously, the bytecode evaluation loop was interrupted at each instruction until the main thread handles signals.

- **bpo-39984** [<https://bugs.python.org/issue?@action=redirect&bpo=39984>]: If `Py_AddPendingCall()` is called in a subinterpreter, the function is now scheduled to be called from the subinterpreter, rather than being called from the main interpreter. Each subinterpreter now has its own list of scheduled calls.
- **bpo-1635741** [<https://bugs.python.org/issue?@action=redirect&bpo=1635741>]: Port `_heapq` module to multiphase initialization.
- **bpo-1635741** [<https://bugs.python.org/issue?@action=redirect&bpo=1635741>]: Port `itertools` module to multiphase initialization (**PEP 489** [<https://peps.python.org/pep-0489/>]).
- **bpo-37207** [<https://bugs.python.org/issue?@action=redirect&bpo=37207>]: Speed up calls to `frozenset()` by using the **PEP 590** [<https://peps.python.org/pep-0590/>] `vectorcall` calling convention. Patch by Dong-hee Na.
- **bpo-39984** [<https://bugs.python.org/issue?@action=redirect&bpo=39984>]

@action=redirect&bpo=39984]: subinterpreters: Move `_PyRuntimeState.ceval.tracing_possible` to `PyInterpreterState.ceval.tracing_possible`: each interpreter now has its own variable.

- [bpo-37207](https://bugs.python.org/issue?@action=redirect&bpo=37207) [https://bugs.python.org/issue?@action=redirect&bpo=37207]: Speed up calls to `set()` by using the [PEP 590](https://peps.python.org/pep-0590/) [https://peps.python.org/pep-0590/] `vectorcall` calling convention. Patch by Dong-hee Na.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `_statistics` module to multiphase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-39968](https://bugs.python.org/issue?@action=redirect&bpo=39968) [https://bugs.python.org/issue?@action=redirect&bpo=39968]: Use inline function to replace extension modules' `get_module_state` macros.
- [bpo-39965](https://bugs.python.org/issue?@action=redirect&bpo=39965) [https://bugs.python.org/issue?@action=redirect&bpo=39965]: Correctly raise `SyntaxError` if `await` is used inside non-async functions and `PyCF_ALLOW_TOP_LEVEL_AWAIT` is set (like in the `asyncio` REPL). Patch by Pablo Galindo.
- [bpo-39562](https://bugs.python.org/issue?@action=redirect&bpo=39562) [https://bugs.python.org/issue?@action=redirect&bpo=39562]: Allow executing asynchronous comprehensions on the top level when the `PyCF_ALLOW_TOP_LEVEL_AWAIT` flag is given. Patch by Batuhan Taskaya.
- [bpo-37207](https://bugs.python.org/issue?@action=redirect&bpo=37207) [https://bugs.python.org/issue?@action=redirect&bpo=37207]: Speed up calls to `tuple()` by using the [PEP 590](https://peps.python.org/pep-0590/) [https://peps.python.org/pep-0590/] `vectorcall` calling convention. Patch by Dong-hee Na.
- [bpo-38373](https://bugs.python.org/issue?@action=redirect&bpo=38373) [https://bugs.python.org/issue?@action=redirect&bpo=38373]: Changed list overallocation strategy. It no longer overallocates if the new size is closer to overallocated size than to the old size and adds padding.

- [bpo-39926](https://bugs.python.org/issue?@action=redirect&bpo=39926) [https://bugs.python.org/issue?@action=redirect&bpo=39926]: Update Unicode database to Unicode version 13.0.0.
- [bpo-19466](https://bugs.python.org/issue?@action=redirect&bpo=19466) [https://bugs.python.org/issue?@action=redirect&bpo=19466]: Clear the frames of daemon threads earlier during the Python shutdown to call objects destructors. So “unclosed file” resource warnings are now emitted for daemon threads in a more reliable way.
- [bpo-38894](https://bugs.python.org/issue?@action=redirect&bpo=38894) [https://bugs.python.org/issue?@action=redirect&bpo=38894]: Fix a bug that was causing incomplete results when calling `pathlib.Path.glob` in the presence of symlinks that point to files where the user does not have read access. Patch by Pablo Galindo and Matt Wozniski.
- [bpo-39877](https://bugs.python.org/issue?@action=redirect&bpo=39877) [https://bugs.python.org/issue?@action=redirect&bpo=39877]: Fix `PyEval_RestoreThread()` random crash at exit with daemon threads. It now accesses the `_PyRuntime` variable directly instead of using `tstate->interp->runtime`, since `tstate` can be a dangling pointer after `Py_Finalize()` has been called. Moreover, the daemon thread now exits before trying to take the GIL.
- [bpo-39871](https://bugs.python.org/issue?@action=redirect&bpo=39871) [https://bugs.python.org/issue?@action=redirect&bpo=39871]: Fix a possible `SystemError` in `math.{atan2, copysign, remainder}()` when the first argument cannot be converted to a `float`. Patch by Zackery Spytz.
- [bpo-39776](https://bugs.python.org/issue?@action=redirect&bpo=39776) [https://bugs.python.org/issue?@action=redirect&bpo=39776]: Fix race condition where threads created by `PyGILState_Ensure()` could get a duplicate id.

This affects consumers of `tstate->id` like the contextvar caching machinery, which could return invalid cached objects under heavy thread load (observed in embedded scenarios).

- [bpo-39778](https://bugs.python.org/issue?@action=redirect&bpo=39778) [https://bugs.python.org/issue?@action=redirect&bpo=39778]: Fixed a crash due to incorrect

handling of weak references in `collections.OrderedDict` classes. Patch by Pablo Galindo.

- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port audioop extension module to multiphase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-39702](https://bugs.python.org/issue?@action=redirect&bpo=39702) [https://bugs.python.org/issue?@action=redirect&bpo=39702]: Relax [decorator](#) grammar restrictions to allow any valid expression ([PEP 614](https://peps.python.org/pep-0614/) [https://peps.python.org/pep-0614/]).
- [bpo-38091](https://bugs.python.org/issue?@action=redirect&bpo=38091) [https://bugs.python.org/issue?@action=redirect&bpo=38091]: Tweak import deadlock detection code to not deadlock itself.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `_locale` extension module to multiphase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-39087](https://bugs.python.org/issue?@action=redirect&bpo=39087) [https://bugs.python.org/issue?@action=redirect&bpo=39087]: Optimize [PyUnicode\\_AsUTF8\(\)](#) and [PyUnicode\\_AsUTF8AndSize\(\)](#) slightly when they need to create internal UTF-8 cache.
- [bpo-39520](https://bugs.python.org/issue?@action=redirect&bpo=39520) [https://bugs.python.org/issue?@action=redirect&bpo=39520]: Fix unparsing of ext slices with no items (`f○○[: , ]`). Patch by Batuhan Taskaya.
- [bpo-39220](https://bugs.python.org/issue?@action=redirect&bpo=39220) [https://bugs.python.org/issue?@action=redirect&bpo=39220]: Do not optimize annotations if ‘from `_future_` import annotations’ is used. Patch by Pablo Galindo.
- [bpo-35712](https://bugs.python.org/issue?@action=redirect&bpo=35712) [https://bugs.python.org/issue?@action=redirect&bpo=35712]: Using [NotImplemented](#) in a boolean context has been deprecated. Patch contributed by

Josh Rosenberg.

- [bpo-22490](https://bugs.python.org/issue?@action=redirect&bpo=22490) [https://bugs.python.org/issue?@action=redirect&bpo=22490]: Don't leak environment variable `__PYENV_LAUNCHER__` into the interpreter session on macOS.

## Library

- [bpo-39830](https://bugs.python.org/issue?@action=redirect&bpo=39830) [https://bugs.python.org/issue?@action=redirect&bpo=39830]: Add `zipfile.Path` to `__all__` in the `zipfile` module.
- [bpo-40000](https://bugs.python.org/issue?@action=redirect&bpo=40000) [https://bugs.python.org/issue?@action=redirect&bpo=40000]: Improved error messages for validation of `ast.Constant` nodes. Patch by Batuhan Taskaya.
- [bpo-39999](https://bugs.python.org/issue?@action=redirect&bpo=39999) [https://bugs.python.org/issue?@action=redirect&bpo=39999]: `__module__` of the AST node classes is now set to "ast" instead of "\_ast". Added docstrings for dummy AST node classes and deprecated attributes.
- [bpo-39991](https://bugs.python.org/issue?@action=redirect&bpo=39991) [https://bugs.python.org/issue?@action=redirect&bpo=39991]: `uuid.getnode()` now skips IPv6 addresses with the same string length than a MAC address (17 characters): only use MAC addresses.
- [bpo-39988](https://bugs.python.org/issue?@action=redirect&bpo=39988) [https://bugs.python.org/issue?@action=redirect&bpo=39988]: Deprecated `ast.AugLoad` and `ast.AugStore` node classes because they are no longer used.
- [bpo-39656](https://bugs.python.org/issue?@action=redirect&bpo=39656) [https://bugs.python.org/issue?@action=redirect&bpo=39656]: Ensure `bin/python3.#` is always present in virtual environments on POSIX platforms - by Anthony Sottile.
- [bpo-39969](https://bugs.python.org/issue?@action=redirect&bpo=39969) [https://bugs.python.org/issue?@action=redirect&bpo=39969]: Deprecated `ast.Param` node class because it's no longer used. Patch by Batuhan Taskaya.
- [bpo-39360](https://bugs.python.org/issue?@action=redirect&bpo=39360) [https://bugs.python.org/issue?@action=redirect&bpo=39360]: Ensure all workers exit when finalizing a `multiprocessing.Pool` implicitly via the module finalization handlers of multiprocessing. This fixes a deadlock situation that can be experienced when the Pool is

not properly finalized via the context manager or a call to `multiprocessing.Pool.terminate`. Patch by Batuhan Taskaya and Pablo Galindo.

- [bpo-35370](https://bugs.python.org/issue?@action=redirect&bpo=35370) [https://bugs.python.org/issue?@action=redirect&bpo=35370]: `sys.settrace()`, `sys.setprofile()` and `_lsprof.Profiler.enable()` now properly report `PySys_Audit()` error if “`sys.setprofile`” or “`sys.settrace`” audit event is denied.
- [bpo-39936](https://bugs.python.org/issue?@action=redirect&bpo=39936) [https://bugs.python.org/issue?@action=redirect&bpo=39936]: AIX: Fix `_aix_support` module when the subprocess is not available, when building Python from scratch. It now uses new private `_bootsubprocess` module, rather than having two implementations depending if subprocess is available or not. So `_aix_support.aix_platform()` result is now the same if subprocess is available or not.
- [bpo-36144](https://bugs.python.org/issue?@action=redirect&bpo=36144) [https://bugs.python.org/issue?@action=redirect&bpo=36144]: `collections.OrderedDict` now implements `|` and `|=` (PEP 584 [https://peps.python.org/pep-0584/]).
- [bpo-39652](https://bugs.python.org/issue?@action=redirect&bpo=39652) [https://bugs.python.org/issue?@action=redirect&bpo=39652]: The column name found in `sqlite3.Cursor.description` is now truncated on the first ‘`[`’ only if the `PARSE_COLNAMES` option is set.
- [bpo-39915](https://bugs.python.org/issue?@action=redirect&bpo=39915) [https://bugs.python.org/issue?@action=redirect&bpo=39915]: Ensure `unittest.mock.AsyncMock.await_args_list` has call objects in the order of awaited arguments instead of using `unittest.mock.Mock.call_args` which has the last value of the call. Patch by Karthikeyan Singaravelan.
- [bpo-36144](https://bugs.python.org/issue?@action=redirect&bpo=36144) [https://bugs.python.org/issue?@action=redirect&bpo=36144]: Updated `os.environ` and `os.environb` to support PEP 584 [https://peps.python.org/pep-0584/]’s merge (`|`) and update (`|=`) operators.
- [bpo-38662](https://bugs.python.org/issue?@action=redirect&bpo=38662) [https://bugs.python.org/issue?@action=redirect&bpo=38662]: The `ensurepip` module now invokes `pip` via the `runpy` module. Hence it is no longer tightly coupled with the internal API of the bundled `pip` version, allowing easier updates to a newer `pip` version both internally and for distributors.

- [bpo-38075](https://bugs.python.org/issue?@action=redirect&bpo=38075) [https://bugs.python.org/issue?@action=redirect&bpo=38075]: Fix the **random.Random.seed()** method when a **bool** is passed as the seed.
- [bpo-39916](https://bugs.python.org/issue?@action=redirect&bpo=39916) [https://bugs.python.org/issue?@action=redirect&bpo=39916]: More reliable use of **os.scandir()** in **Path.glob()**. It no longer emits a **ResourceWarning** when interrupted.
- [bpo-39850](https://bugs.python.org/issue?@action=redirect&bpo=39850) [https://bugs.python.org/issue?@action=redirect&bpo=39850]: **multiprocessing** now supports abstract socket addresses (if abstract sockets are supported in the running platform). When creating arbitrary addresses (like when default-constructing **multiprocessing.connection.Listener** objects) abstract sockets are preferred to avoid the case when the temporary-file-generated address is too large for an **AF\_UNIX** socket address. Patch by Pablo Galindo.
- [bpo-36287](https://bugs.python.org/issue?@action=redirect&bpo=36287) [https://bugs.python.org/issue?@action=redirect&bpo=36287]: **ast.dump()** no longer outputs optional fields and attributes with default values. The default values for optional fields and attributes of AST nodes are now set as class attributes (e.g. **Constant.kind** is set to **None**).
- [bpo-39889](https://bugs.python.org/issue?@action=redirect&bpo=39889) [https://bugs.python.org/issue?@action=redirect&bpo=39889]: Fixed **ast.unparse()** for extended slices containing a single element (e.g. **a[i:j, ]**). Remove redundant tuples when index with a tuple (e.g. **a[i, j]**).
- [bpo-39828](https://bugs.python.org/issue?@action=redirect&bpo=39828) [https://bugs.python.org/issue?@action=redirect&bpo=39828]: Fix **json.tool** to catch **BrokenPipeError**. Patch by Dong-hee Na.
- [bpo-13487](https://bugs.python.org/issue?@action=redirect&bpo=13487) [https://bugs.python.org/issue?@action=redirect&bpo=13487]: Avoid a possible “*RuntimeError: dictionary changed size during iteration*” from **inspect.getmodule()** when it tried to loop through **sys.modules**.
- [bpo-39674](https://bugs.python.org/issue?@action=redirect&bpo=39674) [https://bugs.python.org/issue?@action=redirect&bpo=39674]: Revert “[bpo-37330](https://bugs.python.org/issue?@action=redirect&bpo=37330) [https://bugs.python.org/issue?@action=redirect&bpo=37330]: **open()** no longer accept ‘U’ in file mode”. The “U” mode of **open()** is kept in Python 3.9 to ease transition from Python 2.7, but

will be removed in Python 3.10.

- [bpo-28577](https://bugs.python.org/issue?@action=redirect&bpo=28577) [https://bugs.python.org/issue?@action=redirect&bpo=28577]: The hosts method on 32-bit prefix length IPv4Networks and 128-bit prefix IPv6Networks now returns a list containing the single Address instead of an empty list.
- [bpo-39826](https://bugs.python.org/issue?@action=redirect&bpo=39826) [https://bugs.python.org/issue?@action=redirect&bpo=39826]: Add getConnection method to logging HTTPHandler to enable custom connections.
- [bpo-39763](https://bugs.python.org/issue?@action=redirect&bpo=39763) [https://bugs.python.org/issue?@action=redirect&bpo=39763]: Reimplement **distutils.spawn.spawn()** function with the **subprocess** module.
- [bpo-39794](https://bugs.python.org/issue?@action=redirect&bpo=39794) [https://bugs.python.org/issue?@action=redirect&bpo=39794]: Add `-without-decimal-contextvar` build option. This enables a thread-local rather than a coroutine local context.
- [bpo-36144](https://bugs.python.org/issue?@action=redirect&bpo=36144) [https://bugs.python.org/issue?@action=redirect&bpo=36144]: **collections.defaultdict** now implements `|` ([PEP 584](https://peps.python.org/pep-0584/) [https://peps.python.org/pep-0584/]).
- [bpo-39517](https://bugs.python.org/issue?@action=redirect&bpo=39517) [https://bugs.python.org/issue?@action=redirect&bpo=39517]: Fix `runpy.run_path()` when using pathlike objects
- [bpo-39775](https://bugs.python.org/issue?@action=redirect&bpo=39775) [https://bugs.python.org/issue?@action=redirect&bpo=39775]: Change `inspect.Signature.parameters` back to `collections.OrderedDict`. This was changed to `dict` in Python 3.9.0a4.
- [bpo-39678](https://bugs.python.org/issue?@action=redirect&bpo=39678) [https://bugs.python.org/issue?@action=redirect&bpo=39678]: Refactor `queue_manager` in **concurrent.futures.ProcessPoolExecutor** to make it easier to maintain.
- [bpo-39764](https://bugs.python.org/issue?@action=redirect&bpo=39764) [https://bugs.python.org/issue?@action=redirect&bpo=39764]: Fix `AttributeError` when calling `get_stack` on a `PyAsyncGenObject` Task
- [bpo-39769](https://bugs.python.org/issue?@action=redirect&bpo=39769) [https://bugs.python.org/issue?@action=redirect&bpo=39769]: The **compileall.compile\_dir()** function's `ddir` parameter and the `compileall` command line flag `-d` no longer write the wrong pathname to the generated pyc file for submodules

beneath the root of the directory tree being compiled. This fixes a regression introduced with Python 3.5.

- [bpo-36144](https://bugs.python.org/issue?@action=redirect&bpo=36144) [https://bugs.python.org/issue?@action=redirect&bpo=36144]: `types.MappingProxyType` objects now support the merge (`|`) operator from [PEP 584](https://peps.python.org/pep-0584/) [https://peps.python.org/pep-0584/].
- [bpo-38691](https://bugs.python.org/issue?@action=redirect&bpo=38691) [https://bugs.python.org/issue?@action=redirect&bpo=38691]: The `importlib` module now ignores the `PYTHONCASEOK` environment variable when the `-E` or `-I` command line options are being used.
- [bpo-39719](https://bugs.python.org/issue?@action=redirect&bpo=39719) [https://bugs.python.org/issue?@action=redirect&bpo=39719]: Remove `tempfile.SpooledTemporaryFile.softspace()` as files no longer have the `softspace` attribute in Python 3. Patch by Shantanu.
- [bpo-39667](https://bugs.python.org/issue?@action=redirect&bpo=39667) [https://bugs.python.org/issue?@action=redirect&bpo=39667]: Improve `pathlib.Path` compatibility on `zipfile.Path` and correct performance degradation as found in `zipp 3.0`.
- [bpo-39638](https://bugs.python.org/issue?@action=redirect&bpo=39638) [https://bugs.python.org/issue?@action=redirect&bpo=39638]: Keep ASDL signatures in the docstrings for AST nodes. Patch by Batuhan Taskaya
- [bpo-39639](https://bugs.python.org/issue?@action=redirect&bpo=39639) [https://bugs.python.org/issue?@action=redirect&bpo=39639]: Deprecated `ast.Suite` node class because it's no longer used. Patch by Batuhan Taskaya.
- [bpo-39609](https://bugs.python.org/issue?@action=redirect&bpo=39609) [https://bugs.python.org/issue?@action=redirect&bpo=39609]: Add `thread_name_prefix` to default `asyncio` executor
- [bpo-39548](https://bugs.python.org/issue?@action=redirect&bpo=39548) [https://bugs.python.org/issue?@action=redirect&bpo=39548]: Fix handling of header in `urllib.request.AbstractDigestAuthHandler` when the optional `qop` parameter is not present.
- [bpo-39509](https://bugs.python.org/issue?@action=redirect&bpo=39509) [https://bugs.python.org/issue?@action=redirect&bpo=39509]: HTTP status codes `103` `EARLY_HINTS` and `425` `TOO_EARLY` are added to `http.HTTPStatus`. Patch by Dong-hee Na.
- [bpo-39507](https://bugs.python.org/issue?@action=redirect&bpo=39507) [https://bugs.python.org/issue?@action=redirect&bpo=39507]: Adding HTTP status `418` "I'm a Teapot" to `HTTPStatus` in `http` library. Patch by Ross Rhodes.
- [bpo-39495](https://bugs.python.org/issue?@action=redirect&bpo=39495) [https://bugs.python.org/issue?@action=redirect&bpo=39495]

@action=redirect&bpo=39495]: Remove default value from *attrs* parameter of

`xml.etree.ElementTree.TreeBuilder.start()` for consistency between Python and C implementations.

- [bpo-38971](https://bugs.python.org/issue?@action=redirect&bpo=38971) [https://bugs.python.org/issue?@action=redirect&bpo=38971]: Open issue in the BPO indicated a desire to make the implementation of `codecs.open()` at parity with `io.open()`, which implements a try/except to assure file stream gets closed before an exception is raised.
- [bpo-38641](https://bugs.python.org/issue?@action=redirect&bpo=38641) [https://bugs.python.org/issue?@action=redirect&bpo=38641]: Added starred expressions support to `return` and `yield` statements for `lib2to3`. Patch by Vlad Emelianov.
- [bpo-37534](https://bugs.python.org/issue?@action=redirect&bpo=37534) [https://bugs.python.org/issue?@action=redirect&bpo=37534]: When using `minidom` module to generate XML documents the ability to add Standalone Document Declaration is added. All the changes are made to generate a document in compliance with Extensible Markup Language (XML) 1.0 (Fifth Edition) W3C Recommendation (available here: <https://www.w3.org/TR/xml/#sec-prolog-dtd>).
- [bpo-34788](https://bugs.python.org/issue?@action=redirect&bpo=34788) [https://bugs.python.org/issue?@action=redirect&bpo=34788]: Add support for scoped IPv6 addresses to `ipaddress`. Patch by Oleksandr Pavliuk.
- [bpo-34822](https://bugs.python.org/issue?@action=redirect&bpo=34822) [https://bugs.python.org/issue?@action=redirect&bpo=34822]: Simplified AST for subscription. Simple indices are now represented by their value, extended slices are represented as tuples. `ast` classes `Index` and `ExtSlice` are considered deprecated and will be removed in future Python versions. In the meantime, `Index(value)` now returns a `value` itself, `ExtSlice(slices)` returns `Tuple(slices, Load())`.

## Documentation

- [bpo-39868](https://bugs.python.org/issue?@action=redirect&bpo=39868) [https://bugs.python.org/issue?@action=redirect&bpo=39868]: Updated the Language Reference for [PEP 572](https://peps.python.org/pep-0572/) [https://peps.python.org/pep-0572/].
- [bpo-13790](https://bugs.python.org/issue?@action=redirect&bpo=13790) [https://bugs.python.org/issue?@action=redirect&bpo=13790]: Change ‘string’ to ‘specification’ in

format doc.

- [bpo-17422](https://bugs.python.org/issue?@action=redirect&bpo=17422) [https://bugs.python.org/issue?@action=redirect&bpo=17422]: The language reference no longer restricts default class namespaces to dicts only.
- [bpo-39530](https://bugs.python.org/issue?@action=redirect&bpo=39530) [https://bugs.python.org/issue?@action=redirect&bpo=39530]: Fix misleading documentation about mixed-type numeric comparisons.
- [bpo-39718](https://bugs.python.org/issue?@action=redirect&bpo=39718) [https://bugs.python.org/issue?@action=redirect&bpo=39718]: Update **token** documentation to reflect additions in Python 3.8
- [bpo-39677](https://bugs.python.org/issue?@action=redirect&bpo=39677) [https://bugs.python.org/issue?@action=redirect&bpo=39677]: Changed operand name of **MAKE\_FUNCTION** from *argc* to *flags* for module **dis**

## Tests

- [bpo-40019](https://bugs.python.org/issue?@action=redirect&bpo=40019) [https://bugs.python.org/issue?@action=redirect&bpo=40019]: test\_gdb now skips tests if it detects that gdb failed to read debug information because the Python binary is optimized.
- [bpo-27807](https://bugs.python.org/issue?@action=redirect&bpo=27807) [https://bugs.python.org/issue?@action=redirect&bpo=27807]: test\_site.test\_startup\_imports() is now skipped if a path of **sys.path** contains a .pth file.
- [bpo-26067](https://bugs.python.org/issue?@action=redirect&bpo=26067) [https://bugs.python.org/issue?@action=redirect&bpo=26067]: Do not fail test\_shutil test\_chown test when uid or gid of user cannot be resolved to a name.
- [bpo-39855](https://bugs.python.org/issue?@action=redirect&bpo=39855) [https://bugs.python.org/issue?@action=redirect&bpo=39855]: test\_subprocess.test\_user() now skips the test on an user name if the user name doesn't exist. For example, skip the test if the user "nobody" doesn't exist on Linux.

## Build

- [bpo-39761](https://bugs.python.org/issue?@action=redirect&bpo=39761) [https://bugs.python.org/issue?@action=redirect&bpo=39761]: Fix build with DTrace but without additional DFLAGS.
- [bpo-39763](https://bugs.python.org/issue?@action=redirect&bpo=39763) [https://bugs.python.org/issue?@action=redirect&bpo=39763]: setup.py now uses a basic

implementation of the `subprocess` module if the `subprocess` module is not available: before required C extension modules are built.

- [bpo-1294959](https://bugs.python.org/issue?@action=redirect&bpo=1294959) [https://bugs.python.org/issue?@action=redirect&bpo=1294959]: Add `--with-platlibdir` option to the configure script: name of the platform-specific library directory, stored in the new `sys.platlibdir` attribute. It is used to build the path of platform-specific extension modules and the path of the standard library. It is equal to `"lib"` on most platforms. On Fedora and SuSE, it is equal to `"lib64"` on 64-bit platforms. Patch by Jan Matějka, Matěj Cepl, Charalampos Stratakis and Victor Stinner.

## Windows

- [bpo-39930](https://bugs.python.org/issue?@action=redirect&bpo=39930) [https://bugs.python.org/issue?@action=redirect&bpo=39930]: Ensures the required `vcruntime140.dll` is included in install packages.
- [bpo-39847](https://bugs.python.org/issue?@action=redirect&bpo=39847) [https://bugs.python.org/issue?@action=redirect&bpo=39847]: Avoid hang when computer is hibernated whilst waiting for a mutex (for lock-related objects from `threading`) around 49-day uptime.
- [bpo-38597](https://bugs.python.org/issue?@action=redirect&bpo=38597) [https://bugs.python.org/issue?@action=redirect&bpo=38597]: `distutils` will no longer statically link `vcruntime140.dll` when a redistributable version is unavailable. All future releases of CPython will include a copy of this DLL to ensure distributed extensions can continue to load.
- [bpo-38380](https://bugs.python.org/issue?@action=redirect&bpo=38380) [https://bugs.python.org/issue?@action=redirect&bpo=38380]: Update Windows builds to use SQLite 3.31.1
- [bpo-39789](https://bugs.python.org/issue?@action=redirect&bpo=39789) [https://bugs.python.org/issue?@action=redirect&bpo=39789]: Update Windows release build machines to Visual Studio 2019 (MSVC 14.2).
- [bpo-34803](https://bugs.python.org/issue?@action=redirect&bpo=34803) [https://bugs.python.org/issue?@action=redirect&bpo=34803]: Package for nuget.org now includes repository reference and bundled icon image.

## macOS

- [bpo-38380](https://bugs.python.org/issue?@action=redirect&bpo=38380) [https://bugs.python.org/issue?@action=redirect&bpo=38380]: Update macOS builds to use SQLite 3.31.1

## IDLE

- [bpo-27115](https://bugs.python.org/issue?@action=redirect&bpo=27115) [https://bugs.python.org/issue?@action=redirect&bpo=27115]: For ‘Go to Line’, use a Query box subclass with IDLE standard behavior and improved error checking.
- [bpo-39885](https://bugs.python.org/issue?@action=redirect&bpo=39885) [https://bugs.python.org/issue?@action=redirect&bpo=39885]: Since clicking to get an IDLE context menu moves the cursor, any text selection should be and now is cleared.
- [bpo-39852](https://bugs.python.org/issue?@action=redirect&bpo=39852) [https://bugs.python.org/issue?@action=redirect&bpo=39852]: Edit “Go to line” now clears any selection, preventing accidental deletion. It also updates Ln and Col on the status bar.
- [bpo-39781](https://bugs.python.org/issue?@action=redirect&bpo=39781) [https://bugs.python.org/issue?@action=redirect&bpo=39781]: Selecting code context lines no longer causes a jump.

## Tools/Demos

- [bpo-36184](https://bugs.python.org/issue?@action=redirect&bpo=36184) [https://bugs.python.org/issue?@action=redirect&bpo=36184]: Port python-gdb.py to FreeBSD. python-gdb.py now checks for “take\_gil” function name to check if a frame tries to acquire the GIL, instead of checking for “pthread\_cond\_timedwait” which is specific to Linux and can be a different condition than the GIL.
- [bpo-38080](https://bugs.python.org/issue?@action=redirect&bpo=38080) [https://bugs.python.org/issue?@action=redirect&bpo=38080]: Added support to fix `getproxies` in the `lib2to3.fixes.fix_urllib` module. Patch by José Roberto Meza Cabrera.

## C API

- [bpo-40024](https://bugs.python.org/issue?@action=redirect&bpo=40024) [https://bugs.python.org/issue?@action=redirect&bpo=40024]: Add `PyModule_AddType()` helper function: add a type to a module. Patch by Dong-hee

Na.

- [bpo-39946](https://bugs.python.org/issue?@action=redirect&bpo=39946) [https://bugs.python.org/issue?@action=redirect&bpo=39946]: Remove `_PyRuntime.getframe` hook and remove `_PyThreadState_GetFrame` macro which was an alias to `_PyRuntime.getframe`. They were only exposed by the internal C API. Remove also `PyThreadFrameGetter` type.
- [bpo-39947](https://bugs.python.org/issue?@action=redirect&bpo=39947) [https://bugs.python.org/issue?@action=redirect&bpo=39947]: Add `PyThreadState_GetFrame()` function: get the current frame of a Python thread state.
- [bpo-37207](https://bugs.python.org/issue?@action=redirect&bpo=37207) [https://bugs.python.org/issue?@action=redirect&bpo=37207]: Add `_PyArg_NoKwnames` helper function. Patch by Dong-hee Na.
- [bpo-39947](https://bugs.python.org/issue?@action=redirect&bpo=39947) [https://bugs.python.org/issue?@action=redirect&bpo=39947]: Add `PyThreadState_GetInterpreter()`: get the interpreter of a Python thread state.
- [bpo-39947](https://bugs.python.org/issue?@action=redirect&bpo=39947) [https://bugs.python.org/issue?@action=redirect&bpo=39947]: Add `PyInterpreterState_Get()` function to the limited C API.
- [bpo-35370](https://bugs.python.org/issue?@action=redirect&bpo=35370) [https://bugs.python.org/issue?@action=redirect&bpo=35370]: If `PySys_Audit()` fails in `PyEval_SetProfile()` or `PyEval_SetTrace()`, log the error as an unraisable exception.
- [bpo-39947](https://bugs.python.org/issue?@action=redirect&bpo=39947) [https://bugs.python.org/issue?@action=redirect&bpo=39947]: Move the static inline function flavor of `Py_EnterRecursiveCall()` and `Py_LeaveRecursiveCall()` to the internal C API: they access `PyThreadState` attributes. The limited C API provides regular functions which hide implementation details.
- [bpo-39947](https://bugs.python.org/issue?@action=redirect&bpo=39947) [https://bugs.python.org/issue?@action=redirect&bpo=39947]

@action=redirect&bpo=39947]:

Py\_TRASHCAN\_BEGIN\_CONDITION and Py\_TRASHCAN\_END macro no longer access PyThreadState attributes, but call new private \_PyTrash\_begin() and \_PyTrash\_end() functions which hide implementation details.

- [bpo-39884](https://bugs.python.org/issue?@action=redirect&bpo=39884) [https://bugs.python.org/issue?@action=redirect&bpo=39884]: **PyDescr\_NewMethod()** and **PyCFunction\_NewEx()** now include the method name in the SystemError “bad call flags” error message to ease debug.
- [bpo-39877](https://bugs.python.org/issue?@action=redirect&bpo=39877) [https://bugs.python.org/issue?@action=redirect&bpo=39877]: Deprecated **PyEval\_InitThreads()** and **PyEval\_ThreadsInitialized()**. Calling **PyEval\_InitThreads()** now does nothing.
- [bpo-38249](https://bugs.python.org/issue?@action=redirect&bpo=38249) [https://bugs.python.org/issue?@action=redirect&bpo=38249]: **Py\_UNREACHABLE** is now implemented with `__builtin_unreachable()` and analogs in release mode.
- [bpo-38643](https://bugs.python.org/issue?@action=redirect&bpo=38643) [https://bugs.python.org/issue?@action=redirect&bpo=38643]: **PyNumber\_ToBase()** now raises a **SystemError** instead of crashing when called with invalid base.
- [bpo-39882](https://bugs.python.org/issue?@action=redirect&bpo=39882) [https://bugs.python.org/issue?@action=redirect&bpo=39882]: The **Py\_FatalError()** function is replaced with a macro which logs automatically the name of the current function, unless the `Py_LIMITED_API` macro is defined.
- [bpo-39824](https://bugs.python.org/issue?@action=redirect&bpo=39824) [https://bugs.python.org/issue?@action=redirect&bpo=39824]: Extension modules: **m\_traverse**, **m\_clear** and **m\_free** functions of **PyModuleDef** are no longer called if the module state was requested but is not allocated yet. This is the case immediately after the module is created and before the module is executed (**Py\_mod\_exec** function). More precisely, these functions are not called if **m\_size** is greater than 0 and

the module state (as returned by `PyModule_GetState()`) is `NULL`.

Extension modules without module state (`m_size <= 0`) are not affected.

- [bpo-38913](https://bugs.python.org/issue?@action=redirect&bpo=38913) [https://bugs.python.org/issue?@action=redirect&bpo=38913]: Fixed segfault in `Py_BuildValue()` called with a format containing “#” and undefined `PY_SSIZE_T_CLEAN` when an exception is set.
- [bpo-38500](https://bugs.python.org/issue?@action=redirect&bpo=38500) [https://bugs.python.org/issue?@action=redirect&bpo=38500]: Add a private API to get and set the frame evaluation function: add `_PyInterpreterState_GetEvalFrameFunc()` and `_PyInterpreterState_SetEvalFrameFunc()` C functions. The `_PyFrameEvalFunction` function type now takes a `tstate` parameter.

## Python 3.9.0 alpha 4

*Release date: 2020-02-25*

### Security

- [bpo-39184](https://bugs.python.org/issue?@action=redirect&bpo=39184) [https://bugs.python.org/issue?@action=redirect&bpo=39184]: Add audit events to functions in `fcntl`, `msvcrt`, `os`, `resource`, `shutil`, `signal` and `syslog`.
- [bpo-39401](https://bugs.python.org/issue?@action=redirect&bpo=39401) [https://bugs.python.org/issue?@action=redirect&bpo=39401]: Avoid unsafe DLL load at startup on Windows 7 and earlier.
- [bpo-39184](https://bugs.python.org/issue?@action=redirect&bpo=39184) [https://bugs.python.org/issue?@action=redirect&bpo=39184]: Add audit events to command execution functions in `os` and `pty` modules.

### Core and Builtins

- [bpo-39382](https://bugs.python.org/issue?@action=redirect&bpo=39382) [https://bugs.python.org/issue?@action=redirect&bpo=39382]: Fix a use-after-free in the single

inheritance path of `issubclass()`, when the `__bases__` of an object has a single reference, and so does its first item. Patch by Yonatan Goldschmidt.

- [bpo-39573](https://bugs.python.org/issue?@action=redirect&bpo=39573) [https://bugs.python.org/issue?@action=redirect&bpo=39573]: Update clinic tool to use `Py_IS_TYPE()`. Patch by Dong-hee Na.
- [bpo-39619](https://bugs.python.org/issue?@action=redirect&bpo=39619) [https://bugs.python.org/issue?@action=redirect&bpo=39619]: Enable use of `os.chroot()` on HP-UX systems.
- [bpo-39573](https://bugs.python.org/issue?@action=redirect&bpo=39573) [https://bugs.python.org/issue?@action=redirect&bpo=39573]: Add `Py_IS_TYPE()` static inline function to check whether the object `o` type is `type`.
- [bpo-39606](https://bugs.python.org/issue?@action=redirect&bpo=39606) [https://bugs.python.org/issue?@action=redirect&bpo=39606]: Fix regression caused by fix for [bpo-39386](https://bugs.python.org/issue?@action=redirect&bpo=39386) [https://bugs.python.org/issue?@action=redirect&bpo=39386], that prevented calling `aclose` on an async generator that had already been closed or exhausted.
- [bpo-39579](https://bugs.python.org/issue?@action=redirect&bpo=39579) [https://bugs.python.org/issue?@action=redirect&bpo=39579]: Change the ending column offset of `Attribute` nodes constructed in `ast_for_dotted_name` to point at the end of the current node and not at the end of the last `NAME` node.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `_crypt` extension module to multiphase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `_contextvars` extension module to multiphase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-39510](https://bugs.python.org/issue?@action=redirect&bpo=39510) [https://bugs.python.org/issue?@action=redirect&bpo=39510]: Fix segfault in `readinto()` method on closed `BufferedReader`.
- [bpo-39502](https://bugs.python.org/issue?@action=redirect&bpo=39502) [https://bugs.python.org/issue?@action=redirect&bpo=39502]: Fix `time.localtime()` on 64-bit AIX to support years before 1902 and after 2038. Patch by M Felt.
- [bpo-39492](https://bugs.python.org/issue?@action=redirect&bpo=39492) [https://bugs.python.org/issue?@action=redirect&bpo=39492]: Fix a reference cycle in the C

Pickler that was preventing the garbage collection of deleted, pickled objects.

- [bpo-39453](https://bugs.python.org/issue?@action=redirect&bpo=39453) [https://bugs.python.org/issue?@action=redirect&bpo=39453]: Fixed a possible crash in **list.\_\_contains\_\_()** when a list is changed during comparing items. Patch by Dong-hee Na.
- [bpo-39434](https://bugs.python.org/issue?@action=redirect&bpo=39434) [https://bugs.python.org/issue?@action=redirect&bpo=39434]: [floor division](#) of float operation now has a better performance. Also the message of **ZeroDivisionError** for this operation is updated. Patch by Dong-hee Na.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `_codecs` extension module to multiphase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `_bz2` extension module to multiphase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `_abc` extension module to multiphase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-39320](https://bugs.python.org/issue?@action=redirect&bpo=39320) [https://bugs.python.org/issue?@action=redirect&bpo=39320]: Replace two complex bytecodes for building dicts with two simpler ones. The new bytecodes `DICT_MERGE` and `DICT_UPDATE` have been added The old bytecodes `BUILD_MAP_UNPACK` and `BUILD_MAP_UNPACK_WITH_CALL` have been removed.
- [bpo-39219](https://bugs.python.org/issue?@action=redirect&bpo=39219) [https://bugs.python.org/issue?@action=redirect&bpo=39219]: Syntax errors raised in the tokenizer now always set correct “text” and “offset” attributes.
- [bpo-36051](https://bugs.python.org/issue?@action=redirect&bpo=36051) [https://bugs.python.org/issue?@action=redirect&bpo=36051]: Drop the GIL during large `bytes.join` operations. Patch by Bruce Merry.
- [bpo-38960](https://bugs.python.org/issue?@action=redirect&bpo=38960) [https://bugs.python.org/issue?@action=redirect&bpo=38960]: Fix DTrace build issues on FreeBSD. Patch by David Carlier.
- [bpo-37207](https://bugs.python.org/issue?@action=redirect&bpo=37207) [https://bugs.python.org/issue?@action=redirect&bpo=37207]

@action=redirect&bpo=37207]: Speed up calls to `range()` by about 30%, by using the PEP 590 `vectorcall` calling convention. Patch by Mark Shannon.

- [bpo-36144](https://bugs.python.org/issue?@action=redirect&bpo=36144) [https://bugs.python.org/issue?@action=redirect&bpo=36144]: `dict` (and `collections.UserDict`) objects now support PEP 584's `merge()` and `update(|=)` operators. Patch by Brandt Bucher.
- [bpo-32856](https://bugs.python.org/issue?@action=redirect&bpo=32856) [https://bugs.python.org/issue?@action=redirect&bpo=32856]: Optimized the idiom for assignment a temporary variable in comprehensions. Now `for y in [expr] in comprehensions` is as fast as a simple assignment `y = expr`.

## Library

- [bpo-30566](https://bugs.python.org/issue?@action=redirect&bpo=30566) [https://bugs.python.org/issue?@action=redirect&bpo=30566]: Fix `IndexError` when trying to decode an invalid string with punycode codec.
- [bpo-39649](https://bugs.python.org/issue?@action=redirect&bpo=39649) [https://bugs.python.org/issue?@action=redirect&bpo=39649]: Remove obsolete check for `__args__` in `bdb.Bdb.format_stack_entry`.
- [bpo-39648](https://bugs.python.org/issue?@action=redirect&bpo=39648) [https://bugs.python.org/issue?@action=redirect&bpo=39648]: Expanded `math.gcd()` and `math.lcm()` to handle multiple arguments.
- [bpo-39681](https://bugs.python.org/issue?@action=redirect&bpo=39681) [https://bugs.python.org/issue?@action=redirect&bpo=39681]: Fix a regression where the C pickle module wouldn't allow unpickling from a file-like object that doesn't expose a `readinto()` method.
- [bpo-35950](https://bugs.python.org/issue?@action=redirect&bpo=35950) [https://bugs.python.org/issue?@action=redirect&bpo=35950]: Raise `io.UnsupportedOperation` in `io.BufferedReader.truncate()` when it is called on a read-only `io.BufferedReader` instance.
- [bpo-39479](https://bugs.python.org/issue?@action=redirect&bpo=39479) [https://bugs.python.org/issue?@action=redirect&bpo=39479]: Add `math.lcm()` function: least common multiple.
- [bpo-39674](https://bugs.python.org/issue?@action=redirect&bpo=39674) [https://bugs.python.org/issue?@action=redirect&bpo=39674]: Revert "Do not expose abstract collection classes in the collections module" change

([bpo-25988](https://bugs.python.org/issue?@action=redirect&bpo=25988) [https://bugs.python.org/issue?

@action=redirect&bpo=25988]). Aliases to ABC like

`collections.Mapping` are kept in Python 3.9 to ease transition from Python 2.7, but will be removed in Python 3.10.

- [bpo-39104](https://bugs.python.org/issue?@action=redirect&bpo=39104) [https://bugs.python.org/issue?@action=redirect&bpo=39104]: Fix hanging `ProcessPoolExecutor` on `shutdown(wait=False)` when a task has failed pickling.
- [bpo-39627](https://bugs.python.org/issue?@action=redirect&bpo=39627) [https://bugs.python.org/issue?@action=redirect&bpo=39627]: Fixed `TypedDict` totality check for inherited keys.
- [bpo-39474](https://bugs.python.org/issue?@action=redirect&bpo=39474) [https://bugs.python.org/issue?@action=redirect&bpo=39474]: Fixed starting position of AST for expressions like `(a)(b)`, `(a)[b]` and `(a).b`.
- [bpo-21016](https://bugs.python.org/issue?@action=redirect&bpo=21016) [https://bugs.python.org/issue?@action=redirect&bpo=21016]: The `pydoc` and `trace` modules now use the `sysconfig` module to get the path to the Python standard library, to support uncommon installation path like `/usr/lib64/python3.9/` on Fedora. Patch by Jan Matějka.
- [bpo-39590](https://bugs.python.org/issue?@action=redirect&bpo=39590) [https://bugs.python.org/issue?@action=redirect&bpo=39590]: `Collections.deque` now holds strong references during `deque._contains_` and `deque.count`, fixing crashes.
- [bpo-39586](https://bugs.python.org/issue?@action=redirect&bpo=39586) [https://bugs.python.org/issue?@action=redirect&bpo=39586]: The distutils `bdist_msi` command is deprecated in Python 3.9, use `bdist_wheel` (wheel packages) instead.
- [bpo-39595](https://bugs.python.org/issue?@action=redirect&bpo=39595) [https://bugs.python.org/issue?@action=redirect&bpo=39595]: Improved performance of `zipfile.Path` for files with a large number of entries. Also improved performance and fixed minor issue as published with [importlib-metadata 1.5](https://importlib-metadata.readthedocs.io/en/latest/history.html#v1-5-0) [https://importlib-metadata.readthedocs.io/en/latest/history.html#v1-5-0].
- [bpo-39350](https://bugs.python.org/issue?@action=redirect&bpo=39350) [https://bugs.python.org/issue?@action=redirect&bpo=39350]: Fix regression in `fractions.Fraction` if the numerator and/or the denominator is an `int` subclass. The `math.gcd()` function is now used to normalize the *numerator* and *denominator*. `math.gcd()` always return a `int` type. Previously, the GCD

type depended on *numerator* and *denominator*.

- [bpo-39567](https://bugs.python.org/issue?@action=redirect&bpo=39567) [https://bugs.python.org/issue?@action=redirect&bpo=39567]: Added audit for `os.walk()`, `os.fwalk()`, `pathlib.Path.glob()` and `pathlib.Path.rglob()`.
- [bpo-39559](https://bugs.python.org/issue?@action=redirect&bpo=39559) [https://bugs.python.org/issue?@action=redirect&bpo=39559]: Remove unused, undocumented argument getters from `uuid.getnode()`
- [bpo-38149](https://bugs.python.org/issue?@action=redirect&bpo=38149) [https://bugs.python.org/issue?@action=redirect&bpo=38149]: `sys.audit()` is now called only once per call of `glob.glob()` and `glob.iglob()`.
- [bpo-39546](https://bugs.python.org/issue?@action=redirect&bpo=39546) [https://bugs.python.org/issue?@action=redirect&bpo=39546]: Fix a regression in `ArgumentParser` where `allow_abbrev=False` was ignored for long options that used a prefix character other than “-”.
- [bpo-39450](https://bugs.python.org/issue?@action=redirect&bpo=39450) [https://bugs.python.org/issue?@action=redirect&bpo=39450]: Striped whitespace from docstring before returning it from `unittest.case.shortDescription()`.
- [bpo-12915](https://bugs.python.org/issue?@action=redirect&bpo=12915) [https://bugs.python.org/issue?@action=redirect&bpo=12915]: A new function `resolve_name` has been added to the `pkgutil` module. This resolves a string of the form `'a.b.c.d'` or `'a.b:c.d'` to an object. In the example, `a.b` is a package/module and `c.d` is an object within that package/module reached via recursive attribute access.
- [bpo-39353](https://bugs.python.org/issue?@action=redirect&bpo=39353) [https://bugs.python.org/issue?@action=redirect&bpo=39353]: The `binascii.crc_hqx()` function is no longer deprecated.
- [bpo-39493](https://bugs.python.org/issue?@action=redirect&bpo=39493) [https://bugs.python.org/issue?@action=redirect&bpo=39493]: Mark `typing.IO.closed` as a property
- [bpo-39491](https://bugs.python.org/issue?@action=redirect&bpo=39491) [https://bugs.python.org/issue?@action=redirect&bpo=39491]: Add `typing.Annotated` and `include_extras` parameter to `typing.get_type_hints()` as part of [PEP 593](https://peps.python.org/pep-0593/) [https://peps.python.org/pep-0593/]. Patch by Till Varoquaux, documentation by Till Varoquaux and Konstantin Kashin.
- [bpo-39485](https://bugs.python.org/issue?@action=redirect&bpo=39485) [https://bugs.python.org/issue?@action=redirect&bpo=39485]

@action=redirect&bpo=39485]: Fix a bug in `unittest.mock.create_autospec()` that would complain about the wrong number of arguments for custom descriptors defined in an extension module returning functions.

- [bpo-38932](https://bugs.python.org/issue?@action=redirect&bpo=38932) [https://bugs.python.org/issue?@action=redirect&bpo=38932]: Mock fully resets child objects on `reset_mock()`. Patch by Vegard Stikbakke
- [bpo-39082](https://bugs.python.org/issue?@action=redirect&bpo=39082) [https://bugs.python.org/issue?@action=redirect&bpo=39082]: Allow `AsyncMock` to correctly patch static/class methods
- [bpo-39432](https://bugs.python.org/issue?@action=redirect&bpo=39432) [https://bugs.python.org/issue?@action=redirect&bpo=39432]: Implement PEP-489 algorithm for non-ascii “PyInit...” symbol names in distutils to make it export the correct init symbol also on Windows.
- [bpo-18819](https://bugs.python.org/issue?@action=redirect&bpo=18819) [https://bugs.python.org/issue?@action=redirect&bpo=18819]: Omit `devmajor` and `devminor` fields for non-device files in `tarfile` archives, enabling bit-for-bit compatibility with GNU `tar(1)`.
- [bpo-39349](https://bugs.python.org/issue?@action=redirect&bpo=39349) [https://bugs.python.org/issue?@action=redirect&bpo=39349]: Added a new `cancel_futures` parameter to `concurrent.futures.Executor.shutdown()` that cancels all pending futures which have not started running, instead of waiting for them to complete before shutting down the executor.
- [bpo-39274](https://bugs.python.org/issue?@action=redirect&bpo=39274) [https://bugs.python.org/issue?@action=redirect&bpo=39274]: `bool(fraction.Fraction)` now returns a boolean even if `(numerator != 0)` does not return a boolean (ex: numpy number).
- [bpo-34793](https://bugs.python.org/issue?@action=redirect&bpo=34793) [https://bugs.python.org/issue?@action=redirect&bpo=34793]: Remove support for `with (await asyncio.lock):` and `with (yield from asyncio.lock):`. The same is correct for `asyncio.Condition` and `asyncio.Semaphore`.
- [bpo-25597](https://bugs.python.org/issue?@action=redirect&bpo=25597) [https://bugs.python.org/issue?@action=redirect&bpo=25597]: Ensure, if `wraps` is supplied to `unittest.mock.MagicMock`, it is used to calculate return values for the magic methods instead of using the default return values. Patch by Karthikeyan Singaravelan.

- [bpo-36350](https://bugs.python.org/issue?@action=redirect&bpo=36350) [https://bugs.python.org/issue?@action=redirect&bpo=36350]: `inspect.Signature.parameters` and `inspect.BoundArguments.arguments` are now dicts instead of OrderedDicts. Patch contributed by Rémi Lapeyre.
- [bpo-35727](https://bugs.python.org/issue?@action=redirect&bpo=35727) [https://bugs.python.org/issue?@action=redirect&bpo=35727]: Fix `sys.exit()` and `sys.exit(None)` exit code propagation when used in multiprocessing.Process.
- [bpo-32173](https://bugs.python.org/issue?@action=redirect&bpo=32173) [https://bugs.python.org/issue?@action=redirect&bpo=32173]: \* Add `lazycache` function to `__all__`. \* Use `dict.clear` to clear the cache. \* Refactoring `getline` function and `checkcache` function.

## Documentation

- [bpo-17422](https://bugs.python.org/issue?@action=redirect&bpo=17422) [https://bugs.python.org/issue?@action=redirect&bpo=17422]: The language reference now specifies restrictions on class namespaces. Adapted from a patch by Ethan Furman.
- [bpo-39572](https://bugs.python.org/issue?@action=redirect&bpo=39572) [https://bugs.python.org/issue?@action=redirect&bpo=39572]: Updated documentation of `total` flag of `TypedDict`.
- [bpo-39654](https://bugs.python.org/issue?@action=redirect&bpo=39654) [https://bugs.python.org/issue?@action=redirect&bpo=39654]: In pycldr doc, update ‘class’ to ‘module’ where appropriate and add readmodule comment. Patch by Hakan Çelik.
- [bpo-39153](https://bugs.python.org/issue?@action=redirect&bpo=39153) [https://bugs.python.org/issue?@action=redirect&bpo=39153]: Clarify refcounting semantics for the following functions: - `PyObject_SetItem` - `PyMapping_SetItemString` - `PyDict_SetItem` - `PyDict_SetItemString`
- [bpo-39392](https://bugs.python.org/issue?@action=redirect&bpo=39392) [https://bugs.python.org/issue?@action=redirect&bpo=39392]: Explain that when filling with turtle, overlap regions may be left unfilled.
- [bpo-39369](https://bugs.python.org/issue?@action=redirect&bpo=39369) [https://bugs.python.org/issue?@action=redirect&bpo=39369]: Update mmap readline method description. The fact that the readline method does update the file position should not be ignored since this might give the impression for the programmer that it doesn’t update it.
- [bpo-9056](https://bugs.python.org/issue?@action=redirect&bpo=9056) [https://bugs.python.org/issue?@action=redirect&bpo=9056]:

Include subsection in TOC for PDF version of docs.

## Tests

- [bpo-38325](https://bugs.python.org/issue?@action=redirect&bpo=38325) [https://bugs.python.org/issue?@action=redirect&bpo=38325]: Skip tests on non-BMP characters of `test_winconsoleio`.
- [bpo-39502](https://bugs.python.org/issue?@action=redirect&bpo=39502) [https://bugs.python.org/issue?@action=redirect&bpo=39502]: Skip `test_zipfile.test_add_file_after_2107()` if `time.localtime()` fails with `OverflowError`. It is the case on AIX 6.1 for example.

## Build

- [bpo-39489](https://bugs.python.org/issue?@action=redirect&bpo=39489) [https://bugs.python.org/issue?@action=redirect&bpo=39489]: Remove `COUNT_ALLOCS` special build.

## Windows

- [bpo-39553](https://bugs.python.org/issue?@action=redirect&bpo=39553) [https://bugs.python.org/issue?@action=redirect&bpo=39553]: Delete unused code related to SxS manifests.
- [bpo-39439](https://bugs.python.org/issue?@action=redirect&bpo=39439) [https://bugs.python.org/issue?@action=redirect&bpo=39439]: Honor the Python path when a `virtualenv` is active on Windows.
- [bpo-39393](https://bugs.python.org/issue?@action=redirect&bpo=39393) [https://bugs.python.org/issue?@action=redirect&bpo=39393]: Improve the error message when attempting to load a DLL with unresolved dependencies.
- [bpo-38883](https://bugs.python.org/issue?@action=redirect&bpo=38883) [https://bugs.python.org/issue?@action=redirect&bpo=38883]: `home()` and `expanduser()` on Windows now prefer `USERPROFILE` and no longer use `HOME`, which is not normally set for regular user accounts. This makes them again behave like `os.path.expanduser()`, which was changed to ignore `HOME` in 3.8, see [bpo-36264](https://bugs.python.org/issue?@action=redirect&bpo=36264) [https://bugs.python.org/issue?@action=redirect&bpo=36264].
- [bpo-39185](https://bugs.python.org/issue?@action=redirect&bpo=39185) [https://bugs.python.org/issue?@action=redirect&bpo=39185]: The `build.bat` script has additional

options for very-quiet output (-q) and very-verbose output (-vv)

## IDLE

- [bpo-39663](https://bugs.python.org/issue?@action=redirect&bpo=39663) [https://bugs.python.org/issue?@action=redirect&bpo=39663]: Add tests for `pyparse.find_good_parse_start()`.
- [bpo-39600](https://bugs.python.org/issue?@action=redirect&bpo=39600) [https://bugs.python.org/issue?@action=redirect&bpo=39600]: In the font configuration window, remove duplicated font names.
- [bpo-30780](https://bugs.python.org/issue?@action=redirect&bpo=30780) [https://bugs.python.org/issue?@action=redirect&bpo=30780]: Add remaining configdialog tests for buttons and highlights and keys tabs.
- [bpo-39388](https://bugs.python.org/issue?@action=redirect&bpo=39388) [https://bugs.python.org/issue?@action=redirect&bpo=39388]: IDLE Settings Cancel button now cancels pending changes
- [bpo-38792](https://bugs.python.org/issue?@action=redirect&bpo=38792) [https://bugs.python.org/issue?@action=redirect&bpo=38792]: Close an IDLE shell calltip if a **KeyboardInterrupt** or shell restart occurs. Patch by Zackery Spytz.

## C API

- [bpo-35081](https://bugs.python.org/issue?@action=redirect&bpo=35081) [https://bugs.python.org/issue?@action=redirect&bpo=35081]: Move the `bytes_methods.h` header file to the internal C API as `pycore_bytes_methods.h`: it only contains private symbols (prefixed by `_Py`), except of the `PyDoc_STRVAR_shared()` macro.
- [bpo-35081](https://bugs.python.org/issue?@action=redirect&bpo=35081) [https://bugs.python.org/issue?@action=redirect&bpo=35081]: Move the `dtoa.h` header file to the internal C API as `pycore_dtoa.h`: it only contains private functions (prefixed by `_Py`). The **math** and **cmath** modules must now be compiled with the `Py_BUILD_CORE` macro defined.
- [bpo-39573](https://bugs.python.org/issue?@action=redirect&bpo=39573) [https://bugs.python.org/issue?@action=redirect&bpo=39573]: Add **Py\_SET\_SIZE()** function to set the size of an object.
- [bpo-39500](https://bugs.python.org/issue?@action=redirect&bpo=39500) [https://bugs.python.org/issue?@action=redirect&bpo=39500]

@action=redirect&bpo=39500]: **PyUnicode\_IsIdentifier()** does not call **Py\_FatalError()** anymore if the string is not ready.

- **bpo-39573** [<https://bugs.python.org/issue?@action=redirect&bpo=39573>]: Add **Py\_SET\_TYPE()** function to set the type of an object.
- **bpo-39573** [<https://bugs.python.org/issue?@action=redirect&bpo=39573>]: Add a **Py\_SET\_REFCNT()** function to set the reference counter of an object.
- **bpo-39542** [<https://bugs.python.org/issue?@action=redirect&bpo=39542>]: Convert **PyType\_HasFeature()**, **PyType\_Check()** and **PyType\_CheckExact()** macros to static inline functions.
- **bpo-39542** [<https://bugs.python.org/issue?@action=redirect&bpo=39542>]: In the limited C API, **PyObject\_INIT()** and **PyObject\_INIT\_VAR()** are now defined as aliases to **PyObject\_Init()** and **PyObject\_InitVar()** to make their implementation opaque. It avoids to leak implementation details in the limited C API. Exclude the following functions from the limited C API: **\_Py\_NewReference()**, **\_Py\_ForgetReference()**, **\_PyTraceMalloc\_NewReference()** and **\_Py\_GetRefTotal()**.
- **bpo-39542** [<https://bugs.python.org/issue?@action=redirect&bpo=39542>]: Exclude trashcan mechanism from the limited C API: it requires access to **PyObject** and **PyThreadState** structure fields, whereas these structures are opaque in the limited C API.
- **bpo-39511** [<https://bugs.python.org/issue?@action=redirect&bpo=39511>]: The **PyThreadState\_Clear()** function now calls the **PyThreadState.on\_delete** callback. Previously, that happened in **PyThreadState\_Delete()**.
- **bpo-38076** [<https://bugs.python.org/issue?@action=redirect&bpo=38076>]: Fix to clear the interpreter state only after clearing module globals to guarantee module state access from C Extensions during runtime destruction
- **bpo-39245** [<https://bugs.python.org/issue?@action=redirect&bpo=39245>]: The **Vectorcall** API (PEP 590) was

made public, adding the functions `PyObject_Vectorcall`, `PyObject_VectorcallMethod`, `PyVectorcall_Function`, `PyObject_CallOneArg`, `PyObject_CallMethodNoArgs`, `PyObject_CallMethodOneArg`, `PyObject_FastCallDict`, and the flag `Py_TPFLAGS_HAVE_VECTORCALL`.

## Python 3.9.0 alpha 3

*Release date: 2020-01-24*

### Core and Builtins

- [bpo-39427](https://bugs.python.org/issue?@action=redirect&bpo=39427) [https://bugs.python.org/issue?@action=redirect&bpo=39427]: Document all possibilities for the `-X` options in the command line help section. Patch by Pablo Galindo.
- [bpo-39421](https://bugs.python.org/issue?@action=redirect&bpo=39421) [https://bugs.python.org/issue?@action=redirect&bpo=39421]: Fix possible crashes when operating with the functions in the `heapq` module and custom comparison operators.
- [bpo-39386](https://bugs.python.org/issue?@action=redirect&bpo=39386) [https://bugs.python.org/issue?@action=redirect&bpo=39386]: Prevent double awaiting of async iterator.
- [bpo-17005](https://bugs.python.org/issue?@action=redirect&bpo=17005) [https://bugs.python.org/issue?@action=redirect&bpo=17005]: Add `functools.TopologicalSorter` to the `functools` module to offers functionality to perform topological sorting of graphs. Patch by Pablo Galindo, Tim Peters and Larry Hastings.
- [bpo-39320](https://bugs.python.org/issue?@action=redirect&bpo=39320) [https://bugs.python.org/issue?@action=redirect&bpo=39320]: Replace four complex bytecodes for building sequences with three simpler ones.

The following four bytecodes have been removed:

- BUILD\_LIST\_UNPACK
- BUILD\_TUPLE\_UNPACK
- BUILD\_SET\_UNPACK
- BUILD\_TUPLE\_UNPACK\_WITH\_CALL

The following three bytecodes have been added:

- LIST\_TO\_TUPLE
- LIST\_EXTEND
- SET\_UPDATE

- [bpo-39336](https://bugs.python.org/issue?@action=redirect&bpo=39336) [https://bugs.python.org/issue?@action=redirect&bpo=39336]: Import loaders which publish immutable module objects can now publish immutable packages in addition to individual modules.
- [bpo-39322](https://bugs.python.org/issue?@action=redirect&bpo=39322) [https://bugs.python.org/issue?@action=redirect&bpo=39322]: Added a new function **`gc.is_finalized()`** to check if an object has been finalized by the garbage collector. Patch by Pablo Galindo.
- [bpo-39048](https://bugs.python.org/issue?@action=redirect&bpo=39048) [https://bugs.python.org/issue?@action=redirect&bpo=39048]: Improve the displayed error message when incorrect types are passed to `async with` statements by looking up the **`__aenter__()`** special method before the **`__aexit__()`** special method when entering an asynchronous context manager. Patch by Géry Ogam.
- [bpo-39235](https://bugs.python.org/issue?@action=redirect&bpo=39235) [https://bugs.python.org/issue?@action=redirect&bpo=39235]: Fix AST end location for lone generator expression in function call, e.g. `f(i for i in a)`.
- [bpo-39209](https://bugs.python.org/issue?@action=redirect&bpo=39209) [https://bugs.python.org/issue?@action=redirect&bpo=39209]: Correctly handle multi-line tokens in interactive mode. Patch by Pablo Galindo.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `_json` extension module to multiphase initialization (**PEP 489** [https://peps.python.org/pep-0489/]).

- [bpo-39216](https://bugs.python.org/issue?@action=redirect&bpo=39216) [https://bugs.python.org/issue?@action=redirect&bpo=39216]: Fix constant folding optimization for positional only arguments - by Anthony Sottile.
- [bpo-39215](https://bugs.python.org/issue?@action=redirect&bpo=39215) [https://bugs.python.org/issue?@action=redirect&bpo=39215]: Fix `SystemError` when nested function has annotation on positional-only argument - by Anthony Sottile.
- [bpo-39200](https://bugs.python.org/issue?@action=redirect&bpo=39200) [https://bugs.python.org/issue?@action=redirect&bpo=39200]: Correct the error message when calling the `min()` or `max()` with no arguments. Patch by Dong-hee Na.
- [bpo-39200](https://bugs.python.org/issue?@action=redirect&bpo=39200) [https://bugs.python.org/issue?@action=redirect&bpo=39200]: Correct the error message when trying to construct `range` objects with no arguments. Patch by Pablo Galindo.
- [bpo-39166](https://bugs.python.org/issue?@action=redirect&bpo=39166) [https://bugs.python.org/issue?@action=redirect&bpo=39166]: Fix incorrect line execution reporting in trace functions when tracing the last iteration of asynchronous for loops. Patch by Pablo Galindo.
- [bpo-39114](https://bugs.python.org/issue?@action=redirect&bpo=39114) [https://bugs.python.org/issue?@action=redirect&bpo=39114]: Fix incorrect line execution reporting in trace functions when tracing exception handlers with name binding. Patch by Pablo Galindo.
- [bpo-39156](https://bugs.python.org/issue?@action=redirect&bpo=39156) [https://bugs.python.org/issue?@action=redirect&bpo=39156]: Split the `COMPARE_OP` bytecode instruction into four distinct instructions.
  - `COMPARE_OP` for rich comparisons
  - `IS_OP` for 'is' and 'is not' tests
  - `CONTAINS_OP` for 'in' and 'is not' tests
  - `JUMP_IF_NOT_EXC_MATCH` for checking exceptions in 'try-except' statements.

This improves the clarity of the interpreter and should provide a modest speedup.

- [bpo-38588](https://bugs.python.org/issue?@action=redirect&bpo=38588) [https://bugs.python.org/issue?@action=redirect&bpo=38588]: Fix possible crashes in dict and list when calling `PyObject_RichCompareBool()`.
- [bpo-13601](https://bugs.python.org/issue?@action=redirect&bpo=13601) [https://bugs.python.org/issue?@action=redirect&bpo=13601]: By default, `sys.stderr` is line-buffered now, even if `stderr` is redirected to a file. You can still make `sys.stderr` unbuffered by passing the `-u` command-line option or setting the `PYTHONUNBUFFERED` environment variable.

(Contributed by Jendrik Seipp in [bpo-13601](https://bugs.python.org/issue?@action=redirect&bpo=13601) [https://bugs.python.org/issue?@action=redirect&bpo=13601].)

- [bpo-38610](https://bugs.python.org/issue?@action=redirect&bpo=38610) [https://bugs.python.org/issue?@action=redirect&bpo=38610]: Fix possible crashes in several list methods by holding strong references to list elements when calling `PyObject_RichCompareBool()`.
- [bpo-32021](https://bugs.python.org/issue?@action=redirect&bpo=32021) [https://bugs.python.org/issue?@action=redirect&bpo=32021]: Include brotli .br encoding in `mimetypes encodings_map`

## Library

- [bpo-39430](https://bugs.python.org/issue?@action=redirect&bpo=39430) [https://bugs.python.org/issue?@action=redirect&bpo=39430]: Fixed race condition in lazy imports in `tarfile`.
- [bpo-39413](https://bugs.python.org/issue?@action=redirect&bpo=39413) [https://bugs.python.org/issue?@action=redirect&bpo=39413]: The `os.unsetenv()` function is now also available on Windows.
- [bpo-39390](https://bugs.python.org/issue?@action=redirect&bpo=39390) [https://bugs.python.org/issue?@action=redirect&bpo=39390]: Fixed a regression with the `ignore` callback of `shutil.copytree()`. The argument types are now `str` and `List[str]` again.
- [bpo-39395](https://bugs.python.org/issue?@action=redirect&bpo=39395) [https://bugs.python.org/issue?@action=redirect&bpo=39395]: The `os.putenv()` and `os.unsetenv()` functions are now always available.
- [bpo-39406](https://bugs.python.org/issue?@action=redirect&bpo=39406) [https://bugs.python.org/issue?@action=redirect&bpo=39406]: If `setenv()` C function is

available, `os.putenv()` is now implemented with `setenv()` instead of `putenv()`, so Python doesn't have to handle the environment variable memory.

- [bpo-39396](https://bugs.python.org/issue?@action=redirect&bpo=39396) [https://bugs.python.org/issue?@action=redirect&bpo=39396]: Fix `math.nextafter(-0.0, +0.0)` on AIX 7.1.
- [bpo-29435](https://bugs.python.org/issue?@action=redirect&bpo=29435) [https://bugs.python.org/issue?@action=redirect&bpo=29435]: Allow `tarfile.is_tarfile()` to be used with file and file-like objects, like `zipfile.is_zipfile()`. Patch by William Woodruff.
- [bpo-39377](https://bugs.python.org/issue?@action=redirect&bpo=39377) [https://bugs.python.org/issue?@action=redirect&bpo=39377]: Removed `encoding` option from `json.loads()`. It has been deprecated since Python 3.1.
- [bpo-39389](https://bugs.python.org/issue?@action=redirect&bpo=39389) [https://bugs.python.org/issue?@action=redirect&bpo=39389]: Write accurate compression level metadata in `gzip` archives, rather than always signaling maximum compression.
- [bpo-39366](https://bugs.python.org/issue?@action=redirect&bpo=39366) [https://bugs.python.org/issue?@action=redirect&bpo=39366]: The previously deprecated `xpath()` and `xgtitle()` methods of `ntplib.NNTP` have been removed.
- [bpo-39357](https://bugs.python.org/issue?@action=redirect&bpo=39357) [https://bugs.python.org/issue?@action=redirect&bpo=39357]: Remove the *buffering* parameter of `bz2.BZ2File`. Since Python 3.0, it was ignored and using it was emitting `DeprecationWarning`. Pass an open file object, to control how the file is opened. The *compresslevel* parameter becomes keyword-only.
- [bpo-39353](https://bugs.python.org/issue?@action=redirect&bpo=39353) [https://bugs.python.org/issue?@action=redirect&bpo=39353]: Deprecate `binhex4` and `hexbin4` standards. Deprecate the `binhex` module and the following `binascii` functions: `b2a_hqx()`, `a2b_hqx()`, `rlecode_hqx()`, `rledecode_hqx()`, `crc_hqx()`.
- [bpo-39351](https://bugs.python.org/issue?@action=redirect&bpo=39351) [https://bugs.python.org/issue?@action=redirect&bpo=39351]: Remove `base64.encodestring()` and `base64.decodestring()`, aliases deprecated since Python 3.1: use `base64.encodebytes()` and `base64.decodebytes()` instead.
- [bpo-39350](https://bugs.python.org/issue?@action=redirect&bpo=39350) [https://bugs.python.org/issue?@action=redirect&bpo=39350]: Remove `fractions.gcd()`

function, deprecated since Python 3.5 ([bpo-22486](https://bugs.python.org/issue?@action=redirect&bpo=22486) [https://bugs.python.org/issue?@action=redirect&bpo=22486]): use `math.gcd()` instead.

- [bpo-39329](https://bugs.python.org/issue?@action=redirect&bpo=39329) [https://bugs.python.org/issue?@action=redirect&bpo=39329]: `LMTTP` constructor now has an optional `timeout` parameter. Patch by Dong-hee Na.
- [bpo-39313](https://bugs.python.org/issue?@action=redirect&bpo=39313) [https://bugs.python.org/issue?@action=redirect&bpo=39313]: Add a new `exec_function` option (`--exec-function` in the CLI) to `RefactoringTool` for making `exec` a function. Patch by Batuhan Taskaya.
- [bpo-39259](https://bugs.python.org/issue?@action=redirect&bpo=39259) [https://bugs.python.org/issue?@action=redirect&bpo=39259]: `FTP_TLS` and `FTP_TLS` now raise a `ValueError` if the given timeout for their constructor is zero to prevent the creation of a non-blocking socket. Patch by Dong-hee Na.
- [bpo-39259](https://bugs.python.org/issue?@action=redirect&bpo=39259) [https://bugs.python.org/issue?@action=redirect&bpo=39259]: `SMTP` and `SMTP_SSL` now raise a `ValueError` if the given timeout for their constructor is zero to prevent the creation of a non-blocking socket. Patch by Dong-hee Na.
- [bpo-39310](https://bugs.python.org/issue?@action=redirect&bpo=39310) [https://bugs.python.org/issue?@action=redirect&bpo=39310]: Add `math.ulp()`: return the value of the least significant bit of a float.
- [bpo-39297](https://bugs.python.org/issue?@action=redirect&bpo=39297) [https://bugs.python.org/issue?@action=redirect&bpo=39297]: Improved performance of `importlib.metadata` distribution discovery and resilient to inaccessible `sys.path` entries (`importlib.metadata` v1.4.0).
- [bpo-39259](https://bugs.python.org/issue?@action=redirect&bpo=39259) [https://bugs.python.org/issue?@action=redirect&bpo=39259]: `NNTP` and `NNTP_SSL` now raise a `ValueError` if the given timeout for their constructor is zero to prevent the creation of a non-blocking socket. Patch by Dong-hee Na.
- [bpo-38901](https://bugs.python.org/issue?@action=redirect&bpo=38901) [https://bugs.python.org/issue?@action=redirect&bpo=38901]: When you specify `prompt=''` or equivalently `python -m venv --prompt . ...` the basename of the current directory is used to set the created `venv`'s prompt when it's activated.
- [bpo-39288](https://bugs.python.org/issue?@action=redirect&bpo=39288) [https://bugs.python.org/issue?@action=redirect&bpo=39288]: Add `math.nextafter()`: return the next floating-point value after `x` towards `y`.

- [bpo-39259](https://bugs.python.org/issue?@action=redirect&bpo=39259) [https://bugs.python.org/issue?@action=redirect&bpo=39259]: **POP3** and **POP3\_SSL** now raise a **ValueError** if the given timeout for their constructor is zero to prevent the creation of a non-blocking socket. Patch by Dong-hee Na.
- [bpo-39242](https://bugs.python.org/issue?@action=redirect&bpo=39242) [https://bugs.python.org/issue?@action=redirect&bpo=39242]: Updated the Gmane domain from news.gmane.org to news.gmane.io which is used for examples of **NNTP** news reader server and nntplib tests.
- [bpo-35292](https://bugs.python.org/issue?@action=redirect&bpo=35292) [https://bugs.python.org/issue?@action=redirect&bpo=35292]: Proxy the **SimpleHTTPRequestHandler.guess\_type** to **mimetypes.guess\_type** so the **mimetypes.init** is called lazily to avoid unnecessary costs when **http.server** module is imported.
- [bpo-39239](https://bugs.python.org/issue?@action=redirect&bpo=39239) [https://bugs.python.org/issue?@action=redirect&bpo=39239]: The **select.epoll.unregister()** method no longer ignores the **EBADF** error.
- [bpo-38907](https://bugs.python.org/issue?@action=redirect&bpo=38907) [https://bugs.python.org/issue?@action=redirect&bpo=38907]: In **http.server** script, restore binding to IPv4 on Windows.
- [bpo-39152](https://bugs.python.org/issue?@action=redirect&bpo=39152) [https://bugs.python.org/issue?@action=redirect&bpo=39152]: Fix **ttk.Scale.configure([name])** to return configuration tuple for name or all options. Giovanni Lombardo contributed part of the patch.
- [bpo-39198](https://bugs.python.org/issue?@action=redirect&bpo=39198) [https://bugs.python.org/issue?@action=redirect&bpo=39198]: If an exception were to be thrown in **Logger.isEnabledFor** (say, by **asyncio** timeouts or **stopit**) , the **logging** global lock may not be released appropriately, resulting in deadlock. This change wraps that block of code with **try...finally** to ensure the lock is released.
- [bpo-39191](https://bugs.python.org/issue?@action=redirect&bpo=39191) [https://bugs.python.org/issue?@action=redirect&bpo=39191]: Perform a check for running loop before starting a new task in **loop.run\_until\_complete()** to fail fast; it prevents the side effect of new task spawning before exception raising.
- [bpo-38871](https://bugs.python.org/issue?@action=redirect&bpo=38871) [https://bugs.python.org/issue?@action=redirect&bpo=38871]: Correctly parenthesize filter-based

statements that contain lambda expressions in mod:[lib2to3](#). Patch by Dong-hee Na.

- [bpo-39142](#) [<https://bugs.python.org/issue?@action=redirect&bpo=39142>]: A change was made to `logging.config.dictConfig` to avoid converting instances of named tuples to `ConvertingTuple`. It's assumed that named tuples are too specialised to be treated like ordinary tuples; if a user of named tuples requires `ConvertingTuple` functionality, they will have to implement that themselves in their named tuple class.
- [bpo-39158](#) [<https://bugs.python.org/issue?@action=redirect&bpo=39158>]: `ast.literal_eval()` now supports empty sets.
- [bpo-39129](#) [<https://bugs.python.org/issue?@action=redirect&bpo=39129>]: Fix `import path` for `asyncio.TimeoutError`
- [bpo-39057](#) [<https://bugs.python.org/issue?@action=redirect&bpo=39057>]: `urllib.request.proxy_bypass_environment()` now ignores leading dots and no longer ignores a trailing newline.
- [bpo-39056](#) [<https://bugs.python.org/issue?@action=redirect&bpo=39056>]: Fixed handling invalid warning category in the `-W` option. No longer import the `re` module if it is not needed.
- [bpo-39055](#) [<https://bugs.python.org/issue?@action=redirect&bpo=39055>]: `base64.b64decode()` with `validate=True` raises now a `binascii.Error` if the input ends with a single `\n`.
- [bpo-21600](#) [<https://bugs.python.org/issue?@action=redirect&bpo=21600>]: Fix `mock.patch.stopall()` to stop active patches that were created with `mock.patch.dict()`.
- [bpo-39019](#) [<https://bugs.python.org/issue?@action=redirect&bpo=39019>]: Implement dummy `__class_getitem__` for `tempfile.SpooledTemporaryFile`.
- [bpo-39019](#) [<https://bugs.python.org/issue?@action=redirect&bpo=39019>]: Implement dummy `__class_getitem__` for `subprocess.Popen`, `subprocess.CompletedProcess`

- [bpo-38914](https://bugs.python.org/issue?@action=redirect&bpo=38914) [https://bugs.python.org/issue?@action=redirect&bpo=38914]: Adjusted the wording of the warning issued by `distutils' check` command when the `author` and `maintainer` fields are supplied but no corresponding e-mail field (`author_email` or `maintainer_email`) is found. The wording now reflects the fact that these fields are suggested, but not required. Patch by Juergen Gmach.
- [bpo-38878](https://bugs.python.org/issue?@action=redirect&bpo=38878) [https://bugs.python.org/issue?@action=redirect&bpo=38878]: Fixed `_subclasshook_` of `os.PathLike` to return a correct result upon inheritance. Patch by Bar Harel.
- [bpo-38615](https://bugs.python.org/issue?@action=redirect&bpo=38615) [https://bugs.python.org/issue?@action=redirect&bpo=38615]: `IMAP4` and `IMAP4_SSL` now have an optional `timeout` parameter for their constructors. Also, the `open()` method now has an optional `timeout` parameter with this change. The overridden methods of `IMAP4_SSL` and `IMAP4_stream` were applied to this change. Patch by Dong-hee Na.
- [bpo-35182](https://bugs.python.org/issue?@action=redirect&bpo=35182) [https://bugs.python.org/issue?@action=redirect&bpo=35182]: Fixed `Popen.communicate()` subsequent call crash when the child process has already closed any piped standard stream, but still continues to be running. Patch by Andriy Maletsky.
- [bpo-38630](https://bugs.python.org/issue?@action=redirect&bpo=38630) [https://bugs.python.org/issue?@action=redirect&bpo=38630]: On Unix, `subprocess.Popen.send_signal()` now polls the process status. Polling reduces the risk of sending a signal to the wrong process if the process completed, the `subprocess.Popen.returncode` attribute is still `None`, and the pid has been reassigned (recycled) to a new different process.
- [bpo-38536](https://bugs.python.org/issue?@action=redirect&bpo=38536) [https://bugs.python.org/issue?@action=redirect&bpo=38536]: Removes trailing space in formatted currency with `international=True` and a locale with symbol following value. E.g. `locale.currency(12.34, international=True)` returned `'12,34 EUR '` instead of `'12,34 EUR'`.
- [bpo-38473](https://bugs.python.org/issue?@action=redirect&bpo=38473) [https://bugs.python.org/issue?@action=redirect&bpo=38473]: Use signature from inner mock for

autospecced methods attached with `unittest.mock.attach_mock()`. Patch by Karthikeyan Singaravelan.

- [bpo-38361](https://bugs.python.org/issue?@action=redirect&bpo=38361) [https://bugs.python.org/issue?@action=redirect&bpo=38361]: Fixed an issue where `ident` could include a leading path separator when `syslog.openlog()` was called without arguments.
- [bpo-38293](https://bugs.python.org/issue?@action=redirect&bpo=38293) [https://bugs.python.org/issue?@action=redirect&bpo=38293]: Add `copy.copy()` and `copy.deepcopy()` support to `property()` objects.
- [bpo-37958](https://bugs.python.org/issue?@action=redirect&bpo=37958) [https://bugs.python.org/issue?@action=redirect&bpo=37958]: Added the `pstats.Stats.get_profile_dict()` method to return the profile data as a `StatsProfile` instance.
- [bpo-28367](https://bugs.python.org/issue?@action=redirect&bpo=28367) [https://bugs.python.org/issue?@action=redirect&bpo=28367]: Termios magic constants for the following baud rates: - B500000 - B576000 - B921600 - B1000000 - B1152000 - B1500000 - B2000000 - B2500000 - B3000000 - B3500000 - B4000000 Patch by Andrey Smirnov

## Documentation

- [bpo-39381](https://bugs.python.org/issue?@action=redirect&bpo=39381) [https://bugs.python.org/issue?@action=redirect&bpo=39381]: Mention in docs that `asyncio.get_event_loop()` implicitly creates new event loop only if called from the main thread.
- [bpo-38918](https://bugs.python.org/issue?@action=redirect&bpo=38918) [https://bugs.python.org/issue?@action=redirect&bpo=38918]: Add an entry for `__module__` in the “function” & “method” sections of the `inspect` docs’ `Types and members` table.
- [bpo-3530](https://bugs.python.org/issue?@action=redirect&bpo=3530) [https://bugs.python.org/issue?@action=redirect&bpo=3530]: In the `ast` module documentation, fix a misleading `NodeTransformer` example and add advice on when to use the `fix_missing_locations` function.

## Build

- [bpo-39395](https://bugs.python.org/issue?@action=redirect&bpo=39395) [https://bugs.python.org/issue?@action=redirect&bpo=39395]: On non-Windows platforms, the `setenv()` and `unsetenv()` functions are now required to

build Python.

- [bpo-39160](https://bugs.python.org/issue?@action=redirect&bpo=39160) [https://bugs.python.org/issue?@action=redirect&bpo=39160]: Updated the documentation in `/configure --help` to show default values, reference documentation where required and add additional explanation where needed.
- [bpo-39144](https://bugs.python.org/issue?@action=redirect&bpo=39144) [https://bugs.python.org/issue?@action=redirect&bpo=39144]: The `ctags` and `etags` build targets both include `Modules/_ctypes` and Python standard library source files.

## IDLE

- [bpo-39050](https://bugs.python.org/issue?@action=redirect&bpo=39050) [https://bugs.python.org/issue?@action=redirect&bpo=39050]: Make IDLE Settings dialog Help button work again.
- [bpo-34118](https://bugs.python.org/issue?@action=redirect&bpo=34118) [https://bugs.python.org/issue?@action=redirect&bpo=34118]: Tag `memoryview`, `range`, and `tuple` as classes, the same as `list`, etcetera, in the library manual built-in functions list.
- [bpo-32989](https://bugs.python.org/issue?@action=redirect&bpo=32989) [https://bugs.python.org/issue?@action=redirect&bpo=32989]: Add tests for editor `newline_and_indent_event` method. Remove dead code from `pyparse.find_good_parse_start` method.

## C API

- [bpo-39372](https://bugs.python.org/issue?@action=redirect&bpo=39372) [https://bugs.python.org/issue?@action=redirect&bpo=39372]: Clean header files of interfaces defined but with no implementation. The public API symbols being removed are:  
`_PyBytes_InsertThousandsGroupingLocale`,  
`_PyBytes_InsertThousandsGrouping`,  
`_Py_InitializeFromArgs`,  
`_Py_InitializeFromWideArgs`, `_PyFloat_Repr`,  
`_PyFloat_Digits`, `_PyFloat_DigitsInit`,  
`PyFrame_ExtendStack`, `_PyAIterWrapper_Type`,  
`PyNullImporter_Type`, `PyCmpWrapper_Type`,  
`PySortWrapper_Type`, `PyNoArgsFunction`.
- [bpo-39164](https://bugs.python.org/issue?@action=redirect&bpo=39164) [https://bugs.python.org/issue?@action=redirect&bpo=39164]

@action=redirect&bpo=39164]: Add a private `_PyErr_GetExcInfo()` function to retrieve exception information of the specified Python thread state.

## Python 3.9.0 alpha 2

*Release date: 2019-12-18*

### Security

- [bpo-38945](https://bugs.python.org/issue?@action=redirect&bpo=38945) [https://bugs.python.org/issue?@action=redirect&bpo=38945]: Newline characters have been escaped when performing uu encoding to prevent them from overflowing into to content section of the encoded file. This prevents malicious or accidental modification of data during the decoding process.
- [bpo-37228](https://bugs.python.org/issue?@action=redirect&bpo=37228) [https://bugs.python.org/issue?@action=redirect&bpo=37228]: Due to significant security concerns, the `reuse_address` parameter of `asyncio.loop.create_datagram_endpoint()` is no longer supported. This is because of the behavior of `SO_REUSEADDR` in UDP. For more details, see the documentation for `loop.create_datagram_endpoint()`. (Contributed by Kyle Stanley, Antoine Pitrou, and Yuri Selivanov in [bpo-37228](https://bugs.python.org/issue?@action=redirect&bpo=37228) [https://bugs.python.org/issue?@action=redirect&bpo=37228].)
- [bpo-38804](https://bugs.python.org/issue?@action=redirect&bpo=38804) [https://bugs.python.org/issue?@action=redirect&bpo=38804]: Fixes a ReDoS vulnerability in [http.cookiejar](http://cookiejar). Patch by Ben Caller.

### Core and Builtins

- [bpo-39028](https://bugs.python.org/issue?@action=redirect&bpo=39028) [https://bugs.python.org/issue?@action=redirect&bpo=39028]: Slightly improve the speed of keyword argument parsing with many kwargs by strengthening the assumption that kwargs are interned strings.
- [bpo-39080](https://bugs.python.org/issue?@action=redirect&bpo=39080) [https://bugs.python.org/issue?@action=redirect&bpo=39080]

@action=redirect&bpo=39080]: Fix the value of `end_col_offset` for Starred Expression AST nodes when they are among the elements in the `args` attribute of Call AST nodes.

- [bpo-39031](https://bugs.python.org/issue?@action=redirect&bpo=39031) [https://bugs.python.org/issue?@action=redirect&bpo=39031]: When parsing an “elif” node, `lineno` and `col_offset` of the node now point to the “elif” keyword and not to its condition, making it consistent with the “if” node. Patch by Lysandros Nikolaou.
- [bpo-20443](https://bugs.python.org/issue?@action=redirect&bpo=20443) [https://bugs.python.org/issue?@action=redirect&bpo=20443]: In Python 3.9.0a1, `sys.argv[0]` was made an absolute path if a filename was specified on the command line. Revert this change, since most users expect `sys.argv` to be unmodified.
- [bpo-39008](https://bugs.python.org/issue?@action=redirect&bpo=39008) [https://bugs.python.org/issue?@action=redirect&bpo=39008]: `PySys_Audit()` now requires `Py_ssize_t` to be used for size arguments in the format string, regardless of whether `PY_SSIZE_T_CLEAN` was defined at include time.
- [bpo-38673](https://bugs.python.org/issue?@action=redirect&bpo=38673) [https://bugs.python.org/issue?@action=redirect&bpo=38673]: In REPL mode, don’t switch to PS2 if the line starts with comment or whitespace. Based on work by Batuhan Taşkaya.
- [bpo-38922](https://bugs.python.org/issue?@action=redirect&bpo=38922) [https://bugs.python.org/issue?@action=redirect&bpo=38922]: Calling `replace` on a code object now raises the `code.__new__` audit event.
- [bpo-38920](https://bugs.python.org/issue?@action=redirect&bpo=38920) [https://bugs.python.org/issue?@action=redirect&bpo=38920]: Add audit hooks for when `sys.excepthook()` and `sys.unraisablehook()` are invoked.
- [bpo-38892](https://bugs.python.org/issue?@action=redirect&bpo=38892) [https://bugs.python.org/issue?@action=redirect&bpo=38892]: Improve documentation for audit events table and functions.
- [bpo-38852](https://bugs.python.org/issue?@action=redirect&bpo=38852) [https://bugs.python.org/issue?@action=redirect&bpo=38852]: Set the thread stack size to 8 Mb for debug builds on android platforms.
- [bpo-38858](https://bugs.python.org/issue?@action=redirect&bpo=38858) [https://bugs.python.org/issue?@action=redirect&bpo=38858]: Each Python subinterpreter now has its own “small integer singletons”: numbers in `[-5; 257]` range. It is no longer possible to change the number of small integers at build time by overriding `NSMALLNEGINTS` and

NSMALLPOSINTS macros: macros should now be modified manually in `pycore_pystate.h` header file.

- [bpo-36854](https://bugs.python.org/issue?@action=redirect&bpo=36854) [https://bugs.python.org/issue?@action=redirect&bpo=36854]: The garbage collector state becomes per interpreter (`PyInterpreterState.gc`), rather than being global (`_PyRuntimeState.gc`).
- [bpo-38835](https://bugs.python.org/issue?@action=redirect&bpo=38835) [https://bugs.python.org/issue?@action=redirect&bpo=38835]: The `PyFPE_START_PROTECT()` and `PyFPE_END_PROTECT()` macros are empty: they have been doing nothing for the last year, so stop using them.
- [bpo-38328](https://bugs.python.org/issue?@action=redirect&bpo=38328) [https://bugs.python.org/issue?@action=redirect&bpo=38328]: Sped up the creation time of constant `list` and `set` displays. Patch by Brandt Bucher.
- [bpo-38707](https://bugs.python.org/issue?@action=redirect&bpo=38707) [https://bugs.python.org/issue?@action=redirect&bpo=38707]: `MainThread.native_id` is now correctly reset in child processes spawned using `multiprocessing.Process`, instead of retaining the parent's value.
- [bpo-38629](https://bugs.python.org/issue?@action=redirect&bpo=38629) [https://bugs.python.org/issue?@action=redirect&bpo=38629]: Added `__floor__` and `__ceil__` methods to float object. Patch by Batuhan Taşkaya.
- [bpo-27145](https://bugs.python.org/issue?@action=redirect&bpo=27145) [https://bugs.python.org/issue?@action=redirect&bpo=27145]: `int + int` and `int - int` operators can now return small integer singletons. Patch by hongweipeng.
- [bpo-38021](https://bugs.python.org/issue?@action=redirect&bpo=38021) [https://bugs.python.org/issue?@action=redirect&bpo=38021]: Provide a platform tag for AIX that is sufficient for PEP425 binary distribution identification. Patch by Michael Felt.
- [bpo-35409](https://bugs.python.org/issue?@action=redirect&bpo=35409) [https://bugs.python.org/issue?@action=redirect&bpo=35409]: Ignore `GeneratorExit` exceptions when throwing an exception into the `aclose` coroutine of an asynchronous generator.
- [bpo-33387](https://bugs.python.org/issue?@action=redirect&bpo=33387) [https://bugs.python.org/issue?@action=redirect&bpo=33387]: Removed `WITH_CLEANUP_START`, `WITH_CLEANUP_FINISH`, `BEGIN_FINALLY`, `END_FINALLY`, `CALL_FINALLY` and `POP_FINALLY` bytecodes. Replaced with `RERAISE` and `WITH_EXCEPT_START` bytecodes. The compiler now

generates different code for exceptional and non-exceptional branches for ‘with’ and ‘try-except’ statements. For ‘try-finally’ statements the ‘finally’ block is replicated for each exit from the ‘try’ body.

## Library

- [bpo-39033](https://bugs.python.org/issue?@action=redirect&bpo=39033) [https://bugs.python.org/issue?@action=redirect&bpo=39033]: Fix `NameError` in `zipimport`. Patch by Karthikeyan Singaravelan.
- [bpo-39022](https://bugs.python.org/issue?@action=redirect&bpo=39022) [https://bugs.python.org/issue?@action=redirect&bpo=39022]: Update `importlib.metadata` to include improvements from `importlib_metadata` 1.3 including better serialization of `EntryPoints` and improved documentation for custom finders.
- [bpo-39006](https://bugs.python.org/issue?@action=redirect&bpo=39006) [https://bugs.python.org/issue?@action=redirect&bpo=39006]: Fix `asyncio` when the `ssl` module is missing: only check for `ssl.SSLSocket` instance if the `ssl` module is available.
- [bpo-38708](https://bugs.python.org/issue?@action=redirect&bpo=38708) [https://bugs.python.org/issue?@action=redirect&bpo=38708]: Fix a potential `IndexError` in email parser when parsing an empty `msg-id`.
- [bpo-38698](https://bugs.python.org/issue?@action=redirect&bpo=38698) [https://bugs.python.org/issue?@action=redirect&bpo=38698]: Add a new `InvalidMessageID` token to email parser to represent invalid `Message-ID` headers. Also, add defects when there is remaining value after parsing the header.
- [bpo-38994](https://bugs.python.org/issue?@action=redirect&bpo=38994) [https://bugs.python.org/issue?@action=redirect&bpo=38994]: Implement `__class_getitem__` for `os.PathLike`, `pathlib.Path`.
- [bpo-38979](https://bugs.python.org/issue?@action=redirect&bpo=38979) [https://bugs.python.org/issue?@action=redirect&bpo=38979]: Return class from `ContextVar.__class_getitem__` to simplify subclassing.
- [bpo-38978](https://bugs.python.org/issue?@action=redirect&bpo=38978) [https://bugs.python.org/issue?@action=redirect&bpo=38978]

@action=redirect&bpo=38978]: Implement `__class_getitem__` on asyncio objects (Future, Task, Queue). Patch by Batuhan Taskaya.

- [bpo-38916](https://bugs.python.org/issue?@action=redirect&bpo=38916) [https://bugs.python.org/issue?@action=redirect&bpo=38916]: **array.array**: Remove `tostring()` and `fromstring()` methods. They were aliases to `tobytes()` and `frombytes()`, deprecated since Python 3.2.
- [bpo-38986](https://bugs.python.org/issue?@action=redirect&bpo=38986) [https://bugs.python.org/issue?@action=redirect&bpo=38986]: Make repr of C accelerated TaskWakeupMethWrapper the same as of pure Python version.
- [bpo-38982](https://bugs.python.org/issue?@action=redirect&bpo=38982) [https://bugs.python.org/issue?@action=redirect&bpo=38982]: Fix asyncio `PidfdChildWatcher`: handle `waitpid()` error. If `waitpid()` is called elsewhere, `waitpid()` call fails with **ChildProcessError**: use return code 255 in this case, and log a warning. It ensures that the `pidfd` file descriptor is closed if this error occurs.
- [bpo-38529](https://bugs.python.org/issue?@action=redirect&bpo=38529) [https://bugs.python.org/issue?@action=redirect&bpo=38529]: Drop too noisy asyncio warning about deletion of a stream without explicit `.close()` call.
- [bpo-27413](https://bugs.python.org/issue?@action=redirect&bpo=27413) [https://bugs.python.org/issue?@action=redirect&bpo=27413]: Added ability to pass through `ensure_ascii` options to `json.dumps` in the `json.tool` command-line interface.
- [bpo-38634](https://bugs.python.org/issue?@action=redirect&bpo=38634) [https://bugs.python.org/issue?@action=redirect&bpo=38634]: The **readline** module now detects if Python is linked to `libedit` at runtime on all platforms. Previously, the check was only done on macOS.
- [bpo-33684](https://bugs.python.org/issue?@action=redirect&bpo=33684) [https://bugs.python.org/issue?@action=redirect&bpo=33684]: Fix `json.tool` failed to read a JSON file with non-ASCII characters when locale encoding is not UTF-8.

- [bpo-38698](https://bugs.python.org/issue?@action=redirect&bpo=38698) [https://bugs.python.org/issue?@action=redirect&bpo=38698]: Prevent `UnboundLocalError` to pop up in `parse_message_id`.  
  
`parse_message_id()` was improperly using a token defined inside an exception handler, which was raising `UnboundLocalError` on parsing an invalid value. Patch by Claudiu Popa.
- [bpo-38927](https://bugs.python.org/issue?@action=redirect&bpo=38927) [https://bugs.python.org/issue?@action=redirect&bpo=38927]: Use `python -m pip` instead of `pip` to upgrade dependencies in `venv`.
- [bpo-26730](https://bugs.python.org/issue?@action=redirect&bpo=26730) [https://bugs.python.org/issue?@action=redirect&bpo=26730]: Fix `SpooledTemporaryFile.rollover()` might corrupt the file when it is in text mode. Patch by Serhiy Storchaka.
- [bpo-38881](https://bugs.python.org/issue?@action=redirect&bpo=38881) [https://bugs.python.org/issue?@action=redirect&bpo=38881]: `random.choices()` now raises a `ValueError` when all the weights are zero.
- [bpo-38876](https://bugs.python.org/issue?@action=redirect&bpo=38876) [https://bugs.python.org/issue?@action=redirect&bpo=38876]: Raise `pickle.UnpicklingError` when loading an item from memo for invalid input.

The previous code was raising a `KeyError` for both the Python and C implementation. This was caused by the specified index of an invalid input which did not exist in the memo structure, where the pickle stores what objects it has seen. The malformed input would have caused either a `BINGET` or `LONG_BINGET` load from the memo, leading to a `KeyError` as the determined index was bogus. Patch by Claudiu Popa

- [bpo-38688](https://bugs.python.org/issue?@action=redirect&bpo=38688) [https://bugs.python.org/issue?@action=redirect&bpo=38688]: Calling `func:shutil.copytree` to copy a directory tree from one directory to another subdirectory resulted in an endless loop and a `RecursionError`. A fix was added to consume an iterator and create the list of the entries to be copied, avoiding the recursion for newly

created directories. Patch by Bruno P. Kinoshita.

- [bpo-38863](https://bugs.python.org/issue?@action=redirect&bpo=38863) [https://bugs.python.org/issue?@action=redirect&bpo=38863]: Improve `is_cgi()` function in `http.server`, which enables processing the case that `cgi` directory is a child of another directory other than root.
- [bpo-37838](https://bugs.python.org/issue?@action=redirect&bpo=37838) [https://bugs.python.org/issue?@action=redirect&bpo=37838]: `typing.get_type_hints()` properly handles functions decorated with `functools.wraps()`.
- [bpo-38870](https://bugs.python.org/issue?@action=redirect&bpo=38870) [https://bugs.python.org/issue?@action=redirect&bpo=38870]: Expose `ast.unparse()` as a function of the `ast` module that can be used to unparse an `ast.AST` object and produce a string with code that would produce an equivalent `ast.AST` object when parsed. Patch by Pablo Galindo and Batuhan Taskaya.
- [bpo-38859](https://bugs.python.org/issue?@action=redirect&bpo=38859) [https://bugs.python.org/issue?@action=redirect&bpo=38859]: `AsyncMock` now returns `StopAsyncIteration` on the exhaustion of a `side_effects` iterable. Since PEP-479 its Impossible to raise a `StopIteration` exception from a coroutine.
- [bpo-38857](https://bugs.python.org/issue?@action=redirect&bpo=38857) [https://bugs.python.org/issue?@action=redirect&bpo=38857]: `AsyncMock` fix for return values that are awaitable types. This also covers `side_effect` iterable values that happened to be awaitable, and wraps callables that return an awaitable type. Before these awaitables were being awaited instead of being returned as is.
- [bpo-38834](https://bugs.python.org/issue?@action=redirect&bpo=38834) [https://bugs.python.org/issue?@action=redirect&bpo=38834]: `typing.TypedDict` subclasses now track which keys are optional using the `__required_keys__` and `__optional_keys__` attributes, to enable runtime validation by downstream projects. Patch by Zac Hatfield-Dodds.
- [bpo-38821](https://bugs.python.org/issue?@action=redirect&bpo=38821) [https://bugs.python.org/issue?@action=redirect&bpo=38821]: Fix unhandled exceptions in

**argparse** when internationalizing error messages for arguments with `nargs` set to special (non-integer) values. Patch by Federico Bond.

- **bpo-38820** [<https://bugs.python.org/issue?@action=redirect&bpo=38820>]: Make Python compatible with OpenSSL 3.0.0. **ssl.SSLSocket.getpeercert()** no longer returns IPv6 addresses with a trailing new line.
- **bpo-38811** [<https://bugs.python.org/issue?@action=redirect&bpo=38811>]: Fix an unhandled exception in **pathlib** when **os.link()** is missing. Patch by Toke Høiland-Jørgensen.
- **bpo-38686** [<https://bugs.python.org/issue?@action=redirect&bpo=38686>]: Added support for multiple `qop` values in **urllib.request.AbstractDigestAuthHandler**.
- **bpo-38712** [<https://bugs.python.org/issue?@action=redirect&bpo=38712>]: Add the Linux-specific **signal.pidfd\_send\_signal()** function, which allows sending a signal to a process identified by a file descriptor rather than a pid.
- **bpo-38348** [<https://bugs.python.org/issue?@action=redirect&bpo=38348>]: Add `-i` and `--indent` (indentation level), and `--no-type-comments` (type comments) command line options to `ast` parsing tool.
- **bpo-37523** [<https://bugs.python.org/issue?@action=redirect&bpo=37523>]: Change **zipfile.ZipExtFile** to raise `ValueError` when trying to access the underlying file object after it has been closed. This new behavior is consistent with how accessing closed files is handled in other parts of Python.
- **bpo-38045** [<https://bugs.python.org/issue?@action=redirect&bpo=38045>]: Improve the performance of **enum.\_decompose()** in **enum**. Patch by hongweipeng.

- [bpo-36820](https://bugs.python.org/issue?@action=redirect&bpo=36820) [https://bugs.python.org/issue?@action=redirect&bpo=36820]: Break cycle generated when saving an exception in `socket.py`, `codeop.py` and `dyld.py` as they keep alive not only the exception but user objects through the `__traceback__` attribute. Patch by Mario Corchero.
- [bpo-36406](https://bugs.python.org/issue?@action=redirect&bpo=36406) [https://bugs.python.org/issue?@action=redirect&bpo=36406]: Handle namespace packages in **doctest**. Patch by Karthikeyan Singaravelan.
- [bpo-34776](https://bugs.python.org/issue?@action=redirect&bpo=34776) [https://bugs.python.org/issue?@action=redirect&bpo=34776]: Fix dataclasses to support forward references in type annotations
- [bpo-20928](https://bugs.python.org/issue?@action=redirect&bpo=20928) [https://bugs.python.org/issue?@action=redirect&bpo=20928]: ElementTree supports recursive XInclude processing. Patch by Stefan Behnel.
- [bpo-29636](https://bugs.python.org/issue?@action=redirect&bpo=29636) [https://bugs.python.org/issue?@action=redirect&bpo=29636]: Add whitespace options for formatting JSON with the `json.tool` CLI. The following mutually exclusive options are now supported: `--indent` for setting the indent level in spaces; `--tab` for indenting with tabs; `--no-indent` for suppressing newlines; and `--compact` for suppressing all whitespace. The default behavior remains the same as `--indent=4`.

## Documentation

- [bpo-38928](https://bugs.python.org/issue?@action=redirect&bpo=38928) [https://bugs.python.org/issue?@action=redirect&bpo=38928]: Correct when `venv's upgrade_dependencies()` and `--upgrade-deps` are added.
- [bpo-38899](https://bugs.python.org/issue?@action=redirect&bpo=38899) [https://bugs.python.org/issue?@action=redirect&bpo=38899]: Update documentation to state that to activate virtual environments under fish one should use **source**, not as documented at <https://fishshell.com/docs/current/cmds/source.html>.
- [bpo-22377](https://bugs.python.org/issue?@action=redirect&bpo=22377) [https://bugs.python.org/issue?@action=redirect&bpo=22377]

@action=redirect&bpo=22377]: Improves documentation of the values that `datetime.datetime.strptime()` accepts for %Z. Patch by Karl Dubost.

## Tests

- [bpo-38546](https://bugs.python.org/issue?@action=redirect&bpo=38546) [https://bugs.python.org/issue?@action=redirect&bpo=38546]: Fix `test_ressources_gced_in_workers()` of `test_concurrent_futures`: explicitly stop the manager to prevent leaking a child process running in the background after the test completes.
- [bpo-38546](https://bugs.python.org/issue?@action=redirect&bpo=38546) [https://bugs.python.org/issue?@action=redirect&bpo=38546]: Multiprocessing and `concurrent.futures` tests now stop the resource tracker process when tests complete.
- [bpo-38614](https://bugs.python.org/issue?@action=redirect&bpo=38614) [https://bugs.python.org/issue?@action=redirect&bpo=38614]: Replace hardcoded timeout constants in tests with new `test.support` constants: `LOOPBACK_TIMEOUT`, `INTERNET_TIMEOUT`, `SHORT_TIMEOUT` and `LONG_TIMEOUT`. It becomes easier to adjust these four timeout constants for all tests at once, rather than having to adjust every single test file.
- [bpo-38547](https://bugs.python.org/issue?@action=redirect&bpo=38547) [https://bugs.python.org/issue?@action=redirect&bpo=38547]: Fix `test_pty`: if the process is the session leader, closing the master file descriptor raises a `SIGHUP` signal: simply ignore `SIGHUP` when running the tests.
- [bpo-38992](https://bugs.python.org/issue?@action=redirect&bpo=38992) [https://bugs.python.org/issue?@action=redirect&bpo=38992]: Fix a test for `math.fsum()` that was failing due to constant folding.
- [bpo-38991](https://bugs.python.org/issue?@action=redirect&bpo=38991) [https://bugs.python.org/issue?@action=redirect&bpo=38991]: `test.support`: `run_python_until_end()`, `assert_python_ok()` and `assert_python_failure()` functions no longer strip whitespaces from `stderr`. Remove `test.support.strip_python_stderr()` function.
- [bpo-38965](https://bugs.python.org/issue?@action=redirect&bpo=38965) [https://bugs.python.org/issue?@action=redirect&bpo=38965]: Fix `test_faulthandler` on GCC 10. Use the “volatile” keyword in `faulthandler._stack_overflow()` to prevent tail call

optimization on any compiler, rather than relying on compiler specific pragma.

- [bpo-38875](https://bugs.python.org/issue?@action=redirect&bpo=38875) [https://bugs.python.org/issue?@action=redirect&bpo=38875]: `test_capi`: trashcan tests now require the test “cpu” resource.
- [bpo-38841](https://bugs.python.org/issue?@action=redirect&bpo=38841) [https://bugs.python.org/issue?@action=redirect&bpo=38841]: Skip `asyncio` `test_create_datagram_endpoint_existing_sock_unix` on platforms lacking a functional `bind()` for named unix domain sockets.
- [bpo-38692](https://bugs.python.org/issue?@action=redirect&bpo=38692) [https://bugs.python.org/issue?@action=redirect&bpo=38692]: Skip the `test_posix.test_pidfd_open()` test if `os.pidfd_open()` fails with a `PermissionError`. This situation can happen in a Linux sandbox using a syscall whitelist which doesn’t allow the `pidfd_open()` syscall yet.
- [bpo-38839](https://bugs.python.org/issue?@action=redirect&bpo=38839) [https://bugs.python.org/issue?@action=redirect&bpo=38839]: Fix some unused functions in tests. Patch by Adam Johnson.
- [bpo-38669](https://bugs.python.org/issue?@action=redirect&bpo=38669) [https://bugs.python.org/issue?@action=redirect&bpo=38669]: Raise `TypeError` when passing target as a string with `unittest.mock.patch.object()`.
- [bpo-37957](https://bugs.python.org/issue?@action=redirect&bpo=37957) [https://bugs.python.org/issue?@action=redirect&bpo=37957]: `test regrtest` now can receive a list of test patterns to ignore (using the `-i/-ignore` argument) or a file with a list of patterns to ignore (using the `-ignore-file` argument). Patch by Pablo Galindo.

## Build

- [bpo-37404](https://bugs.python.org/issue?@action=redirect&bpo=37404) [https://bugs.python.org/issue?@action=redirect&bpo=37404]: `asyncio` now raises `TypeError` when calling incompatible methods with an `ssl.SSLSocket` socket. Patch by Ido Michael.
- [bpo-36500](https://bugs.python.org/issue?@action=redirect&bpo=36500) [https://bugs.python.org/issue?@action=redirect&bpo=36500]: Added an optional “regen” project to the Visual Studio solution that will regenerate all grammar, tokens, and opcodes.

## Windows

- [bpo-39007](https://bugs.python.org/issue?@action=redirect&bpo=39007) [https://bugs.python.org/issue?@action=redirect&bpo=39007]: Add auditing events to functions in **winreg**.
- [bpo-33125](https://bugs.python.org/issue?@action=redirect&bpo=33125) [https://bugs.python.org/issue?@action=redirect&bpo=33125]: Add support for building and releasing Windows ARM64 packages.

## macOS

- [bpo-37931](https://bugs.python.org/issue?@action=redirect&bpo=37931) [https://bugs.python.org/issue?@action=redirect&bpo=37931]: Fixed a crash on OSX dynamic builds that occurred when re-initializing the posix module after a `Py_Finalize` if the environment had changed since the previous **import posix**. Patch by Benoît Hudson.

## IDLE

- [bpo-38944](https://bugs.python.org/issue?@action=redirect&bpo=38944) [https://bugs.python.org/issue?@action=redirect&bpo=38944]: Escape key now closes IDLE completion windows. Patch by Johnny Najera.
- [bpo-38943](https://bugs.python.org/issue?@action=redirect&bpo=38943) [https://bugs.python.org/issue?@action=redirect&bpo=38943]: Fix IDLE autocomplete windows not always appearing on some systems. Patch by Johnny Najera.
- [bpo-38862](https://bugs.python.org/issue?@action=redirect&bpo=38862) [https://bugs.python.org/issue?@action=redirect&bpo=38862]: ‘Strip Trailing Whitespace’ on the Format menu removes extra newlines at the end of non-shell files.
- [bpo-38636](https://bugs.python.org/issue?@action=redirect&bpo=38636) [https://bugs.python.org/issue?@action=redirect&bpo=38636]: Fix IDLE Format menu tab toggle and file indent width. These functions (default shortcuts Alt-T and Alt-U) were mistakenly disabled in 3.7.5 and 3.8.0.

## C API

- [bpo-38896](https://bugs.python.org/issue?@action=redirect&bpo=38896) [https://bugs.python.org/issue?@action=redirect&bpo=38896]: Remove `PyUnicode_ClearFreeList()` function: the Unicode free list has been removed in Python 3.3.
- [bpo-37340](https://bugs.python.org/issue?@action=redirect&bpo=37340) [https://bugs.python.org/issue?@action=redirect&bpo=37340]

@action=redirect&bpo=37340]: Remove `PyMethod_ClearFreeList()` and `PyCFunction_ClearFreeList()` functions: the free lists of bound method objects have been removed.

- [bpo-38835](https://bugs.python.org/issue?@action=redirect&bpo=38835) [https://bugs.python.org/issue?@action=redirect&bpo=38835]: Exclude `PyFPE_START_PROTECT()` and `PyFPE_END_PROTECT()` macros of `pyfpe.h` from `Py_LIMITED_API` (stable API).

## Python 3.9.0 alpha 1

*Release date: 2019-11-19*

### Security

- [bpo-38722](https://bugs.python.org/issue?@action=redirect&bpo=38722) [https://bugs.python.org/issue?@action=redirect&bpo=38722]: `runpy` now uses `io.open_code()` to open code files. Patch by Jason Killen.
- [bpo-38622](https://bugs.python.org/issue?@action=redirect&bpo=38622) [https://bugs.python.org/issue?@action=redirect&bpo=38622]: Add additional audit events for the `ctypes` module.
- [bpo-38418](https://bugs.python.org/issue?@action=redirect&bpo=38418) [https://bugs.python.org/issue?@action=redirect&bpo=38418]: Fixes audit event for `os.system()` to be named `os.system`.
- [bpo-38243](https://bugs.python.org/issue?@action=redirect&bpo=38243) [https://bugs.python.org/issue?@action=redirect&bpo=38243]: Escape the server title of `xmlrpc.server.DocXMLRPCServer` when rendering the document page as HTML. (Contributed by Dong-hee Na in [bpo-38243](https://bugs.python.org/issue?@action=redirect&bpo=38243) [https://bugs.python.org/issue?@action=redirect&bpo=38243].)
- [bpo-38174](https://bugs.python.org/issue?@action=redirect&bpo=38174) [https://bugs.python.org/issue?@action=redirect&bpo=38174]: Update vendorized expat library version to 2.2.8, which resolves CVE-2019-15903.
- [bpo-37764](https://bugs.python.org/issue?@action=redirect&bpo=37764) [https://bugs.python.org/issue?@action=redirect&bpo=37764]: Fixes `email.header_value_parser.get_unstructured` going into an infinite loop for a specific case in which the email header does not have trailing whitespace, and the case in which it contains an invalid encoded word. Patch by Ashwin

Ramaswami.

- [bpo-37461](https://bugs.python.org/issue?@action=redirect&bpo=37461) [https://bugs.python.org/issue?@action=redirect&bpo=37461]: Fix an infinite loop when parsing specially crafted email headers. Patch by Abhilash Raj.
- [bpo-37363](https://bugs.python.org/issue?@action=redirect&bpo=37363) [https://bugs.python.org/issue?@action=redirect&bpo=37363]: Adds audit events for the range of supported run commands (see [Command line and environment](#)).
- [bpo-37463](https://bugs.python.org/issue?@action=redirect&bpo=37463) [https://bugs.python.org/issue?@action=redirect&bpo=37463]: `ssl.match_hostname()` no longer accepts IPv4 addresses with additional text after the address and only quad-dotted notation without trailing whitespaces. Some `inet_aton()` implementations ignore whitespace and all data after whitespace, e.g. '127.0.0.1 whatever'.
- [bpo-37363](https://bugs.python.org/issue?@action=redirect&bpo=37363) [https://bugs.python.org/issue?@action=redirect&bpo=37363]: Adds audit events for [ensurepip](#), [ftplib](#), [glob](#), [imaplib](#), [nntplib](#), [pdb](#), [poplib](#), [shutil](#), [smtplib](#), [sqlite3](#), [subprocess](#), [telnetlib](#), [tempfile](#) and [webbrowser](#), as well as [os.listdir\(\)](#), [os.scandir\(\)](#) and [breakpoint\(\)](#).
- [bpo-37364](https://bugs.python.org/issue?@action=redirect&bpo=37364) [https://bugs.python.org/issue?@action=redirect&bpo=37364]: [io.open\\_code\(\)](#) is now used when reading `.pth` files.
- [bpo-34631](https://bugs.python.org/issue?@action=redirect&bpo=34631) [https://bugs.python.org/issue?@action=redirect&bpo=34631]: Updated OpenSSL to 1.1.1c in Windows installer
- [bpo-34155](https://bugs.python.org/issue?@action=redirect&bpo=34155) [https://bugs.python.org/issue?@action=redirect&bpo=34155]: Fix parsing of invalid email addresses with more than one `@` (e.g. `a@b@c.com.`) to not return the part before 2nd `@` as valid email address. Patch by maxking & jplic.

## Core and Builtins

- [bpo-38631](https://bugs.python.org/issue?@action=redirect&bpo=38631) [https://bugs.python.org/issue?@action=redirect&bpo=38631]: Replace `Py_FatalError()` call with a regular [RuntimeError](#) exception in `float.__getformat__()`.
- [bpo-38639](https://bugs.python.org/issue?@action=redirect&bpo=38639) [https://bugs.python.org/issue?@action=redirect&bpo=38639]

@action=redirect&bpo=38639]: Optimized `math.floor()`, `math.ceil()` and `math.trunc()` for floats.

- [bpo-38640](https://bugs.python.org/issue?@action=redirect&bpo=38640) [https://bugs.python.org/issue?@action=redirect&bpo=38640]: Fixed a bug in the compiler that was causing to raise in the presence of break statements and continue statements inside always false while loops. Patch by Pablo Galindo.
- [bpo-38613](https://bugs.python.org/issue?@action=redirect&bpo=38613) [https://bugs.python.org/issue?@action=redirect&bpo=38613]: Optimized some set operations (e.g. `|`, `^`, and `-`) of `dict_keys`. `d.keys()` | `other` was slower than `set(d)` | `other` but they are almost same performance for now.
- [bpo-28029](https://bugs.python.org/issue?@action=redirect&bpo=28029) [https://bugs.python.org/issue?@action=redirect&bpo=28029]: `"".replace("", s, n)` now returns `s` instead of an empty string for all non-zero `n`. There are similar changes for `bytes` and `bytearray` objects.
- [bpo-38535](https://bugs.python.org/issue?@action=redirect&bpo=38535) [https://bugs.python.org/issue?@action=redirect&bpo=38535]: Fixed line numbers and column offsets for AST nodes for calls without arguments in decorators.
- [bpo-38525](https://bugs.python.org/issue?@action=redirect&bpo=38525) [https://bugs.python.org/issue?@action=redirect&bpo=38525]: Fix a segmentation fault when using reverse iterators of empty `dict` objects. Patch by Dong-hee Na and Inada Naoki.
- [bpo-38465](https://bugs.python.org/issue?@action=redirect&bpo=38465) [https://bugs.python.org/issue?@action=redirect&bpo=38465]: `bytearray`, `array` and `mmap` objects allow now to export more than `2**31` buffers at a time.
- [bpo-38469](https://bugs.python.org/issue?@action=redirect&bpo=38469) [https://bugs.python.org/issue?@action=redirect&bpo=38469]: Fixed a bug where the scope of named expressions was not being resolved correctly in the presence of the `global` keyword. Patch by Pablo Galindo.

- [bpo-38437](https://bugs.python.org/issue?@action=redirect&bpo=38437) [https://bugs.python.org/issue?@action=redirect&bpo=38437]: Activate the `GC_DEBUG` macro for debug builds of the interpreter (when `Py_DEBUG` is set). Patch by Pablo Galindo.
- [bpo-38379](https://bugs.python.org/issue?@action=redirect&bpo=38379) [https://bugs.python.org/issue?@action=redirect&bpo=38379]: When the garbage collector makes a collection in which some objects resurrect (they are reachable from outside the isolated cycles after the finalizers have been executed), do not block the collection of all objects that are still unreachable. Patch by Pablo Galindo and Tim Peters.
- [bpo-38379](https://bugs.python.org/issue?@action=redirect&bpo=38379) [https://bugs.python.org/issue?@action=redirect&bpo=38379]: When cyclic garbage collection (`gc`) runs finalizers that resurrect unreachable objects, the current `gc` run ends, without collecting any cyclic trash. However, the statistics reported by `collect()` and `get_stats()` claimed that all cyclic trash found was collected, and that the resurrected objects were collected. Changed the stats to report that none were collected.
- [bpo-38392](https://bugs.python.org/issue?@action=redirect&bpo=38392) [https://bugs.python.org/issue?@action=redirect&bpo=38392]: In debug mode, `PyObject_GC_Track()` now calls `tp_traverse()` of the object type to ensure that the object is valid: test that objects visited by `tp_traverse()` are valid.
- [bpo-38210](https://bugs.python.org/issue?@action=redirect&bpo=38210) [https://bugs.python.org/issue?@action=redirect&bpo=38210]: Remove unnecessary intersection and update set operation in dictview with empty set. (Contributed by Dong-hee Na in [bpo-38210](https://bugs.python.org/issue?@action=redirect&bpo=38210) [https://bugs.python.org/issue?@action=redirect&bpo=38210].)
- [bpo-38402](https://bugs.python.org/issue?@action=redirect&bpo=38402) [https://bugs.python.org/issue?@action=redirect&bpo=38402]: Check the error from the system's underlying `crypt` or `crypt_r`.
- [bpo-37474](https://bugs.python.org/issue?@action=redirect&bpo=37474) [https://bugs.python.org/issue?@action=redirect&bpo=37474]: On FreeBSD, Python no longer calls `fedisableexcept()` at startup to control the floating

point control mode. The call became useless since FreeBSD 6: it became the default mode.

- [bpo-38006](https://bugs.python.org/issue?@action=redirect&bpo=38006) [https://bugs.python.org/issue?@action=redirect&bpo=38006]: Fix a bug due to the interaction of weakrefs and the cyclic garbage collector. We must clear any weakrefs in garbage in order to prevent their callbacks from executing and causing a crash.
- [bpo-38317](https://bugs.python.org/issue?@action=redirect&bpo=38317) [https://bugs.python.org/issue?@action=redirect&bpo=38317]: Fix warnings options priority: `PyConfig.warnoptions` has the highest priority, as stated in the [PEP 587](https://peps.python.org/pep-0587/) [https://peps.python.org/pep-0587/].
- [bpo-38310](https://bugs.python.org/issue?@action=redirect&bpo=38310) [https://bugs.python.org/issue?@action=redirect&bpo=38310]: Predict `BUILD_MAP_UNPACK_WITH_CALL` -> `CALL_FUNCTION_EX` opcode pairs in the main interpreter loop. Patch by Brandt Bucher.
- [bpo-36871](https://bugs.python.org/issue?@action=redirect&bpo=36871) [https://bugs.python.org/issue?@action=redirect&bpo=36871]: Improve error handling for the `assert_has_calls` and `assert_has_awaits` methods of mocks. Fixed a bug where any errors encountered while binding the expected calls to the mock's spec were silently swallowed, leading to misleading error output.
- [bpo-11410](https://bugs.python.org/issue?@action=redirect&bpo=11410) [https://bugs.python.org/issue?@action=redirect&bpo=11410]: Better control over symbol visibility is provided through use of the visibility attributes available in `gcc >= 4.0`, provided in a uniform way across POSIX and Windows. The POSIX build files have been updated to compile with `-fvisibility=hidden`, minimising exported symbols.
- [bpo-38219](https://bugs.python.org/issue?@action=redirect&bpo=38219) [https://bugs.python.org/issue?@action=redirect&bpo=38219]: Optimized the [dict](#) constructor and the [update\(\)](#) method for the case when the argument is a dict.
- [bpo-38236](https://bugs.python.org/issue?@action=redirect&bpo=38236) [https://bugs.python.org/issue?@action=redirect&bpo=38236]

@action=redirect&bpo=38236]: Python now dumps path configuration if it fails to import the Python codecs of the filesystem and stdio encodings.

- [bpo-38013](https://bugs.python.org/issue?@action=redirect&bpo=38013) [https://bugs.python.org/issue?@action=redirect&bpo=38013]: Allow to call `async_generator_athrow().throw(...)` even for non-started async generator helper. It fixes annoying warning at the end of `asyncio.run()` call.
- [bpo-38124](https://bugs.python.org/issue?@action=redirect&bpo=38124) [https://bugs.python.org/issue?@action=redirect&bpo=38124]: Fix an off-by-one error in `PyState_AddModule` that could cause out-of-bounds memory access.
- [bpo-38116](https://bugs.python.org/issue?@action=redirect&bpo=38116) [https://bugs.python.org/issue?@action=redirect&bpo=38116]: The `select` module is now PEP-384 compliant and no longer has static state
- [bpo-38113](https://bugs.python.org/issue?@action=redirect&bpo=38113) [https://bugs.python.org/issue?@action=redirect&bpo=38113]: `ast` module updated to PEP-384 and all statics removed
- [bpo-38076](https://bugs.python.org/issue?@action=redirect&bpo=38076) [https://bugs.python.org/issue?@action=redirect&bpo=38076]: The `struct` module is now PEP-384 compatible
- [bpo-38075](https://bugs.python.org/issue?@action=redirect&bpo=38075) [https://bugs.python.org/issue?@action=redirect&bpo=38075]: The `random` module is now PEP-384 compatible
- [bpo-38074](https://bugs.python.org/issue?@action=redirect&bpo=38074) [https://bugs.python.org/issue?@action=redirect&bpo=38074]: `zlib` module made PEP-384 compatible
- [bpo-38073](https://bugs.python.org/issue?@action=redirect&bpo=38073) [https://bugs.python.org/issue?@action=redirect&bpo=38073]: Make `pwd` extension module PEP-384 compatible
- [bpo-38072](https://bugs.python.org/issue?@action=redirect&bpo=38072) [https://bugs.python.org/issue?@action=redirect&bpo=38072]: `grp` module made PEP-384

compatible

- [bpo-38069](https://bugs.python.org/issue?@action=redirect&bpo=38069) [https://bugs.python.org/issue?@action=redirect&bpo=38069]: Make `_posixsubprocess` PEP-384 compatible
- [bpo-38071](https://bugs.python.org/issue?@action=redirect&bpo=38071) [https://bugs.python.org/issue?@action=redirect&bpo=38071]: Make `termios` extension module PEP-384 compatible
- [bpo-38005](https://bugs.python.org/issue?@action=redirect&bpo=38005) [https://bugs.python.org/issue?@action=redirect&bpo=38005]: Fixed comparing and creating of `InterpreterID` and `ChannelID`.
- [bpo-36946](https://bugs.python.org/issue?@action=redirect&bpo=36946) [https://bugs.python.org/issue?@action=redirect&bpo=36946]: Fix possible signed integer overflow when handling slices. Patch by hongweipeng.
- [bpo-37994](https://bugs.python.org/issue?@action=redirect&bpo=37994) [https://bugs.python.org/issue?@action=redirect&bpo=37994]: Fixed silencing arbitrary errors if an attribute lookup fails in several sites. Only `AttributeError` should be silenced.
- [bpo-8425](https://bugs.python.org/issue?@action=redirect&bpo=8425) [https://bugs.python.org/issue?@action=redirect&bpo=8425]: Optimize `set difference_update` for the case when the other set is much larger than the base set. (Suggested by Evgeny Kapun with code contributed by Michele Orrù).
- [bpo-37966](https://bugs.python.org/issue?@action=redirect&bpo=37966) [https://bugs.python.org/issue?@action=redirect&bpo=37966]: The implementation of `is_normalized()` has been greatly sped up on strings that aren't normalized, by implementing the full normalization-quick-check algorithm from the Unicode standard.
- [bpo-37947](https://bugs.python.org/issue?@action=redirect&bpo=37947) [https://bugs.python.org/issue?@action=redirect&bpo=37947]: Adjust correctly the recursion level in the symtable generation for named expressions. Patch by Pablo Galindo.
- [bpo-37812](https://bugs.python.org/issue?@action=redirect&bpo=37812) [https://bugs.python.org/issue?@action=redirect&bpo=37812]: The `CHECK_SMALL_INT` macro

used inside `Object/longobject.c` has been replaced with an explicit `return` at each call site.

- [bpo-37751](https://bugs.python.org/issue?@action=redirect&bpo=37751) [https://bugs.python.org/issue?@action=redirect&bpo=37751]: Fix `codecs.lookup()` to normalize the encoding name the same way than `encodings.normalize_encoding()`, except that `codecs.lookup()` also converts the name to lower case.
- [bpo-37830](https://bugs.python.org/issue?@action=redirect&bpo=37830) [https://bugs.python.org/issue?@action=redirect&bpo=37830]: Fixed compilation of `break` and `continue` in the `finally` block when the corresponding `try` block contains `return` with a non-constant value.
- [bpo-20490](https://bugs.python.org/issue?@action=redirect&bpo=20490) [https://bugs.python.org/issue?@action=redirect&bpo=20490]: Improve import error message for partially initialized module on circular `from imports` - by Anthony Sottile.
- [bpo-37840](https://bugs.python.org/issue?@action=redirect&bpo=37840) [https://bugs.python.org/issue?@action=redirect&bpo=37840]: Fix handling of negative indices in `sq_item` of `bytearray`. Patch by Sergey Fedoseev.
- [bpo-37802](https://bugs.python.org/issue?@action=redirect&bpo=37802) [https://bugs.python.org/issue?@action=redirect&bpo=37802]: Slightly improve performance of `PyLong_FromUnsignedLong()`, `PyLong_FromUnsignedLongLong()` and `PyLong_FromSize_t()`. Patch by Sergey Fedoseev.
- [bpo-37409](https://bugs.python.org/issue?@action=redirect&bpo=37409) [https://bugs.python.org/issue?@action=redirect&bpo=37409]: Ensure explicit relative imports from interactive sessions and scripts (having no parent package) always raise `ImportError`, rather than treating the current module as the package. Patch by Ben Lewis.
- [bpo-32912](https://bugs.python.org/issue?@action=redirect&bpo=32912) [https://bugs.python.org/issue?@action=redirect&bpo=32912]: Reverted [bpo-32912](https://bugs.python.org/issue?@action=redirect&bpo=32912) [https://bugs.python.org/issue?@action=redirect&bpo=32912]: emitting `SyntaxWarning` instead of `DeprecationWarning` for invalid escape sequences in string and bytes literals.

- [bpo-37757](https://bugs.python.org/issue?@action=redirect&bpo=37757) [https://bugs.python.org/issue?@action=redirect&bpo=37757]: [PEP 572](https://peps.python.org/pep-0572/) [https://peps.python.org/pep-0572/]: As described in the PEP, assignment expressions now raise **SyntaxError** when their interaction with comprehension scoping results in an ambiguous target scope.

The `TargetScopeError` subclass originally proposed by the PEP has been removed in favour of just raising regular syntax errors for the disallowed cases.

- [bpo-36279](https://bugs.python.org/issue?@action=redirect&bpo=36279) [https://bugs.python.org/issue?@action=redirect&bpo=36279]: Fix potential use of uninitialized memory in `os.wait3()`.
- [bpo-36311](https://bugs.python.org/issue?@action=redirect&bpo=36311) [https://bugs.python.org/issue?@action=redirect&bpo=36311]: Decoding bytes objects larger than 2GiB is faster and no longer fails when a multibyte characters spans a chunk boundary.
- [bpo-34880](https://bugs.python.org/issue?@action=redirect&bpo=34880) [https://bugs.python.org/issue?@action=redirect&bpo=34880]: The **assert** statement now works properly if the **AssertionError** exception is being shadowed. Patch by Zackery Spytz.
- [bpo-37340](https://bugs.python.org/issue?@action=redirect&bpo=37340) [https://bugs.python.org/issue?@action=redirect&bpo=37340]: Removed object cache (`free_list`) for bound method objects. Temporary bound method objects are less used than before thanks to the `LOAD_METHOD` opcode and the `_PyObject_VectorcallMethod` C API.
- [bpo-37648](https://bugs.python.org/issue?@action=redirect&bpo=37648) [https://bugs.python.org/issue?@action=redirect&bpo=37648]: Fixed minor inconsistency in `list.__contains__()`, `tuple.__contains__()` and a few other places. The collection's item is now always at the left and the needle is on the right of `==`.
- [bpo-37444](https://bugs.python.org/issue?@action=redirect&bpo=37444) [https://bugs.python.org/issue?@action=redirect&bpo=37444]: Update differing exception between `builtins.__import__()` and `importlib.__import__()`.

- [bpo-37619](https://bugs.python.org/issue?@action=redirect&bpo=37619) [https://bugs.python.org/issue?@action=redirect&bpo=37619]: When adding a wrapper descriptor from one class to a different class (for example, setting `__add__ = str.__add__` on an `int` subclass), an exception is correctly raised when the operator is called.
- [bpo-37593](https://bugs.python.org/issue?@action=redirect&bpo=37593) [https://bugs.python.org/issue?@action=redirect&bpo=37593]: Swap the positions of the *posonlyargs* and *args* parameters in the constructor of **`ast.parameters`** nodes.
- [bpo-37543](https://bugs.python.org/issue?@action=redirect&bpo=37543) [https://bugs.python.org/issue?@action=redirect&bpo=37543]: Optimized pymalloc for non PGO build.
- [bpo-37537](https://bugs.python.org/issue?@action=redirect&bpo=37537) [https://bugs.python.org/issue?@action=redirect&bpo=37537]: Compute allocated pymalloc blocks inside `_Py_GetAllocatedBlocks()`. This slows down `_Py_GetAllocatedBlocks()` but gives a small speedup to `_PyObject_Malloc()` and `_PyObject_Free()`.
- [bpo-37467](https://bugs.python.org/issue?@action=redirect&bpo=37467) [https://bugs.python.org/issue?@action=redirect&bpo=37467]: Fix **`sys.excepthook()`** and **`PyErr_Display()`** if a filename is a bytes string. For example, for a `SyntaxError` exception where the filename attribute is a bytes string.
- [bpo-37433](https://bugs.python.org/issue?@action=redirect&bpo=37433) [https://bugs.python.org/issue?@action=redirect&bpo=37433]: Fix `SyntaxError` indicator printing too many spaces for multi-line strings - by Anthony Sottile.
- [bpo-37417](https://bugs.python.org/issue?@action=redirect&bpo=37417) [https://bugs.python.org/issue?@action=redirect&bpo=37417]: **`bytearray.extend()`** now correctly handles errors that arise during iteration. Patch by Brandt Bucher.
- [bpo-37414](https://bugs.python.org/issue?@action=redirect&bpo=37414) [https://bugs.python.org/issue?@action=redirect&bpo=37414]: The undocumented `sys.callstats()` function has been removed. Since Python 3.7, it was deprecated and always returned `None`. It

required a special build option `CALL_PROFILE` which was already removed in Python 3.7.

- [bpo-37392](https://bugs.python.org/issue?@action=redirect&bpo=37392) [https://bugs.python.org/issue?@action=redirect&bpo=37392]: Remove `sys.getcheckinterval()` and `sys.setcheckinterval()` functions. They were deprecated since Python 3.2. Use `sys.getswitchinterval()` and `sys.setswitchinterval()` instead. Remove also `check_interval` field of the `PyInterpreterState` structure.
- [bpo-37388](https://bugs.python.org/issue?@action=redirect&bpo=37388) [https://bugs.python.org/issue?@action=redirect&bpo=37388]: In development mode and in debug build, *encoding* and *errors* arguments are now checked on string encoding and decoding operations. Examples: `open()`, `str.encode()` and `bytes.decode()`.

By default, for best performances, the *errors* argument is only checked at the first encoding/decoding error, and the *encoding* argument is sometimes ignored for empty strings.

- [bpo-37348](https://bugs.python.org/issue?@action=redirect&bpo=37348) [https://bugs.python.org/issue?@action=redirect&bpo=37348]: Optimized decoding short ASCII string with UTF-8 and `ascii` codecs. `b"foo".decode()` is about 15% faster. Patch by Inada Naoki.
- [bpo-24214](https://bugs.python.org/issue?@action=redirect&bpo=24214) [https://bugs.python.org/issue?@action=redirect&bpo=24214]: Improved support of the surrogatepass error handler in the UTF-8 and UTF-16 incremental decoders.
- [bpo-37330](https://bugs.python.org/issue?@action=redirect&bpo=37330) [https://bugs.python.org/issue?@action=redirect&bpo=37330]: `open()`, `io.open()`, `codecs.open()` and `fileinput.FileInput` no longer accept `'U'` (“universal newline”) in the file mode. This flag was deprecated since Python 3.3.
- [bpo-35224](https://bugs.python.org/issue?@action=redirect&bpo=35224) [https://bugs.python.org/issue?@action=redirect&bpo=35224]: Reverse evaluation order of key:

value in dict comprehensions as proposed in PEP 572. I.e. in `{k: v for ...}`, `k` will be evaluated before `v`.

- [bpo-37316](https://bugs.python.org/issue?@action=redirect&bpo=37316) [https://bugs.python.org/issue?@action=redirect&bpo=37316]: Fix the `PySys_Audit()` call in `mmap.mmap`.
- [bpo-37300](https://bugs.python.org/issue?@action=redirect&bpo=37300) [https://bugs.python.org/issue?@action=redirect&bpo=37300]: Remove an unnecessary `Py_XINCREF` in `classobject.c`.
- [bpo-37269](https://bugs.python.org/issue?@action=redirect&bpo=37269) [https://bugs.python.org/issue?@action=redirect&bpo=37269]: Fix a bug in the peephole optimizer that was not treating correctly constant conditions with binary operators. Patch by Pablo Galindo.
- [bpo-20443](https://bugs.python.org/issue?@action=redirect&bpo=20443) [https://bugs.python.org/issue?@action=redirect&bpo=20443]: Python now gets the absolute path of the script filename specified on the command line (ex: “python3 script.py”): the `__file__` attribute of the `__main__` module and `sys.path[0]` become an absolute path, rather than a relative path.
- [bpo-37257](https://bugs.python.org/issue?@action=redirect&bpo=37257) [https://bugs.python.org/issue?@action=redirect&bpo=37257]: Python’s small object allocator (`obmalloc.c`) now allows (no more than) one empty arena to remain available for immediate reuse, without returning it to the OS. This prevents thrashing in simple loops where an arena could be created and destroyed anew on each iteration.
- [bpo-37231](https://bugs.python.org/issue?@action=redirect&bpo=37231) [https://bugs.python.org/issue?@action=redirect&bpo=37231]: The dispatching of type slots to special methods (for example calling `__mul__` when doing `x * y`) has been made faster.
- [bpo-36974](https://bugs.python.org/issue?@action=redirect&bpo=36974) [https://bugs.python.org/issue?@action=redirect&bpo=36974]: Implemented separate vectorcall functions for every calling convention of builtin functions and methods. This improves performance for calls.
- [bpo-37213](https://bugs.python.org/issue?@action=redirect&bpo=37213) [https://bugs.python.org/issue?@action=redirect&bpo=37213]

@action=redirect&bpo=37213]: Handle correctly negative line offsets in the peephole optimizer. Patch by Pablo Galindo.

- [bpo-37219](https://bugs.python.org/issue?@action=redirect&bpo=37219) [https://bugs.python.org/issue?@action=redirect&bpo=37219]: Remove erroneous optimization for empty set differences.
- [bpo-15913](https://bugs.python.org/issue?@action=redirect&bpo=15913) [https://bugs.python.org/issue?@action=redirect&bpo=15913]: Implement **PyBuffer\_SizeFromFormat()** function (previously documented but not implemented): call **struct.calcsize()**. Patch by Joanna Nanjeyke.
- [bpo-36922](https://bugs.python.org/issue?@action=redirect&bpo=36922) [https://bugs.python.org/issue?@action=redirect&bpo=36922]: Slot functions optimize any callable with `Py_TPFLAGS_METHOD_DESCRIPTOR` instead of only instances of `function`.
- [bpo-36974](https://bugs.python.org/issue?@action=redirect&bpo=36974) [https://bugs.python.org/issue?@action=redirect&bpo=36974]: The slot `tp_vectorcall_offset` is inherited unconditionally to support `super().__call__()` when the base class uses `vectorcall`.
- [bpo-37160](https://bugs.python.org/issue?@action=redirect&bpo=37160) [https://bugs.python.org/issue?@action=redirect&bpo=37160]: **threading.get\_native\_id()** now also supports NetBSD.
- [bpo-37077](https://bugs.python.org/issue?@action=redirect&bpo=37077) [https://bugs.python.org/issue?@action=redirect&bpo=37077]: Add **threading.get\_native\_id()** support for AIX. Patch by M. Felt
- [bpo-36781](https://bugs.python.org/issue?@action=redirect&bpo=36781) [https://bugs.python.org/issue?@action=redirect&bpo=36781]: **sum()** has been optimized for boolean values.
- [bpo-34556](https://bugs.python.org/issue?@action=redirect&bpo=34556) [https://bugs.python.org/issue?@action=redirect&bpo=34556]: Add `--upgrade-deps` to `venv` module. Patch by Cooper Ry Lees

- [bpo-20523](https://bugs.python.org/issue?@action=redirect&bpo=20523) [https://bugs.python.org/issue?@action=redirect&bpo=20523]: `pdb.Pdb` supports `~/.pdbrc` in Windows 7. Patch by Tim Hopper and Dan Lidral-Porter.
- [bpo-35551](https://bugs.python.org/issue?@action=redirect&bpo=35551) [https://bugs.python.org/issue?@action=redirect&bpo=35551]: Updated encodings: - Removed the “tis260” encoding, which was an alias for the nonexistent “tactis” codec. - Added “mac\_centeuro” as an alias for the `mac_latin2` encoding.
- [bpo-19072](https://bugs.python.org/issue?@action=redirect&bpo=19072) [https://bugs.python.org/issue?@action=redirect&bpo=19072]: The `classmethod` decorator can now wrap other descriptors such as property objects. Adapted from a patch written by Graham Dumpleton.
- [bpo-27575](https://bugs.python.org/issue?@action=redirect&bpo=27575) [https://bugs.python.org/issue?@action=redirect&bpo=27575]: Improve speed of dictview intersection by directly using set intersection logic. Patch by David Su.
- [bpo-30773](https://bugs.python.org/issue?@action=redirect&bpo=30773) [https://bugs.python.org/issue?@action=redirect&bpo=30773]: Prohibit parallel running of `aclose()` / `asend()` / `athrow()`. Fix `ag_running` to reflect the actual running status of the AG.

## Library

- [bpo-36589](https://bugs.python.org/issue?@action=redirect&bpo=36589) [https://bugs.python.org/issue?@action=redirect&bpo=36589]: The `curses.update_lines_cols()` function now returns `None` instead of `1` on success.
- [bpo-38807](https://bugs.python.org/issue?@action=redirect&bpo=38807) [https://bugs.python.org/issue?@action=redirect&bpo=38807]: Update `TypeError` messages for `os.path.join()` to include `os.PathLike` objects as acceptable input types.
- [bpo-38724](https://bugs.python.org/issue?@action=redirect&bpo=38724) [https://bugs.python.org/issue?@action=redirect&bpo=38724]: Add a repr for `subprocess.Popen` objects. Patch by Andrey Doroschenko.

- [bpo-38786](https://bugs.python.org/issue?@action=redirect&bpo=38786) [https://bugs.python.org/issue?@action=redirect&bpo=38786]: pydoc now recognizes and parses HTTPS URLs. Patch by python273.
- [bpo-38785](https://bugs.python.org/issue?@action=redirect&bpo=38785) [https://bugs.python.org/issue?@action=redirect&bpo=38785]: Prevent asyncio from crashing if parent `__init__` is not called from a constructor of object derived from `asyncio.Future`.
- [bpo-38723](https://bugs.python.org/issue?@action=redirect&bpo=38723) [https://bugs.python.org/issue?@action=redirect&bpo=38723]: `pdb` now uses `io.open_code()` to trigger auditing events.
- [bpo-27805](https://bugs.python.org/issue?@action=redirect&bpo=27805) [https://bugs.python.org/issue?@action=redirect&bpo=27805]: Allow opening pipes and other non-seekable files in append mode with `open()`.
- [bpo-38438](https://bugs.python.org/issue?@action=redirect&bpo=38438) [https://bugs.python.org/issue?@action=redirect&bpo=38438]: Simplify the `argparse` usage message for `nargs="*"`.
- [bpo-38761](https://bugs.python.org/issue?@action=redirect&bpo=38761) [https://bugs.python.org/issue?@action=redirect&bpo=38761]: `WeakSet` is now registered as a `collections.abc.MutableSet`.
- [bpo-38716](https://bugs.python.org/issue?@action=redirect&bpo=38716) [https://bugs.python.org/issue?@action=redirect&bpo=38716]: logging: change `RotatingHandler` namer and rotator to class-level attributes. This stops `__init__` from setting them to `None` in the case where a subclass defines them with eponymous methods.
- [bpo-38713](https://bugs.python.org/issue?@action=redirect&bpo=38713) [https://bugs.python.org/issue?@action=redirect&bpo=38713]: Add `os.P_PIDFD` constant, which may be passed to `os.waitid()` to wait on a Linux process file descriptor.
- [bpo-38692](https://bugs.python.org/issue?@action=redirect&bpo=38692) [https://bugs.python.org/issue?@action=redirect&bpo=38692]: Add `asyncio.PidfdChildWatcher`, a Linux-specific child watcher implementation that polls process file descriptors.

- [bpo-38692](https://bugs.python.org/issue?@action=redirect&bpo=38692) [https://bugs.python.org/issue?@action=redirect&bpo=38692]: Expose the Linux `pidfd_open` syscall as `os.pidfd_open()`.
- [bpo-38602](https://bugs.python.org/issue?@action=redirect&bpo=38602) [https://bugs.python.org/issue?@action=redirect&bpo=38602]: Added constants `F_OFD_GETTLK`, `F_OFD_SETTLK` and `F_OFD_SETTLKW` to the `fcntl` module. Patch by Dong-hee Na.
- [bpo-38334](https://bugs.python.org/issue?@action=redirect&bpo=38334) [https://bugs.python.org/issue?@action=redirect&bpo=38334]: Fixed seeking backward on an encrypted `zipfile.ZipExtFile`.
- [bpo-38312](https://bugs.python.org/issue?@action=redirect&bpo=38312) [https://bugs.python.org/issue?@action=redirect&bpo=38312]: Add `curses.get_escdelay()`, `curses.set_escdelay()`, `curses.get_tabsize()`, and `curses.set_tabsize()` functions - by Anthony Sottile.
- [bpo-38586](https://bugs.python.org/issue?@action=redirect&bpo=38586) [https://bugs.python.org/issue?@action=redirect&bpo=38586]: Now `fileConfig()` correctly sets the `.name` of handlers loaded.
- [bpo-38565](https://bugs.python.org/issue?@action=redirect&bpo=38565) [https://bugs.python.org/issue?@action=redirect&bpo=38565]: Add new `cache_parameters()` method for `functools.lru_cache()` to better support pickling.
- [bpo-34679](https://bugs.python.org/issue?@action=redirect&bpo=34679) [https://bugs.python.org/issue?@action=redirect&bpo=34679]: `asyncio.ProactorEventLoop.close()` now only calls `signal.set_wakeup_fd()` in the main thread.
- [bpo-31202](https://bugs.python.org/issue?@action=redirect&bpo=31202) [https://bugs.python.org/issue?@action=redirect&bpo=31202]: The case the result of `pathlib.WindowsPath.glob()` matches now the case of the pattern for literal parts.
- [bpo-36321](https://bugs.python.org/issue?@action=redirect&bpo=36321) [https://bugs.python.org/issue?@action=redirect&bpo=36321]: Remove misspelled attribute. The 3.8 changelog noted that this would be removed in 3.9.
- [bpo-38521](https://bugs.python.org/issue?@action=redirect&bpo=38521) [https://bugs.python.org/issue?@action=redirect&bpo=38521]

@action=redirect&bpo=38521]: Fixed erroneous equality comparison in `statistics.NormalDist()`.

- [bpo-38493](https://bugs.python.org/issue?@action=redirect&bpo=38493) [https://bugs.python.org/issue?@action=redirect&bpo=38493]: Added `CLD_KILLED` and `CLD_STOPPED` for `si_code`. Patch by Dong-hee Na.
- [bpo-38478](https://bugs.python.org/issue?@action=redirect&bpo=38478) [https://bugs.python.org/issue?@action=redirect&bpo=38478]: Fixed a bug in `inspect.signature.bind()` that was causing it to fail when handling a keyword argument with same name as positional-only parameter. Patch by Pablo Galindo.
- [bpo-33604](https://bugs.python.org/issue?@action=redirect&bpo=33604) [https://bugs.python.org/issue?@action=redirect&bpo=33604]: Fixed `hmac.new` and `hmac.HMAC` to raise `TypeError` instead of `ValueError` when the `digestmod` parameter, now required in 3.8, is omitted. Also clarified the `hmac` module documentation and docstrings.
- [bpo-38378](https://bugs.python.org/issue?@action=redirect&bpo=38378) [https://bugs.python.org/issue?@action=redirect&bpo=38378]: Parameters `out` and `in` of `os.sendfile()` was renamed to `out_fd` and `in_fd`.
- [bpo-38417](https://bugs.python.org/issue?@action=redirect&bpo=38417) [https://bugs.python.org/issue?@action=redirect&bpo=38417]: Added support for setting the `umask` in the child process to the `subprocess` module on POSIX systems.
- [bpo-38449](https://bugs.python.org/issue?@action=redirect&bpo=38449) [https://bugs.python.org/issue?@action=redirect&bpo=38449]: Revert PR 15522, which introduces a regression in `mimetypes.guess_type()` due to improper handling of filenames as urls.
- [bpo-38431](https://bugs.python.org/issue?@action=redirect&bpo=38431) [https://bugs.python.org/issue?@action=redirect&bpo=38431]: Fix `__repr__` method for `dataclasses.InitVar` to support typing objects, patch by Samuel Colvin.
- [bpo-38109](https://bugs.python.org/issue?@action=redirect&bpo=38109) [https://bugs.python.org/issue?@action=redirect&bpo=38109]: Add missing `stat.S_IFDOOR`,

`stat.S_IFPORT`, `stat.S_IFWHT`, `stat.S_ISDOOR()`, `stat.S_ISPORT()`, and `stat.S_ISWHT()` values to the Python implementation of `stat`.

- [bpo-38422](https://bugs.python.org/issue?@action=redirect&bpo=38422) [https://bugs.python.org/issue?@action=redirect&bpo=38422]: Clarify docstrings of `pathlib` `suffix(es)`
- [bpo-38405](https://bugs.python.org/issue?@action=redirect&bpo=38405) [https://bugs.python.org/issue?@action=redirect&bpo=38405]: Nested subclasses of `typing.NamedTuple` are now pickleable.
- [bpo-38332](https://bugs.python.org/issue?@action=redirect&bpo=38332) [https://bugs.python.org/issue?@action=redirect&bpo=38332]: Prevent `KeyError` thrown by `_encoded_words.decode()` when given an encoded-word with invalid content-type encoding from propagating all the way to `email.message.get()`.
- [bpo-38371](https://bugs.python.org/issue?@action=redirect&bpo=38371) [https://bugs.python.org/issue?@action=redirect&bpo=38371]: Deprecated the `split()` method in `_tkinter.TkappType` in favour of the `splitlist()` method which has more consistent and predicable behavior.
- [bpo-38341](https://bugs.python.org/issue?@action=redirect&bpo=38341) [https://bugs.python.org/issue?@action=redirect&bpo=38341]: Add `smtplib.SMTPNotSupportedError` to the `smtplib` exported names.
- [bpo-38319](https://bugs.python.org/issue?@action=redirect&bpo=38319) [https://bugs.python.org/issue?@action=redirect&bpo=38319]: `sendfile()` used in `socket` and `shutil` modules was raising `OverflowError` for files  $\geq 2\text{GiB}$  on 32-bit architectures. (patch by Giampaolo Rodola)
- [bpo-38242](https://bugs.python.org/issue?@action=redirect&bpo=38242) [https://bugs.python.org/issue?@action=redirect&bpo=38242]: Revert the new `asyncio Streams` API
- [bpo-13153](https://bugs.python.org/issue?@action=redirect&bpo=13153) [https://bugs.python.org/issue?@action=redirect&bpo=13153]: OS native encoding is now used for converting between Python strings and Tcl objects. This allows to display, copy and paste to clipboard emoji and

other non-BMP characters. Converting strings from Tcl to Python and back now never fails (except MemoryError).

- [bpo-38019](https://bugs.python.org/issue?@action=redirect&bpo=38019) [https://bugs.python.org/issue?@action=redirect&bpo=38019]: Correctly handle pause/resume reading of closed asyncio unix pipe.
- [bpo-38163](https://bugs.python.org/issue?@action=redirect&bpo=38163) [https://bugs.python.org/issue?@action=redirect&bpo=38163]: Child mocks will now detect their type as either synchronous or asynchronous, asynchronous child mocks will be AsyncMocks and synchronous child mocks will be either MagicMock or Mock (depending on their parent type).
- [bpo-38161](https://bugs.python.org/issue?@action=redirect&bpo=38161) [https://bugs.python.org/issue?@action=redirect&bpo=38161]: Removes `_AwaitEvent` from `AsyncMock`.
- [bpo-38216](https://bugs.python.org/issue?@action=redirect&bpo=38216) [https://bugs.python.org/issue?@action=redirect&bpo=38216]: Allow the rare code that wants to send invalid http requests from the `http.client` library a way to do so. The fixes for [bpo-30458](https://bugs.python.org/issue?@action=redirect&bpo=30458) [https://bugs.python.org/issue?@action=redirect&bpo=30458] led to breakage for some projects that were relying on this ability to test their own behavior in the face of bad requests.
- [bpo-28286](https://bugs.python.org/issue?@action=redirect&bpo=28286) [https://bugs.python.org/issue?@action=redirect&bpo=28286]: Deprecate opening `GzipFile` for writing implicitly. Always specify the *mode* argument for writing.
- [bpo-38108](https://bugs.python.org/issue?@action=redirect&bpo=38108) [https://bugs.python.org/issue?@action=redirect&bpo=38108]: Any synchronous magic methods on an `AsyncMock` now return a `MagicMock`. Any asynchronous magic methods on a `MagicMock` now return an `AsyncMock`.
- [bpo-38265](https://bugs.python.org/issue?@action=redirect&bpo=38265) [https://bugs.python.org/issue?@action=redirect&bpo=38265]: Update the *length* parameter of `os.pread()` to accept `Py_ssize_t` instead of int.

- [bpo-38112](https://bugs.python.org/issue?@action=redirect&bpo=38112) [https://bugs.python.org/issue?@action=redirect&bpo=38112]: **compileall** has a higher default recursion limit and new command-line arguments for path manipulation, symlinks handling, and multiple optimization levels.
- [bpo-38248](https://bugs.python.org/issue?@action=redirect&bpo=38248) [https://bugs.python.org/issue?@action=redirect&bpo=38248]: **asyncio**: Fix inconsistent immediate Task cancellation
- [bpo-38237](https://bugs.python.org/issue?@action=redirect&bpo=38237) [https://bugs.python.org/issue?@action=redirect&bpo=38237]: The arguments for the builtin **pow** function are more descriptive. They can now also be passed in as keywords.
- [bpo-34002](https://bugs.python.org/issue?@action=redirect&bpo=34002) [https://bugs.python.org/issue?@action=redirect&bpo=34002]: Improve efficiency in parts of email package by changing while-pop to a for loop, using **isdisjoint** instead of set intersections.
- [bpo-38191](https://bugs.python.org/issue?@action=redirect&bpo=38191) [https://bugs.python.org/issue?@action=redirect&bpo=38191]: Constructors of **NamedTuple** and **TypedDict** types now accept arbitrary keyword argument names, including “cls”, “self”, “typename”, “\_typename”, “fields” and “\_fields”.
- [bpo-38155](https://bugs.python.org/issue?@action=redirect&bpo=38155) [https://bugs.python.org/issue?@action=redirect&bpo=38155]: Add **\_\_all\_\_** to **datetime**. Patch by Tahia Khan.
- [bpo-38185](https://bugs.python.org/issue?@action=redirect&bpo=38185) [https://bugs.python.org/issue?@action=redirect&bpo=38185]: Fixed case-insensitive string comparison in **sqlite3.Row** indexing.
- [bpo-38136](https://bugs.python.org/issue?@action=redirect&bpo=38136) [https://bugs.python.org/issue?@action=redirect&bpo=38136]: Changes **AsyncMock** call count and await count to be two different counters. Now await count only counts when a coroutine has been awaited, not when it has been called, and vice-versa. Update the documentation around this.

- [bpo-37828](https://bugs.python.org/issue?@action=redirect&bpo=37828) [https://bugs.python.org/issue?@action=redirect&bpo=37828]: Fix default mock name in `unittest.mock.Mock.assert_called()` exceptions. Patch by Abraham Toriz Cruz.
- [bpo-38175](https://bugs.python.org/issue?@action=redirect&bpo=38175) [https://bugs.python.org/issue?@action=redirect&bpo=38175]: Fix a memory leak in comparison of `sqlite3.Row` objects.
- [bpo-33936](https://bugs.python.org/issue?@action=redirect&bpo=33936) [https://bugs.python.org/issue?@action=redirect&bpo=33936]: `_hashlib` no longer calls obsolete OpenSSL initialization function with OpenSSL 1.1.0+.
- [bpo-34706](https://bugs.python.org/issue?@action=redirect&bpo=34706) [https://bugs.python.org/issue?@action=redirect&bpo=34706]: Preserve subclassing in `inspect.Signature.from_callable`.
- [bpo-38153](https://bugs.python.org/issue?@action=redirect&bpo=38153) [https://bugs.python.org/issue?@action=redirect&bpo=38153]: Names of hashing algorithms from OpenSSL are now normalized to follow Python's naming conventions. For example OpenSSL uses sha3-512 instead of sha3\_512 or blake2b512 instead of blake2b.
- [bpo-38115](https://bugs.python.org/issue?@action=redirect&bpo=38115) [https://bugs.python.org/issue?@action=redirect&bpo=38115]: Fix a bug in `dis.findlinestarts()` where it would return invalid bytecode offsets. Document that a code object's `co_inotab` can contain invalid bytecode offsets.
- [bpo-38148](https://bugs.python.org/issue?@action=redirect&bpo=38148) [https://bugs.python.org/issue?@action=redirect&bpo=38148]: Add slots to `asyncio` transport classes, which can reduce memory usage.
- [bpo-38142](https://bugs.python.org/issue?@action=redirect&bpo=38142) [https://bugs.python.org/issue?@action=redirect&bpo=38142]: The `_hashlib` OpenSSL wrapper extension module is now PEP-384 compliant.
- [bpo-9216](https://bugs.python.org/issue?@action=redirect&bpo=9216) [https://bugs.python.org/issue?@action=redirect&bpo=9216]: `hashlib` constructors now support `usedforsecurity` flag to signal that a hashing algorithm is not used in a security context.

- [bpo-36991](https://bugs.python.org/issue?@action=redirect&bpo=36991) [https://bugs.python.org/issue?@action=redirect&bpo=36991]: Fixes a potential incorrect `AttributeError` exception escaping `ZipFile.extract()` in some unsupported input error situations.
- [bpo-38134](https://bugs.python.org/issue?@action=redirect&bpo=38134) [https://bugs.python.org/issue?@action=redirect&bpo=38134]: Remove obsolete copy of `PBKDF2_HMAC_fast`. All supported OpenSSL versions contain a fast implementation.
- [bpo-38132](https://bugs.python.org/issue?@action=redirect&bpo=38132) [https://bugs.python.org/issue?@action=redirect&bpo=38132]: The OpenSSL hashlib wrapper uses a simpler implementation. Several Macros and pointless caches are gone. The hash name now comes from OpenSSL's EVP. The algorithm name stays the same, except it is now always lower case.
- [bpo-38008](https://bugs.python.org/issue?@action=redirect&bpo=38008) [https://bugs.python.org/issue?@action=redirect&bpo=38008]: Fix parent class check in protocols to correctly identify the module that provides a builtin protocol, instead of assuming they all come from the `collections.abc` module
- [bpo-34037](https://bugs.python.org/issue?@action=redirect&bpo=34037) [https://bugs.python.org/issue?@action=redirect&bpo=34037]: For `asyncio`, add a new coroutine `loop.shutdown_default_executor()`. The new coroutine provides an API to schedule an executor shutdown that waits on the threadpool to finish closing. Also, `asyncio.run()` has been updated to utilize the new coroutine. Patch by Kyle Stanley.
- [bpo-37405](https://bugs.python.org/issue?@action=redirect&bpo=37405) [https://bugs.python.org/issue?@action=redirect&bpo=37405]: Fixed regression bug for `socket.getsockname()` for non-CAN\_ISOTP AF\_CAN address family sockets by returning a 1-tuple instead of string.
- [bpo-38121](https://bugs.python.org/issue?@action=redirect&bpo=38121) [https://bugs.python.org/issue?@action=redirect&bpo=38121]: Update parameter names on functions in `importlib.metadata` matching the changes in the 0.22 release of `importlib_metadata`.

- [bpo-38110](https://bugs.python.org/issue?@action=redirect&bpo=38110) [https://bugs.python.org/issue?@action=redirect&bpo=38110]: The `os.closewalk()` implementation now uses the `libc fdwalk()` API on platforms where it is available.
- [bpo-38093](https://bugs.python.org/issue?@action=redirect&bpo=38093) [https://bugs.python.org/issue?@action=redirect&bpo=38093]: Fixes `AsyncMock` so it doesn't crash when used with `AsyncContextManagers` or `AsyncIterators`.
- [bpo-37488](https://bugs.python.org/issue?@action=redirect&bpo=37488) [https://bugs.python.org/issue?@action=redirect&bpo=37488]: Add warning to `datetime.utctimetuple()`, `datetime.utcnow()` and `datetime.utctimestamp()`.
- [bpo-35640](https://bugs.python.org/issue?@action=redirect&bpo=35640) [https://bugs.python.org/issue?@action=redirect&bpo=35640]: Allow passing a [path-like object](#) as `directory` argument to the [http.server.SimpleHTTPRequestHandler](#) class. Patch by Géry Ogam.
- [bpo-38086](https://bugs.python.org/issue?@action=redirect&bpo=38086) [https://bugs.python.org/issue?@action=redirect&bpo=38086]: Update `importlib.metadata` with changes from [importlib\\_metadata 0.21](#) [https://gitlab.com/python-devs/importlib\_metadata/blob/0.21/importlib\_metadata/docs/changelog.rst].
- [bpo-37251](https://bugs.python.org/issue?@action=redirect&bpo=37251) [https://bugs.python.org/issue?@action=redirect&bpo=37251]: Remove `__code__` check in `AsyncMock` that incorrectly evaluated function specs as async objects but failed to evaluate classes with `__await__` but no `__code__` attribute defined as async objects.
- [bpo-38037](https://bugs.python.org/issue?@action=redirect&bpo=38037) [https://bugs.python.org/issue?@action=redirect&bpo=38037]: Fix reference counters in the [signal](#) module.
- [bpo-38066](https://bugs.python.org/issue?@action=redirect&bpo=38066) [https://bugs.python.org/issue?@action=redirect&bpo=38066]: Hide internal `asyncio.Stream` methods: `feed_eof()`, `feed_data()`, `set_exception()` and `set_transport()`.

- [bpo-38059](https://bugs.python.org/issue?@action=redirect&bpo=38059) [https://bugs.python.org/issue?@action=redirect&bpo=38059]: `inspect.py` now uses `sys.exit()` instead of `exit()`
- [bpo-38049](https://bugs.python.org/issue?@action=redirect&bpo=38049) [https://bugs.python.org/issue?@action=redirect&bpo=38049]: Added command-line interface for the `ast` module.
- [bpo-37953](https://bugs.python.org/issue?@action=redirect&bpo=37953) [https://bugs.python.org/issue?@action=redirect&bpo=37953]: In `typing`, improved the `__hash__` and `__eq__` methods for `ForwardReferences`.
- [bpo-38026](https://bugs.python.org/issue?@action=redirect&bpo=38026) [https://bugs.python.org/issue?@action=redirect&bpo=38026]: Fixed `inspect.getattr_static()` used `isinstance` while it should avoid dynamic lookup.
- [bpo-35923](https://bugs.python.org/issue?@action=redirect&bpo=35923) [https://bugs.python.org/issue?@action=redirect&bpo=35923]: Update `importlib.machinery.BuiltinImporter` to use `loader._ORIGIN` instead of a hardcoded value. Patch by Dong-hee Na.
- [bpo-38010](https://bugs.python.org/issue?@action=redirect&bpo=38010) [https://bugs.python.org/issue?@action=redirect&bpo=38010]: In `importlib.metadata` sync with `importlib_metadata 0.20`, clarifying behavior of `files()` and fixing issue where only one requirement was returned for `requires()` on `dist-info` packages.
- [bpo-38006](https://bugs.python.org/issue?@action=redirect&bpo=38006) [https://bugs.python.org/issue?@action=redirect&bpo=38006]: `weakref.WeakValueDictionary` defines a local `remove()` function used as callback for weak references. This function was created with a closure. Modify the implementation to avoid the closure.
- [bpo-37995](https://bugs.python.org/issue?@action=redirect&bpo=37995) [https://bugs.python.org/issue?@action=redirect&bpo=37995]: Added the `indent` option to `ast.dump()` which allows it to produce a multiline indented output.
- [bpo-34410](https://bugs.python.org/issue?@action=redirect&bpo=34410) [https://bugs.python.org/issue?@action=redirect&bpo=34410]

@action=redirect&bpo=34410]: Fixed a crash in the `tee()` iterator when re-enter it. `RuntimeError` is now raised in this case.

- [bpo-37140](https://bugs.python.org/issue?@action=redirect&bpo=37140) [https://bugs.python.org/issue?@action=redirect&bpo=37140]: Fix a `ctypes` regression of Python 3.8. When a `ctypes.Structure` is passed by copy to a function, `ctypes` internals created a temporary object which had the side effect of calling the structure finalizer (`_del_`) twice. The Python semantics requires a finalizer to be called exactly once. Fix `ctypes` internals to no longer call the finalizer twice.
- [bpo-37587](https://bugs.python.org/issue?@action=redirect&bpo=37587) [https://bugs.python.org/issue?@action=redirect&bpo=37587]: `_json.scanstring` is now up to 3x faster when there are many backslash escaped characters in the JSON string.
- [bpo-37834](https://bugs.python.org/issue?@action=redirect&bpo=37834) [https://bugs.python.org/issue?@action=redirect&bpo=37834]: Prevent `shutil.rmtree` exception when built on non-Windows system without `fd` system call support, like older versions of macOS.
- [bpo-10978](https://bugs.python.org/issue?@action=redirect&bpo=10978) [https://bugs.python.org/issue?@action=redirect&bpo=10978]: `Semaphores` and `BoundedSemaphores` can now release more than one waiting thread at a time.
- [bpo-37972](https://bugs.python.org/issue?@action=redirect&bpo=37972) [https://bugs.python.org/issue?@action=redirect&bpo=37972]: Subscripts to the `unittest.mock.call` objects now receive the same chaining mechanism as any other custom attributes, so that the following usage no longer raises a `TypeError`:

```
call().foo().__getitem__('bar')
```

Patch by blhsing

- [bpo-37965](https://bugs.python.org/issue?@action=redirect&bpo=37965) [https://bugs.python.org/issue?@action=redirect&bpo=37965]: Fix C compiler warning caused by `distutils.ccompiler.CCompiler.has_function`.

- [bpo-37964](https://bugs.python.org/issue?@action=redirect&bpo=37964) [https://bugs.python.org/issue?@action=redirect&bpo=37964]: Add `F_GETPATH` command to `fcntl`.
- [bpo-37960](https://bugs.python.org/issue?@action=redirect&bpo=37960) [https://bugs.python.org/issue?@action=redirect&bpo=37960]: `repr()` of buffered and text streams now silences only expected exceptions when get the value of “name” and “mode” attributes.
- [bpo-37961](https://bugs.python.org/issue?@action=redirect&bpo=37961) [https://bugs.python.org/issue?@action=redirect&bpo=37961]: Add a `total_nframe` field to the traces collected by the `tracemalloc` module. This field indicates the original number of frames before it was truncated.
- [bpo-37951](https://bugs.python.org/issue?@action=redirect&bpo=37951) [https://bugs.python.org/issue?@action=redirect&bpo=37951]: Most features of the subprocess module now work again in subinterpreters. Only `preexec_fn` is restricted in subinterpreters.
- [bpo-36205](https://bugs.python.org/issue?@action=redirect&bpo=36205) [https://bugs.python.org/issue?@action=redirect&bpo=36205]: Fix the `rusage` implementation of `time.process_time()` to correctly report the sum of the system and user CPU time.
- [bpo-37950](https://bugs.python.org/issue?@action=redirect&bpo=37950) [https://bugs.python.org/issue?@action=redirect&bpo=37950]: Fix `ast.dump()` when call with incompletely initialized node.
- [bpo-34679](https://bugs.python.org/issue?@action=redirect&bpo=34679) [https://bugs.python.org/issue?@action=redirect&bpo=34679]: Restores instantiation of Windows IOCP event loops from the non-main thread.
- [bpo-36917](https://bugs.python.org/issue?@action=redirect&bpo=36917) [https://bugs.python.org/issue?@action=redirect&bpo=36917]: Add default implementation of the `ast.NodeVisitor.visit_Constant()` method which emits a deprecation warning and calls corresponding method `visit_Num()`, `visit_Str()`, etc.
- [bpo-37798](https://bugs.python.org/issue?@action=redirect&bpo=37798) [https://bugs.python.org/issue?@action=redirect&bpo=37798]: Update `test_statistics.py` to verify

that the statistics module works well for both C and Python implementations. Patch by Dong-hee Na

- [bpo-26589](https://bugs.python.org/issue?@action=redirect&bpo=26589) [https://bugs.python.org/issue?@action=redirect&bpo=26589]: Added a new status code to the http module: 451 UNAVAILABLE\_FOR\_LEGAL\_REASONS
- [bpo-37915](https://bugs.python.org/issue?@action=redirect&bpo=37915) [https://bugs.python.org/issue?@action=redirect&bpo=37915]: Fix a segmentation fault that appeared when comparing instances of `datetime.timezone` and `datetime.tzinfo` objects. Patch by Pablo Galindo.
- [bpo-32554](https://bugs.python.org/issue?@action=redirect&bpo=32554) [https://bugs.python.org/issue?@action=redirect&bpo=32554]: Deprecate having `random.seed()` call hash on arbitrary types.
- [bpo-9938](https://bugs.python.org/issue?@action=redirect&bpo=9938) [https://bugs.python.org/issue?@action=redirect&bpo=9938]: Add optional keyword argument `exit_on_error` for **ArgumentParser**.
- [bpo-37851](https://bugs.python.org/issue?@action=redirect&bpo=37851) [https://bugs.python.org/issue?@action=redirect&bpo=37851]: The **faulthandler** module no longer allocates its alternative stack at Python startup. Now the stack is only allocated at the first `faulthandler` usage.
- [bpo-32793](https://bugs.python.org/issue?@action=redirect&bpo=32793) [https://bugs.python.org/issue?@action=redirect&bpo=32793]: Fix a duplicated debug message when `smtplib.SMTP.connect()` is called.
- [bpo-37885](https://bugs.python.org/issue?@action=redirect&bpo=37885) [https://bugs.python.org/issue?@action=redirect&bpo=37885]: `venv`: Don't generate unset variable warning on deactivate.
- [bpo-37868](https://bugs.python.org/issue?@action=redirect&bpo=37868) [https://bugs.python.org/issue?@action=redirect&bpo=37868]: Fix `dataclasses.is_dataclass` when given an instance that never raises `AttributeError` in `__getattr__`. That is, an object that returns something for `__dataclass_fields__` even if it's not a dataclass.
- [bpo-37811](https://bugs.python.org/issue?@action=redirect&bpo=37811) [https://bugs.python.org/issue?@action=redirect&bpo=37811]

@action=redirect&bpo=37811]: Fix `socket` module's `socket.connect(address)` function being unable to establish connection in case of interrupted system call. The problem was observed on all OSes which `poll(2)` system call can take only non-negative integers and -1 as a timeout value.

- [bpo-37863](https://bugs.python.org/issue?@action=redirect&bpo=37863) [https://bugs.python.org/issue?@action=redirect&bpo=37863]: Optimizations for `Fraction.__hash__` suggested by Tim Peters.
- [bpo-21131](https://bugs.python.org/issue?@action=redirect&bpo=21131) [https://bugs.python.org/issue?@action=redirect&bpo=21131]: Fix `faulthandler.register(chain=True)` stack. `faulthandler` now allocates a dedicated stack of `SIGSTKSZ*2` bytes, instead of just `SIGSTKSZ` bytes. Calling the previous signal handler in `faulthandler` signal handler uses more than `SIGSTKSZ` bytes of stack memory on some platforms.
- [bpo-37798](https://bugs.python.org/issue?@action=redirect&bpo=37798) [https://bugs.python.org/issue?@action=redirect&bpo=37798]: Add C fastpath for `statistics.NormalDist.inv_cdf()` Patch by Dong-hee Na
- [bpo-37804](https://bugs.python.org/issue?@action=redirect&bpo=37804) [https://bugs.python.org/issue?@action=redirect&bpo=37804]: Remove the deprecated method `threading.Thread.isAlive()`. Patch by Dong-hee Na.
- [bpo-37819](https://bugs.python.org/issue?@action=redirect&bpo=37819) [https://bugs.python.org/issue?@action=redirect&bpo=37819]: Add `Fraction.as_integer_ratio()` to match the corresponding methods in `bool`, `int`, `float`, and `decimal`.
- [bpo-14465](https://bugs.python.org/issue?@action=redirect&bpo=14465) [https://bugs.python.org/issue?@action=redirect&bpo=14465]: Add an `xml.etree.ElementTree.indent()` function for pretty-printing XML trees. Contributed by Stefan Behnel.
- [bpo-37810](https://bugs.python.org/issue?@action=redirect&bpo=37810) [https://bugs.python.org/issue?@action=redirect&bpo=37810]: Fix `difflib` ? hint in `diff` output when dealing with tabs. Patch by Anthony Sottile.

- [bpo-37772](https://bugs.python.org/issue?@action=redirect&bpo=37772) [https://bugs.python.org/issue?@action=redirect&bpo=37772]: In `zipfile.Path`, when adding implicit dirs, ensure that ancestral directories are added and that duplicates are excluded.
- [bpo-18578](https://bugs.python.org/issue?@action=redirect&bpo=18578) [https://bugs.python.org/issue?@action=redirect&bpo=18578]: Renamed and documented `test.bytecode_helper` as `test.support.bytecode_helper`. Patch by Joanna Nanjekye.
- [bpo-37785](https://bugs.python.org/issue?@action=redirect&bpo=37785) [https://bugs.python.org/issue?@action=redirect&bpo=37785]: Fix `xgettext` warnings in `argparse`.
- [bpo-34488](https://bugs.python.org/issue?@action=redirect&bpo=34488) [https://bugs.python.org/issue?@action=redirect&bpo=34488]: `writelines()` method of `io.BytesIO` is now slightly faster when many small lines are passed. Patch by Sergey Fedoseev.
- [bpo-37449](https://bugs.python.org/issue?@action=redirect&bpo=37449) [https://bugs.python.org/issue?@action=redirect&bpo=37449]: `ensurepip` now uses `importlib.resources.read_binary()` to read data instead of `pkgutil.get_data()`. Patch by Joanna Nanjekye.
- [bpo-28292](https://bugs.python.org/issue?@action=redirect&bpo=28292) [https://bugs.python.org/issue?@action=redirect&bpo=28292]: Mark `calendar.py` helper functions as being private. The follows PEP 8 guidance to maintain the style conventions in the module and it addresses a known case of user confusion.
- [bpo-18049](https://bugs.python.org/issue?@action=redirect&bpo=18049) [https://bugs.python.org/issue?@action=redirect&bpo=18049]: Add definition of `THREAD_STACK_SIZE` for AIX in `Python/thread_pthread.h`. The default thread stacksize caused crashes with the default recursion limit. Patch by M Felt.
- [bpo-37742](https://bugs.python.org/issue?@action=redirect&bpo=37742) [https://bugs.python.org/issue?@action=redirect&bpo=37742]: The `logging.getLogger()` API now returns the root logger when passed the name 'root', whereas

previously it returned a non-root logger named 'root'. This could affect cases where user code explicitly wants a non-root logger named 'root', or instantiates a logger using `logging.getLogger(__name__)` in some top-level module called 'root.py'.

- [bpo-37738](https://bugs.python.org/issue?@action=redirect&bpo=37738) [https://bugs.python.org/issue?@action=redirect&bpo=37738]: Fix the implementation of `curses.addch(str, color_pair)`: pass the color pair to `setcchar()`, instead of always passing 0 as the color pair.
- [bpo-37723](https://bugs.python.org/issue?@action=redirect&bpo=37723) [https://bugs.python.org/issue?@action=redirect&bpo=37723]: Fix performance regression on regular expression parsing with huge character sets. Patch by Yann Vaginy.
- [bpo-35943](https://bugs.python.org/issue?@action=redirect&bpo=35943) [https://bugs.python.org/issue?@action=redirect&bpo=35943]: The function `PyImport_GetModule()` now ensures any module it returns is fully initialized. Patch by Joanna Nanjey.
- [bpo-32178](https://bugs.python.org/issue?@action=redirect&bpo=32178) [https://bugs.python.org/issue?@action=redirect&bpo=32178]: Fix `IndexError` in `email` package when trying to parse invalid address fields starting with `:`.
- [bpo-37268](https://bugs.python.org/issue?@action=redirect&bpo=37268) [https://bugs.python.org/issue?@action=redirect&bpo=37268]: The `parser` module is deprecated and will be removed in future versions of Python.
- [bpo-11953](https://bugs.python.org/issue?@action=redirect&bpo=11953) [https://bugs.python.org/issue?@action=redirect&bpo=11953]: Completing WSA\* error codes in `socket`.
- [bpo-37685](https://bugs.python.org/issue?@action=redirect&bpo=37685) [https://bugs.python.org/issue?@action=redirect&bpo=37685]: Fixed comparisons of `datetime.timedelta` and `datetime.timezone`.
- [bpo-37697](https://bugs.python.org/issue?@action=redirect&bpo=37697) [https://bugs.python.org/issue?@action=redirect&bpo=37697]: Synchronize `importlib.metadata` with `importlib_metadata 0.19` [https://gitlab.com/python-devs/importlib\_metadata/-/milestones/20], improving

handling of EGG-INFO files and fixing a crash when entry point names contained colons.

- [bpo-37695](https://bugs.python.org/issue?@action=redirect&bpo=37695) [https://bugs.python.org/issue?@action=redirect&bpo=37695]: Correct `curses.unget_wch()` error message. Patch by Anthony Sottile.
- [bpo-37689](https://bugs.python.org/issue?@action=redirect&bpo=37689) [https://bugs.python.org/issue?@action=redirect&bpo=37689]: Add `is_relative_to()` in **PurePath** to determine whether or not one path is relative to another.
- [bpo-29553](https://bugs.python.org/issue?@action=redirect&bpo=29553) [https://bugs.python.org/issue?@action=redirect&bpo=29553]: Fixed `argparse.ArgumentParser.format_usage()` for mutually exclusive groups. Patch by Andrew Nester.
- [bpo-37691](https://bugs.python.org/issue?@action=redirect&bpo=37691) [https://bugs.python.org/issue?@action=redirect&bpo=37691]: Let `math.dist()` accept coordinates as sequences (or iterables) rather than just tuples.
- [bpo-37685](https://bugs.python.org/issue?@action=redirect&bpo=37685) [https://bugs.python.org/issue?@action=redirect&bpo=37685]: Fixed `__eq__`, `__lt__` etc implementations in some classes. They now return **NotImplemented** for unsupported type of the other operand. This allows the other operand to play role (for example the equality comparison with **ANY** will return `True`).
- [bpo-37354](https://bugs.python.org/issue?@action=redirect&bpo=37354) [https://bugs.python.org/issue?@action=redirect&bpo=37354]: Make `Activate.ps1` Powershell script static to allow for signing it.
- [bpo-37664](https://bugs.python.org/issue?@action=redirect&bpo=37664) [https://bugs.python.org/issue?@action=redirect&bpo=37664]: Update wheels bundled with ensurepip (pip 19.2.3 and setuptools 41.2.0)
- [bpo-37663](https://bugs.python.org/issue?@action=redirect&bpo=37663) [https://bugs.python.org/issue?@action=redirect&bpo=37663]: Bring consistency to `venv` shell activation scripts by always using `_VENV_PROMPT_`.

- [bpo-37642](https://bugs.python.org/issue?@action=redirect&bpo=37642) [https://bugs.python.org/issue?@action=redirect&bpo=37642]: Allowed the pure Python implementation of `datetime.timezone` to represent sub-minute offsets close to minimum and maximum boundaries, specifically in the ranges (23:59, 24:00) and (-23:59, 24:00). Patch by Ngalim Siregar
- [bpo-36161](https://bugs.python.org/issue?@action=redirect&bpo=36161) [https://bugs.python.org/issue?@action=redirect&bpo=36161]: In `posix`, use `ttynamex` instead of `ttynamex` for thread safety.
- [bpo-36324](https://bugs.python.org/issue?@action=redirect&bpo=36324) [https://bugs.python.org/issue?@action=redirect&bpo=36324]: Make internal attributes for `statistics.NormalDist()` private.
- [bpo-37555](https://bugs.python.org/issue?@action=redirect&bpo=37555) [https://bugs.python.org/issue?@action=redirect&bpo=37555]: Fix `NonCallableMock._call_matcher` returning tuple instead of `_Call` object when `self._spec_signature` exists. Patch by Elizabeth Uselton
- [bpo-29446](https://bugs.python.org/issue?@action=redirect&bpo=29446) [https://bugs.python.org/issue?@action=redirect&bpo=29446]: Make `from tkinter import *` import only the expected objects.
- [bpo-16970](https://bugs.python.org/issue?@action=redirect&bpo=16970) [https://bugs.python.org/issue?@action=redirect&bpo=16970]: Adding a value error when an invalid value in passed to `nargs` Patch by Robert Leenders
- [bpo-34443](https://bugs.python.org/issue?@action=redirect&bpo=34443) [https://bugs.python.org/issue?@action=redirect&bpo=34443]: Exceptions from `enum` now use the `__qualname` of the enum class in the exception message instead of the `__name__`.
- [bpo-37491](https://bugs.python.org/issue?@action=redirect&bpo=37491) [https://bugs.python.org/issue?@action=redirect&bpo=37491]: Fix `IndexError` when parsing email headers with unexpectedly ending bare-quoted string value. Patch by Abhilash Raj.
- [bpo-37587](https://bugs.python.org/issue?@action=redirect&bpo=37587) [https://bugs.python.org/issue?@action=redirect&bpo=37587]: Make `json.loads` faster for long

strings. (Patch by Marco Paolini)

- [bpo-18378](https://bugs.python.org/issue?@action=redirect&bpo=18378) [https://bugs.python.org/issue?@action=redirect&bpo=18378]: Recognize “UTF-8” as a valid value for LC\_CTYPE in locale.\_parse\_localename.
- [bpo-37579](https://bugs.python.org/issue?@action=redirect&bpo=37579) [https://bugs.python.org/issue?@action=redirect&bpo=37579]: Return **NotImplemented** in Python implementation of `__eq__` for **timedelta** and **time** when the other object being compared is not of the same type to match C implementation. Patch by Karthikeyan Singaravelan.
- [bpo-21478](https://bugs.python.org/issue?@action=redirect&bpo=21478) [https://bugs.python.org/issue?@action=redirect&bpo=21478]: Record calls to parent when autospecced object is attached to a mock using **`unittest.mock.attach_mock()`**. Patch by Karthikeyan Singaravelan.
- [bpo-37531](https://bugs.python.org/issue?@action=redirect&bpo=37531) [https://bugs.python.org/issue?@action=redirect&bpo=37531]: “python3 -m test -jN – timeout=TIMEOUT” now kills a worker process if it runs longer than *TIMEOUT* seconds.
- [bpo-37482](https://bugs.python.org/issue?@action=redirect&bpo=37482) [https://bugs.python.org/issue?@action=redirect&bpo=37482]: Fix serialization of display name in originator or destination address fields with both encoded words and special chars.
- [bpo-36993](https://bugs.python.org/issue?@action=redirect&bpo=36993) [https://bugs.python.org/issue?@action=redirect&bpo=36993]: Improve error reporting for corrupt zip files with bad zip64 extra data. Patch by Daniel Hillier.
- [bpo-37502](https://bugs.python.org/issue?@action=redirect&bpo=37502) [https://bugs.python.org/issue?@action=redirect&bpo=37502]: **`pickle.loads()`** no longer raises **`TypeError`** when the **`buffers`** argument is set to **`None`**
- [bpo-37520](https://bugs.python.org/issue?@action=redirect&bpo=37520) [https://bugs.python.org/issue?@action=redirect&bpo=37520]: Correct behavior for **`zipfile.Path.parent`** when the path object identifies a

subdirectory.

- [bpo-18374](https://bugs.python.org/issue?@action=redirect&bpo=18374) [https://bugs.python.org/issue?@action=redirect&bpo=18374]: Fix the `.col_offset` attribute of nested `ast.BinOp` instances which had a too large value in some situations.
- [bpo-37424](https://bugs.python.org/issue?@action=redirect&bpo=37424) [https://bugs.python.org/issue?@action=redirect&bpo=37424]: Fixes a possible hang when using a timeout on `subprocess.run()` while capturing output. If the child process spawned its own children or otherwise connected its stdout or stderr handles with another process, we could hang after the timeout was reached and our child was killed when attempting to read final output from the pipes.
- [bpo-37421](https://bugs.python.org/issue?@action=redirect&bpo=37421) [https://bugs.python.org/issue?@action=redirect&bpo=37421]: Fix `multiprocessing.util.get_temp_dir()` finalizer: clear also the 'tempdir' configuration of the current process, so next call to `get_temp_dir()` will create a new temporary directory, rather than reusing the removed temporary directory.
- [bpo-37481](https://bugs.python.org/issue?@action=redirect&bpo=37481) [https://bugs.python.org/issue?@action=redirect&bpo=37481]: The distutils `bdist_wininst` command is deprecated in Python 3.8, use `bdist_wheel` (wheel packages) instead.
- [bpo-37479](https://bugs.python.org/issue?@action=redirect&bpo=37479) [https://bugs.python.org/issue?@action=redirect&bpo=37479]: When `Enum.__str__` is overridden in a derived class, the override will be used by `Enum.__format__` regardless of whether mixin classes are present.
- [bpo-37440](https://bugs.python.org/issue?@action=redirect&bpo=37440) [https://bugs.python.org/issue?@action=redirect&bpo=37440]: `http.client` now enables TLS 1.3 post-handshake authentication for default context or if a `cert_file` is passed to `HTTPSConnection`.
- [bpo-37437](https://bugs.python.org/issue?@action=redirect&bpo=37437) [https://bugs.python.org/issue?@action=redirect&bpo=37437]

@action=redirect&bpo=37437]: Update vendorized expat version to 2.2.7.

- [bpo-37428](https://bugs.python.org/issue?@action=redirect&bpo=37428) [https://bugs.python.org/issue?@action=redirect&bpo=37428]: SSLContext.post\_handshake\_auth = True no longer sets SSL\_VERIFY\_POST\_HANDSHAKE verify flag for client connections. Although the option is documented as ignored for clients, OpenSSL implicitly enables cert chain validation when the flag is set.
- [bpo-37420](https://bugs.python.org/issue?@action=redirect&bpo=37420) [https://bugs.python.org/issue?@action=redirect&bpo=37420]: `os.sched_setaffinity()` now correctly handles errors that arise during iteration over its `mask` argument. Patch by Brandt Bucher.
- [bpo-37412](https://bugs.python.org/issue?@action=redirect&bpo=37412) [https://bugs.python.org/issue?@action=redirect&bpo=37412]: The `os.getcwdb()` function now uses the UTF-8 encoding on Windows, rather than the ANSI code page: see [PEP 529](https://peps.python.org/pep-0529/) [https://peps.python.org/pep-0529/] for the rationale. The function is no longer deprecated on Windows.
- [bpo-37406](https://bugs.python.org/issue?@action=redirect&bpo=37406) [https://bugs.python.org/issue?@action=redirect&bpo=37406]: The `sqlite3` module now raises `TypeError`, rather than `ValueError`, if operation argument type is not `str`: `execute()`, `executemany()` and calling a connection.
- [bpo-29412](https://bugs.python.org/issue?@action=redirect&bpo=29412) [https://bugs.python.org/issue?@action=redirect&bpo=29412]: Fix `IndexError` in parsing a header value ending unexpectedly. Patch by Abhilash Raj.
- [bpo-36546](https://bugs.python.org/issue?@action=redirect&bpo=36546) [https://bugs.python.org/issue?@action=redirect&bpo=36546]: The `dist` argument for `statistics.quantiles()` is now positional only. The current name doesn't reflect that the argument can be either a dataset or a distribution. Marking the parameter as positional avoids confusion and makes it possible to change the name later.
- [bpo-37394](https://bugs.python.org/issue?@action=redirect&bpo=37394) [https://bugs.python.org/issue?@action=redirect&bpo=37394]: Fix a bug that was causing the

`queue` module to fail if the accelerator module was not available. Patch by Pablo Galindo.

- [bpo-37376](https://bugs.python.org/issue?@action=redirect&bpo=37376) [https://bugs.python.org/issue?@action=redirect&bpo=37376]: `pprint` now has support for `types.SimpleNamespace`. Patch by Carl Bordum Hansen.
- [bpo-26967](https://bugs.python.org/issue?@action=redirect&bpo=26967) [https://bugs.python.org/issue?@action=redirect&bpo=26967]: An `ArgumentParser` with `allow_abbrev=False` no longer disables grouping of short flags, such as `-vv`, but only disables abbreviation of long flags as documented. Patch by Zac Hatfield-Dodds.
- [bpo-37212](https://bugs.python.org/issue?@action=redirect&bpo=37212) [https://bugs.python.org/issue?@action=redirect&bpo=37212]: `unittest.mock.call()` now preserves the order of keyword arguments in repr output. Patch by Karthikeyan Singaravelan.
- [bpo-37372](https://bugs.python.org/issue?@action=redirect&bpo=37372) [https://bugs.python.org/issue?@action=redirect&bpo=37372]: Fix error unpickling `datetime.time` objects from Python 2 with `seconds >= 24`. Patch by Justin Blanchard.
- [bpo-37345](https://bugs.python.org/issue?@action=redirect&bpo=37345) [https://bugs.python.org/issue?@action=redirect&bpo=37345]: Add formal support for UDPLITE sockets. Support was present before, but it is now easier to detect support with `hasattr(socket, 'IPPROTO_UDPLITE')` and there are constants defined for each of the values needed: `socket.IPPROTO_UDPLITE`, `UDPLITE_SEND_CSCOV`, and `UDPLITE_RECV_CSCOV`. Patch by Gabe Appleton.
- [bpo-37358](https://bugs.python.org/issue?@action=redirect&bpo=37358) [https://bugs.python.org/issue?@action=redirect&bpo=37358]: Optimized `functools.partial` by using `vectorcall`.
- [bpo-37347](https://bugs.python.org/issue?@action=redirect&bpo=37347) [https://bugs.python.org/issue?@action=redirect&bpo=37347]:  
`sqlite3.Connection.create_aggregate()`,  
`sqlite3.Connection.create_function()`,  
`sqlite3.Connection.set_authorizer()`,

`sqlite3.Connection.set_progress_handler()` and `sqlite3.Connection.set_trace_callback()` methods lead to segfaults if some of these methods are called twice with an equal object but not the same. Now callbacks are stored more carefully. Patch by Aleksandr Balezin.

- [bpo-37163](https://bugs.python.org/issue?@action=redirect&bpo=37163) [https://bugs.python.org/issue?@action=redirect&bpo=37163]: The *obj* argument of `dataclasses.replace()` is positional-only now.
- [bpo-37085](https://bugs.python.org/issue?@action=redirect&bpo=37085) [https://bugs.python.org/issue?@action=redirect&bpo=37085]: Add the optional Linux SocketCAN Broadcast Manager constants, used as flags to configure the BCM behaviour, in the socket module. Patch by Karl Ding.
- [bpo-37328](https://bugs.python.org/issue?@action=redirect&bpo=37328) [https://bugs.python.org/issue?@action=redirect&bpo=37328]: `HTMLParser.unescape` is removed. It was undocumented and deprecated since Python 3.4.
- [bpo-37305](https://bugs.python.org/issue?@action=redirect&bpo=37305) [https://bugs.python.org/issue?@action=redirect&bpo=37305]: Add `.webmanifest` -> `application/manifest+json` to list of recognized file types and content type headers
- [bpo-37320](https://bugs.python.org/issue?@action=redirect&bpo=37320) [https://bugs.python.org/issue?@action=redirect&bpo=37320]: `aifc.openfp()` alias to `aifc.open()`, `sunau.openfp()` alias to `sunau.open()`, and `wave.openfp()` alias to `wave.open()` have been removed. They were deprecated since Python 3.7.
- [bpo-37315](https://bugs.python.org/issue?@action=redirect&bpo=37315) [https://bugs.python.org/issue?@action=redirect&bpo=37315]: Deprecated accepting floats with integral value (like `5.0`) in `math.factorial()`.
- [bpo-37312](https://bugs.python.org/issue?@action=redirect&bpo=37312) [https://bugs.python.org/issue?@action=redirect&bpo=37312]: `_dummy_thread` and `dummy_threading` modules have been removed. These modules were deprecated since Python 3.7 which requires threading support.

- [bpo-33972](https://bugs.python.org/issue?@action=redirect&bpo=33972) [https://bugs.python.org/issue?@action=redirect&bpo=33972]: Email with single part but content-type set to `multipart/*` doesn't raise `AttributeError` anymore.
- [bpo-37280](https://bugs.python.org/issue?@action=redirect&bpo=37280) [https://bugs.python.org/issue?@action=redirect&bpo=37280]: Use `threadpool` for reading from file for `sendfile` fallback mode.
- [bpo-37279](https://bugs.python.org/issue?@action=redirect&bpo=37279) [https://bugs.python.org/issue?@action=redirect&bpo=37279]: Fix `asyncio` `sendfile` support when `sendfile` sends extra data in fallback mode.
- [bpo-19865](https://bugs.python.org/issue?@action=redirect&bpo=19865) [https://bugs.python.org/issue?@action=redirect&bpo=19865]: `ctypes.create_unicode_buffer()` now also supports non-BMP characters on platforms with 16-bit `wchar_t` (for example, Windows and AIX).
- [bpo-37266](https://bugs.python.org/issue?@action=redirect&bpo=37266) [https://bugs.python.org/issue?@action=redirect&bpo=37266]: In a subinterpreter, spawning a daemon thread now raises an exception. Daemon threads were never supported in subinterpreters. Previously, the subinterpreter finalization crashed with a Python fatal error if a daemon thread was still running.
- [bpo-37210](https://bugs.python.org/issue?@action=redirect&bpo=37210) [https://bugs.python.org/issue?@action=redirect&bpo=37210]: Allow pure Python implementation of `pickle` to work even when the C `_pickle` module is unavailable.
- [bpo-21872](https://bugs.python.org/issue?@action=redirect&bpo=21872) [https://bugs.python.org/issue?@action=redirect&bpo=21872]: Fix `lzma`: module decompresses data incompletely. When decompressing a `FORMAT_ALONE` format file, and it doesn't have the end marker, sometimes the last one to dozens bytes can't be output. Patch by Ma Lin.
- [bpo-35922](https://bugs.python.org/issue?@action=redirect&bpo=35922) [https://bugs.python.org/issue?@action=redirect&bpo=35922]: Fix `RobotFileParser.crawl_delay()` and `RobotFileParser.request_rate()` to return `None`

rather than raise `AttributeError` when no relevant rule is defined in the robots.txt file. Patch by Rémi Lapeyre.

- [bpo-35766](https://bugs.python.org/issue?@action=redirect&bpo=35766) [https://bugs.python.org/issue?@action=redirect&bpo=35766]: Change the format of `feature_version` to be a (major, minor) tuple.
- [bpo-36607](https://bugs.python.org/issue?@action=redirect&bpo=36607) [https://bugs.python.org/issue?@action=redirect&bpo=36607]: Eliminate `RuntimeError` raised by `asyncio.all_tasks()` if internal tasks weak set is changed by another thread during iteration.
- [bpo-18748](https://bugs.python.org/issue?@action=redirect&bpo=18748) [https://bugs.python.org/issue?@action=redirect&bpo=18748]: `_pyio.IOBase` destructor now does nothing if getting the `closed` attribute fails to better mimic `_io.IOBase` finalizer.
- [bpo-36402](https://bugs.python.org/issue?@action=redirect&bpo=36402) [https://bugs.python.org/issue?@action=redirect&bpo=36402]: Fix a race condition at Python shutdown when waiting for threads. Wait until the Python thread state of all non-daemon threads get deleted (join all non-daemon threads), rather than just wait until non-daemon Python threads complete.
- [bpo-37206](https://bugs.python.org/issue?@action=redirect&bpo=37206) [https://bugs.python.org/issue?@action=redirect&bpo=37206]: Default values which cannot be represented as Python objects no longer improperly represented as `None` in function signatures.
- [bpo-37111](https://bugs.python.org/issue?@action=redirect&bpo=37111) [https://bugs.python.org/issue?@action=redirect&bpo=37111]: Added `encoding` and `errors` keyword parameters to `logging.basicConfig`.
- [bpo-12144](https://bugs.python.org/issue?@action=redirect&bpo=12144) [https://bugs.python.org/issue?@action=redirect&bpo=12144]: Ensure cookies with `expires` attribute are handled in `CookieJar.make_cookies()`.
- [bpo-34886](https://bugs.python.org/issue?@action=redirect&bpo=34886) [https://bugs.python.org/issue?@action=redirect&bpo=34886]: Fix an unintended `ValueError` from `subprocess.run()` when checking for conflicting `input` and `stdin` or `capture_output` and `stdout` or

**stderr** args when they were explicitly provided but with **None** values within a passed in **\*\*kwargs** dict rather than as passed directly by name. Patch contributed by Rémi Lapeyre.

- [bpo-37173](https://bugs.python.org/issue?@action=redirect&bpo=37173) [https://bugs.python.org/issue?@action=redirect&bpo=37173]: The exception message for `inspect.getfile()` now correctly reports the passed class rather than the builtins module.
- [bpo-37178](https://bugs.python.org/issue?@action=redirect&bpo=37178) [https://bugs.python.org/issue?@action=redirect&bpo=37178]: Give `math.perm()` a one argument form that means the same as `math.factorial()`.
- [bpo-37178](https://bugs.python.org/issue?@action=redirect&bpo=37178) [https://bugs.python.org/issue?@action=redirect&bpo=37178]: For `math.perm(n, k)`, let `k` default to `n`, giving the same result as `factorial`.
- [bpo-37165](https://bugs.python.org/issue?@action=redirect&bpo=37165) [https://bugs.python.org/issue?@action=redirect&bpo=37165]: Converted `_collections._count_elements` to use the Argument Clinic.
- [bpo-34767](https://bugs.python.org/issue?@action=redirect&bpo=34767) [https://bugs.python.org/issue?@action=redirect&bpo=34767]: Do not always create a `collections.deque` in `asyncio.Lock`.
- [bpo-37158](https://bugs.python.org/issue?@action=redirect&bpo=37158) [https://bugs.python.org/issue?@action=redirect&bpo=37158]: Speed-up `statistics.fmean()` by switching from a function to a generator.
- [bpo-34282](https://bugs.python.org/issue?@action=redirect&bpo=34282) [https://bugs.python.org/issue?@action=redirect&bpo=34282]: Remove `Enum._convert` method, deprecated in 3.8.
- [bpo-37150](https://bugs.python.org/issue?@action=redirect&bpo=37150) [https://bugs.python.org/issue?@action=redirect&bpo=37150]: `argparse._ActionsContainer.add_argument` now throws error, if someone accidentally pass `FileType` class object instead of instance of `FileType` as `type` argument
- [bpo-28724](https://bugs.python.org/issue?@action=redirect&bpo=28724) [https://bugs.python.org/issue?@action=redirect&bpo=28724]

@action=redirect&bpo=28724]: The socket module now has the `socket.send_fds()` and `socket.recv_fds()` methods. Contributed by Joanna Nanjey, Shinya Okano and Victor Stinner.

- [bpo-35621](https://bugs.python.org/issue?@action=redirect&bpo=35621) [https://bugs.python.org/issue?@action=redirect&bpo=35621]: Support running asyncio subprocesses when execution event loop in a thread on UNIX.
- [bpo-36520](https://bugs.python.org/issue?@action=redirect&bpo=36520) [https://bugs.python.org/issue?@action=redirect&bpo=36520]: Lengthy email headers with UTF-8 characters are now properly encoded when they are folded. Patch by Jeffrey Kintscher.
- [bpo-30835](https://bugs.python.org/issue?@action=redirect&bpo=30835) [https://bugs.python.org/issue?@action=redirect&bpo=30835]: Fixed a bug in email parsing where a message with invalid bytes in content-transfer-encoding of a multipart message can cause an AttributeError. Patch by Andrew Donnellan.
- [bpo-31163](https://bugs.python.org/issue?@action=redirect&bpo=31163) [https://bugs.python.org/issue?@action=redirect&bpo=31163]: `pathlib.Path` instance's `rename` and `replace` methods now return the new `Path` instance.
- [bpo-25068](https://bugs.python.org/issue?@action=redirect&bpo=25068) [https://bugs.python.org/issue?@action=redirect&bpo=25068]: `urllib.request.ProxyHandler` now lowercases the keys of the passed dictionary.
- [bpo-26185](https://bugs.python.org/issue?@action=redirect&bpo=26185) [https://bugs.python.org/issue?@action=redirect&bpo=26185]: Fix `repr()` on empty `ZipInfo` object. Patch by Mickaël Schoentgen.
- [bpo-21315](https://bugs.python.org/issue?@action=redirect&bpo=21315) [https://bugs.python.org/issue?@action=redirect&bpo=21315]: Email headers containing RFC2047 encoded words are parsed despite the missing whitespace, and a defect registered. Also missing trailing whitespace after encoded words is now registered as a defect.
- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: Port `test_datetime` to VxWorks:

skip zoneinfo tests on VxWorks

- [bpo-35805](https://bugs.python.org/issue?@action=redirect&bpo=35805) [https://bugs.python.org/issue?@action=redirect&bpo=35805]: Add parser for Message-ID header and add it to default HeaderRegistry. This should prevent folding of Message-ID using RFC 2048 encoded words.
- [bpo-36871](https://bugs.python.org/issue?@action=redirect&bpo=36871) [https://bugs.python.org/issue?@action=redirect&bpo=36871]: Ensure method signature is used instead of constructor signature of a class while asserting mock object against method calls. Patch by Karthikeyan Singaravelan.
- [bpo-35070](https://bugs.python.org/issue?@action=redirect&bpo=35070) [https://bugs.python.org/issue?@action=redirect&bpo=35070]: posix.getgrouplist() now works correctly when the user belongs to NGROUPS\_MAX supplemental groups. Patch by Jeffrey Kintscher.
- [bpo-31783](https://bugs.python.org/issue?@action=redirect&bpo=31783) [https://bugs.python.org/issue?@action=redirect&bpo=31783]: Fix race condition in ThreadPoolExecutor when worker threads are created during interpreter shutdown.
- [bpo-36582](https://bugs.python.org/issue?@action=redirect&bpo=36582) [https://bugs.python.org/issue?@action=redirect&bpo=36582]: Fix `UserString.encode()` to correctly return `bytes` rather than a `UserString` instance.
- [bpo-32424](https://bugs.python.org/issue?@action=redirect&bpo=32424) [https://bugs.python.org/issue?@action=redirect&bpo=32424]: Deprecate `xml.etree.ElementTree.Element.copy()` in favor of `copy.copy()`.

Patch by Gordon P. Hemsley

- [bpo-36564](https://bugs.python.org/issue?@action=redirect&bpo=36564) [https://bugs.python.org/issue?@action=redirect&bpo=36564]: Fix infinite loop in email header folding logic that would be triggered when an email policy's `max_line_length` is not long enough to include the required markup and any values in the message. Patch by Paul Ganssle
- [bpo-36543](https://bugs.python.org/issue?@action=redirect&bpo=36543) [https://bugs.python.org/issue?@action=redirect&bpo=36543]

@action=redirect&bpo=36543]: Removed methods `Element.getchildren()`, `Element.getiterator()` and `ElementTree.getiterator()` and the `xml.etree.cElementTree` module.

- [bpo-36409](https://bugs.python.org/issue?@action=redirect&bpo=36409) [https://bugs.python.org/issue?@action=redirect&bpo=36409]: Remove the old `plistlib` API deprecated in Python 3.4
- [bpo-36302](https://bugs.python.org/issue?@action=redirect&bpo=36302) [https://bugs.python.org/issue?@action=redirect&bpo=36302]: `distutils` sorts source file lists so that Extension `.so` files build more reproducibly by default
- [bpo-36250](https://bugs.python.org/issue?@action=redirect&bpo=36250) [https://bugs.python.org/issue?@action=redirect&bpo=36250]: Ignore `ValueError` from `signal` with `interaction` in non-main thread.
- [bpo-36046](https://bugs.python.org/issue?@action=redirect&bpo=36046) [https://bugs.python.org/issue?@action=redirect&bpo=36046]: Added `user`, `group` and `extra_groups` parameters to the `subprocess.Popen` constructor. Patch by Patrick McLean.
- [bpo-32627](https://bugs.python.org/issue?@action=redirect&bpo=32627) [https://bugs.python.org/issue?@action=redirect&bpo=32627]: Fix compile error when `_uuid` headers conflicting included.
- [bpo-35800](https://bugs.python.org/issue?@action=redirect&bpo=35800) [https://bugs.python.org/issue?@action=redirect&bpo=35800]: Deprecate `smtpd.MailmanProxy` ready for future removal.
- [bpo-35168](https://bugs.python.org/issue?@action=redirect&bpo=35168) [https://bugs.python.org/issue?@action=redirect&bpo=35168]: `shlex.shlex.punctuation_chars` is now a read-only property.
- [bpo-8538](https://bugs.python.org/issue?@action=redirect&bpo=8538) [https://bugs.python.org/issue?@action=redirect&bpo=8538]: Add support for boolean actions like `--foo` and `--no-foo` to `argparse`. Patch contributed by Rémi Lapeyre.
- [bpo-20504](https://bugs.python.org/issue?@action=redirect&bpo=20504) [https://bugs.python.org/issue?@action=redirect&bpo=20504]: Fixes a bug in `cgi` module when

a multipart/form-data request has no **Content-Length** header.

- [bpo-25988](https://bugs.python.org/issue?@action=redirect&bpo=25988) [https://bugs.python.org/issue?@action=redirect&bpo=25988]: The abstract base classes in **collections.abc** no longer are exposed in the regular **collections** module.
- [bpo-11122](https://bugs.python.org/issue?@action=redirect&bpo=11122) [https://bugs.python.org/issue?@action=redirect&bpo=11122]: Distutils won't check for rpmbuild in specified paths only.
- [bpo-34775](https://bugs.python.org/issue?@action=redirect&bpo=34775) [https://bugs.python.org/issue?@action=redirect&bpo=34775]: Division handling of PurePath now returns NotImplemented instead of raising a TypeError when passed something other than an instance of str or PurePath. Patch by Roger Aiudi.
- [bpo-34749](https://bugs.python.org/issue?@action=redirect&bpo=34749) [https://bugs.python.org/issue?@action=redirect&bpo=34749]: **binascii.a2b\_base64()** is now up to 2 times faster. Patch by Sergey Fedoseev.
- [bpo-34519](https://bugs.python.org/issue?@action=redirect&bpo=34519) [https://bugs.python.org/issue?@action=redirect&bpo=34519]: Add additional aliases for HP Roman 8. Patch by Michael Osipov.
- [bpo-28009](https://bugs.python.org/issue?@action=redirect&bpo=28009) [https://bugs.python.org/issue?@action=redirect&bpo=28009]: Fix uuid.getnode() on platforms with '.' as MAC Addr delimiter as well fix for MAC Addr format that omits a leading 0 in MAC Addr values. Currently, AIX is the only know platform with these settings. Patch by Michael Felt.
- [bpo-30618](https://bugs.python.org/issue?@action=redirect&bpo=30618) [https://bugs.python.org/issue?@action=redirect&bpo=30618]: Add **readlink()**. Patch by Girts Folkmanis.
- [bpo-32498](https://bugs.python.org/issue?@action=redirect&bpo=32498) [https://bugs.python.org/issue?@action=redirect&bpo=32498]: Made **urllib.parse.unquote()** accept bytes in addition to strings. Patch by Stein Karlsen.

- [bpo-33348](https://bugs.python.org/issue?@action=redirect&bpo=33348) [https://bugs.python.org/issue?@action=redirect&bpo=33348]: `lib2to3` now recognizes expressions after `*` and `**` like in `f(*[] or [])`.
- [bpo-32689](https://bugs.python.org/issue?@action=redirect&bpo=32689) [https://bugs.python.org/issue?@action=redirect&bpo=32689]: Update `shutil.move()` function to allow for `Path` objects to be used as source argument. Patch by Emily Morehouse and Maxwell “5.13b” McKinnon.
- [bpo-32820](https://bugs.python.org/issue?@action=redirect&bpo=32820) [https://bugs.python.org/issue?@action=redirect&bpo=32820]: Added `_format_` to `IPv4` and `IPv6` classes. Always outputs a fully zero- padded string. Supports `b/x/n` modifiers (bin/hex/native format). Native format for `IPv4` is bin, native format for `IPv6` is hex. Also supports `#` and `_` modifiers.
- [bpo-27657](https://bugs.python.org/issue?@action=redirect&bpo=27657) [https://bugs.python.org/issue?@action=redirect&bpo=27657]: Fix `urllib.parse.urlparse()` with numeric paths. A string like `“path:80”` is no longer parsed as a path but as a scheme (`“path”`) and a path (`“80”`).
- [bpo-4963](https://bugs.python.org/issue?@action=redirect&bpo=4963) [https://bugs.python.org/issue?@action=redirect&bpo=4963]: Fixed non-deterministic behavior related to `mimetypes` extension mapping and module reinitialization.

## Documentation

- [bpo-21767](https://bugs.python.org/issue?@action=redirect&bpo=21767) [https://bugs.python.org/issue?@action=redirect&bpo=21767]: Explicitly mention `abc` support in `functools singledispatch`
- [bpo-38816](https://bugs.python.org/issue?@action=redirect&bpo=38816) [https://bugs.python.org/issue?@action=redirect&bpo=38816]: Provides more details about the interaction between `fork()` and CPython’s runtime, focusing just on the C-API. This includes cautions about where `fork()` should and shouldn’t be called.
- [bpo-38351](https://bugs.python.org/issue?@action=redirect&bpo=38351) [https://bugs.python.org/issue?@action=redirect&bpo=38351]: Modernize `email` examples from `%`-formatting to `f`-strings.

- [bpo-38778](https://bugs.python.org/issue?@action=redirect&bpo=38778) [https://bugs.python.org/issue?@action=redirect&bpo=38778]: Document the fact that **RuntimeError** is raised if **os.fork()** is called in a subinterpreter.
- [bpo-38592](https://bugs.python.org/issue?@action=redirect&bpo=38592) [https://bugs.python.org/issue?@action=redirect&bpo=38592]: Add Brazilian Portuguese to the language switcher at Python Documentation website.
- [bpo-38294](https://bugs.python.org/issue?@action=redirect&bpo=38294) [https://bugs.python.org/issue?@action=redirect&bpo=38294]: Add list of no-longer-escaped chars to re.escape documentation
- [bpo-38053](https://bugs.python.org/issue?@action=redirect&bpo=38053) [https://bugs.python.org/issue?@action=redirect&bpo=38053]: Modernized the plistlib documentation
- [bpo-26868](https://bugs.python.org/issue?@action=redirect&bpo=26868) [https://bugs.python.org/issue?@action=redirect&bpo=26868]: Fix example usage of **PyModule\_AddObject()** to properly handle errors.
- [bpo-36797](https://bugs.python.org/issue?@action=redirect&bpo=36797) [https://bugs.python.org/issue?@action=redirect&bpo=36797]: Fix a dead link in the distutils API Reference.
- [bpo-37977](https://bugs.python.org/issue?@action=redirect&bpo=37977) [https://bugs.python.org/issue?@action=redirect&bpo=37977]: Warn more strongly and clearly about pickle insecurity
- [bpo-37979](https://bugs.python.org/issue?@action=redirect&bpo=37979) [https://bugs.python.org/issue?@action=redirect&bpo=37979]: Added a link to `dateutil.parser.isoparse` in the `datetime.fromisoformat` documentation. Patch by Paul Ganssle
- [bpo-12707](https://bugs.python.org/issue?@action=redirect&bpo=12707) [https://bugs.python.org/issue?@action=redirect&bpo=12707]: Deprecate `info()`, `geturl()`, `getcode()` methods in favor of the `headers`, `url`, and `status` properties, respectively, for `HTTPResponse` and `addinfourl`. Also deprecate the `code` attribute of `addinfourl` in favor of the `status` attribute. Patch by Ashwin Ramaswami

- [bpo-37937](https://bugs.python.org/issue?@action=redirect&bpo=37937) [https://bugs.python.org/issue?@action=redirect&bpo=37937]: Mention `frame.f_trace` in `sys.settrace()` docs.
- [bpo-37878](https://bugs.python.org/issue?@action=redirect&bpo=37878) [https://bugs.python.org/issue?@action=redirect&bpo=37878]: Make `PyThreadState_DeleteCurrent()` Internal.
- [bpo-37759](https://bugs.python.org/issue?@action=redirect&bpo=37759) [https://bugs.python.org/issue?@action=redirect&bpo=37759]: Beginning edits to Whatsnew 3.8
- [bpo-37726](https://bugs.python.org/issue?@action=redirect&bpo=37726) [https://bugs.python.org/issue?@action=redirect&bpo=37726]: Stop recommending getopt in the tutorial for command line argument parsing and promote argparse.
- [bpo-32910](https://bugs.python.org/issue?@action=redirect&bpo=32910) [https://bugs.python.org/issue?@action=redirect&bpo=32910]: Remove implementation-specific behaviour of how venv's Deactivate works.
- [bpo-37256](https://bugs.python.org/issue?@action=redirect&bpo=37256) [https://bugs.python.org/issue?@action=redirect&bpo=37256]: Fix wording of arguments for `Request` in `urllib.request`
- [bpo-37284](https://bugs.python.org/issue?@action=redirect&bpo=37284) [https://bugs.python.org/issue?@action=redirect&bpo=37284]: Add a brief note to indicate that any new `sys.implementation` required attributes must go through the PEP process.
- [bpo-30088](https://bugs.python.org/issue?@action=redirect&bpo=30088) [https://bugs.python.org/issue?@action=redirect&bpo=30088]: Documented that `mailbox.Maildir` constructor doesn't attempt to verify the maildir folder layout correctness. Patch by Sviatoslav Sydorenko.
- [bpo-37521](https://bugs.python.org/issue?@action=redirect&bpo=37521) [https://bugs.python.org/issue?@action=redirect&bpo=37521]: Fix `importlib` examples to insert any newly created modules via `importlib.util.module_from_spec()` immediately into `sys.modules` instead of after calling `loader.exec_module()`.

Thanks to Benjamin Mintz for finding the bug.

- [bpo-37456](https://bugs.python.org/issue?@action=redirect&bpo=37456) [https://bugs.python.org/issue?@action=redirect&bpo=37456]: Slash (‘/’) is now part of syntax.
- [bpo-37487](https://bugs.python.org/issue?@action=redirect&bpo=37487) [https://bugs.python.org/issue?@action=redirect&bpo=37487]: Fix PyList\_GetItem index description to include 0.
- [bpo-37149](https://bugs.python.org/issue?@action=redirect&bpo=37149) [https://bugs.python.org/issue?@action=redirect&bpo=37149]: Replace the dead link to the Tkinter 8.5 reference by John Shipman, New Mexico Tech, with a link to the archive.org copy.
- [bpo-37478](https://bugs.python.org/issue?@action=redirect&bpo=37478) [https://bugs.python.org/issue?@action=redirect&bpo=37478]: Added possible exceptions to the description of `os.chdir()`.
- [bpo-34903](https://bugs.python.org/issue?@action=redirect&bpo=34903) [https://bugs.python.org/issue?@action=redirect&bpo=34903]: Documented that in `datetime.datetime.strptime()`, the leading zero in some two-digit formats is optional. Patch by Mike Gleen.
- [bpo-36260](https://bugs.python.org/issue?@action=redirect&bpo=36260) [https://bugs.python.org/issue?@action=redirect&bpo=36260]: Add decompression pitfalls to zipfile module documentation.
- [bpo-37004](https://bugs.python.org/issue?@action=redirect&bpo=37004) [https://bugs.python.org/issue?@action=redirect&bpo=37004]: In the documentation for `difflib`, a note was added explicitly warning that the results of `SequenceMatcher`’s `ratio` method may depend on the order of the input strings.
- [bpo-36960](https://bugs.python.org/issue?@action=redirect&bpo=36960) [https://bugs.python.org/issue?@action=redirect&bpo=36960]: Restructured the `datetime` docs in the interest of making them more user-friendly and improving readability. Patch by Brad Solomon.
- [bpo-36487](https://bugs.python.org/issue?@action=redirect&bpo=36487) [https://bugs.python.org/issue?@action=redirect&bpo=36487]: Make C-API docs clear about what the “main” interpreter is.

- [bpo-23460](https://bugs.python.org/issue?@action=redirect&bpo=23460) [https://bugs.python.org/issue?@action=redirect&bpo=23460]: The documentation for decimal string formatting using the `g` specifier has been updated to reflect the correct exponential notation cutoff point. Original patch contributed by Tuomas Suutari.
- [bpo-35803](https://bugs.python.org/issue?@action=redirect&bpo=35803) [https://bugs.python.org/issue?@action=redirect&bpo=35803]: Document and test that `tempfile` functions may accept a [path-like object](#) for the `dir` argument. Patch by Anthony Sottile.
- [bpo-33944](https://bugs.python.org/issue?@action=redirect&bpo=33944) [https://bugs.python.org/issue?@action=redirect&bpo=33944]: Added a note about the intended use of code in `.pth` files.
- [bpo-34293](https://bugs.python.org/issue?@action=redirect&bpo=34293) [https://bugs.python.org/issue?@action=redirect&bpo=34293]: Fix the Doc/Makefile regarding PAPER environment variable and PDF builds
- [bpo-25237](https://bugs.python.org/issue?@action=redirect&bpo=25237) [https://bugs.python.org/issue?@action=redirect&bpo=25237]: Add documentation for tkinter modules

## Tests

- [bpo-38614](https://bugs.python.org/issue?@action=redirect&bpo=38614) [https://bugs.python.org/issue?@action=redirect&bpo=38614]: Fix `test_communicate()` of `test_asyncio.test_subprocess`: use `support.LONG_TIMEOUT` (5 minutes), instead of just 1 minute.
- [bpo-38614](https://bugs.python.org/issue?@action=redirect&bpo=38614) [https://bugs.python.org/issue?@action=redirect&bpo=38614]: Add timeout constants to `test.support`: `LOOPBACK_TIMEOUT`, `INTERNET_TIMEOUT`, `SHORT_TIMEOUT` and `LONG_TIMEOUT`.
- [bpo-38502](https://bugs.python.org/issue?@action=redirect&bpo=38502) [https://bugs.python.org/issue?@action=redirect&bpo=38502]: `test regrtest` now uses process groups in the multiprocessing mode (`-jN` command line option) if process groups are available: if `os.setsid()` and `os.killpg()` functions are available.

- [bpo-35998](https://bugs.python.org/issue?@action=redirect&bpo=35998) [https://bugs.python.org/issue?@action=redirect&bpo=35998]: Fix a race condition in `test_asyncio.test_start_tls_server_1()`. Previously, there was a race condition between the test `main()` function which replaces the protocol and the test `ServerProto` protocol which sends ANSWER once it gets HELLO. Now, only the test `main()` function is responsible to send data, `ServerProto` no longer sends data.
- [bpo-38470](https://bugs.python.org/issue?@action=redirect&bpo=38470) [https://bugs.python.org/issue?@action=redirect&bpo=38470]: Fix `test_compileall.test_compile_dir_maxlevels()` on Windows without long path support: only create 3 subdirectories instead of between 20 and 100 subdirectories.
- [bpo-37531](https://bugs.python.org/issue?@action=redirect&bpo=37531) [https://bugs.python.org/issue?@action=redirect&bpo=37531]: On timeout, `regtest` no longer attempts to call `popen.communicate()` again: it can hang until all child processes using stdout and stderr pipes completes. Kill the worker process and ignores its output. Change also the `faulthandler` timeout of the main process from 1 minute to 5 minutes, for Python slowest buildbots.
- [bpo-38239](https://bugs.python.org/issue?@action=redirect&bpo=38239) [https://bugs.python.org/issue?@action=redirect&bpo=38239]: Fix `test_gdb` for Link Time Optimization (LTO) builds.
- [bpo-38275](https://bugs.python.org/issue?@action=redirect&bpo=38275) [https://bugs.python.org/issue?@action=redirect&bpo=38275]: `test_ssl` now handles disabled TLS/SSL versions better. OpenSSL's crypto policy and run-time settings are recognized and tests for disabled versions are skipped. Tests also accept more TLS `minimum_versions` for platforms that override OpenSSL's default with strict settings.
- [bpo-38271](https://bugs.python.org/issue?@action=redirect&bpo=38271) [https://bugs.python.org/issue?@action=redirect&bpo=38271]: The private keys for `test_ssl` were encrypted with 3DES in traditional PKCS#5 format. 3DES and the digest algorithm of PKCS#5 are blocked by some strict crypto policies. Use PKCS#8 format with AES256 encryption instead.

- [bpo-38270](https://bugs.python.org/issue?@action=redirect&bpo=38270) [https://bugs.python.org/issue?@action=redirect&bpo=38270]: test.support now has a helper function to check for availability of a hash digest function. Several tests are refactored avoid MD5 and use SHA256 instead. Other tests are marked to use MD5 and skipped when MD5 is disabled.
- [bpo-37123](https://bugs.python.org/issue?@action=redirect&bpo=37123) [https://bugs.python.org/issue?@action=redirect&bpo=37123]: Multiprocessing test test\_mymanager() now also expects -SIGTERM, not only exitcode 0. BaseManager.\_finalize\_manager() sends SIGTERM to the manager process if it takes longer than 1 second to stop, which happens on slow buildbots.
- [bpo-38212](https://bugs.python.org/issue?@action=redirect&bpo=38212) [https://bugs.python.org/issue?@action=redirect&bpo=38212]: Multiprocessing tests: increase test\_queue\_feeder\_dont\_stop\_onexc() timeout from 1 to 60 seconds.
- [bpo-38117](https://bugs.python.org/issue?@action=redirect&bpo=38117) [https://bugs.python.org/issue?@action=redirect&bpo=38117]: Test with OpenSSL 1.1.1d
- [bpo-38018](https://bugs.python.org/issue?@action=redirect&bpo=38018) [https://bugs.python.org/issue?@action=redirect&bpo=38018]: Increase code coverage for multiprocessing.shared\_memory.
- [bpo-37805](https://bugs.python.org/issue?@action=redirect&bpo=37805) [https://bugs.python.org/issue?@action=redirect&bpo=37805]: Add tests for json.dump(..., skipkeys=True). Patch by Dong-hee Na.
- [bpo-37531](https://bugs.python.org/issue?@action=redirect&bpo=37531) [https://bugs.python.org/issue?@action=redirect&bpo=37531]: Enhance regrtest multiprocessing timeout: write a message when killing a worker process, catch popen.kill() and popen.wait() exceptions, put a timeout on the second call to popen.communicate().
- [bpo-37876](https://bugs.python.org/issue?@action=redirect&bpo=37876) [https://bugs.python.org/issue?@action=redirect&bpo=37876]: Add tests for ROT-13 codec.
- [bpo-36833](https://bugs.python.org/issue?@action=redirect&bpo=36833) [https://bugs.python.org/issue?@action=redirect&bpo=36833]: Added tests for

PyDateTime\_xxx\_GET\_xxx() macros of the C API of the **datetime** module. Patch by Joannah Nanjeyke.

- [bpo-37558](https://bugs.python.org/issue?@action=redirect&bpo=37558) [https://bugs.python.org/issue?@action=redirect&bpo=37558]: Fix `test_shared_memory_cleaned_after_process_termination` name handling
- [bpo-37526](https://bugs.python.org/issue?@action=redirect&bpo=37526) [https://bugs.python.org/issue?@action=redirect&bpo=37526]: Add `test.support.catch_threading_exception()`: context manager catching `threading.Thread` exception using `threading.excepthook()`.
- [bpo-37421](https://bugs.python.org/issue?@action=redirect&bpo=37421) [https://bugs.python.org/issue?@action=redirect&bpo=37421]: `test_concurrent_futures` now explicitly stops the `ForkServer` instance if it's running.
- [bpo-37421](https://bugs.python.org/issue?@action=redirect&bpo=37421) [https://bugs.python.org/issue?@action=redirect&bpo=37421]: `multiprocessing` tests now stop the `ForkServer` instance if it's running: close the "alive" file descriptor to ask the server to stop and then remove its UNIX address.
- [bpo-37421](https://bugs.python.org/issue?@action=redirect&bpo=37421) [https://bugs.python.org/issue?@action=redirect&bpo=37421]: `test_distutils.test_build_ext()` is now able to remove the temporary directory on Windows: don't import the newly built C extension ("xx") in the current process, but test it in a separated process.
- [bpo-37421](https://bugs.python.org/issue?@action=redirect&bpo=37421) [https://bugs.python.org/issue?@action=redirect&bpo=37421]: `test_concurrent_futures` now cleans up `multiprocessing` to remove immediately temporary directories created by `multiprocessing.util.get_temp_dir()`.
- [bpo-37421](https://bugs.python.org/issue?@action=redirect&bpo=37421) [https://bugs.python.org/issue?@action=redirect&bpo=37421]: `test_winconsoleio` doesn't leak a temporary file anymore: use `tempfile.TemporaryFile()` to remove it when the test completes.
- [bpo-37421](https://bugs.python.org/issue?@action=redirect&bpo=37421) [https://bugs.python.org/issue?@action=redirect&bpo=37421]

@action=redirect&bpo=37421]: multiprocessing tests now explicitly call `_run_finalizers()` to immediately remove temporary directories created by tests.

- [bpo-37421](https://bugs.python.org/issue?@action=redirect&bpo=37421) [https://bugs.python.org/issue?@action=redirect&bpo=37421]: `urllib.request` tests now call `urlcleanup()` to remove temporary files created by `urlretrieve()` tests and to clear the `_opener` global variable set by `urlopen()` and functions calling indirectly `urlopen()`.
- [bpo-37472](https://bugs.python.org/issue?@action=redirect&bpo=37472) [https://bugs.python.org/issue?@action=redirect&bpo=37472]: Remove `Lib/test/outstanding_bugs.py`.
- [bpo-37199](https://bugs.python.org/issue?@action=redirect&bpo=37199) [https://bugs.python.org/issue?@action=redirect&bpo=37199]: Fix test failures when IPv6 is unavailable or disabled.
- [bpo-19696](https://bugs.python.org/issue?@action=redirect&bpo=19696) [https://bugs.python.org/issue?@action=redirect&bpo=19696]: Replace deprecated method “random.choose” with “random.choice” in “test\_pkg\_import.py”.
- [bpo-37335](https://bugs.python.org/issue?@action=redirect&bpo=37335) [https://bugs.python.org/issue?@action=redirect&bpo=37335]: Remove no longer necessary code from c locale coercion tests
- [bpo-37421](https://bugs.python.org/issue?@action=redirect&bpo=37421) [https://bugs.python.org/issue?@action=redirect&bpo=37421]: Fix `test_shutil` to no longer leak temporary files.
- [bpo-37411](https://bugs.python.org/issue?@action=redirect&bpo=37411) [https://bugs.python.org/issue?@action=redirect&bpo=37411]: Fix `test_wsgiref.testEnviron()` to no longer depend on the environment variables (don't fail if “X” variable is set).
- [bpo-37400](https://bugs.python.org/issue?@action=redirect&bpo=37400) [https://bugs.python.org/issue?@action=redirect&bpo=37400]: Fix `test_os.test_chown()`: use `os.getgroups()` rather than `grp.getgrall()` to get groups. Rename also the test to `test_chown_gid()`.

- [bpo-37359](https://bugs.python.org/issue?@action=redirect&bpo=37359) [https://bugs.python.org/issue?@action=redirect&bpo=37359]: Add `--cleanup` option to `python3 -m test` to remove `test_python_*` directories of previous failed jobs. Add “make cleantest” to run `python3 -m test --cleanup`.
- [bpo-37362](https://bugs.python.org/issue?@action=redirect&bpo=37362) [https://bugs.python.org/issue?@action=redirect&bpo=37362]: `test_gdb` no longer fails if it gets an “unexpected” message on stderr: it now ignores stderr. The purpose of `test_gdb` is to test that `python-gdb.py` commands work as expected, not to test `gdb`.
- [bpo-35998](https://bugs.python.org/issue?@action=redirect&bpo=35998) [https://bugs.python.org/issue?@action=redirect&bpo=35998]: Avoid `TimeoutError` in `test_asyncio: test_start_tls_server_1()`
- [bpo-37278](https://bugs.python.org/issue?@action=redirect&bpo=37278) [https://bugs.python.org/issue?@action=redirect&bpo=37278]: Fix `test_asyncio ProactorLoopCtrlC`: join the thread to prevent leaking a running thread and leaking a reference.
- [bpo-37261](https://bugs.python.org/issue?@action=redirect&bpo=37261) [https://bugs.python.org/issue?@action=redirect&bpo=37261]: Fix `test.support.catch_unraisable_exception()`: its `_exit_()` method now ignores unraisable exception raised when clearing its `unraisable` attribute.
- [bpo-37069](https://bugs.python.org/issue?@action=redirect&bpo=37069) [https://bugs.python.org/issue?@action=redirect&bpo=37069]: `regtest` now uses `sys.unraisablehook()` to mark a test as “environment altered” (`ENV_CHANGED`) if it emits an “unraisable exception”. Moreover, `regtest` logs a warning in this case.

Use `python3 -m test --fail-env-changed` to catch unraisable exceptions in tests.

- [bpo-37252](https://bugs.python.org/issue?@action=redirect&bpo=37252) [https://bugs.python.org/issue?@action=redirect&bpo=37252]: Fix assertions in `test_close` and `test_events_mask_overflow` devpoll tests.
- [bpo-37169](https://bugs.python.org/issue?@action=redirect&bpo=37169) [https://bugs.python.org/issue?@action=redirect&bpo=37169]

@action=redirect&bpo=37169]: Rewrite  
\_PyObject\_IsFreed() unit tests.

- [bpo-37153](https://bugs.python.org/issue?@action=redirect&bpo=37153) [https://bugs.python.org/issue?@action=redirect&bpo=37153]:  
test\_venv.test\_multiprocessing() now explicitly  
calls pool.terminate() to wait until the pool completes.
- [bpo-34001](https://bugs.python.org/issue?@action=redirect&bpo=34001) [https://bugs.python.org/issue?@action=redirect&bpo=34001]: Make test\_ssl pass with LibreSSL.  
LibreSSL handles minimum and maximum TLS version  
differently than OpenSSL.
- [bpo-36919](https://bugs.python.org/issue?@action=redirect&bpo=36919) [https://bugs.python.org/issue?@action=redirect&bpo=36919]: Make  
test\_source\_encoding.test\_issue2301  
implementation independent. The test will work now for both  
CPython and IronPython.
- [bpo-30202](https://bugs.python.org/issue?@action=redirect&bpo=30202) [https://bugs.python.org/issue?@action=redirect&bpo=30202]: Update  
test.test\_importlib.test\_abc to test find\_spec().
- [bpo-28009](https://bugs.python.org/issue?@action=redirect&bpo=28009) [https://bugs.python.org/issue?@action=redirect&bpo=28009]: Modify the test\_uuid logic to test  
when a program is available AND can be used to obtain a  
MACADDR as basis for an UUID. Patch by M. Felt
- [bpo-34596](https://bugs.python.org/issue?@action=redirect&bpo=34596) [https://bugs.python.org/issue?@action=redirect&bpo=34596]: Fallback to a default reason when  
unittest.skip() is uncalled. Patch by Naitree Zhu.

## Build

- [bpo-38809](https://bugs.python.org/issue?@action=redirect&bpo=38809) [https://bugs.python.org/issue?@action=redirect&bpo=38809]: On Windows, build scripts will  
now recognize and use python.exe from an active virtual env.
- [bpo-38684](https://bugs.python.org/issue?@action=redirect&bpo=38684) [https://bugs.python.org/issue?@action=redirect&bpo=38684]: Fix \_hashlib build when Blake2 is  
disabled, but OpenSSL supports it.

- [bpo-38468](https://bugs.python.org/issue?@action=redirect&bpo=38468) [https://bugs.python.org/issue?@action=redirect&bpo=38468]: Misc/python-config.in now uses **getvar()** for all still existing **sysconfig.get\_config\_var()** calls. Patch by Joanna Nanjekye.
- [bpo-37415](https://bugs.python.org/issue?@action=redirect&bpo=37415) [https://bugs.python.org/issue?@action=redirect&bpo=37415]: Fix stdatomic.h header check for ICC compiler: the ICC implementation lacks atomic\_uintptr\_t type which is needed by Python.
- [bpo-38301](https://bugs.python.org/issue?@action=redirect&bpo=38301) [https://bugs.python.org/issue?@action=redirect&bpo=38301]: In Solaris family, we must be sure to use `-D_REENTRANT`. Patch by Jesús Cea Avi3n.
- [bpo-36002](https://bugs.python.org/issue?@action=redirect&bpo=36002) [https://bugs.python.org/issue?@action=redirect&bpo=36002]: Locate `llvm-profdata` and `llvm-ar` binaries using `AC_PATH_TOOL` rather than `AC_PATH_TARGET_TOOL`.
- [bpo-37936](https://bugs.python.org/issue?@action=redirect&bpo=37936) [https://bugs.python.org/issue?@action=redirect&bpo=37936]: The `.gitignore` file systematically keeps “rooted”, with a non-trailing slash, all the rules that are meant to apply to files in a specific place in the repo. Previously, when the intended file to ignore happened to be at the root of the repo, we’d most often accidentally also ignore files and directories with the same name anywhere in the tree.
- [bpo-37760](https://bugs.python.org/issue?@action=redirect&bpo=37760) [https://bugs.python.org/issue?@action=redirect&bpo=37760]: The `Tools/unicode/makeunicodedata.py` script, which is used for converting information from the Unicode Character Database into generated code and data used by the methods of **str** and by the **unicodedata** module, now handles each character’s data as a `dataclass` with named attributes, rather than a length-18 list of different fields.
- [bpo-37936](https://bugs.python.org/issue?@action=redirect&bpo=37936) [https://bugs.python.org/issue?@action=redirect&bpo=37936]: The `.gitignore` file no longer applies to any files that are in fact tracked in the Git

repository. Patch by Greg Price.

- [bpo-37725](https://bugs.python.org/issue?@action=redirect&bpo=37725) [https://bugs.python.org/issue?@action=redirect&bpo=37725]: Change “clean” makefile target to also clean the program guided optimization (PGO) data. Previously you would have to use “make clean” and “make profile-removal”, or “make clobber”.
- [bpo-37707](https://bugs.python.org/issue?@action=redirect&bpo=37707) [https://bugs.python.org/issue?@action=redirect&bpo=37707]: Mark some individual tests to skip when `-pgo` is used. The tests marked increase the PGO task time significantly and likely don’t help improve optimization of the final executable.
- [bpo-36044](https://bugs.python.org/issue?@action=redirect&bpo=36044) [https://bugs.python.org/issue?@action=redirect&bpo=36044]: Reduce the number of unit tests run for the PGO generation task. This speeds up the task by a factor of about 15x. Running the full unit test suite is slow. This change may result in a slightly less optimized build since not as many code branches will be executed. If you are willing to wait for the much slower build, the old behavior can be restored using ‘./configure [...] PROFILE\_TASK=”-m test -pgo-extended”’. We make no guarantees as to which PGO task set produces a faster build. Users who care should run their own relevant benchmarks as results can depend on the environment, workload, and compiler tool chain.
- [bpo-37468](https://bugs.python.org/issue?@action=redirect&bpo=37468) [https://bugs.python.org/issue?@action=redirect&bpo=37468]: `make install` no longer installs `wininst-*.exe` files used by `distutils` `bdist_wininst`: `bdist_wininst` only works on Windows.
- [bpo-37189](https://bugs.python.org/issue?@action=redirect&bpo=37189) [https://bugs.python.org/issue?@action=redirect&bpo=37189]: Many `PyRun_XXX()` functions like `PyRun_String()` were no longer exported in `libpython38.dll` by mistake. Export them again to fix the ABI compatibility.
- [bpo-25361](https://bugs.python.org/issue?@action=redirect&bpo=25361) [https://bugs.python.org/issue?@action=redirect&bpo=25361]: Enables use of SSE2 instructions in Windows 32-bit build.

- [bpo-36210](https://bugs.python.org/issue?@action=redirect&bpo=36210) [https://bugs.python.org/issue?@action=redirect&bpo=36210]: Update optional extension module detection for AIX. ossaudiodev and spwd are not applicable for AIX, and are no longer reported as missing. 3rd-party packaging of ncurses (with ASIS support) conflicts with officially supported AIX curses library, so configure AIX to use libcurses.a. However, skip trying to build \_curses\_panel.

patch by M Felt

## Windows

- [bpo-38589](https://bugs.python.org/issue?@action=redirect&bpo=38589) [https://bugs.python.org/issue?@action=redirect&bpo=38589]: Fixes HTML Help shortcut when Windows is not installed to C drive
- [bpo-38453](https://bugs.python.org/issue?@action=redirect&bpo=38453) [https://bugs.python.org/issue?@action=redirect&bpo=38453]: Ensure ntpath.realpath() correctly resolves relative paths.
- [bpo-38519](https://bugs.python.org/issue?@action=redirect&bpo=38519) [https://bugs.python.org/issue?@action=redirect&bpo=38519]: Restores the internal C headers that were missing from the nuget.org and Microsoft Store packages.
- [bpo-38492](https://bugs.python.org/issue?@action=redirect&bpo=38492) [https://bugs.python.org/issue?@action=redirect&bpo=38492]: Remove pythonw.exe dependency on the Microsoft C++ runtime.
- [bpo-38344](https://bugs.python.org/issue?@action=redirect&bpo=38344) [https://bugs.python.org/issue?@action=redirect&bpo=38344]: Fix error message in activate.bat
- [bpo-38359](https://bugs.python.org/issue?@action=redirect&bpo=38359) [https://bugs.python.org/issue?@action=redirect&bpo=38359]: Ensures pyw.exe launcher reads correct registry key.
- [bpo-38355](https://bugs.python.org/issue?@action=redirect&bpo=38355) [https://bugs.python.org/issue?@action=redirect&bpo=38355]: Fixes ntpath.realpath failing on sys.executable.
- [bpo-38117](https://bugs.python.org/issue?@action=redirect&bpo=38117) [https://bugs.python.org/issue?@action=redirect&bpo=38117]: Update bundled OpenSSL to 1.1.1d
- [bpo-38092](https://bugs.python.org/issue?@action=redirect&bpo=38092) [https://bugs.python.org/issue?@action=redirect&bpo=38092]: Reduce overhead when using multiprocessing in a Windows virtual environment.
- [bpo-38133](https://bugs.python.org/issue?@action=redirect&bpo=38133) [https://bugs.python.org/issue?@action=redirect&bpo=38133]

@action=redirect&bpo=38133]: Allow py.exe launcher to locate installations from the Microsoft Store and improve display of active virtual environments.

- [bpo-38114](https://bugs.python.org/issue?@action=redirect&bpo=38114) [https://bugs.python.org/issue?@action=redirect&bpo=38114]: The `pip.ini` is no longer included in the Nuget package.
- [bpo-32592](https://bugs.python.org/issue?@action=redirect&bpo=32592) [https://bugs.python.org/issue?@action=redirect&bpo=32592]: Set Windows 8 as the minimum required version for API support
- [bpo-36634](https://bugs.python.org/issue?@action=redirect&bpo=36634) [https://bugs.python.org/issue?@action=redirect&bpo=36634]: `os.cpu_count()` now returns active processors rather than maximum processors.
- [bpo-36634](https://bugs.python.org/issue?@action=redirect&bpo=36634) [https://bugs.python.org/issue?@action=redirect&bpo=36634]: `venv activate.bat` now works when the existing variables contain double quote characters.
- [bpo-38081](https://bugs.python.org/issue?@action=redirect&bpo=38081) [https://bugs.python.org/issue?@action=redirect&bpo=38081]: Prevent error calling `os.path.realpath()` on `'NUL'`.
- [bpo-38087](https://bugs.python.org/issue?@action=redirect&bpo=38087) [https://bugs.python.org/issue?@action=redirect&bpo=38087]: Fix case sensitivity in `test_pathlib` and `test_ntpath`.
- [bpo-38088](https://bugs.python.org/issue?@action=redirect&bpo=38088) [https://bugs.python.org/issue?@action=redirect&bpo=38088]: Fixes `distutils` not finding `vcruntime140.dll` with only the v142 toolset installed.
- [bpo-37283](https://bugs.python.org/issue?@action=redirect&bpo=37283) [https://bugs.python.org/issue?@action=redirect&bpo=37283]: Ensure command-line and `unattend.xml` setting override previously detected states in Windows installer.
- [bpo-38030](https://bugs.python.org/issue?@action=redirect&bpo=38030) [https://bugs.python.org/issue?@action=redirect&bpo=38030]: Fixes `os.stat()` failing for block devices on Windows
- [bpo-38020](https://bugs.python.org/issue?@action=redirect&bpo=38020) [https://bugs.python.org/issue?@action=redirect&bpo=38020]: Fixes potential crash when calling `os.readlink()` (or indirectly through `realpath()`) on a file that is not a supported link.
- [bpo-37705](https://bugs.python.org/issue?@action=redirect&bpo=37705) [https://bugs.python.org/issue?@action=redirect&bpo=37705]: Improve the implementation of `winerror_to_errno()`.
- [bpo-37549](https://bugs.python.org/issue?@action=redirect&bpo=37549) [https://bugs.python.org/issue?@action=redirect&bpo=37549]: `os.dup()` no longer fails for

standard streams on Windows 7.

- [bpo-1311](https://bugs.python.org/issue?@action=redirect&bpo=1311) [https://bugs.python.org/issue?@action=redirect&bpo=1311]: The `nul` file on Windows now returns `True` from `exists()` and a valid result from `os.stat()` with `S_IFCHR` set.
- [bpo-9949](https://bugs.python.org/issue?@action=redirect&bpo=9949) [https://bugs.python.org/issue?@action=redirect&bpo=9949]: Enable support for following symlinks in `os.realpath()`.
- [bpo-37834](https://bugs.python.org/issue?@action=redirect&bpo=37834) [https://bugs.python.org/issue?@action=redirect&bpo=37834]: Treat all name surrogate reparse points on Windows in `os.lstat()` and other reparse points as regular files in `os.stat()`.
- [bpo-36266](https://bugs.python.org/issue?@action=redirect&bpo=36266) [https://bugs.python.org/issue?@action=redirect&bpo=36266]: Add the module name in the formatted error message when DLL load fail happens during module import in `_PyImport_FindSharedFuncptrWindows()`. Patch by Srinivas Nyayapati.
- [bpo-25172](https://bugs.python.org/issue?@action=redirect&bpo=25172) [https://bugs.python.org/issue?@action=redirect&bpo=25172]: Trying to import the `crypt` module on Windows will result in an `ImportError` with a message explaining that the module isn't supported on Windows. On other platforms, if the underlying `_crypt` module is not available, the `ImportError` will include a message explaining the problem.
- [bpo-37778](https://bugs.python.org/issue?@action=redirect&bpo=37778) [https://bugs.python.org/issue?@action=redirect&bpo=37778]: Fixes the icons used for file associations to the Microsoft Store package.
- [bpo-37734](https://bugs.python.org/issue?@action=redirect&bpo=37734) [https://bugs.python.org/issue?@action=redirect&bpo=37734]: Fix use of registry values to launch Python from Microsoft Store app.
- [bpo-37702](https://bugs.python.org/issue?@action=redirect&bpo=37702) [https://bugs.python.org/issue?@action=redirect&bpo=37702]: Fix memory leak on Windows in creating an `SSLContext` object or running `urllib.request.urlopen('https://...')`.
- [bpo-37672](https://bugs.python.org/issue?@action=redirect&bpo=37672) [https://bugs.python.org/issue?@action=redirect&bpo=37672]: Switch Windows Store package's `pip` to use bundled `pip.ini` instead of `PIP_USER` variable.
- [bpo-10945](https://bugs.python.org/issue?@action=redirect&bpo=10945) [https://bugs.python.org/issue?@action=redirect&bpo=10945]: Officially drop support for creating `bdist_wininst` installers on non-Windows systems.
- [bpo-37445](https://bugs.python.org/issue?@action=redirect&bpo=37445) [https://bugs.python.org/issue?@action=redirect&bpo=37445]

@action=redirect&bpo=37445]: Include the `FORMAT_MESSAGE_IGNORE_INSERTS` flag in `FormatMessageW()` calls.

- [bpo-37369](https://bugs.python.org/issue?@action=redirect&bpo=37369) [https://bugs.python.org/issue?@action=redirect&bpo=37369]: Fixes path for `sys.executable` when running from the Microsoft Store.
- [bpo-37380](https://bugs.python.org/issue?@action=redirect&bpo=37380) [https://bugs.python.org/issue?@action=redirect&bpo=37380]: Don't collect unfinished processes with `subprocess._active` on Windows to cleanup later. Patch by Ruslan Kuprieiev.
- [bpo-37351](https://bugs.python.org/issue?@action=redirect&bpo=37351) [https://bugs.python.org/issue?@action=redirect&bpo=37351]: Removes `libpython38.a` from standard Windows distribution.
- [bpo-35360](https://bugs.python.org/issue?@action=redirect&bpo=35360) [https://bugs.python.org/issue?@action=redirect&bpo=35360]: Update Windows builds to use SQLite 3.28.0.
- [bpo-37267](https://bugs.python.org/issue?@action=redirect&bpo=37267) [https://bugs.python.org/issue?@action=redirect&bpo=37267]: On Windows, `os.dup()` no longer creates an inheritable fd when handling a character file.
- [bpo-36779](https://bugs.python.org/issue?@action=redirect&bpo=36779) [https://bugs.python.org/issue?@action=redirect&bpo=36779]: Ensure `time.tzname` is correct on Windows when the active code page is set to CP\_UTF7 or CP\_UTF8.
- [bpo-32587](https://bugs.python.org/issue?@action=redirect&bpo=32587) [https://bugs.python.org/issue?@action=redirect&bpo=32587]: Make `winreg.REG_MULTI_SZ` support zero-length strings.
- [bpo-28269](https://bugs.python.org/issue?@action=redirect&bpo=28269) [https://bugs.python.org/issue?@action=redirect&bpo=28269]: Replace use of `strcasecmp()` for the system function `_stricmp()`. Patch by Minmin Gong.
- [bpo-36590](https://bugs.python.org/issue?@action=redirect&bpo=36590) [https://bugs.python.org/issue?@action=redirect&bpo=36590]: Add native Bluetooth RFCOMM support to socket module.

## macOS

- [bpo-38117](https://bugs.python.org/issue?@action=redirect&bpo=38117) [https://bugs.python.org/issue?@action=redirect&bpo=38117]: Updated OpenSSL to 1.1.1d in macOS installer.

- [bpo-38089](https://bugs.python.org/issue?@action=redirect&bpo=38089) [https://bugs.python.org/issue?@action=redirect&bpo=38089]: Move Azure Pipelines to latest VM versions and make macOS tests optional
- [bpo-18049](https://bugs.python.org/issue?@action=redirect&bpo=18049) [https://bugs.python.org/issue?@action=redirect&bpo=18049]: Increase the default stack size of threads from 5MB to 16MB on macOS, to match the stack size of the main thread. This avoids crashes on deep recursion in threads.
- [bpo-34602](https://bugs.python.org/issue?@action=redirect&bpo=34602) [https://bugs.python.org/issue?@action=redirect&bpo=34602]: Avoid test suite failures on macOS by no longer calling resource.setrlimit to increase the process stack size limit at runtime. The runtime change is no longer needed since the interpreter is being built with a larger default stack size.
- [bpo-35360](https://bugs.python.org/issue?@action=redirect&bpo=35360) [https://bugs.python.org/issue?@action=redirect&bpo=35360]: Update macOS installer to use SQLite 3.28.0.
- [bpo-34631](https://bugs.python.org/issue?@action=redirect&bpo=34631) [https://bugs.python.org/issue?@action=redirect&bpo=34631]: Updated OpenSSL to 1.1.1c in macOS installer.

## IDLE

- [bpo-26353](https://bugs.python.org/issue?@action=redirect&bpo=26353) [https://bugs.python.org/issue?@action=redirect&bpo=26353]: Stop adding newline when saving an IDLE shell window.
- [bpo-4630](https://bugs.python.org/issue?@action=redirect&bpo=4630) [https://bugs.python.org/issue?@action=redirect&bpo=4630]: Add an option to toggle IDLE's cursor blink for shell, editor, and output windows. See Settings, General, Window Preferences, Cursor Blink. Patch by Zackery Spytz.
- [bpo-38598](https://bugs.python.org/issue?@action=redirect&bpo=38598) [https://bugs.python.org/issue?@action=redirect&bpo=38598]: Do not try to compile IDLE shell or output windows
- [bpo-36698](https://bugs.python.org/issue?@action=redirect&bpo=36698) [https://bugs.python.org/issue?@action=redirect&bpo=36698]: IDLE no longer fails when write non-encodable characters to stderr. It now escapes them with a backslash, as the regular Python interpreter. Added the `errors` field to the standard streams.
- [bpo-35379](https://bugs.python.org/issue?@action=redirect&bpo=35379) [https://bugs.python.org/issue?@action=redirect&bpo=35379]: When exiting IDLE, catch any

AttributeError. One happens when `EditorWindow.close` is called twice. Printing a traceback, when IDLE is run from a terminal, is useless and annoying.

- [bpo-38183](https://bugs.python.org/issue?@action=redirect&bpo=38183) [https://bugs.python.org/issue?@action=redirect&bpo=38183]: To avoid problems, `test_idle` ignores the user config directory. It no longer tries to create or access `.idlerc` or any files within. Users must run IDLE to discover problems with saving settings.
- [bpo-38077](https://bugs.python.org/issue?@action=redirect&bpo=38077) [https://bugs.python.org/issue?@action=redirect&bpo=38077]: IDLE no longer adds `'argv'` to the user namespace when initializing it. This bug only affected 3.7.4 and 3.8.0b2 to 3.8.0b4.
- [bpo-38041](https://bugs.python.org/issue?@action=redirect&bpo=38041) [https://bugs.python.org/issue?@action=redirect&bpo=38041]: Shell restart lines now fill the window width, always start with `'='`, and avoid wrapping unnecessarily. The line will still wrap if the included file name is long relative to the width.
- [bpo-35771](https://bugs.python.org/issue?@action=redirect&bpo=35771) [https://bugs.python.org/issue?@action=redirect&bpo=35771]: To avoid occasional spurious `test_idle` failures on slower machines, increase the `hover_delay` in `test_tooltip`.
- [bpo-37824](https://bugs.python.org/issue?@action=redirect&bpo=37824) [https://bugs.python.org/issue?@action=redirect&bpo=37824]: Properly handle user input warnings in IDLE shell. Cease turning `SyntaxWarnings` into `SyntaxErrors`.
- [bpo-37929](https://bugs.python.org/issue?@action=redirect&bpo=37929) [https://bugs.python.org/issue?@action=redirect&bpo=37929]: IDLE Settings dialog now closes properly when there is no shell window.
- [bpo-37902](https://bugs.python.org/issue?@action=redirect&bpo=37902) [https://bugs.python.org/issue?@action=redirect&bpo=37902]: Add mousewheel scrolling for IDLE module, path, and stack browsers. Patch by George Zhang.
- [bpo-37849](https://bugs.python.org/issue?@action=redirect&bpo=37849) [https://bugs.python.org/issue?@action=redirect&bpo=37849]: Fixed completions list appearing too high or low when shown above the current line.
- [bpo-36419](https://bugs.python.org/issue?@action=redirect&bpo=36419) [https://bugs.python.org/issue?@action=redirect&bpo=36419]: Refactor IDLE autocomplete and improve testing.
- [bpo-37748](https://bugs.python.org/issue?@action=redirect&bpo=37748) [https://bugs.python.org/issue?@action=redirect&bpo=37748]: Reorder the Run menu. Put the

most common choice, Run Module, at the top.

- [bpo-37692](https://bugs.python.org/issue?@action=redirect&bpo=37692) [https://bugs.python.org/issue?@action=redirect&bpo=37692]: Improve highlight config sample with example shell interaction and better labels for shell elements.
- [bpo-37628](https://bugs.python.org/issue?@action=redirect&bpo=37628) [https://bugs.python.org/issue?@action=redirect&bpo=37628]: Settings dialog no longer expands with font size.
- [bpo-37627](https://bugs.python.org/issue?@action=redirect&bpo=37627) [https://bugs.python.org/issue?@action=redirect&bpo=37627]: Initialize the Customize Run dialog with the command line arguments most recently entered before. The user can optionally edit before submitting them.
- [bpo-33610](https://bugs.python.org/issue?@action=redirect&bpo=33610) [https://bugs.python.org/issue?@action=redirect&bpo=33610]: Fix code context not showing the correct context when first toggled on.
- [bpo-37530](https://bugs.python.org/issue?@action=redirect&bpo=37530) [https://bugs.python.org/issue?@action=redirect&bpo=37530]: Optimize code context to reduce unneeded background activity. Font and highlight changes now occur along with text changes instead of after a random delay.
- [bpo-27452](https://bugs.python.org/issue?@action=redirect&bpo=27452) [https://bugs.python.org/issue?@action=redirect&bpo=27452]: Cleanup `config.py` by inlining `RemoveFile` and simplifying the handling of `file` in `CreateConfigHandlers`.
- [bpo-37325](https://bugs.python.org/issue?@action=redirect&bpo=37325) [https://bugs.python.org/issue?@action=redirect&bpo=37325]: Fix tab focus traversal order for help source and custom run dialogs.
- [bpo-37321](https://bugs.python.org/issue?@action=redirect&bpo=37321) [https://bugs.python.org/issue?@action=redirect&bpo=37321]: Both subprocess connection error messages now refer to the ‘Startup failure’ section of the IDLE doc.
- [bpo-17535](https://bugs.python.org/issue?@action=redirect&bpo=17535) [https://bugs.python.org/issue?@action=redirect&bpo=17535]: Add optional line numbers for IDLE editor windows. Windows open without line numbers unless set otherwise in the General tab of the configuration dialog.
- [bpo-26806](https://bugs.python.org/issue?@action=redirect&bpo=26806) [https://bugs.python.org/issue?@action=redirect&bpo=26806]: To compensate for stack frames added by IDLE and avoid possible problems with low

recursion limits, add 30 to limits in the user code execution process. Subtract 30 when reporting recursion limits to make this addition mostly transparent.

- [bpo-37177](https://bugs.python.org/issue?@action=redirect&bpo=37177) [https://bugs.python.org/issue?@action=redirect&bpo=37177]: Properly ‘attach’ search dialogs to their main window so that they behave like other dialogs and do not get hidden behind their main window.
- [bpo-37039](https://bugs.python.org/issue?@action=redirect&bpo=37039) [https://bugs.python.org/issue?@action=redirect&bpo=37039]: Adjust “Zoom Height” to individual screens by momentarily maximizing the window on first use with a particular screen. Changing screen settings may invalidate the saved height. While a window is maximized, “Zoom Height” has no effect.
- [bpo-35763](https://bugs.python.org/issue?@action=redirect&bpo=35763) [https://bugs.python.org/issue?@action=redirect&bpo=35763]: Make calltip reminder about ‘/’ meaning positional-only less obtrusive by only adding it when there is room on the first line.
- [bpo-5680](https://bugs.python.org/issue?@action=redirect&bpo=5680) [https://bugs.python.org/issue?@action=redirect&bpo=5680]: Add ‘Run... Customized’ to the Run menu to run a module with customized settings. Any ‘command line arguments’ entered are added to sys.argv. One can suppress the normal Shell main module restart.
- [bpo-36390](https://bugs.python.org/issue?@action=redirect&bpo=36390) [https://bugs.python.org/issue?@action=redirect&bpo=36390]: Gather Format menu functions into format.py. Combine paragraph.py, rstrip.py, and format methods from editor.py.

## Tools/Demos

- [bpo-38118](https://bugs.python.org/issue?@action=redirect&bpo=38118) [https://bugs.python.org/issue?@action=redirect&bpo=38118]: Update Valgrind suppression file to ignore a false alarm in `PyUnicode_Decode()` when using GCC builtin strcmp().
- [bpo-38347](https://bugs.python.org/issue?@action=redirect&bpo=38347) [https://bugs.python.org/issue?@action=redirect&bpo=38347]: pathfix.py: Assume all files that end on ‘.py’ are Python scripts when working recursively.
- [bpo-37803](https://bugs.python.org/issue?@action=redirect&bpo=37803) [https://bugs.python.org/issue?@action=redirect&bpo=37803]: pdb’s `--help` and `--version` long options now work.
- [bpo-37942](https://bugs.python.org/issue?@action=redirect&bpo=37942) [https://bugs.python.org/issue?@action=redirect&bpo=37942]

@action=redirect&bpo=37942]: Improve ArgumentClinic converter for floats.

- [bpo-37704](https://bugs.python.org/issue?@action=redirect&bpo=37704) [https://bugs.python.org/issue?@action=redirect&bpo=37704]: Remove `Tools/scripts/h2py.py`: use `cffi` to access a C API in Python.
- [bpo-37675](https://bugs.python.org/issue?@action=redirect&bpo=37675) [https://bugs.python.org/issue?@action=redirect&bpo=37675]: 2to3 now works when run from a zipped standard library.
- [bpo-37034](https://bugs.python.org/issue?@action=redirect&bpo=37034) [https://bugs.python.org/issue?@action=redirect&bpo=37034]: Argument Clinic now uses the argument name on errors with keyword-only argument instead of their position. Patch contributed by Rémi Lapeyre.
- [bpo-37064](https://bugs.python.org/issue?@action=redirect&bpo=37064) [https://bugs.python.org/issue?@action=redirect&bpo=37064]: Add option `-k` to `pathscript.py` script: preserve shebang flags. Add option `-a` to `pathscript.py` script: add flags.

## C API

- [bpo-37633](https://bugs.python.org/issue?@action=redirect&bpo=37633) [https://bugs.python.org/issue?@action=redirect&bpo=37633]: Re-export some function compatibility wrappers for macros in `pythonrun.h`.
- [bpo-38644](https://bugs.python.org/issue?@action=redirect&bpo=38644) [https://bugs.python.org/issue?@action=redirect&bpo=38644]: Provide `Py_EnterRecursiveCall()` and `Py_LeaveRecursiveCall()` as regular functions for the limited API. Previously, there were defined as macros, but these macros didn't work with the limited API which cannot access `PyThreadState.recursion_depth` field. Remove `_Py_CheckRecursionLimit` from the stable ABI.
- [bpo-38650](https://bugs.python.org/issue?@action=redirect&bpo=38650) [https://bugs.python.org/issue?@action=redirect&bpo=38650]: The global variable `PyStructSequence_UnnamedField` is now a constant and refers to a constant string.
- [bpo-38540](https://bugs.python.org/issue?@action=redirect&bpo=38540) [https://bugs.python.org/issue?@action=redirect&bpo=38540]: Fixed possible leak in `PyArg_Parse()` and similar functions for format units `"es#"` and `"et#"` when the macro `PY_SSIZE_T_CLEAN` is not defined.
- [bpo-38395](https://bugs.python.org/issue?@action=redirect&bpo=38395) [https://bugs.python.org/issue?@action=redirect&bpo=38395]

@action=redirect&bpo=38395]: Fix a crash in **weakref.proxy** objects due to incorrect lifetime management when calling some associated methods that may delete the last reference to object being referenced by the proxy. Patch by Pablo Galindo.

- **bpo-36389** [<https://bugs.python.org/issue?@action=redirect&bpo=36389>]: The `_PyObject_CheckConsistency()` function is now also available in release mode. For example, it can be used to debug a crash in the `visit_decref()` function of the GC.
- **bpo-38266** [<https://bugs.python.org/issue?@action=redirect&bpo=38266>]: Revert the removal of `PyThreadState_DeleteCurrent()` with documentation.
- **bpo-38303** [<https://bugs.python.org/issue?@action=redirect&bpo=38303>]: Update audioop extension module to use the stable ABI (PEP-384). Patch by Tyler Kieft.
- **bpo-38234** [<https://bugs.python.org/issue?@action=redirect&bpo=38234>]: **Py\_SetPath()** now sets **sys.executable** to the program full path (**Py\_GetProgramFullPath()**) rather than to the program name (**Py\_GetProgramName()**).
- **bpo-38234** [<https://bugs.python.org/issue?@action=redirect&bpo=38234>]: Python ignored arguments passed to **Py\_SetPath()**, **Py\_SetPythonHome()** and **Py\_SetProgramName()**: fix Python initialization to use specified arguments.
- **bpo-38205** [<https://bugs.python.org/issue?@action=redirect&bpo=38205>]: The **Py\_UNREACHABLE()** macro now calls **Py\_FatalError()**.
- **bpo-38140** [<https://bugs.python.org/issue?@action=redirect&bpo=38140>]: Make dict and weakref offsets opaque for C heap types by passing the offsets through `PyMemberDef`
- **bpo-15088** [<https://bugs.python.org/issue?@action=redirect&bpo=15088>]: The C function `PyGen_NeedsFinalizing` has been removed. It was not documented, tested or used anywhere within CPython after the implementation of **PEP 442** [<https://peps.python.org/pep-0442/>]. Patch by Joanna Nanjeyye. (Patch by Joanna Nanjeyye)
- **bpo-36763** [<https://bugs.python.org/issue?@action=redirect&bpo=36763>]

@action=redirect&bpo=36763]: Options added by `PySys_AddXOption()` are now handled the same way than `PyConfig.xoptions` and command line `-X` options.

- [bpo-37926](https://bugs.python.org/issue?@action=redirect&bpo=37926) [https://bugs.python.org/issue?@action=redirect&bpo=37926]: Fix a crash in `PySys_SetArgvEx(0, NULL, 0)`.
- [bpo-37879](https://bugs.python.org/issue?@action=redirect&bpo=37879) [https://bugs.python.org/issue?@action=redirect&bpo=37879]: Fix `subtype_dealloc` to suppress the type `decref` when the base type is a C heap type
- [bpo-37645](https://bugs.python.org/issue?@action=redirect&bpo=37645) [https://bugs.python.org/issue?@action=redirect&bpo=37645]: Add `_PyObject_FunctionStr()` to get a user-friendly string representation of a function-like object. Patch by Jeroen Demeyer.
- [bpo-29548](https://bugs.python.org/issue?@action=redirect&bpo=29548) [https://bugs.python.org/issue?@action=redirect&bpo=29548]: The functions `PyEval_CallObject`, `PyEval_CallFunction`, `PyEval_CallMethod` and `PyEval_CallObjectWithKeywords` are deprecated. Use `PyObject_Call()` and its variants instead.
- [bpo-37151](https://bugs.python.org/issue?@action=redirect&bpo=37151) [https://bugs.python.org/issue?@action=redirect&bpo=37151]: `PyCFunction_Call` is now a deprecated alias of `PyObject_Call()`.
- [bpo-37540](https://bugs.python.org/issue?@action=redirect&bpo=37540) [https://bugs.python.org/issue?@action=redirect&bpo=37540]: The vectorcall protocol now requires that the caller passes only strings as keyword names.
- [bpo-37207](https://bugs.python.org/issue?@action=redirect&bpo=37207) [https://bugs.python.org/issue?@action=redirect&bpo=37207]: The vectorcall protocol is now enabled for `type` objects: set `tp_vectorcall` to a vectorcall function to be used instead of `tp_new` and `tp_init` when calling the class itself.
- [bpo-21120](https://bugs.python.org/issue?@action=redirect&bpo=21120) [https://bugs.python.org/issue?@action=redirect&bpo=21120]: Exclude `Python-ast.h`, `ast.h` and `asdl.h` from the limited API.
- [bpo-37483](https://bugs.python.org/issue?@action=redirect&bpo=37483) [https://bugs.python.org/issue?@action=redirect&bpo=37483]: Add new function `_PyObject_CallOneArg` for calling an object with one positional argument.
- [bpo-36763](https://bugs.python.org/issue?@action=redirect&bpo=36763) [https://bugs.python.org/issue?@action=redirect&bpo=36763]: Add

**PyConfig\_SetWideStringList()** function.

- [bpo-37337](https://bugs.python.org/issue?@action=redirect&bpo=37337) [https://bugs.python.org/issue?@action=redirect&bpo=37337]: Add fast functions for calling methods: **\_PyObject\_VectorcallMethod()**, **\_PyObject\_CallMethodNoArgs()** and **\_PyObject\_CallMethodOneArg()**.
- [bpo-28805](https://bugs.python.org/issue?@action=redirect&bpo=28805) [https://bugs.python.org/issue?@action=redirect&bpo=28805]: The **METH\_FASTCALL** calling convention has been documented.
- [bpo-37221](https://bugs.python.org/issue?@action=redirect&bpo=37221) [https://bugs.python.org/issue?@action=redirect&bpo=37221]: The new function **PyCode\_NewWithPosOnlyArgs()** allows to create code objects like **PyCode\_New()**, but with an extra *posonlyargcount* parameter for indicating the number of positional-only arguments.
- [bpo-37215](https://bugs.python.org/issue?@action=redirect&bpo=37215) [https://bugs.python.org/issue?@action=redirect&bpo=37215]: Fix dtrace issue introduced by [bpo-36842](https://bugs.python.org/issue?@action=redirect&bpo=36842) [https://bugs.python.org/issue?@action=redirect&bpo=36842]
- [bpo-37194](https://bugs.python.org/issue?@action=redirect&bpo=37194) [https://bugs.python.org/issue?@action=redirect&bpo=37194]: Add a new public **PyObject\_CallNoArgs()** function to the C API: call a callable Python object without any arguments. It is the most efficient way to call a callback without any argument. On x86-64, for example, **PyObject\_CallFunctionObjArgs(func, NULL)** allocates 960 bytes on the stack per call, whereas **PyObject\_CallNoArgs(func)** only allocates 624 bytes per call.
- [bpo-37170](https://bugs.python.org/issue?@action=redirect&bpo=37170) [https://bugs.python.org/issue?@action=redirect&bpo=37170]: Fix the cast on error in **PyLong\_AsUnsignedLongLongMask()**.
- [bpo-35381](https://bugs.python.org/issue?@action=redirect&bpo=35381) [https://bugs.python.org/issue?@action=redirect&bpo=35381]: Convert *posixmodule.c* statically allocated types **DirEntryType** and **ScandirIteratorType** to heap-allocated types.
- [bpo-34331](https://bugs.python.org/issue?@action=redirect&bpo=34331) [https://bugs.python.org/issue?@action=redirect&bpo=34331]: Use singular/plural noun in error message when instantiating an abstract class with non-overridden abstract method(s).

# Python 3.8.0 beta 1

*Release date: 2019-06-04*

## Security

- [bpo-35907](https://bugs.python.org/issue?@action=redirect&bpo=35907) [https://bugs.python.org/issue?@action=redirect&bpo=35907]: CVE-2019-9948: Avoid file reading by disallowing `local-file://` and `local_file://` URL schemes in `URLopener().open()` and `URLopener().retrieve()` of [urllib.request](#).
- [bpo-33529](https://bugs.python.org/issue?@action=redirect&bpo=33529) [https://bugs.python.org/issue?@action=redirect&bpo=33529]: Prevent fold function used in email header encoding from entering infinite loop when there are too many non-ASCII characters in a header.
- [bpo-33164](https://bugs.python.org/issue?@action=redirect&bpo=33164) [https://bugs.python.org/issue?@action=redirect&bpo=33164]: Updated blake2 implementation which uses secure memset implementation provided by platform.

## Core and Builtins

- [bpo-35814](https://bugs.python.org/issue?@action=redirect&bpo=35814) [https://bugs.python.org/issue?@action=redirect&bpo=35814]: Allow unpacking in the right hand side of annotated assignments. In particular, `tuple[int, ...] = x, y, *z` is now allowed.
- [bpo-37126](https://bugs.python.org/issue?@action=redirect&bpo=37126) [https://bugs.python.org/issue?@action=redirect&bpo=37126]: All structseq objects are now tracked by the garbage collector. Patch by Pablo Galindo.
- [bpo-37122](https://bugs.python.org/issue?@action=redirect&bpo=37122) [https://bugs.python.org/issue?@action=redirect&bpo=37122]: Make the `co_argcount` attribute of code objects represent the total number of positional arguments (including positional-only arguments). The value of `co_posonlyargcount` can be used to distinguish which arguments are positional only, and the difference (`co_argcount` - `co_posonlyargcount`) is the number of positional-or-keyword arguments. Patch by Pablo Galindo.
- [bpo-20092](https://bugs.python.org/issue?@action=redirect&bpo=20092) [https://bugs.python.org/issue?@action=redirect&bpo=20092]: Constructors of [int](#), [float](#) and

`complex` will now use the `__index__()` special method, if available and the corresponding method `__int__()`, `__float__()` or `__complex__()` is not available.

- [bpo-37087](https://bugs.python.org/issue?@action=redirect&bpo=37087) [https://bugs.python.org/issue?@action=redirect&bpo=37087]: Add native thread ID (TID) support to OpenBSD.
- [bpo-26219](https://bugs.python.org/issue?@action=redirect&bpo=26219) [https://bugs.python.org/issue?@action=redirect&bpo=26219]: Implemented per opcode cache mechanism and `LOAD_GLOBAL` instruction use it. `LOAD_GLOBAL` is now about 40% faster. Contributed by Yury Selivanov, and Inada Naoki.
- [bpo-37072](https://bugs.python.org/issue?@action=redirect&bpo=37072) [https://bugs.python.org/issue?@action=redirect&bpo=37072]: Fix crash in `PyAST_FromNodeObject()` when flags is NULL.
- [bpo-37029](https://bugs.python.org/issue?@action=redirect&bpo=37029) [https://bugs.python.org/issue?@action=redirect&bpo=37029]: Freeing a great many small objects could take time quadratic in the number of arenas, due to using linear search to keep `obmalloc.c`'s list of usable arenas sorted by order of number of free memory pools. This is accomplished without search now, leaving the worst-case time linear in the number of arenas. For programs where this quite visibly matters (typically with more than 100 thousand small objects alive simultaneously), this can greatly reduce the time needed to release their memory.
- [bpo-26423](https://bugs.python.org/issue?@action=redirect&bpo=26423) [https://bugs.python.org/issue?@action=redirect&bpo=26423]: Fix possible overflow in `wrap_lenfunc()` when `sizeof(long) < sizeof(Py_ssize_t)` (e.g., 64-bit Windows).
- [bpo-37050](https://bugs.python.org/issue?@action=redirect&bpo=37050) [https://bugs.python.org/issue?@action=redirect&bpo=37050]: Improve the AST for “debug” f-strings, which use ‘=’ to print out the source of the expression being evaluated. Delete `expr_text` from the `FormattedValue` node, and instead use a `Constant` string node (possibly merged with adjacent constant expressions inside the f-string).
- [bpo-22385](https://bugs.python.org/issue?@action=redirect&bpo=22385) [https://bugs.python.org/issue?@action=redirect&bpo=22385]: The `bytes.hex`, `bytearray.hex`, and `memoryview.hex` methods as well as the `binascii.hexlify` and `b2a_hex` functions now have the ability to include an optional separator between hex

bytes. This functionality was inspired by MicroPython's hexlify implementation.

- [bpo-26836](https://bugs.python.org/issue?@action=redirect&bpo=26836) [https://bugs.python.org/issue?@action=redirect&bpo=26836]: Add `os.memfd_create()`.
- [bpo-37032](https://bugs.python.org/issue?@action=redirect&bpo=37032) [https://bugs.python.org/issue?@action=redirect&bpo=37032]: Added new `replace()` method to the code type (`types.CodeType`).
- [bpo-37007](https://bugs.python.org/issue?@action=redirect&bpo=37007) [https://bugs.python.org/issue?@action=redirect&bpo=37007]: Implement `socket.if_nameindex()`, `socket.if_nameindex()`, and `socket.if_indextoname()` on Windows.
- [bpo-36829](https://bugs.python.org/issue?@action=redirect&bpo=36829) [https://bugs.python.org/issue?@action=redirect&bpo=36829]: `PyErr_WriteUnraisable()` now creates a traceback object if there is no current traceback. Moreover, call `PyErr_NormalizeException()` and `PyException_SetTraceback()` to normalize the exception value. Ignore any error.
- [bpo-36878](https://bugs.python.org/issue?@action=redirect&bpo=36878) [https://bugs.python.org/issue?@action=redirect&bpo=36878]: Only accept text after `# type: ignore` if the first character is ASCII. This is to disallow things like `# type: ignoreé`.
- [bpo-36878](https://bugs.python.org/issue?@action=redirect&bpo=36878) [https://bugs.python.org/issue?@action=redirect&bpo=36878]: Store text appearing after a `# type: ignore` comment in the AST. For example a type ignore like `# type: ignore[E1000]` will have the string `"[E1000]"` stored in its AST node.
- [bpo-2180](https://bugs.python.org/issue?@action=redirect&bpo=2180) [https://bugs.python.org/issue?@action=redirect&bpo=2180]: Treat line continuation at EOF as a `SyntaxError` by Anthony Sottile.
- [bpo-36907](https://bugs.python.org/issue?@action=redirect&bpo=36907) [https://bugs.python.org/issue?@action=redirect&bpo=36907]: Fix a crash when calling a C function with a keyword dict (`f(**kwargs)`) and changing the dict `kwargs` while that function is running.
- [bpo-36946](https://bugs.python.org/issue?@action=redirect&bpo=36946) [https://bugs.python.org/issue?@action=redirect&bpo=36946]: Fix possible signed integer overflow when handling slices.
- [bpo-36826](https://bugs.python.org/issue?@action=redirect&bpo=36826) [https://bugs.python.org/issue?@action=redirect&bpo=36826]: Add `NamedExpression` kind support to `ast_unparse.c`.
- [bpo-1875](https://bugs.python.org/issue?@action=redirect&bpo=1875) [https://bugs.python.org/issue?@action=redirect&bpo=1875]:

A **SyntaxError** is now raised if a code blocks that will be optimized away (e.g. if conditions that are always false) contains syntax errors. Patch by Pablo Galindo.

- **bpo-36027** [<https://bugs.python.org/issue?@action=redirect&bpo=36027>]: Allow computation of modular inverses via three-argument `pow`: the second argument is now permitted to be negative in the case where the first and third arguments are relatively prime.
- **bpo-36861** [<https://bugs.python.org/issue?@action=redirect&bpo=36861>]: Update the Unicode database to version 12.1.0.
- **bpo-28866** [<https://bugs.python.org/issue?@action=redirect&bpo=28866>]: Avoid caching attributes of classes which type defines `mro()` to avoid a hard cache invalidation problem.
- **bpo-36851** [<https://bugs.python.org/issue?@action=redirect&bpo=36851>]: The `FrameType` stack is now correctly cleaned up if the execution ends with a return and the stack is not empty.
- **bpo-34616** [<https://bugs.python.org/issue?@action=redirect&bpo=34616>]: The `compile()` builtin functions now support the `ast.PyCF_ALLOW_TOP_LEVEL_AWAIT` flag, which allow to compile sources that contains top-level `await`, `async with` or `async for`. This is useful to evaluate `async`-code from with an already `async` functions; for example in a custom REPL.
- **bpo-36842** [<https://bugs.python.org/issue?@action=redirect&bpo=36842>]: Implement PEP 578, adding `sys.audit`, `io.open_code` and related APIs.
- **bpo-27639** [<https://bugs.python.org/issue?@action=redirect&bpo=27639>]: Correct return type for `UserList` slicing operations. Patch by Michael Blahay, Erick Cervantes, and vaultah
- **bpo-36737** [<https://bugs.python.org/issue?@action=redirect&bpo=36737>]: Move `PyRuntimeState.warnings` into per-interpreter state (via “module state”).
- **bpo-36793** [<https://bugs.python.org/issue?@action=redirect&bpo=36793>]: Removed `__str__` implementations from builtin types `bool`, `int`, `float`, `complex` and few classes from the standard library. They

now inherit `__str__()` from `object`.

- [bpo-36817](https://bugs.python.org/issue?@action=redirect&bpo=36817) [https://bugs.python.org/issue?@action=redirect&bpo=36817]: Add `as_fstring()` for debugging. This can precede `!s`, `!r`, or `!a`. It produces the text of the expression, followed by an equal sign, followed by the repr of the value of the expression. So `f'{3*9+15=}'` would be equal to the string `'3*9+15=42'`. If `=` is specified, the default conversion is set to `!r`, unless a format spec is given, in which case the formatting behavior is unchanged, and `__format__` will be used.
- [bpo-24048](https://bugs.python.org/issue?@action=redirect&bpo=24048) [https://bugs.python.org/issue?@action=redirect&bpo=24048]: Save the live exception during `import.c's remove_module()`.
- [bpo-27987](https://bugs.python.org/issue?@action=redirect&bpo=27987) [https://bugs.python.org/issue?@action=redirect&bpo=27987]: `pymalloc` returns memory blocks aligned by 16 bytes, instead of 8 bytes, on 64-bit platforms to conform x86-64 ABI. Recent compilers assume this alignment more often. Patch by Inada Naoki.
- [bpo-36601](https://bugs.python.org/issue?@action=redirect&bpo=36601) [https://bugs.python.org/issue?@action=redirect&bpo=36601]: A long-since-meaningless check for `getpid() == main_pid` was removed from Python's internal C signal handler.
- [bpo-36594](https://bugs.python.org/issue?@action=redirect&bpo=36594) [https://bugs.python.org/issue?@action=redirect&bpo=36594]: Fix incorrect use of `%p` in format strings. Patch by Zackery Spytz.
- [bpo-36045](https://bugs.python.org/issue?@action=redirect&bpo=36045) [https://bugs.python.org/issue?@action=redirect&bpo=36045]: `builtins.help()` now prefixes **async** for async functions
- [bpo-36084](https://bugs.python.org/issue?@action=redirect&bpo=36084) [https://bugs.python.org/issue?@action=redirect&bpo=36084]: Add native thread ID (TID) to `threading.Thread` objects (supported platforms: Windows, FreeBSD, Linux, macOS)
- [bpo-36035](https://bugs.python.org/issue?@action=redirect&bpo=36035) [https://bugs.python.org/issue?@action=redirect&bpo=36035]: Added fix for broken symlinks in combination with `pathlib`
- [bpo-35983](https://bugs.python.org/issue?@action=redirect&bpo=35983) [https://bugs.python.org/issue?@action=redirect&bpo=35983]: Added new trashcan macros to deal with a double deallocation that could occur when the `tp_dealloc` of a subclass calls the `tp_dealloc` of a base class and that base class uses the trashcan mechanism. Patch

by Jeroen Demeyer.

- [bpo-20602](https://bugs.python.org/issue?@action=redirect&bpo=20602) [https://bugs.python.org/issue?@action=redirect&bpo=20602]: Do not clear `sys.flags` and `sys.float_info` during shutdown. Patch by Zackery Spytz.
- [bpo-26826](https://bugs.python.org/issue?@action=redirect&bpo=26826) [https://bugs.python.org/issue?@action=redirect&bpo=26826]: Expose `copy_file_range()` as a low level API in the `os` module.
- [bpo-32388](https://bugs.python.org/issue?@action=redirect&bpo=32388) [https://bugs.python.org/issue?@action=redirect&bpo=32388]: Remove cross-version binary compatibility requirement in `tp_flags`.
- [bpo-31862](https://bugs.python.org/issue?@action=redirect&bpo=31862) [https://bugs.python.org/issue?@action=redirect&bpo=31862]: Port `binascii` to PEP 489 multiphase initialization. Patch by Marcel Plch.

## Library

- [bpo-37128](https://bugs.python.org/issue?@action=redirect&bpo=37128) [https://bugs.python.org/issue?@action=redirect&bpo=37128]: Added `math.perm()`.
- [bpo-37120](https://bugs.python.org/issue?@action=redirect&bpo=37120) [https://bugs.python.org/issue?@action=redirect&bpo=37120]: Add `SSLContext.num_tickets` to control the number of TLSv1.3 session tickets.
- [bpo-12202](https://bugs.python.org/issue?@action=redirect&bpo=12202) [https://bugs.python.org/issue?@action=redirect&bpo=12202]: Fix the error handling in `msilib.SummaryInformation.GetProperty()`. Patch by Zackery Spytz.
- [bpo-26835](https://bugs.python.org/issue?@action=redirect&bpo=26835) [https://bugs.python.org/issue?@action=redirect&bpo=26835]: The `fcntl` module now contains file sealing constants for sealing of `memfd`s.
- [bpo-29262](https://bugs.python.org/issue?@action=redirect&bpo=29262) [https://bugs.python.org/issue?@action=redirect&bpo=29262]: Add `get_origin()` and `get_args()` introspection helpers to `typing` module.
- [bpo-12639](https://bugs.python.org/issue?@action=redirect&bpo=12639) [https://bugs.python.org/issue?@action=redirect&bpo=12639]: `msilib.Directory.start_component()` no longer fails if `keyfile` is not `None`.

- [bpo-36999](https://bugs.python.org/issue?@action=redirect&bpo=36999) [https://bugs.python.org/issue?@action=redirect&bpo=36999]: Add the `asyncio.Task.get_coro()` method to publicly expose the tasks's coroutine object.
- [bpo-35246](https://bugs.python.org/issue?@action=redirect&bpo=35246) [https://bugs.python.org/issue?@action=redirect&bpo=35246]: Make `asyncio.create_subprocess_exec()` accept path-like arguments.
- [bpo-35279](https://bugs.python.org/issue?@action=redirect&bpo=35279) [https://bugs.python.org/issue?@action=redirect&bpo=35279]: Change default *max\_workers* of `ThreadPoolExecutor` from `cpu_count() * 5` to `min(32, cpu_count() + 4)`. Previous value was unreasonably large on many cores machines.
- [bpo-37076](https://bugs.python.org/issue?@action=redirect&bpo=37076) [https://bugs.python.org/issue?@action=redirect&bpo=37076]: `_thread.start_new_thread()` now logs uncaught exception raised by the function using `sys.unraisablehook()`, rather than `sys.excepthook()`, so the hook gets access to the function which raised the exception.
- [bpo-33725](https://bugs.python.org/issue?@action=redirect&bpo=33725) [https://bugs.python.org/issue?@action=redirect&bpo=33725]: On macOS, the `multiprocessing` module now uses *spawn* start method by default.
- [bpo-37054](https://bugs.python.org/issue?@action=redirect&bpo=37054) [https://bugs.python.org/issue?@action=redirect&bpo=37054]: Fix destructor `_pyio.BytesIO` and `_pyio.TextIOWrapper`: initialize their `_buffer` attribute as soon as possible (in the class body), because it's used by `__del__()` which calls `close()`.
- [bpo-37058](https://bugs.python.org/issue?@action=redirect&bpo=37058) [https://bugs.python.org/issue?@action=redirect&bpo=37058]: PEP 544: Add `Protocol` and `@runtime_checkable` to the `typing` module.
- [bpo-36933](https://bugs.python.org/issue?@action=redirect&bpo=36933) [https://bugs.python.org/issue?@action=redirect&bpo=36933]: The functions

`sys.set_coroutine_wrapper` and `sys.get_coroutine_wrapper` that were deprecated and marked for removal in 3.8 have been removed.

- [bpo-37047](https://bugs.python.org/issue?@action=redirect&bpo=37047) [https://bugs.python.org/issue?@action=redirect&bpo=37047]: Handle late binding and attribute access in `unittest.mock.AsyncMock` setup for autospeccing. Document newly implemented async methods in `unittest.mock.MagicMock`.
- [bpo-37049](https://bugs.python.org/issue?@action=redirect&bpo=37049) [https://bugs.python.org/issue?@action=redirect&bpo=37049]: PEP 589: Add `TypedDict` to the `typing` module.
- [bpo-37046](https://bugs.python.org/issue?@action=redirect&bpo=37046) [https://bugs.python.org/issue?@action=redirect&bpo=37046]: PEP 586: Add `Literal` to the `typing` module.
- [bpo-37045](https://bugs.python.org/issue?@action=redirect&bpo=37045) [https://bugs.python.org/issue?@action=redirect&bpo=37045]: PEP 591: Add `Final` qualifier and `@final` decorator to the `typing` module.
- [bpo-37035](https://bugs.python.org/issue?@action=redirect&bpo=37035) [https://bugs.python.org/issue?@action=redirect&bpo=37035]: Don't log `OSError` based exceptions if a fatal error has occurred in `asyncio` transport. Peer can generate almost any `OSError`, user cannot avoid these exceptions by fixing own code. Errors are still propagated to user code, it's just logging them is pointless and pollute `asyncio` logs.
- [bpo-37001](https://bugs.python.org/issue?@action=redirect&bpo=37001) [https://bugs.python.org/issue?@action=redirect&bpo=37001]: `symtable.symtable()` now accepts the same input types for source code as the built-in `compile()` function. Patch by Dino Viehland.
- [bpo-37028](https://bugs.python.org/issue?@action=redirect&bpo=37028) [https://bugs.python.org/issue?@action=redirect&bpo=37028]: Implement `asyncio` REPL
- [bpo-37027](https://bugs.python.org/issue?@action=redirect&bpo=37027) [https://bugs.python.org/issue?@action=redirect&bpo=37027]: Return safe to use proxy socket object from `transport.get_extra_info('socket')`

- [bpo-32528](https://bugs.python.org/issue?@action=redirect&bpo=32528) [https://bugs.python.org/issue?@action=redirect&bpo=32528]: Make `asyncio.CancelledError` a `BaseException`.

This will address the common mistake many `asyncio` users make: an “except `Exception`” clause breaking `Tasks` cancellation.

In addition to this change, we stop inheriting `asyncio.TimeoutError` and `asyncio.InvalidStateError` from their `concurrent.futures.*` counterparts. There’s no point for these exceptions to share the inheritance chain.

- [bpo-1230540](https://bugs.python.org/issue?@action=redirect&bpo=1230540) [https://bugs.python.org/issue?@action=redirect&bpo=1230540]: Add a new `threading.excepthook()` function which handles uncaught `threading.Thread.run()` exception. It can be overridden to control how uncaught `threading.Thread.run()` exceptions are handled.
- [bpo-36996](https://bugs.python.org/issue?@action=redirect&bpo=36996) [https://bugs.python.org/issue?@action=redirect&bpo=36996]: Handle `unittest.mock.patch()` used as a decorator on `async` functions.
- [bpo-37008](https://bugs.python.org/issue?@action=redirect&bpo=37008) [https://bugs.python.org/issue?@action=redirect&bpo=37008]: Add support for calling `next()` with the mock resulting from `unittest.mock.mock_open()`
- [bpo-27737](https://bugs.python.org/issue?@action=redirect&bpo=27737) [https://bugs.python.org/issue?@action=redirect&bpo=27737]: Allow whitespace only header encoding in `email.header` - by Batuhan Taskaya
- [bpo-36969](https://bugs.python.org/issue?@action=redirect&bpo=36969) [https://bugs.python.org/issue?@action=redirect&bpo=36969]: PDB command `args` now display positional only arguments. Patch contributed by Rémi Lapeyre.
- [bpo-36969](https://bugs.python.org/issue?@action=redirect&bpo=36969) [https://bugs.python.org/issue?@action=redirect&bpo=36969]: PDB command `args` now display

keyword only arguments. Patch contributed by Rémi Lapeyre.

- [bpo-36983](https://bugs.python.org/issue?@action=redirect&bpo=36983) [https://bugs.python.org/issue?@action=redirect&bpo=36983]: Add missing names to `typing.__all__`: `ChainMap`, `ForwardRef`, `OrderedDict` - by Anthony Sottile.
- [bpo-36972](https://bugs.python.org/issue?@action=redirect&bpo=36972) [https://bugs.python.org/issue?@action=redirect&bpo=36972]: Add `SupportsIndex` protocol to the `typing` module to allow type checking to detect classes that can be passed to `hex()`, `oct()` and `bin()`.
- [bpo-32972](https://bugs.python.org/issue?@action=redirect&bpo=32972) [https://bugs.python.org/issue?@action=redirect&bpo=32972]: Implement `unittest.IsolatedAsyncioTestCase` to help testing asyncio-based code.
- [bpo-36952](https://bugs.python.org/issue?@action=redirect&bpo=36952) [https://bugs.python.org/issue?@action=redirect&bpo=36952]: `fileinput.input()` and `fileinput.FileInput` `bufsize` argument has been removed (was deprecated and ignored since Python 3.6), and as a result the `mode` and `openhook` arguments have been made keyword-only.
- [bpo-36952](https://bugs.python.org/issue?@action=redirect&bpo=36952) [https://bugs.python.org/issue?@action=redirect&bpo=36952]: Starting with Python 3.3, importing ABCs from `collections` is deprecated, and import should be done from `collections.abc`. Still being able to import from `collections` was marked for removal in 3.8, but has been delayed to 3.9; documentation and `DeprecationWarning` clarified.
- [bpo-36949](https://bugs.python.org/issue?@action=redirect&bpo=36949) [https://bugs.python.org/issue?@action=redirect&bpo=36949]: Implement `__repr__` for `WeakSet` objects.
- [bpo-36948](https://bugs.python.org/issue?@action=redirect&bpo=36948) [https://bugs.python.org/issue?@action=redirect&bpo=36948]: Fix `NameError` in `urllib.request.URLopener.retrieve()`. Patch by Karthikeyan Singaravelan.

- [bpo-33524](https://bugs.python.org/issue?@action=redirect&bpo=33524) [https://bugs.python.org/issue?@action=redirect&bpo=33524]: Fix the folding of email header when the `max_line_length` is 0 or None and the header contains non-ascii characters. Contributed by Licht Takeuchi (@Licht-T).
- [bpo-24564](https://bugs.python.org/issue?@action=redirect&bpo=24564) [https://bugs.python.org/issue?@action=redirect&bpo=24564]: `shutil.copystat()` now ignores `errno.EINVAL` on `os.setxattr()` which may occur when copying files on filesystems without extended attributes support.

Original patch by Giampaolo Rodola, updated by Ying Wang.

- [bpo-36888](https://bugs.python.org/issue?@action=redirect&bpo=36888) [https://bugs.python.org/issue?@action=redirect&bpo=36888]: Python child processes can now access the status of their parent process using `multiprocessing.process.parent_process`
- [bpo-36921](https://bugs.python.org/issue?@action=redirect&bpo=36921) [https://bugs.python.org/issue?@action=redirect&bpo=36921]: Deprecate `@coroutine` for sake of `async def`.
- [bpo-25652](https://bugs.python.org/issue?@action=redirect&bpo=25652) [https://bugs.python.org/issue?@action=redirect&bpo=25652]: Fix bug in `__rmod__` of `UserString` - by Batuhan Taskaya.
- [bpo-36916](https://bugs.python.org/issue?@action=redirect&bpo=36916) [https://bugs.python.org/issue?@action=redirect&bpo=36916]: Remove a message about an unhandled exception in a task when `writer.write()` is used without `await` and `writer.drain()` fails with an exception.
- [bpo-36889](https://bugs.python.org/issue?@action=redirect&bpo=36889) [https://bugs.python.org/issue?@action=redirect&bpo=36889]: Introduce `asyncio.Stream` class that merges `asyncio.StreamReader` and `asyncio.StreamWriter` functionality. `asyncio.Stream` can work in readonly, writeonly and readwrite modes. Provide `asyncio.connect()`, `asyncio.connect_unix()`, `asyncio.connect_read_pipe()` and `asyncio.connect_write_pipe()` factories to open

**asyncio.Stream** connections. Provide **asyncio.StreamServer** and **UnixStreamServer** to serve servers with **asyncio.Stream** API. Modify **asyncio.create\_subprocess\_shell()** and **asyncio.create\_subprocess\_exec()** to use **asyncio.Stream** instead of deprecated **StreamReader** and **StreamWriter**. Deprecate **asyncio.StreamReader** and **asyncio.StreamWriter**. Deprecate usage of private classes, e.g. **asyncio.FlowControlMixing** and **asyncio.StreamReaderProtocol** outside of **asyncio** package.

- [bpo-36845](https://bugs.python.org/issue?@action=redirect&bpo=36845) [https://bugs.python.org/issue?@action=redirect&bpo=36845]: Added validation of integer prefixes to the construction of IP networks and interfaces in the **ipaddress** module.
- [bpo-23378](https://bugs.python.org/issue?@action=redirect&bpo=23378) [https://bugs.python.org/issue?@action=redirect&bpo=23378]: Add an extend action to **argparser**.
- [bpo-36867](https://bugs.python.org/issue?@action=redirect&bpo=36867) [https://bugs.python.org/issue?@action=redirect&bpo=36867]: Fix a bug making a **SharedMemoryManager** instance and its parent process use two separate **resource\_tracker** processes.
- [bpo-23896](https://bugs.python.org/issue?@action=redirect&bpo=23896) [https://bugs.python.org/issue?@action=redirect&bpo=23896]: Adds a grammar to **lib2to3.pygram** that contains **exec** as a function not as statement.
- [bpo-36895](https://bugs.python.org/issue?@action=redirect&bpo=36895) [https://bugs.python.org/issue?@action=redirect&bpo=36895]: The function **time.clock()** was deprecated in 3.3 in favor of **time.perf\_counter()** and marked for removal in 3.8, it has removed.
- [bpo-35545](https://bugs.python.org/issue?@action=redirect&bpo=35545) [https://bugs.python.org/issue?@action=redirect&bpo=35545]: Fix **asyncio** discarding IPv6 scopes when ensuring hostname resolutions internally
- [bpo-36887](https://bugs.python.org/issue?@action=redirect&bpo=36887) [https://bugs.python.org/issue?@action=redirect&bpo=36887]

@action=redirect&bpo=36887]: Add new function **math.isqrt()** to compute integer square roots.

- **bpo-34632** [<https://bugs.python.org/issue?@action=redirect&bpo=34632>]: Introduce the **importlib.metadata** module with (provisional) support for reading metadata from third-party packages.
- **bpo-36878** [<https://bugs.python.org/issue?@action=redirect&bpo=36878>]: When using **type\_comments=True** in **ast.parse**, treat **# type: ignore** followed by a non-alphanumeric character and then arbitrary text as a type ignore, instead of requiring nothing but whitespace or another comment. This is to permit formations such as **# type: ignore[E1000]**.
- **bpo-36778** [<https://bugs.python.org/issue?@action=redirect&bpo=36778>]: **cp65001** encoding (Windows code page 65001) becomes an alias to **utf\_8** encoding.
- **bpo-36867** [<https://bugs.python.org/issue?@action=redirect&bpo=36867>]: The **multiprocessing.resource\_tracker** replaces the **multiprocessing.semaphore\_tracker** module. Other than semaphores, **resource\_tracker** also tracks **shared\_memory** segments.
- **bpo-30262** [<https://bugs.python.org/issue?@action=redirect&bpo=30262>]: The **Cache** and **Statement** objects of the **sqlite3** module are not exposed to the user. Patch by Aviv Palivoda.
- **bpo-24538** [<https://bugs.python.org/issue?@action=redirect&bpo=24538>]: In **shutil.copystat()**, first copy extended file attributes and then file permissions, since extended attributes can only be set on the destination while it is still writeable.
- **bpo-36829** [<https://bugs.python.org/issue?@action=redirect&bpo=36829>]: Add new **sys.unraisablehook()** function which can be overridden

to control how “unraisable exceptions” are handled. It is called when an exception has occurred but there is no way for Python to handle it. For example, when a destructor raises an exception or during garbage collection (`gc.collect()`).

- [bpo-36832](https://bugs.python.org/issue?@action=redirect&bpo=36832) [https://bugs.python.org/issue?@action=redirect&bpo=36832]: Introducing `zipfile.Path`, a `pathlib`-compatible wrapper for traversing zip files.
- [bpo-36814](https://bugs.python.org/issue?@action=redirect&bpo=36814) [https://bugs.python.org/issue?@action=redirect&bpo=36814]: Fix an issue where `os.posix_spawnnp()` would incorrectly raise a `TypeError` when `file_actions` is `None`.
- [bpo-33110](https://bugs.python.org/issue?@action=redirect&bpo=33110) [https://bugs.python.org/issue?@action=redirect&bpo=33110]: Handle exceptions raised by functions added by `concurrent.futures.add_done_callback` correctly when the `Future` has already completed.
- [bpo-26903](https://bugs.python.org/issue?@action=redirect&bpo=26903) [https://bugs.python.org/issue?@action=redirect&bpo=26903]: Limit `max_workers` in `ProcessPoolExecutor` to 61 to work around a `WaitForMultipleObjects` limitation.
- [bpo-36813](https://bugs.python.org/issue?@action=redirect&bpo=36813) [https://bugs.python.org/issue?@action=redirect&bpo=36813]: Fix `QueueListener` to call `queue.task_done()` upon stopping. Patch by Bar Harel.
- [bpo-36806](https://bugs.python.org/issue?@action=redirect&bpo=36806) [https://bugs.python.org/issue?@action=redirect&bpo=36806]: Forbid creation of `asyncio` stream objects like `StreamReader`, `StreamWriter`, `Process`, and their protocols outside of `asyncio` package.
- [bpo-36802](https://bugs.python.org/issue?@action=redirect&bpo=36802) [https://bugs.python.org/issue?@action=redirect&bpo=36802]: Provide both sync and async calls for `StreamWriter.write()` and `StreamWriter.close()`
- [bpo-36801](https://bugs.python.org/issue?@action=redirect&bpo=36801) [https://bugs.python.org/issue?@action=redirect&bpo=36801]: Properly handle SSL connection closing in `asyncio StreamWriter.drain()` call.

- [bpo-36785](https://bugs.python.org/issue?@action=redirect&bpo=36785) [https://bugs.python.org/issue?@action=redirect&bpo=36785]: Implement PEP 574 (pickle protocol 5 with out-of-band buffers).
- [bpo-36772](https://bugs.python.org/issue?@action=redirect&bpo=36772) [https://bugs.python.org/issue?@action=redirect&bpo=36772]: `functools.lru_cache()` can now be used as a straight decorator in addition to its existing usage as a function that returns a decorator.
- [bpo-6584](https://bugs.python.org/issue?@action=redirect&bpo=6584) [https://bugs.python.org/issue?@action=redirect&bpo=6584]: Add a **BadGzipFile** exception to the **gzip** module.
- [bpo-36748](https://bugs.python.org/issue?@action=redirect&bpo=36748) [https://bugs.python.org/issue?@action=redirect&bpo=36748]: Optimized write buffering in C implementation of `TextIOWrapper`. Writing ASCII string to `TextIOWrapper` with `ascii`, `latin1`, or `utf-8` encoding is about 20% faster. Patch by Inada Naoki.
- [bpo-8138](https://bugs.python.org/issue?@action=redirect&bpo=8138) [https://bugs.python.org/issue?@action=redirect&bpo=8138]: Don't mark `wsgiref.simple_server.SimpleServer` as multi-threaded since `wsgiref.simple_server.WSGIServer` is single-threaded.
- [bpo-22640](https://bugs.python.org/issue?@action=redirect&bpo=22640) [https://bugs.python.org/issue?@action=redirect&bpo=22640]: **`py_compile.compile()`** now supports silent mode. Patch by Joannah Nanjey
- [bpo-29183](https://bugs.python.org/issue?@action=redirect&bpo=29183) [https://bugs.python.org/issue?@action=redirect&bpo=29183]: Fix double exceptions in **`wsgiref.handlers.BaseHandler`** by calling its **`close()`** method only when no exception is raised.
- [bpo-36548](https://bugs.python.org/issue?@action=redirect&bpo=36548) [https://bugs.python.org/issue?@action=redirect&bpo=36548]: Improved the repr of regular expression flags.
- [bpo-36542](https://bugs.python.org/issue?@action=redirect&bpo=36542) [https://bugs.python.org/issue?@action=redirect&bpo=36542]: The signature of Python functions can now be overridden by specifying the `__text_signature__` attribute.

- [bpo-36533](https://bugs.python.org/issue?@action=redirect&bpo=36533) [https://bugs.python.org/issue?@action=redirect&bpo=36533]: Reinitialize logging.Handler locks in forked child processes instead of attempting to acquire them all in the parent before forking only to be released in the child process. The acquire/release pattern was leading to deadlocks in code that has implemented any form of chained logging handlers that depend upon one another as the lock acquisition order cannot be guaranteed.
- [bpo-35252](https://bugs.python.org/issue?@action=redirect&bpo=35252) [https://bugs.python.org/issue?@action=redirect&bpo=35252]: Throw a TypeError instead of an AssertionError when using an invalid type annotation with singledispatch.
- [bpo-35900](https://bugs.python.org/issue?@action=redirect&bpo=35900) [https://bugs.python.org/issue?@action=redirect&bpo=35900]: Allow reduction methods to return a 6-item tuple where the 6th item specifies a custom state-setting method that's called instead of the regular `__setstate__` method.
- [bpo-35900](https://bugs.python.org/issue?@action=redirect&bpo=35900) [https://bugs.python.org/issue?@action=redirect&bpo=35900]: enable custom reduction callback registration for functions and classes in `_pickle.c`, using the new Pickler's attribute `reducer_override`
- [bpo-36368](https://bugs.python.org/issue?@action=redirect&bpo=36368) [https://bugs.python.org/issue?@action=redirect&bpo=36368]: Fix a bug crashing SharedMemoryManager instances in interactive sessions after a ctrl-c (KeyboardInterrupt) was sent
- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: Fix mmap fail for VxWorks
- [bpo-27497](https://bugs.python.org/issue?@action=redirect&bpo=27497) [https://bugs.python.org/issue?@action=redirect&bpo=27497]: `csv.DictWriter.writeheader()` now returns the return value of the underlying `csv.Writer.writerow()` method. Patch contributed by Ashish Nitin Patil.
- [bpo-36239](https://bugs.python.org/issue?@action=redirect&bpo=36239) [https://bugs.python.org/issue?@action=redirect&bpo=36239]: Parsing .mo files now ignores

comments starting and ending with #-#-#-#-#.

- [bpo-26707](https://bugs.python.org/issue?@action=redirect&bpo=26707) [https://bugs.python.org/issue?@action=redirect&bpo=26707]: Enable plistlib to read and write binary plist files that were created as a KeyedArchive file. Specifically, this allows the plistlib to process 0x80 tokens as UID objects.
- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: Add posix module support for VxWorks.
- [bpo-35125](https://bugs.python.org/issue?@action=redirect&bpo=35125) [https://bugs.python.org/issue?@action=redirect&bpo=35125]: Asyncio: Remove inner callback on outer cancellation in shield
- [bpo-35721](https://bugs.python.org/issue?@action=redirect&bpo=35721) [https://bugs.python.org/issue?@action=redirect&bpo=35721]: Fix **asyncio.SelectorEventLoop.subprocess\_exec()** leaks file descriptors if `Popen` fails and called with `stdin=subprocess.PIPE`. Patch by Niklas Fiekas.
- [bpo-31855](https://bugs.python.org/issue?@action=redirect&bpo=31855) [https://bugs.python.org/issue?@action=redirect&bpo=31855]: **unittest.mock.mock\_open()** results now respects the argument of `read([size])`. Patch contributed by Rémi Lapeyre.
- [bpo-35431](https://bugs.python.org/issue?@action=redirect&bpo=35431) [https://bugs.python.org/issue?@action=redirect&bpo=35431]: Implement **math.comb()** that returns binomial coefficient, that computes the number of ways to choose k items from n items without repetition and without order. Patch by Yash Aggarwal and Keller Fuchs.
- [bpo-26660](https://bugs.python.org/issue?@action=redirect&bpo=26660) [https://bugs.python.org/issue?@action=redirect&bpo=26660]: Fixed permission errors in **TemporaryDirectory** clean up. Previously `TemporaryDirectory.cleanup()` failed when non-writable or non-searchable files or directories were created inside a temporary directory.
- [bpo-34271](https://bugs.python.org/issue?@action=redirect&bpo=34271) [https://bugs.python.org/issue?@action=redirect&bpo=34271]

@action=redirect&bpo=34271]: Add debugging helpers to ssl module. It's now possible to dump key material and to trace TLS protocol. The default and stdlib contexts also support SSLKEYLOGFILE env var.

- [bpo-26467](https://bugs.python.org/issue?@action=redirect&bpo=26467) [https://bugs.python.org/issue?@action=redirect&bpo=26467]: Added AsyncMock to support using unittest to mock asyncio coroutines. Patch by Lisa Roach.
- [bpo-33569](https://bugs.python.org/issue?@action=redirect&bpo=33569) [https://bugs.python.org/issue?@action=redirect&bpo=33569]: dataclasses.InitVar: Exposes the type used to create the init var.
- [bpo-34424](https://bugs.python.org/issue?@action=redirect&bpo=34424) [https://bugs.python.org/issue?@action=redirect&bpo=34424]: Fix serialization of messages containing encoded strings when the policy.linesep is set to a multi-character string. Patch by Jens Troeger.
- [bpo-34303](https://bugs.python.org/issue?@action=redirect&bpo=34303) [https://bugs.python.org/issue?@action=redirect&bpo=34303]: Performance of `functools.reduce()` is slightly improved. Patch by Sergey Fedoseev.
- [bpo-33361](https://bugs.python.org/issue?@action=redirect&bpo=33361) [https://bugs.python.org/issue?@action=redirect&bpo=33361]: Fix a bug in `codecs.StreamRecoder` where seeking might leave old data in a buffer and break subsequent read calls. Patch by Ammar Askar.
- [bpo-22454](https://bugs.python.org/issue?@action=redirect&bpo=22454) [https://bugs.python.org/issue?@action=redirect&bpo=22454]: The `shlex` module now exposes `shlex.join()`, the inverse of `shlex.split()`. Patch by Bo Bayles.
- [bpo-31922](https://bugs.python.org/issue?@action=redirect&bpo=31922) [https://bugs.python.org/issue?@action=redirect&bpo=31922]: `asyncio.AbstractEventLoop.create_datagram_endpoint()` Do not connect UDP socket when broadcast is allowed. This allows to receive replies after a UDP broadcast.

- [bpo-24882](https://bugs.python.org/issue?@action=redirect&bpo=24882) [https://bugs.python.org/issue?@action=redirect&bpo=24882]: Change `ThreadPoolExecutor` to use existing idle threads before spinning up new ones.
- [bpo-31961](https://bugs.python.org/issue?@action=redirect&bpo=31961) [https://bugs.python.org/issue?@action=redirect&bpo=31961]: Added support for bytes and path-like objects in `subprocess.Popen()` on Windows. The `args` parameter now accepts a [path-like object](#) if `shell` is `False` and a sequence containing bytes and path-like objects. The `executable` parameter now accepts a bytes and [path-like object](#). The `cwd` parameter now accepts a bytes object. Based on patch by Anders Lorentsen.
- [bpo-33123](https://bugs.python.org/issue?@action=redirect&bpo=33123) [https://bugs.python.org/issue?@action=redirect&bpo=33123]: `pathlib.Path.unlink` now accepts a `missing_ok` parameter to avoid a `FileNotFoundError` from being raised. Patch by Robert Buchholz.
- [bpo-32941](https://bugs.python.org/issue?@action=redirect&bpo=32941) [https://bugs.python.org/issue?@action=redirect&bpo=32941]: Allow `mmap.mmap` objects to access the `madvise()` system call (through `mmap.mmap.madvise()`).
- [bpo-22102](https://bugs.python.org/issue?@action=redirect&bpo=22102) [https://bugs.python.org/issue?@action=redirect&bpo=22102]: Added support for ZIP files with disks set to 0. Such files are commonly created by builtin tools on Windows when use ZIP64 extension. Patch by Francisco Facioni.
- [bpo-32515](https://bugs.python.org/issue?@action=redirect&bpo=32515) [https://bugs.python.org/issue?@action=redirect&bpo=32515]: `trace.py` can now run modules via `python3 -m trace -t -module module_name`
- [bpo-32299](https://bugs.python.org/issue?@action=redirect&bpo=32299) [https://bugs.python.org/issue?@action=redirect&bpo=32299]: Changed `unittest.mock.patch.dict()` to return the patched dictionary when used as context manager. Patch by Vadim Tsander.
- [bpo-27141](https://bugs.python.org/issue?@action=redirect&bpo=27141) [https://bugs.python.org/issue?@action=redirect&bpo=27141]

@action=redirect&bpo=27141]: Added a `__copy__()` to `collections.UserList` and `collections.UserDict` in order to correctly implement shallow copying of the objects. Patch by Bar Harel.

- [bpo-31829](https://bugs.python.org/issue?@action=redirect&bpo=31829) [https://bugs.python.org/issue?@action=redirect&bpo=31829]: `\r`, `\0` and `\x1a` (end-of-file on Windows) are now escaped in protocol 0 pickles of Unicode strings. This allows to load them without loss from files open in text mode in Python 2.
- [bpo-23395](https://bugs.python.org/issue?@action=redirect&bpo=23395) [https://bugs.python.org/issue?@action=redirect&bpo=23395]: `_thread.interrupt_main()` now avoids setting the Python error status if the `SIGINT` signal is ignored or not handled by Python.

## Documentation

- [bpo-36896](https://bugs.python.org/issue?@action=redirect&bpo=36896) [https://bugs.python.org/issue?@action=redirect&bpo=36896]: Clarify that some types have unstable constructor signature between Python versions.
- [bpo-36686](https://bugs.python.org/issue?@action=redirect&bpo=36686) [https://bugs.python.org/issue?@action=redirect&bpo=36686]: Improve documentation of the `stdin`, `stdout`, and `stderr` arguments of the `asyncio.subprocess_exec` function to specify which values are supported. Also mention that decoding as text is not supported.

Add a few tests to verify that the various values passed to the `std*` arguments actually work.

- [bpo-36984](https://bugs.python.org/issue?@action=redirect&bpo=36984) [https://bugs.python.org/issue?@action=redirect&bpo=36984]: Improve version added references in `typing` module - by Anthony Sottile.
- [bpo-36868](https://bugs.python.org/issue?@action=redirect&bpo=36868) [https://bugs.python.org/issue?@action=redirect&bpo=36868]: What's new now mentions `SSLContext.hostname_checks_common_name` instead of `SSLContext.host_flags`.

- [bpo-35924](https://bugs.python.org/issue?@action=redirect&bpo=35924) [https://bugs.python.org/issue?@action=redirect&bpo=35924]: Add a note to the `curses.addstr()` documentation to warn that multiline strings can cause segfaults because of an ncurses bug.
- [bpo-36783](https://bugs.python.org/issue?@action=redirect&bpo=36783) [https://bugs.python.org/issue?@action=redirect&bpo=36783]: Added C API Documentation for `Time_FromTimeAndFold` and `PyDateTime_FromDateAndTimeAndFold` as per PEP 495. Patch by Edison Abahurire.
- [bpo-36797](https://bugs.python.org/issue?@action=redirect&bpo=36797) [https://bugs.python.org/issue?@action=redirect&bpo=36797]: More of the legacy distutils documentation has been either pruned, or else more clearly marked as being retained solely until the setuptools documentation covers it independently.
- [bpo-22865](https://bugs.python.org/issue?@action=redirect&bpo=22865) [https://bugs.python.org/issue?@action=redirect&bpo=22865]: Add detail to the documentation on the `pty.spawn` function.
- [bpo-35397](https://bugs.python.org/issue?@action=redirect&bpo=35397) [https://bugs.python.org/issue?@action=redirect&bpo=35397]: Remove deprecation and document `urllib.parse.unwrap()`. Patch contributed by Rémi Lapeyre.
- [bpo-32995](https://bugs.python.org/issue?@action=redirect&bpo=32995) [https://bugs.python.org/issue?@action=redirect&bpo=32995]: Added the context variable in glossary.
- [bpo-33519](https://bugs.python.org/issue?@action=redirect&bpo=33519) [https://bugs.python.org/issue?@action=redirect&bpo=33519]: Clarify that `copy()` is not part of the `MutableSequence` ABC.
- [bpo-33482](https://bugs.python.org/issue?@action=redirect&bpo=33482) [https://bugs.python.org/issue?@action=redirect&bpo=33482]: Make `codecs.StreamRecoder.writelines` take a list of bytes.
- [bpo-25735](https://bugs.python.org/issue?@action=redirect&bpo=25735) [https://bugs.python.org/issue?@action=redirect&bpo=25735]: Added documentation for `funcfactorial` to indicate that returns integer values

- [bpo-20285](https://bugs.python.org/issue?@action=redirect&bpo=20285) [https://bugs.python.org/issue?@action=redirect&bpo=20285]: Expand `object.__doc__` (docstring) to make it clearer. Modify `pydoc.py` so that `help(object)` lists object methods (for other classes, `help` omits methods of the object base class.)

## Tests

- [bpo-37069](https://bugs.python.org/issue?@action=redirect&bpo=37069) [https://bugs.python.org/issue?@action=redirect&bpo=37069]: Modify `test_coroutines`, `test_cprofile`, `test_generators`, `test_raise`, `test_ssl` and `test_yield_from` to use `test.support.catch_unraisable_exception()` rather than `test.support.captured_stderr()`.
- [bpo-37098](https://bugs.python.org/issue?@action=redirect&bpo=37098) [https://bugs.python.org/issue?@action=redirect&bpo=37098]: Fix `test_memfd_create` on older Linux Kernels.
- [bpo-37081](https://bugs.python.org/issue?@action=redirect&bpo=37081) [https://bugs.python.org/issue?@action=redirect&bpo=37081]: Test with OpenSSL 1.1.1c
- [bpo-36829](https://bugs.python.org/issue?@action=redirect&bpo=36829) [https://bugs.python.org/issue?@action=redirect&bpo=36829]: Add `test.support.catch_unraisable_exception()`: context manager catching unraisable exception using `sys.unraisablehook()`.
- [bpo-36915](https://bugs.python.org/issue?@action=redirect&bpo=36915) [https://bugs.python.org/issue?@action=redirect&bpo=36915]: The main `regtest` process now always removes all temporary directories of worker processes even if they crash or if they are killed on `KeyboardInterrupt` (CTRL + c).
- [bpo-36719](https://bugs.python.org/issue?@action=redirect&bpo=36719) [https://bugs.python.org/issue?@action=redirect&bpo=36719]: “`python3 -m test -jN ...`” now continues the execution of next tests when a worker process crash (CHILD\_ERROR state). Previously, the test suite stopped immediately. Use `-failfast` to stop at the first error.
- [bpo-36816](https://bugs.python.org/issue?@action=redirect&bpo=36816) [https://bugs.python.org/issue?@action=redirect&bpo=36816]: Update `Lib/test/selfsigned_pythontestdotnet.pem` to match `selfsigned.pythontest.net`’s new TLS certificate.
- [bpo-35925](https://bugs.python.org/issue?@action=redirect&bpo=35925) [https://bugs.python.org/issue?@action=redirect&bpo=35925]: Skip `httplib` and `nntplib`

networking tests when they would otherwise fail due to a modern OS or distro with a default OpenSSL policy of rejecting connections to servers with weak certificates.

- [bpo-36782](https://bugs.python.org/issue?@action=redirect&bpo=36782) [https://bugs.python.org/issue?@action=redirect&bpo=36782]: Add tests for several C API functions in the `datetime` module. Patch by Edison Abahurire.
- [bpo-36342](https://bugs.python.org/issue?@action=redirect&bpo=36342) [https://bugs.python.org/issue?@action=redirect&bpo=36342]: Fix `test_multiprocessing` in `test_venv` if platform lacks functioning `sem_open`.

## Build

- [bpo-36721](https://bugs.python.org/issue?@action=redirect&bpo=36721) [https://bugs.python.org/issue?@action=redirect&bpo=36721]: To embed Python into an application, a new `--embed` option must be passed to `python3-config --libs --embed` to get `-lpython3.8` (link the application to `libpython`). To support both 3.8 and older, try `python3-config --libs --embed` first and fallback to `python3-config --libs` (without `--embed`) if the previous command fails.

Add a `pkg-config python-3.8-embed` module to embed Python into an application: `pkg-config python-3.8-embed --libs` includes `-lpython3.8`. To support both 3.8 and older, try `pkg-config python-X.Y-embed --libs` first and fallback to `pkg-config python-X.Y --libs` (without `--embed`) if the previous command fails (replace `X.Y` with the Python version).

On the other hand, `pkg-config python3.8 --libs` no longer contains `-lpython3.8`. C extensions must not be linked to `libpython` (except on Android, case handled by the script); this change is backward incompatible on purpose.

- [bpo-36786](https://bugs.python.org/issue?@action=redirect&bpo=36786) [https://bugs.python.org/issue?@action=redirect&bpo=36786]: “make install” now runs `compileall` in parallel.

## Windows

- [bpo-36965](https://bugs.python.org/issue?@action=redirect&bpo=36965) [https://bugs.python.org/issue?@action=redirect&bpo=36965]: include of STATUS\_CONTROL\_C\_EXIT without depending on MSC compiler
- [bpo-35926](https://bugs.python.org/issue?@action=redirect&bpo=35926) [https://bugs.python.org/issue?@action=redirect&bpo=35926]: Update to OpenSSL 1.1.1b for Windows.
- [bpo-29883](https://bugs.python.org/issue?@action=redirect&bpo=29883) [https://bugs.python.org/issue?@action=redirect&bpo=29883]: Add Windows support for UDP transports for the Proactor Event Loop. Patch by Adam Meily.
- [bpo-33407](https://bugs.python.org/issue?@action=redirect&bpo=33407) [https://bugs.python.org/issue?@action=redirect&bpo=33407]: The `Py_DEPRECATED()` macro has been implemented for MSVC.

## macOS

- [bpo-36231](https://bugs.python.org/issue?@action=redirect&bpo=36231) [https://bugs.python.org/issue?@action=redirect&bpo=36231]: Support building Python on macOS without /usr/include installed. As of macOS 10.14, system header files are only available within an SDK provided by either the Command Line Tools or the Xcode app.

## IDLE

- [bpo-35610](https://bugs.python.org/issue?@action=redirect&bpo=35610) [https://bugs.python.org/issue?@action=redirect&bpo=35610]: Replace now redundant `.context_use_ps1` with `.prompt_last_line`. This finishes change started in [bpo-31858](https://bugs.python.org/issue?@action=redirect&bpo=31858) [https://bugs.python.org/issue?@action=redirect&bpo=31858].
- [bpo-37038](https://bugs.python.org/issue?@action=redirect&bpo=37038) [https://bugs.python.org/issue?@action=redirect&bpo=37038]: Make `idlelib.run` runnable; add test clause.
- [bpo-36958](https://bugs.python.org/issue?@action=redirect&bpo=36958) [https://bugs.python.org/issue?@action=redirect&bpo=36958]: Print any argument other than `None` or `int` passed to `SystemExit` or `sys.exit()`.
- [bpo-36807](https://bugs.python.org/issue?@action=redirect&bpo=36807) [https://bugs.python.org/issue?@action=redirect&bpo=36807]: When saving a file, call `os.fsync()` so bits are flushed to e.g. USB drive.
- [bpo-32411](https://bugs.python.org/issue?@action=redirect&bpo=32411) [https://bugs.python.org/issue?@action=redirect&bpo=32411]: In `browser.py`, remove extraneous

sorting by line number since dictionary was created in line number order.

## Tools/Demos

- [bpo-37053](https://bugs.python.org/issue?@action=redirect&bpo=37053) [https://bugs.python.org/issue?@action=redirect&bpo=37053]: Handle strings like u"bar" correctly in Tools/parser/unparse.py. Patch by Chih-Hsuan Yen.

## C API

- [bpo-36763](https://bugs.python.org/issue?@action=redirect&bpo=36763) [https://bugs.python.org/issue?@action=redirect&bpo=36763]: Implement the [PEP 587](https://peps.python.org/pep-0587/) [https://peps.python.org/pep-0587/] "Python Initialization Configuration".
- [bpo-36379](https://bugs.python.org/issue?@action=redirect&bpo=36379) [https://bugs.python.org/issue?@action=redirect&bpo=36379]: Fix crashes when attempting to use the *modulo* parameter when `__ipow__` is implemented in C.
- [bpo-37107](https://bugs.python.org/issue?@action=redirect&bpo=37107) [https://bugs.python.org/issue?@action=redirect&bpo=37107]: Update [PyObject\\_CallMethodObjArgs\(\)](#) and `_PyObject_CallMethodIdObjArgs` to use `_PyObject_GetMethod` to avoid creating a bound method object in many cases. Patch by Michael J. Sullivan.
- [bpo-36974](https://bugs.python.org/issue?@action=redirect&bpo=36974) [https://bugs.python.org/issue?@action=redirect&bpo=36974]: Implement [PEP 590](https://peps.python.org/pep-0590/) [https://peps.python.org/pep-0590/]: Vectorcall: a fast calling protocol for CPython. This is a new protocol to optimize calls of custom callable objects.
- [bpo-36763](https://bugs.python.org/issue?@action=redirect&bpo=36763) [https://bugs.python.org/issue?@action=redirect&bpo=36763]: `Py_Main()` now returns the `exitcode` rather than calling `Py_Exit(exitcode)` when calling `PyErr_Print()` if the current exception type is `SystemExit`.
- [bpo-36922](https://bugs.python.org/issue?@action=redirect&bpo=36922) [https://bugs.python.org/issue?@action=redirect&bpo=36922]: Add new type flag `Py_TPFLAGS_METHOD_DESCRIPTOR` for objects behaving like unbound methods. These are objects supporting the optimization given by the `LOAD_METHOD/CALL_METHOD`

opcodes. See PEP 590.

- [bpo-36728](https://bugs.python.org/issue?@action=redirect&bpo=36728) [https://bugs.python.org/issue?@action=redirect&bpo=36728]: The **PyEval\_ReInitThreads()** function has been removed from the C API. It should not be called explicitly: use **PyOS\_AfterFork\_Child()** instead.

## Python 3.8.0 alpha 4

*Release date: 2019-05-06*

### Security

- [bpo-36742](https://bugs.python.org/issue?@action=redirect&bpo=36742) [https://bugs.python.org/issue?@action=redirect&bpo=36742]: Fixes mishandling of pre-normalization characters in `urllib.parse.urlsplit()`.
- [bpo-30458](https://bugs.python.org/issue?@action=redirect&bpo=30458) [https://bugs.python.org/issue?@action=redirect&bpo=30458]: Address CVE-2019-9740 by disallowing URL paths with embedded whitespace or control characters through into the underlying http client request. Such potentially malicious header injection URLs now cause an `http.client.InvalidURL` exception to be raised.
- [bpo-35755](https://bugs.python.org/issue?@action=redirect&bpo=35755) [https://bugs.python.org/issue?@action=redirect&bpo=35755]: **shutil.which()** now uses `os.confstr("CS_PATH")` if available and if the **PATH** environment variable is not set. Remove also the current directory from **posixpath.defpath**. On Unix, **shutil.which()** and the **subprocess** module no longer search the executable in the current directory if the **PATH** environment variable is not set.

### Core and Builtins

- [bpo-36722](https://bugs.python.org/issue?@action=redirect&bpo=36722) [https://bugs.python.org/issue?@action=redirect&bpo=36722]: In debug build, import now also looks for C extensions compiled in release mode and for C extensions compiled in the stable ABI.
- [bpo-32849](https://bugs.python.org/issue?@action=redirect&bpo=32849) [https://bugs.python.org/issue?@action=redirect&bpo=32849]: Fix Python Initialization code on

FreeBSD to detect properly when stdin file descriptor (fd 0) is invalid.

- [bpo-36623](https://bugs.python.org/issue?@action=redirect&bpo=36623) [https://bugs.python.org/issue?@action=redirect&bpo=36623]: Remove parser headers and related function declarations that lack implementations after the removal of pgen.
- [bpo-20180](https://bugs.python.org/issue?@action=redirect&bpo=20180) [https://bugs.python.org/issue?@action=redirect&bpo=20180]: `dict.pop()` is now up to 33% faster thanks to Argument Clinic. Patch by Inada Naoki.
- [bpo-36611](https://bugs.python.org/issue?@action=redirect&bpo=36611) [https://bugs.python.org/issue?@action=redirect&bpo=36611]: Debug memory allocators: disable `serialno` field by default from debug hooks on Python memory allocators to reduce the memory footprint by 5%. Enable [tracemalloc](#) to get the traceback where a memory block has been allocated when a fatal memory error is logged to decide where to put a breakpoint. Compile Python with `PYMEM_DEBUG_SERIALNO` defined to get back the field.
- [bpo-36588](https://bugs.python.org/issue?@action=redirect&bpo=36588) [https://bugs.python.org/issue?@action=redirect&bpo=36588]: On AIX, [sys.platform](#) doesn't contain the major version anymore. Always return `'aix'`, instead of `'aix3' .. 'aix7'`. Since older Python versions include the version number, it is recommended to always use `sys.platform.startswith('aix')`. Contributed by M. Felt.
- [bpo-36549](https://bugs.python.org/issue?@action=redirect&bpo=36549) [https://bugs.python.org/issue?@action=redirect&bpo=36549]: Change `str.capitalize` to use `titlecase` for the first character instead of uppercase.
- [bpo-36540](https://bugs.python.org/issue?@action=redirect&bpo=36540) [https://bugs.python.org/issue?@action=redirect&bpo=36540]: Implement [PEP 570](#) [https://peps.python.org/pep-0570/] (Python positional-only parameters). Patch by Pablo Galindo.
- [bpo-36475](https://bugs.python.org/issue?@action=redirect&bpo=36475) [https://bugs.python.org/issue?@action=redirect&bpo=36475]: [PyEval\\_AcquireLock\(\)](#) and [PyEval\\_AcquireThread\(\)](#) now terminate the current thread if called while the interpreter is finalizing, making them consistent with [PyEval\\_RestoreThread\(\)](#), [Py\\_END\\_ALLOW\\_THREADS\(\)](#), and [PyGILState\\_Ensure\(\)](#).
- [bpo-36504](https://bugs.python.org/issue?@action=redirect&bpo=36504) [https://bugs.python.org/issue?@action=redirect&bpo=36504]: Fix signed integer overflow in

- `_ctypes.c's PyCArrayType_new()`.
- [bpo-20844](https://bugs.python.org/issue?@action=redirect&bpo=20844) [https://bugs.python.org/issue?@action=redirect&bpo=20844]: Fix running script with encoding cookie and LF line ending may fail on Windows.
- [bpo-24214](https://bugs.python.org/issue?@action=redirect&bpo=24214) [https://bugs.python.org/issue?@action=redirect&bpo=24214]: Fixed support of the surrogatepass error handler in the UTF-8 incremental decoder.
- [bpo-36452](https://bugs.python.org/issue?@action=redirect&bpo=36452) [https://bugs.python.org/issue?@action=redirect&bpo=36452]: Changing dict keys during iteration of the dict itself, `keys()`, `values()`, or `items()` will now be detected in certain corner cases where keys are deleted/added so that the number of keys isn't changed. A **RuntimeError** will be raised after `len(dict)` iterations. Contributed by Thomas Perl.
- [bpo-36459](https://bugs.python.org/issue?@action=redirect&bpo=36459) [https://bugs.python.org/issue?@action=redirect&bpo=36459]: Fix a possible double `PyMem_FREE()` due to `tokenizer.c's tok_nextc()`.
- [bpo-36433](https://bugs.python.org/issue?@action=redirect&bpo=36433) [https://bugs.python.org/issue?@action=redirect&bpo=36433]: Fixed `TypeError` message in `classmethoddescr_call`.
- [bpo-36430](https://bugs.python.org/issue?@action=redirect&bpo=36430) [https://bugs.python.org/issue?@action=redirect&bpo=36430]: Fix a possible reference leak in `itertools.count()`.
- [bpo-36440](https://bugs.python.org/issue?@action=redirect&bpo=36440) [https://bugs.python.org/issue?@action=redirect&bpo=36440]: Include node names in `ParserError` messages, instead of numeric IDs. Patch by A. Skrobov.
- [bpo-36143](https://bugs.python.org/issue?@action=redirect&bpo=36143) [https://bugs.python.org/issue?@action=redirect&bpo=36143]: Regenerate **keyword** from the Grammar and Tokens file using `pgen`. Patch by Pablo Galindo.
- [bpo-18372](https://bugs.python.org/issue?@action=redirect&bpo=18372) [https://bugs.python.org/issue?@action=redirect&bpo=18372]: Add missing `PyObject_GC_Track()` calls in the **pickle** module. Patch by Zackery Spytz.

## Library

- [bpo-35952](https://bugs.python.org/issue?@action=redirect&bpo=35952) [https://bugs.python.org/issue?@action=redirect&bpo=35952]: Fix `pythoninfo` when the compiler is missing.

- [bpo-28238](https://bugs.python.org/issue?@action=redirect&bpo=28238) [https://bugs.python.org/issue?@action=redirect&bpo=28238]: The `.find*()` methods of `xml.etree.ElementTree` can now search for wildcards like `{*}` tag and `{ns}*` that match a tag in any namespace or all tags in a namespace. Patch by Stefan Behnel.
- [bpo-26978](https://bugs.python.org/issue?@action=redirect&bpo=26978) [https://bugs.python.org/issue?@action=redirect&bpo=26978]: `pathlib.path.link_to()` is now implemented. It creates a hard link pointing to a path.
- [bpo-1613500](https://bugs.python.org/issue?@action=redirect&bpo=1613500) [https://bugs.python.org/issue?@action=redirect&bpo=1613500]: `fileinput.FileInput` now uses the input file mode to correctly set the output file mode (previously it was hardcoded to 'w') when `inplace=True` is passed to its constructor.
- [bpo-36734](https://bugs.python.org/issue?@action=redirect&bpo=36734) [https://bugs.python.org/issue?@action=redirect&bpo=36734]: Fix compilation of `faulthandler.c` on HP-UX. Initialize `stack_t` `current_stack` to zero using `memset()`.
- [bpo-13611](https://bugs.python.org/issue?@action=redirect&bpo=13611) [https://bugs.python.org/issue?@action=redirect&bpo=13611]: The `xml.etree.ElementTree` packages gained support for C14N 2.0 serialisation. Patch by Stefan Behnel.
- [bpo-36669](https://bugs.python.org/issue?@action=redirect&bpo=36669) [https://bugs.python.org/issue?@action=redirect&bpo=36669]: Add missing matrix multiplication operator support to `weakref.proxy`.
- [bpo-36676](https://bugs.python.org/issue?@action=redirect&bpo=36676) [https://bugs.python.org/issue?@action=redirect&bpo=36676]: The `XMLParser()` in `xml.etree.ElementTree` provides namespace prefix context to the parser target if it defines the callback methods “`start_ns()`” and/or “`end_ns()`”. Patch by Stefan Behnel.
- [bpo-36673](https://bugs.python.org/issue?@action=redirect&bpo=36673) [https://bugs.python.org/issue?@action=redirect&bpo=36673]: The `TreeBuilder` and `XMLPullParser` in `xml.etree.ElementTree` gained support for parsing comments and processing instructions. Patch by Stefan Behnel.
- [bpo-36650](https://bugs.python.org/issue?@action=redirect&bpo=36650) [https://bugs.python.org/issue?@action=redirect&bpo=36650]: The C version of `functools.lru_cache()` was treating calls with an empty `**kwargs` dictionary as being distinct from calls with no keywords at all. This did not result in an incorrect answer, but it did trigger an unexpected cache miss.

- **bpo-28552** [[https://bugs.python.org/issue?](https://bugs.python.org/issue?@action=redirect&bpo=28552)  
@action=redirect&bpo=28552]: Fix **distutils.sysconfig** if **sys.executable** is `None` or an empty string: use **os.getcwd()** to initialize `project_base`. Fix also the `distutils` build command: don't use **sys.executable** if it is `None` or an empty string.
- **bpo-35755** [[https://bugs.python.org/issue?](https://bugs.python.org/issue?@action=redirect&bpo=35755)  
@action=redirect&bpo=35755]: **shutil.which()** and **distutils.spawn.find\_executable()** now use `os.confstr("CS_PATH")` if available instead of **os.defpath**, if the `PATH` environment variable is not set. Moreover, don't use `os.confstr("CS_PATH")` nor **os.defpath** if the `PATH` environment variable is set to an empty string.
- **bpo-25430** [[https://bugs.python.org/issue?](https://bugs.python.org/issue?@action=redirect&bpo=25430)  
@action=redirect&bpo=25430]: improve performance of `IPNetwork.__contains__()`
- **bpo-30485** [[https://bugs.python.org/issue?](https://bugs.python.org/issue?@action=redirect&bpo=30485)  
@action=redirect&bpo=30485]: `Path` expressions in `xml.etree.ElementTree` can now avoid explicit namespace prefixes for tags (or the “`{namespace}tag`” notation) by passing a default namespace with an empty string prefix.
- **bpo-36613** [[https://bugs.python.org/issue?](https://bugs.python.org/issue?@action=redirect&bpo=36613)  
@action=redirect&bpo=36613]: Fix **asyncio** `wait()` not removing callback if exception
- **bpo-36598** [[https://bugs.python.org/issue?](https://bugs.python.org/issue?@action=redirect&bpo=36598)  
@action=redirect&bpo=36598]: Fix `isinstance` check for `Mock` objects with `spec` when the code is executed under tracing. Patch by Karthikeyan Singaravelan.
- **bpo-18748** [[https://bugs.python.org/issue?](https://bugs.python.org/issue?@action=redirect&bpo=18748)  
@action=redirect&bpo=18748]: In development mode (`-X dev`) and in debug build, the **io.IOBase** destructor now logs `close()` exceptions. These exceptions are silent by default in release mode.
- **bpo-36575** [[https://bugs.python.org/issue?](https://bugs.python.org/issue?@action=redirect&bpo=36575)  
@action=redirect&bpo=36575]: The `_lsprof` module now uses internal timer same to `time.perf_counter()` by default. `gettimeofday(2)` was used on Unix. New timer has better resolution on most Unix platforms and timings are no longer impacted by system clock updates since `perf_counter()` is

monotonic. Patch by Inada Naoki.

- [bpo-33461](https://bugs.python.org/issue?@action=redirect&bpo=33461) [https://bugs.python.org/issue?@action=redirect&bpo=33461]: `json.loads` now emits `DeprecationWarning` when `encoding` option is specified. Patch by Matthias Bussonnier.
- [bpo-36559](https://bugs.python.org/issue?@action=redirect&bpo=36559) [https://bugs.python.org/issue?@action=redirect&bpo=36559]: The `random` module now prefers the lean internal `_sha512` module over `hashlib` for `seed(version=2)` to optimize import time.
- [bpo-17561](https://bugs.python.org/issue?@action=redirect&bpo=17561) [https://bugs.python.org/issue?@action=redirect&bpo=17561]: Set `backlog=None` as the default for `socket.create_server`.
- [bpo-34373](https://bugs.python.org/issue?@action=redirect&bpo=34373) [https://bugs.python.org/issue?@action=redirect&bpo=34373]: Fix `time.mktime()` error handling on AIX for year before 1970.
- [bpo-36232](https://bugs.python.org/issue?@action=redirect&bpo=36232) [https://bugs.python.org/issue?@action=redirect&bpo=36232]: Improve error message when trying to open existing DBM database that actually doesn't exist. Patch by Marco Rougeth.
- [bpo-36546](https://bugs.python.org/issue?@action=redirect&bpo=36546) [https://bugs.python.org/issue?@action=redirect&bpo=36546]: Add `statistics.quantiles()`
- [bpo-36050](https://bugs.python.org/issue?@action=redirect&bpo=36050) [https://bugs.python.org/issue?@action=redirect&bpo=36050]: Optimized `http.client.HTTPResponse.read()` for large response. Patch by Inada Naoki.
- [bpo-36522](https://bugs.python.org/issue?@action=redirect&bpo=36522) [https://bugs.python.org/issue?@action=redirect&bpo=36522]: If `debuglevel` is set to `> 0` in `http.client`, print all values for headers with multiple values for the same header name. Patch by Matt Houghlum.
- [bpo-36492](https://bugs.python.org/issue?@action=redirect&bpo=36492) [https://bugs.python.org/issue?@action=redirect&bpo=36492]: Deprecated passing required arguments like `func` as keyword arguments in functions which should accept arbitrary keyword arguments and pass them to other function. Arbitrary keyword arguments (even with names “self” and “func”) can now be passed to these functions if the required arguments are passed as positional arguments.
- [bpo-27181](https://bugs.python.org/issue?@action=redirect&bpo=27181) [https://bugs.python.org/issue?@action=redirect&bpo=27181]: Add `statistics.geometric_mean()`.
- [bpo-30427](https://bugs.python.org/issue?@action=redirect&bpo=30427) [https://bugs.python.org/issue?@action=redirect&bpo=30427]

@action=redirect&bpo=30427]: `os.path.normcase()` relies on `os.fspath()` to check the type of its argument. Redundant checks have been removed from its `posixpath.normcase()` and `ntpath.normcase()` implementations. Patch by Wolfgang Maier.

- [bpo-36385](https://bugs.python.org/issue?@action=redirect&bpo=36385) [https://bugs.python.org/issue?@action=redirect&bpo=36385]: Stop rejecting IPv4 octets for being ambiguously octal. Leading zeros are ignored, and no longer are assumed to specify octal octets. Octets are always decimal numbers. Octets must still be no more than three digits, including leading zeroes.
- [bpo-36434](https://bugs.python.org/issue?@action=redirect&bpo=36434) [https://bugs.python.org/issue?@action=redirect&bpo=36434]: Errors during writing to a ZIP file no longer prevent to properly close it.
- [bpo-36407](https://bugs.python.org/issue?@action=redirect&bpo=36407) [https://bugs.python.org/issue?@action=redirect&bpo=36407]: Fixed wrong indentation writing for CDATA section in `xml.dom.minidom`. Patch by Vladimir Surjaninov.
- [bpo-36326](https://bugs.python.org/issue?@action=redirect&bpo=36326) [https://bugs.python.org/issue?@action=redirect&bpo=36326]: `inspect.getdoc()` can now find docstrings for member objects when `__slots__` is a dictionary.
- [bpo-36366](https://bugs.python.org/issue?@action=redirect&bpo=36366) [https://bugs.python.org/issue?@action=redirect&bpo=36366]: Calling `stop()` on an unstarted or stopped `unittest.mock.patch()` object will now return `None` instead of raising `RuntimeError`, making the method idempotent. Patch by Karthikeyan Singaravelan.
- [bpo-36348](https://bugs.python.org/issue?@action=redirect&bpo=36348) [https://bugs.python.org/issue?@action=redirect&bpo=36348]: The `imap.IMAP4.logout()` method no longer ignores silently arbitrary exceptions.
- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: Add time module support and fix `test_time` failures for VxWorks.
- [bpo-36227](https://bugs.python.org/issue?@action=redirect&bpo=36227) [https://bugs.python.org/issue?@action=redirect&bpo=36227]: Added support for keyword arguments `default_namespace` and `xml_declaration` in functions `ElementTree.tostring()` and `ElementTree.tostringlist()`.
- [bpo-36004](https://bugs.python.org/issue?@action=redirect&bpo=36004) [https://bugs.python.org/issue?@action=redirect&bpo=36004]: Added new alternate constructors `datetime.date.fromisocalendar()` and

`datetime.datetime.fromisocalendar()`, which construct date objects from ISO year, week number and weekday; these are the inverse of each class's `isocalendar` method. Patch by Paul Ganssle.

- [bpo-35936](https://bugs.python.org/issue?@action=redirect&bpo=35936) [https://bugs.python.org/issue?@action=redirect&bpo=35936]: `modulefinder` no longer depends on the deprecated `imp` module, and the initializer for `modulefinder.ModuleFinder` now has immutable default arguments. Patch by Brandt Bucher.
- [bpo-35376](https://bugs.python.org/issue?@action=redirect&bpo=35376) [https://bugs.python.org/issue?@action=redirect&bpo=35376]: `modulefinder` correctly handles modules that have the same name as a bad package. Patch by Brandt Bucher.
- [bpo-17396](https://bugs.python.org/issue?@action=redirect&bpo=17396) [https://bugs.python.org/issue?@action=redirect&bpo=17396]: `modulefinder` no longer crashes when encountering syntax errors in followed imports. Patch by Brandt Bucher.
- [bpo-35934](https://bugs.python.org/issue?@action=redirect&bpo=35934) [https://bugs.python.org/issue?@action=redirect&bpo=35934]: Added `create_server()` and `has_dualstack_ipv6()` convenience functions to automate the necessary tasks usually involved when creating a server socket, including accepting both IPv4 and IPv6 connections on the same socket. (Contributed by Giampaolo Rodola in [bpo-17561](https://bugs.python.org/issue?@action=redirect&bpo=17561) [https://bugs.python.org/issue?@action=redirect&bpo=17561].)
- [bpo-23078](https://bugs.python.org/issue?@action=redirect&bpo=23078) [https://bugs.python.org/issue?@action=redirect&bpo=23078]: Add support for `classmethod()` and `staticmethod()` to `unittest.mock.create_autospec()`. Initial patch by Felipe Ochoa.
- [bpo-35416](https://bugs.python.org/issue?@action=redirect&bpo=35416) [https://bugs.python.org/issue?@action=redirect&bpo=35416]: Fix potential resource warnings in `distutils`. Patch by Mickaël Schoentgen.
- [bpo-25451](https://bugs.python.org/issue?@action=redirect&bpo=25451) [https://bugs.python.org/issue?@action=redirect&bpo=25451]: Add transparency methods to `tkinter.PhotoImage`. Patch by Zackery Spytz.
- [bpo-35082](https://bugs.python.org/issue?@action=redirect&bpo=35082) [https://bugs.python.org/issue?@action=redirect&bpo=35082]: Don't return deleted attributes when calling `dir` on a `unittest.mock.Mock`.
- [bpo-34547](https://bugs.python.org/issue?@action=redirect&bpo=34547) [https://bugs.python.org/issue?@action=redirect&bpo=34547]

@action=redirect&bpo=34547]:

**wsgiref.handlers.BaseHandler** now handles abrupt client connection terminations gracefully. Patch by Petter Strandmark.

- **bpo-31658** [https://bugs.python.org/issue?@action=redirect&bpo=31658]: **xml.sax.parse()** now supports **path-like**. Patch by Mickaël Schoentgen.
- **bpo-34139** [https://bugs.python.org/issue?@action=redirect&bpo=34139]: Remove stale unix datagram socket before binding
- **bpo-33530** [https://bugs.python.org/issue?@action=redirect&bpo=33530]: Implemented Happy Eyeballs in **asyncio.create\_connection()**. Added two new arguments, *happy\_eyeballs\_delay* and *interleave*, to specify Happy Eyeballs behavior.
- **bpo-33291** [https://bugs.python.org/issue?@action=redirect&bpo=33291]: Do not raise AttributeError when calling the inspect functions *isgeneratorfunction*, *iscoroutinefunction*, *isasyncgenfunction* on a method created from an arbitrary callable. Instead, return False.
- **bpo-31310** [https://bugs.python.org/issue?@action=redirect&bpo=31310]: Fix the `multiprocessing.semaphore_tracker` so it is reused by child processes
- **bpo-31292** [https://bugs.python.org/issue?@action=redirect&bpo=31292]: Fix `setup.py` check `--restructuredtext` for files containing `include` directives.

## Documentation

- **bpo-36625** [https://bugs.python.org/issue?@action=redirect&bpo=36625]: Remove obsolete comments from docstrings in `fractions.Fraction`
- **bpo-30840** [https://bugs.python.org/issue?@action=redirect&bpo=30840]: Document relative imports
- **bpo-36523** [https://bugs.python.org/issue?@action=redirect&bpo=36523]: Add docstring for `io.IOBase.writelines()`.
- **bpo-36425** [https://bugs.python.org/issue?

- @action=redirect&bpo=36425]: New documentation translation: [Simplified Chinese](https://docs.python.org/zh-cn/) [https://docs.python.org/zh-cn/].
- [bpo-36345](https://bugs.python.org/issue?@action=redirect&bpo=36345) [https://bugs.python.org/issue?@action=redirect&bpo=36345]: Avoid the duplication of code from `Tools/scripts/serve.py` in using the **literalinclude** directive for the basic `wsgiref`-based web server in the documentation of [wsgiref](#). Contributed by Stéphane Wirtel.
  - [bpo-36345](https://bugs.python.org/issue?@action=redirect&bpo=36345) [https://bugs.python.org/issue?@action=redirect&bpo=36345]: Using the code of the `Tools/scripts/serve.py` script as an example in the [wsgiref](#) documentation. Contributed by Stéphane Wirtel.
  - [bpo-36157](https://bugs.python.org/issue?@action=redirect&bpo=36157) [https://bugs.python.org/issue?@action=redirect&bpo=36157]: Added Documentation for `PyInterpreterState_Main()`.
  - [bpo-33043](https://bugs.python.org/issue?@action=redirect&bpo=33043) [https://bugs.python.org/issue?@action=redirect&bpo=33043]: Updates the docs.python.org page with the addition of a ‘Contributing to Docs’ link at the end of the page (between ‘Reporting Bugs’ and ‘About Documentation’). Updates the ‘Found a Bug’ page with additional links and information in the Documentation Bugs section.
  - [bpo-35581](https://bugs.python.org/issue?@action=redirect&bpo=35581) [https://bugs.python.org/issue?@action=redirect&bpo=35581]: `@typing.type_check_only` now allows type stubs to mark functions and classes not available during runtime.
  - [bpo-33832](https://bugs.python.org/issue?@action=redirect&bpo=33832) [https://bugs.python.org/issue?@action=redirect&bpo=33832]: Add glossary entry for ‘magic method’.
  - [bpo-32913](https://bugs.python.org/issue?@action=redirect&bpo=32913) [https://bugs.python.org/issue?@action=redirect&bpo=32913]: Added `re.Match.groupdict` example to regex HOWTO.

## Tests

- [bpo-36719](https://bugs.python.org/issue?@action=redirect&bpo=36719) [https://bugs.python.org/issue?@action=redirect&bpo=36719]: `regtest` now always detects uncollectable objects. Previously, the check was only enabled by `--findleaks`. The check now also works with `-jN/--multiprocess N`. `--findleaks` becomes a deprecated

alias to `--fail-env-changed`.

- [bpo-36725](https://bugs.python.org/issue?@action=redirect&bpo=36725) [https://bugs.python.org/issue?@action=redirect&bpo=36725]: When using multiprocessing mode (`-jN`), `regtest` now better reports errors if a worker process fails, and it exits immediately on a worker thread failure or when interrupted.
- [bpo-36454](https://bugs.python.org/issue?@action=redirect&bpo=36454) [https://bugs.python.org/issue?@action=redirect&bpo=36454]: Change `test_time.test_monotonic()` to test only the lower bound of elapsed time after a sleep command rather than the upper bound. This prevents unnecessary test failures on slow buildbots. Patch by Victor Stinner.
- [bpo-32424](https://bugs.python.org/issue?@action=redirect&bpo=32424) [https://bugs.python.org/issue?@action=redirect&bpo=32424]: Improve test coverage for `xml.etree.ElementTree`. Patch by Gordon P. Hemsley.
- [bpo-32424](https://bugs.python.org/issue?@action=redirect&bpo=32424) [https://bugs.python.org/issue?@action=redirect&bpo=32424]: Fix typo in `test_cyclic_gc()` test for `xml.etree.ElementTree`. Patch by Gordon P. Hemsley.
- [bpo-36635](https://bugs.python.org/issue?@action=redirect&bpo=36635) [https://bugs.python.org/issue?@action=redirect&bpo=36635]: Add a new `_testinternalcapi` module to test the internal C API.
- [bpo-36629](https://bugs.python.org/issue?@action=redirect&bpo=36629) [https://bugs.python.org/issue?@action=redirect&bpo=36629]: Fix `test_imap4_host_default_value()` of `test_imaplib`: catch also `errno.ENETUNREACH` error.
- [bpo-36611](https://bugs.python.org/issue?@action=redirect&bpo=36611) [https://bugs.python.org/issue?@action=redirect&bpo=36611]: Fix `test_sys.test_getallocatedblocks()` when `tracemalloc` is enabled.
- [bpo-36560](https://bugs.python.org/issue?@action=redirect&bpo=36560) [https://bugs.python.org/issue?@action=redirect&bpo=36560]: Fix reference leak hunting in `regtest`: compute also deltas (of reference count, allocated memory blocks, file descriptor count) during warmup, to ensure that everything is initialized before starting to hunt reference leaks.
- [bpo-36565](https://bugs.python.org/issue?@action=redirect&bpo=36565) [https://bugs.python.org/issue?@action=redirect&bpo=36565]: Fix reference hunting (`python3 -m test -R 3:3`) when Python has no built-in `abc` module.
- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: Port `test_resource` to VxWorks:

skip tests cases setting `RLIMIT_FSIZE` and `RLIMIT_CPU`.

- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: Fix `test_tabnanny` on VxWorks: adjust `ENOENT` error message.
- [bpo-36436](https://bugs.python.org/issue?@action=redirect&bpo=36436) [https://bugs.python.org/issue?@action=redirect&bpo=36436]: Fix `_testcapi.pymem_buffer_overflow()`: handle memory allocation failure.
- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: Fix `test_utf8_mode` on VxWorks: Python always use UTF-8 on VxWorks.
- [bpo-36341](https://bugs.python.org/issue?@action=redirect&bpo=36341) [https://bugs.python.org/issue?@action=redirect&bpo=36341]: Fix tests that may fail with `PermissionError` upon calling `bind()` on `AF_UNIX` sockets.

## Build

- [bpo-36747](https://bugs.python.org/issue?@action=redirect&bpo=36747) [https://bugs.python.org/issue?@action=redirect&bpo=36747]: Remove the stale `scriptsinstall` Makefile target.
- [bpo-21536](https://bugs.python.org/issue?@action=redirect&bpo=21536) [https://bugs.python.org/issue?@action=redirect&bpo=21536]: On Unix, C extensions are no longer linked to `libpython` except on Android and Cygwin.

It is now possible for a statically linked Python to load a C extension built using a shared library Python.

When Python is embedded, `libpython` must not be loaded with `RTLD_LOCAL`, but `RTLD_GLOBAL` instead. Previously, using `RTLD_LOCAL`, it was already not possible to load C extensions which were not linked to `libpython`, such as C extensions of the standard library built by the `*shared*` section of `Modules/Setup`.

`distutils`, `python-config` and `python-config.py` have been modified.

- [bpo-36707](https://bugs.python.org/issue?@action=redirect&bpo=36707) [https://bugs.python.org/issue?@action=redirect&bpo=36707]: `./configure --with-pymalloc` no longer adds the `m` flag to `SOABI`

(`sys.implementation.cache_tag`). Enabling or disabling `pymalloc` has no impact on the ABI.

- [bpo-36635](https://bugs.python.org/issue?@action=redirect&bpo=36635) [https://bugs.python.org/issue?@action=redirect&bpo=36635]: **Change** `PyAPI_FUNC(type)`, `PyAPI_DATA(type)` and `PyMODINIT_FUNC` macros of `pyport.h` when `Py_BUILD_CORE_MODULE` is defined. The `Py_BUILD_CORE_MODULE` define must be now be used to build a C extension as a dynamic library accessing Python internals: export the `PyInit_xxx()` function in DLL exports on Windows.
- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: **Don't build the** `_crypt` extension on VxWorks.
- [bpo-36618](https://bugs.python.org/issue?@action=redirect&bpo=36618) [https://bugs.python.org/issue?@action=redirect&bpo=36618]: **Add** `-fmax-type-align=8` to `CFLAGS` when clang compiler is detected. The `pymalloc` memory allocator aligns memory on 8 bytes. On x86-64, clang expects alignment on 16 bytes by default and so uses `MOVAPS` instruction which can lead to segmentation fault. Instruct clang that Python is limited to alignment on 8 bytes to use `MOVUPS` instruction instead: slower but don't trigger a `SIGSEGV` if the memory is not aligned on 16 bytes. Sadly, the flag must be added to `CFLAGS` and not just `CFLAGS_NODIST`, since third party C extensions can have the same issue.
- [bpo-36605](https://bugs.python.org/issue?@action=redirect&bpo=36605) [https://bugs.python.org/issue?@action=redirect&bpo=36605]: **make tags and make TAGS** now also parse `Modules/_io/*.c` and `Modules/_io/*.h`.
- [bpo-36465](https://bugs.python.org/issue?@action=redirect&bpo=36465) [https://bugs.python.org/issue?@action=redirect&bpo=36465]: **Release builds and debug builds** are now ABI compatible: defining the `Py_DEBUG` macro no longer implies the `Py_TRACE_REFS` macro, which introduces the only ABI incompatibility. The `Py_TRACE_REFS` macro, which adds the **`sys.getobjects()`** function and the **`PYTHONDUMPREFS`**

environment variable, can be set using the new `. / configure --with-trace-refs` build option.

- [bpo-36577](https://bugs.python.org/issue?@action=redirect&bpo=36577) [https://bugs.python.org/issue?@action=redirect&bpo=36577]: `setup.py` now correctly reports missing OpenSSL headers and libraries again.
- [bpo-36544](https://bugs.python.org/issue?@action=redirect&bpo=36544) [https://bugs.python.org/issue?@action=redirect&bpo=36544]: Fix regression introduced in [bpo-36146](https://bugs.python.org/issue?@action=redirect&bpo=36146) [https://bugs.python.org/issue?@action=redirect&bpo=36146] refactoring `setup.py`
- [bpo-36508](https://bugs.python.org/issue?@action=redirect&bpo=36508) [https://bugs.python.org/issue?@action=redirect&bpo=36508]: `python-config --ldflags` no longer includes flags of the `LINKFORSHARED` variable. The `LINKFORSHARED` variable must only be used to build executables.
- [bpo-36503](https://bugs.python.org/issue?@action=redirect&bpo=36503) [https://bugs.python.org/issue?@action=redirect&bpo=36503]: Remove references to “aix3” and “aix4”. Patch by M. Felt.

## Windows

- [bpo-35920](https://bugs.python.org/issue?@action=redirect&bpo=35920) [https://bugs.python.org/issue?@action=redirect&bpo=35920]: Added `platform.win32_edition()` and `platform.win32_is_iot()`. Added support for cross-compiling packages for Windows ARM32. Skip tests that are not expected to work on Windows IoT Core ARM32.
- [bpo-36649](https://bugs.python.org/issue?@action=redirect&bpo=36649) [https://bugs.python.org/issue?@action=redirect&bpo=36649]: Remove trailing spaces for registry keys when installed via the Store.
- [bpo-34144](https://bugs.python.org/issue?@action=redirect&bpo=34144) [https://bugs.python.org/issue?@action=redirect&bpo=34144]: Fixed `activate.bat` to correctly update codepage when `chcp.com` returns dots in output. Patch by Lorenz Mende.
- [bpo-36509](https://bugs.python.org/issue?@action=redirect&bpo=36509) [https://bugs.python.org/issue?@action=redirect&bpo=36509]: Added preset-iot layout for Windows IoT ARM containers. This layout doesn't contain UI components like `tkinter` or `IDLE`. It also doesn't contain files to support on-target builds since Windows ARM32 builds

must be cross-compiled when using MSVC.

- [bpo-35941](https://bugs.python.org/issue?@action=redirect&bpo=35941) [https://bugs.python.org/issue?@action=redirect&bpo=35941]: `enum_certificates` function of the `ssl` module now returns certificates from all available certificate stores inside windows in a query instead of returning only certificates from the system wide certificate store. This includes certificates from these certificate stores: local machine, local machine enterprise, local machine group policy, current user, current user group policy, services, users. `ssl.enum_crls()` function is changed in the same way to return all certificate revocation lists inside the windows certificate revocation list stores.
- [bpo-36441](https://bugs.python.org/issue?@action=redirect&bpo=36441) [https://bugs.python.org/issue?@action=redirect&bpo=36441]: Fixes creating a venv when debug binaries are installed.
- [bpo-36085](https://bugs.python.org/issue?@action=redirect&bpo=36085) [https://bugs.python.org/issue?@action=redirect&bpo=36085]: Enable better DLL resolution on Windows by using safe DLL search paths and adding `os.add_dll_directory()`.
- [bpo-36010](https://bugs.python.org/issue?@action=redirect&bpo=36010) [https://bugs.python.org/issue?@action=redirect&bpo=36010]: Add the venv standard library module to the nuget distribution for Windows.
- [bpo-29515](https://bugs.python.org/issue?@action=redirect&bpo=29515) [https://bugs.python.org/issue?@action=redirect&bpo=29515]: Add the following socket module constants on Windows: `IPPROTO_AH` `IPPROTO_CBT` `IPPROTO_DSTOPTS` `IPPROTO_EGP` `IPPROTO_ESP` `IPPROTO_FRAGMENT` `IPPROTO_GGP` `IPPROTO_HOPOPTS` `IPPROTO_ICLFXBM` `IPPROTO_ICMPV6` `IPPROTO_IDP` `IPPROTO_IGMP` `IPPROTO_IGP` `IPPROTO_IPV4` `IPPROTO_IPV6` `IPPROTO_L2TP` `IPPROTO_MAX` `IPPROTO_ND` `IPPROTO_NONE` `IPPROTO_PGM` `IPPROTO_PIM` `IPPROTO_PUP` `IPPROTO_RDP` `IPPROTO_ROUTING` `IPPROTO_SCTP` `IPPROTO_ST`
- [bpo-35947](https://bugs.python.org/issue?@action=redirect&bpo=35947) [https://bugs.python.org/issue?@action=redirect&bpo=35947]: Added current version of `libffi` to `cpython-source-deps`. Change `_ctypes` to use current version of `libffi` on Windows.
- [bpo-34060](https://bugs.python.org/issue?@action=redirect&bpo=34060) [https://bugs.python.org/issue?@action=redirect&bpo=34060]: Report system load when running test suite on Windows. Patch by Ammar Askar. Based on prior

work by Jeremy Kloth.

- [bpo-31512](https://bugs.python.org/issue?@action=redirect&bpo=31512) [https://bugs.python.org/issue?@action=redirect&bpo=31512]: With the Windows 10 Creators Update, non-elevated users can now create symlinks as long as the computer has Developer Mode enabled.

## macOS

- [bpo-34602](https://bugs.python.org/issue?@action=redirect&bpo=34602) [https://bugs.python.org/issue?@action=redirect&bpo=34602]: Avoid failures setting macOS stack resource limit with resource.setrlimit. This reverts an earlier fix for [bpo-18075](https://bugs.python.org/issue?@action=redirect&bpo=18075) [https://bugs.python.org/issue?@action=redirect&bpo=18075] which forced a non-default stack size when building the interpreter executable on macOS.

## IDLE

- [bpo-36429](https://bugs.python.org/issue?@action=redirect&bpo=36429) [https://bugs.python.org/issue?@action=redirect&bpo=36429]: Fix starting IDLE with pyshell. Add idlelib.pyshell alias at top; remove pyshell alias at bottom. Remove obsolete `__name__ = '__main__'` command.

## Tools/Demos

- [bpo-14546](https://bugs.python.org/issue?@action=redirect&bpo=14546) [https://bugs.python.org/issue?@action=redirect&bpo=14546]: Fix the argument handling in Tools/scripts/lll.py.

## C API

- [bpo-36763](https://bugs.python.org/issue?@action=redirect&bpo=36763) [https://bugs.python.org/issue?@action=redirect&bpo=36763]: Fix memory leak in [Py\\_SetStandardStreamEncoding\(\)](#): release memory if the function is called twice.
- [bpo-36641](https://bugs.python.org/issue?@action=redirect&bpo=36641) [https://bugs.python.org/issue?@action=redirect&bpo=36641]: `PyDoc_VAR(name)` and `PyDoc_STRVAR(name, str)` now create `static const char name[]` instead of `static char name[]`. Patch by Inada Naoki.

- [bpo-36389](https://bugs.python.org/issue?@action=redirect&bpo=36389) [https://bugs.python.org/issue?@action=redirect&bpo=36389]: Change the value of `CLEANBYTE`, `DEADBYTE` and `FORBIDDENBYTE` internal constants used by debug hooks on Python memory allocators (`PyMem_SetupDebugHooks()` function). Byte patterns `0xCB`, `0xDB` and `0xFB` have been replaced with `0xCD`, `0xDD` and `0xFD` to use the same values than Windows CRT debug `malloc()` and `free()`.
- [bpo-36443](https://bugs.python.org/issue?@action=redirect&bpo=36443) [https://bugs.python.org/issue?@action=redirect&bpo=36443]: Since Python 3.7.0, calling `Py_DecodeLocale()` before `Py_Initialize()` produces mojibake if the `LC_CTYPE` locale is coerced and/or if the UTF-8 Mode is enabled by the user configuration. The `LC_CTYPE` coercion and UTF-8 Mode are now disabled by default to fix the mojibake issue. They must now be enabled explicitly (opt-in) using the new `_Py_PreInitialize()` API with `_PyPreConfig`.
- [bpo-36025](https://bugs.python.org/issue?@action=redirect&bpo=36025) [https://bugs.python.org/issue?@action=redirect&bpo=36025]: Fixed an accidental change to the datetime C API where the arguments to the `PyDate_FromTimestamp()` function were incorrectly interpreted as a single timestamp rather than an arguments tuple, which causes existing code to start raising `TypeError`. The backwards-incompatible change was only present in alpha releases of Python 3.8. Patch by Paul Ganssle.
- [bpo-35810](https://bugs.python.org/issue?@action=redirect&bpo=35810) [https://bugs.python.org/issue?@action=redirect&bpo=35810]: Modify `PyObject_Init` to correctly increase the refcount of heap-allocated Type objects. Also fix the refcounts of the heap-allocated types that were either doing this manually or not decreasing the type's refcount in `tp_dealloc`

## Python 3.8.0 alpha 3

*Release date: 2019-03-25*

### Security

- [bpo-36216](https://bugs.python.org/issue?@action=redirect&bpo=36216) [https://bugs.python.org/issue?@action=redirect&bpo=36216]: Changes `urlsplit()` to raise `ValueError` when the URL contains characters that decompose under IDNA encoding (NFKC-normalization) into characters that affect how the URL is parsed.
- [bpo-35121](https://bugs.python.org/issue?@action=redirect&bpo=35121) [https://bugs.python.org/issue?@action=redirect&bpo=35121]: Don't send cookies of domain A without Domain attribute to domain B when domain A is a suffix match of domain B while using a cookiejar with `http.cookiejar.DefaultCookiePolicy` policy. Patch by Karthikeyan Singaravelan.

## Core and Builtins

- [bpo-36421](https://bugs.python.org/issue?@action=redirect&bpo=36421) [https://bugs.python.org/issue?@action=redirect&bpo=36421]: Fix a possible double decref in `_ctypes.c's PyCArrayType_new()`.
- [bpo-36412](https://bugs.python.org/issue?@action=redirect&bpo=36412) [https://bugs.python.org/issue?@action=redirect&bpo=36412]: Fix a possible crash when creating a new dictionary.
- [bpo-36398](https://bugs.python.org/issue?@action=redirect&bpo=36398) [https://bugs.python.org/issue?@action=redirect&bpo=36398]: Fix a possible crash in `structseq_repr()`.
- [bpo-36256](https://bugs.python.org/issue?@action=redirect&bpo=36256) [https://bugs.python.org/issue?@action=redirect&bpo=36256]: Fix bug in parsermodule when parsing a state in a DFA that has two or more arcs with labels of the same type. Patch by Pablo Galindo.
- [bpo-36365](https://bugs.python.org/issue?@action=redirect&bpo=36365) [https://bugs.python.org/issue?@action=redirect&bpo=36365]: `repr(structseq)` is no longer limited to 512 bytes.
- [bpo-36374](https://bugs.python.org/issue?@action=redirect&bpo=36374) [https://bugs.python.org/issue?@action=redirect&bpo=36374]: Fix a possible null pointer dereference in `merge_consts_recursive()`. Patch by Zackery Spytz.
- [bpo-36236](https://bugs.python.org/issue?@action=redirect&bpo=36236) [https://bugs.python.org/issue?@action=redirect&bpo=36236]: At Python initialization, the current directory is no longer prepended to `sys.path` if it has been removed.
- [bpo-36352](https://bugs.python.org/issue?@action=redirect&bpo=36352) [https://bugs.python.org/issue?@action=redirect&bpo=36352]: Python initialization now fails

with an error, rather than silently truncating paths, if a path is too long.

- [bpo-36301](https://bugs.python.org/issue?@action=redirect&bpo=36301) [https://bugs.python.org/issue?@action=redirect&bpo=36301]: Python initialization now fails if decoding `pybuilddir.txt` configuration file fails at startup.
- [bpo-36333](https://bugs.python.org/issue?@action=redirect&bpo=36333) [https://bugs.python.org/issue?@action=redirect&bpo=36333]: Fix leak in `_PyRuntimeState_Fini`. Contributed by Stéphane Wirtel.
- [bpo-36332](https://bugs.python.org/issue?@action=redirect&bpo=36332) [https://bugs.python.org/issue?@action=redirect&bpo=36332]: The builtin `compile()` can now handle AST objects that contain assignment expressions. Patch by Pablo Galindo.
- [bpo-36282](https://bugs.python.org/issue?@action=redirect&bpo=36282) [https://bugs.python.org/issue?@action=redirect&bpo=36282]: Improved error message for too much positional arguments in some builtin functions.
- [bpo-30040](https://bugs.python.org/issue?@action=redirect&bpo=30040) [https://bugs.python.org/issue?@action=redirect&bpo=30040]: New empty dict uses fewer memory for now. It used more memory than empty dict created by `dict.clear()`. And empty dict creation and deletion is about 2x faster. Patch by Inada Naoki.
- [bpo-36262](https://bugs.python.org/issue?@action=redirect&bpo=36262) [https://bugs.python.org/issue?@action=redirect&bpo=36262]: Fix an unlikely memory leak on conversion from string to float in the function `_Py_dg_strtod()` used by `float(str)`, `complex(str)`, `pickle.load()`, `marshal.load()`, etc.
- [bpo-36252](https://bugs.python.org/issue?@action=redirect&bpo=36252) [https://bugs.python.org/issue?@action=redirect&bpo=36252]: Update Unicode databases to version 12.0.0.
- [bpo-36218](https://bugs.python.org/issue?@action=redirect&bpo=36218) [https://bugs.python.org/issue?@action=redirect&bpo=36218]: Fix a segfault occurring when sorting a list of heterogeneous values. Patch contributed by Rémi Lapeyre and Elliot Gorokhovskiy.
- [bpo-36188](https://bugs.python.org/issue?@action=redirect&bpo=36188) [https://bugs.python.org/issue?@action=redirect&bpo=36188]: Cleaned up left-over vestiges of Python 2 unbound method handling in method objects and documentation. Patch by Martijn Pieters
- [bpo-36124](https://bugs.python.org/issue?@action=redirect&bpo=36124) [https://bugs.python.org/issue?@action=redirect&bpo=36124]: Add a new interpreter-specific dict and expose it in the C-API via

`PyInterpreterState_GetDict()`. This parallels `PyThreadState_GetDict()`. However, extension modules should continue using `PyModule_GetState()` for their own internal per-interpreter state.

- [bpo-35975](https://bugs.python.org/issue?@action=redirect&bpo=35975) [https://bugs.python.org/issue?@action=redirect&bpo=35975]: Add a `feature_version` flag to `ast.parse()` (documented) and `compile()` (hidden) that allows tweaking the parser to support older versions of the grammar. In particular, if `feature_version` is 5 or 6, the hacks for the `async` and `await` keyword from PEP 492 are reinstated. (For 7 or higher, these are unconditionally treated as keywords, but they are still special tokens rather than `NAME` tokens that the parser driver recognizes.)
- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: Use UTF-8 as the system encoding on VxWorks.
- [bpo-36048](https://bugs.python.org/issue?@action=redirect&bpo=36048) [https://bugs.python.org/issue?@action=redirect&bpo=36048]: The `__index__()` special method will be used instead of `__int__()` for implicit conversion of Python numbers to C integers. Using the `__int__()` method in implicit conversions has been deprecated.
- [bpo-35808](https://bugs.python.org/issue?@action=redirect&bpo=35808) [https://bugs.python.org/issue?@action=redirect&bpo=35808]: Retire `pgen` and use a modified version of `pgen2` to generate the parser. Patch by Pablo Galindo.

## Library

- [bpo-36401](https://bugs.python.org/issue?@action=redirect&bpo=36401) [https://bugs.python.org/issue?@action=redirect&bpo=36401]: The class documentation created by `pydoc` now has a separate section for readonly properties.
- [bpo-36320](https://bugs.python.org/issue?@action=redirect&bpo=36320) [https://bugs.python.org/issue?@action=redirect&bpo=36320]: The `typing.NamedTuple()` class has deprecated the `_field_types` attribute in favor of the `_annotations_` attribute which carried the same information. Also, both attributes were converted from `OrderedDict` to a regular dict.
- [bpo-34745](https://bugs.python.org/issue?@action=redirect&bpo=34745) [https://bugs.python.org/issue?@action=redirect&bpo=34745]: Fix `asyncio` ssl memory issues

caused by circular references

- [bpo-36324](https://bugs.python.org/issue?@action=redirect&bpo=36324) [https://bugs.python.org/issue?@action=redirect&bpo=36324]: Add method to `statistics.NormalDist` for computing the inverse cumulative normal distribution.
- [bpo-36321](https://bugs.python.org/issue?@action=redirect&bpo=36321) [https://bugs.python.org/issue?@action=redirect&bpo=36321]: `collections.namedtuple()` misspelled the name of an attribute. To be consistent with `typing.NamedTuple`, the attribute name should have been “`_field_defaults`” instead of “`_fields_defaults`”. For backwards compatibility, both spellings are now created. The misspelled version may be removed in the future.
- [bpo-36297](https://bugs.python.org/issue?@action=redirect&bpo=36297) [https://bugs.python.org/issue?@action=redirect&bpo=36297]: “`unicode_internal`” codec is removed. It was deprecated since Python 3.3. Patch by Inada Naoki.
- [bpo-36298](https://bugs.python.org/issue?@action=redirect&bpo=36298) [https://bugs.python.org/issue?@action=redirect&bpo=36298]: Raise `ModuleNotFoundError` in `pyclbr` when a module can’t be found. Thanks to ‘mental’ for the bug report.
- [bpo-36268](https://bugs.python.org/issue?@action=redirect&bpo=36268) [https://bugs.python.org/issue?@action=redirect&bpo=36268]: Switch the default format used for writing tars with `mod:tarfile` to the modern POSIX.1-2001 pax standard, from the vendor-specific GNU. Contributed by C.A.M. Gerlach.
- [bpo-36285](https://bugs.python.org/issue?@action=redirect&bpo=36285) [https://bugs.python.org/issue?@action=redirect&bpo=36285]: Fix integer overflows in the array module. Patch by Stephan Hohe.
- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: Add `_signal` module support for VxWorks.
- [bpo-36272](https://bugs.python.org/issue?@action=redirect&bpo=36272) [https://bugs.python.org/issue?@action=redirect&bpo=36272]: **logging** does not silently ignore `RecursionError` anymore. Patch contributed by Rémi Lapeyre.
- [bpo-36280](https://bugs.python.org/issue?@action=redirect&bpo=36280) [https://bugs.python.org/issue?@action=redirect&bpo=36280]: Add a `kind` field to `ast.Constant`. It is ‘u’ if the literal has a ‘u’ prefix (i.e. a Python 2 style unicode literal), else `None`.
- [bpo-35931](https://bugs.python.org/issue?@action=redirect&bpo=35931) [https://bugs.python.org/issue?@action=redirect&bpo=35931]: The **pdb** debug command now

gracefully handles all exceptions.

- [bpo-36251](https://bugs.python.org/issue?@action=redirect&bpo=36251) [https://bugs.python.org/issue?@action=redirect&bpo=36251]: Fix format strings used for `stderrprinter` and `re.Match` reprs. Patch by Stephan Hohe.
- [bpo-36235](https://bugs.python.org/issue?@action=redirect&bpo=36235) [https://bugs.python.org/issue?@action=redirect&bpo=36235]: Fix `CFLAGS` in `customize_compiler()` of `distutils.sysconfig`: when the `CFLAGS` environment variable is defined, don't override `CFLAGS` variable with the `OPT` variable anymore. Initial patch written by David Malcolm.
- [bpo-35807](https://bugs.python.org/issue?@action=redirect&bpo=35807) [https://bugs.python.org/issue?@action=redirect&bpo=35807]: Update `ensurepip` to install `pip` 19.0.3 and `setuptools` 40.8.0.
- [bpo-36139](https://bugs.python.org/issue?@action=redirect&bpo=36139) [https://bugs.python.org/issue?@action=redirect&bpo=36139]: Release GIL when closing `mmap` objects.
- [bpo-36179](https://bugs.python.org/issue?@action=redirect&bpo=36179) [https://bugs.python.org/issue?@action=redirect&bpo=36179]: Fix two unlikely reference leaks in `_hashopenssl`. The leaks only occur in out-of-memory cases.
- [bpo-36169](https://bugs.python.org/issue?@action=redirect&bpo=36169) [https://bugs.python.org/issue?@action=redirect&bpo=36169]: Add `overlap()` method to `statistics.NormalDist`. Computes the overlapping coefficient for two normal distributions.
- [bpo-36103](https://bugs.python.org/issue?@action=redirect&bpo=36103) [https://bugs.python.org/issue?@action=redirect&bpo=36103]: Default buffer size used by `shutil.copyfileobj()` is changed from 16 KiB to 64 KiB on non-Windows platform to reduce system call overhead. Contributed by Inada Naoki.
- [bpo-36130](https://bugs.python.org/issue?@action=redirect&bpo=36130) [https://bugs.python.org/issue?@action=redirect&bpo=36130]: Fix `pdb` with `skip=...` when stepping into a frame without a `__name__` global. Patch by Anthony Sottile.
- [bpo-35652](https://bugs.python.org/issue?@action=redirect&bpo=35652) [https://bugs.python.org/issue?@action=redirect&bpo=35652]: `shutil.copytree(copy_function=...)` erroneously pass `DirEntry` instead of a path string.
- [bpo-35178](https://bugs.python.org/issue?@action=redirect&bpo=35178) [https://bugs.python.org/issue?@action=redirect&bpo=35178]: Ensure custom `warnings.formatwarning()` function can receive `line` as positional argument. Based on patch by Tashrif Billah.

- [bpo-36106](https://bugs.python.org/issue?@action=redirect&bpo=36106) [https://bugs.python.org/issue?@action=redirect&bpo=36106]: Resolve potential name clash with `libm`'s `sinpi()`. Patch by Dmitrii Pasechnik.
- [bpo-36091](https://bugs.python.org/issue?@action=redirect&bpo=36091) [https://bugs.python.org/issue?@action=redirect&bpo=36091]: Clean up reference to `async` generator in `Lib/types`. Patch by Henry Chen.
- [bpo-36043](https://bugs.python.org/issue?@action=redirect&bpo=36043) [https://bugs.python.org/issue?@action=redirect&bpo=36043]: **FileCookieJar** supports [path-like object](#). Contributed by Stéphane Wirtel
- [bpo-35899](https://bugs.python.org/issue?@action=redirect&bpo=35899) [https://bugs.python.org/issue?@action=redirect&bpo=35899]: `Enum` has been fixed to correctly handle empty strings and strings with non-Latin characters (ie. 'α', 'ᄀ') without crashing. Original patch contributed by Maxwell. Assisted by Stéphane Wirtel.
- [bpo-21269](https://bugs.python.org/issue?@action=redirect&bpo=21269) [https://bugs.python.org/issue?@action=redirect&bpo=21269]: Add `args` and `kwargs` properties to mock call objects. Contributed by Kumar Akshay.
- [bpo-30670](https://bugs.python.org/issue?@action=redirect&bpo=30670) [https://bugs.python.org/issue?@action=redirect&bpo=30670]: [pprint.pp](#) has been added to pretty-print objects with dictionary keys being sorted with their insertion order by default. Parameter `sort_dicts` has been added to [pprint.pprint](#), [pprint.pformat](#) and [pprint.PrettyPrinter](#). Contributed by Rémi Lapeyre.
- [bpo-35843](https://bugs.python.org/issue?@action=redirect&bpo=35843) [https://bugs.python.org/issue?@action=redirect&bpo=35843]: Implement `__getitem__` for `_NamespacePath`. Patch by Anthony Sottile.
- [bpo-35802](https://bugs.python.org/issue?@action=redirect&bpo=35802) [https://bugs.python.org/issue?@action=redirect&bpo=35802]: Clean up code which checked presence of `os.stat / os.lstat / os.chmod` which are always present. Patch by Anthony Sottile.
- [bpo-35715](https://bugs.python.org/issue?@action=redirect&bpo=35715) [https://bugs.python.org/issue?@action=redirect&bpo=35715]: Librates the return value of a `ProcessPoolExecutor` `_process_worker` after it's no longer needed to free memory
- [bpo-35493](https://bugs.python.org/issue?@action=redirect&bpo=35493) [https://bugs.python.org/issue?@action=redirect&bpo=35493]: Use [multiprocessing.connection.wait\(\)](#) instead of polling each 0.2 seconds for worker updates in [multiprocessing.Pool](#). Patch by Pablo Galindo.

- [bpo-35661](https://bugs.python.org/issue?@action=redirect&bpo=35661) [https://bugs.python.org/issue?@action=redirect&bpo=35661]: Store the venv prompt in `pyvenv.cfg`.
- [bpo-35121](https://bugs.python.org/issue?@action=redirect&bpo=35121) [https://bugs.python.org/issue?@action=redirect&bpo=35121]: Don't set cookie for a request when the request path is a prefix match of the cookie's path attribute but doesn't end with `"/"`. Patch by Karthikeyan Singaravelan.
- [bpo-21478](https://bugs.python.org/issue?@action=redirect&bpo=21478) [https://bugs.python.org/issue?@action=redirect&bpo=21478]: Calls to a child function created with `unittest.mock.create_autospec()` should propagate to the parent. Patch by Karthikeyan Singaravelan.
- [bpo-35198](https://bugs.python.org/issue?@action=redirect&bpo=35198) [https://bugs.python.org/issue?@action=redirect&bpo=35198]: Fix C++ extension compilation on AIX

## Documentation

- [bpo-36329](https://bugs.python.org/issue?@action=redirect&bpo=36329) [https://bugs.python.org/issue?@action=redirect&bpo=36329]: Declare the path of the Python binary for the usage of `Tools/scripts/serve.py` when executing `make -C Doc/ serve`. Contributed by Stéphane Wirtel
- [bpo-36138](https://bugs.python.org/issue?@action=redirect&bpo=36138) [https://bugs.python.org/issue?@action=redirect&bpo=36138]: Improve documentation about converting `datetime.timedelta` to scalars.
- [bpo-21314](https://bugs.python.org/issue?@action=redirect&bpo=21314) [https://bugs.python.org/issue?@action=redirect&bpo=21314]: A new entry was added to the Core Language Section of the Programming FAQ, which explains the usage of slash(`/`) in the signature of a function. Patch by Lysandros Nikolaou

## Tests

- [bpo-36234](https://bugs.python.org/issue?@action=redirect&bpo=36234) [https://bugs.python.org/issue?@action=redirect&bpo=36234]: `test_posix.PosixUidGidTests`: add tests for invalid uid/gid type (str). Initial patch written by David Malcolm.
- [bpo-29571](https://bugs.python.org/issue?@action=redirect&bpo=29571) [https://bugs.python.org/issue?@action=redirect&bpo=29571]: Fix

`test_re.test_locale_flag():` use `locale.getpreferredencoding()` rather than `locale.getlocale()` to get the locale encoding. With some locales, `locale.getlocale()` returns the wrong encoding.

- [bpo-36123](https://bugs.python.org/issue?@action=redirect&bpo=36123) [https://bugs.python.org/issue?@action=redirect&bpo=36123]: Fix race condition in `test_socket`.

## Build

- [bpo-36356](https://bugs.python.org/issue?@action=redirect&bpo=36356) [https://bugs.python.org/issue?@action=redirect&bpo=36356]: Fix leaks that led to build failure when configured with address sanitizer.
- [bpo-36146](https://bugs.python.org/issue?@action=redirect&bpo=36146) [https://bugs.python.org/issue?@action=redirect&bpo=36146]: Add `TEST_EXTENSIONS` constant to `setup.py` to allow to not build test extensions like `_testcapi`.
- [bpo-36146](https://bugs.python.org/issue?@action=redirect&bpo=36146) [https://bugs.python.org/issue?@action=redirect&bpo=36146]: Fix `setup.py` on macOS: only add `/usr/include/ffi` to include directories of `_ctypes`, not for all extensions.
- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: Enable build system to cross-build for VxWorks RTOS.

## Windows

- [bpo-36312](https://bugs.python.org/issue?@action=redirect&bpo=36312) [https://bugs.python.org/issue?@action=redirect&bpo=36312]: Fixed decoders for the following code pages: 50220, 50221, 50222, 50225, 50227, 50229, 57002 through 57011, 65000 and 42.
- [bpo-36264](https://bugs.python.org/issue?@action=redirect&bpo=36264) [https://bugs.python.org/issue?@action=redirect&bpo=36264]: Don't honor `POSIX_HOME` in `os.path.expanduser` on windows. Patch by Anthony Sottile.
- [bpo-24643](https://bugs.python.org/issue?@action=redirect&bpo=24643) [https://bugs.python.org/issue?@action=redirect&bpo=24643]: Fix name collisions due to `#define timezone _timezone` in `PC/pyconfig.h`.

## IDLE

- [bpo-36405](https://bugs.python.org/issue?@action=redirect&bpo=36405) [https://bugs.python.org/issue?@action=redirect&bpo=36405]: Use dict unpacking in idlelib.
- [bpo-36396](https://bugs.python.org/issue?@action=redirect&bpo=36396) [https://bugs.python.org/issue?@action=redirect&bpo=36396]: Remove fgBg param of idlelib.config.GetHighlight(). This param was only used twice and changed the return type.
- [bpo-36176](https://bugs.python.org/issue?@action=redirect&bpo=36176) [https://bugs.python.org/issue?@action=redirect&bpo=36176]: Fix IDLE autocomplete & calltip popup colors. Prevent conflicts with Linux dark themes (and slightly darken calltip background).
- [bpo-23205](https://bugs.python.org/issue?@action=redirect&bpo=23205) [https://bugs.python.org/issue?@action=redirect&bpo=23205]: For the grep module, add tests for findfiles, refactor findfiles to be a module-level function, and refactor findfiles to use os.walk.
- [bpo-23216](https://bugs.python.org/issue?@action=redirect&bpo=23216) [https://bugs.python.org/issue?@action=redirect&bpo=23216]: Add docstrings to IDLE search modules.
- [bpo-36152](https://bugs.python.org/issue?@action=redirect&bpo=36152) [https://bugs.python.org/issue?@action=redirect&bpo=36152]: Remove colorizer.ColorDelegator.close\_when\_done and the corresponding argument of .close(). In IDLE, both have always been None or False since 2007.
- [bpo-32129](https://bugs.python.org/issue?@action=redirect&bpo=32129) [https://bugs.python.org/issue?@action=redirect&bpo=32129]: Avoid blurry IDLE application icon on macOS with Tk 8.6. Patch by Kevin Walzer.
- [bpo-36096](https://bugs.python.org/issue?@action=redirect&bpo=36096) [https://bugs.python.org/issue?@action=redirect&bpo=36096]: Refactor class variables to instance variables in colorizer.
- [bpo-30348](https://bugs.python.org/issue?@action=redirect&bpo=30348) [https://bugs.python.org/issue?@action=redirect&bpo=30348]: Increase test coverage of idlelib.autocomplete by 30%. Patch by Louie Lu

## Tools/Demos

- [bpo-35132](https://bugs.python.org/issue?@action=redirect&bpo=35132) [https://bugs.python.org/issue?@action=redirect&bpo=35132]: Fix py-list and py-bt commands of python-gdb.py on gdb7.
- [bpo-32217](https://bugs.python.org/issue?@action=redirect&bpo=32217) [https://bugs.python.org/issue?@action=redirect&bpo=32217]: Fix freeze script on Windows.

## C API

- [bpo-36381](https://bugs.python.org/issue?@action=redirect&bpo=36381) [https://bugs.python.org/issue?@action=redirect&bpo=36381]: Raise `DeprecationWarning` when `'#'` formats are used for building or parsing values without `PY_SSIZE_T_CLEAN`.
- [bpo-36142](https://bugs.python.org/issue?@action=redirect&bpo=36142) [https://bugs.python.org/issue?@action=redirect&bpo=36142]: The whole `coreconfig.h` header is now excluded from `Py_LIMITED_API`. Move functions definitions into a new internal `pycore_coreconfig.h` header.

## Python 3.8.0 alpha 2

*Release date: 2019-02-25*

### Core and Builtins

- [bpo-36052](https://bugs.python.org/issue?@action=redirect&bpo=36052) [https://bugs.python.org/issue?@action=redirect&bpo=36052]: Raise a `SyntaxError` when assigning a value to `__debug__` with the Assignment Operator. Contributed by Stéphane Wirtel and Pablo Galindo.
- [bpo-36012](https://bugs.python.org/issue?@action=redirect&bpo=36012) [https://bugs.python.org/issue?@action=redirect&bpo=36012]: Doubled the speed of class variable writes. When a non-dunder attribute was updated, there was an unnecessary call to update slots.
- [bpo-35942](https://bugs.python.org/issue?@action=redirect&bpo=35942) [https://bugs.python.org/issue?@action=redirect&bpo=35942]: The error message emitted when returning invalid types from `__fspath__` in interfaces that allow passing `PathLike` objects has been improved and now it does explain the origin of the error.
- [bpo-36016](https://bugs.python.org/issue?@action=redirect&bpo=36016) [https://bugs.python.org/issue?@action=redirect&bpo=36016]: `gc.get_objects` can now receive an optional parameter indicating a generation to get objects from. Patch by Pablo Galindo.
- [bpo-1054041](https://bugs.python.org/issue?@action=redirect&bpo=1054041) [https://bugs.python.org/issue?@action=redirect&bpo=1054041]: When the main interpreter exits due to an uncaught `KeyboardInterrupt`, the process now exits in the appropriate manner for its parent process to detect that a SIGINT or `^C` terminated the process. This allows shells and

batch scripts to understand that the user has asked them to stop.

- [bpo-35992](https://bugs.python.org/issue?@action=redirect&bpo=35992) [https://bugs.python.org/issue?@action=redirect&bpo=35992]: Fix `__class_getitem__()` not being called on a class with a custom non-subscriptable metaclass.
- [bpo-35993](https://bugs.python.org/issue?@action=redirect&bpo=35993) [https://bugs.python.org/issue?@action=redirect&bpo=35993]: Fix a crash on fork when using subinterpreters. Contributed by Stéphane Wirtel
- [bpo-35991](https://bugs.python.org/issue?@action=redirect&bpo=35991) [https://bugs.python.org/issue?@action=redirect&bpo=35991]: Fix a potential double free in `Modules/_randommodule.c`.
- [bpo-35961](https://bugs.python.org/issue?@action=redirect&bpo=35961) [https://bugs.python.org/issue?@action=redirect&bpo=35961]: Fix a crash in `slice_richcompare()`: use strong references rather than stolen references for the two temporary internal tuples.
- [bpo-35911](https://bugs.python.org/issue?@action=redirect&bpo=35911) [https://bugs.python.org/issue?@action=redirect&bpo=35911]: Enable the creation of cell objects by adding a `cell.__new__` method, and expose the type `cell` in `Lib/types.py` under the name `CellType`. Patch by Pierre Glaser.
- [bpo-12822](https://bugs.python.org/issue?@action=redirect&bpo=12822) [https://bugs.python.org/issue?@action=redirect&bpo=12822]: Use monotonic clock for `pthread_cond_timedwait` when `pthread_condattr_setclock` and `CLOCK_MONOTONIC` are available.
- [bpo-15248](https://bugs.python.org/issue?@action=redirect&bpo=15248) [https://bugs.python.org/issue?@action=redirect&bpo=15248]: The compiler emits now syntax warnings in the case when a comma is likely missed before tuple or list.
- [bpo-35886](https://bugs.python.org/issue?@action=redirect&bpo=35886) [https://bugs.python.org/issue?@action=redirect&bpo=35886]: The implementation of `PyInterpreterState` has been moved into the internal header files (guarded by `Py_BUILD_CORE`).
- [bpo-31506](https://bugs.python.org/issue?@action=redirect&bpo=31506) [https://bugs.python.org/issue?@action=redirect&bpo=31506]: Clarify the errors reported when `object.__new__` and `object.__init__` receive more than one argument. Contributed by Sanyam Khurana.
- [bpo-35724](https://bugs.python.org/issue?@action=redirect&bpo=35724) [https://bugs.python.org/issue?@action=redirect&bpo=35724]: Signal-handling is now

guaranteed to happen relative to the main interpreter.

- [bpo-33608](https://bugs.python.org/issue?@action=redirect&bpo=33608) [https://bugs.python.org/issue?@action=redirect&bpo=33608]: We added a new internal `_Py_AddPendingCall()` that operates relative to the provided interpreter. This allows us to use the existing implementation to ask another interpreter to do work that cannot be done in the current interpreter, like `decref` an object the other interpreter owns. The existing `Py_AddPendingCall()` only operates relative to the main interpreter.
- [bpo-33989](https://bugs.python.org/issue?@action=redirect&bpo=33989) [https://bugs.python.org/issue?@action=redirect&bpo=33989]: Fix a possible crash in `list.sort()` when sorting objects with `ob_type->tp_richcompare == NULL`. Patch by Zackery Spytz.

## Library

- [bpo-35512](https://bugs.python.org/issue?@action=redirect&bpo=35512) [https://bugs.python.org/issue?@action=redirect&bpo=35512]: `unittest.mock.patch.dict()` used as a decorator with string target resolves the target during function call instead of during decorator construction. Patch by Karthikeyan Singaravelan.
- [bpo-36018](https://bugs.python.org/issue?@action=redirect&bpo=36018) [https://bugs.python.org/issue?@action=redirect&bpo=36018]: Add `statistics.NormalDist`, a tool for creating and manipulating normal distributions of random variable. Features a composite class that treats the mean and standard deviation of measurement data as single entity.
- [bpo-35904](https://bugs.python.org/issue?@action=redirect&bpo=35904) [https://bugs.python.org/issue?@action=redirect&bpo=35904]: Added `statistics.fmean()` as a faster, floating point variant of the existing `mean()` function.
- [bpo-35918](https://bugs.python.org/issue?@action=redirect&bpo=35918) [https://bugs.python.org/issue?@action=redirect&bpo=35918]: Removed broken `has_key` method from `multiprocessing.managers.SyncManager.dict`. Contributed by Rémi Lapeyre.
- [bpo-18283](https://bugs.python.org/issue?@action=redirect&bpo=18283) [https://bugs.python.org/issue?@action=redirect&bpo=18283]: Add support for bytes to `shutil.which()`.
- [bpo-35960](https://bugs.python.org/issue?@action=redirect&bpo=35960) [https://bugs.python.org/issue?@action=redirect&bpo=35960]: Fix `dataclasses.field()` throwing away empty mapping objects passed as metadata.

- [bpo-35500](https://bugs.python.org/issue?@action=redirect&bpo=35500) [https://bugs.python.org/issue?@action=redirect&bpo=35500]: Write expected and actual call parameters on separate lines in `unittest.mock.Mock.assert_called_with()` assertion errors. Contributed by Susan Su.
- [bpo-35931](https://bugs.python.org/issue?@action=redirect&bpo=35931) [https://bugs.python.org/issue?@action=redirect&bpo=35931]: The `pdb` debug command now gracefully handles syntax errors.
- [bpo-24209](https://bugs.python.org/issue?@action=redirect&bpo=24209) [https://bugs.python.org/issue?@action=redirect&bpo=24209]: In `http.server` script, rely on `getaddrinfo` to bind to preferred address based on the `bind` parameter. Now default bind or binding to a name may bind to IPv6 or dual-stack, depending on the environment.
- [bpo-35321](https://bugs.python.org/issue?@action=redirect&bpo=35321) [https://bugs.python.org/issue?@action=redirect&bpo=35321]: Set `__spec__.origin` of `_frozen_importlib` to `frozen` so that it matches the behavior of `_frozen_importlib_external`. Patch by Nina Zakharenko.
- [bpo-35378](https://bugs.python.org/issue?@action=redirect&bpo=35378) [https://bugs.python.org/issue?@action=redirect&bpo=35378]: Fix a reference issue inside `multiprocessing.Pool` that caused the pool to remain alive if it was deleted without being closed or terminated explicitly. A new strong reference is added to the pool iterators to link the lifetime of the pool to the lifetime of its iterators so the pool does not get destroyed if a pool iterator is still alive.
- [bpo-34294](https://bugs.python.org/issue?@action=redirect&bpo=34294) [https://bugs.python.org/issue?@action=redirect&bpo=34294]: `re` module, fix wrong capturing groups in rare cases. `re.search()`, `re.findall()`, `re.sub()` and other functions that scan through string looking for a match, should reset capturing groups between two match attempts. Patch by Ma Lin.
- [bpo-35615](https://bugs.python.org/issue?@action=redirect&bpo=35615) [https://bugs.python.org/issue?@action=redirect&bpo=35615]: `weakref`: Fix a `RuntimeError` when copying a `WeakKeyDictionary` or a `WeakValueDictionary`, due to some keys or values disappearing while iterating.
- [bpo-35606](https://bugs.python.org/issue?@action=redirect&bpo=35606) [https://bugs.python.org/issue?@action=redirect&bpo=35606]: Implement `math.prod()` as analogous function to `sum()` that returns the product of a

‘start’ value (default: 1) times an iterable of numbers. Patch by Pablo Galindo.

- [bpo-32417](https://bugs.python.org/issue?@action=redirect&bpo=32417) [https://bugs.python.org/issue?@action=redirect&bpo=32417]: Performing arithmetic between `datetime.datetime` subclasses and `datetime.timedelta` now returns an object of the same type as the `datetime.datetime` subclass. As a result, `datetime.datetime.astimezone()` and alternate constructors like `datetime.datetime.now()` and `datetime.fromtimestamp()` called with a `tz` argument now *also* retain their subclass.
- [bpo-35153](https://bugs.python.org/issue?@action=redirect&bpo=35153) [https://bugs.python.org/issue?@action=redirect&bpo=35153]: Add *headers* optional keyword-only parameter to `xmlrpc.client.ServerProxy`, `xmlrpc.client.Transport` and `xmlrpc.client.SafeTransport`. Patch by Cédric Krier.
- [bpo-34572](https://bugs.python.org/issue?@action=redirect&bpo=34572) [https://bugs.python.org/issue?@action=redirect&bpo=34572]: Fix C implementation of `pickle.loads` to use `importlib`’s locking mechanisms, and thereby avoid using partially loaded modules. Patch by Tim Burgess.

## Documentation

- [bpo-36083](https://bugs.python.org/issue?@action=redirect&bpo=36083) [https://bugs.python.org/issue?@action=redirect&bpo=36083]: Fix formatting of `-check-hash-based-pycs` options in the manpage Synopsis.
- [bpo-36007](https://bugs.python.org/issue?@action=redirect&bpo=36007) [https://bugs.python.org/issue?@action=redirect&bpo=36007]: Bump minimum sphinx version to 1.8. Patch by Anthony Sottile.
- [bpo-22062](https://bugs.python.org/issue?@action=redirect&bpo=22062) [https://bugs.python.org/issue?@action=redirect&bpo=22062]: Update documentation and docstrings for `pathlib`. Original patch by Mike Short.

## Tests

- [bpo-27313](https://bugs.python.org/issue?@action=redirect&bpo=27313) [https://bugs.python.org/issue?@action=redirect&bpo=27313]: Avoid `test_ttk_gui`only `ComboboxTest` failure with macOS Cocoa Tk.

- [bpo-36019](https://bugs.python.org/issue?@action=redirect&bpo=36019) [https://bugs.python.org/issue?@action=redirect&bpo=36019]: Add `test.support.TEST_HTTP_URL` and replace references of <http://www.example.com> by this new constant. Contributed by Stéphane Wirtel.
- [bpo-36037](https://bugs.python.org/issue?@action=redirect&bpo=36037) [https://bugs.python.org/issue?@action=redirect&bpo=36037]: Fix `test_ssl` for strict OpenSSL configuration like RHEL8 strict crypto policy. Use older TLS version for minimum TLS version of the server SSL context if needed, to test TLS version older than default minimum TLS version.
- [bpo-35798](https://bugs.python.org/issue?@action=redirect&bpo=35798) [https://bugs.python.org/issue?@action=redirect&bpo=35798]: Added **`test.support.check_syntax_warning()`**.
- [bpo-35505](https://bugs.python.org/issue?@action=redirect&bpo=35505) [https://bugs.python.org/issue?@action=redirect&bpo=35505]: Make `test_imap4_host_default_value` independent on whether the local IMAP server is running.
- [bpo-35917](https://bugs.python.org/issue?@action=redirect&bpo=35917) [https://bugs.python.org/issue?@action=redirect&bpo=35917]: multiprocessing: provide unit tests for `SyncManager` and `SharedMemoryManager` classes + all the shareable types which are supposed to be supported by them. (patch by Giampaolo Rodola)
- [bpo-35704](https://bugs.python.org/issue?@action=redirect&bpo=35704) [https://bugs.python.org/issue?@action=redirect&bpo=35704]: Skip `test_shutil.test_unpack_archive_xztar` to prevent a `MemoryError` on 32-bit AIX when `MAXDATA` setting is less than `0x20000000`.  
  
Patch by Michael Felt (aixtools)
- [bpo-34720](https://bugs.python.org/issue?@action=redirect&bpo=34720) [https://bugs.python.org/issue?@action=redirect&bpo=34720]: Assert `m_state != NULL` to mimic GC traversal functions that do not correctly handle module creation when the module state has not been created.

## Windows

- [bpo-35976](https://bugs.python.org/issue?@action=redirect&bpo=35976) [https://bugs.python.org/issue?@action=redirect&bpo=35976]: Added ARM build support to Windows build files in PCBuild.
- [bpo-35692](https://bugs.python.org/issue?@action=redirect&bpo=35692) [https://bugs.python.org/issue?@action=redirect&bpo=35692]: `pathlib` no longer raises when checking file and directory existence on drives that are not ready
- [bpo-35872](https://bugs.python.org/issue?@action=redirect&bpo=35872) [https://bugs.python.org/issue?@action=redirect&bpo=35872]: Uses the base Python executable when invoking `venv` in a virtual environment
- [bpo-35873](https://bugs.python.org/issue?@action=redirect&bpo=35873) [https://bugs.python.org/issue?@action=redirect&bpo=35873]: Prevents `venv` paths being inherited by child processes
- [bpo-35299](https://bugs.python.org/issue?@action=redirect&bpo=35299) [https://bugs.python.org/issue?@action=redirect&bpo=35299]: Fix `sysconfig` detection of the source directory and `distutils` handling of `pyconfig.h` during PGO profiling

## IDLE

- [bpo-24310](https://bugs.python.org/issue?@action=redirect&bpo=24310) [https://bugs.python.org/issue?@action=redirect&bpo=24310]: IDLE – Document settings dialog font tab sample.
- [bpo-35833](https://bugs.python.org/issue?@action=redirect&bpo=35833) [https://bugs.python.org/issue?@action=redirect&bpo=35833]: Revise IDLE doc for control codes sent to Shell. Add a code example block.
- [bpo-35689](https://bugs.python.org/issue?@action=redirect&bpo=35689) [https://bugs.python.org/issue?@action=redirect&bpo=35689]: Add docstrings and unittests for `colorizer.py`.

# Python 3.8.0 alpha 1

*Release date: 2019-02-03*

## Security

- [bpo-35746](https://bugs.python.org/issue?@action=redirect&bpo=35746) [https://bugs.python.org/issue?@action=redirect&bpo=35746]: [CVE-2019-5010] Fix a NULL pointer deref in `ssl` module. The cert parser did not handle

CRL distribution points with empty DP or URI correctly. A malicious or buggy certificate can result into segfault. Vulnerability (TALOS-2018-0758) reported by Colin Read and Nicolas Edet of Cisco.

- [bpo-34812](https://bugs.python.org/issue?@action=redirect&bpo=34812) [https://bugs.python.org/issue?@action=redirect&bpo=34812]: The `-i` command line option (run Python in isolated mode) is now also copied by the `multiprocessing` and `distutils` modules when spawning child processes. Previously, only `-E` and `-s` options (enabled by `-i`) were copied.
- [bpo-34791](https://bugs.python.org/issue?@action=redirect&bpo=34791) [https://bugs.python.org/issue?@action=redirect&bpo=34791]: The `xml.sax` and `xml.dom.domreg` no longer use environment variables to override parser implementations when `sys.flags.ignore_environment` is set by `-E` or `-I` arguments.
- [bpo-17239](https://bugs.python.org/issue?@action=redirect&bpo=17239) [https://bugs.python.org/issue?@action=redirect&bpo=17239]: The `xml.sax` and `xml.dom.minidom` parsers no longer processes external entities by default. External DTD and ENTITY declarations no longer load files or create network connections.
- [bpo-34623](https://bugs.python.org/issue?@action=redirect&bpo=34623) [https://bugs.python.org/issue?@action=redirect&bpo=34623]: CVE-2018-14647: The `C` accelerated `_elementtree` module now initializes hash randomization salt from `_Py_HashSecret` instead of `libexpat`'s default `CSPRNG`.
- [bpo-34405](https://bugs.python.org/issue?@action=redirect&bpo=34405) [https://bugs.python.org/issue?@action=redirect&bpo=34405]: Updated to OpenSSL 1.1.0i for Windows builds.
- [bpo-33871](https://bugs.python.org/issue?@action=redirect&bpo=33871) [https://bugs.python.org/issue?@action=redirect&bpo=33871]: Fixed sending the part of the file in `os.sendfile()` on macOS. Using the `trailers` argument could cause sending more bytes from the input file than was specified.
- [bpo-32533](https://bugs.python.org/issue?@action=redirect&bpo=32533) [https://bugs.python.org/issue?@action=redirect&bpo=32533]: Fixed thread-safety of error handling in `_ssl`.
- [bpo-33136](https://bugs.python.org/issue?@action=redirect&bpo=33136) [https://bugs.python.org/issue?@action=redirect&bpo=33136]: Harden `ssl` module against LibreSSL CVE-2018-8970. `X509_VERIFY_PARAM_set1_host()` is called with an explicit `namelen`. A new test ensures that `NULL`

bytes are not allowed.

- [bpo-33001](https://bugs.python.org/issue?@action=redirect&bpo=33001) [https://bugs.python.org/issue?@action=redirect&bpo=33001]: Minimal fix to prevent buffer overrun in os.symlink on Windows
- [bpo-32981](https://bugs.python.org/issue?@action=redirect&bpo=32981) [https://bugs.python.org/issue?@action=redirect&bpo=32981]: Regexes in difflib and poplib were vulnerable to catastrophic backtracking. These regexes formed potential DOS vectors (REDOS). They have been refactored. This resolves CVE-2018-1060 and CVE-2018-1061. Patch by Jamie Davis.
- [bpo-28414](https://bugs.python.org/issue?@action=redirect&bpo=28414) [https://bugs.python.org/issue?@action=redirect&bpo=28414]: The ssl module now allows users to perform their own IDN en/decoding when using SNI.

## Core and Builtins

- [bpo-35877](https://bugs.python.org/issue?@action=redirect&bpo=35877) [https://bugs.python.org/issue?@action=redirect&bpo=35877]: Make parenthesis optional for named expressions in while statement. Patch by Karthikeyan Singaravelan.
- [bpo-35814](https://bugs.python.org/issue?@action=redirect&bpo=35814) [https://bugs.python.org/issue?@action=redirect&bpo=35814]: Allow same right hand side expressions in annotated assignments as in normal ones. In particular, `x: Tuple[int, int] = 1, 2` (without parentheses on the right) is now allowed.
- [bpo-35766](https://bugs.python.org/issue?@action=redirect&bpo=35766) [https://bugs.python.org/issue?@action=redirect&bpo=35766]: Add the option to parse PEP 484 type comments in the ast module. (Off by default.) This is merging the key functionality of the third party fork thereof, [typed\_ast]([https://github.com/python/typed\\_ast](https://github.com/python/typed_ast)).
- [bpo-35713](https://bugs.python.org/issue?@action=redirect&bpo=35713) [https://bugs.python.org/issue?@action=redirect&bpo=35713]: Reorganize Python initialization to get working exceptions and sys.stderr earlier.
- [bpo-33416](https://bugs.python.org/issue?@action=redirect&bpo=33416) [https://bugs.python.org/issue?@action=redirect&bpo=33416]: Add end line and end column position information to the Python AST nodes. This is a C-level backwards incompatible change.

- [bpo-35720](https://bugs.python.org/issue?@action=redirect&bpo=35720) [https://bugs.python.org/issue?@action=redirect&bpo=35720]: Fixed a minor memory leak in `pymain_parse_cmdline_impl` function in `Modules/main.c`
- [bpo-35634](https://bugs.python.org/issue?@action=redirect&bpo=35634) [https://bugs.python.org/issue?@action=redirect&bpo=35634]: `func (**kwargs)` will now raise an error when `kwargs` is a mapping containing multiple entries with the same key. An error was already raised when other keyword arguments are passed before `**kwargs` since Python 3.6.
- [bpo-35623](https://bugs.python.org/issue?@action=redirect&bpo=35623) [https://bugs.python.org/issue?@action=redirect&bpo=35623]: Fix a crash when sorting very long lists. Patch by Stephan Hohe.
- [bpo-35214](https://bugs.python.org/issue?@action=redirect&bpo=35214) [https://bugs.python.org/issue?@action=redirect&bpo=35214]: clang Memory Sanitizer build instrumentation was added to work around false positives from `posix`, `socket`, `time`, `test_io`, and `test_faulthandler`.
- [bpo-35560](https://bugs.python.org/issue?@action=redirect&bpo=35560) [https://bugs.python.org/issue?@action=redirect&bpo=35560]: Fix an assertion error in `format ()` in debug build for floating point formatting with “n” format, zero padding and small width. Release build is not impacted. Patch by Karthikeyan Singaravelan.
- [bpo-35552](https://bugs.python.org/issue?@action=redirect&bpo=35552) [https://bugs.python.org/issue?@action=redirect&bpo=35552]: Format characters `%s` and `%V` in `PyUnicode_FromFormat ()` and `%s` in `PyBytes_FromFormat ()` no longer read memory past the limit if *precision* is specified.
- [bpo-35504](https://bugs.python.org/issue?@action=redirect&bpo=35504) [https://bugs.python.org/issue?@action=redirect&bpo=35504]: Fix segfaults and `SystemErrors` when deleting certain attributes. Patch by Zackery Spytz.
- [bpo-35504](https://bugs.python.org/issue?@action=redirect&bpo=35504) [https://bugs.python.org/issue?@action=redirect&bpo=35504]: Fixed a `SystemError` when delete the `characters_written` attribute of an `OSError`.
- [bpo-35494](https://bugs.python.org/issue?@action=redirect&bpo=35494) [https://bugs.python.org/issue?@action=redirect&bpo=35494]

@action=redirect&bpo=35494]: Improved syntax error messages for unbalanced parentheses in f-string.

- [bpo-35444](https://bugs.python.org/issue?@action=redirect&bpo=35444) [https://bugs.python.org/issue?@action=redirect&bpo=35444]: Fixed error handling in pickling methods when fail to look up builtin “getattr”. Sped up pickling iterators.
- [bpo-35436](https://bugs.python.org/issue?@action=redirect&bpo=35436) [https://bugs.python.org/issue?@action=redirect&bpo=35436]: Fix various issues with memory allocation error handling. Patch by Zackery Spytz.
- [bpo-35423](https://bugs.python.org/issue?@action=redirect&bpo=35423) [https://bugs.python.org/issue?@action=redirect&bpo=35423]: Separate the signal handling trigger in the eval loop from the “pending calls” machinery. There is no semantic change and the difference in performance is insignificant.
- [bpo-35357](https://bugs.python.org/issue?@action=redirect&bpo=35357) [https://bugs.python.org/issue?@action=redirect&bpo=35357]: Internal attributes’ names of unittest.mock.\_Call and unittest.mock.MagicProxy (name, parent & from\_kall) are now prefixed with \_mock\_ in order to prevent clashes with widely used object attributes. Fixed minor typo in test function name.
- [bpo-35372](https://bugs.python.org/issue?@action=redirect&bpo=35372) [https://bugs.python.org/issue?@action=redirect&bpo=35372]: Fixed the code page decoder for input longer than 2 GiB containing undecodable bytes.
- [bpo-35336](https://bugs.python.org/issue?@action=redirect&bpo=35336) [https://bugs.python.org/issue?@action=redirect&bpo=35336]: Fix PYTHONCOERCECLOCALE=1 environment variable: only coerce the C locale if the LC\_CTYPE locale is “C”.
- [bpo-31241](https://bugs.python.org/issue?@action=redirect&bpo=31241) [https://bugs.python.org/issue?@action=redirect&bpo=31241]: The *lineno* and *col\_offset* attributes of AST nodes for list comprehensions, generator expressions and tuples are now point to the opening parenthesis or square brace. For tuples without parenthesis they point to the position of the first item.

- [bpo-33954](https://bugs.python.org/issue?@action=redirect&bpo=33954) [https://bugs.python.org/issue?@action=redirect&bpo=33954]: For `str.format()`, `float.__format__()` and `complex.__format__()` methods for non-ASCII decimal point when using the “n” formatter.
- [bpo-35269](https://bugs.python.org/issue?@action=redirect&bpo=35269) [https://bugs.python.org/issue?@action=redirect&bpo=35269]: Fix a possible segfault involving a newly created coroutine. Patch by Zackery Spytz.
- [bpo-35224](https://bugs.python.org/issue?@action=redirect&bpo=35224) [https://bugs.python.org/issue?@action=redirect&bpo=35224]: Implement [PEP 572](https://peps.python.org/pep-0572/) (assignment expressions). Patch by Emily Morehouse.
- [bpo-32492](https://bugs.python.org/issue?@action=redirect&bpo=32492) [https://bugs.python.org/issue?@action=redirect&bpo=32492]: Speed up `namedtuple` attribute access by 1.6x using a C fast-path for the name descriptors. Patch by Pablo Galindo.
- [bpo-35214](https://bugs.python.org/issue?@action=redirect&bpo=35214) [https://bugs.python.org/issue?@action=redirect&bpo=35214]: Fixed an out of bounds memory access when parsing a truncated unicode escape sequence at the end of a string such as `'\N'`. It would read one byte beyond the end of the memory allocation.
- [bpo-35214](https://bugs.python.org/issue?@action=redirect&bpo=35214) [https://bugs.python.org/issue?@action=redirect&bpo=35214]: The interpreter and extension modules have had annotations added so that they work properly under clang’s Memory Sanitizer. A new configure flag `-with-memory-sanitizer` has been added to make test builds of this nature easier to perform.
- [bpo-35193](https://bugs.python.org/issue?@action=redirect&bpo=35193) [https://bugs.python.org/issue?@action=redirect&bpo=35193]: Fix an off by one error in the bytecode peephole optimizer where it could read bytes beyond the end of bounds of an array when removing unreachable code. This bug was present in every release of Python 3.6 and 3.7 until now.
- [bpo-35169](https://bugs.python.org/issue?@action=redirect&bpo=35169) [https://bugs.python.org/issue?@action=redirect&bpo=35169]

@action=redirect&bpo=35169]: Improved error messages for forbidden assignments.

- [bpo-34022](https://bugs.python.org/issue?@action=redirect&bpo=34022) [https://bugs.python.org/issue?@action=redirect&bpo=34022]: Fix handling of hash-based bytecode files in `zipimport`. Patch by Elvis Pranskevichus.
- [bpo-28401](https://bugs.python.org/issue?@action=redirect&bpo=28401) [https://bugs.python.org/issue?@action=redirect&bpo=28401]: Debug builds will no longer attempt to import extension modules built for the ABI as they were never compatible to begin with. Patch by Stefano Rivera.
- [bpo-29341](https://bugs.python.org/issue?@action=redirect&bpo=29341) [https://bugs.python.org/issue?@action=redirect&bpo=29341]: Clarify in the docstrings of `os` methods that path-like objects are also accepted as input parameters.
- [bpo-35050](https://bugs.python.org/issue?@action=redirect&bpo=35050) [https://bugs.python.org/issue?@action=redirect&bpo=35050]: `socket`: Fix off-by-one bug in length check for `AF_ALG` name and type.
- [bpo-29743](https://bugs.python.org/issue?@action=redirect&bpo=29743) [https://bugs.python.org/issue?@action=redirect&bpo=29743]: Raise `ValueError` instead of `OverflowError` in case of a negative `_length_` in a `ctypes.Array` subclass. Also raise `TypeError` instead of `AttributeError` for non-integer `_length_`. Original patch by Oren Milman.
- [bpo-16806](https://bugs.python.org/issue?@action=redirect&bpo=16806) [https://bugs.python.org/issue?@action=redirect&bpo=16806]: Fix `lineno` and `col_offset` for multi-line string tokens.
- [bpo-35029](https://bugs.python.org/issue?@action=redirect&bpo=35029) [https://bugs.python.org/issue?@action=redirect&bpo=35029]: `SyntaxWarning` raised as an exception at code generation time will be now replaced with a `SyntaxError` for better error reporting.
- [bpo-34983](https://bugs.python.org/issue?@action=redirect&bpo=34983) [https://bugs.python.org/issue?@action=redirect&bpo=34983]: Expose `symtable.Symbol.is_nonlocal()` in the `symtable`

module. Patch by Pablo Galindo.

- [bpo-34974](https://bugs.python.org/issue?@action=redirect&bpo=34974) [https://bugs.python.org/issue?@action=redirect&bpo=34974]: **bytes** and **bytearray** constructors no longer convert unexpected exceptions (e.g. **MemoryError** and **KeyboardInterrupt**) to **TypeError**.
- [bpo-34939](https://bugs.python.org/issue?@action=redirect&bpo=34939) [https://bugs.python.org/issue?@action=redirect&bpo=34939]: Allow annotated names in module namespace that are declared global before the annotation happens. Patch by Pablo Galindo.
- [bpo-34973](https://bugs.python.org/issue?@action=redirect&bpo=34973) [https://bugs.python.org/issue?@action=redirect&bpo=34973]: Fixed crash in **bytes()** when the **list** argument is mutated while it is iterated.
- [bpo-34876](https://bugs.python.org/issue?@action=redirect&bpo=34876) [https://bugs.python.org/issue?@action=redirect&bpo=34876]: The *lineno* and *col\_offset* attributes of the AST for decorated function and class refer now to the position of the corresponding `def`, `async def` and `class` instead of the position of the first decorator. This leads to more correct line reporting in tracing. This is the only case when the position of child AST nodes can precede the position of the parent AST node.
- [bpo-34879](https://bugs.python.org/issue?@action=redirect&bpo=34879) [https://bugs.python.org/issue?@action=redirect&bpo=34879]: Fix a possible null pointer dereference in `bytesobject.c`. Patch by Zackery Spytz.
- [bpo-34784](https://bugs.python.org/issue?@action=redirect&bpo=34784) [https://bugs.python.org/issue?@action=redirect&bpo=34784]: Fix the implementation of `PyStructSequence_NewType` in order to create heap allocated `StructSequences`.
- [bpo-32912](https://bugs.python.org/issue?@action=redirect&bpo=32912) [https://bugs.python.org/issue?@action=redirect&bpo=32912]: A **SyntaxWarning** is now emitted instead of a **DeprecationWarning** for invalid escape sequences in string and bytes literals.
- [bpo-34854](https://bugs.python.org/issue?@action=redirect&bpo=34854) [https://bugs.python.org/issue?@action=redirect&bpo=34854]: Fixed a crash in compiling string

annotations containing a lambda with a keyword-only argument that doesn't have a default value.

- [bpo-34850](https://bugs.python.org/issue?@action=redirect&bpo=34850) [https://bugs.python.org/issue?@action=redirect&bpo=34850]: The compiler now produces a **SyntaxWarning** when identity checks (`is` and `is not`) are used with certain types of literals (e.g. strings, ints). These can often work by accident in CPython, but are not guaranteed by the language spec. The warning advises users to use equality tests (`==` and `!=`) instead.
- [bpo-34824](https://bugs.python.org/issue?@action=redirect&bpo=34824) [https://bugs.python.org/issue?@action=redirect&bpo=34824]: Fix a possible null pointer dereference in `Modules/_ssl.c`. Patch by Zackery Spytz.
- [bpo-30156](https://bugs.python.org/issue?@action=redirect&bpo=30156) [https://bugs.python.org/issue?@action=redirect&bpo=30156]: The C function `property_descr_get()` uses a “cached” tuple to optimize function calls. But this tuple can be discovered in debug mode with `sys.getobjects()`. Remove the optimization, it's not really worth it and it causes 3 different crashes last years.
- [bpo-34762](https://bugs.python.org/issue?@action=redirect&bpo=34762) [https://bugs.python.org/issue?@action=redirect&bpo=34762]: Fix contextvars C API to use `PyObject*` pointer types.
- [bpo-34751](https://bugs.python.org/issue?@action=redirect&bpo=34751) [https://bugs.python.org/issue?@action=redirect&bpo=34751]: The hash function for tuples is now based on `xxHash` which gives better collision results on (formerly) pathological cases. Additionally, on 64-bit systems it improves tuple hashes in general. Patch by Jeroen Demeyer with substantial contributions by Tim Peters.
- [bpo-34735](https://bugs.python.org/issue?@action=redirect&bpo=34735) [https://bugs.python.org/issue?@action=redirect&bpo=34735]: Fix a memory leak in `Modules/timemodule.c`. Patch by Zackery Spytz.
- [bpo-34683](https://bugs.python.org/issue?@action=redirect&bpo=34683) [https://bugs.python.org/issue?@action=redirect&bpo=34683]: Fixed a bug where some `SyntaxError` error pointed to locations that were off-by-one.

- [bpo-34651](https://bugs.python.org/issue?@action=redirect&bpo=34651) [https://bugs.python.org/issue?@action=redirect&bpo=34651]: Only allow the main interpreter to fork. This avoids the possibility of affecting the main interpreter, which is critical to operation of the runtime.
- [bpo-34653](https://bugs.python.org/issue?@action=redirect&bpo=34653) [https://bugs.python.org/issue?@action=redirect&bpo=34653]: Remove unused function `PyParser_SimpleParseStringFilename`.
- [bpo-32236](https://bugs.python.org/issue?@action=redirect&bpo=32236) [https://bugs.python.org/issue?@action=redirect&bpo=32236]: Warn that line buffering is not supported if `open()` is called with binary mode and `buffering=1`.
- [bpo-34641](https://bugs.python.org/issue?@action=redirect&bpo=34641) [https://bugs.python.org/issue?@action=redirect&bpo=34641]: Further restrict the syntax of the left-hand side of keyword arguments in function calls. In particular, `f((keyword)=arg)` is now disallowed.
- [bpo-34637](https://bugs.python.org/issue?@action=redirect&bpo=34637) [https://bugs.python.org/issue?@action=redirect&bpo=34637]: Make the *start* argument to `sum()` visible as a keyword argument.
- [bpo-1621](https://bugs.python.org/issue?@action=redirect&bpo=1621) [https://bugs.python.org/issue?@action=redirect&bpo=1621]: Do not assume signed integer overflow behavior (C undefined behavior) when performing set hash table resizing.
- [bpo-34588](https://bugs.python.org/issue?@action=redirect&bpo=34588) [https://bugs.python.org/issue?@action=redirect&bpo=34588]: Fix an off-by-one in the recursive call pruning feature of traceback formatting.
- [bpo-34485](https://bugs.python.org/issue?@action=redirect&bpo=34485) [https://bugs.python.org/issue?@action=redirect&bpo=34485]: On Windows, the `LC_CTYPE` is now set to the user preferred locale at startup. Previously, the `LC_CTYPE` locale was “C” at startup, but changed when calling `setlocale(LC_CTYPE, “”)` or `setlocale(LC_ALL, “”)`.
- [bpo-34485](https://bugs.python.org/issue?@action=redirect&bpo=34485) [https://bugs.python.org/issue?@action=redirect&bpo=34485]: Standard streams like `sys.stdout` now use the “surrogateescape” error handler, instead of “strict”, on the POSIX locale (when the C locale is not coerced

and the UTF-8 Mode is disabled).

- [bpo-34485](https://bugs.python.org/issue?@action=redirect&bpo=34485) [https://bugs.python.org/issue?@action=redirect&bpo=34485]: Fix the error handler of standard streams like sys.stdout: PYTHONIOENCODING=":" is now ignored instead of setting the error handler to "strict".
- [bpo-34485](https://bugs.python.org/issue?@action=redirect&bpo=34485) [https://bugs.python.org/issue?@action=redirect&bpo=34485]: Python now gets the locale encoding with C code to initialize the encoding of standard streams like sys.stdout. Moreover, the encoding is now initialized to the Python codec name to get a normalized encoding name and to ensure that the codec is loaded. The change avoids importing \_bootlocale and \_locale modules at startup by default.
- [bpo-34527](https://bugs.python.org/issue?@action=redirect&bpo=34527) [https://bugs.python.org/issue?@action=redirect&bpo=34527]: On FreeBSD, Py\_DecodeLocale() and Py\_EncodeLocale() now also forces the ASCII encoding if the LC\_CTYPE locale is "POSIX", not only if the LC\_CTYPE locale is "C".
- [bpo-34527](https://bugs.python.org/issue?@action=redirect&bpo=34527) [https://bugs.python.org/issue?@action=redirect&bpo=34527]: The UTF-8 Mode is now also enabled by the "POSIX" locale, not only by the "C" locale.
- [bpo-34403](https://bugs.python.org/issue?@action=redirect&bpo=34403) [https://bugs.python.org/issue?@action=redirect&bpo=34403]: On HP-UX with C or POSIX locale, sys.getfilesystemencoding() now returns "ascii" instead of "roman8" (when the UTF-8 Mode is disabled and the C locale is not coerced).
- [bpo-34523](https://bugs.python.org/issue?@action=redirect&bpo=34523) [https://bugs.python.org/issue?@action=redirect&bpo=34523]: The Python filesystem encoding is now read earlier during the Python initialization.
- [bpo-12458](https://bugs.python.org/issue?@action=redirect&bpo=12458) [https://bugs.python.org/issue?@action=redirect&bpo=12458]: Tracebacks show now correct line number for subexpressions in multiline expressions. Tracebacks show now the line number of the first line for multiline expressions instead of the line number of the last

subexpression.

- [bpo-34408](https://bugs.python.org/issue?@action=redirect&bpo=34408) [https://bugs.python.org/issue?@action=redirect&bpo=34408]: Prevent a null pointer dereference and resource leakage in `PyInterpreterState_New()`.
- [bpo-34400](https://bugs.python.org/issue?@action=redirect&bpo=34400) [https://bugs.python.org/issue?@action=redirect&bpo=34400]: Fix undefined behavior in `parsetok.c`. Patch by Zackery Spytz.
- [bpo-33073](https://bugs.python.org/issue?@action=redirect&bpo=33073) [https://bugs.python.org/issue?@action=redirect&bpo=33073]: Added `as_integer_ratio` to ints to make them more interoperable with floats.
- [bpo-34377](https://bugs.python.org/issue?@action=redirect&bpo=34377) [https://bugs.python.org/issue?@action=redirect&bpo=34377]: Update valgrind suppression list to use `_PyObject_Free/_PyObject_Realloc` instead of `PyObject_Free/PyObject_Realloc`.
- [bpo-34353](https://bugs.python.org/issue?@action=redirect&bpo=34353) [https://bugs.python.org/issue?@action=redirect&bpo=34353]: Added the “socket” option in the `stat.filemode()` Python implementation to match the C implementation.
- [bpo-34320](https://bugs.python.org/issue?@action=redirect&bpo=34320) [https://bugs.python.org/issue?@action=redirect&bpo=34320]: Fix `dict(od)` didn’t copy iteration order of `OrderedDict`.
- [bpo-34113](https://bugs.python.org/issue?@action=redirect&bpo=34113) [https://bugs.python.org/issue?@action=redirect&bpo=34113]: Fixed crash on debug builds when opcode stack was adjusted with negative numbers. Patch by Constantin Petrisor.
- [bpo-34100](https://bugs.python.org/issue?@action=redirect&bpo=34100) [https://bugs.python.org/issue?@action=redirect&bpo=34100]: Compiler now merges constants in tuples and frozensets recursively. Code attributes like `co_names` are merged too.
- [bpo-34151](https://bugs.python.org/issue?@action=redirect&bpo=34151) [https://bugs.python.org/issue?@action=redirect&bpo=34151]: Performance of list concatenation, repetition and slicing operations is slightly improved. Patch

by Sergey Fedoseev.

- [bpo-34170](https://bugs.python.org/issue?@action=redirect&bpo=34170) [https://bugs.python.org/issue?@action=redirect&bpo=34170]: -X dev: it is now possible to override the memory allocator using PYTHONMALLOC even if the developer mode is enabled.
- [bpo-33237](https://bugs.python.org/issue?@action=redirect&bpo=33237) [https://bugs.python.org/issue?@action=redirect&bpo=33237]: Improved **AttributeError** message for partially initialized module.
- [bpo-34149](https://bugs.python.org/issue?@action=redirect&bpo=34149) [https://bugs.python.org/issue?@action=redirect&bpo=34149]: Fix min and max functions to get default behavior when key is None.
- [bpo-34125](https://bugs.python.org/issue?@action=redirect&bpo=34125) [https://bugs.python.org/issue?@action=redirect&bpo=34125]: Profiling of unbound built-in methods now works when `**kwargs` is given.
- [bpo-34141](https://bugs.python.org/issue?@action=redirect&bpo=34141) [https://bugs.python.org/issue?@action=redirect&bpo=34141]: Optimized pickling atomic types (None, bool, int, float, bytes, str).
- [bpo-34126](https://bugs.python.org/issue?@action=redirect&bpo=34126) [https://bugs.python.org/issue?@action=redirect&bpo=34126]: Fix crashes when profiling certain invalid calls of unbound methods. Patch by Jeroen Demeyer.
- [bpo-24618](https://bugs.python.org/issue?@action=redirect&bpo=24618) [https://bugs.python.org/issue?@action=redirect&bpo=24618]: Fixed reading invalid memory when create the code object with too small varnames tuple or too large argument counts.
- [bpo-34068](https://bugs.python.org/issue?@action=redirect&bpo=34068) [https://bugs.python.org/issue?@action=redirect&bpo=34068]: In `io.IOBase.close()`, ensure that the `closed` attribute is not set with a live exception. Patch by Zackery Spytz and Serhiy Storchaka.
- [bpo-34087](https://bugs.python.org/issue?@action=redirect&bpo=34087) [https://bugs.python.org/issue?@action=redirect&bpo=34087]: Fix buffer overflow while converting unicode to numeric values.
- [bpo-34080](https://bugs.python.org/issue?@action=redirect&bpo=34080) [https://bugs.python.org/issue?@action=redirect&bpo=34080]

@action=redirect&bpo=34080]: Fixed a memory leak in the compiler when it raised some uncommon errors during tokenizing.

- [bpo-34066](https://bugs.python.org/issue?@action=redirect&bpo=34066) [https://bugs.python.org/issue?@action=redirect&bpo=34066]: Disabled interruption by Ctrl-C between calling `open()` and entering a **with** block in `with open()`.
- [bpo-34042](https://bugs.python.org/issue?@action=redirect&bpo=34042) [https://bugs.python.org/issue?@action=redirect&bpo=34042]: Fix `dict.copy()` to maintain correct total refcount (as reported by `sys.gettotalrefcount()`).
- [bpo-33418](https://bugs.python.org/issue?@action=redirect&bpo=33418) [https://bugs.python.org/issue?@action=redirect&bpo=33418]: Fix potential memory leak in function object when it creates reference cycle.
- [bpo-33985](https://bugs.python.org/issue?@action=redirect&bpo=33985) [https://bugs.python.org/issue?@action=redirect&bpo=33985]: Implement `contextvars.ContextVar.name` attribute.
- [bpo-33956](https://bugs.python.org/issue?@action=redirect&bpo=33956) [https://bugs.python.org/issue?@action=redirect&bpo=33956]: Update vendored Expat library copy to version 2.2.5.
- [bpo-24596](https://bugs.python.org/issue?@action=redirect&bpo=24596) [https://bugs.python.org/issue?@action=redirect&bpo=24596]: Decref the module object in `PyRun_SimpleFileExFlags()` before calling `PyErr_Print()`. Patch by Zackery Spytz.
- [bpo-33451](https://bugs.python.org/issue?@action=redirect&bpo=33451) [https://bugs.python.org/issue?@action=redirect&bpo=33451]: Close directly executed pyc files before calling `PyEval_EvalCode()`.
- [bpo-1617161](https://bugs.python.org/issue?@action=redirect&bpo=1617161) [https://bugs.python.org/issue?@action=redirect&bpo=1617161]: The hash of **BuiltinMethodType** instances (methods of built-in classes) now depends on the hash of the identity of `_self_` instead of its value. The hash and equality of **ModuleType** and **MethodWrapperType** instances (methods of user-defined classes and some methods of built-in classes like

`str.__add__`) now depend on the hash and equality of the identity of `_self_` instead of its value. **MethodWrapperType** instances no longer support ordering.

- [bpo-33824](https://bugs.python.org/issue?@action=redirect&bpo=33824) [https://bugs.python.org/issue?@action=redirect&bpo=33824]: Fix “LC\_ALL=C python3.7 -V”: reset properly the command line parser when the encoding changes after reading the Python configuration.
- [bpo-33803](https://bugs.python.org/issue?@action=redirect&bpo=33803) [https://bugs.python.org/issue?@action=redirect&bpo=33803]: Fix a crash in hamt.c caused by enabling GC tracking for an object that hadn't all of its fields set to NULL.
- [bpo-33738](https://bugs.python.org/issue?@action=redirect&bpo=33738) [https://bugs.python.org/issue?@action=redirect&bpo=33738]: Seven macro incompatibilities with the Limited API were fixed, and the macros **PyIter\_Check()**, **PyIndex\_Check()** and **PyExceptionClass\_Name()** were added as functions. A script for automatic macro checks was added.
- [bpo-33786](https://bugs.python.org/issue?@action=redirect&bpo=33786) [https://bugs.python.org/issue?@action=redirect&bpo=33786]: Fix asynchronous generators to handle GeneratorExit in `athrow()` correctly
- [bpo-30167](https://bugs.python.org/issue?@action=redirect&bpo=30167) [https://bugs.python.org/issue?@action=redirect&bpo=30167]: `PyRun_SimpleFileExFlags` removes `__cached__` from module in addition to `__file__`.
- [bpo-33706](https://bugs.python.org/issue?@action=redirect&bpo=33706) [https://bugs.python.org/issue?@action=redirect&bpo=33706]: Fix a crash in Python initialization when parsing the command line options. Thanks Christoph Gohlke for the bug report and the fix!
- [bpo-33597](https://bugs.python.org/issue?@action=redirect&bpo=33597) [https://bugs.python.org/issue?@action=redirect&bpo=33597]: Reduce `PyGC_Head` size from 3 words to 2 words.
- [bpo-30654](https://bugs.python.org/issue?@action=redirect&bpo=30654) [https://bugs.python.org/issue?@action=redirect&bpo=30654]: Fixed reset of the SIGINT handler

to SIG\_DFL on interpreter shutdown even when there was a custom handler set previously. Patch by Philipp Kerling.

- [bpo-33622](https://bugs.python.org/issue?@action=redirect&bpo=33622) [https://bugs.python.org/issue?@action=redirect&bpo=33622]: Fixed a leak when the garbage collector fails to add an object with the `__del__` method or referenced by it into the `gc.garbage` list. `PyGC_Collect()` can now be called when an exception is set and preserves it.
- [bpo-33462](https://bugs.python.org/issue?@action=redirect&bpo=33462) [https://bugs.python.org/issue?@action=redirect&bpo=33462]: Make dict and dict views reversible. Patch by Rémi Lapeyre.
- [bpo-23722](https://bugs.python.org/issue?@action=redirect&bpo=23722) [https://bugs.python.org/issue?@action=redirect&bpo=23722]: A `RuntimeError` is now raised when the custom metaclass doesn't provide the `__classcell__` entry in the namespace passed to `type.__new__`. A `DeprecationWarning` was emitted in Python 3.6–3.7.
- [bpo-33499](https://bugs.python.org/issue?@action=redirect&bpo=33499) [https://bugs.python.org/issue?@action=redirect&bpo=33499]: Add `PYTHONPYCACHEPREFIX` environment variable and `-X pycache_prefix` command-line option to set an alternate root directory for writing module bytecode cache files.
- [bpo-25711](https://bugs.python.org/issue?@action=redirect&bpo=25711) [https://bugs.python.org/issue?@action=redirect&bpo=25711]: The `zipimport` module has been rewritten in pure Python.
- [bpo-33509](https://bugs.python.org/issue?@action=redirect&bpo=33509) [https://bugs.python.org/issue?@action=redirect&bpo=33509]: Fix `module_globals` parameter of `warnings.warn_explicit()`: don't crash if `module_globals` is not a dict.
- [bpo-31849](https://bugs.python.org/issue?@action=redirect&bpo=31849) [https://bugs.python.org/issue?@action=redirect&bpo=31849]: Fix signed/unsigned comparison warning in `pyhash.c`.
- [bpo-33475](https://bugs.python.org/issue?@action=redirect&bpo=33475) [https://bugs.python.org/issue?@action=redirect&bpo=33475]

@action=redirect&bpo=33475]: Fixed miscellaneous bugs in converting annotations to strings and optimized parentheses in the string representation.

- [bpo-20104](https://bugs.python.org/issue?@action=redirect&bpo=20104) [https://bugs.python.org/issue?@action=redirect&bpo=20104]: Added support for the **setpgroup**, **resetids**, **setsigmask**, **setsigdef** and **scheduler** parameters of **posix\_spawn**. Patch by Pablo Galindo.
- [bpo-33391](https://bugs.python.org/issue?@action=redirect&bpo=33391) [https://bugs.python.org/issue?@action=redirect&bpo=33391]: Fix a leak in `set_symmetric_difference()`.
- [bpo-33363](https://bugs.python.org/issue?@action=redirect&bpo=33363) [https://bugs.python.org/issue?@action=redirect&bpo=33363]: Raise a `SyntaxError` for `async` with `and` `async` for statements outside of `async` functions.
- [bpo-28055](https://bugs.python.org/issue?@action=redirect&bpo=28055) [https://bugs.python.org/issue?@action=redirect&bpo=28055]: Fix unaligned accesses in `siphhash24()`. Patch by Rolf Eike Beer.
- [bpo-33128](https://bugs.python.org/issue?@action=redirect&bpo=33128) [https://bugs.python.org/issue?@action=redirect&bpo=33128]: Fix a bug that causes `PathFinder` to appear twice on `sys.meta_path`. Patch by Pablo Galindo Salgado.
- [bpo-33331](https://bugs.python.org/issue?@action=redirect&bpo=33331) [https://bugs.python.org/issue?@action=redirect&bpo=33331]: Modules imported last are now cleared first at interpreter shutdown.
- [bpo-33312](https://bugs.python.org/issue?@action=redirect&bpo=33312) [https://bugs.python.org/issue?@action=redirect&bpo=33312]: Fixed clang ubsan (undefined behavior sanitizer) warnings in `dictobject.c` by adjusting how the internal struct `_dictkeyobject` shared keys structure is declared.
- [bpo-33305](https://bugs.python.org/issue?@action=redirect&bpo=33305) [https://bugs.python.org/issue?@action=redirect&bpo=33305]: Improved syntax error messages for invalid numerical literals.

- [bpo-33306](https://bugs.python.org/issue?@action=redirect&bpo=33306) [https://bugs.python.org/issue?@action=redirect&bpo=33306]: Improved syntax error messages for unbalanced parentheses.
- [bpo-33234](https://bugs.python.org/issue?@action=redirect&bpo=33234) [https://bugs.python.org/issue?@action=redirect&bpo=33234]: The list constructor will pre-size and not over-allocate when the input length is known.
- [bpo-33270](https://bugs.python.org/issue?@action=redirect&bpo=33270) [https://bugs.python.org/issue?@action=redirect&bpo=33270]: Intern the names for all anonymous code objects. Patch by Zackery Spytz.
- [bpo-30455](https://bugs.python.org/issue?@action=redirect&bpo=30455) [https://bugs.python.org/issue?@action=redirect&bpo=30455]: The C and Python code and the documentation related to tokens are now generated from a single source file `Grammar/Tokens`.
- [bpo-33176](https://bugs.python.org/issue?@action=redirect&bpo=33176) [https://bugs.python.org/issue?@action=redirect&bpo=33176]: Add a `toreadonly()` method to `memoryviews`.
- [bpo-33231](https://bugs.python.org/issue?@action=redirect&bpo=33231) [https://bugs.python.org/issue?@action=redirect&bpo=33231]: Fix potential memory leak in `normalizestring()`.
- [bpo-33205](https://bugs.python.org/issue?@action=redirect&bpo=33205) [https://bugs.python.org/issue?@action=redirect&bpo=33205]: Change dict growth function from `round_up_to_power_2(used*2+hashtable_size/2)` to `round_up_to_power_2(used*3)`. Previously, dict is shrunk only when `used == 0`. Now dict has more chance to be shrunk.
- [bpo-29922](https://bugs.python.org/issue?@action=redirect&bpo=29922) [https://bugs.python.org/issue?@action=redirect&bpo=29922]: Improved error messages in ‘async with’ when `__aenter__()` or `__aexit__()` return non-awaitable object.
- [bpo-33199](https://bugs.python.org/issue?@action=redirect&bpo=33199) [https://bugs.python.org/issue?@action=redirect&bpo=33199]: Fix `ma_version_tag` in dict implementation is uninitialized when copying from key-sharing dict.

- [bpo-33053](https://bugs.python.org/issue?@action=redirect&bpo=33053) [https://bugs.python.org/issue?@action=redirect&bpo=33053]: When using the `-m` switch, `sys.path[0]` is now explicitly expanded as the *starting* working directory, rather than being left as the empty path (which allows imports from the current working directory at the time of the import)
- [bpo-33138](https://bugs.python.org/issue?@action=redirect&bpo=33138) [https://bugs.python.org/issue?@action=redirect&bpo=33138]: Changed standard error message for non-pickleable and non-copyable types. It now says “cannot pickle” instead of “can’t pickle” or “cannot serialize”.
- [bpo-33018](https://bugs.python.org/issue?@action=redirect&bpo=33018) [https://bugs.python.org/issue?@action=redirect&bpo=33018]: Improve consistency of errors raised by `issubclass()` when called with a non-class and an abstract base class as the first and second arguments, respectively. Patch by Josh Bronson.
- [bpo-33083](https://bugs.python.org/issue?@action=redirect&bpo=33083) [https://bugs.python.org/issue?@action=redirect&bpo=33083]: `math.factorial` no longer accepts arguments that are not int-like. Patch by Pablo Galindo.
- [bpo-33041](https://bugs.python.org/issue?@action=redirect&bpo=33041) [https://bugs.python.org/issue?@action=redirect&bpo=33041]: Added new opcode **END\_ASYNC\_FOR** and fixes the following issues:
  - Setting global **StopAsyncIteration** no longer breaks `async for` loops.
  - Jumping into an `async for` loop is now disabled.
  - Jumping out of an `async for` loop no longer corrupts the stack.
- [bpo-25750](https://bugs.python.org/issue?@action=redirect&bpo=25750) [https://bugs.python.org/issue?@action=redirect&bpo=25750]: Fix rare Python crash due to bad refcounting in `type_getattro()` if a descriptor deletes itself from the class. Patch by Jeroen Demeyer.
- [bpo-33041](https://bugs.python.org/issue?@action=redirect&bpo=33041) [https://bugs.python.org/issue?@action=redirect&bpo=33041]: Fixed bytecode generation for “async for” with a complex target. A `StopAsyncIteration`

raised on assigning or unpacking will be now propagated instead of stopping the iteration.

- [bpo-33026](https://bugs.python.org/issue?@action=redirect&bpo=33026) [https://bugs.python.org/issue?@action=redirect&bpo=33026]: Fixed jumping out of “with” block by setting `f_lineno`.
- [bpo-33005](https://bugs.python.org/issue?@action=redirect&bpo=33005) [https://bugs.python.org/issue?@action=redirect&bpo=33005]: Fix a crash on fork when using a custom memory allocator (ex: using `PYTHONMALLOC` env var). `_PyGILState_Reinit()` and `_PyInterpreterState_Enable()` now use the default RAW memory allocator to allocate a new interpreters mutex on fork.
- [bpo-32911](https://bugs.python.org/issue?@action=redirect&bpo=32911) [https://bugs.python.org/issue?@action=redirect&bpo=32911]: Due to unexpected compatibility issues discovered during downstream beta testing, reverted [bpo-29463](https://bugs.python.org/issue?@action=redirect&bpo=29463) [https://bugs.python.org/issue?@action=redirect&bpo=29463]. `docstring` field is removed from `Module`, `ClassDef`, `FunctionDef`, and `AsyncFunctionDef` ast nodes which was added in 3.7a1. Docstring expression is restored as a first statement in their body. Based on patch by Inada Naoki.
- [bpo-17288](https://bugs.python.org/issue?@action=redirect&bpo=17288) [https://bugs.python.org/issue?@action=redirect&bpo=17288]: Prevent jumps from ‘return’ and ‘exception’ trace events.
- [bpo-32946](https://bugs.python.org/issue?@action=redirect&bpo=32946) [https://bugs.python.org/issue?@action=redirect&bpo=32946]: Importing names from already imported module with “from ... import ...” is now 30% faster if the module is not a package.
- [bpo-32932](https://bugs.python.org/issue?@action=redirect&bpo=32932) [https://bugs.python.org/issue?@action=redirect&bpo=32932]: Make error message more revealing when there are non-str objects in `__all__`.
- [bpo-32925](https://bugs.python.org/issue?@action=redirect&bpo=32925) [https://bugs.python.org/issue?@action=redirect&bpo=32925]: Optimized iterating and containing test for literal lists consisting of non-constants: `x in [a, b]` and `for x in [a, b]`. The case of all

constant elements already was optimized.

- [bpo-32889](https://bugs.python.org/issue?@action=redirect&bpo=32889) [https://bugs.python.org/issue?@action=redirect&bpo=32889]: Update Valgrind suppression list to account for the rename of `Py_ADDRESS_IN_RANGE` to `address_in_range`.
- [bpo-32836](https://bugs.python.org/issue?@action=redirect&bpo=32836) [https://bugs.python.org/issue?@action=redirect&bpo=32836]: Don't use temporary variables in cases of list/dict/set comprehensions
- [bpo-31356](https://bugs.python.org/issue?@action=redirect&bpo=31356) [https://bugs.python.org/issue?@action=redirect&bpo=31356]: Remove the new API added in [bpo-31356](https://bugs.python.org/issue?@action=redirect&bpo=31356) (`gc.ensure_disabled()` context manager).
- [bpo-32305](https://bugs.python.org/issue?@action=redirect&bpo=32305) [https://bugs.python.org/issue?@action=redirect&bpo=32305]: For namespace packages, ensure that both `__file__` and `__spec__.origin` are set to `None`.
- [bpo-32303](https://bugs.python.org/issue?@action=redirect&bpo=32303) [https://bugs.python.org/issue?@action=redirect&bpo=32303]: Make sure `__spec__.loader` matches `__loader__` for namespace packages.
- [bpo-32711](https://bugs.python.org/issue?@action=redirect&bpo=32711) [https://bugs.python.org/issue?@action=redirect&bpo=32711]: Fix the warning messages for `Python/ast_unparse.c`. Patch by Stéphane Wirtel
- [bpo-32583](https://bugs.python.org/issue?@action=redirect&bpo=32583) [https://bugs.python.org/issue?@action=redirect&bpo=32583]: Fix possible crashing in builtin Unicode decoders caused by write out-of-bound errors when using customized decode error handlers.
- [bpo-32489](https://bugs.python.org/issue?@action=redirect&bpo=32489) [https://bugs.python.org/issue?@action=redirect&bpo=32489]: A `continue` statement is now allowed in the `finally` clause.
- [bpo-17611](https://bugs.python.org/issue?@action=redirect&bpo=17611) [https://bugs.python.org/issue?@action=redirect&bpo=17611]: Simplified the interpreter loop by

moving the logic of unrolling the stack of blocks into the compiler. The compiler emits now explicit instructions for adjusting the stack of values and calling the cleaning up code for **break**, **continue** and **return**.

Removed opcodes **BREAK\_LOOP**, **CONTINUE\_LOOP**, **SETUP\_LOOP** and **SETUP\_EXCEPT**. Added new opcodes **ROT\_FOUR**, **BEGIN\_FINALLY** and **CALL\_FINALLY** and **POP\_FINALLY**. Changed the behavior of **END\_FINALLY** and **WITH\_CLEANUP\_START**.

- [bpo-32285](https://bugs.python.org/issue?@action=redirect&bpo=32285) [https://bugs.python.org/issue?@action=redirect&bpo=32285]: New function `unicodedata.is_normalized`, which can check whether a string is in a specific normal form.
- [bpo-10544](https://bugs.python.org/issue?@action=redirect&bpo=10544) [https://bugs.python.org/issue?@action=redirect&bpo=10544]: Yield expressions are now disallowed in comprehensions and generator expressions except the expression for the outermost iterable.
- [bpo-32117](https://bugs.python.org/issue?@action=redirect&bpo=32117) [https://bugs.python.org/issue?@action=redirect&bpo=32117]: Iterable unpacking is now allowed without parentheses in yield and return statements, e.g. `yield 1, 2, 3, *rest`. Thanks to David Cuthbert for the change and Jordan Chapman for added tests.
- [bpo-31902](https://bugs.python.org/issue?@action=redirect&bpo=31902) [https://bugs.python.org/issue?@action=redirect&bpo=31902]: Fix the `col_offset` attribute for ast nodes `ast.AsyncFor`, `ast.AsyncFunctionDef`, and `ast.AsyncWith`. Previously, `col_offset` pointed to the keyword after `async`.
- [bpo-25862](https://bugs.python.org/issue?@action=redirect&bpo=25862) [https://bugs.python.org/issue?@action=redirect&bpo=25862]: Fix assertion failures in the `tell()` method of `io.TextIOWrapper`. Patch by Zackery Spytz.
- [bpo-21983](https://bugs.python.org/issue?@action=redirect&bpo=21983) [https://bugs.python.org/issue?@action=redirect&bpo=21983]: Fix a crash in `ctypes.cast()` in case the type argument is a ctypes structured data type.

Patch by Eryk Sun and Oren Milman.

- [bpo-31577](https://bugs.python.org/issue?@action=redirect&bpo=31577) [https://bugs.python.org/issue?@action=redirect&bpo=31577]: Fix a crash in `os.utime()` in case of a bad ns argument. Patch by Oren Milman.
- [bpo-29832](https://bugs.python.org/issue?@action=redirect&bpo=29832) [https://bugs.python.org/issue?@action=redirect&bpo=29832]: Remove references to ‘getsockaddrarg’ from various socket error messages. Patch by Oren Milman.

## Library

- [bpo-35845](https://bugs.python.org/issue?@action=redirect&bpo=35845) [https://bugs.python.org/issue?@action=redirect&bpo=35845]: Add ‘order’ parameter to `memoryview.tobytes()`.
- [bpo-35864](https://bugs.python.org/issue?@action=redirect&bpo=35864) [https://bugs.python.org/issue?@action=redirect&bpo=35864]: The `_asdict()` method for `collections.namedtuple` now returns a regular dict instead of an `OrderedDict`.
- [bpo-35537](https://bugs.python.org/issue?@action=redirect&bpo=35537) [https://bugs.python.org/issue?@action=redirect&bpo=35537]: An `ExitStack` is now used internally within `subprocess.Popen` to clean up pipe file handles. No behavior change in normal operation. But if closing one handle were ever to cause an exception, the others will now be closed instead of leaked. (patch by Giampaolo Rodola)
- [bpo-35847](https://bugs.python.org/issue?@action=redirect&bpo=35847) [https://bugs.python.org/issue?@action=redirect&bpo=35847]: RISC-V needed the `CTYPES_PASS_BY_REF_HACK`. Fixes `ctypes.Structure.test_pass_by_value`.
- [bpo-35813](https://bugs.python.org/issue?@action=redirect&bpo=35813) [https://bugs.python.org/issue?@action=redirect&bpo=35813]: Shared memory submodule added to multiprocessing to avoid need for serialization between processes
- [bpo-35780](https://bugs.python.org/issue?@action=redirect&bpo=35780) [https://bugs.python.org/issue?@action=redirect&bpo=35780]

@action=redirect&bpo=35780]: Fix `lru_cache()` errors arising in recursive, reentrant, or multi-threaded code. These errors could result in orphan links and in the cache being trapped in a state with fewer than the specified maximum number of links. Fix handling of negative `maxsize` which should have been treated as zero. Fix errors in toggling the “full” status flag. Fix misordering of links when errors are encountered. Sync-up the C code and pure Python code for the space saving path in functions with a single positional argument. In this common case, the space overhead of an lru cache entry is reduced by almost half. Fix counting of cache misses. In error cases, the miss count was out of sync with the actual number of times the underlying user function was called.

- [bpo-35537](https://bugs.python.org/issue?@action=redirect&bpo=35537) [https://bugs.python.org/issue?@action=redirect&bpo=35537]: `os.posix_spawn()` and `os.posix_spawnp()` now have a `setsid` parameter.
- [bpo-23846](https://bugs.python.org/issue?@action=redirect&bpo=23846) [https://bugs.python.org/issue?@action=redirect&bpo=23846]: `asyncio.ProactorEventLoop` now catches and logs send errors when the self-pipe is full.
- [bpo-34323](https://bugs.python.org/issue?@action=redirect&bpo=34323) [https://bugs.python.org/issue?@action=redirect&bpo=34323]: `asyncio`: Enhance `IocpProactor.close()` log: wait 1 second before the first log, then log every second. Log also the number of seconds since `close()` was called.
- [bpo-35674](https://bugs.python.org/issue?@action=redirect&bpo=35674) [https://bugs.python.org/issue?@action=redirect&bpo=35674]: Add a new `os.posix_spawnp()` function. Patch by Joannah Nanjekye.
- [bpo-35733](https://bugs.python.org/issue?@action=redirect&bpo=35733) [https://bugs.python.org/issue?@action=redirect&bpo=35733]: `ast.Constant(booleann)` no longer an instance of `ast.Num`. Patch by Anthony Sottile.
- [bpo-35726](https://bugs.python.org/issue?@action=redirect&bpo=35726) [https://bugs.python.org/issue?@action=redirect&bpo=35726]: `QueueHandler.prepare()` now makes a copy of the record before modifying and enqueueing it, to avoid affecting other handlers in the chain.

- [bpo-35719](https://bugs.python.org/issue?@action=redirect&bpo=35719) [https://bugs.python.org/issue?@action=redirect&bpo=35719]: Sped up multi-argument `math` functions `atan2()`, `copysign()`, `remainder()` and `hypot()` by 1.3–2.5 times.
- [bpo-35717](https://bugs.python.org/issue?@action=redirect&bpo=35717) [https://bugs.python.org/issue?@action=redirect&bpo=35717]: Fix `KeyError` exception raised when using `enums` and `compile`. Patch contributed by Rémi Lapeyre.
- [bpo-35699](https://bugs.python.org/issue?@action=redirect&bpo=35699) [https://bugs.python.org/issue?@action=redirect&bpo=35699]: Fixed detection of Visual Studio Build Tools 2017 in `distutils`
- [bpo-32710](https://bugs.python.org/issue?@action=redirect&bpo=32710) [https://bugs.python.org/issue?@action=redirect&bpo=32710]: Fix memory leaks in `asyncio` `ProactorEventLoop` on overlapped operation failure.
- [bpo-35702](https://bugs.python.org/issue?@action=redirect&bpo=35702) [https://bugs.python.org/issue?@action=redirect&bpo=35702]: The `time.CLOCK_UPTIME_RAW` constant is now available for macOS 10.12.
- [bpo-32710](https://bugs.python.org/issue?@action=redirect&bpo=32710) [https://bugs.python.org/issue?@action=redirect&bpo=32710]: Fix a memory leak in `asyncio` in the `ProactorEventLoop` when `ReadFile()` or `WSASend()` overlapped operation fail immediately: release the internal buffer.
- [bpo-35682](https://bugs.python.org/issue?@action=redirect&bpo=35682) [https://bugs.python.org/issue?@action=redirect&bpo=35682]: Fix `asyncio.ProactorEventLoop.sendfile()`: don't attempt to set the result of an internal future if it's already done.
- [bpo-35283](https://bugs.python.org/issue?@action=redirect&bpo=35283) [https://bugs.python.org/issue?@action=redirect&bpo=35283]: Add a deprecated warning for the `threading.Thread.isAlive()` method. Patch by Donghee Na.
- [bpo-35664](https://bugs.python.org/issue?@action=redirect&bpo=35664) [https://bugs.python.org/issue?@action=redirect&bpo=35664]: Improve `operator.itemgetter()`

performance by 33% with optimized argument handling and with adding a fast path for the common case of a single non-negative integer index into a tuple (which is the typical use case in the standard library).

- [bpo-35643](https://bugs.python.org/issue?@action=redirect&bpo=35643) [https://bugs.python.org/issue?@action=redirect&bpo=35643]: Fixed a SyntaxWarning: invalid escape sequence in Modules/\_sha3/cleanup.py. Patch by Mickaël Schoentgen.
- [bpo-35619](https://bugs.python.org/issue?@action=redirect&bpo=35619) [https://bugs.python.org/issue?@action=redirect&bpo=35619]: Improved support of custom data descriptors in `help()` and `pydoc`.
- [bpo-28503](https://bugs.python.org/issue?@action=redirect&bpo=28503) [https://bugs.python.org/issue?@action=redirect&bpo=28503]: The `crypt` module now internally uses the `crypt_r()` library function instead of `crypt()` when available.
- [bpo-35614](https://bugs.python.org/issue?@action=redirect&bpo=35614) [https://bugs.python.org/issue?@action=redirect&bpo=35614]: Fixed `help()` on metaclasses. Patch by Sanyam Khurana.
- [bpo-35568](https://bugs.python.org/issue?@action=redirect&bpo=35568) [https://bugs.python.org/issue?@action=redirect&bpo=35568]: Expose `raise(signum)` as `raise_signal`
- [bpo-35588](https://bugs.python.org/issue?@action=redirect&bpo=35588) [https://bugs.python.org/issue?@action=redirect&bpo=35588]: The floor division and modulo operations and the `divmod()` function on `fractions.Fraction` types are 2–4x faster. Patch by Stefan Behnel.
- [bpo-35585](https://bugs.python.org/issue?@action=redirect&bpo=35585) [https://bugs.python.org/issue?@action=redirect&bpo=35585]: Speed-up building enums by value, e.g. `http.HTTPStatus(200)`.
- [bpo-30561](https://bugs.python.org/issue?@action=redirect&bpo=30561) [https://bugs.python.org/issue?@action=redirect&bpo=30561]: `random.gammavariate(1.0, beta)` now computes the same result as `random.expovariate(1.0 / beta)`. This synchronizes the two algorithms and eliminates

some idiosyncrasies in the old implementation. It does however produce a difference stream of random variables than it used to.

- [bpo-35537](https://bugs.python.org/issue?@action=redirect&bpo=35537) [https://bugs.python.org/issue?@action=redirect&bpo=35537]: The `subprocess` module can now use the `os.posix_spawn()` function in some cases for better performance.
- [bpo-35526](https://bugs.python.org/issue?@action=redirect&bpo=35526) [https://bugs.python.org/issue?@action=redirect&bpo=35526]: Delaying the ‘joke’ of `barry_as_FLUFL.mandatory` to Python version 4.0
- [bpo-35523](https://bugs.python.org/issue?@action=redirect&bpo=35523) [https://bugs.python.org/issue?@action=redirect&bpo=35523]: Remove `ctypes` callback workaround: no longer create a callback at startup. Avoid SELinux alert on `import ctypes` and `import uuid`.
- [bpo-31784](https://bugs.python.org/issue?@action=redirect&bpo=31784) [https://bugs.python.org/issue?@action=redirect&bpo=31784]: `uuid.uuid1()` now calls `time.time_ns()` rather than `int(time.time() * 1e9)`.
- [bpo-35513](https://bugs.python.org/issue?@action=redirect&bpo=35513) [https://bugs.python.org/issue?@action=redirect&bpo=35513]: `TextTestRunner` of `unittest.runner` now uses `time.perf_counter()` rather than `time.time()` to measure the execution time of a test: `time.time()` can go backwards, whereas `time.perf_counter()` is monotonic.
- [bpo-35502](https://bugs.python.org/issue?@action=redirect&bpo=35502) [https://bugs.python.org/issue?@action=redirect&bpo=35502]: Fixed reference leaks in `xml.etree.ElementTree.TreeBuilder` in case of unfinished building of the tree (in particular when an error was raised during parsing XML).
- [bpo-35348](https://bugs.python.org/issue?@action=redirect&bpo=35348) [https://bugs.python.org/issue?@action=redirect&bpo=35348]: Make `platform.architecture()` parsing of `file` command output more reliable: add the `-b` option to the `file` command to omit the filename, force the usage of the C

locale, and search also the “shared object” pattern.

- [bpo-35491](https://bugs.python.org/issue?@action=redirect&bpo=35491) [https://bugs.python.org/issue?@action=redirect&bpo=35491]: **multiprocessing**: Add `Pool.__repr__()` and enhance `BaseProcess.__repr__()` (add pid and parent pid) to ease debugging. Pool state constant values are now strings instead of integers, for example `RUN` value becomes `'RUN'` instead of `0`.
- [bpo-35477](https://bugs.python.org/issue?@action=redirect&bpo=35477) [https://bugs.python.org/issue?@action=redirect&bpo=35477]: **multiprocessing.Pool.\_\_enter\_\_()** now fails if the pool is not running: `with pool:` fails if used more than once.
- [bpo-31446](https://bugs.python.org/issue?@action=redirect&bpo=31446) [https://bugs.python.org/issue?@action=redirect&bpo=31446]: Copy command line that was passed to `CreateProcessW` since this function can change the content of the input buffer.
- [bpo-35471](https://bugs.python.org/issue?@action=redirect&bpo=35471) [https://bugs.python.org/issue?@action=redirect&bpo=35471]: Python 2.4 dropped MacOS 9 support. The `macpath` module was deprecated in Python 3.7. The module is now removed.
- [bpo-23057](https://bugs.python.org/issue?@action=redirect&bpo=23057) [https://bugs.python.org/issue?@action=redirect&bpo=23057]: Unblock Proactor event loop when keyboard interrupt is received on Windows
- [bpo-35052](https://bugs.python.org/issue?@action=redirect&bpo=35052) [https://bugs.python.org/issue?@action=redirect&bpo=35052]: Fix `xml.dom.minidom.cloneNode()` on a document with an entity: pass the correct arguments to the user data handler of an entity.
- [bpo-20239](https://bugs.python.org/issue?@action=redirect&bpo=20239) [https://bugs.python.org/issue?@action=redirect&bpo=20239]: Allow repeated assignment deletion of **`unittest.mock.Mock`** attributes. Patch by Pablo Galindo.
- [bpo-17185](https://bugs.python.org/issue?@action=redirect&bpo=17185) [https://bugs.python.org/issue?@action=redirect&bpo=17185]

@action=redirect&bpo=17185]: Set `__signature__` on mock for **inspect** to get signature. Patch by Karthikeyan Singaravelan.

- [bpo-35445](https://bugs.python.org/issue?@action=redirect&bpo=35445) [https://bugs.python.org/issue?@action=redirect&bpo=35445]: Memory errors during creating `posix.environ` no longer ignored.
- [bpo-35415](https://bugs.python.org/issue?@action=redirect&bpo=35415) [https://bugs.python.org/issue?@action=redirect&bpo=35415]: Validate `fileno =` argument to `socket.socket()`.
- [bpo-35424](https://bugs.python.org/issue?@action=redirect&bpo=35424) [https://bugs.python.org/issue?@action=redirect&bpo=35424]: **multiprocessing.Pool** destructor now emits **ResourceWarning** if the pool is still running.
- [bpo-35330](https://bugs.python.org/issue?@action=redirect&bpo=35330) [https://bugs.python.org/issue?@action=redirect&bpo=35330]: When a **Mock** instance was used to wrap an object, if **side\_effect** is used in one of the mocks of it methods, don't call the original implementation and return the result of using the side effect the same way that it is done with `return_value`.
- [bpo-35346](https://bugs.python.org/issue?@action=redirect&bpo=35346) [https://bugs.python.org/issue?@action=redirect&bpo=35346]: Drop Mac OS 9 and Rhapsody support from the **platform** module. Rhapsody last release was in 2000. Mac OS 9 last release was in 2001.
- [bpo-10496](https://bugs.python.org/issue?@action=redirect&bpo=10496) [https://bugs.python.org/issue?@action=redirect&bpo=10496]: **check\_environ()** of **distutils.utils** now catches **KeyError** on calling **pwd.getpuid()**: don't create the `HOME` environment variable in this case.
- [bpo-10496](https://bugs.python.org/issue?@action=redirect&bpo=10496) [https://bugs.python.org/issue?@action=redirect&bpo=10496]: **posixpath.expanduser()** now returns the input *path* unchanged if the `HOME` environment variable is not set and the current user has no home directory (if the current user identifier doesn't exist in the password database). This change fix the **site** module if

the current user doesn't exist in the password database (if the user has no home directory).

- [bpo-35389](https://bugs.python.org/issue?@action=redirect&bpo=35389) [https://bugs.python.org/issue?@action=redirect&bpo=35389]: `platform.libc_ver()` now uses `os.confstr('CS_GNU_LIBC_VERSION')` if available and the *executable* parameter is not set.
- [bpo-35394](https://bugs.python.org/issue?@action=redirect&bpo=35394) [https://bugs.python.org/issue?@action=redirect&bpo=35394]: Add empty slots to asyncio abstract protocols.
- [bpo-35310](https://bugs.python.org/issue?@action=redirect&bpo=35310) [https://bugs.python.org/issue?@action=redirect&bpo=35310]: Fix a bug in `select.select()` where, in some cases, the file descriptor sequences were returned unmodified after a signal interruption, even though the file descriptors might not be ready yet. `select.select()` will now always return empty lists if a timeout has occurred. Patch by Oran Avraham.
- [bpo-35380](https://bugs.python.org/issue?@action=redirect&bpo=35380) [https://bugs.python.org/issue?@action=redirect&bpo=35380]: Enable TCP\_NODELAY on Windows for proactor asyncio event loop.
- [bpo-35341](https://bugs.python.org/issue?@action=redirect&bpo=35341) [https://bugs.python.org/issue?@action=redirect&bpo=35341]: Add generic version of `collections.OrderedDict` to the `typing` module. Patch by Ismo Toijala.
- [bpo-35371](https://bugs.python.org/issue?@action=redirect&bpo=35371) [https://bugs.python.org/issue?@action=redirect&bpo=35371]: Fixed possible crash in `os.utime()` on Windows when pass incorrect arguments.
- [bpo-35346](https://bugs.python.org/issue?@action=redirect&bpo=35346) [https://bugs.python.org/issue?@action=redirect&bpo=35346]: `platform.uname()` now redirects `stderr` to `os.devnull` when running external programs like `cmd /c ver`.
- [bpo-35066](https://bugs.python.org/issue?@action=redirect&bpo=35066) [https://bugs.python.org/issue?@action=redirect&bpo=35066]: Previously, calling the `strftime()` method on a datetime object with a trailing '%' in the format

string would result in an exception. However, this only occurred when the datetime C module was being used; the python implementation did not match this behavior. Datetime is now PEP-399 compliant, and will not throw an exception on a trailing '%'.

- [bpo-35345](https://bugs.python.org/issue?@action=redirect&bpo=35345) [https://bugs.python.org/issue?@action=redirect&bpo=35345]: The function `platform.popen` has been removed, it was deprecated since Python 3.3: use `os.popen()` instead.
- [bpo-35344](https://bugs.python.org/issue?@action=redirect&bpo=35344) [https://bugs.python.org/issue?@action=redirect&bpo=35344]: On macOS, `platform.platform()` now uses `platform.mac_ver()`, if it returns a non-empty release string, to get the macOS version rather than the darwin version.
- [bpo-35312](https://bugs.python.org/issue?@action=redirect&bpo=35312) [https://bugs.python.org/issue?@action=redirect&bpo=35312]: Make `lib2to3.pgen2.parse.ParseError` round-trip pickle-able. Patch by Anthony Sottile.
- [bpo-35308](https://bugs.python.org/issue?@action=redirect&bpo=35308) [https://bugs.python.org/issue?@action=redirect&bpo=35308]: Fix regression in `webbrowser` where default browsers may be preferred over browsers in the `BROWSER` environment variable.
- [bpo-24746](https://bugs.python.org/issue?@action=redirect&bpo=24746) [https://bugs.python.org/issue?@action=redirect&bpo=24746]: Avoid stripping trailing whitespace in `doctest` fancy diff. Original patch by R. David Murray & Jairo Trad. Enhanced by Sanyam Khurana.
- [bpo-28604](https://bugs.python.org/issue?@action=redirect&bpo=28604) [https://bugs.python.org/issue?@action=redirect&bpo=28604]: `locale.localeconv()` now sets temporarily the `LC_CTYPE` locale to the `LC_MONETARY` locale if the two locales are different and monetary strings are non-ASCII. This temporary change affects other threads.
- [bpo-35277](https://bugs.python.org/issue?@action=redirect&bpo=35277) [https://bugs.python.org/issue?@action=redirect&bpo=35277]: Update `ensurepip` to install pip 18.1 and `setuptools` 40.6.2.

- [bpo-24209](https://bugs.python.org/issue?@action=redirect&bpo=24209) [https://bugs.python.org/issue?@action=redirect&bpo=24209]: Adds IPv6 support when invoking `http.server` directly.
- [bpo-35226](https://bugs.python.org/issue?@action=redirect&bpo=35226) [https://bugs.python.org/issue?@action=redirect&bpo=35226]: Recursively check arguments when testing for equality of `unittest.mock.call` objects and add note that tracking of parameters used to create ancestors of mocks in `mock_calls` is not possible.
- [bpo-29564](https://bugs.python.org/issue?@action=redirect&bpo=29564) [https://bugs.python.org/issue?@action=redirect&bpo=29564]: The warnings module now suggests to enable tracemalloc if the source is specified, the tracemalloc module is available, but tracemalloc is not tracing memory allocations.
- [bpo-35189](https://bugs.python.org/issue?@action=redirect&bpo=35189) [https://bugs.python.org/issue?@action=redirect&bpo=35189]: Modify the following `fncctl` function to retry if interrupted by a signal (EINTR): `flock`, `lockf`, `fncctl`
- [bpo-30064](https://bugs.python.org/issue?@action=redirect&bpo=30064) [https://bugs.python.org/issue?@action=redirect&bpo=30064]: Use `add_done_callback()` in `sock_*` asyncio API to unsubscribe reader/writer early on cancellation.
- [bpo-35186](https://bugs.python.org/issue?@action=redirect&bpo=35186) [https://bugs.python.org/issue?@action=redirect&bpo=35186]: Removed the “built with” comment added when `setup.py` upload is used with either `bdist_rpm` or `bdist_dumb`.
- [bpo-35152](https://bugs.python.org/issue?@action=redirect&bpo=35152) [https://bugs.python.org/issue?@action=redirect&bpo=35152]: Allow sending more than 2 GB at once on a multiprocessing connection on non-Windows systems.
- [bpo-35062](https://bugs.python.org/issue?@action=redirect&bpo=35062) [https://bugs.python.org/issue?@action=redirect&bpo=35062]: Fix incorrect parsing of `_io.IncrementalNewlineDecoder`’s `translate` argument.
- [bpo-35065](https://bugs.python.org/issue?@action=redirect&bpo=35065) [https://bugs.python.org/issue?@action=redirect&bpo=35065]

@action=redirect&bpo=35065]: Remove

**StreamReaderProtocol.\_untrack\_reader**. The call to **\_untrack\_reader** is currently performed too soon, causing the protocol to forget about the reader before **connection\_lost** can run and feed the EOF to the reader.

- [bpo-34160](https://bugs.python.org/issue?@action=redirect&bpo=34160) [https://bugs.python.org/issue?@action=redirect&bpo=34160]: **ElementTree** and **minidom** now preserve the attribute order specified by the user.
- [bpo-35079](https://bugs.python.org/issue?@action=redirect&bpo=35079) [https://bugs.python.org/issue?@action=redirect&bpo=35079]: Improve **difflib.SequenceManager.get\_matching\_blocks** doc by adding 'non-overlapping' and changing '!=' to '<'.
- [bpo-33710](https://bugs.python.org/issue?@action=redirect&bpo=33710) [https://bugs.python.org/issue?@action=redirect&bpo=33710]: Deprecated **l\*gettext()** functions and methods in the **gettext** module. They return encoded bytes instead of Unicode strings and are artifacts from Python 2 times. Also deprecated functions and methods related to setting the charset for **l\*gettext()** functions and methods.
- [bpo-35017](https://bugs.python.org/issue?@action=redirect&bpo=35017) [https://bugs.python.org/issue?@action=redirect&bpo=35017]: **socketserver.BaseServer.serve\_forever()** now exits immediately if it's **shutdown()** method is called while it is polling for new events.
- [bpo-35024](https://bugs.python.org/issue?@action=redirect&bpo=35024) [https://bugs.python.org/issue?@action=redirect&bpo=35024]: **importlib** no longer logs **wrote** redundantly after **(created|could not create)** is already logged. Patch by Quentin Agren.
- [bpo-35047](https://bugs.python.org/issue?@action=redirect&bpo=35047) [https://bugs.python.org/issue?@action=redirect&bpo=35047]: **unittest.mock** now includes mock calls in exception messages if **assert\_not\_called**, **assert\_called\_once**, or **assert\_called\_once\_with** fails. Patch by Petter Strandmark.
- [bpo-31047](https://bugs.python.org/issue?@action=redirect&bpo=31047) [https://bugs.python.org/issue?@action=redirect&bpo=31047]

@action=redirect&bpo=31047]: Fix `ntpath.abspath` regression where it didn't remove a trailing separator on Windows. Patch by Tim Graham.

- [bpo-35053](https://bugs.python.org/issue?@action=redirect&bpo=35053) [https://bugs.python.org/issue?@action=redirect&bpo=35053]: `tracemalloc` now tries to update the traceback when an object is reused from a “free list” (optimization for faster object creation, used by the builtin list type for example).
- [bpo-31553](https://bugs.python.org/issue?@action=redirect&bpo=31553) [https://bugs.python.org/issue?@action=redirect&bpo=31553]: Add the `-json-lines` option to `json.tool`. Patch by hongweipeng.
- [bpo-34794](https://bugs.python.org/issue?@action=redirect&bpo=34794) [https://bugs.python.org/issue?@action=redirect&bpo=34794]: Fixed a leak in Tkinter when pass the Python wrapper around `Tcl_Obj` back to `Tcl/Tk`.
- [bpo-34909](https://bugs.python.org/issue?@action=redirect&bpo=34909) [https://bugs.python.org/issue?@action=redirect&bpo=34909]: Enum: fix grandchildren subclassing when parent mixed with concrete data types.
- [bpo-35022](https://bugs.python.org/issue?@action=redirect&bpo=35022) [https://bugs.python.org/issue?@action=redirect&bpo=35022]: `unittest.mock.MagicMock` now supports the `__fspath__` method (from `os.PathLike`).
- [bpo-35008](https://bugs.python.org/issue?@action=redirect&bpo=35008) [https://bugs.python.org/issue?@action=redirect&bpo=35008]: Fixed references leaks when call the `__setstate__()` method of `xml.etree.ElementTree.Element` in the C implementation for already initialized element.
- [bpo-23420](https://bugs.python.org/issue?@action=redirect&bpo=23420) [https://bugs.python.org/issue?@action=redirect&bpo=23420]: Verify the value for the parameter ‘-s’ of the cProfile CLI. Patch by Robert Kuska
- [bpo-33947](https://bugs.python.org/issue?@action=redirect&bpo=33947) [https://bugs.python.org/issue?@action=redirect&bpo=33947]: dataclasses now handle recursive reprs without raising `RecursionError`.

- [bpo-34890](https://bugs.python.org/issue?@action=redirect&bpo=34890) [https://bugs.python.org/issue?@action=redirect&bpo=34890]: Make `inspect.iscoroutinefunction()`, `inspect.isgeneratorfunction()` and `inspect.isasyncgenfunction()` work with `functools.partial()`. Patch by Pablo Galindo.
- [bpo-34521](https://bugs.python.org/issue?@action=redirect&bpo=34521) [https://bugs.python.org/issue?@action=redirect&bpo=34521]: Use `socket.CMSG_SPACE()` to calculate ancillary data size instead of `socket.CMSG_LEN()` in `multiprocessing.reduction.recvfds()` as [RFC 3542](https://datatracker.ietf.org/doc/html/rfc3542.html) [https://datatracker.ietf.org/doc/html/rfc3542.html] requires the use of the former for portable applications.
- [bpo-31522](https://bugs.python.org/issue?@action=redirect&bpo=31522) [https://bugs.python.org/issue?@action=redirect&bpo=31522]: The `mailbox.mbox.get_string` function *from\_* parameter can now successfully be set to a non-default value.
- [bpo-34970](https://bugs.python.org/issue?@action=redirect&bpo=34970) [https://bugs.python.org/issue?@action=redirect&bpo=34970]: Protect tasks weak set manipulation in `asyncio.all_tasks()`
- [bpo-34969](https://bugs.python.org/issue?@action=redirect&bpo=34969) [https://bugs.python.org/issue?@action=redirect&bpo=34969]: `gzip`: Add `-fast`, `-best` on the `gzip` CLI, these parameters will be used for the fast compression method (quick) or the best method compress (slower, but smaller file). Also, change the default compression level to 6 (tradeoff).
- [bpo-16965](https://bugs.python.org/issue?@action=redirect&bpo=16965) [https://bugs.python.org/issue?@action=redirect&bpo=16965]: The `2to3 execfile` fixer now opens the file with mode `'rb'`. Patch by Zackery Spytz.
- [bpo-34966](https://bugs.python.org/issue?@action=redirect&bpo=34966) [https://bugs.python.org/issue?@action=redirect&bpo=34966]: `pydoc` now supports aliases not only to methods defined in the end class, but also to inherited methods. The docstring is not duplicated for aliases.
- [bpo-34926](https://bugs.python.org/issue?@action=redirect&bpo=34926) [https://bugs.python.org/issue?@action=redirect&bpo=34926]

@action=redirect&bpo=34926]:

`mimetypes.MimeTypes.guess_type()` now accepts `path-like object` in addition to url strings. Patch by Mayank Asthana.

- [bpo-23831](https://bugs.python.org/issue?@action=redirect&bpo=23831) [https://bugs.python.org/issue?@action=redirect&bpo=23831]: Add `moveto()` method to the `tkinter.Canvas` widget. Patch by Juliette Monsel.
- [bpo-34941](https://bugs.python.org/issue?@action=redirect&bpo=34941) [https://bugs.python.org/issue?@action=redirect&bpo=34941]: Methods `find()`, `findtext()` and `findall()` of the `Element` class in the `xml.etree.ElementTree` module are now able to find children which are instances of `Element` subclasses.
- [bpo-32680](https://bugs.python.org/issue?@action=redirect&bpo=32680) [https://bugs.python.org/issue?@action=redirect&bpo=32680]: `smtpplib.SMTP` objects now always have a `sock` attribute present
- [bpo-34769](https://bugs.python.org/issue?@action=redirect&bpo=34769) [https://bugs.python.org/issue?@action=redirect&bpo=34769]: Fix for async generators not finalizing when event loop is in debug mode and garbage collector runs in another thread.
- [bpo-34936](https://bugs.python.org/issue?@action=redirect&bpo=34936) [https://bugs.python.org/issue?@action=redirect&bpo=34936]: Fix `TclError` in `tkinter.Spinbox.selection_element()`. Patch by Juliette Monsel.
- [bpo-34829](https://bugs.python.org/issue?@action=redirect&bpo=34829) [https://bugs.python.org/issue?@action=redirect&bpo=34829]: Add methods `selection_from`, `selection_range`, `selection_present` and `selection_to` to the `tkinter.Spinbox` for consistency with the `tkinter.Entry` widget. Patch by Juliette Monsel.
- [bpo-34911](https://bugs.python.org/issue?@action=redirect&bpo=34911) [https://bugs.python.org/issue?@action=redirect&bpo=34911]: Added `secure_protocols` argument to `http.cookiejar.DefaultCookiePolicy` to allow for tweaking of protocols and also to add support by default for `wss`, the secure websocket protocol.

- [bpo-34922](https://bugs.python.org/issue?@action=redirect&bpo=34922) [https://bugs.python.org/issue?@action=redirect&bpo=34922]: Fixed integer overflow in the `digest()` and `hexdigest()` methods for the SHAKE algorithm in the `hashlib` module.
- [bpo-34925](https://bugs.python.org/issue?@action=redirect&bpo=34925) [https://bugs.python.org/issue?@action=redirect&bpo=34925]: 25% speedup in argument parsing for the functions in the `bisect` module.
- [bpo-34900](https://bugs.python.org/issue?@action=redirect&bpo=34900) [https://bugs.python.org/issue?@action=redirect&bpo=34900]: Fixed `unittest.TestCase.debug()` when used to call test methods with subtests. Patch by Bruno Oliveira.
- [bpo-34844](https://bugs.python.org/issue?@action=redirect&bpo=34844) [https://bugs.python.org/issue?@action=redirect&bpo=34844]: `logging.Formatter` enhancement - Ensure styles and fmt matches in `logging.Formatter` - Added `validate` method in each format style class: `StrFormatStyle`, `PercentStyle`, `StringTemplateStyle`. - This method is called in the constructor of `logging.Formatter` class - Also re-raise the `KeyError` in the format method of each style class, so it would be a bit clear that it's an error with the invalid format fields.
- [bpo-34897](https://bugs.python.org/issue?@action=redirect&bpo=34897) [https://bugs.python.org/issue?@action=redirect&bpo=34897]: Adjust `test.support.missing_compiler_executable` check so that a nominal command name of `""` is ignored. Patch by Michael Felt.
- [bpo-34871](https://bugs.python.org/issue?@action=redirect&bpo=34871) [https://bugs.python.org/issue?@action=redirect&bpo=34871]: Fix `inspect` module polluted `sys.modules` when parsing `__text_signature__` of callable.
- [bpo-34898](https://bugs.python.org/issue?@action=redirect&bpo=34898) [https://bugs.python.org/issue?@action=redirect&bpo=34898]: Add `mtime` argument to `gzip.compress` for reproducible output. Patch by Guo Ci Teo.
- [bpo-28441](https://bugs.python.org/issue?@action=redirect&bpo=28441) [https://bugs.python.org/issue?@action=redirect&bpo=28441]: On Cygwin and MinGW, ensure

that `sys.executable` always includes the full filename in the path, including the `.exe` suffix (unless it is a symbolic link).

- [bpo-34866](https://bugs.python.org/issue?@action=redirect&bpo=34866) [https://bugs.python.org/issue?@action=redirect&bpo=34866]: Adding `max_num_fields` to `cgi.FieldStorage` to make DOS attacks harder by limiting the number of `MiniFieldStorage` objects created by `FieldStorage`.
- [bpo-34711](https://bugs.python.org/issue?@action=redirect&bpo=34711) [https://bugs.python.org/issue?@action=redirect&bpo=34711]: `http.server` ensures it reports `HTTPStatus.NOT_FOUND` when the local path ends with `“/”` and is not a directory, even if the underlying OS (e.g. AIX) accepts such paths as a valid file reference. Patch by Michael Felt.
- [bpo-34872](https://bugs.python.org/issue?@action=redirect&bpo=34872) [https://bugs.python.org/issue?@action=redirect&bpo=34872]: Fix self-cancellation in C implementation of `asyncio.Task`
- [bpo-34849](https://bugs.python.org/issue?@action=redirect&bpo=34849) [https://bugs.python.org/issue?@action=redirect&bpo=34849]: Don't log waiting for `selector.select` in `asyncio` loop iteration. The waiting is pretty normal for any `asyncio` program, logging its time just adds a noise to logs without any useful information provided.
- [bpo-34022](https://bugs.python.org/issue?@action=redirect&bpo=34022) [https://bugs.python.org/issue?@action=redirect&bpo=34022]: The `SOURCE_DATE_EPOCH` environment variable no longer overrides the value of the `invalidation_mode` argument to `py_compile.compile()`, and determines its default value instead.
- [bpo-34819](https://bugs.python.org/issue?@action=redirect&bpo=34819) [https://bugs.python.org/issue?@action=redirect&bpo=34819]: Use a monotonic clock to compute timeouts in `Executor.map()` and `as_completed()`, in order to prevent timeouts from deviating when the system clock is adjusted.
- [bpo-34758](https://bugs.python.org/issue?@action=redirect&bpo=34758) [https://bugs.python.org/issue?@action=redirect&bpo=34758]: Add `.wasm -> application/wasm`

to list of recognized file types and content type headers

- [bpo-34789](https://bugs.python.org/issue?@action=redirect&bpo=34789) [https://bugs.python.org/issue?@action=redirect&bpo=34789]: `xml.sax.make_parser()` now accepts any iterable as its *parser\_list* argument. Patch by Andrés Delfino.
- [bpo-34334](https://bugs.python.org/issue?@action=redirect&bpo=34334) [https://bugs.python.org/issue?@action=redirect&bpo=34334]: In `QueueHandler`, clear `exc_text` from `LogRecord` to prevent traceback from being written twice.
- [bpo-34687](https://bugs.python.org/issue?@action=redirect&bpo=34687) [https://bugs.python.org/issue?@action=redirect&bpo=34687]: On Windows, `asyncio` now uses `ProactorEventLoop`, instead of `SelectorEventLoop`, by default.
- [bpo-5950](https://bugs.python.org/issue?@action=redirect&bpo=5950) [https://bugs.python.org/issue?@action=redirect&bpo=5950]: Support reading zip files with archive comments in `zipimport`.
- [bpo-32892](https://bugs.python.org/issue?@action=redirect&bpo=32892) [https://bugs.python.org/issue?@action=redirect&bpo=32892]: The parser now represents all constants as `ast.Constant` instead of using specific constant AST types (`Num`, `Str`, `Bytes`, `NameConstant` and `Ellipsis`). These classes are considered deprecated and will be removed in future Python versions.
- [bpo-34728](https://bugs.python.org/issue?@action=redirect&bpo=34728) [https://bugs.python.org/issue?@action=redirect&bpo=34728]: Add deprecation warning when `loop` is used in methods: `asyncio.sleep`, `asyncio.wait` and `asyncio.wait_for`.
- [bpo-34738](https://bugs.python.org/issue?@action=redirect&bpo=34738) [https://bugs.python.org/issue?@action=redirect&bpo=34738]: ZIP files created by `distutils` will now include entries for directories.
- [bpo-34659](https://bugs.python.org/issue?@action=redirect&bpo=34659) [https://bugs.python.org/issue?@action=redirect&bpo=34659]: Add an optional *initial* argument to `itertools.accumulate()`.
- [bpo-29577](https://bugs.python.org/issue?@action=redirect&bpo=29577) [https://bugs.python.org/issue?@action=redirect&bpo=29577]

@action=redirect&bpo=29577]: Support multiple mixin classes when creating Enums.

- [bpo-34670](https://bugs.python.org/issue?@action=redirect&bpo=34670) [https://bugs.python.org/issue?@action=redirect&bpo=34670]: Add `SSLContext.post_handshake_auth` and `SSLSocket.verify_client_post_handshake` for TLS 1.3's post handshake authentication feature.
- [bpo-32718](https://bugs.python.org/issue?@action=redirect&bpo=32718) [https://bugs.python.org/issue?@action=redirect&bpo=32718]: The `Activate.ps1` script from `venv` works with PowerShell Core 6.1 and is now available under all operating systems.
- [bpo-31177](https://bugs.python.org/issue?@action=redirect&bpo=31177) [https://bugs.python.org/issue?@action=redirect&bpo=31177]: Fix bug that prevented using `reset_mock` on mock instances with deleted attributes
- [bpo-34672](https://bugs.python.org/issue?@action=redirect&bpo=34672) [https://bugs.python.org/issue?@action=redirect&bpo=34672]: Add a workaround, so the `'z'` `time.strftime()` specifier on the musl C library can work in some cases.
- [bpo-34666](https://bugs.python.org/issue?@action=redirect&bpo=34666) [https://bugs.python.org/issue?@action=redirect&bpo=34666]: Implement `asyncio.StreamWriter.awrite` and `asyncio.StreamWriter.aclose()` coroutines. Methods are needed for providing a consistent stream API with control flow switched on by default.
- [bpo-6721](https://bugs.python.org/issue?@action=redirect&bpo=6721) [https://bugs.python.org/issue?@action=redirect&bpo=6721]: Acquire the logging module's commonly used internal locks while `fork()`ing to avoid deadlocks in the child process.
- [bpo-34658](https://bugs.python.org/issue?@action=redirect&bpo=34658) [https://bugs.python.org/issue?@action=redirect&bpo=34658]: Fix a rare interpreter unhandled exception state `SystemError` only seen when using `subprocess` with a `preexec_fn` while an `after_parent` handler has been registered with `os.register_at_fork` and the `fork` system call fails.

- [bpo-34652](https://bugs.python.org/issue?@action=redirect&bpo=34652) [https://bugs.python.org/issue?@action=redirect&bpo=34652]: Ensure `os.lchmod()` is never defined on Linux.
- [bpo-34638](https://bugs.python.org/issue?@action=redirect&bpo=34638) [https://bugs.python.org/issue?@action=redirect&bpo=34638]: Store a weak reference to stream reader to break strong references loop between reader and protocol. It allows to detect and close the socket if the stream is deleted (garbage collected) without `close()` call.
- [bpo-34536](https://bugs.python.org/issue?@action=redirect&bpo=34536) [https://bugs.python.org/issue?@action=redirect&bpo=34536]: `Enum._missing_`: raise `ValueError` if None returned and `TypeError` if non-member is returned.
- [bpo-34636](https://bugs.python.org/issue?@action=redirect&bpo=34636) [https://bugs.python.org/issue?@action=redirect&bpo=34636]: Speed up re scanning of many non-matching characters for s w and d within bytes objects. (microoptimization)
- [bpo-24412](https://bugs.python.org/issue?@action=redirect&bpo=24412) [https://bugs.python.org/issue?@action=redirect&bpo=24412]: Add `addModuleCleanup()` and `addClassCleanup()` to unittest to support cleanups for `setUpModule()` and `setUpClass()`. Patch by Lisa Roach.
- [bpo-34630](https://bugs.python.org/issue?@action=redirect&bpo=34630) [https://bugs.python.org/issue?@action=redirect&bpo=34630]: Don't log SSL certificate errors in asyncio code (connection error logging is skipped already).
- [bpo-32490](https://bugs.python.org/issue?@action=redirect&bpo=32490) [https://bugs.python.org/issue?@action=redirect&bpo=32490]: Prevent filename duplication in `subprocess` exception messages. Patch by Zackery Spytz.
- [bpo-34363](https://bugs.python.org/issue?@action=redirect&bpo=34363) [https://bugs.python.org/issue?@action=redirect&bpo=34363]: `dataclasses.asdict()` and `.astuple()` now handle namedtuples correctly.
- [bpo-34625](https://bugs.python.org/issue?@action=redirect&bpo=34625) [https://bugs.python.org/issue?@action=redirect&bpo=34625]: Update vendorized expat library version to 2.2.6.

- [bpo-32270](https://bugs.python.org/issue?@action=redirect&bpo=32270) [https://bugs.python.org/issue?@action=redirect&bpo=32270]: The subprocess module no longer mistakenly closes redirected fds even when they were in `pass_fds` when outside of the default {0, 1, 2} set.
- [bpo-34622](https://bugs.python.org/issue?@action=redirect&bpo=34622) [https://bugs.python.org/issue?@action=redirect&bpo=34622]: Create a dedicated `asyncio.CancelledError`, `asyncio.InvalidStateError` and `asyncio.TimeoutError` exception classes. Inherit them from corresponding exceptions from `concurrent.futures` package. Extract `asyncio` exceptions into a separate file.
- [bpo-34610](https://bugs.python.org/issue?@action=redirect&bpo=34610) [https://bugs.python.org/issue?@action=redirect&bpo=34610]: Fixed iterator of **`multiprocessing.managers.DictProxy`**.
- [bpo-34421](https://bugs.python.org/issue?@action=redirect&bpo=34421) [https://bugs.python.org/issue?@action=redirect&bpo=34421]: Fix distutils logging for non-ASCII strings. This caused installation issues on Windows.
- [bpo-34604](https://bugs.python.org/issue?@action=redirect&bpo=34604) [https://bugs.python.org/issue?@action=redirect&bpo=34604]: Fix possible mojibake in the error message of **`pwd.getpwnam`** and **`grp.getgrnam`** using string representation because of invisible characters or trailing whitespaces. Patch by William Grzybowski.
- [bpo-30977](https://bugs.python.org/issue?@action=redirect&bpo=30977) [https://bugs.python.org/issue?@action=redirect&bpo=30977]: Make `uuid.UUID` use `__slots__` to reduce its memory footprint. Based on original patch by Wouter Bolsterlee.
- [bpo-34574](https://bugs.python.org/issue?@action=redirect&bpo=34574) [https://bugs.python.org/issue?@action=redirect&bpo=34574]: `OrderedDict` iterators are not exhausted during pickling anymore. Patch by Sergey Fedoseev.
- [bpo-8110](https://bugs.python.org/issue?@action=redirect&bpo=8110) [https://bugs.python.org/issue?@action=redirect&bpo=8110]: Refactored **`subprocess`** to check for Windows-specific modules rather than `sys.platform == 'win32'`.

- [bpo-34530](https://bugs.python.org/issue?@action=redirect&bpo=34530) [https://bugs.python.org/issue?@action=redirect&bpo=34530]: `distutils.spawn.find_executable()` now falls back on `os.defpath` if the `PATH` environment variable is not set.
- [bpo-34563](https://bugs.python.org/issue?@action=redirect&bpo=34563) [https://bugs.python.org/issue?@action=redirect&bpo=34563]: On Windows, fix `multiprocessing.Connection` for very large read: fix `_winapi.PeekNamedPipe()` and `_winapi.ReadFile()` for read larger than `INT_MAX` (usually `2**31-1`).
- [bpo-34558](https://bugs.python.org/issue?@action=redirect&bpo=34558) [https://bugs.python.org/issue?@action=redirect&bpo=34558]: Correct typo in `Lib/ctypes/_aix.py`
- [bpo-34282](https://bugs.python.org/issue?@action=redirect&bpo=34282) [https://bugs.python.org/issue?@action=redirect&bpo=34282]: Move `Enum._convert` to `EnumMeta._convert_` and fix enum members getting shadowed by parent attributes.
- [bpo-22872](https://bugs.python.org/issue?@action=redirect&bpo=22872) [https://bugs.python.org/issue?@action=redirect&bpo=22872]: When the queue is closed, `ValueError` is now raised by `multiprocessing.Queue.put()` and `multiprocessing.Queue.get()` instead of `AssertionError` and `OSError`, respectively. Patch by Zackery Spytz.
- [bpo-34515](https://bugs.python.org/issue?@action=redirect&bpo=34515) [https://bugs.python.org/issue?@action=redirect&bpo=34515]: Fix parsing non-ASCII identifiers in `lib2to3.pgen2.tokenize` (PEP 3131).
- [bpo-13312](https://bugs.python.org/issue?@action=redirect&bpo=13312) [https://bugs.python.org/issue?@action=redirect&bpo=13312]: Avoids a possible integer underflow (undefined behavior) in the time module's year handling code when passed a very low negative year value.
- [bpo-34472](https://bugs.python.org/issue?@action=redirect&bpo=34472) [https://bugs.python.org/issue?@action=redirect&bpo=34472]: Improved compatibility for streamed files in `zipfile`. Previously an optional signature was not being written and certain ZIP applications were not

supported. Patch by Silas Sewell.

- [bpo-34454](https://bugs.python.org/issue?@action=redirect&bpo=34454) [https://bugs.python.org/issue?@action=redirect&bpo=34454]: Fix the `.fromisoformat()` methods of datetime types crashing when given unicode with non-UTF-8-encodable code points. Specifically, `datetime.fromisoformat()` now accepts surrogate unicode code points used as the separator. Report and tests by Alexey Izbyshchev, patch by Paul Ganssle.
- [bpo-6700](https://bugs.python.org/issue?@action=redirect&bpo=6700) [https://bugs.python.org/issue?@action=redirect&bpo=6700]: Fix `inspect.getsourcelines` for module level frames/tracebacks. Patch by Vladimir Matveev.
- [bpo-34171](https://bugs.python.org/issue?@action=redirect&bpo=34171) [https://bugs.python.org/issue?@action=redirect&bpo=34171]: Running the `trace` module no longer creates the `trace.cover` file.
- [bpo-34441](https://bugs.python.org/issue?@action=redirect&bpo=34441) [https://bugs.python.org/issue?@action=redirect&bpo=34441]: Fix crash when an ABC-derived class with invalid `__subclasses__` is passed as the second argument to `issubclass()`. Patch by Alexey Izbyshchev.
- [bpo-34427](https://bugs.python.org/issue?@action=redirect&bpo=34427) [https://bugs.python.org/issue?@action=redirect&bpo=34427]: Fix infinite loop in `a.extend(a)` for `MutableSequence` subclasses.
- [bpo-34412](https://bugs.python.org/issue?@action=redirect&bpo=34412) [https://bugs.python.org/issue?@action=redirect&bpo=34412]: Make `signal.strsignal()` work on HP-UX. Patch by Michael Osipov.
- [bpo-20849](https://bugs.python.org/issue?@action=redirect&bpo=20849) [https://bugs.python.org/issue?@action=redirect&bpo=20849]: `shutil.copytree` now accepts a new `dirs_exist_ok` keyword argument. Patch by Josh Bronson.
- [bpo-31715](https://bugs.python.org/issue?@action=redirect&bpo=31715) [https://bugs.python.org/issue?@action=redirect&bpo=31715]: Associate `.mjs` file extension with `application/javascript` MIME Type.
- [bpo-34384](https://bugs.python.org/issue?@action=redirect&bpo=34384) [https://bugs.python.org/issue?@action=redirect&bpo=34384]: `os.readlink()` now accepts

`path-like` and `bytes` objects on Windows.

- [bpo-22602](https://bugs.python.org/issue?@action=redirect&bpo=22602) [https://bugs.python.org/issue?@action=redirect&bpo=22602]: The UTF-7 decoder now raises `UnicodeDecodeError` for ill-formed sequences starting with “+” (as specified in RFC 2152). Patch by Zackery Spytz.
- [bpo-2122](https://bugs.python.org/issue?@action=redirect&bpo=2122) [https://bugs.python.org/issue?@action=redirect&bpo=2122]: The `mmap.flush()` method now returns `None` on success, raises an exception on error under all platforms.
- [bpo-34341](https://bugs.python.org/issue?@action=redirect&bpo=34341) [https://bugs.python.org/issue?@action=redirect&bpo=34341]: Appending to the ZIP archive with the ZIP64 extension no longer grows the size of extra fields of existing entries.
- [bpo-34333](https://bugs.python.org/issue?@action=redirect&bpo=34333) [https://bugs.python.org/issue?@action=redirect&bpo=34333]: Fix %-formatting in `pathlib.PurePath.with_suffix()` when formatting an error message.
- [bpo-18540](https://bugs.python.org/issue?@action=redirect&bpo=18540) [https://bugs.python.org/issue?@action=redirect&bpo=18540]: The `imaplib.IMAP4` and `imaplib.IMAP4_SSL` classes now resolve to the local host IP correctly when the default value of `host` parameter (‘’) is used.
- [bpo-26502](https://bugs.python.org/issue?@action=redirect&bpo=26502) [https://bugs.python.org/issue?@action=redirect&bpo=26502]: Implement `traceback.FrameSummary.__len__()` method to preserve compatibility with the old tuple API.
- [bpo-34318](https://bugs.python.org/issue?@action=redirect&bpo=34318) [https://bugs.python.org/issue?@action=redirect&bpo=34318]: `assertRaises()`, `assertRaisesRegex()`, `assertWarns()` and `assertWarnsRegex()` no longer success if the passed callable is `None`. They no longer ignore unknown keyword arguments in the context manager mode. A `DeprecationWarning` was raised in these cases since Python 3.5.

- [bpo-9372](https://bugs.python.org/issue?@action=redirect&bpo=9372) [https://bugs.python.org/issue?@action=redirect&bpo=9372]: Deprecate `__getitem__()` methods of `xml.dom.pulldom.DOMEventStream`, `wsgiref.util.FileWrapper` and `fileinput.FileInput`.
- [bpo-33613](https://bugs.python.org/issue?@action=redirect&bpo=33613) [https://bugs.python.org/issue?@action=redirect&bpo=33613]: Fix a race condition in `multiprocessing.semaphore_tracker` when the tracker receives SIGINT before it can register signal handlers for ignoring it.
- [bpo-34248](https://bugs.python.org/issue?@action=redirect&bpo=34248) [https://bugs.python.org/issue?@action=redirect&bpo=34248]: Report filename in the exception raised when the database file cannot be opened by `dbm.gnu.open()` and `dbm.ndbm.open()` due to OS-related error. Patch by Zsolt Cserna.
- [bpo-33089](https://bugs.python.org/issue?@action=redirect&bpo=33089) [https://bugs.python.org/issue?@action=redirect&bpo=33089]: Add `math.dist()` to compute the Euclidean distance between two points.
- [bpo-34246](https://bugs.python.org/issue?@action=redirect&bpo=34246) [https://bugs.python.org/issue?@action=redirect&bpo=34246]: `smtplib.SMTP.send_message()` no longer modifies the content of the `mail_options` argument. Patch by Pablo S. Blum de Aguiar.
- [bpo-31047](https://bugs.python.org/issue?@action=redirect&bpo=31047) [https://bugs.python.org/issue?@action=redirect&bpo=31047]: Fix `ntpath.abspath` for invalid paths on windows. Patch by Franz Woellert.
- [bpo-32321](https://bugs.python.org/issue?@action=redirect&bpo=32321) [https://bugs.python.org/issue?@action=redirect&bpo=32321]: Add pure Python fallback for `functools.reduce`. Patch by Robert Wright.
- [bpo-34270](https://bugs.python.org/issue?@action=redirect&bpo=34270) [https://bugs.python.org/issue?@action=redirect&bpo=34270]: The default asyncio task class now always has a name which can be get or set using two new methods (`get_name()` and `set_name()`) and is visible in the `repr()` output. An initial name can also be set using the

new name keyword argument to `asyncio.create_task()` or the `create_task()` method of the event loop. If no initial name is set, the default Task implementation generates a name like `Task-1` using a monotonic counter.

- [bpo-34263](https://bugs.python.org/issue?@action=redirect&bpo=34263) [https://bugs.python.org/issue?@action=redirect&bpo=34263]: `asyncio`'s event loop will not pass timeouts longer than one day to `epoll/select` etc.
- [bpo-34035](https://bugs.python.org/issue?@action=redirect&bpo=34035) [https://bugs.python.org/issue?@action=redirect&bpo=34035]: Fix several `AttributeError` in `zipfile seek()` methods. Patch by Mickaël Schoentgen.
- [bpo-32215](https://bugs.python.org/issue?@action=redirect&bpo=32215) [https://bugs.python.org/issue?@action=redirect&bpo=32215]: Fix performance regression in `sqlite3` when a DML statement appeared in a different line than the rest of the SQL query.
- [bpo-34075](https://bugs.python.org/issue?@action=redirect&bpo=34075) [https://bugs.python.org/issue?@action=redirect&bpo=34075]: Deprecate passing non-`ThreadPoolExecutor` instances to `AbstractEventLoop.set_default_executor()`.
- [bpo-34251](https://bugs.python.org/issue?@action=redirect&bpo=34251) [https://bugs.python.org/issue?@action=redirect&bpo=34251]: Restore `msilib.Win64` to preserve backwards compatibility since it's already used by `distutils`' `bdist_msi` command.
- [bpo-19891](https://bugs.python.org/issue?@action=redirect&bpo=19891) [https://bugs.python.org/issue?@action=redirect&bpo=19891]: Ignore errors caused by missing / non-writable homedir while writing history during exit of an interactive session. Patch by Anthony Sottile.
- [bpo-33089](https://bugs.python.org/issue?@action=redirect&bpo=33089) [https://bugs.python.org/issue?@action=redirect&bpo=33089]: Enhanced `math.hypot()` to support more than two dimensions.
- [bpo-34228](https://bugs.python.org/issue?@action=redirect&bpo=34228) [https://bugs.python.org/issue?@action=redirect&bpo=34228]: `tracemalloc`: `PYTHONTRACEMALLOC=0` environment variable and `-X`

tracemalloc=0 command line option are now allowed to disable explicitly tracemalloc at startup.

- [bpo-13041](https://bugs.python.org/issue?@action=redirect&bpo=13041) [https://bugs.python.org/issue?@action=redirect&bpo=13041]: Use `shutil.get_terminal_size()` to calculate the terminal width correctly in the `argparse.HelpFormatter` class. Initial patch by Zbyszek Jędrzejewski-Szmek.
- [bpo-34213](https://bugs.python.org/issue?@action=redirect&bpo=34213) [https://bugs.python.org/issue?@action=redirect&bpo=34213]: Allow frozen dataclasses to have a field named “object”. Previously this conflicted with an internal use of “object”.
- [bpo-34052](https://bugs.python.org/issue?@action=redirect&bpo=34052) [https://bugs.python.org/issue?@action=redirect&bpo=34052]:  
`sqlite3.Connection.create_aggregate()`,  
`sqlite3.Connection.create_function()`,  
`sqlite3.Connection.set_authorizer()`,  
`sqlite3.Connection.set_progress_handler()`  
methods raises `TypeError` when unhashable objects are passed as callable. These methods now don’t pass such objects to SQLite API. Previous behavior could lead to segfaults. Patch by Sergey Fedoseev.
- [bpo-34197](https://bugs.python.org/issue?@action=redirect&bpo=34197) [https://bugs.python.org/issue?@action=redirect&bpo=34197]: Attributes *skipinitialspace*, *doublequote* and *strict* of the *dialect* attribute of the `csv` reader are now `bool` instances instead of integers 0 or 1.
- [bpo-32788](https://bugs.python.org/issue?@action=redirect&bpo=32788) [https://bugs.python.org/issue?@action=redirect&bpo=32788]: Errors other than `TypeError` raised in methods `__adapt__()` and `__conform__()` in the `sqlite3` module are now propagated to the user.
- [bpo-21446](https://bugs.python.org/issue?@action=redirect&bpo=21446) [https://bugs.python.org/issue?@action=redirect&bpo=21446]: The `reload` fixer now uses `importlib.reload()` instead of deprecated `imp.reload()`.
- [bpo-940286](https://bugs.python.org/issue?@action=redirect&bpo=940286) [https://bugs.python.org/issue?@action=redirect&bpo=940286]

@action=redirect&bpo=940286]: `pydoc's Helper.showtopic()` method now prints the cross references of a topic correctly.

- [bpo-34164](https://bugs.python.org/issue?@action=redirect&bpo=34164) [https://bugs.python.org/issue?@action=redirect&bpo=34164]: `base64.b32decode()` could raise `UnboundLocalError` or `OverflowError` for incorrect padding. Now it always raises `base64.Error` in these cases.
- [bpo-33729](https://bugs.python.org/issue?@action=redirect&bpo=33729) [https://bugs.python.org/issue?@action=redirect&bpo=33729]: Fixed issues with arguments parsing in `hashlib`.
- [bpo-34097](https://bugs.python.org/issue?@action=redirect&bpo=34097) [https://bugs.python.org/issue?@action=redirect&bpo=34097]: `ZipFile` can zip files older than 1980-01-01 and newer than 2107-12-31 using a new `strict_timestamps` parameter at the cost of setting the timestamp to the limit.
- [bpo-34108](https://bugs.python.org/issue?@action=redirect&bpo=34108) [https://bugs.python.org/issue?@action=redirect&bpo=34108]: Remove extraneous CR in 2to3 refactor.
- [bpo-34070](https://bugs.python.org/issue?@action=redirect&bpo=34070) [https://bugs.python.org/issue?@action=redirect&bpo=34070]: Make sure to only check if the handle is a tty, when opening a file with `buffering=-1`.
- [bpo-27494](https://bugs.python.org/issue?@action=redirect&bpo=27494) [https://bugs.python.org/issue?@action=redirect&bpo=27494]: Reverted [bpo-27494](https://bugs.python.org/issue?@action=redirect&bpo=27494) [https://bugs.python.org/issue?@action=redirect&bpo=27494]. 2to3 rejects now a trailing comma in generator expressions.
- [bpo-33967](https://bugs.python.org/issue?@action=redirect&bpo=33967) [https://bugs.python.org/issue?@action=redirect&bpo=33967]: `functools singledispatch` now raises `TypeError` instead of `IndexError` when no positional arguments are passed.
- [bpo-34041](https://bugs.python.org/issue?@action=redirect&bpo=34041) [https://bugs.python.org/issue?@action=redirect&bpo=34041]: Add the parameter *deterministic* to the `sqlite3.Connection.create_function()` method. Patch by Sergey Fedoseev.

- [bpo-34056](https://bugs.python.org/issue?@action=redirect&bpo=34056) [https://bugs.python.org/issue?@action=redirect&bpo=34056]: Ensure the loader shim created by `imp.load_module` always returns bytes from its `get_data()` function. This fixes using `imp.load_module` with [PEP 552](https://peps.python.org/pep-0552/) [https://peps.python.org/pep-0552/] hash-based pycs.
- [bpo-34054](https://bugs.python.org/issue?@action=redirect&bpo=34054) [https://bugs.python.org/issue?@action=redirect&bpo=34054]: The multiprocessing module now uses the monotonic clock `time.monotonic()` instead of the system clock `time.time()` to implement timeout.
- [bpo-34043](https://bugs.python.org/issue?@action=redirect&bpo=34043) [https://bugs.python.org/issue?@action=redirect&bpo=34043]: Optimize tarfile uncompress performance about 15% when gzip is used.
- [bpo-34044](https://bugs.python.org/issue?@action=redirect&bpo=34044) [https://bugs.python.org/issue?@action=redirect&bpo=34044]: `subprocess.Popen` now copies the `startupinfo` argument to leave it unchanged: it will modify the copy, so that the same `STARTUPINFO` object can be used multiple times.
- [bpo-34010](https://bugs.python.org/issue?@action=redirect&bpo=34010) [https://bugs.python.org/issue?@action=redirect&bpo=34010]: Fixed a performance regression for reading streams with tarfile. The buffered read should use a list, instead of appending to a bytes object.
- [bpo-34019](https://bugs.python.org/issue?@action=redirect&bpo=34019) [https://bugs.python.org/issue?@action=redirect&bpo=34019]: `webbrowser`: Correct the arguments passed to Opera Browser when opening a new URL using the `webbrowser` module. Patch by Bumsik Kim.
- [bpo-34003](https://bugs.python.org/issue?@action=redirect&bpo=34003) [https://bugs.python.org/issue?@action=redirect&bpo=34003]: `csv.DictReader` now creates dicts instead of `OrderedDicts`. Patch by Michael Selik.
- [bpo-33978](https://bugs.python.org/issue?@action=redirect&bpo=33978) [https://bugs.python.org/issue?@action=redirect&bpo=33978]: Closed existing logging handlers before reconfiguration via `fileConfig` and `dictConfig`. Patch by Karthikeyan Singaravelan.
- [bpo-14117](https://bugs.python.org/issue?@action=redirect&bpo=14117) [https://bugs.python.org/issue?@action=redirect&bpo=14117]

@action=redirect&bpo=14117]: Make minor tweaks to `turtledemo`. The ‘wikipedia’ example is now ‘rosette’, describing what it draws. The ‘penrose’ print output is reduced. The ‘1024’ output of ‘tree’ is eliminated.

- [bpo-33974](https://bugs.python.org/issue?@action=redirect&bpo=33974) [https://bugs.python.org/issue?@action=redirect&bpo=33974]: Fixed passing lists and tuples of strings containing special characters " , \, {, } and \n as options to `ttk` widgets.
- [bpo-27500](https://bugs.python.org/issue?@action=redirect&bpo=27500) [https://bugs.python.org/issue?@action=redirect&bpo=27500]: Fix `getaddrinfo` to resolve IPv6 addresses correctly.
- [bpo-24567](https://bugs.python.org/issue?@action=redirect&bpo=24567) [https://bugs.python.org/issue?@action=redirect&bpo=24567]: Improve `random.choices()` to handle subnormal input weights that could occasionally trigger an `IndexError`.
- [bpo-33871](https://bugs.python.org/issue?@action=redirect&bpo=33871) [https://bugs.python.org/issue?@action=redirect&bpo=33871]: Fixed integer overflow in `os.readv()`, `os.writev()`, `os.preadv()` and `os.pwritev()` and in `os.sendfile()` with *headers* or *trailers* arguments (on BSD-based OSes and macOS).
- [bpo-25007](https://bugs.python.org/issue?@action=redirect&bpo=25007) [https://bugs.python.org/issue?@action=redirect&bpo=25007]: Add `copy.copy()` and `copy.deepcopy()` support to `zlib` compressors and decompressors. Patch by Zackery Spytz.
- [bpo-33929](https://bugs.python.org/issue?@action=redirect&bpo=33929) [https://bugs.python.org/issue?@action=redirect&bpo=33929]: multiprocessing: Fix a race condition in `Popen` of `multiprocessing.popen_spawn_win32`. The child process now duplicates the read end of pipe instead of “stealing” it. Previously, the read end of pipe was “stolen” by the child process, but it leaked a handle if the child process had been terminated before it could steal the handle from the parent process.
- [bpo-33899](https://bugs.python.org/issue?@action=redirect&bpo=33899) [https://bugs.python.org/issue?@action=redirect&bpo=33899]: `Tokenizer` module now implicitly

emits a NEWLINE when provided with input that does not have a trailing new line. This behavior now matches what the C tokenizer does internally. Contributed by Ammar Askar.

- [bpo-33897](https://bugs.python.org/issue?@action=redirect&bpo=33897) [https://bugs.python.org/issue?@action=redirect&bpo=33897]: Added a 'force' keyword argument to logging.basicConfig().
- [bpo-33695](https://bugs.python.org/issue?@action=redirect&bpo=33695) [https://bugs.python.org/issue?@action=redirect&bpo=33695]: `shutil.copytree()` uses `os.scandir()` function and all copy functions depending from it use cached `os.stat()` values. The speedup for copying a directory with 8000 files is around +9% on Linux, +20% on Windows and +30% on a Windows SMB share. Also the number of `os.stat()` syscalls is reduced by 38% making `shutil.copytree()` especially faster on network filesystems. (Contributed by Giampaolo Rodola' in [bpo-33695](https://bugs.python.org/issue?@action=redirect&bpo=33695) [https://bugs.python.org/issue?@action=redirect&bpo=33695].)

- [bpo-33767](https://bugs.python.org/issue?@action=redirect&bpo=33767) [https://bugs.python.org/issue?@action=redirect&bpo=33767]: The concatenation (+) and repetition (\*) sequence operations now raise **TypeError** instead of **SystemError** when performed on `mmap.mmap` objects. Patch by Zackery Spytz.
- [bpo-33734](https://bugs.python.org/issue?@action=redirect&bpo=33734) [https://bugs.python.org/issue?@action=redirect&bpo=33734]: asyncio/ssl: Fix AttributeError, increase default handshake timeout
- [bpo-31014](https://bugs.python.org/issue?@action=redirect&bpo=31014) [https://bugs.python.org/issue?@action=redirect&bpo=31014]: Fixed creating a controller for **webbrowser** when a user specifies a path to an entry in the BROWSER environment variable. Based on patch by John Still.
- [bpo-2504](https://bugs.python.org/issue?@action=redirect&bpo=2504) [https://bugs.python.org/issue?@action=redirect&bpo=2504]: Add gettext.gettext() and variants.
- [bpo-33197](https://bugs.python.org/issue?@action=redirect&bpo=33197) [https://bugs.python.org/issue?@action=redirect&bpo=33197]: Add description property for `_ParameterKind`
- [bpo-32751](https://bugs.python.org/issue?@action=redirect&bpo=32751) [https://bugs.python.org/issue?@action=redirect&bpo=32751]

@action=redirect&bpo=32751]: When cancelling the task due to a timeout, `asyncio.wait_for()` will now wait until the cancellation is complete.

- [bpo-32684](https://bugs.python.org/issue?@action=redirect&bpo=32684) [https://bugs.python.org/issue?@action=redirect&bpo=32684]: Fix `gather` to propagate cancellation of itself even with `return_exceptions`.
- [bpo-33654](https://bugs.python.org/issue?@action=redirect&bpo=33654) [https://bugs.python.org/issue?@action=redirect&bpo=33654]: Support protocol type switching in `SSLTransport.set_protocol()`.
- [bpo-33674](https://bugs.python.org/issue?@action=redirect&bpo=33674) [https://bugs.python.org/issue?@action=redirect&bpo=33674]: Pause the transport as early as possible to further reduce the risk of `data_received()` being called before `connection_made()`.
- [bpo-33671](https://bugs.python.org/issue?@action=redirect&bpo=33671) [https://bugs.python.org/issue?@action=redirect&bpo=33671]: `shutil.copyfile()`, `shutil.copy()`, `shutil.copy2()`, `shutil.copypath()` and `shutil.move()` use platform-specific fast-copy syscalls on Linux and macOS in order to copy the file more efficiently. On Windows `shutil.copyfile()` uses a bigger default buffer size (1 MiB instead of 16 KiB) and a `memoryview()`-based variant of `shutil.copyfileobj()` is used. The speedup for copying a 512MiB file is about +26% on Linux, +50% on macOS and +40% on Windows. Also, much less CPU cycles are consumed. (Contributed by Giampaolo Rodola' in [bpo-25427](https://bugs.python.org/issue?@action=redirect&bpo=25427) [https://bugs.python.org/issue?@action=redirect&bpo=25427].)
- [bpo-33674](https://bugs.python.org/issue?@action=redirect&bpo=33674) [https://bugs.python.org/issue?@action=redirect&bpo=33674]: Fix a race condition in `SSLProtocol.connection_made()` of `asyncio.sslproto`: start immediately the handshake instead of using `call_soon()`. Previously, `data_received()` could be called before the handshake started, causing the handshake to hang or fail.
- [bpo-31647](https://bugs.python.org/issue?@action=redirect&bpo=31647) [https://bugs.python.org/issue?@action=redirect&bpo=31647]: Fixed bug where calling

`write_eof()` on a `_SelectorSocketTransport` after it's already closed raises `AttributeError`.

- [bpo-32610](https://bugs.python.org/issue?@action=redirect&bpo=32610) [https://bugs.python.org/issue?@action=redirect&bpo=32610]: Make `asyncio.all_tasks()` return only pending tasks.
- [bpo-32410](https://bugs.python.org/issue?@action=redirect&bpo=32410) [https://bugs.python.org/issue?@action=redirect&bpo=32410]: Avoid blocking on file IO in `sendfile` fallback code
- [bpo-33469](https://bugs.python.org/issue?@action=redirect&bpo=33469) [https://bugs.python.org/issue?@action=redirect&bpo=33469]: Fix `RuntimeError` after closing loop that used `run_in_executor`
- [bpo-33672](https://bugs.python.org/issue?@action=redirect&bpo=33672) [https://bugs.python.org/issue?@action=redirect&bpo=33672]: Fix `Task._repr_` crash with Cython's bogus coroutines
- [bpo-33654](https://bugs.python.org/issue?@action=redirect&bpo=33654) [https://bugs.python.org/issue?@action=redirect&bpo=33654]: Fix `transport.set_protocol()` to support switching between `asyncio.Protocol` and `asyncio.BufferedProtocol`. Fix `loop.start_tls()` to work with `asyncio.BufferedProtocols`.
- [bpo-33652](https://bugs.python.org/issue?@action=redirect&bpo=33652) [https://bugs.python.org/issue?@action=redirect&bpo=33652]: Pickles of type variables and subscripted generics are now future-proof and compatible with older Python versions.
- [bpo-32493](https://bugs.python.org/issue?@action=redirect&bpo=32493) [https://bugs.python.org/issue?@action=redirect&bpo=32493]: Fixed `uuid.uuid1()` on FreeBSD.
- [bpo-33238](https://bugs.python.org/issue?@action=redirect&bpo=33238) [https://bugs.python.org/issue?@action=redirect&bpo=33238]: Add `InvalidStateError` to `concurrent.futures`. `Future.set_result` and `Future.set_exception` now raise `InvalidStateError` if the futures are not pending or running. Patch by Jason Haydaman.

- [bpo-33618](https://bugs.python.org/issue?@action=redirect&bpo=33618) [https://bugs.python.org/issue?@action=redirect&bpo=33618]: Finalize and document preliminary and experimental TLS 1.3 support with OpenSSL 1.1.1
- [bpo-33625](https://bugs.python.org/issue?@action=redirect&bpo=33625) [https://bugs.python.org/issue?@action=redirect&bpo=33625]: Release GIL on `grp.getgrnam`, `grp.getgrgid`, `pwd.getpwnam` and `pwd.getpwuid` if reentrant variants of these functions are available. Patch by William Grzybowski.
- [bpo-33623](https://bugs.python.org/issue?@action=redirect&bpo=33623) [https://bugs.python.org/issue?@action=redirect&bpo=33623]: Fix possible SIGSEGV when `asyncio.Future` is created in `__del__`
- [bpo-11874](https://bugs.python.org/issue?@action=redirect&bpo=11874) [https://bugs.python.org/issue?@action=redirect&bpo=11874]: Use a better regex when breaking usage into wrappable parts. Avoids bogus assertion errors from custom metavar strings.
- [bpo-30877](https://bugs.python.org/issue?@action=redirect&bpo=30877) [https://bugs.python.org/issue?@action=redirect&bpo=30877]: Fixed a bug in the Python implementation of the JSON decoder that prevented the cache of parsed strings from clearing after finishing the decoding. Based on patch by c-fos.
- [bpo-33604](https://bugs.python.org/issue?@action=redirect&bpo=33604) [https://bugs.python.org/issue?@action=redirect&bpo=33604]: Remove HMAC default to md5 marked for removal in 3.8 (removal originally planned in 3.6, bump to 3.8 in PR 7062).
- [bpo-33582](https://bugs.python.org/issue?@action=redirect&bpo=33582) [https://bugs.python.org/issue?@action=redirect&bpo=33582]: Emit a deprecation warning for `inspect.formatargspec`
- [bpo-21145](https://bugs.python.org/issue?@action=redirect&bpo=21145) [https://bugs.python.org/issue?@action=redirect&bpo=21145]: Add `functools.cached_property` decorator, for computed properties cached for the life of the instance.
- [bpo-33570](https://bugs.python.org/issue?@action=redirect&bpo=33570) [https://bugs.python.org/issue?@action=redirect&bpo=33570]

@action=redirect&bpo=33570]: Change TLS 1.3 cipher suite settings for compatibility with OpenSSL 1.1.1-pre6 and newer. OpenSSL 1.1.1 will have TLS 1.3 ciphers enabled by default.

- [bpo-28556](https://bugs.python.org/issue?@action=redirect&bpo=28556) [https://bugs.python.org/issue?@action=redirect&bpo=28556]: Do not simplify arguments to `typing.Union`. Now `Union[Manager, Employee]` is not simplified to `Employee` at runtime. Such simplification previously caused several bugs and limited possibilities for introspection.
- [bpo-12486](https://bugs.python.org/issue?@action=redirect&bpo=12486) [https://bugs.python.org/issue?@action=redirect&bpo=12486]: `tokenize.generate_tokens()` is now documented as a public API to tokenize unicode strings. It was previously present but undocumented.
- [bpo-33540](https://bugs.python.org/issue?@action=redirect&bpo=33540) [https://bugs.python.org/issue?@action=redirect&bpo=33540]: Add a new `block_on_close` class attribute to `ForkingMixIn` and `ThreadingMixIn` classes of `socketserver`.
- [bpo-33548](https://bugs.python.org/issue?@action=redirect&bpo=33548) [https://bugs.python.org/issue?@action=redirect&bpo=33548]: `tempfile._candidate_tempdir_list` should consider common TEMP locations
- [bpo-33109](https://bugs.python.org/issue?@action=redirect&bpo=33109) [https://bugs.python.org/issue?@action=redirect&bpo=33109]: `argparse` subparsers are once again not required by default, reverting the change in behavior introduced by [bpo-26510](https://bugs.python.org/issue?@action=redirect&bpo=26510) [https://bugs.python.org/issue?@action=redirect&bpo=26510] in 3.7.0a2.
- [bpo-33541](https://bugs.python.org/issue?@action=redirect&bpo=33541) [https://bugs.python.org/issue?@action=redirect&bpo=33541]: Remove unused private method `_strptime.LocaleTime.__pad` (a.k.a. `_LocaleTime__pad`).
- [bpo-33536](https://bugs.python.org/issue?@action=redirect&bpo=33536) [https://bugs.python.org/issue?@action=redirect&bpo=33536]: `dataclasses.make_dataclass` now checks for invalid field names and duplicate fields. Also,

added a check for invalid field specifications.

- [bpo-33542](https://bugs.python.org/issue?@action=redirect&bpo=33542) [https://bugs.python.org/issue?@action=redirect&bpo=33542]: Prevent `uuid.get_node` from using a DUID instead of a MAC on Windows. Patch by Zvi Effron
- [bpo-26819](https://bugs.python.org/issue?@action=redirect&bpo=26819) [https://bugs.python.org/issue?@action=redirect&bpo=26819]: Fix race condition with **`ReadTransport.resume_reading`** in Windows proactor event loop.
- Fix failure in `typing.get_type_hints()` when ClassVar was provided as a string forward reference.
- [bpo-33516](https://bugs.python.org/issue?@action=redirect&bpo=33516) [https://bugs.python.org/issue?@action=redirect&bpo=33516]: **`unittest.mock.MagicMock`** now supports the `__round__` magic method.
- [bpo-28612](https://bugs.python.org/issue?@action=redirect&bpo=28612) [https://bugs.python.org/issue?@action=redirect&bpo=28612]: Added support for Site Maps to `urllib's RobotFileParser` as **`RobotFileParser.site_maps()`**. Patch by Lady Red, based on patch by Peter Wirtz.
- [bpo-28167](https://bugs.python.org/issue?@action=redirect&bpo=28167) [https://bugs.python.org/issue?@action=redirect&bpo=28167]: Remove `platform.linux_distribution`, which was deprecated since 3.5.
- [bpo-33504](https://bugs.python.org/issue?@action=redirect&bpo=33504) [https://bugs.python.org/issue?@action=redirect&bpo=33504]: Switch the default dictionary implementation for **`configparser`** from **`collections.OrderedDict`** to the standard **`dict`** type.
- [bpo-33505](https://bugs.python.org/issue?@action=redirect&bpo=33505) [https://bugs.python.org/issue?@action=redirect&bpo=33505]: Optimize `asyncio.ensure_future()` by reordering if checks: 1.17x faster.
- [bpo-33497](https://bugs.python.org/issue?@action=redirect&bpo=33497) [https://bugs.python.org/issue?@action=redirect&bpo=33497]: Add errors param to `cgi.parse_multipart` and make an encoding in `FieldStorage` use

the given errors (needed for Twisted). Patch by Amber Brown.

- [bpo-29235](https://bugs.python.org/issue?@action=redirect&bpo=29235) [https://bugs.python.org/issue?@action=redirect&bpo=29235]: The `cProfile.Profile` class can now be used as a context manager. Patch by Scott Sanderson.
- [bpo-33495](https://bugs.python.org/issue?@action=redirect&bpo=33495) [https://bugs.python.org/issue?@action=redirect&bpo=33495]: Change `dataclasses.Fields` repr to use the repr of each of its members, instead of str. This makes it more clear what each field actually represents. This is especially true for the ‘type’ member.
- [bpo-26103](https://bugs.python.org/issue?@action=redirect&bpo=26103) [https://bugs.python.org/issue?@action=redirect&bpo=26103]: Correct `inspect.isdatadescriptor` to look for `__set__` or `__delete__`. Patch by Aaron Hall.
- [bpo-29209](https://bugs.python.org/issue?@action=redirect&bpo=29209) [https://bugs.python.org/issue?@action=redirect&bpo=29209]: Removed the `doctype()` method and the `html` parameter of the constructor of `XMLParser`. The `doctype()` method defined in a subclass will no longer be called. Deprecated methods `getchildren()` and `getiterator()` in the `ElementTree` module emit now a `DeprecationWarning` instead of `PendingDeprecationWarning`.
- [bpo-33453](https://bugs.python.org/issue?@action=redirect&bpo=33453) [https://bugs.python.org/issue?@action=redirect&bpo=33453]: Fix `dataclasses` to work if using literal string type annotations or if using PEP 563 “Postponed Evaluation of Annotations”. Only specific string prefixes are detected for both `ClassVar` (“ClassVar” and “typing.ClassVar”) and `InitVar` (“InitVar” and “dataclasses.InitVar”).
- [bpo-28556](https://bugs.python.org/issue?@action=redirect&bpo=28556) [https://bugs.python.org/issue?@action=redirect&bpo=28556]: Minor fixes in `typing` module: add annotations to `NamedTuple.__new__`, pass `*args` and `**kwargs` in `Generic.__new__`. Original PRs by Paulius Šarka and Chad Dombrova.

- [bpo-33365](https://bugs.python.org/issue?@action=redirect&bpo=33365) [https://bugs.python.org/issue?@action=redirect&bpo=33365]: Print the header values besides the header keys instead just the header keys if *debuglevel* is set to > 0 in `http.client`. Patch by Marco Strigl.
- [bpo-20087](https://bugs.python.org/issue?@action=redirect&bpo=20087) [https://bugs.python.org/issue?@action=redirect&bpo=20087]: Updated alias mapping with glibc 2.27 supported locales.
- [bpo-33422](https://bugs.python.org/issue?@action=redirect&bpo=33422) [https://bugs.python.org/issue?@action=redirect&bpo=33422]: Fix trailing quotation marks getting deleted when looking up byte/string literals on pydoc. Patch by Andrés Delfino.
- [bpo-28167](https://bugs.python.org/issue?@action=redirect&bpo=28167) [https://bugs.python.org/issue?@action=redirect&bpo=28167]: The function `platform.linux_distribution` and `platform.dist` now trigger a `DeprecationWarning` and have been marked for removal in Python 3.8
- [bpo-33281](https://bugs.python.org/issue?@action=redirect&bpo=33281) [https://bugs.python.org/issue?@action=redirect&bpo=33281]: Fix `ctypes.util.find_library` regression on macOS.
- [bpo-33311](https://bugs.python.org/issue?@action=redirect&bpo=33311) [https://bugs.python.org/issue?@action=redirect&bpo=33311]: Text and html output generated by `cgitb` does not display parentheses if the current call is done directly in the module. Patch by Stéphane Blondon.
- [bpo-27300](https://bugs.python.org/issue?@action=redirect&bpo=27300) [https://bugs.python.org/issue?@action=redirect&bpo=27300]: The file classes in *tempfile* now accept an *errors* parameter that complements the already existing *encoding*. Patch by Stephan Hohe.
- [bpo-32933](https://bugs.python.org/issue?@action=redirect&bpo=32933) [https://bugs.python.org/issue?@action=redirect&bpo=32933]: `unittest.mock.mock_open()` now supports iteration over the file contents. Patch by Tony Flury.
- [bpo-33217](https://bugs.python.org/issue?@action=redirect&bpo=33217) [https://bugs.python.org/issue?@action=redirect&bpo=33217]: Raise `TypeError` when looking

up non-Enum objects in Enum classes and Enum members.

- [bpo-33197](https://bugs.python.org/issue?@action=redirect&bpo=33197) [https://bugs.python.org/issue?@action=redirect&bpo=33197]: Update error message when constructing invalid inspect.Parameters Patch by Dong-hee Na.
- [bpo-33383](https://bugs.python.org/issue?@action=redirect&bpo=33383) [https://bugs.python.org/issue?@action=redirect&bpo=33383]: Fixed crash in the get() method of the `dbm.ndbm` database object when it is called with a single argument.
- [bpo-33375](https://bugs.python.org/issue?@action=redirect&bpo=33375) [https://bugs.python.org/issue?@action=redirect&bpo=33375]: The warnings module now finds the Python file associated with a warning from the code object, rather than the frame's global namespace. This is consistent with how tracebacks and pdb find filenames, and should work better for dynamically executed code.
- [bpo-33336](https://bugs.python.org/issue?@action=redirect&bpo=33336) [https://bugs.python.org/issue?@action=redirect&bpo=33336]: `imaplib` now allows `MOVE` command in `IMAP4.uid()` (RFC 6851: IMAP MOVE Extension) and potentially as a name of supported method of `IMAP4` object.
- [bpo-32455](https://bugs.python.org/issue?@action=redirect&bpo=32455) [https://bugs.python.org/issue?@action=redirect&bpo=32455]: Added *jump* parameter to `dis.stack_effect()`.
- [bpo-27485](https://bugs.python.org/issue?@action=redirect&bpo=27485) [https://bugs.python.org/issue?@action=redirect&bpo=27485]: Rename and deprecate undocumented functions in `urllib.parse()`.
- [bpo-33332](https://bugs.python.org/issue?@action=redirect&bpo=33332) [https://bugs.python.org/issue?@action=redirect&bpo=33332]: Add `signal.valid_signals()` to expose the POSIX sigfillset() functionality.
- [bpo-33251](https://bugs.python.org/issue?@action=redirect&bpo=33251) [https://bugs.python.org/issue?@action=redirect&bpo=33251]: `ConfigParser.items()` was fixed so that key-value pairs passed in via `vars` are not

included in the resulting output.

- [bpo-33329](https://bugs.python.org/issue?@action=redirect&bpo=33329) [https://bugs.python.org/issue?@action=redirect&bpo=33329]: Fix multiprocessing regression on newer glibcs
- [bpo-33334](https://bugs.python.org/issue?@action=redirect&bpo=33334) [https://bugs.python.org/issue?@action=redirect&bpo=33334]: `dis.stack_effect()` now supports all defined opcodes including NOP and EXTENDED\_ARG.
- [bpo-991266](https://bugs.python.org/issue?@action=redirect&bpo=991266) [https://bugs.python.org/issue?@action=redirect&bpo=991266]: Fix quoting of the `Comment` attribute of `http.cookies.SimpleCookie`.
- [bpo-33131](https://bugs.python.org/issue?@action=redirect&bpo=33131) [https://bugs.python.org/issue?@action=redirect&bpo=33131]: Upgrade bundled version of pip to 10.0.1.
- [bpo-33308](https://bugs.python.org/issue?@action=redirect&bpo=33308) [https://bugs.python.org/issue?@action=redirect&bpo=33308]: Fixed a crash in the `parser` module when converting an ST object to a tree of tuples or lists with `line_info=False` and `col_info=True`.
- [bpo-23403](https://bugs.python.org/issue?@action=redirect&bpo=23403) [https://bugs.python.org/issue?@action=redirect&bpo=23403]: `lib2to3` now uses pickle protocol 4 for pre-computed grammars.
- [bpo-33266](https://bugs.python.org/issue?@action=redirect&bpo=33266) [https://bugs.python.org/issue?@action=redirect&bpo=33266]: `lib2to3` now recognizes `rf'...'` strings.
- [bpo-11594](https://bugs.python.org/issue?@action=redirect&bpo=11594) [https://bugs.python.org/issue?@action=redirect&bpo=11594]: Ensure line-endings are respected when using `lib2to3`.
- [bpo-33254](https://bugs.python.org/issue?@action=redirect&bpo=33254) [https://bugs.python.org/issue?@action=redirect&bpo=33254]: Have `importlib.resources.contents()` and `importlib.abc.ResourceReader.contents()` return an `iterable` instead of an `iterator`.

- [bpo-33265](https://bugs.python.org/issue?@action=redirect&bpo=33265) [https://bugs.python.org/issue?@action=redirect&bpo=33265]: `contextlib.ExitStack` and `contextlib.AsyncExitStack` now use a method instead of a wrapper function for exit callbacks.
- [bpo-33263](https://bugs.python.org/issue?@action=redirect&bpo=33263) [https://bugs.python.org/issue?@action=redirect&bpo=33263]: Fix FD leak in `_SelectorSocketTransport` Patch by Vlad Starostin.
- [bpo-33256](https://bugs.python.org/issue?@action=redirect&bpo=33256) [https://bugs.python.org/issue?@action=redirect&bpo=33256]: Fix display of `<module>` call in the html produced by `cglib.html()`. Patch by Stéphane Blondon.
- [bpo-33144](https://bugs.python.org/issue?@action=redirect&bpo=33144) [https://bugs.python.org/issue?@action=redirect&bpo=33144]: `random.Random()` and its subclassing mechanism got optimized to check only once at class/subclass instantiation time whether its `getrandbits()` method can be relied on by other methods, including `randrange()`, for the generation of arbitrarily large random integers. Patch by Wolfgang Maier.
- [bpo-33185](https://bugs.python.org/issue?@action=redirect&bpo=33185) [https://bugs.python.org/issue?@action=redirect&bpo=33185]: Fixed regression when running pydoc with the `-m` switch. (The regression was introduced in 3.7.0b3 by the resolution of [bpo-33053](https://bugs.python.org/issue?@action=redirect&bpo=33053) [https://bugs.python.org/issue?@action=redirect&bpo=33053])

This fix also changed pydoc to add `os.getcwd()` to `sys.path` when necessary, rather than adding `"."`.

- [bpo-29613](https://bugs.python.org/issue?@action=redirect&bpo=29613) [https://bugs.python.org/issue?@action=redirect&bpo=29613]: Added support for the `SameSite` cookie flag to the `http.cookies` module.
- [bpo-33169](https://bugs.python.org/issue?@action=redirect&bpo=33169) [https://bugs.python.org/issue?@action=redirect&bpo=33169]: Delete entries of `None` in `sys.path_importer_cache` when `importlib.machinery.invalidate_caches()` is called.
- [bpo-33203](https://bugs.python.org/issue?@action=redirect&bpo=33203) [https://bugs.python.org/issue?@action=redirect&bpo=33203]

@action=redirect&bpo=33203]: `random.Random.choice()` now raises `IndexError` for empty sequences consistently even when called from subclasses without a `getrandbits()` implementation.

- [bpo-33224](https://bugs.python.org/issue?@action=redirect&bpo=33224) [https://bugs.python.org/issue?@action=redirect&bpo=33224]: Update `difflib.mdifff()` for [PEP 479](https://peps.python.org/pep-0479/) [https://peps.python.org/pep-0479/]. Convert an uncaught `StopIteration` in a generator into a return-statement.
- [bpo-33209](https://bugs.python.org/issue?@action=redirect&bpo=33209) [https://bugs.python.org/issue?@action=redirect&bpo=33209]: End framing at the end of C implementation of `pickle.Pickler.dump()`.
- [bpo-32861](https://bugs.python.org/issue?@action=redirect&bpo=32861) [https://bugs.python.org/issue?@action=redirect&bpo=32861]: The `urllib.robotparser`'s `__str__` representation now includes wildcard entries and the “Crawl-delay” and “Request-rate” fields. Also removes extra newlines that were being appended to the end of the string. Patch by Michael Lazar.
- [bpo-23403](https://bugs.python.org/issue?@action=redirect&bpo=23403) [https://bugs.python.org/issue?@action=redirect&bpo=23403]: `DEFAULT_PROTOCOL` in `pickle` was bumped to 4. Protocol 4 is described in [PEP 3154](https://peps.python.org/pep-3154/) [https://peps.python.org/pep-3154/] and available since Python 3.4. It offers better performance and smaller size compared to protocol 3 introduced in Python 3.0.
- [bpo-20104](https://bugs.python.org/issue?@action=redirect&bpo=20104) [https://bugs.python.org/issue?@action=redirect&bpo=20104]: Improved error handling and fixed a reference leak in `os.posix_spawn()`.
- [bpo-33106](https://bugs.python.org/issue?@action=redirect&bpo=33106) [https://bugs.python.org/issue?@action=redirect&bpo=33106]: Deleting a key from a read-only dbm database raises module specific error instead of `KeyError`.
- [bpo-33175](https://bugs.python.org/issue?@action=redirect&bpo=33175) [https://bugs.python.org/issue?@action=redirect&bpo=33175]: In dataclasses, `Field._set_name__` now looks up the `_set_name__` special method on the class, not the instance, of the default value.

- [bpo-32380](https://bugs.python.org/issue?@action=redirect&bpo=32380) [https://bugs.python.org/issue?@action=redirect&bpo=32380]: Create `functools singledispatchmethod` to support generic single dispatch on descriptors and methods.
- [bpo-33141](https://bugs.python.org/issue?@action=redirect&bpo=33141) [https://bugs.python.org/issue?@action=redirect&bpo=33141]: Have `Field` objects pass through `__set_name__` to their default values, if they have their own `__set_name__`.
- [bpo-33096](https://bugs.python.org/issue?@action=redirect&bpo=33096) [https://bugs.python.org/issue?@action=redirect&bpo=33096]: Allow `ttk.Treeview.insert` to insert iid that has a false boolean value. Note `iid=0` and `iid=False` would be same. Patch by Garvit Khatri.
- [bpo-32873](https://bugs.python.org/issue?@action=redirect&bpo=32873) [https://bugs.python.org/issue?@action=redirect&bpo=32873]: Treat type variables and special typing forms as immutable by copy and pickle. This fixes several minor issues and inconsistencies, and improves backwards compatibility with Python 3.6.
- [bpo-33134](https://bugs.python.org/issue?@action=redirect&bpo=33134) [https://bugs.python.org/issue?@action=redirect&bpo=33134]: When computing dataclass's `__hash__`, use the lookup table to contain the function which returns the `__hash__` value. This is an improvement over looking up a string, and then testing that string to see what to do.
- [bpo-33127](https://bugs.python.org/issue?@action=redirect&bpo=33127) [https://bugs.python.org/issue?@action=redirect&bpo=33127]: The `ssl` module now compiles with LibreSSL 2.7.1.
- [bpo-32505](https://bugs.python.org/issue?@action=redirect&bpo=32505) [https://bugs.python.org/issue?@action=redirect&bpo=32505]: Raise `TypeError` if a member variable of a dataclass is of type `Field`, but doesn't have a type annotation.
- [bpo-33078](https://bugs.python.org/issue?@action=redirect&bpo=33078) [https://bugs.python.org/issue?@action=redirect&bpo=33078]: Fix the failure on OSX caused by the tests relying on `sem_getvalue`

- [bpo-33116](https://bugs.python.org/issue?@action=redirect&bpo=33116) [https://bugs.python.org/issue?@action=redirect&bpo=33116]: Add 'Field' to dataclasses.\_\_all\_\_.
- [bpo-32896](https://bugs.python.org/issue?@action=redirect&bpo=32896) [https://bugs.python.org/issue?@action=redirect&bpo=32896]: Fix an error where subclassing a dataclass with a field that uses a default\_factory would generate an incorrect class.
- [bpo-33100](https://bugs.python.org/issue?@action=redirect&bpo=33100) [https://bugs.python.org/issue?@action=redirect&bpo=33100]: Dataclasses: If a field has a default value that's a MemberDescriptorType, then it's from that field being in \_\_slots\_\_, not an actual default value.
- [bpo-32953](https://bugs.python.org/issue?@action=redirect&bpo=32953) [https://bugs.python.org/issue?@action=redirect&bpo=32953]: If a non-dataclass inherits from a frozen dataclass, allow attributes to be added to the derived class. Only attributes from the frozen dataclass cannot be assigned to. Require all dataclasses in a hierarchy to be either all frozen or all non-frozen.
- [bpo-33097](https://bugs.python.org/issue?@action=redirect&bpo=33097) [https://bugs.python.org/issue?@action=redirect&bpo=33097]: Raise RuntimeError when executor.submit is called during interpreter shutdown.
- [bpo-32968](https://bugs.python.org/issue?@action=redirect&bpo=32968) [https://bugs.python.org/issue?@action=redirect&bpo=32968]: Modulo and floor division involving Fraction and float should return float.
- [bpo-33061](https://bugs.python.org/issue?@action=redirect&bpo=33061) [https://bugs.python.org/issue?@action=redirect&bpo=33061]: Add missing NoReturn to \_\_all\_\_ in typing.py
- [bpo-33078](https://bugs.python.org/issue?@action=redirect&bpo=33078) [https://bugs.python.org/issue?@action=redirect&bpo=33078]: Fix the size handling in multiprocessing.Queue when a pickling error occurs.
- [bpo-33064](https://bugs.python.org/issue?@action=redirect&bpo=33064) [https://bugs.python.org/issue?@action=redirect&bpo=33064]: lib2to3 now properly supports trailing commas after \*args and \*\*kwargs in function signatures.

- [bpo-33056](https://bugs.python.org/issue?@action=redirect&bpo=33056) [https://bugs.python.org/issue?@action=redirect&bpo=33056]: **FIX** properly close leaking fds in `concurrent.futures.ProcessPoolExecutor`.
- [bpo-33021](https://bugs.python.org/issue?@action=redirect&bpo=33021) [https://bugs.python.org/issue?@action=redirect&bpo=33021]: Release the GIL during `fstat()` calls, avoiding hang of all threads when calling `mmap.mmap()`, `os.urandom()`, and `random.seed()`. Patch by Nir Soffer.
- [bpo-31804](https://bugs.python.org/issue?@action=redirect&bpo=31804) [https://bugs.python.org/issue?@action=redirect&bpo=31804]: Avoid failing in `multiprocessing.Process` if the standard streams are closed or `None` at exit.
- [bpo-33034](https://bugs.python.org/issue?@action=redirect&bpo=33034) [https://bugs.python.org/issue?@action=redirect&bpo=33034]: Providing an explicit error message when casting the port property to anything that is not an integer value using `urlparse()` and `urlsplit()`. Patch by Matt Eaton.
- [bpo-30249](https://bugs.python.org/issue?@action=redirect&bpo=30249) [https://bugs.python.org/issue?@action=redirect&bpo=30249]: Improve `struct.unpack_from()` exception messages for problems with the buffer size and offset.
- [bpo-33037](https://bugs.python.org/issue?@action=redirect&bpo=33037) [https://bugs.python.org/issue?@action=redirect&bpo=33037]: Skip sending/receiving data after SSL transport closing.
- [bpo-27683](https://bugs.python.org/issue?@action=redirect&bpo=27683) [https://bugs.python.org/issue?@action=redirect&bpo=27683]: Fix a regression in `ipaddress` that result of `hosts()` is empty when the network is constructed by a tuple containing an integer mask and only 1 bit left for addresses.
- [bpo-22674](https://bugs.python.org/issue?@action=redirect&bpo=22674) [https://bugs.python.org/issue?@action=redirect&bpo=22674]: Add the `strsignal()` function in the `signal` module that returns the system description of the given signal, as returned by `strsignal(3)`.

- [bpo-32999](https://bugs.python.org/issue?@action=redirect&bpo=32999) [https://bugs.python.org/issue?@action=redirect&bpo=32999]: Fix C implementation of `ABC.__subclasscheck__(cls, subclass)` crashed when subclass is not a type object.
- [bpo-33009](https://bugs.python.org/issue?@action=redirect&bpo=33009) [https://bugs.python.org/issue?@action=redirect&bpo=33009]: Fix `inspect.signature()` for single-parameter partial methods.
- [bpo-32969](https://bugs.python.org/issue?@action=redirect&bpo=32969) [https://bugs.python.org/issue?@action=redirect&bpo=32969]: Expose several missing constants in `zlib` and fix corresponding documentation.
- [bpo-32056](https://bugs.python.org/issue?@action=redirect&bpo=32056) [https://bugs.python.org/issue?@action=redirect&bpo=32056]: Improved exceptions raised for invalid number of channels and sample width when read an audio file in modules `aifc`, `wave` and `sunau`.
- [bpo-32970](https://bugs.python.org/issue?@action=redirect&bpo=32970) [https://bugs.python.org/issue?@action=redirect&bpo=32970]: Improved disassembly of the `MAKE_FUNCTION` instruction.
- [bpo-32844](https://bugs.python.org/issue?@action=redirect&bpo=32844) [https://bugs.python.org/issue?@action=redirect&bpo=32844]: Fix wrong redirection of a low descriptor (0 or 1) to `stderr` in subprocess if another low descriptor is closed.
- [bpo-32960](https://bugs.python.org/issue?@action=redirect&bpo=32960) [https://bugs.python.org/issue?@action=redirect&bpo=32960]: For dataclasses, disallow inheriting frozen from non-frozen classes, and also disallow inheriting non-frozen from frozen classes. This restriction will be relaxed at a future date.
- [bpo-32713](https://bugs.python.org/issue?@action=redirect&bpo=32713) [https://bugs.python.org/issue?@action=redirect&bpo=32713]: Fixed `tarfile.itn` handling of out-of-bounds float values. Patch by Joffrey Fuhrer.
- [bpo-32257](https://bugs.python.org/issue?@action=redirect&bpo=32257) [https://bugs.python.org/issue?@action=redirect&bpo=32257]: The `ssl` module now contains `OP_NO_RENEGOTIATION` constant, available with OpenSSL 1.1.0h or 1.1.1.

- [bpo-32951](https://bugs.python.org/issue?@action=redirect&bpo=32951) [https://bugs.python.org/issue?@action=redirect&bpo=32951]: Direct instantiation of SSLSocket and SSLObject objects is now prohibited. The constructors were never documented, tested, or designed as public constructors. Users were suppose to use ssl.wrap\_socket() or SSLContext.
- [bpo-32929](https://bugs.python.org/issue?@action=redirect&bpo=32929) [https://bugs.python.org/issue?@action=redirect&bpo=32929]: Remove the tri-state parameter “hash”, and add the boolean “unsafe\_hash”. If unsafe\_hash is True, add a \_hash\_ function, but if a \_hash\_ exists, raise TypeError. If unsafe\_hash is False, add a \_hash\_ based on the values of eq= and frozen=. The unsafe\_hash=False behavior is the same as the old hash=None behavior. unsafe\_hash=False is the default, just as hash=None used to be.
- [bpo-32947](https://bugs.python.org/issue?@action=redirect&bpo=32947) [https://bugs.python.org/issue?@action=redirect&bpo=32947]: Add OP\_ENABLE\_MIDDLEBOX\_COMPAT and test workaround for TLSv1.3 for future compatibility with OpenSSL 1.1.1.
- [bpo-32146](https://bugs.python.org/issue?@action=redirect&bpo=32146) [https://bugs.python.org/issue?@action=redirect&bpo=32146]: Document the interaction between frozen executables and the spawn and forkserver start methods in multiprocessing.
- [bpo-30622](https://bugs.python.org/issue?@action=redirect&bpo=30622) [https://bugs.python.org/issue?@action=redirect&bpo=30622]: The ssl module now detects missing NPN support in LibreSSL.
- [bpo-32922](https://bugs.python.org/issue?@action=redirect&bpo=32922) [https://bugs.python.org/issue?@action=redirect&bpo=32922]: dbm.open() now encodes filename with the filesystem encoding rather than default encoding.
- [bpo-32759](https://bugs.python.org/issue?@action=redirect&bpo=32759) [https://bugs.python.org/issue?@action=redirect&bpo=32759]: Free unused arenas in multiprocessing.heap.
- [bpo-32859](https://bugs.python.org/issue?@action=redirect&bpo=32859) [https://bugs.python.org/issue?@action=redirect&bpo=32859]: In os.dup2, don't check every

call whether the `dup3` syscall exists or not.

- [bpo-32556](https://bugs.python.org/issue?@action=redirect&bpo=32556) [https://bugs.python.org/issue?@action=redirect&bpo=32556]: `nt._getfinalpathname`, `nt._getvolumepathname` and `nt._getdiskusage` now correctly convert from bytes.
- [bpo-21060](https://bugs.python.org/issue?@action=redirect&bpo=21060) [https://bugs.python.org/issue?@action=redirect&bpo=21060]: Rewrite confusing message from `setup.py` upload from “No dist file created in earlier command” to the more helpful “Must create and upload files in one command”.
- [bpo-32857](https://bugs.python.org/issue?@action=redirect&bpo=32857) [https://bugs.python.org/issue?@action=redirect&bpo=32857]: In `tkinter`, `after_cancel` (`None`) now raises a `ValueError` instead of canceling the first scheduled function. Patch by Cheryl Sabella.
- [bpo-32852](https://bugs.python.org/issue?@action=redirect&bpo=32852) [https://bugs.python.org/issue?@action=redirect&bpo=32852]: Make sure `sys.argv` remains as a list when running trace.
- [bpo-31333](https://bugs.python.org/issue?@action=redirect&bpo=31333) [https://bugs.python.org/issue?@action=redirect&bpo=31333]: `_abc` module is added. It is a speedup module with C implementations for various functions and methods in `abc`. Creating an ABC subclass and calling `isinstance` or `issubclass` with an ABC subclass are up to 1.5x faster. In addition, this makes Python start-up up to 10% faster.

Note that the new implementation hides internal registry and caches, previously accessible via private attributes

`_abc_registry`, `_abc_cache`, and `_abc_negative_cache`. There are three debugging helper methods that can be used instead `_dump_registry`, `_abc_registry_clear`, and `_abc_caches_clear`.

- [bpo-32841](https://bugs.python.org/issue?@action=redirect&bpo=32841) [https://bugs.python.org/issue?@action=redirect&bpo=32841]: Fixed `asyncio.Condition` issue which silently ignored cancellation after notifying and

cancelling a conditional lock. Patch by Bar Harel.

- [bpo-32819](https://bugs.python.org/issue?@action=redirect&bpo=32819) [https://bugs.python.org/issue?@action=redirect&bpo=32819]: `ssl.match_hostname()` has been simplified and no longer depends on `re` and `ipaddress` module for wildcard and IP addresses. Error reporting for invalid wildcards has been improved.
- [bpo-19675](https://bugs.python.org/issue?@action=redirect&bpo=19675) [https://bugs.python.org/issue?@action=redirect&bpo=19675]: `multiprocessing.Pool` no longer leaks processes if its initialization fails.
- [bpo-32394](https://bugs.python.org/issue?@action=redirect&bpo=32394) [https://bugs.python.org/issue?@action=redirect&bpo=32394]: `socket`: Remove `TCP_FASTOPEN`, `TCP_KEEPCNT`, `TCP_KEEPIDLE`, `TCP_KEEPINTVL` flags on older version Windows during run-time.
- [bpo-31787](https://bugs.python.org/issue?@action=redirect&bpo=31787) [https://bugs.python.org/issue?@action=redirect&bpo=31787]: Fixed reflinks of `__init__()` methods in various modules. (Contributed by Oren Milman)
- [bpo-30157](https://bugs.python.org/issue?@action=redirect&bpo=30157) [https://bugs.python.org/issue?@action=redirect&bpo=30157]: Fixed guessing quote and delimiter in `csv.Sniffer.sniff()` when only the last field is quoted. Patch by Jake Davis.
- [bpo-30688](https://bugs.python.org/issue?@action=redirect&bpo=30688) [https://bugs.python.org/issue?@action=redirect&bpo=30688]: Added support of `\N{name}` escapes in regular expressions. Based on patch by Jonathan Eunice.
- [bpo-32792](https://bugs.python.org/issue?@action=redirect&bpo=32792) [https://bugs.python.org/issue?@action=redirect&bpo=32792]: `collections.ChainMap()` preserves the order of the underlying mappings.
- [bpo-32775](https://bugs.python.org/issue?@action=redirect&bpo=32775) [https://bugs.python.org/issue?@action=redirect&bpo=32775]: `fnmatch.translate()` no longer produces patterns which contain set operations. Sets starting with `'[` or containing `'-'`, `'&&'`, `'~'` or `'|'` will be interpreted differently in regular expressions in future versions. Currently they emit warnings. `fnmatch.translate()`

now avoids producing patterns containing such sets by accident.

- [bpo-32622](https://bugs.python.org/issue?@action=redirect&bpo=32622) [https://bugs.python.org/issue?@action=redirect&bpo=32622]: Implement native fast sendfile for Windows proactor event loop.
- [bpo-32777](https://bugs.python.org/issue?@action=redirect&bpo=32777) [https://bugs.python.org/issue?@action=redirect&bpo=32777]: Fix a rare but potential pre-exec child process deadlock in subprocess on POSIX systems when marking file descriptors inheritable on exec in the child process. This bug appears to have been introduced in 3.4.
- [bpo-32647](https://bugs.python.org/issue?@action=redirect&bpo=32647) [https://bugs.python.org/issue?@action=redirect&bpo=32647]: The ctypes module used to depend on indirect linking for dlopen. The shared extension is now explicitly linked against libdl on platforms with dl.
- [bpo-32749](https://bugs.python.org/issue?@action=redirect&bpo=32749) [https://bugs.python.org/issue?@action=redirect&bpo=32749]: A `dbm.dumb` database opened with flags 'r' is now read-only. `dbm.dumb.open()` with flags 'r' and 'w' no longer creates a database if it does not exist.
- [bpo-32741](https://bugs.python.org/issue?@action=redirect&bpo=32741) [https://bugs.python.org/issue?@action=redirect&bpo=32741]: Implement `asyncio.TimerHandle.when()` method.
- [bpo-32691](https://bugs.python.org/issue?@action=redirect&bpo=32691) [https://bugs.python.org/issue?@action=redirect&bpo=32691]: Use `mod_spec.parent` when running modules with `pdb`
- [bpo-32734](https://bugs.python.org/issue?@action=redirect&bpo=32734) [https://bugs.python.org/issue?@action=redirect&bpo=32734]: Fixed `asyncio.Lock()` safety issue which allowed acquiring and locking the same lock multiple times, without it being free. Patch by Bar Harel.
- [bpo-32727](https://bugs.python.org/issue?@action=redirect&bpo=32727) [https://bugs.python.org/issue?@action=redirect&bpo=32727]: Do not include name field in SMTP envelope from address. Patch by Stéphane Wirtel

- [bpo-31453](https://bugs.python.org/issue?@action=redirect&bpo=31453) [https://bugs.python.org/issue?@action=redirect&bpo=31453]: Add `TLSVersion` constants and `SSLContext.maximum_version / minimum_version` attributes. The new API wraps OpenSSL 1.1 [https://web.archive.org/web/20180309043602/https://www.openssl.org/docs/man1.1.0/ssl/SSL\\_CTX\\_set\\_min\\_proto\\_version.html](https://web.archive.org/web/20180309043602/https://www.openssl.org/docs/man1.1.0/ssl/SSL_CTX_set_min_proto_version.html) feature.
- [bpo-24334](https://bugs.python.org/issue?@action=redirect&bpo=24334) [https://bugs.python.org/issue?@action=redirect&bpo=24334]: Internal implementation details of `ssl` module were cleaned up. The `SSLSocket` has one less layer of indirection. Owner and session information are now handled by the `SSLSocket` and `SSLObject` constructor. Channel binding implementation has been simplified.
- [bpo-31848](https://bugs.python.org/issue?@action=redirect&bpo=31848) [https://bugs.python.org/issue?@action=redirect&bpo=31848]: Fix the error handling in `Aifc.read.initfp()` when the SSND chunk is not found. Patch by Zackery Spytz.
- [bpo-32585](https://bugs.python.org/issue?@action=redirect&bpo=32585) [https://bugs.python.org/issue?@action=redirect&bpo=32585]: Add Tk spinbox widget to `tkinter.ttk`. Patch by Alan D Moore.
- [bpo-32512](https://bugs.python.org/issue?@action=redirect&bpo=32512) [https://bugs.python.org/issue?@action=redirect&bpo=32512]: `profile` CLI accepts `-m module_name` as an alternative to script path.
- [bpo-8525](https://bugs.python.org/issue?@action=redirect&bpo=8525) [https://bugs.python.org/issue?@action=redirect&bpo=8525]: `help()` on a type now displays builtin subclasses. This is intended primarily to help with notification of more specific exception subclasses.

Patch by Sanyam Khurana.

- [bpo-31639](https://bugs.python.org/issue?@action=redirect&bpo=31639) [https://bugs.python.org/issue?@action=redirect&bpo=31639]: `http.server` now exposes a `ThreadingHTTPServer` class and uses it when the module is run with `-m` to cope with web browsers pre-opening sockets.
- [bpo-29877](https://bugs.python.org/issue?@action=redirect&bpo=29877) [https://bugs.python.org/issue?@action=redirect&bpo=29877]: `compileall: import`

ProcessPoolExecutor only when needed, preventing hangs on low resource platforms

- [bpo-32221](https://bugs.python.org/issue?@action=redirect&bpo=32221) [https://bugs.python.org/issue?@action=redirect&bpo=32221]: Various functions returning tuple containing IPv6 addresses now omit `%scope` part since the same information is already encoded in `scopeid` tuple item. Especially this speeds up `socket.recvfrom()` when it receives multicast packet since useless resolving of network interface name is omitted.
- [bpo-32147](https://bugs.python.org/issue?@action=redirect&bpo=32147) [https://bugs.python.org/issue?@action=redirect&bpo=32147]: `binascii.unhexlify()` is now up to 2 times faster. Patch by Sergej Fedoseev.
- [bpo-30693](https://bugs.python.org/issue?@action=redirect&bpo=30693) [https://bugs.python.org/issue?@action=redirect&bpo=30693]: The TarFile class now recurses directories in a reproducible way.
- [bpo-30693](https://bugs.python.org/issue?@action=redirect&bpo=30693) [https://bugs.python.org/issue?@action=redirect&bpo=30693]: The ZipFile class now recurses directories in a reproducible way.
- [bpo-31680](https://bugs.python.org/issue?@action=redirect&bpo=31680) [https://bugs.python.org/issue?@action=redirect&bpo=31680]: Added `curses.ncurses_version`.
- [bpo-31908](https://bugs.python.org/issue?@action=redirect&bpo=31908) [https://bugs.python.org/issue?@action=redirect&bpo=31908]: Fix output of cover files for `trace` module command-line tool. Previously emitted cover files only when `--missing` option was used. Patch by Michael Selik.
- [bpo-31608](https://bugs.python.org/issue?@action=redirect&bpo=31608) [https://bugs.python.org/issue?@action=redirect&bpo=31608]: Raise a `TypeError` instead of crashing if a `collections.deque` subclass returns a non-`deque` from `__new__`. Patch by Oren Milman.
- [bpo-31425](https://bugs.python.org/issue?@action=redirect&bpo=31425) [https://bugs.python.org/issue?@action=redirect&bpo=31425]: Add support for sockets of the AF\_QIPCRTR address family, supported by the Linux kernel.

This is used to communicate with services, such as GPS or radio, running on Qualcomm devices. Patch by Bjorn Andersson.

- [bpo-22005](https://bugs.python.org/issue?@action=redirect&bpo=22005) [https://bugs.python.org/issue?@action=redirect&bpo=22005]: Implemented unpickling instances of `datetime`, `date` and `time` pickled by Python 2. `encoding='latin1'` should be used for successful decoding.
- [bpo-27645](https://bugs.python.org/issue?@action=redirect&bpo=27645) [https://bugs.python.org/issue?@action=redirect&bpo=27645]: `sqlite3.Connection` now exposes a `backup` method, if the underlying SQLite library is at version 3.6.11 or higher. Patch by Lele Gaifax.
- [bpo-16865](https://bugs.python.org/issue?@action=redirect&bpo=16865) [https://bugs.python.org/issue?@action=redirect&bpo=16865]: Support arrays  $\geq 2$  GiB in `ctypes`. Patch by Segev Finer.
- [bpo-31508](https://bugs.python.org/issue?@action=redirect&bpo=31508) [https://bugs.python.org/issue?@action=redirect&bpo=31508]: Removed support of arguments in `tkinter.ttk.Treeview.selection`. It was deprecated in 3.6. Use specialized methods like `selection_set` for changing the selection.
- [bpo-29456](https://bugs.python.org/issue?@action=redirect&bpo=29456) [https://bugs.python.org/issue?@action=redirect&bpo=29456]: Fix bugs in hangul normalization: `u1176`, `u11a7` and `u11c3`

## Documentation

- [bpo-21257](https://bugs.python.org/issue?@action=redirect&bpo=21257) [https://bugs.python.org/issue?@action=redirect&bpo=21257]: Document `http.client.parse_headers()`.
- [bpo-34764](https://bugs.python.org/issue?@action=redirect&bpo=34764) [https://bugs.python.org/issue?@action=redirect&bpo=34764]: Improve example of `iter()` with 2nd sentinel argument.
- [bpo-35564](https://bugs.python.org/issue?@action=redirect&bpo=35564) [https://bugs.python.org/issue?@action=redirect&bpo=35564]: Explicitly set `master_doc` variable in `conf.py` for compliance with Sphinx 2.0
- [bpo-35511](https://bugs.python.org/issue?@action=redirect&bpo=35511) [https://bugs.python.org/issue?@action=redirect&bpo=35511]

@action=redirect&bpo=35511]: Specified that profile.Profile class doesn't not support enable or disable methods. Also, elaborated that Profile object as a context manager is only supported in cProfile module.

- [bpo-10536](https://bugs.python.org/issue?@action=redirect&bpo=10536) [https://bugs.python.org/issue?@action=redirect&bpo=10536]: Enhance the gettext docs. Patch by Éric Araujo
- [bpo-35089](https://bugs.python.org/issue?@action=redirect&bpo=35089) [https://bugs.python.org/issue?@action=redirect&bpo=35089]: Remove mention of `typing.io` and `typing.re`. Their types should be imported from `typing` directly.
- [bpo-35038](https://bugs.python.org/issue?@action=redirect&bpo=35038) [https://bugs.python.org/issue?@action=redirect&bpo=35038]: Fix the documentation about an unexisting **`f_restricted`** attribute in the frame object. Patch by Stéphane Wirtel
- [bpo-35042](https://bugs.python.org/issue?@action=redirect&bpo=35042) [https://bugs.python.org/issue?@action=redirect&bpo=35042]: Replace PEP XYZ by the pep role and allow to use the direct links to the PEPs.
- [bpo-35044](https://bugs.python.org/issue?@action=redirect&bpo=35044) [https://bugs.python.org/issue?@action=redirect&bpo=35044]: Fix the documentation with the role `exc` for the appropriated exception. Patch by Stéphane Wirtel
- [bpo-35035](https://bugs.python.org/issue?@action=redirect&bpo=35035) [https://bugs.python.org/issue?@action=redirect&bpo=35035]: Rename documentation for **`email.utils`** to `email.utils.rst`.
- [bpo-34967](https://bugs.python.org/issue?@action=redirect&bpo=34967) [https://bugs.python.org/issue?@action=redirect&bpo=34967]: Use `app.add_object_type()` instead of the deprecated Sphinx function `app.description_unit()`
- [bpo-34913](https://bugs.python.org/issue?@action=redirect&bpo=34913) [https://bugs.python.org/issue?@action=redirect&bpo=34913]: Add documentation about the new command line interface of the gzip module.
- [bpo-32174](https://bugs.python.org/issue?@action=redirect&bpo=32174) [https://bugs.python.org/issue?@action=redirect&bpo=32174]: `chm` document displays non-ASCII charaters properly on some MBCS Windows systems.
- [bpo-11233](https://bugs.python.org/issue?@action=redirect&bpo=11233) [https://bugs.python.org/issue?@action=redirect&bpo=11233]: Create availability directive for documentation. Original patch by Georg Brandl.
- [bpo-34790](https://bugs.python.org/issue?@action=redirect&bpo=34790) [https://bugs.python.org/issue?@action=redirect&bpo=34790]: Document how passing coroutines to `asyncio.wait()` can be confusing.

- [bpo-34552](https://bugs.python.org/issue?@action=redirect&bpo=34552) [https://bugs.python.org/issue?@action=redirect&bpo=34552]: Make clear that `==` operator sometimes is equivalent to `is`. The `<`, `<=`, `>` and `>=` operators are only defined where they make sense.
- [bpo-28617](https://bugs.python.org/issue?@action=redirect&bpo=28617) [https://bugs.python.org/issue?@action=redirect&bpo=28617]: Fixed info in the stdtypes docs concerning the types that support membership tests.
- [bpo-20177](https://bugs.python.org/issue?@action=redirect&bpo=20177) [https://bugs.python.org/issue?@action=redirect&bpo=20177]: Migrate `datetime.date.fromtimestamp` to Argument Clinic. Patch by Tim Hoffmann.
- [bpo-34065](https://bugs.python.org/issue?@action=redirect&bpo=34065) [https://bugs.python.org/issue?@action=redirect&bpo=34065]: Fix wrongly written `basicConfig` documentation markup syntax
- [bpo-33460](https://bugs.python.org/issue?@action=redirect&bpo=33460) [https://bugs.python.org/issue?@action=redirect&bpo=33460]: replaced ellipsis with correct error codes in tutorial chapter 3.
- [bpo-33847](https://bugs.python.org/issue?@action=redirect&bpo=33847) [https://bugs.python.org/issue?@action=redirect&bpo=33847]: Add `@` operator entry to index.
- [bpo-33409](https://bugs.python.org/issue?@action=redirect&bpo=33409) [https://bugs.python.org/issue?@action=redirect&bpo=33409]: Clarified the relationship between [PEP 538](https://peps.python.org/pep-0538/) [https://peps.python.org/pep-0538/]’s `PYTHONCOERCECLOCALE` and PEP 540’s `PYTHONUTF8` mode.
- [bpo-33197](https://bugs.python.org/issue?@action=redirect&bpo=33197) [https://bugs.python.org/issue?@action=redirect&bpo=33197]: Add `versionadded` tag to the documentation of `ParameterKind.description`
- [bpo-17045](https://bugs.python.org/issue?@action=redirect&bpo=17045) [https://bugs.python.org/issue?@action=redirect&bpo=17045]: Improve the C-API doc for `PyTypeObject`. This includes adding several quick-reference tables and a lot of missing slot/typedef entries. The existing entries were also cleaned up with a slightly more consistent format.
- [bpo-33736](https://bugs.python.org/issue?@action=redirect&bpo=33736) [https://bugs.python.org/issue?@action=redirect&bpo=33736]: Improve the documentation of [`asyncio.open\_connection\(\)`](#), [`asyncio.start\_server\(\)`](#) and their UNIX socket counterparts.
- [bpo-23859](https://bugs.python.org/issue?@action=redirect&bpo=23859) [https://bugs.python.org/issue?@action=redirect&bpo=23859]: Document that

`asyncio.wait()` does not cancel its futures on timeout.

- [bpo-32436](https://bugs.python.org/issue?@action=redirect&bpo=32436) [https://bugs.python.org/issue?@action=redirect&bpo=32436]: Document [PEP 567](https://peps.python.org/pep-0567/) [https://peps.python.org/pep-0567/] changes to asyncio.
- [bpo-33604](https://bugs.python.org/issue?@action=redirect&bpo=33604) [https://bugs.python.org/issue?@action=redirect&bpo=33604]: Update HMAC md5 default to a DeprecationWarning, bump removal to 3.8.
- [bpo-33594](https://bugs.python.org/issue?@action=redirect&bpo=33594) [https://bugs.python.org/issue?@action=redirect&bpo=33594]: Document `getargspec`, `from_function` and `from_builtin` as deprecated in their respective docstring, and include version since deprecation in DeprecationWarning message.
- [bpo-33503](https://bugs.python.org/issue?@action=redirect&bpo=33503) [https://bugs.python.org/issue?@action=redirect&bpo=33503]: Fix broken pypi link
- [bpo-33421](https://bugs.python.org/issue?@action=redirect&bpo=33421) [https://bugs.python.org/issue?@action=redirect&bpo=33421]: Add missing documentation for `typing.AsyncContextManager`.
- [bpo-33487](https://bugs.python.org/issue?@action=redirect&bpo=33487) [https://bugs.python.org/issue?@action=redirect&bpo=33487]: BZ2file now emit a DeprecationWarning when buffering=None is passed, the deprecation message and documentation also now explicitly state it is deprecated since 3.0.
- [bpo-33378](https://bugs.python.org/issue?@action=redirect&bpo=33378) [https://bugs.python.org/issue?@action=redirect&bpo=33378]: Add Korean language switcher for <https://docs.python.org/3/>
- [bpo-33276](https://bugs.python.org/issue?@action=redirect&bpo=33276) [https://bugs.python.org/issue?@action=redirect&bpo=33276]: Clarify that the `__path__` attribute on modules cannot be just any value.
- [bpo-33201](https://bugs.python.org/issue?@action=redirect&bpo=33201) [https://bugs.python.org/issue?@action=redirect&bpo=33201]: Modernize documentation for writing C extension types.
- [bpo-33195](https://bugs.python.org/issue?@action=redirect&bpo=33195) [https://bugs.python.org/issue?@action=redirect&bpo=33195]: Deprecate `Py_UNICODE` usage in `c-api/arg` document. `Py_UNICODE` related APIs are deprecated since Python 3.3, but it is missed in the document.
- [bpo-33126](https://bugs.python.org/issue?@action=redirect&bpo=33126) [https://bugs.python.org/issue?@action=redirect&bpo=33126]: Document `PyBuffer_ToContiguous()`.
- [bpo-27212](https://bugs.python.org/issue?@action=redirect&bpo=27212) [https://bugs.python.org/issue?@action=redirect&bpo=27212]: Modify documentation for the

**islice()** recipe to consume initial values up to the start index.

- [bpo-28247](https://bugs.python.org/issue?@action=redirect&bpo=28247) [https://bugs.python.org/issue?@action=redirect&bpo=28247]: Update **zipapp** documentation to describe how to make standalone applications.
- [bpo-18802](https://bugs.python.org/issue?@action=redirect&bpo=18802) [https://bugs.python.org/issue?@action=redirect&bpo=18802]: Documentation changes for **ipaddress**. Patch by Jon Foster and Berker Peksag.
- [bpo-27428](https://bugs.python.org/issue?@action=redirect&bpo=27428) [https://bugs.python.org/issue?@action=redirect&bpo=27428]: Update documentation to clarify that **WindowsRegistryFinder** implements **MetaPathFinder**. (Patch by Himanshu Lakhara)
- [bpo-28124](https://bugs.python.org/issue?@action=redirect&bpo=28124) [https://bugs.python.org/issue?@action=redirect&bpo=28124]: The **ssl** module function **ssl.wrap\_socket()** has been de-emphasized and deprecated in favor of the more secure and efficient **SSLContext.wrap\_socket()** method.
- [bpo-17232](https://bugs.python.org/issue?@action=redirect&bpo=17232) [https://bugs.python.org/issue?@action=redirect&bpo=17232]: Clarify docs for **-O** and **-OO**. Patch by Terry Reedy.
- [bpo-32436](https://bugs.python.org/issue?@action=redirect&bpo=32436) [https://bugs.python.org/issue?@action=redirect&bpo=32436]: Add documentation for the **contextvars** module (PEP 567).
- [bpo-32800](https://bugs.python.org/issue?@action=redirect&bpo=32800) [https://bugs.python.org/issue?@action=redirect&bpo=32800]: Update link to w3c doc for xml default namespaces.
- [bpo-11015](https://bugs.python.org/issue?@action=redirect&bpo=11015) [https://bugs.python.org/issue?@action=redirect&bpo=11015]: Update **test.support** documentation.
- [bpo-32613](https://bugs.python.org/issue?@action=redirect&bpo=32613) [https://bugs.python.org/issue?@action=redirect&bpo=32613]: Update the **faq/windows.html** to use the **py** command from PEP 397 instead of **python**.
- [bpo-8722](https://bugs.python.org/issue?@action=redirect&bpo=8722) [https://bugs.python.org/issue?@action=redirect&bpo=8722]: Document **\_\_getattr\_\_()** behavior when property **get()** method raises **AttributeError**.
- [bpo-32614](https://bugs.python.org/issue?@action=redirect&bpo=32614) [https://bugs.python.org/issue?@action=redirect&bpo=32614]: Modify RE examples in documentation to use raw strings to prevent **DeprecationWarning** and add text to REGEX HOWTO to highlight the deprecation.

- [bpo-20709](https://bugs.python.org/issue?@action=redirect&bpo=20709) [https://bugs.python.org/issue?@action=redirect&bpo=20709]: Remove the paragraph where we explain that `os.utime()` does not support a directory as path under Windows. Patch by Jan-Philip Gehrcke
- [bpo-32722](https://bugs.python.org/issue?@action=redirect&bpo=32722) [https://bugs.python.org/issue?@action=redirect&bpo=32722]: Remove the bad example in the tutorial of the Generator Expression. Patch by Stéphane Wirtel
- [bpo-31972](https://bugs.python.org/issue?@action=redirect&bpo=31972) [https://bugs.python.org/issue?@action=redirect&bpo=31972]: Improve docstrings for `pathlib.PurePath` subclasses.
- [bpo-30607](https://bugs.python.org/issue?@action=redirect&bpo=30607) [https://bugs.python.org/issue?@action=redirect&bpo=30607]: Use the externalized `python-docs-theme` package when building the documentation.
- [bpo-8243](https://bugs.python.org/issue?@action=redirect&bpo=8243) [https://bugs.python.org/issue?@action=redirect&bpo=8243]: Add a note about `curses.addch` and `curses.addstr` exception behavior when writing outside a window, or pad.
- [bpo-32337](https://bugs.python.org/issue?@action=redirect&bpo=32337) [https://bugs.python.org/issue?@action=redirect&bpo=32337]: Update documentation related with `dict` order.
- [bpo-25041](https://bugs.python.org/issue?@action=redirect&bpo=25041) [https://bugs.python.org/issue?@action=redirect&bpo=25041]: Document `AF_PACKET` in the `socket` module.
- [bpo-31432](https://bugs.python.org/issue?@action=redirect&bpo=31432) [https://bugs.python.org/issue?@action=redirect&bpo=31432]: Clarify meaning of `CERT_NONE`, `CERT_OPTIONAL`, and `CERT_REQUIRED` flags for `ssl.SSLContext.verify_mode`.

## Tests

- [bpo-35772](https://bugs.python.org/issue?@action=redirect&bpo=35772) [https://bugs.python.org/issue?@action=redirect&bpo=35772]: Fix sparse file tests of `test_tarfile` on `ppc64` with the `tmpfs` filesystem. Fix the function testing if the filesystem supports sparse files: create a file which contains data and “holes”, instead of creating a file which contains no data. `tmpfs` effective block size is a page size (`tmpfs` lives in the page cache). `RHEL` uses 64 KiB pages on `aarch64`, `ppc64`, `ppc64le`, only `s390x` and `x86_64` use 4 KiB pages, whereas the test punches holes of 4 KiB.

- [bpo-35045](https://bugs.python.org/issue?@action=redirect&bpo=35045) [https://bugs.python.org/issue?@action=redirect&bpo=35045]: Make ssl tests less strict and also accept TLSv1 as system default. The changes unbreaks test\_min\_max\_version on Fedora 29.
- [bpo-32710](https://bugs.python.org/issue?@action=redirect&bpo=32710) [https://bugs.python.org/issue?@action=redirect&bpo=32710]: test\_asyncio/test\_sendfile.py now resets the event loop policy using **tearDownModule()** as done in other tests, to prevent a warning when running tests on Windows.
- [bpo-33717](https://bugs.python.org/issue?@action=redirect&bpo=33717) [https://bugs.python.org/issue?@action=redirect&bpo=33717]: test.pythoninfo now logs information of all clocks, not only time.time() and time.perf\_counter().
- [bpo-35488](https://bugs.python.org/issue?@action=redirect&bpo=35488) [https://bugs.python.org/issue?@action=redirect&bpo=35488]: Add a test to pathlib's Path.match() to verify it does not support glob-style \*\* recursive pattern matching.
- [bpo-31731](https://bugs.python.org/issue?@action=redirect&bpo=31731) [https://bugs.python.org/issue?@action=redirect&bpo=31731]: Fix a race condition in check\_interrupted\_write() of test\_io: create directly the thread with SIGALRM signal blocked, rather than blocking the signal later from the thread. Previously, it was possible that the thread gets the signal before the signal is blocked.
- [bpo-35424](https://bugs.python.org/issue?@action=redirect&bpo=35424) [https://bugs.python.org/issue?@action=redirect&bpo=35424]: Fix test\_multiprocessing\_main\_handling: use **multiprocessing.Pool** with a context manager and then explicitly join the pool.
- [bpo-35519](https://bugs.python.org/issue?@action=redirect&bpo=35519) [https://bugs.python.org/issue?@action=redirect&bpo=35519]: Rename **test.bisect** module to **test.bisect\_cmd** to avoid conflict with **bisect** module when running directly a test like ./python Lib/test/test\_xmlrpc.py.

- [bpo-35513](https://bugs.python.org/issue?@action=redirect&bpo=35513) [https://bugs.python.org/issue?@action=redirect&bpo=35513]: Replace `time.time()` with `time.monotonic()` in tests to measure time delta.
- [bpo-34279](https://bugs.python.org/issue?@action=redirect&bpo=34279) [https://bugs.python.org/issue?@action=redirect&bpo=34279]: `test.support.run_unittest()` no longer raise **TestDidNotRun** if the test result contains skipped tests. The exception is now only raised if no test have been run and no test have been skipped.
- [bpo-35412](https://bugs.python.org/issue?@action=redirect&bpo=35412) [https://bugs.python.org/issue?@action=redirect&bpo=35412]: Add testcase to `test_future4`: check unicode literal.
- [bpo-26704](https://bugs.python.org/issue?@action=redirect&bpo=26704) [https://bugs.python.org/issue?@action=redirect&bpo=26704]: Added test demonstrating double-patching of an instance method. Patch by Anthony Sottile.
- [bpo-33725](https://bugs.python.org/issue?@action=redirect&bpo=33725) [https://bugs.python.org/issue?@action=redirect&bpo=33725]: `test_multiprocessing_fork` may crash on recent versions of macOS. Until the issue is resolved, skip the test on macOS.
- [bpo-35352](https://bugs.python.org/issue?@action=redirect&bpo=35352) [https://bugs.python.org/issue?@action=redirect&bpo=35352]: Modify `test_asyncio` to use the certificate set from the test directory.
- [bpo-35317](https://bugs.python.org/issue?@action=redirect&bpo=35317) [https://bugs.python.org/issue?@action=redirect&bpo=35317]: Fix `mktime()` overflow error in `test_email: run` `test_localtime_daylight_true_dst_true()` and `test_localtime_daylight_false_dst_true()` with a specific timezone.
- [bpo-21263](https://bugs.python.org/issue?@action=redirect&bpo=21263) [https://bugs.python.org/issue?@action=redirect&bpo=21263]: After several reports that `test_gdb` does not work properly on macOS and since `gdb` is not shipped by default anymore, `test_gdb` is now skipped on macOS when LLVM Clang has been used to compile Python. Patch by Lysandros Nikolaou

- [bpo-34279](https://bugs.python.org/issue?@action=redirect&bpo=34279) [https://bugs.python.org/issue?@action=redirect&bpo=34279]: regrtest issue a warning when no tests have been executed in a particular test file. Also, a new final result state is issued if no test have been executed across all test files. Patch by Pablo Galindo.
- [bpo-34962](https://bugs.python.org/issue?@action=redirect&bpo=34962) [https://bugs.python.org/issue?@action=redirect&bpo=34962]: make docstest in Doc now passes., and is enforced in CI
- [bpo-23596](https://bugs.python.org/issue?@action=redirect&bpo=23596) [https://bugs.python.org/issue?@action=redirect&bpo=23596]: Use argparse for the command line of the gzip module. Patch by Antony Lee
- [bpo-34537](https://bugs.python.org/issue?@action=redirect&bpo=34537) [https://bugs.python.org/issue?@action=redirect&bpo=34537]: Fix `test_gdb.test_strings()` when `LC_ALL=C` and GDB was compiled with Python 3.6 or earlier.
- [bpo-34587](https://bugs.python.org/issue?@action=redirect&bpo=34587) [https://bugs.python.org/issue?@action=redirect&bpo=34587]: `test_socket: Remove RDSTest.testCongestion()`. The test tries to fill the receiver's socket buffer and expects an error. But the RDS protocol doesn't require that. Moreover, the Linux implementation of RDS expects that the producer of the messages reduces its rate, it's not the role of the receiver to trigger an error. The test fails on Fedora 28 by design, so just remove it.
- [bpo-34661](https://bugs.python.org/issue?@action=redirect&bpo=34661) [https://bugs.python.org/issue?@action=redirect&bpo=34661]: Fix `test_shutil` if `unzip` doesn't support `-t`.
- [bpo-34200](https://bugs.python.org/issue?@action=redirect&bpo=34200) [https://bugs.python.org/issue?@action=redirect&bpo=34200]: Fixed non-deterministic flakiness of `test_pkg` by not using the scary `test.support.module_cleanup()` logic to save and restore `sys.modules` contents between test cases.
- [bpo-34569](https://bugs.python.org/issue?@action=redirect&bpo=34569) [https://bugs.python.org/issue?@action=redirect&bpo=34569]: The experimental PEP 554 data channels now correctly pass negative PyLong objects between

subinterpreters on 32-bit systems. Patch by Michael Felt.

- [bpo-34594](https://bugs.python.org/issue?@action=redirect&bpo=34594) [https://bugs.python.org/issue?@action=redirect&bpo=34594]: Fix usage of hardcoded `errno` values in the tests.
- [bpo-34579](https://bugs.python.org/issue?@action=redirect&bpo=34579) [https://bugs.python.org/issue?@action=redirect&bpo=34579]: Fix `test_embed` for AIX Patch by Michael Felt
- [bpo-34542](https://bugs.python.org/issue?@action=redirect&bpo=34542) [https://bugs.python.org/issue?@action=redirect&bpo=34542]: Use 3072 RSA keys and SHA-256 signature for test certs and keys.
- [bpo-11193](https://bugs.python.org/issue?@action=redirect&bpo=11193) [https://bugs.python.org/issue?@action=redirect&bpo=11193]: Remove special condition for AIX in `test_subprocess.test_undecodable_env`
- [bpo-34347](https://bugs.python.org/issue?@action=redirect&bpo=34347) [https://bugs.python.org/issue?@action=redirect&bpo=34347]: Fix `test_utf8_mode.test_cmd_line` for AIX
- [bpo-34490](https://bugs.python.org/issue?@action=redirect&bpo=34490) [https://bugs.python.org/issue?@action=redirect&bpo=34490]: On AIX with AF\_UNIX family sockets `getsockname()` does not provide 'sockname', so skip calls to `transport.get_extra_info('sockname')`
- [bpo-34391](https://bugs.python.org/issue?@action=redirect&bpo=34391) [https://bugs.python.org/issue?@action=redirect&bpo=34391]: Fix `ftplib` test for TLS 1.3 by reading from data socket.
- [bpo-11192](https://bugs.python.org/issue?@action=redirect&bpo=11192) [https://bugs.python.org/issue?@action=redirect&bpo=11192]: Fix `test_socket` on AIX 6.1 and later IPv6 zone id supports only supported by `inet_pton6_zone()` Switch to runtime-based `platform.system()` to establish current platform rather than build-time based `sys.platform()`
- [bpo-34399](https://bugs.python.org/issue?@action=redirect&bpo=34399) [https://bugs.python.org/issue?@action=redirect&bpo=34399]: Update all RSA keys and DH params to use at least 2048 bits.

- [bpo-34373](https://bugs.python.org/issue?@action=redirect&bpo=34373) [https://bugs.python.org/issue?@action=redirect&bpo=34373]: Fix `test_mktime` and `test_pthread_getcpuclickid` tests for AIX Add range checking for `_PyTime_localtime` for AIX Patch by Michael Felt
- [bpo-11191](https://bugs.python.org/issue?@action=redirect&bpo=11191) [https://bugs.python.org/issue?@action=redirect&bpo=11191]: Skip the `distutils` test 'test\_search\_cpp' when using XLC as compiler patch by aixtools (Michael Felt)
- Improved an error message when `mock.assert_has_calls` fails.
- [bpo-33746](https://bugs.python.org/issue?@action=redirect&bpo=33746) [https://bugs.python.org/issue?@action=redirect&bpo=33746]: Fix `test_unittest` when run in verbose mode.
- [bpo-33901](https://bugs.python.org/issue?@action=redirect&bpo=33901) [https://bugs.python.org/issue?@action=redirect&bpo=33901]: Fix `test_dbm_gnu` on macOS with `gdbm 1.15`: add a larger value to make sure that the file size changes.
- [bpo-33873](https://bugs.python.org/issue?@action=redirect&bpo=33873) [https://bugs.python.org/issue?@action=redirect&bpo=33873]: Fix a bug in `regtest` that caused an extra test to run if `-huntleaks/-R` was used. Exit with error in case that invalid parameters are specified to `-huntleaks/-R` (at least one warmup run and one repetition must be used).
- [bpo-33562](https://bugs.python.org/issue?@action=redirect&bpo=33562) [https://bugs.python.org/issue?@action=redirect&bpo=33562]: Check that a global `asyncio` event loop policy is not left behind by any tests.
- [bpo-33655](https://bugs.python.org/issue?@action=redirect&bpo=33655) [https://bugs.python.org/issue?@action=redirect&bpo=33655]: Ignore `test_posix_fallocate` failures on BSD platforms that might be due to running on ZFS.
- [bpo-32962](https://bugs.python.org/issue?@action=redirect&bpo=32962) [https://bugs.python.org/issue?@action=redirect&bpo=32962]: Fixed `test_gdb` when Python is compiled with flags `-mcet -fcf-protection -O0`.

- [bpo-33358](https://bugs.python.org/issue?@action=redirect&bpo=33358) [https://bugs.python.org/issue?@action=redirect&bpo=33358]: Fix `test_embed.test_pre_initialization_sys_options()` when the interpreter is built with `--enable-shared`.
- [bpo-32872](https://bugs.python.org/issue?@action=redirect&bpo=32872) [https://bugs.python.org/issue?@action=redirect&bpo=32872]: Avoid regrtest compatibility issue with namespace packages.
- [bpo-32517](https://bugs.python.org/issue?@action=redirect&bpo=32517) [https://bugs.python.org/issue?@action=redirect&bpo=32517]: Fix failing `test_asyncio` on macOS 10.12.2+ due to transport of `KqueueSelector` loop was not being closed.
- [bpo-32663](https://bugs.python.org/issue?@action=redirect&bpo=32663) [https://bugs.python.org/issue?@action=redirect&bpo=32663]: Making sure the **SMTPUTF8SimTests** class of tests gets run in `test_smtplib.py`.
- [bpo-27643](https://bugs.python.org/issue?@action=redirect&bpo=27643) [https://bugs.python.org/issue?@action=redirect&bpo=27643]: `Test_C` test case needs “signed short” bitfields, but the IBM XLC compiler (on AIX) does not support this Skip the code and test when AIX and XLC are used

Applicable to Python2-2.7 and later

- [bpo-19417](https://bugs.python.org/issue?@action=redirect&bpo=19417) [https://bugs.python.org/issue?@action=redirect&bpo=19417]: Add `test_bdb.py`.
- [bpo-31809](https://bugs.python.org/issue?@action=redirect&bpo=31809) [https://bugs.python.org/issue?@action=redirect&bpo=31809]: Add tests to verify connection with secp ECDH curves.

## Build

- [bpo-34691](https://bugs.python.org/issue?@action=redirect&bpo=34691) [https://bugs.python.org/issue?@action=redirect&bpo=34691]: The `_contextvars` module is now built into the core Python library on Windows.
- [bpo-35683](https://bugs.python.org/issue?@action=redirect&bpo=35683) [https://bugs.python.org/issue?@action=redirect&bpo=35683]: Improved Azure Pipelines build steps and now verifying layouts correctly

- [bpo-35642](https://bugs.python.org/issue?@action=redirect&bpo=35642) [https://bugs.python.org/issue?@action=redirect&bpo=35642]: Remove `asyncomodule.c` from `pythoncore.vcxproj`
- [bpo-35550](https://bugs.python.org/issue?@action=redirect&bpo=35550) [https://bugs.python.org/issue?@action=redirect&bpo=35550]: Fix incorrect Solaris `#ifdef` checks to look for `_sun` && `_SVR4` instead of `sun` when compiling.
- [bpo-35499](https://bugs.python.org/issue?@action=redirect&bpo=35499) [https://bugs.python.org/issue?@action=redirect&bpo=35499]: `make profile-opt` no longer replaces `CFLAGS_NODIST` with `CFLAGS`. It now adds profile-guided optimization (PGO) flags to `CFLAGS_NODIST`: existing `CFLAGS_NODIST` flags are kept.
- [bpo-35257](https://bugs.python.org/issue?@action=redirect&bpo=35257) [https://bugs.python.org/issue?@action=redirect&bpo=35257]: Avoid leaking the linker flags from Link Time Optimizations (LTO) into `distutils` when compiling C extensions.
- [bpo-35351](https://bugs.python.org/issue?@action=redirect&bpo=35351) [https://bugs.python.org/issue?@action=redirect&bpo=35351]: When building Python with clang and LTO, LTO flags are no longer passed into `CFLAGS` to build third-party C extensions through `distutils`.
- [bpo-35139](https://bugs.python.org/issue?@action=redirect&bpo=35139) [https://bugs.python.org/issue?@action=redirect&bpo=35139]: Fix a compiler error when statically linking **pyexpat** in **Modules/Setup**.
- [bpo-35059](https://bugs.python.org/issue?@action=redirect&bpo=35059) [https://bugs.python.org/issue?@action=redirect&bpo=35059]: PCbuild: Set `InlineFunctionExpansion` to `OnlyExplicitInline` (“/Ob1” option) in `pyproject.props` in Debug mode to expand functions marked as inline. This change should make Python compiled in Debug mode a little bit faster on Windows.
- [bpo-35011](https://bugs.python.org/issue?@action=redirect&bpo=35011) [https://bugs.python.org/issue?@action=redirect&bpo=35011]: Restores the use of `pyexpatns.h` to isolate our embedded copy of the expat C library so that its symbols do not conflict at link or dynamic loading time with an embedding application or other extension modules with their own version of `libexpat`.
- [bpo-28015](https://bugs.python.org/issue?@action=redirect&bpo=28015) [https://bugs.python.org/issue?@action=redirect&bpo=28015]: Have `-with-lto` works correctly with clang.
- [bpo-34765](https://bugs.python.org/issue?@action=redirect&bpo=34765) [https://bugs.python.org/issue?@action=redirect&bpo=34765]: Update the outdated `install-sh` file to the latest revision from `automake v1.16.1`

- [bpo-34585](https://bugs.python.org/issue?@action=redirect&bpo=34585) [https://bugs.python.org/issue?@action=redirect&bpo=34585]: Check for floating-point byte order in configure.ac using compilation tests instead of executing code, so that these checks work in cross-compiled builds.
- [bpo-34710](https://bugs.python.org/issue?@action=redirect&bpo=34710) [https://bugs.python.org/issue?@action=redirect&bpo=34710]: Fixed SSL module build with OpenSSL & pedantic CFLAGS.
- [bpo-34582](https://bugs.python.org/issue?@action=redirect&bpo=34582) [https://bugs.python.org/issue?@action=redirect&bpo=34582]: Add JUnit XML output for regression tests and update Azure DevOps builds.
- [bpo-34081](https://bugs.python.org/issue?@action=redirect&bpo=34081) [https://bugs.python.org/issue?@action=redirect&bpo=34081]: Make Sphinx warnings as errors in the Docs Makefile.
- [bpo-34555](https://bugs.python.org/issue?@action=redirect&bpo=34555) [https://bugs.python.org/issue?@action=redirect&bpo=34555]: Fix for case where it was not possible to have both HAVE\_LINUX\_VM\_SOCKETS\_H and HAVE\_SOCKADDR\_ALG be undefined.
- [bpo-33015](https://bugs.python.org/issue?@action=redirect&bpo=33015) [https://bugs.python.org/issue?@action=redirect&bpo=33015]: Fix an undefined behaviour in the pthread implementation of **PyThread\_start\_new\_thread()**: add a function wrapper to always return NULL.
- [bpo-34245](https://bugs.python.org/issue?@action=redirect&bpo=34245) [https://bugs.python.org/issue?@action=redirect&bpo=34245]: The Python shared library is now installed with write permission (mode 0755), which is the standard way of installing such libraries.
- [bpo-34121](https://bugs.python.org/issue?@action=redirect&bpo=34121) [https://bugs.python.org/issue?@action=redirect&bpo=34121]: Fix detection of C11 atomic support on clang.
- [bpo-32430](https://bugs.python.org/issue?@action=redirect&bpo=32430) [https://bugs.python.org/issue?@action=redirect&bpo=32430]: Rename Modules/Setup.dist to Modules/Setup, and remove the necessity to copy the former manually to the latter when updating the local source tree.
- [bpo-30345](https://bugs.python.org/issue?@action=redirect&bpo=30345) [https://bugs.python.org/issue?@action=redirect&bpo=30345]: Add -g to LDFLAGS when compiling with LTO to get debug symbols.
- [bpo-5755](https://bugs.python.org/issue?@action=redirect&bpo=5755) [https://bugs.python.org/issue?@action=redirect&bpo=5755]: Move -Wstrict-prototypes option to CFLAGS\_NODIST from OPT. This option emitted annoying warnings when

building extension modules written in C + + .

- [bpo-33614](https://bugs.python.org/issue?@action=redirect&bpo=33614) [https://bugs.python.org/issue?@action=redirect&bpo=33614]: Ensures module definition files for the stable ABI on Windows are correctly regenerated.
- [bpo-33648](https://bugs.python.org/issue?@action=redirect&bpo=33648) [https://bugs.python.org/issue?@action=redirect&bpo=33648]: The `-with-c-locale-warning` configuration flag has been removed. It has had no effect for about a year.
- [bpo-33522](https://bugs.python.org/issue?@action=redirect&bpo=33522) [https://bugs.python.org/issue?@action=redirect&bpo=33522]: Enable CI builds on Visual Studio Team Services at <https://python.visualstudio.com/cpython>
- [bpo-33512](https://bugs.python.org/issue?@action=redirect&bpo=33512) [https://bugs.python.org/issue?@action=redirect&bpo=33512]: `configure`'s check for "long double" has been simplified
- [bpo-33483](https://bugs.python.org/issue?@action=redirect&bpo=33483) [https://bugs.python.org/issue?@action=redirect&bpo=33483]: C compiler is now correctly detected from the standard environment variables. `-without-gcc` and `-with-icc` options have been removed.
- [bpo-33394](https://bugs.python.org/issue?@action=redirect&bpo=33394) [https://bugs.python.org/issue?@action=redirect&bpo=33394]: Enable the verbose build for extension modules, when GNU make is passed macros on the command line.
- [bpo-33393](https://bugs.python.org/issue?@action=redirect&bpo=33393) [https://bugs.python.org/issue?@action=redirect&bpo=33393]: Update `config.guess` and `config.sub` files.
- [bpo-33377](https://bugs.python.org/issue?@action=redirect&bpo=33377) [https://bugs.python.org/issue?@action=redirect&bpo=33377]: Add new triplets for mips r6 and riscv variants (used in extension suffixes).
- [bpo-32232](https://bugs.python.org/issue?@action=redirect&bpo=32232) [https://bugs.python.org/issue?@action=redirect&bpo=32232]: By default, modules configured in **Modules/Setup** are no longer built with `-DPy_BUILD_CORE`. Instead, modules that specifically need that preprocessor definition include it in their individual entries.
- [bpo-33182](https://bugs.python.org/issue?@action=redirect&bpo=33182) [https://bugs.python.org/issue?@action=redirect&bpo=33182]: The embedding tests can once again be built with clang 6.0
- [bpo-33163](https://bugs.python.org/issue?@action=redirect&bpo=33163) [https://bugs.python.org/issue?@action=redirect&bpo=33163]: Upgrade pip to 9.0.3 and setuptools to v39.0.1.

- [bpo-33012](https://bugs.python.org/issue?@action=redirect&bpo=33012) [https://bugs.python.org/issue?@action=redirect&bpo=33012]: gcc 8 has added a new warning heuristic to detect invalid function casts and a stock python build seems to hit that warning quite often. The most common is the cast of a METH\_NOARGS function (that uses just one argument) to a PyCFunction. Fix this by adding a dummy argument to all functions that implement METH\_NOARGS.
- [bpo-32898](https://bugs.python.org/issue?@action=redirect&bpo=32898) [https://bugs.python.org/issue?@action=redirect&bpo=32898]: Fix the python debug build when using COUNT\_ALLOCS.
- [bpo-29442](https://bugs.python.org/issue?@action=redirect&bpo=29442) [https://bugs.python.org/issue?@action=redirect&bpo=29442]: Replace optparse with argparse in setup.py

## Windows

- [bpo-35890](https://bugs.python.org/issue?@action=redirect&bpo=35890) [https://bugs.python.org/issue?@action=redirect&bpo=35890]: Fix API calling consistency of GetVersionEx and wctok.
- [bpo-32560](https://bugs.python.org/issue?@action=redirect&bpo=32560) [https://bugs.python.org/issue?@action=redirect&bpo=32560]: The py launcher now forwards its STARTUPINFO structure to child processes.
- [bpo-35854](https://bugs.python.org/issue?@action=redirect&bpo=35854) [https://bugs.python.org/issue?@action=redirect&bpo=35854]: Fix EnvBuilder and --symlinks in venv on Windows
- [bpo-35811](https://bugs.python.org/issue?@action=redirect&bpo=35811) [https://bugs.python.org/issue?@action=redirect&bpo=35811]: Avoid propagating venv settings when launching via py.exe
- [bpo-35797](https://bugs.python.org/issue?@action=redirect&bpo=35797) [https://bugs.python.org/issue?@action=redirect&bpo=35797]: Fix default executable used by the multiprocessing module
- [bpo-35758](https://bugs.python.org/issue?@action=redirect&bpo=35758) [https://bugs.python.org/issue?@action=redirect&bpo=35758]: Allow building on ARM with MSVC.
- [bpo-29734](https://bugs.python.org/issue?@action=redirect&bpo=29734) [https://bugs.python.org/issue?@action=redirect&bpo=29734]: Fix handle leaks in os.stat on Windows.
- [bpo-35596](https://bugs.python.org/issue?@action=redirect&bpo=35596) [https://bugs.python.org/issue?@action=redirect&bpo=35596]: Use unchecked PYCs for the

embeddable distro to avoid zipimport restrictions.

- [bpo-35596](https://bugs.python.org/issue?@action=redirect&bpo=35596) [https://bugs.python.org/issue?@action=redirect&bpo=35596]: Fix vcruntime140.dll being added to embeddable distro multiple times.
- [bpo-35402](https://bugs.python.org/issue?@action=redirect&bpo=35402) [https://bugs.python.org/issue?@action=redirect&bpo=35402]: Update Windows build to use Tcl and Tk 8.6.9
- [bpo-35401](https://bugs.python.org/issue?@action=redirect&bpo=35401) [https://bugs.python.org/issue?@action=redirect&bpo=35401]: Updates Windows build to OpenSSL 1.1.0j
- [bpo-34977](https://bugs.python.org/issue?@action=redirect&bpo=34977) [https://bugs.python.org/issue?@action=redirect&bpo=34977]: venv on Windows will now use a python.exe redirector rather than copying the actual binaries from the base environment.
- [bpo-34977](https://bugs.python.org/issue?@action=redirect&bpo=34977) [https://bugs.python.org/issue?@action=redirect&bpo=34977]: Adds support for building a Windows App Store package
- [bpo-35067](https://bugs.python.org/issue?@action=redirect&bpo=35067) [https://bugs.python.org/issue?@action=redirect&bpo=35067]: Remove \_distutils\_findvs module and use vswhere.exe instead.
- [bpo-32557](https://bugs.python.org/issue?@action=redirect&bpo=32557) [https://bugs.python.org/issue?@action=redirect&bpo=32557]: Allow shutil.disk\_usage to take a file path on Windows
- [bpo-34770](https://bugs.python.org/issue?@action=redirect&bpo=34770) [https://bugs.python.org/issue?@action=redirect&bpo=34770]: Fix a possible null pointer dereference in pyshellext.cpp.
- [bpo-34603](https://bugs.python.org/issue?@action=redirect&bpo=34603) [https://bugs.python.org/issue?@action=redirect&bpo=34603]: Fix returning structs from functions produced by MSVC
- [bpo-34581](https://bugs.python.org/issue?@action=redirect&bpo=34581) [https://bugs.python.org/issue?@action=redirect&bpo=34581]: Guard MSVC-specific code in socketmodule.c with `#ifdef _MSC_VER`.
- [bpo-34532](https://bugs.python.org/issue?@action=redirect&bpo=34532) [https://bugs.python.org/issue?@action=redirect&bpo=34532]: Fixes exit code of list version arguments for py.exe.
- [bpo-34062](https://bugs.python.org/issue?@action=redirect&bpo=34062) [https://bugs.python.org/issue?@action=redirect&bpo=34062]: Fixed the ‘-list’ and ‘-list-paths’ arguments for the py.exe launcher
- [bpo-34225](https://bugs.python.org/issue?@action=redirect&bpo=34225) [https://bugs.python.org/issue?@action=redirect&bpo=34225]: Ensure INCLUDE and LIB

directories do not end with a backslash.

- [bpo-34011](https://bugs.python.org/issue?@action=redirect&bpo=34011) [https://bugs.python.org/issue?@action=redirect&bpo=34011]: A suite of code has been changed which copied across DLLs and init.tcl from the running Python location into a venv being created. These copies are needed only when running from a Python source build, and the copying code is now only run when that is the case, rather than whenever a venv is created.
- [bpo-34006](https://bugs.python.org/issue?@action=redirect&bpo=34006) [https://bugs.python.org/issue?@action=redirect&bpo=34006]: Revert line length limit for Windows help docs. The line-length limit is not needed because the pages appear in a separate app rather than on a browser tab. It can also interact badly with the DPI setting.
- [bpo-31546](https://bugs.python.org/issue?@action=redirect&bpo=31546) [https://bugs.python.org/issue?@action=redirect&bpo=31546]: Restore running PyOS\_InputHook while waiting for user input at the prompt. The restores integration of interactive GUI windows (such as Matplotlib figures) with the prompt on Windows.
- [bpo-30237](https://bugs.python.org/issue?@action=redirect&bpo=30237) [https://bugs.python.org/issue?@action=redirect&bpo=30237]: Output error when ReadConsole is canceled by CancelSynchronousIo instead of crashing.
- [bpo-33895](https://bugs.python.org/issue?@action=redirect&bpo=33895) [https://bugs.python.org/issue?@action=redirect&bpo=33895]: GIL is released while calling functions that acquire Windows loader lock.
- [bpo-33720](https://bugs.python.org/issue?@action=redirect&bpo=33720) [https://bugs.python.org/issue?@action=redirect&bpo=33720]: Reduces maximum marshal recursion depth on release builds.
- [bpo-29097](https://bugs.python.org/issue?@action=redirect&bpo=29097) [https://bugs.python.org/issue?@action=redirect&bpo=29097]: Fix bug where `datetime.fromtimestamp()` erroneously throws an `OSError` on Windows for values between 0 and 86400. Patch by Ammar Askar.
- [bpo-33316](https://bugs.python.org/issue?@action=redirect&bpo=33316) [https://bugs.python.org/issue?@action=redirect&bpo=33316]: `PyThread_release_lock` always fails
- [bpo-33184](https://bugs.python.org/issue?@action=redirect&bpo=33184) [https://bugs.python.org/issue?@action=redirect&bpo=33184]: Update Windows installer to use OpenSSL 1.1.0h.
- [bpo-32890](https://bugs.python.org/issue?@action=redirect&bpo=32890) [https://bugs.python.org/issue?@action=redirect&bpo=32890]: Fix usage of `GetLastError()` instead of `errno` in `os.execve()` and `os.truncate()`.

- [bpo-33016](https://bugs.python.org/issue?@action=redirect&bpo=33016) [https://bugs.python.org/issue?@action=redirect&bpo=33016]: Fix potential use of uninitialized memory in `nt._getfinalpathname`
- [bpo-32903](https://bugs.python.org/issue?@action=redirect&bpo=32903) [https://bugs.python.org/issue?@action=redirect&bpo=32903]: Fix a memory leak in `os.chdir()` on Windows if the current directory is set to a UNC path.
- [bpo-32901](https://bugs.python.org/issue?@action=redirect&bpo=32901) [https://bugs.python.org/issue?@action=redirect&bpo=32901]: Update Tcl and Tk versions to 8.6.8
- [bpo-31966](https://bugs.python.org/issue?@action=redirect&bpo=31966) [https://bugs.python.org/issue?@action=redirect&bpo=31966]: Fixed `WindowsConsoleIO.write()` for writing empty data.
- [bpo-32409](https://bugs.python.org/issue?@action=redirect&bpo=32409) [https://bugs.python.org/issue?@action=redirect&bpo=32409]: Ensures `activate.bat` can handle Unicode contents.
- [bpo-32457](https://bugs.python.org/issue?@action=redirect&bpo=32457) [https://bugs.python.org/issue?@action=redirect&bpo=32457]: Improves handling of denormalized executable path when launching Python.
- [bpo-32370](https://bugs.python.org/issue?@action=redirect&bpo=32370) [https://bugs.python.org/issue?@action=redirect&bpo=32370]: Use the correct encoding for `ipconfig` output in the `uuid` module. Patch by Segev Finer.
- [bpo-29248](https://bugs.python.org/issue?@action=redirect&bpo=29248) [https://bugs.python.org/issue?@action=redirect&bpo=29248]: Fix `os.readlink()` on Windows, which was mistakenly treating the `PrintNameOffset` field of the reparse data buffer as a number of characters instead of bytes. Patch by Craig Holmquist and SSE4.
- [bpo-1104](https://bugs.python.org/issue?@action=redirect&bpo=1104) [https://bugs.python.org/issue?@action=redirect&bpo=1104]: Correctly handle string length in `msilib.SummaryInfo.GetProperty()` to prevent it from truncating the last character.

## macOS

- [bpo-35401](https://bugs.python.org/issue?@action=redirect&bpo=35401) [https://bugs.python.org/issue?@action=redirect&bpo=35401]: Update macOS installer to use OpenSSL 1.1.0j.
- [bpo-35025](https://bugs.python.org/issue?@action=redirect&bpo=35025) [https://bugs.python.org/issue?@action=redirect&bpo=35025]: Properly guard the use of the `CLOCK_GETTIME` et al. macros in `timemodule` on macOS.

- [bpo-24658](https://bugs.python.org/issue?@action=redirect&bpo=24658) [https://bugs.python.org/issue?@action=redirect&bpo=24658]: On macOS, fix reading from and writing into a file with a size larger than 2 GiB.
- [bpo-34405](https://bugs.python.org/issue?@action=redirect&bpo=34405) [https://bugs.python.org/issue?@action=redirect&bpo=34405]: Update to OpenSSL 1.1.0i for macOS installer builds.
- [bpo-33635](https://bugs.python.org/issue?@action=redirect&bpo=33635) [https://bugs.python.org/issue?@action=redirect&bpo=33635]: In macOS stat on some file descriptors (/dev/fd/3 f.e) will result in bad file descriptor OSError. Guard against this exception was added in is\_dir, is\_file and similar methods. DirEntry.is\_dir can also throw this exception so \_RecursiveWildcardSelector.\_iterate\_directories was also extended with the same error ignoring pattern.
- [bpo-13631](https://bugs.python.org/issue?@action=redirect&bpo=13631) [https://bugs.python.org/issue?@action=redirect&bpo=13631]: The .editrc file in user's home directory is now processed correctly during the readline initialization through editline emulation on macOS.
- [bpo-33184](https://bugs.python.org/issue?@action=redirect&bpo=33184) [https://bugs.python.org/issue?@action=redirect&bpo=33184]: Update macOS installer build to use OpenSSL 1.1.0h.
- [bpo-32726](https://bugs.python.org/issue?@action=redirect&bpo=32726) [https://bugs.python.org/issue?@action=redirect&bpo=32726]: Build and link with private copy of Tcl/Tk 8.6 for the macOS 10.6+ installer. The 10.9+ installer variant already does this. This means that the Python 3.7 provided by the python.org macOS installers no longer need or use any external versions of Tcl/Tk, either system-provided or user-installed, such as ActiveTcl.
- [bpo-32901](https://bugs.python.org/issue?@action=redirect&bpo=32901) [https://bugs.python.org/issue?@action=redirect&bpo=32901]: Update macOS 10.9+ installer to Tcl/Tk 8.6.8.
- [bpo-31903](https://bugs.python.org/issue?@action=redirect&bpo=31903) [https://bugs.python.org/issue?@action=redirect&bpo=31903]: In **\_scproxy**, drop the GIL when calling into `SystemConfiguration` to avoid deadlocks.

## IDLE

- [bpo-35770](https://bugs.python.org/issue?@action=redirect&bpo=35770) [https://bugs.python.org/issue?@action=redirect&bpo=35770]: IDLE macosx deletes Options = > Configure IDLE. It previously deleted Window = > Zoom Height by mistake. (Zoom Height is now on the Options

menu). On Mac, the settings dialog is accessed via Preferences on the IDLE menu.

- [bpo-35769](https://bugs.python.org/issue?@action=redirect&bpo=35769) [https://bugs.python.org/issue?@action=redirect&bpo=35769]: Change IDLE's new file name from 'Untitled' to 'untitled'
- [bpo-35660](https://bugs.python.org/issue?@action=redirect&bpo=35660) [https://bugs.python.org/issue?@action=redirect&bpo=35660]: Fix imports in idlelib.window.
- [bpo-35641](https://bugs.python.org/issue?@action=redirect&bpo=35641) [https://bugs.python.org/issue?@action=redirect&bpo=35641]: Proper format **calltip** when the function has no docstring.
- [bpo-33987](https://bugs.python.org/issue?@action=redirect&bpo=33987) [https://bugs.python.org/issue?@action=redirect&bpo=33987]: Use ttk Frame for ttk widgets.
- [bpo-34055](https://bugs.python.org/issue?@action=redirect&bpo=34055) [https://bugs.python.org/issue?@action=redirect&bpo=34055]: Fix erroneous 'smart' indents and newlines in IDLE Shell.
- [bpo-35591](https://bugs.python.org/issue?@action=redirect&bpo=35591) [https://bugs.python.org/issue?@action=redirect&bpo=35591]: Find Selection now works when selection not found.
- [bpo-35196](https://bugs.python.org/issue?@action=redirect&bpo=35196) [https://bugs.python.org/issue?@action=redirect&bpo=35196]: Speed up squeezer line counting.
- [bpo-35598](https://bugs.python.org/issue?@action=redirect&bpo=35598) [https://bugs.python.org/issue?@action=redirect&bpo=35598]: Update config\_key: use PEP 8 names and ttk widgets, make some objects global, and add tests.
- [bpo-28097](https://bugs.python.org/issue?@action=redirect&bpo=28097) [https://bugs.python.org/issue?@action=redirect&bpo=28097]: Add Previous/Next History entries to Shell menu.
- [bpo-35208](https://bugs.python.org/issue?@action=redirect&bpo=35208) [https://bugs.python.org/issue?@action=redirect&bpo=35208]: Squeezer now properly counts wrapped lines before newlines.
- [bpo-35555](https://bugs.python.org/issue?@action=redirect&bpo=35555) [https://bugs.python.org/issue?@action=redirect&bpo=35555]: Gray out Code Context menu entry when it's not applicable.
- [bpo-35521](https://bugs.python.org/issue?@action=redirect&bpo=35521) [https://bugs.python.org/issue?@action=redirect&bpo=35521]: Document the IDLE editor code context feature. Add some internal references within the IDLE doc.
- [bpo-22703](https://bugs.python.org/issue?@action=redirect&bpo=22703) [https://bugs.python.org/issue?@action=redirect&bpo=22703]: The Code Context menu label now toggles between Show/Hide Code Context. The Zoom Height

menu now toggles between Zoom/Restore Height. Zoom Height has moved from the Window menu to the Options menu.

- [bpo-35213](https://bugs.python.org/issue?@action=redirect&bpo=35213) [https://bugs.python.org/issue?@action=redirect&bpo=35213]: Where appropriate, use ‘macOS’ in idlelib.
- [bpo-34864](https://bugs.python.org/issue?@action=redirect&bpo=34864) [https://bugs.python.org/issue?@action=redirect&bpo=34864]: On macOS, warn if the system preference “Prefer tabs when opening documents” is set to “Always”.
- [bpo-34864](https://bugs.python.org/issue?@action=redirect&bpo=34864) [https://bugs.python.org/issue?@action=redirect&bpo=34864]: Document two IDLE on MacOS issues. The System Preferences Dock “prefer tabs always” setting disables some IDLE features. Menus are a bit different than as described for Windows and Linux.
- [bpo-35202](https://bugs.python.org/issue?@action=redirect&bpo=35202) [https://bugs.python.org/issue?@action=redirect&bpo=35202]: Remove unused imports from lib/idlelib
- [bpo-33000](https://bugs.python.org/issue?@action=redirect&bpo=33000) [https://bugs.python.org/issue?@action=redirect&bpo=33000]: Document that IDLE’s shell has no line limit. A program that runs indefinitely can overflow memory.
- [bpo-23220](https://bugs.python.org/issue?@action=redirect&bpo=23220) [https://bugs.python.org/issue?@action=redirect&bpo=23220]: Explain how IDLE’s Shell displays output.
- [bpo-35099](https://bugs.python.org/issue?@action=redirect&bpo=35099) [https://bugs.python.org/issue?@action=redirect&bpo=35099]: Improve the doc about IDLE running user code. The section is renamed from “IDLE – console differences” is renamed “Running user code”. It mostly covers the implications of using custom sys.stdxxx objects.
- [bpo-35097](https://bugs.python.org/issue?@action=redirect&bpo=35097) [https://bugs.python.org/issue?@action=redirect&bpo=35097]: Add IDLE doc subsection explaining editor windows. Topics include opening, title and status bar, .py\* extension, and running.
- [bpo-35093](https://bugs.python.org/issue?@action=redirect&bpo=35093) [https://bugs.python.org/issue?@action=redirect&bpo=35093]: Document the IDLE document viewer in the IDLE doc. Add a paragraph in “Help and preferences”, “Help sources” subsection.
- [bpo-35088](https://bugs.python.org/issue?@action=redirect&bpo=35088) [https://bugs.python.org/issue?@action=redirect&bpo=35088]

@action=redirect&bpo=35088]: Update `idlelib.help.copy_string` docstring. We now use git and backporting instead of hg and forward merging.

- [bpo-35087](https://bugs.python.org/issue?@action=redirect&bpo=35087) [https://bugs.python.org/issue?@action=redirect&bpo=35087]: Update `idlelib` help files for the current doc build. The main change is the elimination of chapter-section numbers.
- [bpo-34548](https://bugs.python.org/issue?@action=redirect&bpo=34548) [https://bugs.python.org/issue?@action=redirect&bpo=34548]: Use configured color theme for read-only text views.
- [bpo-1529353](https://bugs.python.org/issue?@action=redirect&bpo=1529353) [https://bugs.python.org/issue?@action=redirect&bpo=1529353]: Enable “squeezing” of long outputs in the shell, to avoid performance degradation and to clean up the history without losing it. Squeezed outputs may be copied, viewed in a separate window, and “unsqueezed”.
- [bpo-34047](https://bugs.python.org/issue?@action=redirect&bpo=34047) [https://bugs.python.org/issue?@action=redirect&bpo=34047]: Fixed mousewheel scrolling direction on macOS.
- [bpo-34275](https://bugs.python.org/issue?@action=redirect&bpo=34275) [https://bugs.python.org/issue?@action=redirect&bpo=34275]: Make IDLE calltips always visible on Mac. Some MacOS-tk combinations need `.update_idletasks()`. Patch by Kevin Walzer.
- [bpo-34120](https://bugs.python.org/issue?@action=redirect&bpo=34120) [https://bugs.python.org/issue?@action=redirect&bpo=34120]: Fix unresponsiveness after closing certain windows and dialogs.
- [bpo-33975](https://bugs.python.org/issue?@action=redirect&bpo=33975) [https://bugs.python.org/issue?@action=redirect&bpo=33975]: Avoid small type when running htests. Since part of the purpose of human-viewed tests is to determine that widgets look right, it is important that they look the same for testing as when running IDLE.
- [bpo-33905](https://bugs.python.org/issue?@action=redirect&bpo=33905) [https://bugs.python.org/issue?@action=redirect&bpo=33905]: Add test for `idlelib.stackview.StackBrowser`.
- [bpo-33924](https://bugs.python.org/issue?@action=redirect&bpo=33924) [https://bugs.python.org/issue?@action=redirect&bpo=33924]: Change `mainmenu.menudefs` key ‘windows’ to ‘window’. Every other `menudef` key is lowercase version of main menu entry.
- [bpo-33906](https://bugs.python.org/issue?@action=redirect&bpo=33906) [https://bugs.python.org/issue?@action=redirect&bpo=33906]: Rename `idlelib.windows` as `window` Match Window on the main menu and remove last

plural module name.

- [bpo-33917](https://bugs.python.org/issue?@action=redirect&bpo=33917) [https://bugs.python.org/issue?@action=redirect&bpo=33917]: Fix and document `idlelib/idle_test/template.py`. The revised file compiles, runs, and tests OK. `idle_test/README.txt` explains how to use it to create new IDLE test files.
- [bpo-33904](https://bugs.python.org/issue?@action=redirect&bpo=33904) [https://bugs.python.org/issue?@action=redirect&bpo=33904]: IDLE: In `rstrip`, rename class `RstripExtension` as `Rstrip`
- [bpo-33907](https://bugs.python.org/issue?@action=redirect&bpo=33907) [https://bugs.python.org/issue?@action=redirect&bpo=33907]: For consistency and clarity, rename an IDLE module and classes. Module `calltips` and its class `CallTips` are now `calltip` and `Calltip`. In module `calltip_w`, class `CallTip` is now `CalltipWindow`.
- [bpo-33856](https://bugs.python.org/issue?@action=redirect&bpo=33856) [https://bugs.python.org/issue?@action=redirect&bpo=33856]: Add “help” in the welcome message of IDLE
- [bpo-33839](https://bugs.python.org/issue?@action=redirect&bpo=33839) [https://bugs.python.org/issue?@action=redirect&bpo=33839]: IDLE: refactor `ToolTip` and `CallTip` and add documentation and tests
- [bpo-33855](https://bugs.python.org/issue?@action=redirect&bpo=33855) [https://bugs.python.org/issue?@action=redirect&bpo=33855]: Minimally test all IDLE modules. Add missing files, import module, instantiate classes, and check coverage. Check existing files.
- [bpo-33656](https://bugs.python.org/issue?@action=redirect&bpo=33656) [https://bugs.python.org/issue?@action=redirect&bpo=33656]: On Windows, add API call saying that `tk` scales for DPI. On Windows 8.1 + or 10, with DPI compatibility properties of the Python binary unchanged, and a monitor resolution greater than 96 DPI, this should make text and lines sharper. It should otherwise have no effect.
- [bpo-33768](https://bugs.python.org/issue?@action=redirect&bpo=33768) [https://bugs.python.org/issue?@action=redirect&bpo=33768]: Clicking on a context line moves that line to the top of the editor window.
- [bpo-33763](https://bugs.python.org/issue?@action=redirect&bpo=33763) [https://bugs.python.org/issue?@action=redirect&bpo=33763]: IDLE: Use read-only text widget for code context instead of label widget.
- [bpo-33664](https://bugs.python.org/issue?@action=redirect&bpo=33664) [https://bugs.python.org/issue?@action=redirect&bpo=33664]: Scroll IDLE editor text by lines. Previously, the mouse wheel and scrollbar slider moved text by a fixed number of pixels, resulting in partial lines at the

top of the editor box. The change also applies to the shell and grep output windows, but not to read-only text views.

- [bpo-33679](https://bugs.python.org/issue?@action=redirect&bpo=33679) [https://bugs.python.org/issue?@action=redirect&bpo=33679]: Enable theme-specific color configuration for Code Context. Use the Highlights tab to see the setting for built-in themes or add settings to custom themes.
- [bpo-33642](https://bugs.python.org/issue?@action=redirect&bpo=33642) [https://bugs.python.org/issue?@action=redirect&bpo=33642]: Display up to maxlines non-blank lines for Code Context. If there is no current context, show a single blank line.
- [bpo-33628](https://bugs.python.org/issue?@action=redirect&bpo=33628) [https://bugs.python.org/issue?@action=redirect&bpo=33628]: IDLE: Cleanup codecontext.py and its test.
- [bpo-33564](https://bugs.python.org/issue?@action=redirect&bpo=33564) [https://bugs.python.org/issue?@action=redirect&bpo=33564]: IDLE's code context now recognizes async as a block opener.
- [bpo-21474](https://bugs.python.org/issue?@action=redirect&bpo=21474) [https://bugs.python.org/issue?@action=redirect&bpo=21474]: Update word/identifier definition from ascii to unicode. In text and entry boxes, this affects selection by double-click, movement left/right by control-left/right, and deletion left/right by control-BACKSPACE/DEL.
- [bpo-33204](https://bugs.python.org/issue?@action=redirect&bpo=33204) [https://bugs.python.org/issue?@action=redirect&bpo=33204]: IDLE: consistently color invalid string prefixes. A 'u' string prefix cannot be paired with either 'r' or 'f'. Consistently color as much of the prefix, starting at the right, as is valid. Revise and extend colorizer test.
- [bpo-32984](https://bugs.python.org/issue?@action=redirect&bpo=32984) [https://bugs.python.org/issue?@action=redirect&bpo=32984]: Set `__file__` while running a startup file. Like Python, IDLE optionally runs one startup file in the Shell window before presenting the first interactive input prompt. For IDLE, `-s` runs a file named in environmental variable `IDLESTARTUP` or `PYTHONSTARTUP`; `-r file` runs `file`. Python sets `__file__` to the startup file name before running the file and unsets it before the first prompt. IDLE now does the same when run normally, without the `-n` option.
- [bpo-32940](https://bugs.python.org/issue?@action=redirect&bpo=32940) [https://bugs.python.org/issue?@action=redirect&bpo=32940]: Simplify and rename

StringTranslatePseudoMapping in pyparse.

- [bpo-32916](https://bugs.python.org/issue?@action=redirect&bpo=32916) [https://bugs.python.org/issue?@action=redirect&bpo=32916]: Change `str` to `code` in pyparse.
- [bpo-32905](https://bugs.python.org/issue?@action=redirect&bpo=32905) [https://bugs.python.org/issue?@action=redirect&bpo=32905]: Remove unused code in pyparse module.
- [bpo-32874](https://bugs.python.org/issue?@action=redirect&bpo=32874) [https://bugs.python.org/issue?@action=redirect&bpo=32874]: Add tests for pyparse.
- [bpo-32837](https://bugs.python.org/issue?@action=redirect&bpo=32837) [https://bugs.python.org/issue?@action=redirect&bpo=32837]: Using the system and place-dependent default encoding for `open()` is a bad idea for IDLE's system and location-independent files.
- [bpo-32826](https://bugs.python.org/issue?@action=redirect&bpo=32826) [https://bugs.python.org/issue?@action=redirect&bpo=32826]: Add “encoding = utf-8” to `open()` in IDLE's `test_help_about`. GUI test `test_file_buttons()` only looks at initial `ascii`-only lines, but failed on systems where `open()` defaults to ‘`ascii`’ because `readline()` internally reads and decodes far enough ahead to encounter a non-`ascii` character in `CREDITS.txt`.
- [bpo-32831](https://bugs.python.org/issue?@action=redirect&bpo=32831) [https://bugs.python.org/issue?@action=redirect&bpo=32831]: Add docstrings and tests for `codecontext`.
- [bpo-32765](https://bugs.python.org/issue?@action=redirect&bpo=32765) [https://bugs.python.org/issue?@action=redirect&bpo=32765]: Update configdialog General tab docstring to add new widgets to the widget list.

## Tools/Demos

- [bpo-35884](https://bugs.python.org/issue?@action=redirect&bpo=35884) [https://bugs.python.org/issue?@action=redirect&bpo=35884]: Add a benchmark script for timing various ways to access variables: `Tools/scripts/var_access_benchmark.py`.
- [bpo-34989](https://bugs.python.org/issue?@action=redirect&bpo=34989) [https://bugs.python.org/issue?@action=redirect&bpo=34989]: `python-gdb.py` now handles errors on computing the line number of a Python frame.
- [bpo-20260](https://bugs.python.org/issue?@action=redirect&bpo=20260) [https://bugs.python.org/issue?@action=redirect&bpo=20260]: Argument Clinic now has non-bitwise unsigned int converters.
- [bpo-32962](https://bugs.python.org/issue?@action=redirect&bpo=32962) [https://bugs.python.org/issue?@action=redirect&bpo=32962]: `python-gdb` now catches

UnicodeDecodeError exceptions when calling `string()`.

- [bpo-32962](https://bugs.python.org/issue?@action=redirect&bpo=32962) [https://bugs.python.org/issue?@action=redirect&bpo=32962]: `python-gdb` now catches `ValueError` on `read_var()`: when Python has no debug symbols for example.
- [bpo-33189](https://bugs.python.org/issue?@action=redirect&bpo=33189) [https://bugs.python.org/issue?@action=redirect&bpo=33189]: `pygettext.py` now recognizes only literal strings as docstrings and translatable strings, and rejects bytes literals and f-string expressions.
- [bpo-31920](https://bugs.python.org/issue?@action=redirect&bpo=31920) [https://bugs.python.org/issue?@action=redirect&bpo=31920]: Fixed handling directories as arguments in the `pygettext` script. Based on patch by Oleg Krasnikov.
- [bpo-29673](https://bugs.python.org/issue?@action=redirect&bpo=29673) [https://bugs.python.org/issue?@action=redirect&bpo=29673]: Fix `pystackv` and `pystack gdbinit` macros.
- [bpo-25427](https://bugs.python.org/issue?@action=redirect&bpo=25427) [https://bugs.python.org/issue?@action=redirect&bpo=25427]: Remove the `pyvenv` script in favor of `python3 -m venv` in order to lower confusion as to what Python interpreter a virtual environment will be created for.
- [bpo-32885](https://bugs.python.org/issue?@action=redirect&bpo=32885) [https://bugs.python.org/issue?@action=redirect&bpo=32885]: Add an `-n` flag for `Tools/scripts/pathfix.py` to disable automatic backup creation (files with `~` suffix).
- [bpo-32222](https://bugs.python.org/issue?@action=redirect&bpo=32222) [https://bugs.python.org/issue?@action=redirect&bpo=32222]: Fix `pygettext` not extracting docstrings for functions with type annotated arguments. Patch by Toby Harradine.
- [bpo-31583](https://bugs.python.org/issue?@action=redirect&bpo=31583) [https://bugs.python.org/issue?@action=redirect&bpo=31583]: Fix 2to3 for using with `--add-suffix` option but without `--output-dir` option for relative path to files in current directory.

## C API

- [bpo-35713](https://bugs.python.org/issue?@action=redirect&bpo=35713) [https://bugs.python.org/issue?@action=redirect&bpo=35713]: The `PyByteArray_Init()` and `PyByteArray_Fini()` functions have been removed. They did nothing since Python 2.7.4 and Python 3.2.0, were

excluded from the limited API (stable ABI), and were not documented.

- [bpo-33817](https://bugs.python.org/issue?@action=redirect&bpo=33817) [https://bugs.python.org/issue?@action=redirect&bpo=33817]: Fixed `_PyBytes_Resize()` for empty bytes objects.
- [bpo-35322](https://bugs.python.org/issue?@action=redirect&bpo=35322) [https://bugs.python.org/issue?@action=redirect&bpo=35322]: Fix memory leak in `PyUnicode_EncodeLocale()` and `PyUnicode_EncodeFSDefault()` on error handling.
- [bpo-35059](https://bugs.python.org/issue?@action=redirect&bpo=35059) [https://bugs.python.org/issue?@action=redirect&bpo=35059]: The following C macros have been converted to static inline functions: `Py_INCREF()`, `Py_DECREF()`, `Py_XINCRF()`, `Py_XDECREF()`, `PyObject_INIT()`, `PyObject_INIT_VAR()`.
- [bpo-35296](https://bugs.python.org/issue?@action=redirect&bpo=35296) [https://bugs.python.org/issue?@action=redirect&bpo=35296]: make `install` now also installs the internal API: `Include/internal/*.h` header files.
- [bpo-35081](https://bugs.python.org/issue?@action=redirect&bpo=35081) [https://bugs.python.org/issue?@action=redirect&bpo=35081]: Internal APIs surrounded by `#ifdef Py_BUILD_CORE` have been moved from `Include/*.h` headers to new header files `Include/internal/pycore/*.h`.
- [bpo-35259](https://bugs.python.org/issue?@action=redirect&bpo=35259) [https://bugs.python.org/issue?@action=redirect&bpo=35259]: Conditionally declare `Py_FinalizeEx()` (new in 3.6) based on `Py_LIMITED_API`. Patch by Arthur Neufeld.
- [bpo-35081](https://bugs.python.org/issue?@action=redirect&bpo=35081) [https://bugs.python.org/issue?@action=redirect&bpo=35081]: The `_PyObject_GC_TRACK()` and `_PyObject_GC_UNTRACK()` macros have been removed from the public C API.
- [bpo-35134](https://bugs.python.org/issue?@action=redirect&bpo=35134) [https://bugs.python.org/issue?@action=redirect&bpo=35134]: Creation of a new `Include/cpython/` subdirectory.
- [bpo-34725](https://bugs.python.org/issue?@action=redirect&bpo=34725) [https://bugs.python.org/issue?@action=redirect&bpo=34725]: Adds `_Py_SetProgramFullPath` so embedders may override `sys.executable`
- [bpo-34910](https://bugs.python.org/issue?@action=redirect&bpo=34910) [https://bugs.python.org/issue?@action=redirect&bpo=34910]: Ensure that `PyObject_Print()` always returns `-1` on error. Patch by Zackery Spytz.
- [bpo-34523](https://bugs.python.org/issue?) [https://bugs.python.org/issue?]

@action=redirect&bpo=34523]: `Py_DecodeLocale()` and `Py_EncodeLocale()` now use the UTF-8 encoding on Windows if `Py_LegacyWindowsFSEncodingFlag` is zero.

- [bpo-34193](https://bugs.python.org/issue?@action=redirect&bpo=34193) [https://bugs.python.org/issue?@action=redirect&bpo=34193]: Fix pluralization in `TypeError` messages in `getargs.c` and `typeobject.c`: ‘1 argument’ instead of ‘1 arguments’ and ‘1 element’ instead of ‘1 elements’.
- [bpo-34127](https://bugs.python.org/issue?@action=redirect&bpo=34127) [https://bugs.python.org/issue?@action=redirect&bpo=34127]: Return grammatically correct error message based on argument count. Patch by Karthikeyan Singaravelan.
- [bpo-23927](https://bugs.python.org/issue?@action=redirect&bpo=23927) [https://bugs.python.org/issue?@action=redirect&bpo=23927]: Fixed `SystemError` in `PyArg_ParseTupleAndKeywords()` when the `w*` format unit is used for optional parameter.
- [bpo-32455](https://bugs.python.org/issue?@action=redirect&bpo=32455) [https://bugs.python.org/issue?@action=redirect&bpo=32455]: Added `PyCompile_OpcodeStackEffectWithJump()`.
- [bpo-34008](https://bugs.python.org/issue?@action=redirect&bpo=34008) [https://bugs.python.org/issue?@action=redirect&bpo=34008]: `Py_Main()` can again be called after `Py_Initialize()`, as in Python 3.6.
- [bpo-32500](https://bugs.python.org/issue?@action=redirect&bpo=32500) [https://bugs.python.org/issue?@action=redirect&bpo=32500]: Fixed error messages for `PySequence_Size()`, `PySequence_GetItem()`, `PySequence_SetItem()` and `PySequence_DelItem()` called with a mapping and `PyMapping_Size()` called with a sequence.
- [bpo-33818](https://bugs.python.org/issue?@action=redirect&bpo=33818) [https://bugs.python.org/issue?@action=redirect&bpo=33818]: `PyExceptionClass_Name()` will now return `const char *` instead of `char *`.
- [bpo-33042](https://bugs.python.org/issue?@action=redirect&bpo=33042) [https://bugs.python.org/issue?@action=redirect&bpo=33042]: Embedding applications may once again call `PySys_ResetWarnOptions`, `PySys_AddWarnOption`, and `PySys_AddXOption` prior to calling `Py_Initialize`.
- [bpo-32374](https://bugs.python.org/issue?@action=redirect&bpo=32374) [https://bugs.python.org/issue?@action=redirect&bpo=32374]: Document that `m_traverse` for multi-phase initialized modules can be called with `m_state=NULL`, and add a sanity check
- [bpo-30863](https://bugs.python.org/issue?@action=redirect&bpo=30863) [https://bugs.python.org/issue?@action=redirect&bpo=30863]: `PyUnicode_AsWideChar()`

and `PyUnicode_AsWideCharString()` no longer cache the `wchar_t*` representation of string objects.

## Python 3.7.0 final

*Release date: 2018-06-27*

### Library

- [bpo-33851](https://bugs.python.org/issue?@action=redirect&bpo=33851) [https://bugs.python.org/issue?@action=redirect&bpo=33851]: Fix `ast.get_docstring()` for a node that lacks a docstring.

### C API

- [bpo-33932](https://bugs.python.org/issue?@action=redirect&bpo=33932) [https://bugs.python.org/issue?@action=redirect&bpo=33932]: Calling `Py_Initialize()` twice does nothing, instead of failing with a fatal error: restore the Python 3.6 behaviour.

## Python 3.7.0 release candidate 1

*Release date: 2018-06-12*

### Core and Builtins

- [bpo-33803](https://bugs.python.org/issue?@action=redirect&bpo=33803) [https://bugs.python.org/issue?@action=redirect&bpo=33803]: Fix a crash in `hamt.c` caused by enabling GC tracking for an object that hadn't all of its fields set to NULL.
- [bpo-33706](https://bugs.python.org/issue?@action=redirect&bpo=33706) [https://bugs.python.org/issue?@action=redirect&bpo=33706]: Fix a crash in Python initialization when parsing the command line options. Thanks Christoph Gohlke for the bug report and the fix!
- [bpo-30654](https://bugs.python.org/issue?@action=redirect&bpo=30654) [https://bugs.python.org/issue?@action=redirect&bpo=30654]: Fixed reset of the SIGINT handler to `SIG_DFL` on interpreter shutdown even when there was a custom handler set previously. Patch by Philipp Kerling.

- [bpo-31849](https://bugs.python.org/issue?@action=redirect&bpo=31849) [https://bugs.python.org/issue?@action=redirect&bpo=31849]: Fix signed/unsigned comparison warning in pyhash.c.

## Library

- [bpo-30167](https://bugs.python.org/issue?@action=redirect&bpo=30167) [https://bugs.python.org/issue?@action=redirect&bpo=30167]: Prevent site.main() exception if PYTHONSTARTUP is set. Patch by Steve Weber.
- [bpo-33812](https://bugs.python.org/issue?@action=redirect&bpo=33812) [https://bugs.python.org/issue?@action=redirect&bpo=33812]: Datetime instance d with non-None tzinfo, but with d.tzinfo.utcoffset(d) returning None is now treated as naive by the astimezone() method.
- [bpo-30805](https://bugs.python.org/issue?@action=redirect&bpo=30805) [https://bugs.python.org/issue?@action=redirect&bpo=30805]: Avoid race condition with debug logging
- [bpo-33694](https://bugs.python.org/issue?@action=redirect&bpo=33694) [https://bugs.python.org/issue?@action=redirect&bpo=33694]: asyncio: Fix a race condition causing data loss on pause\_reading()/resume\_reading() when using the ProactorEventLoop.
- [bpo-32493](https://bugs.python.org/issue?@action=redirect&bpo=32493) [https://bugs.python.org/issue?@action=redirect&bpo=32493]: Correct test for uuid\_enc\_be availability in configure.ac. Patch by Michael Felt.
- [bpo-33792](https://bugs.python.org/issue?@action=redirect&bpo=33792) [https://bugs.python.org/issue?@action=redirect&bpo=33792]: Add asyncio.WindowsSelectorEventLoopPolicy and asyncio.WindowsProactorEventLoopPolicy.
- [bpo-33778](https://bugs.python.org/issue?@action=redirect&bpo=33778) [https://bugs.python.org/issue?@action=redirect&bpo=33778]: Update unicodedata's database to Unicode version 11.0.0.
- [bpo-33770](https://bugs.python.org/issue?@action=redirect&bpo=33770) [https://bugs.python.org/issue?@action=redirect&bpo=33770]: improve base64 exception message for encoded inputs of invalid length
- [bpo-33769](https://bugs.python.org/issue?@action=redirect&bpo=33769) [https://bugs.python.org/issue?@action=redirect&bpo=33769]: asyncio/start\_tls: Fix error message; cancel callbacks in case of an unhandled error; mark SSLTransport as closed if it is aborted.
- [bpo-33767](https://bugs.python.org/issue?@action=redirect&bpo=33767) [https://bugs.python.org/issue?@action=redirect&bpo=33767]: The concatenation (+) and repetition (\*) sequence operations now raise **TypeError**

instead of `SystemError` when performed on `mmap.mmap` objects. Patch by Zackery Spytz.

- [bpo-33734](https://bugs.python.org/issue?@action=redirect&bpo=33734) [https://bugs.python.org/issue?@action=redirect&bpo=33734]: `asyncio/ssl`: Fix `AttributeError`, increase default handshake timeout
- [bpo-11874](https://bugs.python.org/issue?@action=redirect&bpo=11874) [https://bugs.python.org/issue?@action=redirect&bpo=11874]: Use a better regex when breaking usage into wrappable parts. Avoids bogus assertion errors from custom metavar strings.
- [bpo-33582](https://bugs.python.org/issue?@action=redirect&bpo=33582) [https://bugs.python.org/issue?@action=redirect&bpo=33582]: Emit a deprecation warning for `inspect.formatargspec`

## Documentation

- [bpo-33409](https://bugs.python.org/issue?@action=redirect&bpo=33409) [https://bugs.python.org/issue?@action=redirect&bpo=33409]: Clarified the relationship between [PEP 538](https://peps.python.org/pep-0538/) [https://peps.python.org/pep-0538/]’s `PYTHONCOERCECLOCALE` and PEP 540’s `PYTHONUTF8` mode.
- [bpo-33736](https://bugs.python.org/issue?@action=redirect&bpo=33736) [https://bugs.python.org/issue?@action=redirect&bpo=33736]: Improve the documentation of `asyncio.open_connection()`, `asyncio.start_server()` and their UNIX socket counterparts.
- [bpo-31432](https://bugs.python.org/issue?@action=redirect&bpo=31432) [https://bugs.python.org/issue?@action=redirect&bpo=31432]: Clarify meaning of `CERT_NONE`, `CERT_OPTIONAL`, and `CERT_REQUIRED` flags for `ssl.SSLContext.verify_mode`.

## Build

- [bpo-5755](https://bugs.python.org/issue?@action=redirect&bpo=5755) [https://bugs.python.org/issue?@action=redirect&bpo=5755]: Move `-Wstrict-prototypes` option to `CFLAGS_NODIST` from `OPT`. This option emitted annoying warnings when building extension modules written in C++.

## Windows

- [bpo-33720](https://bugs.python.org/issue?@action=redirect&bpo=33720) [https://bugs.python.org/issue?@action=redirect&bpo=33720]

@action=redirect&bpo=33720]: Reduces maximum marshal recursion depth on release builds.

## IDLE

- [bpo-33656](https://bugs.python.org/issue?@action=redirect&bpo=33656) [https://bugs.python.org/issue?@action=redirect&bpo=33656]: On Windows, add API call saying that tk scales for DPI. On Windows 8.1 + or 10, with DPI compatibility properties of the Python binary unchanged, and a monitor resolution greater than 96 DPI, this should make text and lines sharper. It should otherwise have no effect.
- [bpo-33768](https://bugs.python.org/issue?@action=redirect&bpo=33768) [https://bugs.python.org/issue?@action=redirect&bpo=33768]: Clicking on a context line moves that line to the top of the editor window.
- [bpo-33763](https://bugs.python.org/issue?@action=redirect&bpo=33763) [https://bugs.python.org/issue?@action=redirect&bpo=33763]: IDLE: Use read-only text widget for code context instead of label widget.
- [bpo-33664](https://bugs.python.org/issue?@action=redirect&bpo=33664) [https://bugs.python.org/issue?@action=redirect&bpo=33664]: Scroll IDLE editor text by lines. Previously, the mouse wheel and scrollbar slider moved text by a fixed number of pixels, resulting in partial lines at the top of the editor box. The change also applies to the shell and grep output windows, but not to read-only text views.
- [bpo-33679](https://bugs.python.org/issue?@action=redirect&bpo=33679) [https://bugs.python.org/issue?@action=redirect&bpo=33679]: Enable theme-specific color configuration for Code Context. Use the Highlights tab to see the setting for built-in themes or add settings to custom themes.
- [bpo-33642](https://bugs.python.org/issue?@action=redirect&bpo=33642) [https://bugs.python.org/issue?@action=redirect&bpo=33642]: Display up to maxlines non-blank lines for Code Context. If there is no current context, show a single blank line.

## Python 3.7.0 beta 5

*Release date: 2018-05-30*

### Core and Builtins

- [bpo-33622](https://bugs.python.org/issue?@action=redirect&bpo=33622) [https://bugs.python.org/issue?@action=redirect&bpo=33622]: Fixed a leak when the garbage collector fails to add an object with the `__del__` method or referenced by it into the `gc.garbage` list. `PyGC_Collect()` can now be called when an exception is set and preserves it.
- [bpo-33509](https://bugs.python.org/issue?@action=redirect&bpo=33509) [https://bugs.python.org/issue?@action=redirect&bpo=33509]: Fix `module_globals` parameter of `warnings.warn_explicit()`: don't crash if `module_globals` is not a dict.
- [bpo-20104](https://bugs.python.org/issue?@action=redirect&bpo=20104) [https://bugs.python.org/issue?@action=redirect&bpo=20104]: The new `os.posix_spawn` added in 3.7.0b1 was removed as we are still working on what the API should look like. Expect this in 3.8 instead.
- [bpo-33475](https://bugs.python.org/issue?@action=redirect&bpo=33475) [https://bugs.python.org/issue?@action=redirect&bpo=33475]: Fixed miscellaneous bugs in converting annotations to strings and optimized parentheses in the string representation.
- [bpo-33391](https://bugs.python.org/issue?@action=redirect&bpo=33391) [https://bugs.python.org/issue?@action=redirect&bpo=33391]: Fix a leak in `set_symmetric_difference()`.
- [bpo-28055](https://bugs.python.org/issue?@action=redirect&bpo=28055) [https://bugs.python.org/issue?@action=redirect&bpo=28055]: Fix unaligned accesses in `siphhash24()`. Patch by Rolf Eike Beer.
- [bpo-32911](https://bugs.python.org/issue?@action=redirect&bpo=32911) [https://bugs.python.org/issue?@action=redirect&bpo=32911]: Due to unexpected compatibility issues discovered during downstream beta testing, reverted [bpo-29463](https://bugs.python.org/issue?@action=redirect&bpo=29463) [https://bugs.python.org/issue?@action=redirect&bpo=29463]. `docstring` field is removed from `Module`, `ClassDef`, `FunctionDef`, and `AsyncFunctionDef` ast nodes which was added in 3.7a1. Docstring expression is restored as a first statement in their body. Based on patch by Inada Naoki.
- [bpo-21983](https://bugs.python.org/issue?@action=redirect&bpo=21983) [https://bugs.python.org/issue?@action=redirect&bpo=21983]: Fix a crash in `ctypes.cast()` in case the type argument is a `ctypes` structured data type. Patch by Eryk Sun and Oren Milman.

## Library

- [bpo-32751](https://bugs.python.org/issue?@action=redirect&bpo=32751) [https://bugs.python.org/issue?@action=redirect&bpo=32751]: When cancelling the task due to a timeout, `asyncio.wait_for()` will now wait until the cancellation is complete.
- [bpo-32684](https://bugs.python.org/issue?@action=redirect&bpo=32684) [https://bugs.python.org/issue?@action=redirect&bpo=32684]: Fix gather to propagate cancellation of itself even with return\_exceptions.
- [bpo-33654](https://bugs.python.org/issue?@action=redirect&bpo=33654) [https://bugs.python.org/issue?@action=redirect&bpo=33654]: Support protocol type switching in `SSLTransport.set_protocol()`.
- [bpo-33674](https://bugs.python.org/issue?@action=redirect&bpo=33674) [https://bugs.python.org/issue?@action=redirect&bpo=33674]: Pause the transport as early as possible to further reduce the risk of `data_received()` being called before `connection_made()`.
- [bpo-33674](https://bugs.python.org/issue?@action=redirect&bpo=33674) [https://bugs.python.org/issue?@action=redirect&bpo=33674]: Fix a race condition in `SSLProtocol.connection_made()` of `asyncio.sslproto`: start immediately the handshake instead of using `call_soon()`. Previously, `data_received()` could be called before the handshake started, causing the handshake to hang or fail.
- [bpo-31647](https://bugs.python.org/issue?@action=redirect&bpo=31647) [https://bugs.python.org/issue?@action=redirect&bpo=31647]: Fixed bug where calling `write_eof()` on a `_SelectorSocketTransport` after it's already closed raises `AttributeError`.
- [bpo-32610](https://bugs.python.org/issue?@action=redirect&bpo=32610) [https://bugs.python.org/issue?@action=redirect&bpo=32610]: Make `asyncio.all_tasks()` return only pending tasks.
- [bpo-32410](https://bugs.python.org/issue?@action=redirect&bpo=32410) [https://bugs.python.org/issue?@action=redirect&bpo=32410]: Avoid blocking on file IO in `sendfile` fallback code
- [bpo-33469](https://bugs.python.org/issue?@action=redirect&bpo=33469) [https://bugs.python.org/issue?@action=redirect&bpo=33469]: Fix `RuntimeError` after closing loop that used `run_in_executor`
- [bpo-33672](https://bugs.python.org/issue?@action=redirect&bpo=33672) [https://bugs.python.org/issue?@action=redirect&bpo=33672]: Fix `Task._repr_` crash with Cython's bogus coroutines
- [bpo-33654](https://bugs.python.org/issue?@action=redirect&bpo=33654) [https://bugs.python.org/issue?@action=redirect&bpo=33654]: Fix `transport.set_protocol()` to support switching between `asyncio.Protocol` and `asyncio.BufferedProtocol`. Fix `loop.start_tls()` to work with

asyncio.BufferedProtocols.

- [bpo-33652](https://bugs.python.org/issue?@action=redirect&bpo=33652) [https://bugs.python.org/issue?@action=redirect&bpo=33652]: Pickles of type variables and subscripted generics are now future-proof and compatible with older Python versions.
- [bpo-32493](https://bugs.python.org/issue?@action=redirect&bpo=32493) [https://bugs.python.org/issue?@action=redirect&bpo=32493]: Fixed `uuid.uuid1()` on FreeBSD.
- [bpo-33618](https://bugs.python.org/issue?@action=redirect&bpo=33618) [https://bugs.python.org/issue?@action=redirect&bpo=33618]: Finalize and document preliminary and experimental TLS 1.3 support with OpenSSL 1.1.1
- [bpo-33623](https://bugs.python.org/issue?@action=redirect&bpo=33623) [https://bugs.python.org/issue?@action=redirect&bpo=33623]: Fix possible SIGSEGV when `asyncio.Future` is created in `__del__`
- [bpo-30877](https://bugs.python.org/issue?@action=redirect&bpo=30877) [https://bugs.python.org/issue?@action=redirect&bpo=30877]: Fixed a bug in the Python implementation of the JSON decoder that prevented the cache of parsed strings from clearing after finishing the decoding. Based on patch by c-fos.
- [bpo-33570](https://bugs.python.org/issue?@action=redirect&bpo=33570) [https://bugs.python.org/issue?@action=redirect&bpo=33570]: Change TLS 1.3 cipher suite settings for compatibility with OpenSSL 1.1.1-pre6 and newer. OpenSSL 1.1.1 will have TLS 1.3 ciphers enabled by default.
- [bpo-28556](https://bugs.python.org/issue?@action=redirect&bpo=28556) [https://bugs.python.org/issue?@action=redirect&bpo=28556]: Do not simplify arguments to `typing.Union`. Now `Union[Manager, Employee]` is not simplified to `Employee` at runtime. Such simplification previously caused several bugs and limited possibilities for introspection.
- [bpo-33540](https://bugs.python.org/issue?@action=redirect&bpo=33540) [https://bugs.python.org/issue?@action=redirect&bpo=33540]: Add a new `block_on_close` class attribute to `ForkingMixIn` and `ThreadingMixIn` classes of `socketserver`.
- [bpo-33548](https://bugs.python.org/issue?@action=redirect&bpo=33548) [https://bugs.python.org/issue?@action=redirect&bpo=33548]: `tempfile._candidate_tempdir_list` should consider common TEMP locations
- [bpo-33109](https://bugs.python.org/issue?@action=redirect&bpo=33109) [https://bugs.python.org/issue?@action=redirect&bpo=33109]: `argparse` subparsers are once

again not required by default, reverting the change in behavior introduced by [bpo-26510](https://bugs.python.org/issue?@action=redirect&bpo=26510) in 3.7.0a2.

- [bpo-33536](https://bugs.python.org/issue?@action=redirect&bpo=33536) [https://bugs.python.org/issue?@action=redirect&bpo=33536]: `dataclasses.make_dataclass` now checks for invalid field names and duplicate fields. Also, added a check for invalid field specifications.
- [bpo-33542](https://bugs.python.org/issue?@action=redirect&bpo=33542) [https://bugs.python.org/issue?@action=redirect&bpo=33542]: Prevent `uuid.get_node` from using a DUID instead of a MAC on Windows. Patch by Zvi Effron
- [bpo-26819](https://bugs.python.org/issue?@action=redirect&bpo=26819) [https://bugs.python.org/issue?@action=redirect&bpo=26819]: Fix race condition with `ReadTransport.resume_reading` in Windows proactor event loop.
- Fix failure in `typing.get_type_hints()` when `ClassVar` was provided as a string forward reference.
- [bpo-33505](https://bugs.python.org/issue?@action=redirect&bpo=33505) [https://bugs.python.org/issue?@action=redirect&bpo=33505]: Optimize `asyncio.ensure_future()` by reordering if checks: 1.17x faster.
- [bpo-33497](https://bugs.python.org/issue?@action=redirect&bpo=33497) [https://bugs.python.org/issue?@action=redirect&bpo=33497]: Add errors param to `cgi.parse_multipart` and make an encoding in `FieldStorage` use the given errors (needed for Twisted). Patch by Amber Brown.
- [bpo-33495](https://bugs.python.org/issue?@action=redirect&bpo=33495) [https://bugs.python.org/issue?@action=redirect&bpo=33495]: Change `dataclasses.Fields` repr to use the repr of each of its members, instead of str. This makes it more clear what each field actually represents. This is especially true for the ‘type’ member.
- [bpo-33453](https://bugs.python.org/issue?@action=redirect&bpo=33453) [https://bugs.python.org/issue?@action=redirect&bpo=33453]: Fix `dataclasses` to work if using literal string type annotations or if using PEP 563 “Postponed Evaluation of Annotations”. Only specific string prefixes are detected for both `ClassVar` (“`ClassVar`” and “`typing.ClassVar`”) and `InitVar` (“`InitVar`” and “`dataclasses.InitVar`”).
- [bpo-28556](https://bugs.python.org/issue?@action=redirect&bpo=28556) [https://bugs.python.org/issue?@action=redirect&bpo=28556]: Minor fixes in `typing` module: add annotations to `NamedTuple.__new__`, pass `*args` and `**kwargs` in `Generic.__new__`. Original PRs by Paulius

Šarka and Chad Dombrova.

- [bpo-20087](https://bugs.python.org/issue?@action=redirect&bpo=20087) [https://bugs.python.org/issue?@action=redirect&bpo=20087]: Updated alias mapping with glibc 2.27 supported locales.
- [bpo-33422](https://bugs.python.org/issue?@action=redirect&bpo=33422) [https://bugs.python.org/issue?@action=redirect&bpo=33422]: Fix trailing quotation marks getting deleted when looking up byte/string literals on pydoc. Patch by Andrés Delfino.
- [bpo-28167](https://bugs.python.org/issue?@action=redirect&bpo=28167) [https://bugs.python.org/issue?@action=redirect&bpo=28167]: The function `platform.linux_distribution` and `platform.dist` now trigger a `DeprecationWarning` and have been marked for removal in Python 3.8
- [bpo-33197](https://bugs.python.org/issue?@action=redirect&bpo=33197) [https://bugs.python.org/issue?@action=redirect&bpo=33197]: Update error message when constructing invalid `inspect.Parameters` Patch by Dong-hee Na.
- [bpo-33263](https://bugs.python.org/issue?@action=redirect&bpo=33263) [https://bugs.python.org/issue?@action=redirect&bpo=33263]: Fix FD leak in `_SelectorSocketTransport` Patch by Vlad Starostin.
- [bpo-32861](https://bugs.python.org/issue?@action=redirect&bpo=32861) [https://bugs.python.org/issue?@action=redirect&bpo=32861]: The `urllib.robotparser`'s `__str__` representation now includes wildcard entries and the “Crawl-delay” and “Request-rate” fields. Patch by Michael Lazar.
- [bpo-32257](https://bugs.python.org/issue?@action=redirect&bpo=32257) [https://bugs.python.org/issue?@action=redirect&bpo=32257]: The `ssl` module now contains `OP_NO_RENEGOTIATION` constant, available with OpenSSL 1.1.0h or 1.1.1.
- [bpo-16865](https://bugs.python.org/issue?@action=redirect&bpo=16865) [https://bugs.python.org/issue?@action=redirect&bpo=16865]: Support arrays  $\geq 2\text{GiB}$  in `ctypes`. Patch by Segev Finer.

## Documentation

- [bpo-23859](https://bugs.python.org/issue?@action=redirect&bpo=23859) [https://bugs.python.org/issue?@action=redirect&bpo=23859]: Document that `asyncio.wait()` does not cancel its futures on timeout.
- [bpo-32436](https://bugs.python.org/issue?@action=redirect&bpo=32436) [https://bugs.python.org/issue?@action=redirect&bpo=32436]: Document [PEP 567](https://peps.python.org/pep-0567/) [https://peps.python.org/pep-0567/] changes to `asyncio`.

- [bpo-33604](https://bugs.python.org/issue?@action=redirect&bpo=33604) [https://bugs.python.org/issue?@action=redirect&bpo=33604]: Update HMAC md5 default to a DeprecationWarning, bump removal to 3.8.
- [bpo-33503](https://bugs.python.org/issue?@action=redirect&bpo=33503) [https://bugs.python.org/issue?@action=redirect&bpo=33503]: Fix broken pypi link
- [bpo-33421](https://bugs.python.org/issue?@action=redirect&bpo=33421) [https://bugs.python.org/issue?@action=redirect&bpo=33421]: Add missing documentation for `typing.AsyncContextManager`.

## Tests

- [bpo-33655](https://bugs.python.org/issue?@action=redirect&bpo=33655) [https://bugs.python.org/issue?@action=redirect&bpo=33655]: Ignore test\_posix\_fallocate failures on BSD platforms that might be due to running on ZFS.
- [bpo-32604](https://bugs.python.org/issue?@action=redirect&bpo=32604) [https://bugs.python.org/issue?@action=redirect&bpo=32604]: Remove the `_xxsubinterpreters` module (meant for testing) and associated helpers. This module was originally added recently in 3.7b1.

## Build

- [bpo-33614](https://bugs.python.org/issue?@action=redirect&bpo=33614) [https://bugs.python.org/issue?@action=redirect&bpo=33614]: Ensures module definition files for the stable ABI on Windows are correctly regenerated.
- [bpo-33522](https://bugs.python.org/issue?@action=redirect&bpo=33522) [https://bugs.python.org/issue?@action=redirect&bpo=33522]: Enable CI builds on Visual Studio Team Services at <https://python.visualstudio.com/cpython>
- [bpo-33012](https://bugs.python.org/issue?@action=redirect&bpo=33012) [https://bugs.python.org/issue?@action=redirect&bpo=33012]: Add `-Wno-cast-function-type` for gcc 8 for silencing warnings about function casts like casting to `PyCFunction` in method definition lists.

## macOS

- [bpo-13631](https://bugs.python.org/issue?@action=redirect&bpo=13631) [https://bugs.python.org/issue?@action=redirect&bpo=13631]: The `.editrc` file in user's home directory is now processed correctly during the readline initialization through editline emulation on macOS.

## IDLE

- [bpo-33628](https://bugs.python.org/issue?@action=redirect&bpo=33628) [https://bugs.python.org/issue?@action=redirect&bpo=33628]: IDLE: Cleanup codecontext.py and its test.
- [bpo-33564](https://bugs.python.org/issue?@action=redirect&bpo=33564) [https://bugs.python.org/issue?@action=redirect&bpo=33564]: IDLE's code context now recognizes `async` as a block opener.
- [bpo-32831](https://bugs.python.org/issue?@action=redirect&bpo=32831) [https://bugs.python.org/issue?@action=redirect&bpo=32831]: Add docstrings and tests for `codecontext`.

## Python 3.7.0 beta 4

*Release date: 2018-05-02*

### Core and Builtins

- [bpo-33363](https://bugs.python.org/issue?@action=redirect&bpo=33363) [https://bugs.python.org/issue?@action=redirect&bpo=33363]: Raise a `SyntaxError` for `async` with and `async` for statements outside of `async` functions.
- [bpo-33128](https://bugs.python.org/issue?@action=redirect&bpo=33128) [https://bugs.python.org/issue?@action=redirect&bpo=33128]: Fix a bug that causes `PathFinder` to appear twice on `sys.meta_path`. Patch by Pablo Galindo Salgado.
- [bpo-33312](https://bugs.python.org/issue?@action=redirect&bpo=33312) [https://bugs.python.org/issue?@action=redirect&bpo=33312]: Fixed clang `ubsan` (undefined behavior sanitizer) warnings in `dictobject.c` by adjusting how the internal struct `_dictkeyobject` shared keys structure is declared.
- [bpo-33231](https://bugs.python.org/issue?@action=redirect&bpo=33231) [https://bugs.python.org/issue?@action=redirect&bpo=33231]: Fix potential memory leak in `normalizestring()`.
- [bpo-33205](https://bugs.python.org/issue?@action=redirect&bpo=33205) [https://bugs.python.org/issue?@action=redirect&bpo=33205]: Change dict growth function from `round_up_to_power_2(used*2+hashtable_size/2)` to `round_up_to_power_2(used*3)`. Previously, dict is shrunk only when `used == 0`. Now dict has more chance to be shrunk.

- [bpo-29922](https://bugs.python.org/issue?@action=redirect&bpo=29922) [https://bugs.python.org/issue?@action=redirect&bpo=29922]: Improved error messages in ‘async with’ when `__aenter__()` or `__aexit__()` return non-awaitable object.
- [bpo-33199](https://bugs.python.org/issue?@action=redirect&bpo=33199) [https://bugs.python.org/issue?@action=redirect&bpo=33199]: Fix `ma_version_tag` in dict implementation is uninitialized when copying from key-sharing dict.

## Library

- [bpo-33281](https://bugs.python.org/issue?@action=redirect&bpo=33281) [https://bugs.python.org/issue?@action=redirect&bpo=33281]: Fix `ctypes.util.find_library` regression on macOS.
- [bpo-33383](https://bugs.python.org/issue?@action=redirect&bpo=33383) [https://bugs.python.org/issue?@action=redirect&bpo=33383]: Fixed crash in the `get()` method of the `dbm.ndbm` database object when it is called with a single argument.
- [bpo-33329](https://bugs.python.org/issue?@action=redirect&bpo=33329) [https://bugs.python.org/issue?@action=redirect&bpo=33329]: Fix multiprocessing regression on newer glibc
- [bpo-991266](https://bugs.python.org/issue?@action=redirect&bpo=991266) [https://bugs.python.org/issue?@action=redirect&bpo=991266]: Fix quoting of the `Comment` attribute of `http.cookies.SimpleCookie`.
- [bpo-33131](https://bugs.python.org/issue?@action=redirect&bpo=33131) [https://bugs.python.org/issue?@action=redirect&bpo=33131]: Upgrade bundled version of pip to 10.0.1.
- [bpo-33308](https://bugs.python.org/issue?@action=redirect&bpo=33308) [https://bugs.python.org/issue?@action=redirect&bpo=33308]: Fixed a crash in the `parser` module when converting an ST object to a tree of tuples or lists with `line_info=False` and `col_info=True`.
- [bpo-33266](https://bugs.python.org/issue?@action=redirect&bpo=33266) [https://bugs.python.org/issue?@action=redirect&bpo=33266]: `lib2to3` now recognizes `rf'...'` strings.
- [bpo-11594](https://bugs.python.org/issue?@action=redirect&bpo=11594) [https://bugs.python.org/issue?@action=redirect&bpo=11594]: Ensure line-endings are respected when using `lib2to3`.
- [bpo-33254](https://bugs.python.org/issue?@action=redirect&bpo=33254) [https://bugs.python.org/issue?@action=redirect&bpo=33254]: Have `importlib.resources.contents()` and

`importlib.abc.ResourceReader.contents()` return an `iterable` instead of an `iterator`.

- [bpo-33256](https://bugs.python.org/issue?@action=redirect&bpo=33256) [https://bugs.python.org/issue?@action=redirect&bpo=33256]: Fix display of `<module>` call in the html produced by `cgib.html()`. Patch by Stéphane Blondon.
- [bpo-33185](https://bugs.python.org/issue?@action=redirect&bpo=33185) [https://bugs.python.org/issue?@action=redirect&bpo=33185]: Fixed regression when running pydoc with the `-m` switch. (The regression was introduced in 3.7.0b3 by the resolution of [bpo-33053](https://bugs.python.org/issue?@action=redirect&bpo=33053) [https://bugs.python.org/issue?@action=redirect&bpo=33053]) This fix also changed pydoc to add `os.getcwd()` to `sys.path` when necessary, rather than adding `"."`.
- [bpo-33169](https://bugs.python.org/issue?@action=redirect&bpo=33169) [https://bugs.python.org/issue?@action=redirect&bpo=33169]: Delete entries of `None` in `sys.path_importer_cache` when `importlib.machinery.invalidate_caches()` is called.
- [bpo-33217](https://bugs.python.org/issue?@action=redirect&bpo=33217) [https://bugs.python.org/issue?@action=redirect&bpo=33217]: Deprecate looking up non-Enum objects in Enum classes and Enum members (will raise `TypeError` in 3.8+).
- [bpo-33203](https://bugs.python.org/issue?@action=redirect&bpo=33203) [https://bugs.python.org/issue?@action=redirect&bpo=33203]: `random.Random.choice()` now raises `IndexError` for empty sequences consistently even when called from subclasses without a `getrandbits()` implementation.
- [bpo-33224](https://bugs.python.org/issue?@action=redirect&bpo=33224) [https://bugs.python.org/issue?@action=redirect&bpo=33224]: Update `difflib.mdifff()` for [PEP 479](https://peps.python.org/pep-0479/) [https://peps.python.org/pep-0479/]. Convert an uncaught `StopIteration` in a generator into a return-statement.
- [bpo-33209](https://bugs.python.org/issue?@action=redirect&bpo=33209) [https://bugs.python.org/issue?@action=redirect&bpo=33209]: End framing at the end of C implementation of `pickle.Pickler.dump()`.
- [bpo-20104](https://bugs.python.org/issue?@action=redirect&bpo=20104) [https://bugs.python.org/issue?@action=redirect&bpo=20104]: Improved error handling and fixed a reference leak in `os.posix_spawn()`.
- [bpo-33175](https://bugs.python.org/issue?@action=redirect&bpo=33175) [https://bugs.python.org/issue?@action=redirect&bpo=33175]: In dataclasses, `Field._set_name_` now looks up the `_set_name_` special method on the class, not the instance, of the default value.

- [bpo-33097](https://bugs.python.org/issue?@action=redirect&bpo=33097) [https://bugs.python.org/issue?@action=redirect&bpo=33097]: Raise `RuntimeError` when `executor.submit` is called during interpreter shutdown.
- [bpo-31908](https://bugs.python.org/issue?@action=redirect&bpo=31908) [https://bugs.python.org/issue?@action=redirect&bpo=31908]: Fix output of cover files for `trace` module command-line tool. Previously emitted cover files only when `--missing` option was used. Patch by Michael Selik.

## Documentation

- [bpo-33378](https://bugs.python.org/issue?@action=redirect&bpo=33378) [https://bugs.python.org/issue?@action=redirect&bpo=33378]: Add Korean language switcher for <https://docs.python.org/3/>
- [bpo-33276](https://bugs.python.org/issue?@action=redirect&bpo=33276) [https://bugs.python.org/issue?@action=redirect&bpo=33276]: Clarify that the `__path__` attribute on modules cannot be just any value.
- [bpo-33201](https://bugs.python.org/issue?@action=redirect&bpo=33201) [https://bugs.python.org/issue?@action=redirect&bpo=33201]: Modernize documentation for writing C extension types.
- [bpo-33195](https://bugs.python.org/issue?@action=redirect&bpo=33195) [https://bugs.python.org/issue?@action=redirect&bpo=33195]: Deprecate `Py_UNICODE` usage in `c-api/arg` document. `Py_UNICODE` related APIs are deprecated since Python 3.3, but it is missed in the document.
- [bpo-8243](https://bugs.python.org/issue?@action=redirect&bpo=8243) [https://bugs.python.org/issue?@action=redirect&bpo=8243]: Add a note about `curses.addch` and `curses.addstr` exception behavior when writing outside a window, or pad.
- [bpo-32337](https://bugs.python.org/issue?@action=redirect&bpo=32337) [https://bugs.python.org/issue?@action=redirect&bpo=32337]: Update documentation related with `dict` order.

## Tests

- [bpo-33358](https://bugs.python.org/issue?@action=redirect&bpo=33358) [https://bugs.python.org/issue?@action=redirect&bpo=33358]: Fix `test_embed.test_pre_initialization_sys_options()` when the interpreter is built with `--enable-shared`.

## Build

- [bpo-33394](https://bugs.python.org/issue?@action=redirect&bpo=33394) [https://bugs.python.org/issue?@action=redirect&bpo=33394]: Enable the verbose build for extension modules, when GNU make is passed macros on the command line.
- [bpo-33393](https://bugs.python.org/issue?@action=redirect&bpo=33393) [https://bugs.python.org/issue?@action=redirect&bpo=33393]: Update config.guess and config.sub files.
- [bpo-33377](https://bugs.python.org/issue?@action=redirect&bpo=33377) [https://bugs.python.org/issue?@action=redirect&bpo=33377]: Add new triplets for mips r6 and riscv variants (used in extension suffixes).
- [bpo-32232](https://bugs.python.org/issue?@action=redirect&bpo=32232) [https://bugs.python.org/issue?@action=redirect&bpo=32232]: By default, modules configured in **Modules/Setup** are no longer built with **-DPy\_BUILD\_CORE**. Instead, modules that specifically need that preprocessor definition include it in their individual entries.
- [bpo-33182](https://bugs.python.org/issue?@action=redirect&bpo=33182) [https://bugs.python.org/issue?@action=redirect&bpo=33182]: The embedding tests can once again be built with clang 6.0

## Windows

- [bpo-33184](https://bugs.python.org/issue?@action=redirect&bpo=33184) [https://bugs.python.org/issue?@action=redirect&bpo=33184]: Update Windows installer to use OpenSSL 1.1.0h.

## macOS

- [bpo-33184](https://bugs.python.org/issue?@action=redirect&bpo=33184) [https://bugs.python.org/issue?@action=redirect&bpo=33184]: Update macOS installer build to use OpenSSL 1.1.0h.

## IDLE

- [bpo-21474](https://bugs.python.org/issue?@action=redirect&bpo=21474) [https://bugs.python.org/issue?@action=redirect&bpo=21474]: Update word/identifier definition from ascii to unicode. In text and entry boxes, this affects selection by double-click, movement left/right by control-left/right, and deletion left/right by control-BACKSPACE/DEL.

- [bpo-33204](https://bugs.python.org/issue?@action=redirect&bpo=33204) [https://bugs.python.org/issue?@action=redirect&bpo=33204]: IDLE: consistently color invalid string prefixes. A ‘u’ string prefix cannot be paired with either ‘r’ or ‘f’. Consistently color as much of the prefix, starting at the right, as is valid. Revise and extend colorizer test.

## Tools/Demos

- [bpo-33189](https://bugs.python.org/issue?@action=redirect&bpo=33189) [https://bugs.python.org/issue?@action=redirect&bpo=33189]: **pygettext.py** now recognizes only literal strings as docstrings and translatable strings, and rejects bytes literals and f-string expressions.
- [bpo-31920](https://bugs.python.org/issue?@action=redirect&bpo=31920) [https://bugs.python.org/issue?@action=redirect&bpo=31920]: Fixed handling directories as arguments in the `pygettext` script. Based on patch by Oleg Krasnikov.
- [bpo-29673](https://bugs.python.org/issue?@action=redirect&bpo=29673) [https://bugs.python.org/issue?@action=redirect&bpo=29673]: Fix `pystackv` and `pystack gdbinit` macros.
- [bpo-31583](https://bugs.python.org/issue?@action=redirect&bpo=31583) [https://bugs.python.org/issue?@action=redirect&bpo=31583]: Fix 2to3 for using with `-add-suffix` option but without `-output-dir` option for relative path to files in current directory.

## Python 3.7.0 beta 3

*Release date: 2018-03-29*

## Security

- [bpo-33136](https://bugs.python.org/issue?@action=redirect&bpo=33136) [https://bugs.python.org/issue?@action=redirect&bpo=33136]: Harden `ssl` module against LibreSSL CVE-2018-8970. `X509_VERIFY_PARAM_set1_host()` is called with an explicit `namelen`. A new test ensures that NULL bytes are not allowed.
- [bpo-33001](https://bugs.python.org/issue?@action=redirect&bpo=33001) [https://bugs.python.org/issue?@action=redirect&bpo=33001]: Minimal fix to prevent buffer overrun in `os.symlink` on Windows
- [bpo-32981](https://bugs.python.org/issue?@action=redirect&bpo=32981) [https://bugs.python.org/issue?@action=redirect&bpo=32981]

@action=redirect&bpo=32981]: Regexes in difflib and poplib were vulnerable to catastrophic backtracking. These regexes formed potential DOS vectors (REDOS). They have been refactored. This resolves CVE-2018-1060 and CVE-2018-1061. Patch by Jamie Davis.

## Core and Builtins

- [bpo-33053](https://bugs.python.org/issue?@action=redirect&bpo=33053) [https://bugs.python.org/issue?@action=redirect&bpo=33053]: When using the `-m` switch, `sys.path[0]` is now explicitly expanded as the *starting* working directory, rather than being left as the empty path (which allows imports from the current working directory at the time of the import)
- [bpo-33018](https://bugs.python.org/issue?@action=redirect&bpo=33018) [https://bugs.python.org/issue?@action=redirect&bpo=33018]: Improve consistency of errors raised by `issubclass()` when called with a non-class and an abstract base class as the first and second arguments, respectively. Patch by Josh Bronson.
- [bpo-33041](https://bugs.python.org/issue?@action=redirect&bpo=33041) [https://bugs.python.org/issue?@action=redirect&bpo=33041]: Fixed jumping when the function contains an `async for` loop.
- [bpo-33026](https://bugs.python.org/issue?@action=redirect&bpo=33026) [https://bugs.python.org/issue?@action=redirect&bpo=33026]: Fixed jumping out of “with” block by setting `f_lineno`.
- [bpo-33005](https://bugs.python.org/issue?@action=redirect&bpo=33005) [https://bugs.python.org/issue?@action=redirect&bpo=33005]: Fix a crash on fork when using a custom memory allocator (ex: using `PYTHONMALLOC` env var). `_PyGILState_Reinit()` and `_PyInterpreterState_Enable()` now use the default RAW memory allocator to allocate a new interpreters mutex on fork.
- [bpo-17288](https://bugs.python.org/issue?@action=redirect&bpo=17288) [https://bugs.python.org/issue?@action=redirect&bpo=17288]: Prevent jumps from ‘return’ and ‘exception’ trace events.
- [bpo-32836](https://bugs.python.org/issue?@action=redirect&bpo=32836) [https://bugs.python.org/issue?@action=redirect&bpo=32836]: Don’t use temporary variables in cases of list/dict/set comprehensions

## Library

- [bpo-33141](https://bugs.python.org/issue?@action=redirect&bpo=33141) [https://bugs.python.org/issue?@action=redirect&bpo=33141]: Have Field objects pass through `__set_name__` to their default values, if they have their own `__set_name__`.
- [bpo-33096](https://bugs.python.org/issue?@action=redirect&bpo=33096) [https://bugs.python.org/issue?@action=redirect&bpo=33096]: Allow `tk.Ttreeview.insert` to insert iid that has a false boolean value. Note `iid=0` and `iid=False` would be same. Patch by Garvit Khatri.
- [bpo-32873](https://bugs.python.org/issue?@action=redirect&bpo=32873) [https://bugs.python.org/issue?@action=redirect&bpo=32873]: Treat type variables and special typing forms as immutable by copy and pickle. This fixes several minor issues and inconsistencies, and improves backwards compatibility with Python 3.6.
- [bpo-33134](https://bugs.python.org/issue?@action=redirect&bpo=33134) [https://bugs.python.org/issue?@action=redirect&bpo=33134]: When computing dataclass's `__hash__`, use the lookup table to contain the function which returns the `__hash__` value. This is an improvement over looking up a string, and then testing that string to see what to do.
- [bpo-33127](https://bugs.python.org/issue?@action=redirect&bpo=33127) [https://bugs.python.org/issue?@action=redirect&bpo=33127]: The `ssl` module now compiles with LibreSSL 2.7.1.
- [bpo-32505](https://bugs.python.org/issue?@action=redirect&bpo=32505) [https://bugs.python.org/issue?@action=redirect&bpo=32505]: Raise `TypeError` if a member variable of a dataclass is of type `Field`, but doesn't have a type annotation.
- [bpo-33078](https://bugs.python.org/issue?@action=redirect&bpo=33078) [https://bugs.python.org/issue?@action=redirect&bpo=33078]: Fix the failure on OSX caused by the tests relying on `sem_getvalue`
- [bpo-33116](https://bugs.python.org/issue?@action=redirect&bpo=33116) [https://bugs.python.org/issue?@action=redirect&bpo=33116]: Add 'Field' to dataclasses. `__all__`.
- [bpo-32896](https://bugs.python.org/issue?@action=redirect&bpo=32896) [https://bugs.python.org/issue?@action=redirect&bpo=32896]: Fix an error where subclassing a dataclass with a field that uses a default `factory` would generate an incorrect class.
- [bpo-33100](https://bugs.python.org/issue?@action=redirect&bpo=33100) [https://bugs.python.org/issue?@action=redirect&bpo=33100]: Dataclasses: If a field has a default value that's a `MemberDescriptorType`, then it's from that field being in `__slots__`, not an actual default value.
- [bpo-32953](https://bugs.python.org/issue?@action=redirect&bpo=32953) [https://bugs.python.org/issue?@action=redirect&bpo=32953]

@action=redirect&bpo=32953]: If a non-dataclass inherits from a frozen dataclass, allow attributes to be added to the derived class. Only attributes from the frozen dataclass cannot be assigned to. Require all dataclasses in a hierarchy to be either all frozen or all non-frozen.

- [bpo-33061](https://bugs.python.org/issue?@action=redirect&bpo=33061) [https://bugs.python.org/issue?@action=redirect&bpo=33061]: Add missing `NoReturn` to `__all__` in `typing.py`
- [bpo-33078](https://bugs.python.org/issue?@action=redirect&bpo=33078) [https://bugs.python.org/issue?@action=redirect&bpo=33078]: Fix the size handling in `multiprocessing.Queue` when a pickling error occurs.
- [bpo-33064](https://bugs.python.org/issue?@action=redirect&bpo=33064) [https://bugs.python.org/issue?@action=redirect&bpo=33064]: `lib2to3` now properly supports trailing commas after `*args` and `**kwargs` in function signatures.
- [bpo-33056](https://bugs.python.org/issue?@action=redirect&bpo=33056) [https://bugs.python.org/issue?@action=redirect&bpo=33056]: FIX properly close leaking fds in `concurrent.futures.ProcessPoolExecutor`.
- [bpo-33021](https://bugs.python.org/issue?@action=redirect&bpo=33021) [https://bugs.python.org/issue?@action=redirect&bpo=33021]: Release the GIL during `fstat()` calls, avoiding hang of all threads when calling `mmap.mmap()`, `os.urandom()`, and `random.seed()`. Patch by Nir Soffer.
- [bpo-31804](https://bugs.python.org/issue?@action=redirect&bpo=31804) [https://bugs.python.org/issue?@action=redirect&bpo=31804]: Avoid failing in `multiprocessing.Process` if the standard streams are closed or `None` at exit.
- [bpo-33037](https://bugs.python.org/issue?@action=redirect&bpo=33037) [https://bugs.python.org/issue?@action=redirect&bpo=33037]: Skip sending/receiving data after SSL transport closing.
- [bpo-27683](https://bugs.python.org/issue?@action=redirect&bpo=27683) [https://bugs.python.org/issue?@action=redirect&bpo=27683]: Fix a regression in `ipaddress` that result of `hosts()` is empty when the network is constructed by a tuple containing an integer mask and only 1 bit left for addresses.
- [bpo-32999](https://bugs.python.org/issue?@action=redirect&bpo=32999) [https://bugs.python.org/issue?@action=redirect&bpo=32999]: Fix C implementation of `ABC.__subclasscheck__(cls, subclass)` crashed when `subclass` is not a type object.
- [bpo-33009](https://bugs.python.org/issue?@action=redirect&bpo=33009) [https://bugs.python.org/issue?@action=redirect&bpo=33009]

@action=redirect&bpo=33009]: Fix inspect.signature() for single-parameter partialmethods.

- [bpo-32969](https://bugs.python.org/issue?@action=redirect&bpo=32969) [https://bugs.python.org/issue?@action=redirect&bpo=32969]: Expose several missing constants in zlib and fix corresponding documentation.
- [bpo-32056](https://bugs.python.org/issue?@action=redirect&bpo=32056) [https://bugs.python.org/issue?@action=redirect&bpo=32056]: Improved exceptions raised for invalid number of channels and sample width when read an audio file in modules [aifc](#), [wave](#) and [sunau](#).
- [bpo-32844](https://bugs.python.org/issue?@action=redirect&bpo=32844) [https://bugs.python.org/issue?@action=redirect&bpo=32844]: Fix wrong redirection of a low descriptor (0 or 1) to stderr in subprocess if another low descriptor is closed.
- [bpo-32857](https://bugs.python.org/issue?@action=redirect&bpo=32857) [https://bugs.python.org/issue?@action=redirect&bpo=32857]: In [tkinter](#), `after_cancel(None)` now raises a [ValueError](#) instead of canceling the first scheduled function. Patch by Cheryl Sabella.
- [bpo-31639](https://bugs.python.org/issue?@action=redirect&bpo=31639) [https://bugs.python.org/issue?@action=redirect&bpo=31639]: `http.server` now exposes a `ThreadedHTTPServer` class and uses it when the module is run with `-m` to cope with web browsers pre-opening sockets.
- [bpo-27645](https://bugs.python.org/issue?@action=redirect&bpo=27645) [https://bugs.python.org/issue?@action=redirect&bpo=27645]: [sqlite3.Connection](#) now exposes a [backup](#) method, if the underlying SQLite library is at version 3.6.11 or higher. Patch by Lele Gaifax.

## Documentation

- [bpo-33126](https://bugs.python.org/issue?@action=redirect&bpo=33126) [https://bugs.python.org/issue?@action=redirect&bpo=33126]: Document `PyBuffer_ToContiguous()`.
- [bpo-27212](https://bugs.python.org/issue?@action=redirect&bpo=27212) [https://bugs.python.org/issue?@action=redirect&bpo=27212]: Modify documentation for the [islice\(\)](#) recipe to consume initial values up to the start index.
- [bpo-28247](https://bugs.python.org/issue?@action=redirect&bpo=28247) [https://bugs.python.org/issue?@action=redirect&bpo=28247]: Update [zipapp](#) documentation to describe how to make standalone applications.
- [bpo-18802](https://bugs.python.org/issue?@action=redirect&bpo=18802) [https://bugs.python.org/issue?@action=redirect&bpo=18802]

@action=redirect&bpo=18802]: Documentation changes for ipaddress. Patch by Jon Foster and Berker Peksag.

- [bpo-27428](https://bugs.python.org/issue?@action=redirect&bpo=27428) [https://bugs.python.org/issue?@action=redirect&bpo=27428]: Update documentation to clarify that `WindowsRegistryFinder` implements `MetaPathFinder`. (Patch by Himanshu Lakhara)

## Tests

- [bpo-32872](https://bugs.python.org/issue?@action=redirect&bpo=32872) [https://bugs.python.org/issue?@action=redirect&bpo=32872]: Avoid regrtest compatibility issue with namespace packages.
- [bpo-32517](https://bugs.python.org/issue?@action=redirect&bpo=32517) [https://bugs.python.org/issue?@action=redirect&bpo=32517]: Fix failing `test_asyncio` on macOS 10.12.2+ due to transport of `KqueueSelector` loop was not being closed.
- [bpo-19417](https://bugs.python.org/issue?@action=redirect&bpo=19417) [https://bugs.python.org/issue?@action=redirect&bpo=19417]: Add `test_bdb.py`.

## Build

- [bpo-33163](https://bugs.python.org/issue?@action=redirect&bpo=33163) [https://bugs.python.org/issue?@action=redirect&bpo=33163]: Upgrade pip to 9.0.3 and setuptools to v39.0.1.

## Windows

- [bpo-33016](https://bugs.python.org/issue?@action=redirect&bpo=33016) [https://bugs.python.org/issue?@action=redirect&bpo=33016]: Fix potential use of uninitialized memory in `nt._getfinalpathname`
- [bpo-32903](https://bugs.python.org/issue?@action=redirect&bpo=32903) [https://bugs.python.org/issue?@action=redirect&bpo=32903]: Fix a memory leak in `os.chdir()` on Windows if the current directory is set to a UNC path.

## macOS

- [bpo-32726](https://bugs.python.org/issue?@action=redirect&bpo=32726) [https://bugs.python.org/issue?@action=redirect&bpo=32726]: Build and link with private copy of Tcl/Tk 8.6 for the macOS 10.6+ installer. The 10.9+

installer variant already does this. This means that the Python 3.7 provided by the python.org macOS installers no longer need or use any external versions of Tcl/Tk, either system-provided or user-installed, such as ActiveTcl.

## IDLE

- [bpo-32984](https://bugs.python.org/issue?@action=redirect&bpo=32984) [https://bugs.python.org/issue?@action=redirect&bpo=32984]: Set `__file__` while running a startup file. Like Python, IDLE optionally runs one startup file in the Shell window before presenting the first interactive input prompt. For IDLE, `-s` runs a file named in environmental variable `IDLESTARTUP` or `PYTHONSTARTUP`; `-r file` runs `file`. Python sets `__file__` to the startup file name before running the file and unsets it before the first prompt. IDLE now does the same when run normally, without the `-n` option.
- [bpo-32940](https://bugs.python.org/issue?@action=redirect&bpo=32940) [https://bugs.python.org/issue?@action=redirect&bpo=32940]: Simplify and rename `StringTranslatePseudoMapping` in `pyparse`.

## Tools/Demos

- [bpo-32885](https://bugs.python.org/issue?@action=redirect&bpo=32885) [https://bugs.python.org/issue?@action=redirect&bpo=32885]: Add an `-n` flag for `Tools/scripts/pathfix.py` to disable automatic backup creation (files with `~` suffix).

## C API

- [bpo-33042](https://bugs.python.org/issue?@action=redirect&bpo=33042) [https://bugs.python.org/issue?@action=redirect&bpo=33042]: Embedding applications may once again call `PySys_ResetWarnOptions`, `PySys_AddWarnOption`, and `PySys_AddXOption` prior to calling `Py_Initialize`.
- [bpo-32374](https://bugs.python.org/issue?@action=redirect&bpo=32374) [https://bugs.python.org/issue?@action=redirect&bpo=32374]: Document that `m_traverse` for multi-phase initialized modules can be called with `m_state=NULL`, and add a sanity check

# Python 3.7.0 beta 2

*Release date: 2018-02-27*

## Security

- [bpo-28414](https://bugs.python.org/issue?@action=redirect&bpo=28414) [https://bugs.python.org/issue?@action=redirect&bpo=28414]: The ssl module now allows users to perform their own IDN en/decoding when using SNI.

## Core and Builtins

- [bpo-32889](https://bugs.python.org/issue?@action=redirect&bpo=32889) [https://bugs.python.org/issue?@action=redirect&bpo=32889]: Update Valgrind suppression list to account for the rename of `Py_ADDRESS_IN_RANGE` to `address_in_range`.
- [bpo-31356](https://bugs.python.org/issue?@action=redirect&bpo=31356) [https://bugs.python.org/issue?@action=redirect&bpo=31356]: Remove the new API added in [bpo-31356](https://bugs.python.org/issue?@action=redirect&bpo=31356) [https://bugs.python.org/issue?@action=redirect&bpo=31356] (`gc.ensure_disabled()` context manager).
- [bpo-32305](https://bugs.python.org/issue?@action=redirect&bpo=32305) [https://bugs.python.org/issue?@action=redirect&bpo=32305]: For namespace packages, ensure that both `__file__` and `__spec__.origin` are set to `None`.
- [bpo-32303](https://bugs.python.org/issue?@action=redirect&bpo=32303) [https://bugs.python.org/issue?@action=redirect&bpo=32303]: Make sure `__spec__.loader` matches `__loader__` for namespace packages.
- [bpo-32711](https://bugs.python.org/issue?@action=redirect&bpo=32711) [https://bugs.python.org/issue?@action=redirect&bpo=32711]: Fix the warning messages for Python/ast\_unparse.c. Patch by Stéphane Wirtel
- [bpo-32583](https://bugs.python.org/issue?@action=redirect&bpo=32583) [https://bugs.python.org/issue?@action=redirect&bpo=32583]: Fix possible crashing in builtin Unicode decoders caused by write out-of-bound errors when using customized decode error handlers.

## Library

- [bpo-32960](https://bugs.python.org/issue?@action=redirect&bpo=32960) [https://bugs.python.org/issue?@action=redirect&bpo=32960]

@action=redirect&bpo=32960]: For dataclasses, disallow inheriting frozen from non-frozen classes, and also disallow inheriting non-frozen from frozen classes. This restriction will be relaxed at a future date.

- [bpo-32713](https://bugs.python.org/issue?@action=redirect&bpo=32713) [https://bugs.python.org/issue?@action=redirect&bpo=32713]: Fixed tarfile.itn handling of out-of-bounds float values. Patch by Joffrey Fuhrer.
- [bpo-32951](https://bugs.python.org/issue?@action=redirect&bpo=32951) [https://bugs.python.org/issue?@action=redirect&bpo=32951]: Direct instantiation of SSLSocket and SSLObject objects is now prohibited. The constructors were never documented, tested, or designed as public constructors. Users were suppose to use ssl.wrap\_socket() or SSLContext.
- [bpo-32929](https://bugs.python.org/issue?@action=redirect&bpo=32929) [https://bugs.python.org/issue?@action=redirect&bpo=32929]: Remove the tri-state parameter “hash”, and add the boolean “unsafe\_hash”. If unsafe\_hash is True, add a \_hash\_ function, but if a \_hash\_ exists, raise TypeError. If unsafe\_hash is False, add a \_hash\_ based on the values of eq= and frozen=. The unsafe\_hash=False behavior is the same as the old hash=None behavior. unsafe\_hash=False is the default, just as hash=None used to be.
- [bpo-32947](https://bugs.python.org/issue?@action=redirect&bpo=32947) [https://bugs.python.org/issue?@action=redirect&bpo=32947]: Add OP\_ENABLE\_MIDDLEBOX\_COMPAT and test workaround for TLSv1.3 for future compatibility with OpenSSL 1.1.1.
- [bpo-30622](https://bugs.python.org/issue?@action=redirect&bpo=30622) [https://bugs.python.org/issue?@action=redirect&bpo=30622]: The ssl module now detects missing NPN support in LibreSSL.
- [bpo-32922](https://bugs.python.org/issue?@action=redirect&bpo=32922) [https://bugs.python.org/issue?@action=redirect&bpo=32922]: dbm.open() now encodes filename with the filesystem encoding rather than default encoding.
- [bpo-32859](https://bugs.python.org/issue?@action=redirect&bpo=32859) [https://bugs.python.org/issue?@action=redirect&bpo=32859]: In os.dup2, don't check every call whether the dup3 syscall exists or not.
- [bpo-32556](https://bugs.python.org/issue?@action=redirect&bpo=32556) [https://bugs.python.org/issue?@action=redirect&bpo=32556]: nt.getfinalpathname, nt.getvolumepathname and nt.getdiskusage now correctly convert from bytes.
- [bpo-25988](https://bugs.python.org/issue?@action=redirect&bpo=25988) [https://bugs.python.org/issue?

@action=redirect&bpo=25988]: Emit a **DeprecationWarning** when using or importing an ABC directly from **collections** rather than from **collections.abc**.

- **bpo-21060** [https://bugs.python.org/issue?@action=redirect&bpo=21060]: Rewrite confusing message from setup.py upload from “No dist file created in earlier command” to the more helpful “Must create and upload files in one command”.
- **bpo-32852** [https://bugs.python.org/issue?@action=redirect&bpo=32852]: Make sure sys.argv remains as a list when running trace.
- **bpo-31333** [https://bugs.python.org/issue?@action=redirect&bpo=31333]: **\_abc** module is added. It is a speedup module with C implementations for various functions and methods in **abc**. Creating an ABC subclass and calling **isinstance** or **issubclass** with an ABC subclass are up to 1.5x faster. In addition, this makes Python start-up up to 10% faster. Note that the new implementation hides internal registry and caches, previously accessible via private attributes **\_abc\_registry**, **\_abc\_cache**, and **\_abc\_negative\_cache**. There are three debugging helper methods that can be used instead **\_dump\_registry**, **\_abc\_registry\_clear**, and **\_abc\_caches\_clear**.
- **bpo-32841** [https://bugs.python.org/issue?@action=redirect&bpo=32841]: Fixed **asyncio.Condition** issue which silently ignored cancellation after notifying and cancelling a conditional lock. Patch by Bar Harel.
- **bpo-32819** [https://bugs.python.org/issue?@action=redirect&bpo=32819]: **ssl.match\_hostname()** has been simplified and no longer depends on **re** and **ipaddress** module for wildcard and IP addresses. Error reporting for invalid wildcards has been improved.
- **bpo-32394** [https://bugs.python.org/issue?@action=redirect&bpo=32394]: **socket**: Remove **TCP\_FASTOPEN**, **TCP\_KEEPCNT**, **TCP\_KEEPIDL**, **TCP\_KEEPI** flags on older version Windows during run-time.
- **bpo-31787** [https://bugs.python.org/issue?@action=redirect&bpo=31787]: Fixed leaks of **\_\_init\_\_()** methods in various modules. (Contributed by Oren Milman)
- **bpo-30157** [https://bugs.python.org/issue?@action=redirect&bpo=30157]: Fixed **ssl.match\_hostname()** issue which silently ignored cancellation after notifying and cancelling a conditional lock. Patch by Bar Harel.

@action=redirect&bpo=30157]: Fixed guessing quote and delimiter in `csv.Sniffer.sniff()` when only the last field is quoted. Patch by Jake Davis.

- [bpo-32792](https://bugs.python.org/issue?@action=redirect&bpo=32792) [https://bugs.python.org/issue?@action=redirect&bpo=32792]: `collections.ChainMap()` preserves the order of the underlying mappings.
- [bpo-32775](https://bugs.python.org/issue?@action=redirect&bpo=32775) [https://bugs.python.org/issue?@action=redirect&bpo=32775]: `fnmatch.translate()` no longer produces patterns which contain set operations. Sets starting with '[' or containing '-', '&&', '~' or '|' will be interpreted differently in regular expressions in future versions. Currently they emit warnings. `fnmatch.translate()` now avoids producing patterns containing such sets by accident.
- [bpo-32622](https://bugs.python.org/issue?@action=redirect&bpo=32622) [https://bugs.python.org/issue?@action=redirect&bpo=32622]: Implement native fast sendfile for Windows proactor event loop.
- [bpo-32777](https://bugs.python.org/issue?@action=redirect&bpo=32777) [https://bugs.python.org/issue?@action=redirect&bpo=32777]: Fix a rare but potential pre-exec child process deadlock in subprocess on POSIX systems when marking file descriptors inheritable on exec in the child process. This bug appears to have been introduced in 3.4.
- [bpo-32647](https://bugs.python.org/issue?@action=redirect&bpo=32647) [https://bugs.python.org/issue?@action=redirect&bpo=32647]: The `ctypes` module used to depend on indirect linking for `dlopen`. The shared extension is now explicitly linked against `libdl` on platforms with `dl`.
- [bpo-32741](https://bugs.python.org/issue?@action=redirect&bpo=32741) [https://bugs.python.org/issue?@action=redirect&bpo=32741]: Implement `asyncio.TimerHandle.when()` method.
- [bpo-32691](https://bugs.python.org/issue?@action=redirect&bpo=32691) [https://bugs.python.org/issue?@action=redirect&bpo=32691]: Use `mod_spec.parent` when running modules with `pdb`
- [bpo-32734](https://bugs.python.org/issue?@action=redirect&bpo=32734) [https://bugs.python.org/issue?@action=redirect&bpo=32734]: Fixed `asyncio.Lock()` safety issue which allowed acquiring and locking the same lock multiple times, without it being free. Patch by Bar Harel.
- [bpo-32727](https://bugs.python.org/issue?@action=redirect&bpo=32727) [https://bugs.python.org/issue?@action=redirect&bpo=32727]: Do not include name field in SMTP envelope from address. Patch by Stéphane Wirtel
- [bpo-31453](https://bugs.python.org/issue?@action=redirect&bpo=31453) [https://bugs.python.org/issue?@action=redirect&bpo=31453]

@action=redirect&bpo=31453]: Add TLSVersion constants and SSLContext.maximum\_version / minimum\_version attributes. The new API wraps OpenSSL 1.1 [https://web.archive.org/web/20180309043602/https://www.openssl.org/docs/man1.1.0/ssl/SSL\\_CTX\\_set\\_min\\_proto\\_version.html](https://web.archive.org/web/20180309043602/https://www.openssl.org/docs/man1.1.0/ssl/SSL_CTX_set_min_proto_version.html) feature.

- [bpo-24334](https://bugs.python.org/issue?@action=redirect&bpo=24334) [https://bugs.python.org/issue?@action=redirect&bpo=24334]: Internal implementation details of ssl module were cleaned up. The SSLSocket has one less layer of indirection. Owner and session information are now handled by the SSLSocket and SSLObject constructor. Channel binding implementation has been simplified.
- [bpo-31848](https://bugs.python.org/issue?@action=redirect&bpo=31848) [https://bugs.python.org/issue?@action=redirect&bpo=31848]: Fix the error handling in Aifc\_read.initfp() when the SSND chunk is not found. Patch by Zackery Spytz.
- [bpo-32585](https://bugs.python.org/issue?@action=redirect&bpo=32585) [https://bugs.python.org/issue?@action=redirect&bpo=32585]: Add Tk spinbox widget to **tkinter.ttk**. Patch by Alan D Moore.
- [bpo-32221](https://bugs.python.org/issue?@action=redirect&bpo=32221) [https://bugs.python.org/issue?@action=redirect&bpo=32221]: Various functions returning tuple containing IPv6 addresses now omit %scope part since the same information is already encoded in scopeid tuple item. Especially this speeds up **socket.recvfrom()** when it receives multicast packet since useless resolving of network interface name is omitted.
- [bpo-30693](https://bugs.python.org/issue?@action=redirect&bpo=30693) [https://bugs.python.org/issue?@action=redirect&bpo=30693]: The TarFile class now recurses directories in a reproducible way.
- [bpo-30693](https://bugs.python.org/issue?@action=redirect&bpo=30693) [https://bugs.python.org/issue?@action=redirect&bpo=30693]: The ZipFile class now recurses directories in a reproducible way.

## Documentation

- [bpo-28124](https://bugs.python.org/issue?@action=redirect&bpo=28124) [https://bugs.python.org/issue?@action=redirect&bpo=28124]: The ssl module function ssl.wrap\_socket() has been de-emphasized and deprecated in favor of the more secure and efficient SSLContext.wrap\_socket() method.
- [bpo-17232](https://bugs.python.org/issue?@action=redirect&bpo=17232) [https://bugs.python.org/issue?@action=redirect&bpo=17232]

@action=redirect&bpo=17232]: Clarify docs for -O and -OO. Patch by Terry Reedy.

- [bpo-32436](https://bugs.python.org/issue?@action=redirect&bpo=32436) [https://bugs.python.org/issue?@action=redirect&bpo=32436]: Add documentation for the contextvars module (PEP 567).
- [bpo-32800](https://bugs.python.org/issue?@action=redirect&bpo=32800) [https://bugs.python.org/issue?@action=redirect&bpo=32800]: Update link to w3c doc for xml default namespaces.
- [bpo-11015](https://bugs.python.org/issue?@action=redirect&bpo=11015) [https://bugs.python.org/issue?@action=redirect&bpo=11015]: Update `test.support` documentation.
- [bpo-8722](https://bugs.python.org/issue?@action=redirect&bpo=8722) [https://bugs.python.org/issue?@action=redirect&bpo=8722]: Document `__getattr__()` behavior when property `get()` method raises `AttributeError`.
- [bpo-32614](https://bugs.python.org/issue?@action=redirect&bpo=32614) [https://bugs.python.org/issue?@action=redirect&bpo=32614]: Modify RE examples in documentation to use raw strings to prevent `DeprecationWarning` and add text to REGEX HOWTO to highlight the deprecation.
- [bpo-31972](https://bugs.python.org/issue?@action=redirect&bpo=31972) [https://bugs.python.org/issue?@action=redirect&bpo=31972]: Improve docstrings for `pathlib.PurePath` subclasses.

## Tests

- [bpo-31809](https://bugs.python.org/issue?@action=redirect&bpo=31809) [https://bugs.python.org/issue?@action=redirect&bpo=31809]: Add tests to verify connection with secp ECDH curves.

## Build

- [bpo-32898](https://bugs.python.org/issue?@action=redirect&bpo=32898) [https://bugs.python.org/issue?@action=redirect&bpo=32898]: Fix the python debug build when using COUNT\_ALLOCS.

## Windows

- [bpo-32901](https://bugs.python.org/issue?@action=redirect&bpo=32901) [https://bugs.python.org/issue?@action=redirect&bpo=32901]: Update Tcl and Tk versions to 8.6.8

- [bpo-31966](https://bugs.python.org/issue?@action=redirect&bpo=31966) [https://bugs.python.org/issue?@action=redirect&bpo=31966]: Fixed `WindowsConsoleIO.write()` for writing empty data.
- [bpo-32409](https://bugs.python.org/issue?@action=redirect&bpo=32409) [https://bugs.python.org/issue?@action=redirect&bpo=32409]: Ensures `activate.bat` can handle Unicode contents.
- [bpo-32457](https://bugs.python.org/issue?@action=redirect&bpo=32457) [https://bugs.python.org/issue?@action=redirect&bpo=32457]: Improves handling of denormalized executable path when launching Python.
- [bpo-32370](https://bugs.python.org/issue?@action=redirect&bpo=32370) [https://bugs.python.org/issue?@action=redirect&bpo=32370]: Use the correct encoding for `ipconfig` output in the `uuid` module. Patch by Segev Finer.
- [bpo-29248](https://bugs.python.org/issue?@action=redirect&bpo=29248) [https://bugs.python.org/issue?@action=redirect&bpo=29248]: Fix `os.readlink()` on Windows, which was mistakenly treating the `PrintNameOffset` field of the reparse data buffer as a number of characters instead of bytes. Patch by Craig Holmquist and SSE4.

## macOS

- [bpo-32901](https://bugs.python.org/issue?@action=redirect&bpo=32901) [https://bugs.python.org/issue?@action=redirect&bpo=32901]: Update macOS 10.9+ installer to Tcl/Tk 8.6.8.

## IDLE

- [bpo-32916](https://bugs.python.org/issue?@action=redirect&bpo=32916) [https://bugs.python.org/issue?@action=redirect&bpo=32916]: Change `str` to `code` in `pyparse`.
- [bpo-32905](https://bugs.python.org/issue?@action=redirect&bpo=32905) [https://bugs.python.org/issue?@action=redirect&bpo=32905]: Remove unused code in `pyparse` module.
- [bpo-32874](https://bugs.python.org/issue?@action=redirect&bpo=32874) [https://bugs.python.org/issue?@action=redirect&bpo=32874]: Add tests for `pyparse`.
- [bpo-32837](https://bugs.python.org/issue?@action=redirect&bpo=32837) [https://bugs.python.org/issue?@action=redirect&bpo=32837]: Using the system and place-dependent default encoding for `open()` is a bad idea for IDLE's system and location-independent files.
- [bpo-32826](https://bugs.python.org/issue?@action=redirect&bpo=32826) [https://bugs.python.org/issue?@action=redirect&bpo=32826]: Add “`encoding = utf-8`” to `open()`

in IDLE's `test_help_about`. GUI test `test_file_buttons()` only looks at initial ascii-only lines, but failed on systems where `open()` defaults to 'ascii' because `readline()` internally reads and decodes far enough ahead to encounter a non-ascii character in `CREDITS.txt`.

- [bpo-32765](https://bugs.python.org/issue?@action=redirect&bpo=32765) [https://bugs.python.org/issue?@action=redirect&bpo=32765]: Update `configdialog` General tab docstring to add new widgets to the widget list.

## Tools/Demos

- [bpo-32222](https://bugs.python.org/issue?@action=redirect&bpo=32222) [https://bugs.python.org/issue?@action=redirect&bpo=32222]: Fix `pygettext` not extracting docstrings for functions with type annotated arguments. Patch by Toby Harradine.

# Python 3.7.0 beta 1

*Release date: 2018-01-30*

## Core and Builtins

- [bpo-32703](https://bugs.python.org/issue?@action=redirect&bpo=32703) [https://bugs.python.org/issue?@action=redirect&bpo=32703]: Fix `coroutine`'s `ResourceWarning` when there's an active error set when it's being finalized.
- [bpo-32650](https://bugs.python.org/issue?@action=redirect&bpo=32650) [https://bugs.python.org/issue?@action=redirect&bpo=32650]: `Pdb` and other debuggers dependent on `bdb.py` will correctly step over (next command) native coroutines. Patch by Pablo Galindo.
- [bpo-28685](https://bugs.python.org/issue?@action=redirect&bpo=28685) [https://bugs.python.org/issue?@action=redirect&bpo=28685]: Optimize `list.sort()` and `sorted()` by using type specialized comparisons when possible.
- [bpo-32685](https://bugs.python.org/issue?@action=redirect&bpo=32685) [https://bugs.python.org/issue?@action=redirect&bpo=32685]: Improve suggestion when the Python 2 form of `print` statement is either present on the same line as the header of a compound statement or else terminated by a semi-colon instead of a newline. Patch by Nitish Chandra.
- [bpo-32697](https://bugs.python.org/issue?@action=redirect&bpo=32697) [https://bugs.python.org/issue?@action=redirect&bpo=32697]

@action=redirect&bpo=32697]: Python now explicitly preserves the definition order of keyword-only parameters. It's always preserved their order, but this behavior was never guaranteed before; this behavior is now guaranteed and tested.

- [bpo-32690](https://bugs.python.org/issue?@action=redirect&bpo=32690) [https://bugs.python.org/issue?@action=redirect&bpo=32690]: The locals() dictionary now displays in the lexical order that variables were defined. Previously, the order was reversed.
- [bpo-32677](https://bugs.python.org/issue?@action=redirect&bpo=32677) [https://bugs.python.org/issue?@action=redirect&bpo=32677]: Add .isascii() method to str, bytes and bytearray. It can be used to test that string contains only ASCII characters.
- [bpo-32670](https://bugs.python.org/issue?@action=redirect&bpo=32670) [https://bugs.python.org/issue?@action=redirect&bpo=32670]: Enforce [PEP 479](https://peps.python.org/pep-0479/) [https://peps.python.org/pep-0479/] for all code. This means that manually raising a StopIteration exception from a generator is prohibited for all code, regardless of whether 'from \_future\_ import generator\_stop' was used or not.
- [bpo-32591](https://bugs.python.org/issue?@action=redirect&bpo=32591) [https://bugs.python.org/issue?@action=redirect&bpo=32591]: Added built-in support for tracking the origin of coroutine objects; see sys.set\_coroutine\_origin\_tracking\_depth and CoroutineType.cr\_origin. This replaces the asyncio debug mode's use of coroutine wrapping for native coroutine objects.
- [bpo-31368](https://bugs.python.org/issue?@action=redirect&bpo=31368) [https://bugs.python.org/issue?@action=redirect&bpo=31368]: Expose preadv and pwritev system calls in the os module. Patch by Pablo Galindo
- [bpo-32544](https://bugs.python.org/issue?@action=redirect&bpo=32544) [https://bugs.python.org/issue?@action=redirect&bpo=32544]: hasattr(obj, name) and getattr(obj, name, default) are about 4 times faster than before when name is not found and obj doesn't override \_\_getattr\_\_ or \_\_getattribute\_\_.
- [bpo-26163](https://bugs.python.org/issue?@action=redirect&bpo=26163) [https://bugs.python.org/issue?@action=redirect&bpo=26163]: Improved frozenset() hash to create more distinct hash values when faced with datasets containing many similar values.
- [bpo-32550](https://bugs.python.org/issue?@action=redirect&bpo=32550) [https://bugs.python.org/issue?@action=redirect&bpo=32550]: Remove the STORE\_ANNOTATION bytecode.

- [bpo-20104](https://bugs.python.org/issue?@action=redirect&bpo=20104) [https://bugs.python.org/issue?@action=redirect&bpo=20104]: Expose `posix_spawn` as a low level API in the `os` module. (removed before 3.7.0rc1)
- [bpo-24340](https://bugs.python.org/issue?@action=redirect&bpo=24340) [https://bugs.python.org/issue?@action=redirect&bpo=24340]: Fixed estimation of the code stack size.
- [bpo-32436](https://bugs.python.org/issue?@action=redirect&bpo=32436) [https://bugs.python.org/issue?@action=redirect&bpo=32436]: Implement [PEP 567](https://peps.python.org/pep-0567/) [https://peps.python.org/pep-0567/] Context Variables.
- [bpo-18533](https://bugs.python.org/issue?@action=redirect&bpo=18533) [https://bugs.python.org/issue?@action=redirect&bpo=18533]: `repr()` on a dict containing its own `values()` or `items()` no longer raises `RecursionError`; `OrderedDict` similarly. Instead, use `...`, as for other recursive structures. Patch by Ben North.
- [bpo-20891](https://bugs.python.org/issue?@action=redirect&bpo=20891) [https://bugs.python.org/issue?@action=redirect&bpo=20891]: `Py_Initialize()` now creates the GIL. The GIL is no longer created “on demand” to fix a race condition when `PyGILState_Ensure()` is called in a non-Python thread.
- [bpo-32028](https://bugs.python.org/issue?@action=redirect&bpo=32028) [https://bugs.python.org/issue?@action=redirect&bpo=32028]: Leading whitespace is now correctly ignored when generating suggestions for converting Py2 print statements to Py3 builtin print function calls. Patch by Sanyam Khurana.
- [bpo-31179](https://bugs.python.org/issue?@action=redirect&bpo=31179) [https://bugs.python.org/issue?@action=redirect&bpo=31179]: Make `dict.copy()` up to 5.5 times faster.
- [bpo-31113](https://bugs.python.org/issue?@action=redirect&bpo=31113) [https://bugs.python.org/issue?@action=redirect&bpo=31113]: Get rid of recursion in the compiler for normal control flow.

## Library

- [bpo-25988](https://bugs.python.org/issue?@action=redirect&bpo=25988) [https://bugs.python.org/issue?@action=redirect&bpo=25988]: Deprecate exposing the contents of `collections.abc` in the regular `collections` module.
- [bpo-31429](https://bugs.python.org/issue?@action=redirect&bpo=31429) [https://bugs.python.org/issue?@action=redirect&bpo=31429]: The default cipher suite selection of the `ssl` module now uses a blacklist approach rather than a hard-coded whitelist. Python no longer re-enables ciphers

that have been blocked by OpenSSL security update. Default cipher suite selection can be configured on compile time.

- [bpo-30306](https://bugs.python.org/issue?@action=redirect&bpo=30306) [https://bugs.python.org/issue?@action=redirect&bpo=30306]: `contextlib.contextmanager` now releases the arguments passed to the underlying generator as soon as the context manager is entered. Previously it would keep them alive for as long as the context manager was alive, even when not being used as a function decorator. Patch by Martin Teichmann.
- [bpo-21417](https://bugs.python.org/issue?@action=redirect&bpo=21417) [https://bugs.python.org/issue?@action=redirect&bpo=21417]: Added support for setting the compression level for `zipfile.ZipFile`.
- [bpo-32251](https://bugs.python.org/issue?@action=redirect&bpo=32251) [https://bugs.python.org/issue?@action=redirect&bpo=32251]: Implement `asyncio.BufferedProtocol` (provisional API).
- [bpo-32513](https://bugs.python.org/issue?@action=redirect&bpo=32513) [https://bugs.python.org/issue?@action=redirect&bpo=32513]: In dataclasses, allow easier overriding of dunder methods without specifying decorator parameters.
- [bpo-32660](https://bugs.python.org/issue?@action=redirect&bpo=32660) [https://bugs.python.org/issue?@action=redirect&bpo=32660]: `termios` makes available `FIONREAD`, `FIONCLEX`, `FIOCLEX`, `FIOASYNC` and `FIONBIO` also under Solaris/derivatives.
- [bpo-27931](https://bugs.python.org/issue?@action=redirect&bpo=27931) [https://bugs.python.org/issue?@action=redirect&bpo=27931]: Fix email address header parsing error when the username is an empty quoted string. Patch by Xiang Zhang.
- [bpo-32659](https://bugs.python.org/issue?@action=redirect&bpo=32659) [https://bugs.python.org/issue?@action=redirect&bpo=32659]: Under Solaris and derivatives, `os.stat_result` provides a `st_fstype` attribute.
- [bpo-32662](https://bugs.python.org/issue?@action=redirect&bpo=32662) [https://bugs.python.org/issue?@action=redirect&bpo=32662]: Implement `Server.start_serving()`, `Server.serve_forever()`, and `Server.is_serving()` methods. Add 'start\_serving' keyword parameter to `loop.create_server()` and `loop.create_unix_server()`.
- [bpo-32391](https://bugs.python.org/issue?@action=redirect&bpo=32391) [https://bugs.python.org/issue?@action=redirect&bpo=32391]: Implement `asyncio.StreamWriter.wait_closed()` and `asyncio.StreamWriter.is_closing()` methods
- [bpo-32643](https://bugs.python.org/issue?@action=redirect&bpo=32643) [https://bugs.python.org/issue?@action=redirect&bpo=32643]

@action=redirect&bpo=32643]: Make Task.\_step, Task.\_wakeup and Future.\_schedule\_callbacks methods private.

- [bpo-32630](https://bugs.python.org/issue?@action=redirect&bpo=32630) [https://bugs.python.org/issue?@action=redirect&bpo=32630]: Refactor decimal module to use contextvars to store decimal context.
- [bpo-32622](https://bugs.python.org/issue?@action=redirect&bpo=32622) [https://bugs.python.org/issue?@action=redirect&bpo=32622]: Add **asyncio.AbstractEventLoop.sendfile()** method.
- [bpo-32304](https://bugs.python.org/issue?@action=redirect&bpo=32304) [https://bugs.python.org/issue?@action=redirect&bpo=32304]: distutils' upload command no longer corrupts tar files ending with a CR byte, and no longer tries to convert CR to CRLF in any of the upload text fields.
- [bpo-32502](https://bugs.python.org/issue?@action=redirect&bpo=32502) [https://bugs.python.org/issue?@action=redirect&bpo=32502]: uuid.uuid1 no longer raises an exception if a 64-bit hardware address is encountered.
- [bpo-32596](https://bugs.python.org/issue?@action=redirect&bpo=32596) [https://bugs.python.org/issue?@action=redirect&bpo=32596]: concurrent.futures imports ThreadPoolExecutor and ProcessPoolExecutor lazily (using [PEP 562](https://peps.python.org/pep-0562/) [https://peps.python.org/pep-0562/]). It makes import asyncio about 15% faster because asyncio uses only ThreadPoolExecutor by default.
- [bpo-31801](https://bugs.python.org/issue?@action=redirect&bpo=31801) [https://bugs.python.org/issue?@action=redirect&bpo=31801]: Add `_ignore_` to Enum so temporary variables can be used during class construction without being turned into members.
- [bpo-32576](https://bugs.python.org/issue?@action=redirect&bpo=32576) [https://bugs.python.org/issue?@action=redirect&bpo=32576]: Use queue.SimpleQueue() in places where it can be invoked from a weakref callback.
- [bpo-32574](https://bugs.python.org/issue?@action=redirect&bpo=32574) [https://bugs.python.org/issue?@action=redirect&bpo=32574]: Fix memory leak in asyncio.Queue, when the queue has limited size and it is full, the cancelation of queue.put() can cause a memory leak. Patch by: José Melero.
- [bpo-32521](https://bugs.python.org/issue?@action=redirect&bpo=32521) [https://bugs.python.org/issue?@action=redirect&bpo=32521]: The nis module is now compatible with new libnsl and headers location.
- [bpo-32467](https://bugs.python.org/issue?@action=redirect&bpo=32467) [https://bugs.python.org/issue?@action=redirect&bpo=32467]: collections.abc.ValuesView now inherits from collections.abc.Collection.
- [bpo-32473](https://bugs.python.org/issue?@action=redirect&bpo=32473) [https://bugs.python.org/issue?@action=redirect&bpo=32473]

- @action=redirect&bpo=32473]: Improve ABCMeta.\_dump\_registry() output readability
- [bpo-32102](https://bugs.python.org/issue?@action=redirect&bpo=32102) [https://bugs.python.org/issue?@action=redirect&bpo=32102]: New argument capture\_output for subprocess.run
  - [bpo-32521](https://bugs.python.org/issue?@action=redirect&bpo=32521) [https://bugs.python.org/issue?@action=redirect&bpo=32521]: glibc has removed Sun RPC. Use replacement libtirpc headers and library in nis module.
  - [bpo-32493](https://bugs.python.org/issue?@action=redirect&bpo=32493) [https://bugs.python.org/issue?@action=redirect&bpo=32493]: UUID module fixes build for FreeBSD/OpenBSD
  - [bpo-32503](https://bugs.python.org/issue?@action=redirect&bpo=32503) [https://bugs.python.org/issue?@action=redirect&bpo=32503]: Pickling with protocol 4 no longer creates too small frames.
  - [bpo-29237](https://bugs.python.org/issue?@action=redirect&bpo=29237) [https://bugs.python.org/issue?@action=redirect&bpo=29237]: Create enum for pstats sorting options
  - [bpo-32454](https://bugs.python.org/issue?@action=redirect&bpo=32454) [https://bugs.python.org/issue?@action=redirect&bpo=32454]: Add close(fd) function to the socket module.
  - [bpo-25942](https://bugs.python.org/issue?@action=redirect&bpo=25942) [https://bugs.python.org/issue?@action=redirect&bpo=25942]: The subprocess module is now more graceful when handling a Ctrl-C KeyboardInterrupt during subprocess.call, subprocess.run, or a Popen context manager. It now waits a short amount of time for the child (presumed to have also gotten the SIGINT) to exit, before continuing the KeyboardInterrupt exception handling. This still includes a SIGKILL in the call() and run() APIs, but at least the child had a chance first.
  - [bpo-32433](https://bugs.python.org/issue?@action=redirect&bpo=32433) [https://bugs.python.org/issue?@action=redirect&bpo=32433]: The hmac module now has hmac.digest(), which provides an optimized HMAC digest.
  - [bpo-28134](https://bugs.python.org/issue?@action=redirect&bpo=28134) [https://bugs.python.org/issue?@action=redirect&bpo=28134]: Sockets now auto-detect family, type and protocol from file descriptor by default.
  - [bpo-32404](https://bugs.python.org/issue?@action=redirect&bpo=32404) [https://bugs.python.org/issue?@action=redirect&bpo=32404]: Fix bug where `datetime.datetime.fromtimestamp()` did not call `_new_` in `datetime.datetime` subclasses.
  - [bpo-32403](https://bugs.python.org/issue?@action=redirect&bpo=32403) [https://bugs.python.org/issue?@action=redirect&bpo=32403]

@action=redirect&bpo=32403]: Improved speed of `datetime.date` and `datetime.datetime` alternate constructors.

- [bpo-32228](https://bugs.python.org/issue?@action=redirect&bpo=32228) [https://bugs.python.org/issue?@action=redirect&bpo=32228]: Ensure that `truncate()` preserves the file position (as reported by `tell()`) after writes longer than the buffer size.
- [bpo-32410](https://bugs.python.org/issue?@action=redirect&bpo=32410) [https://bugs.python.org/issue?@action=redirect&bpo=32410]: Implement `loop.sock_sendfile` for asyncio event loop.
- [bpo-22908](https://bugs.python.org/issue?@action=redirect&bpo=22908) [https://bugs.python.org/issue?@action=redirect&bpo=22908]: Added seek and tell to the `ZipExtFile` class. This only works if the file object used to open the zipfile is seekable.
- [bpo-32373](https://bugs.python.org/issue?@action=redirect&bpo=32373) [https://bugs.python.org/issue?@action=redirect&bpo=32373]: Add `socket.getblocking()` method.
- [bpo-32248](https://bugs.python.org/issue?@action=redirect&bpo=32248) [https://bugs.python.org/issue?@action=redirect&bpo=32248]: Add `importlib.resources` and `importlib.abc.ResourceReader` as the unified API for reading resources contained within packages. Loaders wishing to support resource reading must implement the `get_resource_reader()` method. File-based and zipimport-based loaders both implement these APIs. `importlib.abc.ResourceLoader` is deprecated in favor of these new APIs.
- [bpo-32320](https://bugs.python.org/issue?@action=redirect&bpo=32320) [https://bugs.python.org/issue?@action=redirect&bpo=32320]: `collections.namedtuple()` now supports default values.
- [bpo-29302](https://bugs.python.org/issue?@action=redirect&bpo=29302) [https://bugs.python.org/issue?@action=redirect&bpo=29302]: Add `contextlib.AsyncExitStack`. Patch by Alexander Mohr and Ilya Kulakov.
- [bpo-31961](https://bugs.python.org/issue?@action=redirect&bpo=31961) [https://bugs.python.org/issue?@action=redirect&bpo=31961]: *Removed in Python 3.7.0b2*. The `args` argument of `subprocess.Popen` can now be a `path-like object`. If `args` is given as a sequence, it's first element can now be a `path-like object` as well.
- [bpo-31900](https://bugs.python.org/issue?@action=redirect&bpo=31900) [https://bugs.python.org/issue?@action=redirect&bpo=31900]: The `locale.localeconv()` function now sets temporarily the `LC_CTYPE` locale to the `LC_NUMERIC` locale to decode `decimal_point` and

thousands\_sep byte strings if they are non-ASCII or longer than 1 byte, and the LC\_NUMERIC locale is different than the LC\_CTYPE locale. This temporary change affects other threads. Same change for the `str.format()` method when formatting a number (`int`, `float`, `float` and subclasses) with the `n` type (ex: `'{:n}'.format(1234)`).

- [bpo-31853](https://bugs.python.org/issue?@action=redirect&bpo=31853) [https://bugs.python.org/issue?@action=redirect&bpo=31853]: Use `super().method` instead of `socket.method` in `SSLSocket`. They were there most likely for legacy reasons.
- [bpo-31399](https://bugs.python.org/issue?@action=redirect&bpo=31399) [https://bugs.python.org/issue?@action=redirect&bpo=31399]: The `ssl` module now uses OpenSSL's `X509_VERIFY_PARAM_set1_host()` and `X509_VERIFY_PARAM_set1_ip()` API to verify hostname and IP addresses. Subject common name fallback can be disabled with `SSLContext.hostname_checks_common_name`.
- [bpo-14976](https://bugs.python.org/issue?@action=redirect&bpo=14976) [https://bugs.python.org/issue?@action=redirect&bpo=14976]: Add a `queue.SimpleQueue` class, an unbounded FIFO queue with a reentrant C implementation of `put()`.

## Documentation

- [bpo-32724](https://bugs.python.org/issue?@action=redirect&bpo=32724) [https://bugs.python.org/issue?@action=redirect&bpo=32724]: Add references to some commands in the documentation of `Pdb`. Patch by Stéphane Wirtel
- [bpo-32649](https://bugs.python.org/issue?@action=redirect&bpo=32649) [https://bugs.python.org/issue?@action=redirect&bpo=32649]: Complete the C API documentation, profiling and tracing part with the newly added per-opcode events.
- [bpo-17799](https://bugs.python.org/issue?@action=redirect&bpo=17799) [https://bugs.python.org/issue?@action=redirect&bpo=17799]: Explain real behaviour of `sys.settrace` and `sys.setprofile` and their C-API counterparts regarding which type of events are received in each function. Patch by Pablo Galindo Salgado.

## Tests

- [bpo-32721](https://bugs.python.org/issue?@action=redirect&bpo=32721) [https://bugs.python.org/issue?@action=redirect&bpo=32721]

@action=redirect&bpo=32721]: Fix test\_hashlib to not fail if the \_md5 module is not built.

- [bpo-28414](https://bugs.python.org/issue?@action=redirect&bpo=28414) [https://bugs.python.org/issue?@action=redirect&bpo=28414]: Add test cases for IDNA 2003 and 2008 host names. IDNA 2003 internationalized host names are working since [bpo-31399](https://bugs.python.org/issue?@action=redirect&bpo=31399) [https://bugs.python.org/issue?@action=redirect&bpo=31399] has landed. IDNA 2008 are still broken.
- [bpo-32604](https://bugs.python.org/issue?@action=redirect&bpo=32604) [https://bugs.python.org/issue?@action=redirect&bpo=32604]: Add a new “\_xxsubinterpreters” extension module that exposes the existing subinterpreter C-API and a new cross-interpreter data sharing mechanism. The module is primarily intended for more thorough testing of the existing subinterpreter support. Note that the \_xxsubinterpreters module has been removed in 3.7.0rc1.
- [bpo-32602](https://bugs.python.org/issue?@action=redirect&bpo=32602) [https://bugs.python.org/issue?@action=redirect&bpo=32602]: Add test certs and test for ECDSA cert and EC/RSA dual mode.
- [bpo-32549](https://bugs.python.org/issue?@action=redirect&bpo=32549) [https://bugs.python.org/issue?@action=redirect&bpo=32549]: On Travis CI, Python now Compiles and uses a local copy of OpenSSL 1.1.0g for testing.

## Build

- [bpo-32635](https://bugs.python.org/issue?@action=redirect&bpo=32635) [https://bugs.python.org/issue?@action=redirect&bpo=32635]: Fix segfault of the crypt module when libxcrypt is provided instead of libcrypt at the system.
- [bpo-32598](https://bugs.python.org/issue?@action=redirect&bpo=32598) [https://bugs.python.org/issue?@action=redirect&bpo=32598]: Use autoconf to detect OpenSSL libs, headers and supported features. The ax\_check\_openssl M4 macro uses pkg-config to locate OpenSSL and falls back to manual search.
- [bpo-32593](https://bugs.python.org/issue?@action=redirect&bpo=32593) [https://bugs.python.org/issue?@action=redirect&bpo=32593]: Drop support of FreeBSD 9 and older.
- [bpo-29708](https://bugs.python.org/issue?@action=redirect&bpo=29708) [https://bugs.python.org/issue?@action=redirect&bpo=29708]: If the **SOURCE\_DATE\_EPOCH** environment variable is set, **py\_compile** will always create hash-based .pyc files.

## Windows

- [bpo-32588](https://bugs.python.org/issue?@action=redirect&bpo=32588) [https://bugs.python.org/issue?@action=redirect&bpo=32588]: Create standalone `_distutils_findvs` module and add missing `_queue` module to installer.
- [bpo-29911](https://bugs.python.org/issue?@action=redirect&bpo=29911) [https://bugs.python.org/issue?@action=redirect&bpo=29911]: Ensure separate Modify and Uninstall buttons are displayed.
- [bpo-32507](https://bugs.python.org/issue?@action=redirect&bpo=32507) [https://bugs.python.org/issue?@action=redirect&bpo=32507]: Use app-local UCRT install rather than the proper update for old versions of Windows.

## macOS

- [bpo-32726](https://bugs.python.org/issue?@action=redirect&bpo=32726) [https://bugs.python.org/issue?@action=redirect&bpo=32726]: Provide an additional, more modern macOS installer variant that supports macOS 10.9+ systems in 64-bit mode only. Upgrade the supplied third-party libraries to OpenSSL 1.1.0g and to SQLite 3.22.0. The 10.9+ installer now links with and supplies its own copy of Tcl/Tk 8.6.
- [bpo-28440](https://bugs.python.org/issue?@action=redirect&bpo=28440) [https://bugs.python.org/issue?@action=redirect&bpo=28440]: No longer add `/Library/Python/3.x/site-packages` to `sys.path` for macOS framework builds to avoid future conflicts.

## C API

- [bpo-32681](https://bugs.python.org/issue?@action=redirect&bpo=32681) [https://bugs.python.org/issue?@action=redirect&bpo=32681]: Fix uninitialized variable ‘res’ in the C implementation of `os.dup2`. Patch by Stéphane Wirtel
- [bpo-10381](https://bugs.python.org/issue?@action=redirect&bpo=10381) [https://bugs.python.org/issue?@action=redirect&bpo=10381]: Add C API access to the `datetime.timezone` constructor and `datetime.timezone.UTC` singleton.

## Python 3.7.0 alpha 4

*Release date: 2018-01-08*

## Core and Builtins

- [bpo-31975](https://bugs.python.org/issue?@action=redirect&bpo=31975) [https://bugs.python.org/issue?@action=redirect&bpo=31975]: The default warning filter list now starts with a “default::DeprecationWarning:\_main\_” entry, so deprecation warnings are once again shown by default in single-file scripts and at the interactive prompt.
- [bpo-32226](https://bugs.python.org/issue?@action=redirect&bpo=32226) [https://bugs.python.org/issue?@action=redirect&bpo=32226]: `__class__getitem__` is now an automatic class method.
- [bpo-32399](https://bugs.python.org/issue?@action=redirect&bpo=32399) [https://bugs.python.org/issue?@action=redirect&bpo=32399]: Add AIX uuid library support for RFC4122 using `uuid_create()` in `libc.a`
- [bpo-32390](https://bugs.python.org/issue?@action=redirect&bpo=32390) [https://bugs.python.org/issue?@action=redirect&bpo=32390]: Fix the compilation failure on AIX after the `f_fsid` field has been added to the object returned by `os.statvfs()` ([bpo-32143](https://bugs.python.org/issue?@action=redirect&bpo=32143) [https://bugs.python.org/issue?@action=redirect&bpo=32143]). Original patch by Michael Felt.
- [bpo-32379](https://bugs.python.org/issue?@action=redirect&bpo=32379) [https://bugs.python.org/issue?@action=redirect&bpo=32379]: Make MRO computation faster when a class inherits from a single base.
- [bpo-32259](https://bugs.python.org/issue?@action=redirect&bpo=32259) [https://bugs.python.org/issue?@action=redirect&bpo=32259]: The error message of a `TypeError` raised when `unpack non-iterable` is now more specific.
- [bpo-27169](https://bugs.python.org/issue?@action=redirect&bpo=27169) [https://bugs.python.org/issue?@action=redirect&bpo=27169]: The `__debug__` constant is now optimized out at compile time. This fixes also [bpo-22091](https://bugs.python.org/issue?@action=redirect&bpo=22091) [https://bugs.python.org/issue?@action=redirect&bpo=22091].
- [bpo-32329](https://bugs.python.org/issue?@action=redirect&bpo=32329) [https://bugs.python.org/issue?@action=redirect&bpo=32329]: The `-R` option now turns on hash randomization when the `PYTHONHASHSEED` environment variable is set to `0`. Previously, the option was ignored. Moreover, `sys.flags.hash_randomization` is now properly set to `0` when hash randomization is turned off by `PYTHONHASHSEED=0`.
- [bpo-30416](https://bugs.python.org/issue?@action=redirect&bpo=30416) [https://bugs.python.org/issue?@action=redirect&bpo=30416]: The optimizer is now protected from spending much time doing complex calculations and consuming much memory for creating large constants in constant folding. Increased limits for constants that can be

produced in constant folding.

- [bpo-32282](https://bugs.python.org/issue?@action=redirect&bpo=32282) [https://bugs.python.org/issue?@action=redirect&bpo=32282]: Fix an unnecessary `ifdef` in the `include` of `VersionHelpers.h` in `socketmodule` on Windows.
- [bpo-30579](https://bugs.python.org/issue?@action=redirect&bpo=30579) [https://bugs.python.org/issue?@action=redirect&bpo=30579]: Implement `TracebackType._new_` to allow Python-level creation of `traceback` objects, and make `TracebackType.tb_next` mutable.
- [bpo-32260](https://bugs.python.org/issue?@action=redirect&bpo=32260) [https://bugs.python.org/issue?@action=redirect&bpo=32260]: Don't byte swap the input keys to the `SipHash` algorithm on big-endian platforms. This should ensure `siphhash` gives consistent results across platforms.
- [bpo-31506](https://bugs.python.org/issue?@action=redirect&bpo=31506) [https://bugs.python.org/issue?@action=redirect&bpo=31506]: Improve the error message logic for `object._new_` and `object._init_`. Patch by Sanyam Khurana.
- [bpo-20361](https://bugs.python.org/issue?@action=redirect&bpo=20361) [https://bugs.python.org/issue?@action=redirect&bpo=20361]: `-b` and `-bb` now inject `'default::BytesWarning'` and `error::BytesWarning` entries into `sys.warnoptions`, ensuring that they take precedence over any other warning filters configured via the `-W` option or the `PYTHONWARNINGS` environment variable.
- [bpo-32230](https://bugs.python.org/issue?@action=redirect&bpo=32230) [https://bugs.python.org/issue?@action=redirect&bpo=32230]: **-X dev** now injects a `'default'` entry into `sys.warnoptions`, ensuring that it behaves identically to actually passing `-Wdefault` at the command line.
- [bpo-29240](https://bugs.python.org/issue?@action=redirect&bpo=29240) [https://bugs.python.org/issue?@action=redirect&bpo=29240]: Add a new UTF-8 mode: implementation of the [PEP 540](https://peps.python.org/pep-0540/) [https://peps.python.org/pep-0540/].
- [bpo-32226](https://bugs.python.org/issue?@action=redirect&bpo=32226) [https://bugs.python.org/issue?@action=redirect&bpo=32226]: [PEP 560](https://peps.python.org/pep-0560/) [https://peps.python.org/pep-0560/]: Add support for `__mro_entries__` and `__class_getitem__`. Implemented by Ivan Levkivskiy.
- [bpo-32225](https://bugs.python.org/issue?@action=redirect&bpo=32225) [https://bugs.python.org/issue?@action=redirect&bpo=32225]: [PEP 562](https://peps.python.org/pep-0562/) [https://peps.python.org/pep-0562/]: Add support for module `__getattr__` and `__dir__`. Implemented by Ivan Levkivskiy.

- [bpo-31901](https://bugs.python.org/issue?@action=redirect&bpo=31901) [https://bugs.python.org/issue?@action=redirect&bpo=31901]: The `atexit` module now has its callback stored per interpreter.
- [bpo-31650](https://bugs.python.org/issue?@action=redirect&bpo=31650) [https://bugs.python.org/issue?@action=redirect&bpo=31650]: Implement [PEP 552](https://peps.python.org/pep-0552/) (Deterministic pycs). Python now supports invalidating bytecode cache files based on a source content hash rather than source last-modified time.
- [bpo-29469](https://bugs.python.org/issue?@action=redirect&bpo=29469) [https://bugs.python.org/issue?@action=redirect&bpo=29469]: Move constant folding from bytecode layer to AST layer. Original patch by Eugene Toder.

## Library

- [bpo-32506](https://bugs.python.org/issue?@action=redirect&bpo=32506) [https://bugs.python.org/issue?@action=redirect&bpo=32506]: Now that dict is defined as keeping insertion order, drop `OrderedDict` and just use plain dict.
- [bpo-32279](https://bugs.python.org/issue?@action=redirect&bpo=32279) [https://bugs.python.org/issue?@action=redirect&bpo=32279]: Add params to `dataclasses.make_dataclasses()`: `init`, `repr`, `eq`, `order`, `hash`, and `frozen`. Pass them through to `dataclass()`.
- [bpo-32278](https://bugs.python.org/issue?@action=redirect&bpo=32278) [https://bugs.python.org/issue?@action=redirect&bpo=32278]: Make type information optional on `dataclasses.make_dataclass()`. If omitted, the string `'typing.Any'` is used.
- [bpo-32499](https://bugs.python.org/issue?@action=redirect&bpo=32499) [https://bugs.python.org/issue?@action=redirect&bpo=32499]: Add `dataclasses.is_dataclass(obj)`, which returns `True` if `obj` is a dataclass or an instance of one.
- [bpo-32468](https://bugs.python.org/issue?@action=redirect&bpo=32468) [https://bugs.python.org/issue?@action=redirect&bpo=32468]: Improve frame `repr()` to mention filename, code name and current line number.
- [bpo-23749](https://bugs.python.org/issue?@action=redirect&bpo=23749) [https://bugs.python.org/issue?@action=redirect&bpo=23749]: `asyncio`: Implement `loop.start_tls()`
- [bpo-32441](https://bugs.python.org/issue?@action=redirect&bpo=32441) [https://bugs.python.org/issue?@action=redirect&bpo=32441]: Return the new file descriptor (i.e., the second argument) from `os.dup2`. Previously, `None` was always returned.
- [bpo-32422](https://bugs.python.org/issue?@action=redirect&bpo=32422) [https://bugs.python.org/issue?@action=redirect&bpo=32422]: `functools.lru_cache` uses

less memory (3 words for each cached key) and takes about 1/3 time for cyclic GC.

- [bpo-31721](https://bugs.python.org/issue?@action=redirect&bpo=31721) [https://bugs.python.org/issue?@action=redirect&bpo=31721]: Prevent Python crash from happening when `Future._log_traceback` is set to `True` manually. Now it can only be set to `False`, or a `ValueError` is raised.
- [bpo-32415](https://bugs.python.org/issue?@action=redirect&bpo=32415) [https://bugs.python.org/issue?@action=redirect&bpo=32415]: `asyncio`: Add `Task.get_loop()` and `Future.get_loop()`
- [bpo-26133](https://bugs.python.org/issue?@action=redirect&bpo=26133) [https://bugs.python.org/issue?@action=redirect&bpo=26133]: Don't unsubscribe signals in `asyncio` UNIX event loop on interpreter shutdown.
- [bpo-32363](https://bugs.python.org/issue?@action=redirect&bpo=32363) [https://bugs.python.org/issue?@action=redirect&bpo=32363]: Make `asyncio.Task.set_exception()` and `set_result()` raise `NotImplementedError`. `Task.step()` and `Future._await_()` raise proper exceptions when they are in an invalid state, instead of raising an `AssertionError`.
- [bpo-32357](https://bugs.python.org/issue?@action=redirect&bpo=32357) [https://bugs.python.org/issue?@action=redirect&bpo=32357]: Optimize `asyncio.iscoroutine()` and `loop.create_task()` for non-native coroutines (e.g. `async/await` compiled with `Cython`).  
'`loop.create_task(python_coroutine)`' used to be 20% faster than '`loop.create_task(cython_coroutine)`'. Now, the latter is as fast.
- [bpo-32356](https://bugs.python.org/issue?@action=redirect&bpo=32356) [https://bugs.python.org/issue?@action=redirect&bpo=32356]:  
`asyncio.transport.resume_reading()` and `pause_reading()` are now idempotent. New `transport.is_reading()` method is added.
- [bpo-32355](https://bugs.python.org/issue?@action=redirect&bpo=32355) [https://bugs.python.org/issue?@action=redirect&bpo=32355]: Optimize `asyncio.gather()`; now up to 15% faster.
- [bpo-32351](https://bugs.python.org/issue?@action=redirect&bpo=32351) [https://bugs.python.org/issue?@action=redirect&bpo=32351]: Use fastpath in `asyncio.sleep` if `delay < 0` (2x boost)
- [bpo-32348](https://bugs.python.org/issue?@action=redirect&bpo=32348) [https://bugs.python.org/issue?@action=redirect&bpo=32348]: Optimize `asyncio.Future` `schedule/add/remove` callback. The optimization shows 3-6% performance improvements of `async/await` code.
- [bpo-32331](https://bugs.python.org/issue?@action=redirect&bpo=32331) [https://bugs.python.org/issue?@action=redirect&bpo=32331]

@action=redirect&bpo=32331]: Fix `socket.settimeout()` and `socket.setblocking()` to keep `socket.type` as is. Fix `socket.socket()` constructor to reset any bit flags applied to `socket`'s type. This change only affects OSes that have `SOCK_NONBLOCK` and/or `SOCK_CLOEXEC`.

- [bpo-32248](https://bugs.python.org/issue?@action=redirect&bpo=32248) [https://bugs.python.org/issue?@action=redirect&bpo=32248]: Add `importlib.abc.ResourceReader` as an ABC for loaders to provide a unified API for reading resources contained within packages. Also add `importlib.resources` as the port of `importlib_resources`.
- [bpo-32311](https://bugs.python.org/issue?@action=redirect&bpo=32311) [https://bugs.python.org/issue?@action=redirect&bpo=32311]: Implement `asyncio.create_task(coro)` shortcut
- [bpo-32327](https://bugs.python.org/issue?@action=redirect&bpo=32327) [https://bugs.python.org/issue?@action=redirect&bpo=32327]: Convert `asyncio` functions that were documented as coroutines to coroutines. Affected functions: `loop.sock_sendall`, `loop.sock_recv`, `loop.sock_accept`, `loop.getaddrinfo`, `loop.getnameinfo`.
- [bpo-32323](https://bugs.python.org/issue?@action=redirect&bpo=32323) [https://bugs.python.org/issue?@action=redirect&bpo=32323]: `urllib.parse.urlsplit()` does not convert zone-id (scope) to lower case for scoped IPv6 addresses in hostnames now.
- [bpo-32302](https://bugs.python.org/issue?@action=redirect&bpo=32302) [https://bugs.python.org/issue?@action=redirect&bpo=32302]: Fix `bdist_wininst` of `distutils` for CRT v142: it binary compatible with CRT v140.
- [bpo-29711](https://bugs.python.org/issue?@action=redirect&bpo=29711) [https://bugs.python.org/issue?@action=redirect&bpo=29711]: Fix `stop_serving` in `asyncio` `proactor` loop kill all listening servers
- [bpo-32308](https://bugs.python.org/issue?@action=redirect&bpo=32308) [https://bugs.python.org/issue?@action=redirect&bpo=32308]: `re.sub()` now replaces empty matches adjacent to a previous non-empty match.
- [bpo-29970](https://bugs.python.org/issue?@action=redirect&bpo=29970) [https://bugs.python.org/issue?@action=redirect&bpo=29970]: Abort `asyncio` `SSLProtocol` connection if handshake not complete within 10 seconds.
- [bpo-32314](https://bugs.python.org/issue?@action=redirect&bpo=32314) [https://bugs.python.org/issue?@action=redirect&bpo=32314]: Implement `asyncio.run()`.
- [bpo-17852](https://bugs.python.org/issue?@action=redirect&bpo=17852) [https://bugs.python.org/issue?@action=redirect&bpo=17852]: Revert incorrect fix based on misunderstanding of `_Py_PyAtExit()` semantics.

- [bpo-32296](https://bugs.python.org/issue?@action=redirect&bpo=32296) [https://bugs.python.org/issue?@action=redirect&bpo=32296]: Implement `asyncio.get_running_loop()` and `get_event_loop()` in C. This makes them 4x faster.
- [bpo-32250](https://bugs.python.org/issue?@action=redirect&bpo=32250) [https://bugs.python.org/issue?@action=redirect&bpo=32250]: Implement `asyncio.current_task()` and `asyncio.all_tasks()`. Add helpers intended to be used by alternative task implementations: `asyncio._register_task`, `asyncio._enter_task`, `asyncio._leave_task` and `asyncio._unregister_task`. Deprecate `asyncio.Task.current_task()` and `asyncio.Task.all_tasks()`.
- [bpo-32255](https://bugs.python.org/issue?@action=redirect&bpo=32255) [https://bugs.python.org/issue?@action=redirect&bpo=32255]: A single empty field is now always quoted when written into a CSV file. This allows to distinguish an empty row from a row consisting of a single empty field. Patch by Licht Takeuchi.
- [bpo-32277](https://bugs.python.org/issue?@action=redirect&bpo=32277) [https://bugs.python.org/issue?@action=redirect&bpo=32277]: Raise `NotImplementedError` instead of `SystemError` on platforms where `chmod(..., follow_symlinks=False)` is not supported. Patch by Anthony Sottile.
- [bpo-30050](https://bugs.python.org/issue?@action=redirect&bpo=30050) [https://bugs.python.org/issue?@action=redirect&bpo=30050]: New argument `warn_on_full_buffer` to `signal.set_wakeup_fd` lets you control whether Python prints a warning on stderr when the wakeup fd buffer overflows.
- [bpo-29137](https://bugs.python.org/issue?@action=redirect&bpo=29137) [https://bugs.python.org/issue?@action=redirect&bpo=29137]: The `fpectl` library has been removed. It was never enabled by default, never worked correctly on x86-64, and it changed the Python ABI in ways that caused unexpected breakage of C extensions.
- [bpo-32273](https://bugs.python.org/issue?@action=redirect&bpo=32273) [https://bugs.python.org/issue?@action=redirect&bpo=32273]: Move `asyncio.test_utils` to `test.test_asyncio`.
- [bpo-32272](https://bugs.python.org/issue?@action=redirect&bpo=32272) [https://bugs.python.org/issue?@action=redirect&bpo=32272]: Remove `asyncio.async()` function.
- [bpo-32269](https://bugs.python.org/issue?@action=redirect&bpo=32269) [https://bugs.python.org/issue?@action=redirect&bpo=32269]: Add `asyncio.get_running_loop()`

function.

- [bpo-32265](https://bugs.python.org/issue?@action=redirect&bpo=32265) [https://bugs.python.org/issue?@action=redirect&bpo=32265]: All class and static methods of builtin types now are correctly classified by `inspect.classify_class_attrs()` and grouped in `pydoc` output. Added `types.ClassMethodDescriptorType` for unbound class methods of builtin types.
- [bpo-32253](https://bugs.python.org/issue?@action=redirect&bpo=32253) [https://bugs.python.org/issue?@action=redirect&bpo=32253]: Deprecate `yield from lock`, `await lock`, `with (yield from lock)` and `with await lock` for `asyncio` synchronization primitives.
- [bpo-22589](https://bugs.python.org/issue?@action=redirect&bpo=22589) [https://bugs.python.org/issue?@action=redirect&bpo=22589]: Changed MIME type of `.bmp` from `'image/x-ms-bmp'` to `'image/bmp'`
- [bpo-32193](https://bugs.python.org/issue?@action=redirect&bpo=32193) [https://bugs.python.org/issue?@action=redirect&bpo=32193]: Convert `asyncio` to use `async/await` syntax. Old styled `yield from` is still supported too.
- [bpo-32206](https://bugs.python.org/issue?@action=redirect&bpo=32206) [https://bugs.python.org/issue?@action=redirect&bpo=32206]: Add support to run modules with `pdb`
- [bpo-32227](https://bugs.python.org/issue?@action=redirect&bpo=32227) [https://bugs.python.org/issue?@action=redirect&bpo=32227]: `functools.singledispatch` now supports registering implementations using type annotations.
- [bpo-15873](https://bugs.python.org/issue?@action=redirect&bpo=15873) [https://bugs.python.org/issue?@action=redirect&bpo=15873]: Added new alternate constructors `datetime.datetime.fromisoformat()`, `datetime.time.fromisoformat()` and `datetime.date.fromisoformat()` as the inverse operation of each classes's respective `isoformat` methods.
- [bpo-32199](https://bugs.python.org/issue?@action=redirect&bpo=32199) [https://bugs.python.org/issue?@action=redirect&bpo=32199]: The `getnode()` ip getter now uses `'ip link'` instead of `'ip link list'`.
- [bpo-32143](https://bugs.python.org/issue?@action=redirect&bpo=32143) [https://bugs.python.org/issue?@action=redirect&bpo=32143]: `os.statvfs()` includes the `f_fsid` field from `statvfs(2)`
- [bpo-26439](https://bugs.python.org/issue?@action=redirect&bpo=26439) [https://bugs.python.org/issue?@action=redirect&bpo=26439]: Fix `ctypes.util.find_library()` for AIX by implementing `ctypes._aix.find_library()` Patch by: Michael Felt

- [bpo-31993](https://bugs.python.org/issue?@action=redirect&bpo=31993) [https://bugs.python.org/issue?@action=redirect&bpo=31993]: The pickler now uses less memory when serializing large bytes and str objects into a file. Pickles created with protocol 4 will require less memory for unpickling large bytes and str objects.
- [bpo-27456](https://bugs.python.org/issue?@action=redirect&bpo=27456) [https://bugs.python.org/issue?@action=redirect&bpo=27456]: Ensure TCP\_NODELAY is set on Linux. Tests by Victor Stinner.
- [bpo-31778](https://bugs.python.org/issue?@action=redirect&bpo=31778) [https://bugs.python.org/issue?@action=redirect&bpo=31778]: ast.literal\_eval() is now more strict. Addition and subtraction of arbitrary numbers no longer allowed.
- [bpo-31802](https://bugs.python.org/issue?@action=redirect&bpo=31802) [https://bugs.python.org/issue?@action=redirect&bpo=31802]: Importing native path module (posixpath, ntpath) now works even if the os module still is not imported.
- [bpo-30241](https://bugs.python.org/issue?@action=redirect&bpo=30241) [https://bugs.python.org/issue?@action=redirect&bpo=30241]: Add contextlib.AbstractAsyncContextManager. Patch by Jelle Zijlstra.
- [bpo-31699](https://bugs.python.org/issue?@action=redirect&bpo=31699) [https://bugs.python.org/issue?@action=redirect&bpo=31699]: Fix deadlocks in **concurrent.futures.ProcessPoolExecutor** when task arguments or results cause pickling or unpickling errors. This should make sure that calls to the **ProcessPoolExecutor** API always eventually return.
- [bpo-15216](https://bugs.python.org/issue?@action=redirect&bpo=15216) [https://bugs.python.org/issue?@action=redirect&bpo=15216]: `TextIOWrapper.reconfigure()` supports changing *encoding*, *errors*, and *newline*.

## Documentation

- [bpo-32418](https://bugs.python.org/issue?@action=redirect&bpo=32418) [https://bugs.python.org/issue?@action=redirect&bpo=32418]: Add get\_loop() method to Server and AbstractServer classes.

## Tests

- [bpo-32252](https://bugs.python.org/issue?@action=redirect&bpo=32252) [https://bugs.python.org/issue?@action=redirect&bpo=32252]

@action=redirect&bpo=32252]: Fix

faulthandler\_suppress\_crash\_report() used to prevent core dump files when testing crashes. getrlimit() returns zero on success.

- [bpo-32002](https://bugs.python.org/issue?@action=redirect&bpo=32002) [https://bugs.python.org/issue?@action=redirect&bpo=32002]: Adjust C locale coercion testing for the empty locale and POSIX locale cases to more readily adjust to platform dependent behaviour.

## Windows

- [bpo-19764](https://bugs.python.org/issue?@action=redirect&bpo=19764) [https://bugs.python.org/issue?@action=redirect&bpo=19764]: Implement support for **subprocess.Popen(close\_fds=True)** on Windows. Patch by Segev Finer.

## Tools/Demos

- [bpo-24960](https://bugs.python.org/issue?@action=redirect&bpo=24960) [https://bugs.python.org/issue?@action=redirect&bpo=24960]: 2to3 and lib2to3 can now read pickled grammar files using pkgutil.get\_data() rather than probing the filesystem. This lets 2to3 and lib2to3 work when run from a zipfile.

## C API

- [bpo-32030](https://bugs.python.org/issue?@action=redirect&bpo=32030) [https://bugs.python.org/issue?@action=redirect&bpo=32030]: Py\_Initialize() doesn't reset the memory allocators to default if the PYTHONMALLOC environment variable is not set.
- [bpo-29084](https://bugs.python.org/issue?@action=redirect&bpo=29084) [https://bugs.python.org/issue?@action=redirect&bpo=29084]: Undocumented C API for OrderedDict has been excluded from the limited C API. It was added by mistake and actually never worked in the limited C API.
- [bpo-32264](https://bugs.python.org/issue?@action=redirect&bpo=32264) [https://bugs.python.org/issue?@action=redirect&bpo=32264]: Moved the pygetopt.h header into internal/, since it has no public APIs.
- [bpo-32241](https://bugs.python.org/issue?@action=redirect&bpo=32241) [https://bugs.python.org/issue?@action=redirect&bpo=32241]: **Py\_SetProgramName()** and

`Py_SetPythonHome()` now take the `const wchar *` arguments instead of `wchar *`.

## Python 3.7.0 alpha 3

*Release date: 2017-12-05*

### Core and Builtins

- [bpo-32176](https://bugs.python.org/issue?@action=redirect&bpo=32176) [https://bugs.python.org/issue?@action=redirect&bpo=32176]: `co_flags.CO_NOFREE` is now always set correctly by the code object constructor based on freevars and cellvars, rather than needing to be set correctly by the caller. This ensures it will be cleared automatically when additional cell references are injected into a modified code object and function.
- [bpo-10544](https://bugs.python.org/issue?@action=redirect&bpo=10544) [https://bugs.python.org/issue?@action=redirect&bpo=10544]: Yield expressions are now deprecated in comprehensions and generator expressions. They are still permitted in the definition of the outermost iterable, as that is evaluated directly in the enclosing scope.
- [bpo-32137](https://bugs.python.org/issue?@action=redirect&bpo=32137) [https://bugs.python.org/issue?@action=redirect&bpo=32137]: The repr of deeply nested dict now raises a `RecursionError` instead of crashing due to a stack overflow.
- [bpo-32096](https://bugs.python.org/issue?@action=redirect&bpo=32096) [https://bugs.python.org/issue?@action=redirect&bpo=32096]: Revert memory allocator changes in the C API: move structures back from `_PyRuntime` to `Objects/obmalloc.c`. The memory allocators are once again initialized statically, and so `PyMem_RawMalloc()` and `Py_DecodeLocale()` can be called before `_PyRuntime_Initialize()`.
- [bpo-32043](https://bugs.python.org/issue?@action=redirect&bpo=32043) [https://bugs.python.org/issue?@action=redirect&bpo=32043]: Add a new “developer mode”: new “-X dev” command line option to enable debug checks at runtime.
- [bpo-32023](https://bugs.python.org/issue?@action=redirect&bpo=32023) [https://bugs.python.org/issue?@action=redirect&bpo=32023]: `SyntaxError` is now correctly raised when a generator expression without parenthesis is

used instead of an inheritance list in a class definition. The duplication of the parentheses can be omitted only on calls.

- [bpo-32012](https://bugs.python.org/issue?@action=redirect&bpo=32012) [https://bugs.python.org/issue?@action=redirect&bpo=32012]: `SyntaxError` is now correctly raised when a generator expression without parenthesis is passed as an argument, but followed by a trailing comma. A generator expression always needs to be directly inside a set of parentheses and cannot have a comma on either side.
- [bpo-28180](https://bugs.python.org/issue?@action=redirect&bpo=28180) [https://bugs.python.org/issue?@action=redirect&bpo=28180]: A new internal `_Py_SetLocaleFromEnv(category)` helper function has been added in order to improve the consistency of behaviour across different `libc` implementations (e.g. Android doesn't support setting the locale from the environment by default).
- [bpo-31949](https://bugs.python.org/issue?@action=redirect&bpo=31949) [https://bugs.python.org/issue?@action=redirect&bpo=31949]: Fixed several issues in printing tracebacks (`PyTraceBack_Print()`). Setting `sys.tracebacklimit` to 0 or less now suppresses printing tracebacks. Setting `sys.tracebacklimit` to `None` now causes using the default limit. Setting `sys.tracebacklimit` to an integer larger than `LONG_MAX` now means using the limit `LONG_MAX` rather than the default limit. Fixed integer overflows in the case of more than  $2^{31}$  traceback items on Windows. Fixed output errors handling.
- [bpo-30696](https://bugs.python.org/issue?@action=redirect&bpo=30696) [https://bugs.python.org/issue?@action=redirect&bpo=30696]: Fix the interactive interpreter looping endlessly when no memory.
- [bpo-20047](https://bugs.python.org/issue?@action=redirect&bpo=20047) [https://bugs.python.org/issue?@action=redirect&bpo=20047]: `Bytearray` methods `partition()` and `rpartition()` now accept only bytes-like objects as separator, as documented. In particular they now raise `TypeError` rather of returning a bogus result when an integer is passed as a separator.
- [bpo-21720](https://bugs.python.org/issue?@action=redirect&bpo=21720) [https://bugs.python.org/issue?@action=redirect&bpo=21720]: `BytesWarning` no longer emitted when the *fromlist* argument of `__import__()` or the `__all__` attribute of the module contain bytes instances.
- [bpo-31845](https://bugs.python.org/issue?@action=redirect&bpo=31845) [https://bugs.python.org/issue?@action=redirect&bpo=31845]: Environment variables are once more read correctly at interpreter startup.

- [bpo-28936](https://bugs.python.org/issue?@action=redirect&bpo=28936) [https://bugs.python.org/issue?@action=redirect&bpo=28936]: Ensure that lexically first syntax error involving a parameter and `global` or `nonlocal` is detected first at a given scope. Patch by Ivan Levkivskiy.
- [bpo-31825](https://bugs.python.org/issue?@action=redirect&bpo=31825) [https://bugs.python.org/issue?@action=redirect&bpo=31825]: Fixed `OverflowError` in the ‘unicode-escape’ codec and in `codecs.escape_decode()` when decode an escaped non-ascii byte.
- [bpo-31618](https://bugs.python.org/issue?@action=redirect&bpo=31618) [https://bugs.python.org/issue?@action=redirect&bpo=31618]: The per-frame tracing logic added in 3.7a1 has been altered so that `frame->f_lineno` is updated before either `"line"` or `"opcode"` events are emitted. Previously, opcode events were emitted first, and therefore would occasionally see stale line numbers on the frame. The behavior of this feature has changed slightly as a result: when both `f_trace_lines` and `f_trace_opcodes` are enabled, line events now occur first.
- [bpo-28603](https://bugs.python.org/issue?@action=redirect&bpo=28603) [https://bugs.python.org/issue?@action=redirect&bpo=28603]: Print the full context/cause chain of exceptions on interpreter exit, even if an exception in the chain is unhashable or compares equal to later ones. Patch by Zane Bitter.
- [bpo-31786](https://bugs.python.org/issue?@action=redirect&bpo=31786) [https://bugs.python.org/issue?@action=redirect&bpo=31786]: Fix timeout rounding in the `select` module to round correctly negative timeouts between -1.0 and 0.0. The functions now block waiting for events as expected. Previously, the call was incorrectly non-blocking. Patch by Pablo Galindo.
- [bpo-31781](https://bugs.python.org/issue?@action=redirect&bpo=31781) [https://bugs.python.org/issue?@action=redirect&bpo=31781]: Prevent crashes when calling methods of an uninitialized `zipimport.zipimporter` object. Patch by Oren Milman.
- [bpo-30399](https://bugs.python.org/issue?@action=redirect&bpo=30399) [https://bugs.python.org/issue?@action=redirect&bpo=30399]: Standard `repr()` of `BaseException` with a single argument no longer contains redundant trailing comma.
- [bpo-31626](https://bugs.python.org/issue?@action=redirect&bpo=31626) [https://bugs.python.org/issue?@action=redirect&bpo=31626]: Fixed a bug in debug memory allocator. There was a write to freed memory after shrinking a memory block.

- [bpo-30817](https://bugs.python.org/issue?@action=redirect&bpo=30817) [https://bugs.python.org/issue?@action=redirect&bpo=30817]: **PyErr\_PrintEx()** clears now the ignored exception that may be raised by **\_PySys\_SetObjectId()**, for example when no memory.

## Library

- [bpo-28556](https://bugs.python.org/issue?@action=redirect&bpo=28556) [https://bugs.python.org/issue?@action=redirect&bpo=28556]: Two minor fixes for `typing` module: allow shallow copying instances of generic classes, improve interaction of `__init_subclass__` with generics. Original PRs by Ivan Levkivskiy.
- [bpo-32214](https://bugs.python.org/issue?@action=redirect&bpo=32214) [https://bugs.python.org/issue?@action=redirect&bpo=32214]: PEP 557, Data Classes. Provides a decorator which adds boilerplate methods to classes which use type annotations so specify fields.
- [bpo-27240](https://bugs.python.org/issue?@action=redirect&bpo=27240) [https://bugs.python.org/issue?@action=redirect&bpo=27240]: The header folding algorithm for the new email policies has been rewritten, which also fixes [bpo-30788](https://bugs.python.org/issue?@action=redirect&bpo=30788) [https://bugs.python.org/issue?@action=redirect&bpo=30788], [bpo-31831](https://bugs.python.org/issue?@action=redirect&bpo=31831) [https://bugs.python.org/issue?@action=redirect&bpo=31831], and [bpo-32182](https://bugs.python.org/issue?@action=redirect&bpo=32182) [https://bugs.python.org/issue?@action=redirect&bpo=32182]. In particular, RFC2231 folding is now done correctly.
- [bpo-32186](https://bugs.python.org/issue?@action=redirect&bpo=32186) [https://bugs.python.org/issue?@action=redirect&bpo=32186]: `io.FileIO.readall()` and `io.FileIO.read()` now release the GIL when getting the file size. Fixed hang of all threads with inaccessible NFS server. Patch by Nir Soffer.
- [bpo-32101](https://bugs.python.org/issue?@action=redirect&bpo=32101) [https://bugs.python.org/issue?@action=redirect&bpo=32101]: Add **`sys.flags.dev_mode`** flag
- [bpo-32154](https://bugs.python.org/issue?@action=redirect&bpo=32154) [https://bugs.python.org/issue?@action=redirect&bpo=32154]: The `asyncio.windows_utils.socketpair()` function has been removed: use directly **`socket.socketpair()`** which is available on all platforms since Python 3.5 (before, it wasn't available on Windows). `asyncio.windows_utils.socketpair()` was just an alias to `socket.socketpair` on Python 3.5 and newer.
- [bpo-32089](https://bugs.python.org/issue?@action=redirect&bpo=32089) [https://bugs.python.org/issue?@action=redirect&bpo=32089]

@action=redirect&bpo=32089]: warnings: In development (-X dev) and debug mode (pydebug build), use the “default” action for ResourceWarning, rather than the “always” action, in the default warnings filters.

- [bpo-32107](https://bugs.python.org/issue?@action=redirect&bpo=32107) [https://bugs.python.org/issue?@action=redirect&bpo=32107]: `uuid.getnode()` now preferentially returns universally administered MAC addresses if available, over locally administered MAC addresses. This makes a better guarantee for global uniqueness of UUIDs returned from `uuid.uuid1()`. If only locally administered MAC addresses are available, the first such one found is returned.
- [bpo-23033](https://bugs.python.org/issue?@action=redirect&bpo=23033) [https://bugs.python.org/issue?@action=redirect&bpo=23033]: Wildcard is now supported in hostname when it is one and only character in the left most segment of hostname in second argument of `ssl.match_hostname()`. Patch by Mandeep Singh.
- [bpo-12239](https://bugs.python.org/issue?@action=redirect&bpo=12239) [https://bugs.python.org/issue?@action=redirect&bpo=12239]: Make `msilib.SummaryInformation.GetProperty()` return None when the value of property is VT\_EMPTY. Initial patch by Mark Mc Mahon.
- [bpo-28334](https://bugs.python.org/issue?@action=redirect&bpo=28334) [https://bugs.python.org/issue?@action=redirect&bpo=28334]: Use `os.path.expanduser()` to find the `~/netrc` file in `netrc.netrc`. If it does not exist, `FileNotFoundError` is raised. Patch by Dimitri Merejkowsky.
- [bpo-32121](https://bugs.python.org/issue?@action=redirect&bpo=32121) [https://bugs.python.org/issue?@action=redirect&bpo=32121]: Make `tracemalloc.Traceback` behave more like the traceback module, sorting the frames from oldest to most recent. `Traceback.format()` now accepts negative *limit*, truncating the result to the `abs(limit)` oldest frames. To get the old behaviour, one can use the new *most\_recent\_first* argument to `Traceback.format()`. (Patch by Jesse Bakker.)
- [bpo-31325](https://bugs.python.org/issue?@action=redirect&bpo=31325) [https://bugs.python.org/issue?@action=redirect&bpo=31325]: Fix wrong usage of `collections.namedtuple()` in the `RobotFileParser.parse()` method. Initial patch by

Robin Wellner.

- [bpo-12382](https://bugs.python.org/issue?@action=redirect&bpo=12382) [https://bugs.python.org/issue?@action=redirect&bpo=12382]: `msilib.OpenDatabase()` now raises a better exception message when it couldn't open or create an MSI file. Initial patch by William Tisäter.
- [bpo-19610](https://bugs.python.org/issue?@action=redirect&bpo=19610) [https://bugs.python.org/issue?@action=redirect&bpo=19610]: `setup()` now warns about invalid types for some fields. The `distutils.dist.Distribution` class now warns when `classifiers`, `keywords` and `platforms` fields are not specified as a list or a string.
- [bpo-32071](https://bugs.python.org/issue?@action=redirect&bpo=32071) [https://bugs.python.org/issue?@action=redirect&bpo=32071]: Added the `-k` command-line option to `python -m unittest` to run only tests that match the given pattern(s).
- [bpo-10049](https://bugs.python.org/issue?@action=redirect&bpo=10049) [https://bugs.python.org/issue?@action=redirect&bpo=10049]: Added *nullcontext* no-op context manager to `contextlib`. This provides a simpler and faster alternative to `ExitStack()` when handling optional context managers.
- [bpo-28684](https://bugs.python.org/issue?@action=redirect&bpo=28684) [https://bugs.python.org/issue?@action=redirect&bpo=28684]: The new `test.support.skip_unless_bind_unix_socket()` decorator is used here to skip `asyncio` tests that fail because the platform lacks a functional `bind()` function for unix domain sockets (as it is the case for non root users on the recent Android versions that run now SELinux in enforcing mode).
- [bpo-32110](https://bugs.python.org/issue?@action=redirect&bpo=32110) [https://bugs.python.org/issue?@action=redirect&bpo=32110]: `codecs.StreamReader.read(n)` now returns not more than `n` characters/bytes for non-negative `n`. This makes it compatible with `read()` methods of other file-like objects.
- [bpo-27535](https://bugs.python.org/issue?@action=redirect&bpo=27535) [https://bugs.python.org/issue?@action=redirect&bpo=27535]: The warnings module doesn't leak memory anymore in the hidden warnings registry for the "ignore" action of warnings filters. `warn_explicit()` function doesn't add the warning key to the registry anymore for the "ignore" action.
- [bpo-32088](https://bugs.python.org/issue?@action=redirect&bpo=32088) [https://bugs.python.org/issue?@action=redirect&bpo=32088]: warnings: When Python is build is

debug mode (Py\_DEBUG), **DeprecationWarning**, **PendingDeprecationWarning** and **ImportWarning** warnings are now displayed by default.

- [bpo-1647489](https://bugs.python.org/issue?@action=redirect&bpo=1647489) [https://bugs.python.org/issue?@action=redirect&bpo=1647489]: Fixed searching regular expression patterns that could match an empty string. Non-empty string can now be correctly found after matching an empty string.
- [bpo-25054](https://bugs.python.org/issue?@action=redirect&bpo=25054) [https://bugs.python.org/issue?@action=redirect&bpo=25054]: Added support of splitting on a pattern that could match an empty string.
- [bpo-32072](https://bugs.python.org/issue?@action=redirect&bpo=32072) [https://bugs.python.org/issue?@action=redirect&bpo=32072]: Fixed issues with binary plists: Fixed saving bytearrays. Identical objects will be saved only once. Equal references will be load as identical objects. Added support for saving and loading recursive data structures.
- [bpo-32069](https://bugs.python.org/issue?@action=redirect&bpo=32069) [https://bugs.python.org/issue?@action=redirect&bpo=32069]: Drop legacy SSL transport from asyncio, ssl.MemoryBIO is always used anyway.
- [bpo-32066](https://bugs.python.org/issue?@action=redirect&bpo=32066) [https://bugs.python.org/issue?@action=redirect&bpo=32066]: asyncio: Support pathlib.Path in create\_unix\_connection; sock arg should be optional
- [bpo-32046](https://bugs.python.org/issue?@action=redirect&bpo=32046) [https://bugs.python.org/issue?@action=redirect&bpo=32046]: Updates 2to3 to convert from operator.isCallable(obj) to callable(obj). Patch by Dong-hee Na.
- [bpo-32018](https://bugs.python.org/issue?@action=redirect&bpo=32018) [https://bugs.python.org/issue?@action=redirect&bpo=32018]: inspect.signature should follow **PEP 8** [https://peps.python.org/pep-0008/], if the parameter has an annotation and a default value. Patch by Dong-hee Na.
- [bpo-32025](https://bugs.python.org/issue?@action=redirect&bpo=32025) [https://bugs.python.org/issue?@action=redirect&bpo=32025]: Add time.thread\_time() and time.thread\_time\_ns()
- [bpo-32037](https://bugs.python.org/issue?@action=redirect&bpo=32037) [https://bugs.python.org/issue?@action=redirect&bpo=32037]: Integers that fit in a signed 32-bit integer will be now pickled with protocol 0 using the INT opcode. This will decrease the size of a pickle, speed up pickling and unpickling, and make these integers be unpickled as int instances in Python 2.
- [bpo-32034](https://bugs.python.org/issue?@action=redirect&bpo=32034) [https://bugs.python.org/issue?@action=redirect&bpo=32034]

@action=redirect&bpo=32034]: Make `asyncio.IncompleteReadError` and `LimitOverrunError` pickleable.

- [bpo-32015](https://bugs.python.org/issue?@action=redirect&bpo=32015) [https://bugs.python.org/issue?@action=redirect&bpo=32015]: Fixed the looping of `asyncio` in the case of reconnection the socket during waiting `async` read/write from/to the socket.
- [bpo-32011](https://bugs.python.org/issue?@action=redirect&bpo=32011) [https://bugs.python.org/issue?@action=redirect&bpo=32011]: Restored support of loading marshal files with the `TYPE_INT64` code. These files can be produced in Python 2.7.
- [bpo-28369](https://bugs.python.org/issue?@action=redirect&bpo=28369) [https://bugs.python.org/issue?@action=redirect&bpo=28369]: Enhance `add_reader/writer` check that socket is not used by some transport. Before, only cases when `add_reader/writer` were called with an int FD were supported. Now the check is implemented correctly for all file-like objects.
- [bpo-31976](https://bugs.python.org/issue?@action=redirect&bpo=31976) [https://bugs.python.org/issue?@action=redirect&bpo=31976]: Fix race condition when flushing a file is slow, which can cause a segfault if closing the file from another thread.
- [bpo-31985](https://bugs.python.org/issue?@action=redirect&bpo=31985) [https://bugs.python.org/issue?@action=redirect&bpo=31985]: Formally deprecated `aifc.openfp`, `sunau.openfp`, and `wave.openfp`. Since change 7bc817d5ba917528e8bd07ec461c635291e7b06a in 1993, `openfp` in each of the three modules had been pointing to that module's `open` function as a matter of backwards compatibility, though it had been both untested and undocumented.
- [bpo-21862](https://bugs.python.org/issue?@action=redirect&bpo=21862) [https://bugs.python.org/issue?@action=redirect&bpo=21862]: `cProfile` command line now accepts `-m module_name` as an alternative to script path. Patch by Sanyam Khurana.
- [bpo-31970](https://bugs.python.org/issue?@action=redirect&bpo=31970) [https://bugs.python.org/issue?@action=redirect&bpo=31970]: Reduce performance overhead of `asyncio` debug mode.
- [bpo-31843](https://bugs.python.org/issue?@action=redirect&bpo=31843) [https://bugs.python.org/issue?@action=redirect&bpo=31843]: `database` argument of `sqlite3.connect()` now accepts a [path-like object](#), instead of just a string.

- [bpo-31945](https://bugs.python.org/issue?@action=redirect&bpo=31945) [https://bugs.python.org/issue?@action=redirect&bpo=31945]: Add Configurable *blocksize* to `HTTPConnection` and `HTTPSConnection` for improved upload throughput. Patch by Nir Soffer.
- [bpo-31943](https://bugs.python.org/issue?@action=redirect&bpo=31943) [https://bugs.python.org/issue?@action=redirect&bpo=31943]: Add a `cancelled()` method to `asyncio.Handle`. Patch by Marat Sharafutdinov.
- [bpo-9678](https://bugs.python.org/issue?@action=redirect&bpo=9678) [https://bugs.python.org/issue?@action=redirect&bpo=9678]: Fixed determining the MAC address in the `uuid` module: Using `ifconfig` on NetBSD and OpenBSD. Using `arp` on Linux, FreeBSD, NetBSD and OpenBSD. Based on patch by Takayuki Shimizukawa.
- [bpo-30057](https://bugs.python.org/issue?@action=redirect&bpo=30057) [https://bugs.python.org/issue?@action=redirect&bpo=30057]: Fix potential missed signal in `signal.signal()`.
- [bpo-31933](https://bugs.python.org/issue?@action=redirect&bpo=31933) [https://bugs.python.org/issue?@action=redirect&bpo=31933]: Fix Blake2 params `leaf_size` and `node_offset` on big endian platforms. Patch by Jack O'Connor.
- [bpo-21423](https://bugs.python.org/issue?@action=redirect&bpo=21423) [https://bugs.python.org/issue?@action=redirect&bpo=21423]: Add an initializer argument to `{Process,Thread}PoolExecutor`
- [bpo-31927](https://bugs.python.org/issue?@action=redirect&bpo=31927) [https://bugs.python.org/issue?@action=redirect&bpo=31927]: Fixed compilation of the `socket` module on NetBSD 8. Fixed assertion failure or reading arbitrary data when parse a `AF_BLUETOOTH` address on NetBSD and DragonFly BSD.
- [bpo-27666](https://bugs.python.org/issue?@action=redirect&bpo=27666) [https://bugs.python.org/issue?@action=redirect&bpo=27666]: Fixed stack corruption in `curses.box()` and `curses.ungetmouse()` when the size of types `chtype` or `mmask_t` is less than the size of C long. `curses.box()` now accepts characters as arguments. Based on patch by Steve Fink.
- [bpo-31917](https://bugs.python.org/issue?@action=redirect&bpo=31917) [https://bugs.python.org/issue?@action=redirect&bpo=31917]: Add 3 new clock identifiers: `time.CLOCK_BOOTTIME`, `time.CLOCK_PROF` and `time.CLOCK_UPTIME`.
- [bpo-31897](https://bugs.python.org/issue?@action=redirect&bpo=31897) [https://bugs.python.org/issue?@action=redirect&bpo=31897]: `plistlib` now catches more errors when read binary plists and raises `InvalidFileException` instead of unexpected exceptions.

- [bpo-25720](https://bugs.python.org/issue?@action=redirect&bpo=25720) [https://bugs.python.org/issue?@action=redirect&bpo=25720]: Fix the method for checking pad state of curses WINDOW. Patch by Masayuki Yamamoto.
- [bpo-31893](https://bugs.python.org/issue?@action=redirect&bpo=31893) [https://bugs.python.org/issue?@action=redirect&bpo=31893]: Fixed the layout of the kqueue\_event structure on OpenBSD and NetBSD. Fixed the comparison of the kqueue\_event objects.
- [bpo-31891](https://bugs.python.org/issue?@action=redirect&bpo=31891) [https://bugs.python.org/issue?@action=redirect&bpo=31891]: Fixed building the curses module on NetBSD.
- [bpo-31884](https://bugs.python.org/issue?@action=redirect&bpo=31884) [https://bugs.python.org/issue?@action=redirect&bpo=31884]: added required constants to subprocess module for setting priority on windows
- [bpo-28281](https://bugs.python.org/issue?@action=redirect&bpo=28281) [https://bugs.python.org/issue?@action=redirect&bpo=28281]: Remove year (1-9999) limits on the Calendar.weekday() function. Patch by Mark Gollahon.
- [bpo-31702](https://bugs.python.org/issue?@action=redirect&bpo=31702) [https://bugs.python.org/issue?@action=redirect&bpo=31702]: crypt.mksalt() now allows to specify the number of rounds for SHA-256 and SHA-512 hashing.
- [bpo-30639](https://bugs.python.org/issue?@action=redirect&bpo=30639) [https://bugs.python.org/issue?@action=redirect&bpo=30639]: `inspect.getfile()` no longer computes the repr of unknown objects to display in an error message, to protect against badly behaved custom reprs.
- [bpo-30768](https://bugs.python.org/issue?@action=redirect&bpo=30768) [https://bugs.python.org/issue?@action=redirect&bpo=30768]: Fix the pthread + semaphore implementation of PyThread\_acquire\_lock\_timed() when called with timeout > 0 and intr\_flag=0: recompute the timeout if sem\_timedwait() is interrupted by a signal (EINTR). See also the [PEP 475](https://peps.python.org/pep-0475/) [https://peps.python.org/pep-0475/].
- [bpo-31854](https://bugs.python.org/issue?@action=redirect&bpo=31854) [https://bugs.python.org/issue?@action=redirect&bpo=31854]: Add `mmap.ACCESS_DEFAULT` constant.
- [bpo-31834](https://bugs.python.org/issue?@action=redirect&bpo=31834) [https://bugs.python.org/issue?@action=redirect&bpo=31834]: Use optimized code for BLAKE2 only with SSSE3+. The pure SSE2 implementation is slower than the pure C reference implementation.
- [bpo-28292](https://bugs.python.org/issue?@action=redirect&bpo=28292) [https://bugs.python.org/issue?@action=redirect&bpo=28292]: Calendar.itermonthdates() will now consistently raise an exception when a date falls outside

of the 0001-01-01 through 9999-12-31 range. To support applications that cannot tolerate such exceptions, the new methods `itermonthdays3()` and `itermonthdays4()` are added. The new methods return tuples and are not restricted by the range supported by `datetime.date`.

- [bpo-28564](https://bugs.python.org/issue?@action=redirect&bpo=28564) [https://bugs.python.org/issue?@action=redirect&bpo=28564]: The `shutil.rmtree()` function has been sped up to 20–40%. This was done using the `os.scandir()` function.
- [bpo-28416](https://bugs.python.org/issue?@action=redirect&bpo=28416) [https://bugs.python.org/issue?@action=redirect&bpo=28416]: Instances of `pickle.Pickler` subclass with the `persistent_id()` method and `pickle.Unpickler` subclass with the `persistent_load()` method no longer create reference cycles.
- [bpo-31653](https://bugs.python.org/issue?@action=redirect&bpo=31653) [https://bugs.python.org/issue?@action=redirect&bpo=31653]: Don't release the GIL if we can acquire a multiprocessing semaphore immediately.
- [bpo-28326](https://bugs.python.org/issue?@action=redirect&bpo=28326) [https://bugs.python.org/issue?@action=redirect&bpo=28326]: Fix `multiprocessing.Process` when `stdout` and/or `stderr` is closed or `None`.
- [bpo-20825](https://bugs.python.org/issue?@action=redirect&bpo=20825) [https://bugs.python.org/issue?@action=redirect&bpo=20825]: Add **`subnet_of`** and **`superset_of`** containment tests to [`ipaddress.IPv6Network`](#) and [`ipaddress.IPv4Network`](#). Patch by Michel Albert and Cheryl Sabella.
- [bpo-31827](https://bugs.python.org/issue?@action=redirect&bpo=31827) [https://bugs.python.org/issue?@action=redirect&bpo=31827]: Remove the `os.stat_float_times()` function. It was introduced in Python 2.3 for backward compatibility with Python 2.2, and was deprecated since Python 3.1.
- [bpo-31756](https://bugs.python.org/issue?@action=redirect&bpo=31756) [https://bugs.python.org/issue?@action=redirect&bpo=31756]: Add a `subprocess.Popen(text=False)` keyword argument to [`subprocess`](#) functions to be more explicit about when the library should attempt to decode outputs into text. Patch by Andrew Clegg.
- [bpo-31819](https://bugs.python.org/issue?@action=redirect&bpo=31819) [https://bugs.python.org/issue?@action=redirect&bpo=31819]: Add `AbstractEventLoop.sock_recv_into()`.

- [bpo-31457](https://bugs.python.org/issue?@action=redirect&bpo=31457) [https://bugs.python.org/issue?@action=redirect&bpo=31457]: If nested log adapters are used, the inner `process()` methods are no longer omitted.
- [bpo-31457](https://bugs.python.org/issue?@action=redirect&bpo=31457) [https://bugs.python.org/issue?@action=redirect&bpo=31457]: The `manager` property on `LoggerAdapter` objects is now properly settable.
- [bpo-31806](https://bugs.python.org/issue?@action=redirect&bpo=31806) [https://bugs.python.org/issue?@action=redirect&bpo=31806]: Fix timeout rounding in `time.sleep()`, `threading.Lock.acquire()` and `socket.socket.settimeout()` to round correctly negative timeouts between -1.0 and 0.0. The functions now block waiting for events as expected. Previously, the call was incorrectly non-blocking. Patch by Pablo Galindo.
- [bpo-31803](https://bugs.python.org/issue?@action=redirect&bpo=31803) [https://bugs.python.org/issue?@action=redirect&bpo=31803]: `time.clock()` and `time.get_clock_info('clock')` now emit a `DeprecationWarning` warning.
- [bpo-31800](https://bugs.python.org/issue?@action=redirect&bpo=31800) [https://bugs.python.org/issue?@action=redirect&bpo=31800]: Extended support for parsing UTC offsets. `strptime '%z'` can now parse the output generated by `datetime.isoformat`, including seconds and microseconds.
- [bpo-28603](https://bugs.python.org/issue?@action=redirect&bpo=28603) [https://bugs.python.org/issue?@action=redirect&bpo=28603]: `traceback`: Fix a `TypeError` that occurred during printing of exception tracebacks when either the current exception or an exception in its context/cause chain is unhashable. Patch by Zane Bitter.
- [bpo-30541](https://bugs.python.org/issue?@action=redirect&bpo=30541) [https://bugs.python.org/issue?@action=redirect&bpo=30541]: Add new function to seal a mock and prevent the automatically creation of child mocks. Patch by Mario Corchero.
- [bpo-31784](https://bugs.python.org/issue?@action=redirect&bpo=31784) [https://bugs.python.org/issue?@action=redirect&bpo=31784]: Implement the [PEP 564](https://peps.python.org/pep-0564/) [https://peps.python.org/pep-0564/], add new 6 new functions with nanosecond resolution to the `time` module:  
`clock_gettime_ns()`, `clock_settime_ns()`,  
`monotonic_ns()`, `perf_counter_ns()`,  
`process_time_ns()`, `time_ns()`.
- [bpo-30143](https://bugs.python.org/issue?@action=redirect&bpo=30143) [https://bugs.python.org/issue?@action=redirect&bpo=30143]: `2to3` now generates a code that uses abstract collection classes from `collections.abc` rather

than collections.

- [bpo-31770](https://bugs.python.org/issue?@action=redirect&bpo=31770) [https://bugs.python.org/issue?@action=redirect&bpo=31770]: Prevent a crash when calling the `__init__()` method of a `sqlite3.Cursor` object more than once. Patch by Oren Milman.
- [bpo-31764](https://bugs.python.org/issue?@action=redirect&bpo=31764) [https://bugs.python.org/issue?@action=redirect&bpo=31764]: Prevent a crash in `sqlite3.Cursor.close()` in case the `Cursor` object is uninitialized. Patch by Oren Milman.
- [bpo-31752](https://bugs.python.org/issue?@action=redirect&bpo=31752) [https://bugs.python.org/issue?@action=redirect&bpo=31752]: Fix possible crash in `timedelta` constructor called with custom integers.
- [bpo-31620](https://bugs.python.org/issue?@action=redirect&bpo=31620) [https://bugs.python.org/issue?@action=redirect&bpo=31620]: an empty `asyncio.Queue` now doesn't leak memory when `queue.get` pollers timeout
- [bpo-31690](https://bugs.python.org/issue?@action=redirect&bpo=31690) [https://bugs.python.org/issue?@action=redirect&bpo=31690]: Allow the flags `re.ASCII`, `re.LOCALE`, and `re.UNICODE` to be used as group flags for regular expressions.
- [bpo-30349](https://bugs.python.org/issue?@action=redirect&bpo=30349) [https://bugs.python.org/issue?@action=redirect&bpo=30349]: `FutureWarning` is now emitted if a regular expression contains character set constructs that will change semantically in the future (nested sets and set operations).
- [bpo-31664](https://bugs.python.org/issue?@action=redirect&bpo=31664) [https://bugs.python.org/issue?@action=redirect&bpo=31664]: Added support for the Blowfish hashing in the `crypt` module.
- [bpo-31632](https://bugs.python.org/issue?@action=redirect&bpo=31632) [https://bugs.python.org/issue?@action=redirect&bpo=31632]: Fix method `set_protocol()` of class `_SSLProtocolTransport` in `asyncio` module. This method was previously modifying a wrong reference to the protocol.
- [bpo-15037](https://bugs.python.org/issue?@action=redirect&bpo=15037) [https://bugs.python.org/issue?@action=redirect&bpo=15037]: Added a workaround for `getkey()` in curses for ncurses 5.7 and earlier.
- [bpo-31307](https://bugs.python.org/issue?@action=redirect&bpo=31307) [https://bugs.python.org/issue?@action=redirect&bpo=31307]: Allow use of bytes objects for arguments to `configparser.ConfigParser.read()`. Patch by Vincent Michel.
- [bpo-31334](https://bugs.python.org/issue?@action=redirect&bpo=31334) [https://bugs.python.org/issue?@action=redirect&bpo=31334]: Fix `poll.poll([timeout])` in

the `select` module for arbitrary negative timeouts on all OSes where it can only be a non-negative integer or -1. Patch by Riccardo Coccioli.

- [bpo-31310](https://bugs.python.org/issue?@action=redirect&bpo=31310) [https://bugs.python.org/issue?@action=redirect&bpo=31310]: multiprocessing's semaphore tracker should be launched again if crashed.
- [bpo-31308](https://bugs.python.org/issue?@action=redirect&bpo=31308) [https://bugs.python.org/issue?@action=redirect&bpo=31308]: Make multiprocessing's forkserver process immune to Ctrl-C and other user interruptions. If it crashes, restart it when necessary.
- [bpo-31245](https://bugs.python.org/issue?@action=redirect&bpo=31245) [https://bugs.python.org/issue?@action=redirect&bpo=31245]: Added support for AF\_UNIX socket in `asyncio` **`create_datagram_endpoint`**.
- [bpo-30553](https://bugs.python.org/issue?@action=redirect&bpo=30553) [https://bugs.python.org/issue?@action=redirect&bpo=30553]: Add HTTP/2 status code 421 (Misdirected Request) to **`http.HTTPStatus`**. Patch by Vitor Pereira.

## Documentation

- [bpo-32105](https://bugs.python.org/issue?@action=redirect&bpo=32105) [https://bugs.python.org/issue?@action=redirect&bpo=32105]: Added `asyncio.BaseEventLoop.connect_accepted_socket` versionadded marker.

## Tests

- [bpo-31380](https://bugs.python.org/issue?@action=redirect&bpo=31380) [https://bugs.python.org/issue?@action=redirect&bpo=31380]: Skip `test_httpservers` `test_undecodable_file` on macOS: fails on APFS.
- [bpo-31705](https://bugs.python.org/issue?@action=redirect&bpo=31705) [https://bugs.python.org/issue?@action=redirect&bpo=31705]: Skip `test_socket.test_sha256()` on Linux kernel older than 4.5. The test fails with ENOKEY on kernel 3.10 (on ppc64le). A fix was merged into the kernel 4.5.
- [bpo-32138](https://bugs.python.org/issue?@action=redirect&bpo=32138) [https://bugs.python.org/issue?@action=redirect&bpo=32138]: Skip on Android `test_faulthandler` tests that raise SIGSEGV and remove the `test.support.requires_android_level` decorator.
- [bpo-32136](https://bugs.python.org/issue?@action=redirect&bpo=32136) [https://bugs.python.org/issue?@action=redirect&bpo=32136]

@action=redirect&bpo=32136]: The runtime embedding tests have been split out from `Lib/test/test_capi.py` into a new `Lib/test/test_embed.py` file.

- [bpo-28668](https://bugs.python.org/issue?@action=redirect&bpo=28668) [https://bugs.python.org/issue?@action=redirect&bpo=28668]: `test.support.requires_multiprocessing_queue` is removed. Skip tests with `test.support.import_module('multiprocessing.synchronize')` instead when the semaphore implementation is broken or missing.
- [bpo-32126](https://bugs.python.org/issue?@action=redirect&bpo=32126) [https://bugs.python.org/issue?@action=redirect&bpo=32126]: Skip `test_get_event_loop_new_process` in `test.test_asyncio.test_events` when `sem_open()` is not functional.
- [bpo-31174](https://bugs.python.org/issue?@action=redirect&bpo=31174) [https://bugs.python.org/issue?@action=redirect&bpo=31174]: Fix `test_tools.test_unparse:DirectoryTestCase` now stores the names sample to always test the same files. It prevents false alarms when hunting reference leaks.

## Build

- [bpo-28538](https://bugs.python.org/issue?@action=redirect&bpo=28538) [https://bugs.python.org/issue?@action=redirect&bpo=28538]: Revert the previous changes, the `if_nameindex` structure is defined by Unified Headers.
- [bpo-28762](https://bugs.python.org/issue?@action=redirect&bpo=28762) [https://bugs.python.org/issue?@action=redirect&bpo=28762]: Revert the last commit, the `F_LOCK` macro is defined by Android Unified Headers.
- [bpo-29040](https://bugs.python.org/issue?@action=redirect&bpo=29040) [https://bugs.python.org/issue?@action=redirect&bpo=29040]: Support building Android with Unified Headers. The first NDK release to support Unified Headers is `android-ndk-r14`.
- [bpo-32059](https://bugs.python.org/issue?@action=redirect&bpo=32059) [https://bugs.python.org/issue?@action=redirect&bpo=32059]: `detect_modules()` in `setup.py` now also searches the `sysroot` paths when cross-compiling.
- [bpo-31957](https://bugs.python.org/issue?@action=redirect&bpo=31957) [https://bugs.python.org/issue?@action=redirect&bpo=31957]: Fixes Windows SDK version detection when building for Windows.
- [bpo-31609](https://bugs.python.org/issue?@action=redirect&bpo=31609) [https://bugs.python.org/issue?@action=redirect&bpo=31609]

- [bpo-31609](https://bugs.python.org/issue?@action=redirect&bpo=31609): Fixes quotes in PCbuild/clean.bat
- [bpo-31934](https://bugs.python.org/issue?@action=redirect&bpo=31934) [https://bugs.python.org/issue?@action=redirect&bpo=31934]: Abort the build when building out of a not clean source tree.
- [bpo-31926](https://bugs.python.org/issue?@action=redirect&bpo=31926) [https://bugs.python.org/issue?@action=redirect&bpo=31926]: Fixed Argument Clinic sometimes causing compilation errors when there was more than one function and/or method in a .c file with the same name.
- [bpo-28791](https://bugs.python.org/issue?@action=redirect&bpo=28791) [https://bugs.python.org/issue?@action=redirect&bpo=28791]: Update Windows builds to use SQLite 3.21.0.
- [bpo-28791](https://bugs.python.org/issue?@action=redirect&bpo=28791) [https://bugs.python.org/issue?@action=redirect&bpo=28791]: Update OS X installer to use SQLite 3.21.0.
- [bpo-28643](https://bugs.python.org/issue?@action=redirect&bpo=28643) [https://bugs.python.org/issue?@action=redirect&bpo=28643]: Record profile-opt build progress with stamp files.
- [bpo-31866](https://bugs.python.org/issue?@action=redirect&bpo=31866) [https://bugs.python.org/issue?@action=redirect&bpo=31866]: Finish removing support for AtheOS.

## Windows

- [bpo-1102](https://bugs.python.org/issue?@action=redirect&bpo=1102) [https://bugs.python.org/issue?@action=redirect&bpo=1102]: Return None when View.Fetch() returns ERROR\_NO\_MORE\_ITEMS instead of raising MSLError. Initial patch by Anthony Tuininga.
- [bpo-31944](https://bugs.python.org/issue?@action=redirect&bpo=31944) [https://bugs.python.org/issue?@action=redirect&bpo=31944]: Fixes Modify button in Apps and Features dialog.
- [bpo-20486](https://bugs.python.org/issue?@action=redirect&bpo=20486) [https://bugs.python.org/issue?@action=redirect&bpo=20486]: Implement the Database.Close() method to help closing MSI database objects.
- [bpo-31857](https://bugs.python.org/issue?@action=redirect&bpo=31857) [https://bugs.python.org/issue?@action=redirect&bpo=31857]: Make the behavior of USE\_STACKCHECK deterministic in a multi-threaded environment.

## macOS

- [bpo-31392](https://bugs.python.org/issue?@action=redirect&bpo=31392) [https://bugs.python.org/issue?@action=redirect&bpo=31392]: Update macOS installer to use OpenSSL 1.0.2m

## IDLE

- [bpo-32207](https://bugs.python.org/issue?@action=redirect&bpo=32207) [https://bugs.python.org/issue?@action=redirect&bpo=32207]: Improve tk event exception tracebacks in IDLE. When tk event handling is driven by IDLE's run loop, a confusing and distracting queue.EMPTY traceback context is no longer added to tk event exception tracebacks. The traceback is now the same as when event handling is driven by user code. Patch based on a suggestion by Serhiy Storchaka.
- [bpo-32164](https://bugs.python.org/issue?@action=redirect&bpo=32164) [https://bugs.python.org/issue?@action=redirect&bpo=32164]: Delete unused file idlelib/tabbedpages.py. Use of TabbedPageSet in configdialog was replaced by ttk.Notebook.
- [bpo-32100](https://bugs.python.org/issue?@action=redirect&bpo=32100) [https://bugs.python.org/issue?@action=redirect&bpo=32100]: IDLE: Fix old and new bugs in pathbrowser; improve tests. Patch mostly by Cheryl Sabella.
- [bpo-31858](https://bugs.python.org/issue?@action=redirect&bpo=31858) [https://bugs.python.org/issue?@action=redirect&bpo=31858]: IDLE – Restrict shell prompt manipulation to the shell. Editor and output windows only see an empty last prompt line. This simplifies the code and fixes a minor bug when newline is inserted. Sys.ps1, if present, is read on Shell start-up, but is not set or changed.
- [bpo-31860](https://bugs.python.org/issue?@action=redirect&bpo=31860) [https://bugs.python.org/issue?@action=redirect&bpo=31860]: The font sample in the IDLE configuration dialog is now editable. Changes persist while IDLE remains open
- [bpo-31836](https://bugs.python.org/issue?@action=redirect&bpo=31836) [https://bugs.python.org/issue?@action=redirect&bpo=31836]: Test\_code\_module now passes if run after test\_idle, which sets ps1. The code module uses sys.ps1 if present or sets it to '>>>' if not. Test\_code\_module now properly tests both behaviors. Ditto for ps2.
- [bpo-28603](https://bugs.python.org/issue?@action=redirect&bpo=28603) [https://bugs.python.org/issue?@action=redirect&bpo=28603]: Fix a TypeError that caused a shell restart when printing a traceback that includes an

exception that is unhashable. Patch by Zane Bitter.

- [bpo-13802](https://bugs.python.org/issue?@action=redirect&bpo=13802) [https://bugs.python.org/issue?@action=redirect&bpo=13802]: Use non-Latin characters in the IDLE's Font settings sample. Even if one selects a font that defines a limited subset of the unicode Basic Multilingual Plane, tcl/tk will use other fonts that define a character. The expanded example give users of non-Latin characters a better idea of what they might see in IDLE's shell and editors. To make room for the expanded sample, frames on the Font tab are re-arranged. The Font/Tabs help explains a bit about the additions.

## Tools/Demos

- [bpo-32159](https://bugs.python.org/issue?@action=redirect&bpo=32159) [https://bugs.python.org/issue?@action=redirect&bpo=32159]: Remove CVS and Subversion tools: remove svneol.py and treesync.py scripts. CPython migrated from CVS to Subversion, to Mercurial, and then to Git. CVS and Subversion are no longer used to develop CPython.
- [bpo-30722](https://bugs.python.org/issue?@action=redirect&bpo=30722) [https://bugs.python.org/issue?@action=redirect&bpo=30722]: Make redemo work with Python 3.6 and newer versions. Also, remove the `LOCALE` option since it doesn't work with string patterns in Python 3. Patch by Christoph Sarnowski.

## C API

- [bpo-20891](https://bugs.python.org/issue?@action=redirect&bpo=20891) [https://bugs.python.org/issue?@action=redirect&bpo=20891]: Fix `PyGILState_Ensure()`. When `PyGILState_Ensure()` is called in a non-Python thread before `PyEval_InitThreads()`, only call `PyEval_InitThreads()` after calling `PyThreadState_New()` to fix a crash.
- [bpo-32125](https://bugs.python.org/issue?@action=redirect&bpo=32125) [https://bugs.python.org/issue?@action=redirect&bpo=32125]: The `Py_UseClassExceptionsFlag` flag has been removed. It was deprecated and wasn't used anymore since Python 2.0.
- [bpo-25612](https://bugs.python.org/issue?@action=redirect&bpo=25612) [https://bugs.python.org/issue?@action=redirect&bpo=25612]: Move the current exception state from the frame object to the co-routine. This simplifies the

interpreter and fixes a couple of obscure bugs caused by having swap exception state when entering or exiting a generator.

- [bpo-23699](https://bugs.python.org/issue?@action=redirect&bpo=23699) [https://bugs.python.org/issue?@action=redirect&bpo=23699]: Add `Py_RETURN_RICHCOMPARE` macro to reduce boilerplate code in rich comparison functions.
- [bpo-30697](https://bugs.python.org/issue?@action=redirect&bpo=30697) [https://bugs.python.org/issue?@action=redirect&bpo=30697]: The `PyExc_RecursionErrorInst` singleton is removed and `PyErr_NormalizeException()` does not use it anymore. This singleton is persistent and its members being never cleared may cause a segfault during finalization of the interpreter. See also [bpo-22898](https://bugs.python.org/issue?@action=redirect&bpo=22898) [https://bugs.python.org/issue?@action=redirect&bpo=22898].

## Python 3.7.0 alpha 2

*Release date: 2017-10-16*

### Core and Builtins

- [bpo-31558](https://bugs.python.org/issue?@action=redirect&bpo=31558) [https://bugs.python.org/issue?@action=redirect&bpo=31558]: `gc.freeze()` is a new API that allows for moving all objects currently tracked by the garbage collector to a permanent generation, effectively removing them from future collection events. This can be used to protect those objects from having their `PyGC_Head` mutated. In effect, this enables great copy-on-write stability at `fork()`.
- [bpo-31642](https://bugs.python.org/issue?@action=redirect&bpo=31642) [https://bugs.python.org/issue?@action=redirect&bpo=31642]: Restored blocking “from package import module” by setting `sys.modules[“package.module”]` to `None`.
- [bpo-31708](https://bugs.python.org/issue?@action=redirect&bpo=31708) [https://bugs.python.org/issue?@action=redirect&bpo=31708]: Allow use of asynchronous generator expressions in synchronous functions.
- [bpo-31709](https://bugs.python.org/issue?@action=redirect&bpo=31709) [https://bugs.python.org/issue?@action=redirect&bpo=31709]: Drop support of asynchronous `_aiter_`.

- [bpo-30404](https://bugs.python.org/issue?@action=redirect&bpo=30404) [https://bugs.python.org/issue?@action=redirect&bpo=30404]: The `-u` option now makes the stdout and stderr streams unbuffered rather than line-buffered.
- [bpo-31619](https://bugs.python.org/issue?@action=redirect&bpo=31619) [https://bugs.python.org/issue?@action=redirect&bpo=31619]: Fixed a `ValueError` when convert a string with large number of underscores to integer with binary base.
- [bpo-31602](https://bugs.python.org/issue?@action=redirect&bpo=31602) [https://bugs.python.org/issue?@action=redirect&bpo=31602]: Fix an assertion failure in `zipimporter.get_source()` in case of a bad `zlib.decompress()`. Patch by Oren Milman.
- [bpo-31592](https://bugs.python.org/issue?@action=redirect&bpo=31592) [https://bugs.python.org/issue?@action=redirect&bpo=31592]: Fixed an assertion failure in Python parser in case of a bad `unicodedata.normalize()`. Patch by Oren Milman.
- [bpo-31588](https://bugs.python.org/issue?@action=redirect&bpo=31588) [https://bugs.python.org/issue?@action=redirect&bpo=31588]: Raise a `TypeError` with a helpful error message when class creation fails due to a metaclass with a bad `__prepare__()` method. Patch by Oren Milman.
- [bpo-31574](https://bugs.python.org/issue?@action=redirect&bpo=31574) [https://bugs.python.org/issue?@action=redirect&bpo=31574]: Importlib was instrumented with two dtrace probes to profile import timing.
- [bpo-31566](https://bugs.python.org/issue?@action=redirect&bpo=31566) [https://bugs.python.org/issue?@action=redirect&bpo=31566]: Fix an assertion failure in `_warnings.warn()` in case of a bad `__name__` global. Patch by Oren Milman.
- [bpo-31506](https://bugs.python.org/issue?@action=redirect&bpo=31506) [https://bugs.python.org/issue?@action=redirect&bpo=31506]: Improved the error message logic for `object.__new__` and `object.__init__`.
- [bpo-31505](https://bugs.python.org/issue?@action=redirect&bpo=31505) [https://bugs.python.org/issue?@action=redirect&bpo=31505]: Fix an assertion failure in `json`, in case `__json.make_encoder()` received a bad `encoder()` argument. Patch by Oren Milman.
- [bpo-31492](https://bugs.python.org/issue?@action=redirect&bpo=31492) [https://bugs.python.org/issue?@action=redirect&bpo=31492]: Fix assertion failures in case of failing to import from a module with a bad `__name__` attribute, and in case of failing to access an attribute of such a module. Patch by Oren Milman.

- [bpo-31478](https://bugs.python.org/issue?@action=redirect&bpo=31478) [https://bugs.python.org/issue?@action=redirect&bpo=31478]: Fix an assertion failure in `__random.Random.seed()` in case the argument has a bad `__abs__()` method. Patch by Oren Milman.
- [bpo-31336](https://bugs.python.org/issue?@action=redirect&bpo=31336) [https://bugs.python.org/issue?@action=redirect&bpo=31336]: Speed up class creation by 10-20% by reducing the overhead in the necessary special method lookups. Patch by Stefan Behnel.
- [bpo-31415](https://bugs.python.org/issue?@action=redirect&bpo=31415) [https://bugs.python.org/issue?@action=redirect&bpo=31415]: Add `-X importtime` option to show how long each import takes. It can be used to optimize application's startup time. Support the `PYTHONPROFILEIMPORTTIME` as an equivalent way to enable this.
- [bpo-31410](https://bugs.python.org/issue?@action=redirect&bpo=31410) [https://bugs.python.org/issue?@action=redirect&bpo=31410]: Optimized calling wrapper and classmethod descriptors.
- [bpo-31353](https://bugs.python.org/issue?@action=redirect&bpo=31353) [https://bugs.python.org/issue?@action=redirect&bpo=31353]: [PEP 553](https://peps.python.org/pep-0553/) [https://peps.python.org/pep-0553/] - Add a new built-in called `breakpoint()` which calls `sys.breakpointhook()`. By default this imports `pdb` and calls `pdb.set_trace()`, but users may override `sys.breakpointhook()` to call whatever debugger they want. The original value of the hook is saved in `sys.__breakpointhook__`.
- [bpo-17852](https://bugs.python.org/issue?@action=redirect&bpo=17852) [https://bugs.python.org/issue?@action=redirect&bpo=17852]: Maintain a list of open buffered files, flush them before exiting the interpreter. Based on a patch from Armin Rigo.
- [bpo-31315](https://bugs.python.org/issue?@action=redirect&bpo=31315) [https://bugs.python.org/issue?@action=redirect&bpo=31315]: Fix an assertion failure in `imp.create_dynamic()`, when `spec.name` is not a string. Patch by Oren Milman.
- [bpo-31311](https://bugs.python.org/issue?@action=redirect&bpo=31311) [https://bugs.python.org/issue?@action=redirect&bpo=31311]: Fix a crash in the `__setstate__()` method of `ctypes._CData`, in case of a bad `__dict__`. Patch by Oren Milman.
- [bpo-31293](https://bugs.python.org/issue?@action=redirect&bpo=31293) [https://bugs.python.org/issue?@action=redirect&bpo=31293]: Fix crashes in true division and multiplication of a `timedelta` object by a float with a bad

`as_integer_ratio()` method. Patch by Oren Milman.

- [bpo-31285](https://bugs.python.org/issue?@action=redirect&bpo=31285) [https://bugs.python.org/issue?@action=redirect&bpo=31285]: Fix an assertion failure in `warnings.warn_explicit`, when the return value of the received loader's `get_source()` has a bad `splitlines()` method. Patch by Oren Milman.
- [bpo-30406](https://bugs.python.org/issue?@action=redirect&bpo=30406) [https://bugs.python.org/issue?@action=redirect&bpo=30406]: Make `async` and `await` proper keywords, as specified in [PEP 492](https://peps.python.org/pep-0492/) [https://peps.python.org/pep-0492/].

## Library

- [bpo-30058](https://bugs.python.org/issue?@action=redirect&bpo=30058) [https://bugs.python.org/issue?@action=redirect&bpo=30058]: Fixed buffer overflow in `select.kqueue.control()`.
- [bpo-31672](https://bugs.python.org/issue?@action=redirect&bpo=31672) [https://bugs.python.org/issue?@action=redirect&bpo=31672]: `idpattern` in `string.Template` matched some non-ASCII characters. Now it uses `-i` regular expression local flag to avoid non-ASCII characters.
- [bpo-31701](https://bugs.python.org/issue?@action=redirect&bpo=31701) [https://bugs.python.org/issue?@action=redirect&bpo=31701]: On Windows, `faulthandler.enable()` now ignores MSC and COM exceptions.
- [bpo-31728](https://bugs.python.org/issue?@action=redirect&bpo=31728) [https://bugs.python.org/issue?@action=redirect&bpo=31728]: Prevent crashes in `_elementtree` due to unsafe cleanup of `Element.text` and `Element.tail`. Patch by Oren Milman.
- [bpo-31671](https://bugs.python.org/issue?@action=redirect&bpo=31671) [https://bugs.python.org/issue?@action=redirect&bpo=31671]: Now `re.compile()` converts passed `RegexFlag` to normal int object before compiling. `bm_regex_compile` benchmark shows 14% performance improvements.
- [bpo-30397](https://bugs.python.org/issue?@action=redirect&bpo=30397) [https://bugs.python.org/issue?@action=redirect&bpo=30397]: The types of compiled regular objects and match objects are now exposed as `re.Pattern` and `re.Match`. This adds information in pydoc output for the `re` module.
- [bpo-31675](https://bugs.python.org/issue?@action=redirect&bpo=31675) [https://bugs.python.org/issue?@action=redirect&bpo=31675]: Fixed memory leaks in Tkinter's

methods `splitlist()` and `split()` when pass a string larger than 2 GiB.

- [bpo-31673](https://bugs.python.org/issue?@action=redirect&bpo=31673) [https://bugs.python.org/issue?@action=redirect&bpo=31673]: Fixed typo in the name of Tkinter's method `adderrorinfo()`.
- [bpo-31648](https://bugs.python.org/issue?@action=redirect&bpo=31648) [https://bugs.python.org/issue?@action=redirect&bpo=31648]: Improvements to path predicates in `ElementTree`: Allow whitespace around predicate parts, i.e. “[a = ‘text’]” instead of requiring the less readable “[a = 'text']”. Add support for text comparison of the current node, like “[. = 'text']”. Patch by Stefan Behnel.
- [bpo-30806](https://bugs.python.org/issue?@action=redirect&bpo=30806) [https://bugs.python.org/issue?@action=redirect&bpo=30806]: Fix the string representation of a `netrc` object.
- [bpo-31638](https://bugs.python.org/issue?@action=redirect&bpo=31638) [https://bugs.python.org/issue?@action=redirect&bpo=31638]: Add optional argument `compressed` to `zipapp.create_archive`, and add option `--compress` to the command line interface of `zipapp`.
- [bpo-25351](https://bugs.python.org/issue?@action=redirect&bpo=25351) [https://bugs.python.org/issue?@action=redirect&bpo=25351]: Avoid `venv` activate failures with undefined variables
- [bpo-20519](https://bugs.python.org/issue?@action=redirect&bpo=20519) [https://bugs.python.org/issue?@action=redirect&bpo=20519]: Avoid `ctypes` use (if possible) and improve import time for `uuid`.
- [bpo-28293](https://bugs.python.org/issue?@action=redirect&bpo=28293) [https://bugs.python.org/issue?@action=redirect&bpo=28293]: The regular expression cache is no longer completely dumped when it is full.
- [bpo-31596](https://bugs.python.org/issue?@action=redirect&bpo=31596) [https://bugs.python.org/issue?@action=redirect&bpo=31596]: Added `pthread_getcpuclockid()` to the `time` module
- [bpo-27494](https://bugs.python.org/issue?@action=redirect&bpo=27494) [https://bugs.python.org/issue?@action=redirect&bpo=27494]: Make 2to3 accept a trailing comma in generator expressions. For example, `set(x for x in [],)` is now allowed.
- [bpo-30347](https://bugs.python.org/issue?@action=redirect&bpo=30347) [https://bugs.python.org/issue?@action=redirect&bpo=30347]: Stop crashes when concurrently iterate over `itertools.groupby()` iterators.
- [bpo-30346](https://bugs.python.org/issue?@action=redirect&bpo=30346) [https://bugs.python.org/issue?@action=redirect&bpo=30346]: An iterator produced by

itertools.groupby() iterator now becomes exhausted after advancing the groupby iterator.

- [bpo-31556](https://bugs.python.org/issue?@action=redirect&bpo=31556) [https://bugs.python.org/issue?@action=redirect&bpo=31556]: Cancel asyncio.wait\_for future faster if timeout <= 0
- [bpo-31540](https://bugs.python.org/issue?@action=redirect&bpo=31540) [https://bugs.python.org/issue?@action=redirect&bpo=31540]: Allow passing a context object in `concurrent.futures.ProcessPoolExecutor` constructor. Also, free job resources in `concurrent.futures.ProcessPoolExecutor` earlier to improve memory usage when a worker waits for new jobs.
- [bpo-31516](https://bugs.python.org/issue?@action=redirect&bpo=31516) [https://bugs.python.org/issue?@action=redirect&bpo=31516]: `threading.current_thread()` should not return a dummy thread at shutdown.
- [bpo-31525](https://bugs.python.org/issue?@action=redirect&bpo=31525) [https://bugs.python.org/issue?@action=redirect&bpo=31525]: In the sqlite module, require the `sqlite3_prepare_v2` API. Thus, the sqlite module now requires sqlite version at least 3.3.9.
- [bpo-26510](https://bugs.python.org/issue?@action=redirect&bpo=26510) [https://bugs.python.org/issue?@action=redirect&bpo=26510]: `argparse` subparsers are now required by default. This matches behaviour in Python 2. For optional subparsers, use the new parameter `add_subparsers(required=False)`. Patch by Anthony Sottile. (As of 3.7.0rc1, the default was changed to not required as had been the case since Python 3.3.)
- [bpo-27541](https://bugs.python.org/issue?@action=redirect&bpo=27541) [https://bugs.python.org/issue?@action=redirect&bpo=27541]: Reprs of subclasses of some collection and iterator classes (`bytearray`, `array.array`, `collections.deque`, `collections.defaultdict`, `itertools.count`, `itertools.repeat`) now contain actual type name instead of hardcoded name of the base class.
- [bpo-31351](https://bugs.python.org/issue?@action=redirect&bpo=31351) [https://bugs.python.org/issue?@action=redirect&bpo=31351]: `python -m ensurepip` now exits with non-zero exit code if pip bootstrapping has failed.
- [bpo-31389](https://bugs.python.org/issue?@action=redirect&bpo=31389) [https://bugs.python.org/issue?@action=redirect&bpo=31389]: `pdb.set_trace()` now takes an optional keyword-only argument `header`. If given, this is printed to the console just before debugging begins.

## Documentation

- [bpo-31537](https://bugs.python.org/issue?@action=redirect&bpo=31537) [https://bugs.python.org/issue?@action=redirect&bpo=31537]: Fix incorrect usage of `get_history_length` in readline documentation example code. Patch by Brad Smith.
- [bpo-30085](https://bugs.python.org/issue?@action=redirect&bpo=30085) [https://bugs.python.org/issue?@action=redirect&bpo=30085]: The operator functions without double underscores are preferred for clarity. The one with underscores are only kept for back-compatibility.

## Build

- [bpo-31696](https://bugs.python.org/issue?@action=redirect&bpo=31696) [https://bugs.python.org/issue?@action=redirect&bpo=31696]: Improve compiler version information in `sys.version` when Python is built with Clang.
- [bpo-31625](https://bugs.python.org/issue?@action=redirect&bpo=31625) [https://bugs.python.org/issue?@action=redirect&bpo=31625]: Stop using `ranlib` on static libraries. Instead, we assume `ar` supports the 's' flag.
- [bpo-31624](https://bugs.python.org/issue?@action=redirect&bpo=31624) [https://bugs.python.org/issue?@action=redirect&bpo=31624]: Remove support for BSD/OS.
- [bpo-22140](https://bugs.python.org/issue?@action=redirect&bpo=22140) [https://bugs.python.org/issue?@action=redirect&bpo=22140]: Prevent double substitution of prefix in `python-config.sh`.
- [bpo-31569](https://bugs.python.org/issue?@action=redirect&bpo=31569) [https://bugs.python.org/issue?@action=redirect&bpo=31569]: Correct `PCBuild/` case to `PCbuild/` in build scripts and documentation.
- [bpo-31536](https://bugs.python.org/issue?@action=redirect&bpo=31536) [https://bugs.python.org/issue?@action=redirect&bpo=31536]: Avoid wholesale rebuild after `make regen-all` if nothing changed.

## IDLE

- [bpo-31460](https://bugs.python.org/issue?@action=redirect&bpo=31460) [https://bugs.python.org/issue?@action=redirect&bpo=31460]: Simplify the API of IDLE's Module Browser. Passing a widget instead of a list with a root widget opens the option of creating a browser frame that is only part of a window. Passing a full file name instead of pieces assumed to come from a .py file opens the possibility

of browsing python files that do not end in .py.

- [bpo-31649](https://bugs.python.org/issue?@action=redirect&bpo=31649) [https://bugs.python.org/issue?@action=redirect&bpo=31649]: IDLE - Make `_htest`, `_utest` parameters keyword only.
- [bpo-31559](https://bugs.python.org/issue?@action=redirect&bpo=31559) [https://bugs.python.org/issue?@action=redirect&bpo=31559]: Remove test order dependence in `idle_test.test_browser`.
- [bpo-31459](https://bugs.python.org/issue?@action=redirect&bpo=31459) [https://bugs.python.org/issue?@action=redirect&bpo=31459]: Rename IDLE's module browser from Class Browser to Module Browser. The original module-level class and method browser became a module browser, with the addition of module-level functions, years ago. Nested classes and functions were added yesterday. For back-compatibility, the virtual event `<<open-class-browser>>`, which appears on the Keys tab of the Settings dialog, is not changed. Patch by Cheryl Sabella.
- [bpo-31500](https://bugs.python.org/issue?@action=redirect&bpo=31500) [https://bugs.python.org/issue?@action=redirect&bpo=31500]: Default fonts now are scaled on HiDPI displays.
- [bpo-1612262](https://bugs.python.org/issue?@action=redirect&bpo=1612262) [https://bugs.python.org/issue?@action=redirect&bpo=1612262]: IDLE module browser now shows nested classes and functions. Original patches for code and tests by Guilherme Polo and Cheryl Sabella, respectively.

## C API

- [bpo-28280](https://bugs.python.org/issue?@action=redirect&bpo=28280) [https://bugs.python.org/issue?@action=redirect&bpo=28280]: Make `PyMapping_Keys()`, `PyMapping_Values()` and `PyMapping_Items()` always return a `list` (rather than a `list` or a `tuple`). Patch by Oren Milman.
- [bpo-31532](https://bugs.python.org/issue?@action=redirect&bpo=31532) [https://bugs.python.org/issue?@action=redirect&bpo=31532]: Fix memory corruption due to allocator mix in `getpath.c` between `Py_GetPath()` and `Py_SetPath()`
- [bpo-25658](https://bugs.python.org/issue?@action=redirect&bpo=25658) [https://bugs.python.org/issue?@action=redirect&bpo=25658]: Implement [PEP 539](https://peps.python.org/pep-0539/) [https://peps.python.org/pep-0539/] for Thread Specific Storage (TSS) API: it is a new Thread Local Storage (TLS) API to CPython which would supersede use of the existing TLS API within the

CPython interpreter, while deprecating the existing API. PEP written by Erik M. Bray, patch by Masayuki Yamamoto.

# Python 3.7.0 alpha 1

*Release date: 2017-09-19*

## Security

- [bpo-29781](https://bugs.python.org/issue?@action=redirect&bpo=29781) [https://bugs.python.org/issue?@action=redirect&bpo=29781]: `SSLObject.version()` now correctly returns `None` when handshake over BIO has not been performed yet.
- [bpo-29505](https://bugs.python.org/issue?@action=redirect&bpo=29505) [https://bugs.python.org/issue?@action=redirect&bpo=29505]: Add fuzz tests for `float(str)`, `int(str)`, `unicode(str)`; for oss-fuzz.
- [bpo-30947](https://bugs.python.org/issue?@action=redirect&bpo=30947) [https://bugs.python.org/issue?@action=redirect&bpo=30947]: Upgrade libexpat embedded copy from version 2.2.1 to 2.2.3 to get security fixes.
- [bpo-30730](https://bugs.python.org/issue?@action=redirect&bpo=30730) [https://bugs.python.org/issue?@action=redirect&bpo=30730]: Prevent environment variables injection in subprocess on Windows. Prevent passing other environment variables and command arguments.
- [bpo-30694](https://bugs.python.org/issue?@action=redirect&bpo=30694) [https://bugs.python.org/issue?@action=redirect&bpo=30694]: Upgrade expat copy from 2.2.0 to 2.2.1 to get fixes of multiple security vulnerabilities including: CVE-2017-9233 (External entity infinite loop DoS), CVE-2016-9063 (Integer overflow, re-fix), CVE-2016-0718 (Fix regression bugs from 2.2.0's fix to CVE-2016-0718) and CVE-2012-0876 (Counter hash flooding with SipHash). Note: the CVE-2016-5300 (Use os-specific entropy sources like `getrandom`) doesn't impact Python, since Python already gets entropy from the OS to set the expat secret using `XML_SetHashSalt()`.
- [bpo-30500](https://bugs.python.org/issue?@action=redirect&bpo=30500) [https://bugs.python.org/issue?@action=redirect&bpo=30500]: Fix `urllib.parse.splithost()` to correctly parse fragments. For example, `splithost('//127.0.0.1#@evil.com/')` now correctly returns the `127.0.0.1` host, instead of treating

@evil.com as the host in an authentication (login@host).

- [bpo-29591](https://bugs.python.org/issue?@action=redirect&bpo=29591) [https://bugs.python.org/issue?@action=redirect&bpo=29591]: Update expat copy from 2.1.1 to 2.2.0 to get fixes of CVE-2016-0718 and CVE-2016-4472. See <https://sourceforge.net/p/expat/bugs/537/> for more information.

## Core and Builtins

- [bpo-31490](https://bugs.python.org/issue?@action=redirect&bpo=31490) [https://bugs.python.org/issue?@action=redirect&bpo=31490]: Fix an assertion failure in **ctypes** class definition, in case the class has an attribute whose name is specified in `_anonymous_` but not in `_fields_`. Patch by Oren Milman.
- [bpo-31471](https://bugs.python.org/issue?@action=redirect&bpo=31471) [https://bugs.python.org/issue?@action=redirect&bpo=31471]: Fix an assertion failure in **subprocess.Popen()** on Windows, in case the env argument has a bad keys() method. Patch by Oren Milman.
- [bpo-31418](https://bugs.python.org/issue?@action=redirect&bpo=31418) [https://bugs.python.org/issue?@action=redirect&bpo=31418]: Fix an assertion failure in **PyErr\_WriteUnraisable()** in case of an exception with a bad `__module__` attribute. Patch by Oren Milman.
- [bpo-31416](https://bugs.python.org/issue?@action=redirect&bpo=31416) [https://bugs.python.org/issue?@action=redirect&bpo=31416]: Fix assertion failures in case of a bad warnings.filters or warnings.defaultaction. Patch by Oren Milman.
- [bpo-28411](https://bugs.python.org/issue?@action=redirect&bpo=28411) [https://bugs.python.org/issue?@action=redirect&bpo=28411]: Change direct usage of `PyInterpreterState.modules` to `PyImport_GetModuleDict()`. Also introduce more uniformity in other code that deals with `sys.modules`. This helps reduce complications when working on `sys.modules`.
- [bpo-28411](https://bugs.python.org/issue?@action=redirect&bpo=28411) [https://bugs.python.org/issue?@action=redirect&bpo=28411]: Switch to the abstract API when dealing with `PyInterpreterState.modules`. This allows later support for all dict subclasses and other Mapping implementations. Also add a `PyImport_GetModule()` function to reduce a bunch of duplicated code.
- [bpo-31411](https://bugs.python.org/issue?@action=redirect&bpo=31411) [https://bugs.python.org/issue?@action=redirect&bpo=31411]: Raise a `TypeError` instead of

SystemError in case warnings.onceregistry is not a dictionary.  
Patch by Oren Milman.

- [bpo-31344](https://bugs.python.org/issue?@action=redirect&bpo=31344) [https://bugs.python.org/issue?@action=redirect&bpo=31344]: For finer control of tracing behaviour when testing the interpreter, two new frame attributes have been added to control the emission of particular trace events: `f_trace_lines` (True by default) to turn off per-line trace events; and `f_trace_opcodes` (False by default) to turn on per-opcode trace events.
- [bpo-31373](https://bugs.python.org/issue?@action=redirect&bpo=31373) [https://bugs.python.org/issue?@action=redirect&bpo=31373]: Fix several possible instances of undefined behavior due to floating-point demotions.
- [bpo-30465](https://bugs.python.org/issue?@action=redirect&bpo=30465) [https://bugs.python.org/issue?@action=redirect&bpo=30465]: Location information (`lineno` and `col_offset`) in f-strings is now (mostly) correct. This fixes tools like flake8 from showing warnings on the wrong line (typically the first line of the file).
- [bpo-30860](https://bugs.python.org/issue?@action=redirect&bpo=30860) [https://bugs.python.org/issue?@action=redirect&bpo=30860]: Consolidate CPython's global runtime state under a single struct. This improves discoverability of the runtime state.
- [bpo-31347](https://bugs.python.org/issue?@action=redirect&bpo=31347) [https://bugs.python.org/issue?@action=redirect&bpo=31347]: Fix possible undefined behavior in `_PyObject_FastCall_Prepend`.
- [bpo-31343](https://bugs.python.org/issue?@action=redirect&bpo=31343) [https://bugs.python.org/issue?@action=redirect&bpo=31343]: Include `sys/sysmacros.h` for `major()`, `minor()`, and `makedev()`. GNU C library plans to remove the functions from `sys/types.h`.
- [bpo-31291](https://bugs.python.org/issue?@action=redirect&bpo=31291) [https://bugs.python.org/issue?@action=redirect&bpo=31291]: Fix an assertion failure in `zipimport.zipimporter.get_data` on Windows, when the return value of `pathname.replace('/', '\\')` isn't a string. Patch by Oren Milman.
- [bpo-31271](https://bugs.python.org/issue?@action=redirect&bpo=31271) [https://bugs.python.org/issue?@action=redirect&bpo=31271]: Fix an assertion failure in the `write()` method of `io.TextIOWrapper`, when the encoder doesn't return a bytes object. Patch by Oren Milman.
- [bpo-31243](https://bugs.python.org/issue?@action=redirect&bpo=31243) [https://bugs.python.org/issue?@action=redirect&bpo=31243]: Fix a crash in some methods of `io.TextIOWrapper`, when the decoder's state is invalid.

Patch by Oren Milman.

- [bpo-30721](https://bugs.python.org/issue?@action=redirect&bpo=30721) [https://bugs.python.org/issue?@action=redirect&bpo=30721]: `print` now shows correct usage hint for using Python 2 redirection syntax. Patch by Sanyam Khurana.
- [bpo-31070](https://bugs.python.org/issue?@action=redirect&bpo=31070) [https://bugs.python.org/issue?@action=redirect&bpo=31070]: Fix a race condition in `importlib._get_module_lock()`.
- [bpo-30747](https://bugs.python.org/issue?@action=redirect&bpo=30747) [https://bugs.python.org/issue?@action=redirect&bpo=30747]: Add a non-dummy implementation of `_Py_atomic_store` and `_Py_atomic_load` on MSVC.
- [bpo-31095](https://bugs.python.org/issue?@action=redirect&bpo=31095) [https://bugs.python.org/issue?@action=redirect&bpo=31095]: Fix potential crash during GC caused by `tp_dealloc` which doesn't call `PyObject_GC_UnTrack()`.
- [bpo-31071](https://bugs.python.org/issue?@action=redirect&bpo=31071) [https://bugs.python.org/issue?@action=redirect&bpo=31071]: Avoid masking original `TypeError` in call with `*` unpacking when other arguments are passed.
- [bpo-30978](https://bugs.python.org/issue?@action=redirect&bpo=30978) [https://bugs.python.org/issue?@action=redirect&bpo=30978]: `str.format_map()` now passes key lookup exceptions through. Previously any exception was replaced with a `KeyError` exception.
- [bpo-30808](https://bugs.python.org/issue?@action=redirect&bpo=30808) [https://bugs.python.org/issue?@action=redirect&bpo=30808]: Use `_Py_atomic` API for concurrency-sensitive signal state.
- [bpo-30876](https://bugs.python.org/issue?@action=redirect&bpo=30876) [https://bugs.python.org/issue?@action=redirect&bpo=30876]: Relative import from unloaded package now reimports the package instead of failing with `SystemError`. Relative import from non-package now fails with `ImportError` rather than `SystemError`.
- [bpo-30703](https://bugs.python.org/issue?@action=redirect&bpo=30703) [https://bugs.python.org/issue?@action=redirect&bpo=30703]: Improve signal delivery. Avoid using `Py_AddPendingCall` from signal handler, to avoid calling signal-unsafe functions. The tests I'm adding here fail without the rest of the patch, on Linux and OS X. This means our signal delivery logic had defects (some signals could be lost).
- [bpo-30765](https://bugs.python.org/issue?@action=redirect&bpo=30765) [https://bugs.python.org/issue?@action=redirect&bpo=30765]: Avoid blocking in

`pthread_mutex_lock()` when `PyThread_acquire_lock()` is asked not to block.

- [bpo-31161](https://bugs.python.org/issue?@action=redirect&bpo=31161) [https://bugs.python.org/issue?@action=redirect&bpo=31161]: Make sure the ‘Missing parentheses’ syntax error message is only applied to `SyntaxError`, not to subclasses. Patch by Martijn Pieters.
- [bpo-30814](https://bugs.python.org/issue?@action=redirect&bpo=30814) [https://bugs.python.org/issue?@action=redirect&bpo=30814]: Fixed a race condition when import a submodule from a package.
- [bpo-30736](https://bugs.python.org/issue?@action=redirect&bpo=30736) [https://bugs.python.org/issue?@action=redirect&bpo=30736]: The internal `unicodedata` database has been upgraded to Unicode 10.0.
- [bpo-30604](https://bugs.python.org/issue?@action=redirect&bpo=30604) [https://bugs.python.org/issue?@action=redirect&bpo=30604]: Move `co_extra_freefuncs` from per-thread to per-interpreter to avoid crashes.
- [bpo-30597](https://bugs.python.org/issue?@action=redirect&bpo=30597) [https://bugs.python.org/issue?@action=redirect&bpo=30597]: `print` now shows expected input in custom error message when used as a Python 2 statement. Patch by Sanyam Khurana.
- [bpo-30682](https://bugs.python.org/issue?@action=redirect&bpo=30682) [https://bugs.python.org/issue?@action=redirect&bpo=30682]: Removed a too-strict assertion that failed for certain f-strings, such as `eval("f\n")` and `eval("f\r")`.
- [bpo-30501](https://bugs.python.org/issue?@action=redirect&bpo=30501) [https://bugs.python.org/issue?@action=redirect&bpo=30501]: The compiler now produces more optimal code for complex condition expressions in the “if”, “while” and “assert” statement, the “if” expression, and generator expressions and comprehensions.
- [bpo-28180](https://bugs.python.org/issue?@action=redirect&bpo=28180) [https://bugs.python.org/issue?@action=redirect&bpo=28180]: Implement [PEP 538](https://peps.python.org/pep-0538/) (legacy C locale coercion). This means that when a suitable coercion target locale is available, both the core interpreter and locale-aware C extensions will assume the use of UTF-8 as the default text encoding, rather than ASCII.
- [bpo-30486](https://bugs.python.org/issue?@action=redirect&bpo=30486) [https://bugs.python.org/issue?@action=redirect&bpo=30486]: Allows setting cell values for `__closure__`. Patch by Lisa Roach.
- [bpo-30537](https://bugs.python.org/issue?@action=redirect&bpo=30537) [https://bugs.python.org/issue?@action=redirect&bpo=30537]: `itertools.islice` now accepts

integer-like objects (having an `__index__` method) as start, stop, and slice arguments

- [bpo-25324](https://bugs.python.org/issue?@action=redirect&bpo=25324) [https://bugs.python.org/issue?@action=redirect&bpo=25324]: Tokens needed for parsing in Python moved to C. `COMMENT`, `NL` and `ENCODING`. This way the tokens and `tok_names` in the token module don't get changed when you import the tokenize module.
- [bpo-29104](https://bugs.python.org/issue?@action=redirect&bpo=29104) [https://bugs.python.org/issue?@action=redirect&bpo=29104]: Fixed parsing backslashes in f-strings.
- [bpo-27945](https://bugs.python.org/issue?@action=redirect&bpo=27945) [https://bugs.python.org/issue?@action=redirect&bpo=27945]: Fixed various segfaults with dict when input collections are mutated during searching, inserting or comparing. Based on patches by Duane Griffin and Tim Mitchell.
- [bpo-25794](https://bugs.python.org/issue?@action=redirect&bpo=25794) [https://bugs.python.org/issue?@action=redirect&bpo=25794]: Fixed `type._setattr_()` and `type._delattr_()` for non-interned attribute names. Based on patch by Eryk Sun.
- [bpo-30039](https://bugs.python.org/issue?@action=redirect&bpo=30039) [https://bugs.python.org/issue?@action=redirect&bpo=30039]: If a `KeyboardInterrupt` happens when the interpreter is in the middle of resuming a chain of nested 'yield from' or 'await' calls, it's now correctly delivered to the innermost frame.
- [bpo-28974](https://bugs.python.org/issue?@action=redirect&bpo=28974) [https://bugs.python.org/issue?@action=redirect&bpo=28974]: `object.__format__(x, '')` is now equivalent to `str(x)` rather than `format(str(self), '')`.
- [bpo-30024](https://bugs.python.org/issue?@action=redirect&bpo=30024) [https://bugs.python.org/issue?@action=redirect&bpo=30024]: Circular imports involving absolute imports with binding a submodule to a name are now supported.
- [bpo-12414](https://bugs.python.org/issue?@action=redirect&bpo=12414) [https://bugs.python.org/issue?@action=redirect&bpo=12414]: `sys.getsizeof()` on a code object now returns the sizes which includes the code struct and sizes of objects which it references. Patch by Dong-hee Na.
- [bpo-29839](https://bugs.python.org/issue?@action=redirect&bpo=29839) [https://bugs.python.org/issue?@action=redirect&bpo=29839]: `len()` now raises `ValueError` rather than `OverflowError` if `__len__()` returned a large negative integer.

- [bpo-11913](https://bugs.python.org/issue?@action=redirect&bpo=11913) [https://bugs.python.org/issue?@action=redirect&bpo=11913]: README.rst is now included in the list of distutils standard READMEs and therefore included in source distributions.
- [bpo-29914](https://bugs.python.org/issue?@action=redirect&bpo=29914) [https://bugs.python.org/issue?@action=redirect&bpo=29914]: Fixed default implementations of `_reduce_` and `_reduce_ex_()`. `object._reduce_()` no longer takes arguments, `object._reduce_ex_()` now requires one argument.
- [bpo-29949](https://bugs.python.org/issue?@action=redirect&bpo=29949) [https://bugs.python.org/issue?@action=redirect&bpo=29949]: Fix memory usage regression of set and frozenset object.
- [bpo-29935](https://bugs.python.org/issue?@action=redirect&bpo=29935) [https://bugs.python.org/issue?@action=redirect&bpo=29935]: Fixed error messages in the `index()` method of tuple, list and deque when pass indices of wrong type.
- [bpo-29816](https://bugs.python.org/issue?@action=redirect&bpo=29816) [https://bugs.python.org/issue?@action=redirect&bpo=29816]: Shift operation now has less opportunity to raise `OverflowError`. `ValueError` always is raised rather than `OverflowError` for negative counts. Shifting zero with non-negative count always returns zero.
- [bpo-24821](https://bugs.python.org/issue?@action=redirect&bpo=24821) [https://bugs.python.org/issue?@action=redirect&bpo=24821]: Fixed the slowing down to 25 times in the searching of some unlucky Unicode characters.
- [bpo-29102](https://bugs.python.org/issue?@action=redirect&bpo=29102) [https://bugs.python.org/issue?@action=redirect&bpo=29102]: Add a unique ID to `PyInterpreterState`. This makes it easier to identify each subinterpreter.
- [bpo-29894](https://bugs.python.org/issue?@action=redirect&bpo=29894) [https://bugs.python.org/issue?@action=redirect&bpo=29894]: The deprecation warning is emitted if `_complex_` returns an instance of a strict subclass of `complex`. In a future versions of Python this can be an error.
- [bpo-29859](https://bugs.python.org/issue?@action=redirect&bpo=29859) [https://bugs.python.org/issue?@action=redirect&bpo=29859]: Show correct error messages when any of the `pthread_*` calls in `thread_pthread.h` fails.
- [bpo-29849](https://bugs.python.org/issue?@action=redirect&bpo=29849) [https://bugs.python.org/issue?@action=redirect&bpo=29849]: Fix a memory leak when an `ImportError` is raised during from import.
- [bpo-28856](https://bugs.python.org/issue?@action=redirect&bpo=28856) [https://bugs.python.org/issue?@action=redirect&bpo=28856]

@action=redirect&bpo=28856]: Fix an oversight that %b format for bytes should support objects follow the buffer protocol.

- [bpo-29723](https://bugs.python.org/issue?@action=redirect&bpo=29723) [https://bugs.python.org/issue?@action=redirect&bpo=29723]: The `sys.path[0]` initialization change for [bpo-29139](https://bugs.python.org/issue?@action=redirect&bpo=29139) [https://bugs.python.org/issue?@action=redirect&bpo=29139] caused a regression by revealing an inconsistency in how `sys.path` is initialized when executing `__main__` from a zipfile, directory, or other import location. The interpreter now consistently avoids ever adding the import location's parent directory to `sys.path`, and ensures no other `sys.path` entries are inadvertently modified when inserting the import location named on the command line.
- [bpo-29568](https://bugs.python.org/issue?@action=redirect&bpo=29568) [https://bugs.python.org/issue?@action=redirect&bpo=29568]: Escaped percent “%%” in the format string for classic string formatting no longer allows any characters between two percents.
- [bpo-29714](https://bugs.python.org/issue?@action=redirect&bpo=29714) [https://bugs.python.org/issue?@action=redirect&bpo=29714]: Fix a regression that bytes format may fail when containing zero bytes inside.
- [bpo-29695](https://bugs.python.org/issue?@action=redirect&bpo=29695) [https://bugs.python.org/issue?@action=redirect&bpo=29695]: `bool()`, `float()`, `list()` and `tuple()` no longer take keyword arguments. The first argument of `int()` can now be passes only as positional argument.
- [bpo-28893](https://bugs.python.org/issue?@action=redirect&bpo=28893) [https://bugs.python.org/issue?@action=redirect&bpo=28893]: Set correct `_cause_` for errors about invalid awaitables returned from `_aiter_` and `_anext_`.
- [bpo-28876](https://bugs.python.org/issue?@action=redirect&bpo=28876) [https://bugs.python.org/issue?@action=redirect&bpo=28876]: `bool(range)` works even if `len(range)` raises `OverflowError`.
- [bpo-29683](https://bugs.python.org/issue?@action=redirect&bpo=29683) [https://bugs.python.org/issue?@action=redirect&bpo=29683]: Fixes to memory allocation in `_PyCode_SetExtra`. Patch by Brian Coleman.
- [bpo-29684](https://bugs.python.org/issue?@action=redirect&bpo=29684) [https://bugs.python.org/issue?@action=redirect&bpo=29684]: Fix minor regression of `PyEval_CallObjectWithKeywords`. It should raise `TypeError` when `kwargs` is not a dict. But it might cause segv when `args=NULL` and `kwargs` is not a dict.
- [bpo-28598](https://bugs.python.org/issue?@action=redirect&bpo=28598) [https://bugs.python.org/issue?@action=redirect&bpo=28598]: Support `__rmod__` for subclasses of `str` being called before `str.__mod__`. Patch by Martijn Pieters.

- [bpo-29607](https://bugs.python.org/issue?@action=redirect&bpo=29607) [https://bugs.python.org/issue?@action=redirect&bpo=29607]: Fix `stack_effect` computation for `CALL_FUNCTION_EX`. Patch by Matthieu Dartiailh.
- [bpo-29602](https://bugs.python.org/issue?@action=redirect&bpo=29602) [https://bugs.python.org/issue?@action=redirect&bpo=29602]: Fix incorrect handling of signed zeros in complex constructor for complex subclasses and for inputs having a `__complex__` method. Patch by Serhiy Storchaka.
- [bpo-29347](https://bugs.python.org/issue?@action=redirect&bpo=29347) [https://bugs.python.org/issue?@action=redirect&bpo=29347]: Fixed possibly dereferencing undefined pointers when creating weakref objects.
- [bpo-29463](https://bugs.python.org/issue?@action=redirect&bpo=29463) [https://bugs.python.org/issue?@action=redirect&bpo=29463]: Add `docstring` field to `Module`, `ClassDef`, `FunctionDef`, and `AsyncFunctionDef` ast nodes. `docstring` is not first stmt in their body anymore. It affects `co_firstlineno` and `co_lnotab` of code object for module and class. (Reverted in [bpo-32911](https://bugs.python.org/issue?@action=redirect&bpo=32911) [https://bugs.python.org/issue?@action=redirect&bpo=32911].)
- [bpo-29438](https://bugs.python.org/issue?@action=redirect&bpo=29438) [https://bugs.python.org/issue?@action=redirect&bpo=29438]: Fixed use-after-free problem in key sharing dict.
- [bpo-29546](https://bugs.python.org/issue?@action=redirect&bpo=29546) [https://bugs.python.org/issue?@action=redirect&bpo=29546]: Set the ‘path’ and ‘name’ attribute on `ImportError` for `from ... import ...`.
- [bpo-29546](https://bugs.python.org/issue?@action=redirect&bpo=29546) [https://bugs.python.org/issue?@action=redirect&bpo=29546]: Improve from-import error message with location
- [bpo-29478](https://bugs.python.org/issue?@action=redirect&bpo=29478) [https://bugs.python.org/issue?@action=redirect&bpo=29478]: If `max_line_length = None` is specified while using the `Compat32` policy, it is no longer ignored. Patch by Mircea Cosbuc.
- [bpo-29319](https://bugs.python.org/issue?@action=redirect&bpo=29319) [https://bugs.python.org/issue?@action=redirect&bpo=29319]: Prevent `RunMainFromImporter` overwriting `sys.path[0]`.
- [bpo-29337](https://bugs.python.org/issue?@action=redirect&bpo=29337) [https://bugs.python.org/issue?@action=redirect&bpo=29337]: Fixed possible `BytesWarning` when compare the code objects. Warnings could be emitted at compile time.
- [bpo-29327](https://bugs.python.org/issue?@action=redirect&bpo=29327) [https://bugs.python.org/issue?@action=redirect&bpo=29327]: Fixed a crash when pass the

iterable keyword argument to `sorted()`.

- [bpo-29034](https://bugs.python.org/issue?@action=redirect&bpo=29034) [https://bugs.python.org/issue?@action=redirect&bpo=29034]: Fix memory leak and use-after-free in `os` module (`path_converter`).
- [bpo-29159](https://bugs.python.org/issue?@action=redirect&bpo=29159) [https://bugs.python.org/issue?@action=redirect&bpo=29159]: Fix regression in `bytes(x)` when `x._index_()` raises `Exception`.
- [bpo-29049](https://bugs.python.org/issue?@action=redirect&bpo=29049) [https://bugs.python.org/issue?@action=redirect&bpo=29049]: Call `_PyObject_GC_TRACK()` lazily when calling Python function. Calling function is up to 5% faster.
- [bpo-28927](https://bugs.python.org/issue?@action=redirect&bpo=28927) [https://bugs.python.org/issue?@action=redirect&bpo=28927]: `bytes.fromhex()` and `bytearray.fromhex()` now ignore all ASCII whitespace, not only spaces. Patch by Robert Xiao.
- [bpo-28932](https://bugs.python.org/issue?@action=redirect&bpo=28932) [https://bugs.python.org/issue?@action=redirect&bpo=28932]: Do not include `<sys/random.h>` if it does not exist.
- [bpo-25677](https://bugs.python.org/issue?@action=redirect&bpo=25677) [https://bugs.python.org/issue?@action=redirect&bpo=25677]: Correct the positioning of the syntax error caret for indented blocks. Based on patch by Michael Layzell.
- [bpo-29000](https://bugs.python.org/issue?@action=redirect&bpo=29000) [https://bugs.python.org/issue?@action=redirect&bpo=29000]: Fixed bytes formatting of octals with zero padding in alternate form.
- [bpo-18896](https://bugs.python.org/issue?@action=redirect&bpo=18896) [https://bugs.python.org/issue?@action=redirect&bpo=18896]: Python function can now have more than 255 parameters. `collections.namedtuple()` now supports tuples with more than 255 elements.
- [bpo-28596](https://bugs.python.org/issue?@action=redirect&bpo=28596) [https://bugs.python.org/issue?@action=redirect&bpo=28596]: The preferred encoding is UTF-8 on Android. Patch written by Chi Hsuan Yen.
- [bpo-22257](https://bugs.python.org/issue?@action=redirect&bpo=22257) [https://bugs.python.org/issue?@action=redirect&bpo=22257]: Clean up interpreter startup (see [PEP 432](https://peps.python.org/pep-0432/) [https://peps.python.org/pep-0432/]).
- [bpo-26919](https://bugs.python.org/issue?@action=redirect&bpo=26919) [https://bugs.python.org/issue?@action=redirect&bpo=26919]: On Android, operating system data is now always encoded/decoded to/from UTF-8, instead of the locale encoding to avoid inconsistencies with `os.fsencode()` and `os.fsdecode()` which are already using

UTF-8.

- [bpo-28991](https://bugs.python.org/issue?@action=redirect&bpo=28991) [https://bugs.python.org/issue?@action=redirect&bpo=28991]: `functools.lru_cache()` was susceptible to an obscure reentrancy bug triggerable by a monkey-patched `len()` function.
- [bpo-28147](https://bugs.python.org/issue?@action=redirect&bpo=28147) [https://bugs.python.org/issue?@action=redirect&bpo=28147]: Fix a memory leak in split-table dictionaries: `setattr()` must not convert combined table into split table. Patch written by INADA Naoki.
- [bpo-28739](https://bugs.python.org/issue?@action=redirect&bpo=28739) [https://bugs.python.org/issue?@action=redirect&bpo=28739]: f-string expressions are no longer accepted as docstrings and by `ast.literal_eval()` even if they do not include expressions.
- [bpo-28512](https://bugs.python.org/issue?@action=redirect&bpo=28512) [https://bugs.python.org/issue?@action=redirect&bpo=28512]: Fixed setting the offset attribute of `SyntaxError` by `PyErr_SyntaxLocationEx()` and `PyErr_SyntaxLocationObject()`.
- [bpo-28918](https://bugs.python.org/issue?@action=redirect&bpo=28918) [https://bugs.python.org/issue?@action=redirect&bpo=28918]: Fix the cross compilation of `xxlimited` when Python has been built with `Py_DEBUG` defined.
- [bpo-23722](https://bugs.python.org/issue?@action=redirect&bpo=23722) [https://bugs.python.org/issue?@action=redirect&bpo=23722]: Rather than silently producing a class that doesn't support zero-argument `super()` in methods, failing to pass the new `__classcell__` namespace entry up to `type.__new__` now results in a `DeprecationWarning` and a class that supports zero-argument `super()`.
- [bpo-28797](https://bugs.python.org/issue?@action=redirect&bpo=28797) [https://bugs.python.org/issue?@action=redirect&bpo=28797]: Modifying the class `_dict_` inside the `_set_name_` method of a descriptor that is used inside that class no longer prevents calling the `_set_name_` method of other descriptors.
- [bpo-28799](https://bugs.python.org/issue?@action=redirect&bpo=28799) [https://bugs.python.org/issue?@action=redirect&bpo=28799]: Remove the `PyEval_GetCallStats()` function and deprecate the untested and undocumented `sys.callstats()` function. Remove the `CALL_PROFILE` special build: use the [sys.setprofile\(\)](#) function, [cProfile](#) or [profile](#) to profile function calls.

- [bpo-12844](https://bugs.python.org/issue?@action=redirect&bpo=12844) [https://bugs.python.org/issue?@action=redirect&bpo=12844]: More than 255 arguments can now be passed to a function.
- [bpo-28782](https://bugs.python.org/issue?@action=redirect&bpo=28782) [https://bugs.python.org/issue?@action=redirect&bpo=28782]: Fix a bug in the implementation `yield from` when checking if the next instruction is `YIELD_FROM`. Regression introduced by [WORDCODE \(bpo-26647\)](https://bugs.python.org/issue?@action=redirect&bpo=26647) [https://bugs.python.org/issue?@action=redirect&bpo=26647]).
- [bpo-28774](https://bugs.python.org/issue?@action=redirect&bpo=28774) [https://bugs.python.org/issue?@action=redirect&bpo=28774]: Fix error position of the unicode error in ASCII and Latin1 encoders when a string returned by the error handler contains multiple non-encodable characters (non-ASCII for the ASCII codec, characters out of the U + 0000-U + 00FF range for Latin1).
- [bpo-28731](https://bugs.python.org/issue?@action=redirect&bpo=28731) [https://bugs.python.org/issue?@action=redirect&bpo=28731]: Optimize `_PyDict_NewPresized()` to create correct size dict. Improve speed of dict literal with constant keys up to 30%.
- [bpo-28532](https://bugs.python.org/issue?@action=redirect&bpo=28532) [https://bugs.python.org/issue?@action=redirect&bpo=28532]: Show `sys.version` when `-V` option is supplied twice.
- [bpo-27100](https://bugs.python.org/issue?@action=redirect&bpo=27100) [https://bugs.python.org/issue?@action=redirect&bpo=27100]: The `with`-statement now checks for `__enter__` before it checks for `__exit__`. This gives less confusing error messages when both methods are missing. Patch by Jonathan Ellington.
- [bpo-28746](https://bugs.python.org/issue?@action=redirect&bpo=28746) [https://bugs.python.org/issue?@action=redirect&bpo=28746]: Fix the `set_inheritable()` file descriptor method on platforms that do not have the `ioctl` `FIOCLEX` and `FIONCLEX` commands.
- [bpo-26920](https://bugs.python.org/issue?@action=redirect&bpo=26920) [https://bugs.python.org/issue?@action=redirect&bpo=26920]: Fix not getting the locale's charset upon initializing the interpreter, on platforms that do not have `langinfo`.
- [bpo-28648](https://bugs.python.org/issue?@action=redirect&bpo=28648) [https://bugs.python.org/issue?@action=redirect&bpo=28648]: Fixed crash in `Py_DecodeLocale()` in debug build on Mac OS X when decode astral characters. Patch by Xiang Zhang.
- [bpo-28665](https://bugs.python.org/issue?@action=redirect&bpo=28665) [https://bugs.python.org/issue?@action=redirect&bpo=28665]

@action=redirect&bpo=28665]: Improve speed of the STORE\_DEREF opcode by 40%.

- [bpo-19398](https://bugs.python.org/issue?@action=redirect&bpo=19398) [https://bugs.python.org/issue?@action=redirect&bpo=19398]: Extra slash no longer added to sys.path components in case of empty compile-time PYTHONPATH components.
- [bpo-28621](https://bugs.python.org/issue?@action=redirect&bpo=28621) [https://bugs.python.org/issue?@action=redirect&bpo=28621]: Sped up converting int to float by reusing faster bits counting implementation. Patch by Adrian Wielgosik.
- [bpo-28580](https://bugs.python.org/issue?@action=redirect&bpo=28580) [https://bugs.python.org/issue?@action=redirect&bpo=28580]: Optimize iterating split table values. Patch by Xiang Zhang.
- [bpo-28583](https://bugs.python.org/issue?@action=redirect&bpo=28583) [https://bugs.python.org/issue?@action=redirect&bpo=28583]: PyDict\_SetDefault didn't combine split table when needed. Patch by Xiang Zhang.
- [bpo-28128](https://bugs.python.org/issue?@action=redirect&bpo=28128) [https://bugs.python.org/issue?@action=redirect&bpo=28128]: Deprecation warning for invalid str and byte escape sequences now prints better information about where the error occurs. Patch by Serhiy Storchaka and Eric Smith.
- [bpo-28509](https://bugs.python.org/issue?@action=redirect&bpo=28509) [https://bugs.python.org/issue?@action=redirect&bpo=28509]: dict.update() no longer allocate unnecessary large memory.
- [bpo-28426](https://bugs.python.org/issue?@action=redirect&bpo=28426) [https://bugs.python.org/issue?@action=redirect&bpo=28426]: Fixed potential crash in PyUnicode\_AsDecodedObject() in debug build.
- [bpo-28517](https://bugs.python.org/issue?@action=redirect&bpo=28517) [https://bugs.python.org/issue?@action=redirect&bpo=28517]: Fixed of-by-one error in the peephole optimizer that caused keeping unreachable code.
- [bpo-28214](https://bugs.python.org/issue?@action=redirect&bpo=28214) [https://bugs.python.org/issue?@action=redirect&bpo=28214]: Improved exception reporting for problematic \_\_set\_name\_\_ attributes.
- [bpo-23782](https://bugs.python.org/issue?@action=redirect&bpo=23782) [https://bugs.python.org/issue?@action=redirect&bpo=23782]: Fixed possible memory leak in \_PyTraceback\_Add() and exception loss in PyTraceBack\_Here().
- [bpo-28183](https://bugs.python.org/issue?@action=redirect&bpo=28183) [https://bugs.python.org/issue?@action=redirect&bpo=28183]: Optimize and cleanup dict iteration.

- [bpo-26081](https://bugs.python.org/issue?@action=redirect&bpo=26081) [https://bugs.python.org/issue?@action=redirect&bpo=26081]: Added C implementation of `asyncio.Future`. Original patch by Yuri Selivanov.
- [bpo-28379](https://bugs.python.org/issue?@action=redirect&bpo=28379) [https://bugs.python.org/issue?@action=redirect&bpo=28379]: Added sanity checks and tests for `PyUnicode_CopyCharacters()`. Patch by Xiang Zhang.
- [bpo-28376](https://bugs.python.org/issue?@action=redirect&bpo=28376) [https://bugs.python.org/issue?@action=redirect&bpo=28376]: The type of long range iterator is now registered as `Iterator`. Patch by Oren Milman.
- [bpo-28376](https://bugs.python.org/issue?@action=redirect&bpo=28376) [https://bugs.python.org/issue?@action=redirect&bpo=28376]: Creating instances of `range_iterator` by calling `range_iterator` type now is disallowed. Calling `iter()` on `range` instance is the only way. Patch by Oren Milman.
- [bpo-26906](https://bugs.python.org/issue?@action=redirect&bpo=26906) [https://bugs.python.org/issue?@action=redirect&bpo=26906]: Resolving special methods of uninitialized type now causes implicit initialization of the type instead of a fail.
- [bpo-18287](https://bugs.python.org/issue?@action=redirect&bpo=18287) [https://bugs.python.org/issue?@action=redirect&bpo=18287]: `PyType_Ready()` now checks that `tp_name` is not `NULL`. Original patch by Niklas Koep.
- [bpo-24098](https://bugs.python.org/issue?@action=redirect&bpo=24098) [https://bugs.python.org/issue?@action=redirect&bpo=24098]: Fixed possible crash when AST is changed in process of compiling it.
- [bpo-28201](https://bugs.python.org/issue?@action=redirect&bpo=28201) [https://bugs.python.org/issue?@action=redirect&bpo=28201]: Dict reduces possibility of 2nd conflict in hash table when hashes have same lower bits.
- [bpo-28350](https://bugs.python.org/issue?@action=redirect&bpo=28350) [https://bugs.python.org/issue?@action=redirect&bpo=28350]: String constants with null character no longer interned.
- [bpo-26617](https://bugs.python.org/issue?@action=redirect&bpo=26617) [https://bugs.python.org/issue?@action=redirect&bpo=26617]: Fix crash when GC runs during weakref callbacks.
- [bpo-27942](https://bugs.python.org/issue?@action=redirect&bpo=27942) [https://bugs.python.org/issue?@action=redirect&bpo=27942]: String constants now interned recursively in tuples and frozensets.
- [bpo-28289](https://bugs.python.org/issue?@action=redirect&bpo=28289) [https://bugs.python.org/issue?@action=redirect&bpo=28289]: `ImportError.__init__` now resets not specified attributes.
- [bpo-21578](https://bugs.python.org/issue?@action=redirect&bpo=21578) [https://bugs.python.org/issue?@action=redirect&bpo=21578]

@action=redirect&bpo=21578]: Fixed misleading error message when ImportError called with invalid keyword args.

- [bpo-28203](https://bugs.python.org/issue?@action=redirect&bpo=28203) [https://bugs.python.org/issue?@action=redirect&bpo=28203]: Fix incorrect type in complex(1.0, {2:3}) error message. Patch by Soumya Sharma.
- [bpo-28086](https://bugs.python.org/issue?@action=redirect&bpo=28086) [https://bugs.python.org/issue?@action=redirect&bpo=28086]: Single var-positional argument of tuple subtype was passed unscathed to the C-defined function. Now it is converted to exact tuple.
- [bpo-28214](https://bugs.python.org/issue?@action=redirect&bpo=28214) [https://bugs.python.org/issue?@action=redirect&bpo=28214]: Now `__set_name__` is looked up on the class instead of the instance.
- [bpo-27955](https://bugs.python.org/issue?@action=redirect&bpo=27955) [https://bugs.python.org/issue?@action=redirect&bpo=27955]: Fallback on reading `/dev/urandom` device when the `getrandom()` syscall fails with `EPERM`, for example when blocked by `SECCOMP`.
- [bpo-28192](https://bugs.python.org/issue?@action=redirect&bpo=28192) [https://bugs.python.org/issue?@action=redirect&bpo=28192]: Don't import readline in isolated mode.
- [bpo-27441](https://bugs.python.org/issue?@action=redirect&bpo=27441) [https://bugs.python.org/issue?@action=redirect&bpo=27441]: Remove some redundant assignments to `ob_size` in `longobject.c`. Thanks Oren Milman.
- [bpo-27222](https://bugs.python.org/issue?@action=redirect&bpo=27222) [https://bugs.python.org/issue?@action=redirect&bpo=27222]: Clean up redundant code in `long_rshift` function. Thanks Oren Milman.
- Upgrade internal unicode databases to Unicode version 9.0.0.
- [bpo-28131](https://bugs.python.org/issue?@action=redirect&bpo=28131) [https://bugs.python.org/issue?@action=redirect&bpo=28131]: Fix a regression in `zipimport's compile_source()`. `zipimport` should use the same optimization level as the interpreter.
- [bpo-28126](https://bugs.python.org/issue?@action=redirect&bpo=28126) [https://bugs.python.org/issue?@action=redirect&bpo=28126]: Replace `Py_MEMCPY` with `memcpy()`. Visual Studio can properly optimize `memcpy()`.
- [bpo-28120](https://bugs.python.org/issue?@action=redirect&bpo=28120) [https://bugs.python.org/issue?@action=redirect&bpo=28120]: Fix `dict.pop()` for splitted dictionary when trying to remove a "pending key" (Not yet inserted in split-table). Patch by Xiang Zhang.
- [bpo-26182](https://bugs.python.org/issue?@action=redirect&bpo=26182) [https://bugs.python.org/issue?@action=redirect&bpo=26182]: Raise `DeprecationWarning` when `async` and `await` keywords are used as variable/attribute/

class/function name.

- [bpo-26182](https://bugs.python.org/issue?@action=redirect&bpo=26182) [https://bugs.python.org/issue?@action=redirect&bpo=26182]: Fix a reflink in code that raises DeprecationWarning.
- [bpo-28721](https://bugs.python.org/issue?@action=redirect&bpo=28721) [https://bugs.python.org/issue?@action=redirect&bpo=28721]: Fix asynchronous generators aclose() and athrow() to handle StopAsyncIteration propagation properly.
- [bpo-26110](https://bugs.python.org/issue?@action=redirect&bpo=26110) [https://bugs.python.org/issue?@action=redirect&bpo=26110]: Speed-up method calls: add LOAD\_METHOD and CALL\_METHOD opcodes.

## Library

- [bpo-31499](https://bugs.python.org/issue?@action=redirect&bpo=31499) [https://bugs.python.org/issue?@action=redirect&bpo=31499]: xml.etree: Fix a crash when a parser is part of a reference cycle.
- [bpo-31482](https://bugs.python.org/issue?@action=redirect&bpo=31482) [https://bugs.python.org/issue?@action=redirect&bpo=31482]: random.seed() now works with bytes in version = 1
- [bpo-28556](https://bugs.python.org/issue?@action=redirect&bpo=28556) [https://bugs.python.org/issue?@action=redirect&bpo=28556]: typing.get\_type\_hints now finds the right globals for classes and modules by default (when no globals was specified by the caller).
- [bpo-28556](https://bugs.python.org/issue?@action=redirect&bpo=28556) [https://bugs.python.org/issue?@action=redirect&bpo=28556]: Speed improvements to the typing module. Original PRs by Ivan Levkivskyi and Mitar.
- [bpo-31544](https://bugs.python.org/issue?@action=redirect&bpo=31544) [https://bugs.python.org/issue?@action=redirect&bpo=31544]: The C accelerator module of ElementTree ignored exceptions raised when looking up TreeBuilder target methods in XMLParser().
- [bpo-31234](https://bugs.python.org/issue?@action=redirect&bpo=31234) [https://bugs.python.org/issue?@action=redirect&bpo=31234]: socket.create\_connection() now fixes manually a reference cycle: clear the variable storing the last exception on success.
- [bpo-31457](https://bugs.python.org/issue?@action=redirect&bpo=31457) [https://bugs.python.org/issue?@action=redirect&bpo=31457]: LoggerAdapter objects can now be nested.
- [bpo-31431](https://bugs.python.org/issue?@action=redirect&bpo=31431) [https://bugs.python.org/issue?@action=redirect&bpo=31431]: SSLContext.check\_hostname now

automatically sets `SSLContext.verify_mode` to `ssl.CERT_REQUIRED` instead of failing with a `ValueError`.

- [bpo-31233](https://bugs.python.org/issue?@action=redirect&bpo=31233) [https://bugs.python.org/issue?@action=redirect&bpo=31233]: `socketserver.ThreadingMixIn` now keeps a list of non-daemonic threads to wait until all these threads complete in `server_close()`.
- [bpo-28638](https://bugs.python.org/issue?@action=redirect&bpo=28638) [https://bugs.python.org/issue?@action=redirect&bpo=28638]: Changed the implementation strategy for `collections.namedtuple()` to substantially reduce the use of `exec()` in favor of precomputed methods. As a result, the *verbose* parameter and *\_source* attribute are no longer supported. The benefits include 1) having a smaller memory footprint for applications using multiple named tuples, 2) faster creation of the named tuple class (approx 4x to 6x depending on how it is measured), and 3) minor speed-ups for instance creation using `_new_`, `_make`, and `_replace`. (The primary patch contributor is Jelle Zijlstra with further improvements by INADA Naoki, Serhiy Storchaka, and Raymond Hettinger.)
- [bpo-31400](https://bugs.python.org/issue?@action=redirect&bpo=31400) [https://bugs.python.org/issue?@action=redirect&bpo=31400]: Improves SSL error handling to avoid losing error numbers.
- [bpo-27629](https://bugs.python.org/issue?@action=redirect&bpo=27629) [https://bugs.python.org/issue?@action=redirect&bpo=27629]: Make return types of `SSLContext.wrap_bio()` and `SSLContext.wrap_socket()` customizable.
- [bpo-28958](https://bugs.python.org/issue?@action=redirect&bpo=28958) [https://bugs.python.org/issue?@action=redirect&bpo=28958]: `ssl.SSLContext()` now uses OpenSSL error information when a context cannot be instantiated.
- [bpo-28182](https://bugs.python.org/issue?@action=redirect&bpo=28182) [https://bugs.python.org/issue?@action=redirect&bpo=28182]: The SSL module now raises `SSLCertVerificationError` when OpenSSL fails to verify the peer's certificate. The exception contains more information about the error.
- [bpo-27340](https://bugs.python.org/issue?@action=redirect&bpo=27340) [https://bugs.python.org/issue?@action=redirect&bpo=27340]: `SSLSocket.sendall()` now uses `memoryview` to create slices of data. This fixes support for all bytes-like object. It is also more efficient and avoids costly copies.

- [bpo-14191](https://bugs.python.org/issue?@action=redirect&bpo=14191) [https://bugs.python.org/issue?@action=redirect&bpo=14191]: A new function `argparse.ArgumentParser.parse_intermixed_args` provides the ability to parse command lines where there user intermixes options and positional arguments.
- [bpo-31178](https://bugs.python.org/issue?@action=redirect&bpo=31178) [https://bugs.python.org/issue?@action=redirect&bpo=31178]: Fix string concatenation bug in rare error path in the subprocess module
- [bpo-31350](https://bugs.python.org/issue?@action=redirect&bpo=31350) [https://bugs.python.org/issue?@action=redirect&bpo=31350]: Micro-optimize `asyncio._get_running_loop()` to become up to 10% faster.
- [bpo-31170](https://bugs.python.org/issue?@action=redirect&bpo=31170) [https://bugs.python.org/issue?@action=redirect&bpo=31170]: expat: Update libexpat from 2.2.3 to 2.2.4. Fix copying of partial characters for UTF-8 input (libexpat bug 115): <https://github.com/libexpat/libexpat/issues/115>
- [bpo-29136](https://bugs.python.org/issue?@action=redirect&bpo=29136) [https://bugs.python.org/issue?@action=redirect&bpo=29136]: Add TLS 1.3 cipher suites and `OP_NO_TLSv1_3`.
- [bpo-1198569](https://bugs.python.org/issue?@action=redirect&bpo=1198569) [https://bugs.python.org/issue?@action=redirect&bpo=1198569]: `string.Template` subclasses can optionally define `braceidpattern` if they want to specify different placeholder patterns inside and outside the braces. If `None` (the default) it falls back to `idpattern`.
- [bpo-31326](https://bugs.python.org/issue?@action=redirect&bpo=31326) [https://bugs.python.org/issue?@action=redirect&bpo=31326]: `concurrent.futures.ProcessPoolExecutor.shutdown()` now explicitly closes the call queue. Moreover, `shutdown(wait=True)` now also join the call queue thread, to prevent leaking a dangling thread.
- [bpo-27144](https://bugs.python.org/issue?@action=redirect&bpo=27144) [https://bugs.python.org/issue?@action=redirect&bpo=27144]: The `map()` and `as_completed()` iterators in `concurrent.futures` now avoid keeping a reference to yielded objects.
- [bpo-31281](https://bugs.python.org/issue?@action=redirect&bpo=31281) [https://bugs.python.org/issue?@action=redirect&bpo=31281]: Fix `fileinput.FileInput(files, inplace=True)` when files contain `pathlib.Path` objects.
- [bpo-10746](https://bugs.python.org/issue?@action=redirect&bpo=10746) [https://bugs.python.org/issue?@action=redirect&bpo=10746]

@action=redirect&bpo=10746]: Fix ctypes producing wrong [PEP 3118](#) [https://peps.python.org/pep-3118/] type codes for integer types.

- [bpo-27584](#) [https://bugs.python.org/issue?@action=redirect&bpo=27584]: AF\_VSOCK has been added to the socket interface which allows communication between virtual machines and their host.
- [bpo-22536](#) [https://bugs.python.org/issue?@action=redirect&bpo=22536]: The subprocess module now sets the filename when FileNotFoundError is raised on POSIX systems due to the executable or cwd not being found.
- [bpo-29741](#) [https://bugs.python.org/issue?@action=redirect&bpo=29741]: Update some methods in the \_pyio module to also accept integer types. Patch by Oren Milman.
- [bpo-31249](#) [https://bugs.python.org/issue?@action=redirect&bpo=31249]: concurrent.futures: WorkItem.run() used by ThreadPoolExecutor now breaks a reference cycle between an exception object and the WorkItem object.
- [bpo-31247](#) [https://bugs.python.org/issue?@action=redirect&bpo=31247]: xmlrpc.server now explicitly breaks reference cycles when using sys.exc\_info() in code handling exceptions.
- [bpo-23835](#) [https://bugs.python.org/issue?@action=redirect&bpo=23835]: configparser: reading defaults in the ConfigParser() constructor is now using read\_dict(), making its behavior consistent with the rest of the parser. Non-string keys and values in the defaults dictionary are now being implicitly converted to strings. Patch by James Tocknell.
- [bpo-31238](#) [https://bugs.python.org/issue?@action=redirect&bpo=31238]: pydoc: the stop() method of the private ServerThread class now waits until DocServer.serve\_until\_quit() completes and then explicitly sets its docserver attribute to None to break a reference cycle.
- [bpo-5001](#) [https://bugs.python.org/issue?@action=redirect&bpo=5001]: Many asserts in [multiprocessing](#) are now more informative, and some error types have been changed to more specific ones.
- [bpo-31109](#) [https://bugs.python.org/issue?@action=redirect&bpo=31109]:

@action=redirect&bpo=31109]: Convert zipimport to use Argument Clinic.

- [bpo-30102](https://bugs.python.org/issue?@action=redirect&bpo=30102) [https://bugs.python.org/issue?@action=redirect&bpo=30102]: The ssl and hashlib modules now call OPENSSL\_add\_all\_algorithms\_noconf() on OpenSSL < 1.1.0. The function detects CPU features and enables optimizations on some CPU architectures such as POWER8. Patch is based on research from Gustavo Serra Scalet.
- [bpo-18966](https://bugs.python.org/issue?@action=redirect&bpo=18966) [https://bugs.python.org/issue?@action=redirect&bpo=18966]: Non-daemonic threads created by a multiprocessing.Process are now joined on child exit.
- [bpo-31183](https://bugs.python.org/issue?@action=redirect&bpo=31183) [https://bugs.python.org/issue?@action=redirect&bpo=31183]: **dis** now works with asynchronous generator and coroutine objects. Patch by George Collins based on diagnosis by Luciano Ramalho.
- [bpo-5001](https://bugs.python.org/issue?@action=redirect&bpo=5001) [https://bugs.python.org/issue?@action=redirect&bpo=5001]: There are a number of uninformative asserts in the **multiprocessing** module, as noted in issue 5001. This change fixes two of the most potentially problematic ones, since they are in error-reporting code, in the **multiprocessing.managers.convert\_to\_error** function. (It also makes more informative a ValueError message.) The only potentially problematic change is that the AssertionError is now a TypeError; however, this should also help distinguish it from an AssertionError being *reported* by the function/its caller (such as in issue 31169). - Patch by Allen W. Smith (drallensmith on github).
- [bpo-31185](https://bugs.python.org/issue?@action=redirect&bpo=31185) [https://bugs.python.org/issue?@action=redirect&bpo=31185]: Fixed miscellaneous errors in asyncio speedup module.
- [bpo-31151](https://bugs.python.org/issue?@action=redirect&bpo=31151) [https://bugs.python.org/issue?@action=redirect&bpo=31151]: socketserver.ForkingMixIn.server\_close() now waits until all child processes completed to prevent leaking zombie processes.
- [bpo-31072](https://bugs.python.org/issue?@action=redirect&bpo=31072) [https://bugs.python.org/issue?@action=redirect&bpo=31072]: Add an include\_file parameter to zipapp.create\_archive()
- [bpo-24700](https://bugs.python.org/issue?@action=redirect&bpo=24700) [https://bugs.python.org/issue?@action=redirect&bpo=24700]: Optimize array.array comparison.

It is now from 10x up to 70x faster when comparing arrays holding values of the same integer type.

- [bpo-31135](https://bugs.python.org/issue?@action=redirect&bpo=31135) [https://bugs.python.org/issue?@action=redirect&bpo=31135]: `ttk: fix the destroy() method of LabeledScale and OptionMenu classes. Call the parent destroy() method even if the used attribute doesn't exist. The LabeledScale.destroy() method now also explicitly clears label and scale attributes to help the garbage collector to destroy all widgets.`
- [bpo-31107](https://bugs.python.org/issue?@action=redirect&bpo=31107) [https://bugs.python.org/issue?@action=redirect&bpo=31107]: Fix `copyreg._slotnames()` mangled attribute calculation for classes whose name begins with an underscore. Patch by Shane Harvey.
- [bpo-31080](https://bugs.python.org/issue?@action=redirect&bpo=31080) [https://bugs.python.org/issue?@action=redirect&bpo=31080]: Allow `logging.config.fileConfig` to accept kwargs and/or args.
- [bpo-30897](https://bugs.python.org/issue?@action=redirect&bpo=30897) [https://bugs.python.org/issue?@action=redirect&bpo=30897]: `pathlib.Path` objects now include an `is_mount()` method (only implemented on POSIX). This is similar to `os.path.ismount(p)`. Patch by Cooper Ry Lees.
- [bpo-31061](https://bugs.python.org/issue?@action=redirect&bpo=31061) [https://bugs.python.org/issue?@action=redirect&bpo=31061]: Fixed a crash when using `asyncio` and `threads`.
- [bpo-30987](https://bugs.python.org/issue?@action=redirect&bpo=30987) [https://bugs.python.org/issue?@action=redirect&bpo=30987]: Added support for CAN ISO-TP protocol in the `socket` module.
- [bpo-30522](https://bugs.python.org/issue?@action=redirect&bpo=30522) [https://bugs.python.org/issue?@action=redirect&bpo=30522]: Added a `setStream` method to `logging.StreamHandler` to allow the stream to be set after creation.
- [bpo-30502](https://bugs.python.org/issue?@action=redirect&bpo=30502) [https://bugs.python.org/issue?@action=redirect&bpo=30502]: Fix handling of long oids in `ssl`. Based on patch by Christian Heimes.
- [bpo-5288](https://bugs.python.org/issue?@action=redirect&bpo=5288) [https://bugs.python.org/issue?@action=redirect&bpo=5288]: Support `tzinfo` objects with sub-minute offsets.
- [bpo-30919](https://bugs.python.org/issue?@action=redirect&bpo=30919) [https://bugs.python.org/issue?@action=redirect&bpo=30919]: Fix shared memory performance regression in multiprocessing in 3.x. Shared memory used

anonymous memory mappings in 2.x, while 3.x mmaps actual files. Try to be careful to do as little disk I/O as possible.

- [bpo-26732](https://bugs.python.org/issue?@action=redirect&bpo=26732) [https://bugs.python.org/issue?@action=redirect&bpo=26732]: Fix too many fds in processes started with the “forkserver” method. A child process would inherit as many fds as the number of still-running children.
- [bpo-29403](https://bugs.python.org/issue?@action=redirect&bpo=29403) [https://bugs.python.org/issue?@action=redirect&bpo=29403]: Fix `unittest.mock`’s `autospec` to not fail on method-bound builtin functions. Patch by Aaron Gallagher.
- [bpo-30961](https://bugs.python.org/issue?@action=redirect&bpo=30961) [https://bugs.python.org/issue?@action=redirect&bpo=30961]: Fix decrementing a borrowed reference in `tracemalloc`.
- [bpo-19896](https://bugs.python.org/issue?@action=redirect&bpo=19896) [https://bugs.python.org/issue?@action=redirect&bpo=19896]: Fix `multiprocessing.sharedctypes` to recognize typecodes `'q'` and `'Q'`.
- [bpo-30946](https://bugs.python.org/issue?@action=redirect&bpo=30946) [https://bugs.python.org/issue?@action=redirect&bpo=30946]: Remove obsolete code in `readline` module for platforms where GNU `readline` is older than 2.1 or where `select()` is not available.
- [bpo-25684](https://bugs.python.org/issue?@action=redirect&bpo=25684) [https://bugs.python.org/issue?@action=redirect&bpo=25684]: Change `ttk.OptionMenu` radiobuttons to be unique across instances of `OptionMenu`.
- [bpo-30886](https://bugs.python.org/issue?@action=redirect&bpo=30886) [https://bugs.python.org/issue?@action=redirect&bpo=30886]: Fix `multiprocessing.Queue.join_thread()`: it now waits until the thread completes, even if the thread was started by the same process which created the queue.
- [bpo-29854](https://bugs.python.org/issue?@action=redirect&bpo=29854) [https://bugs.python.org/issue?@action=redirect&bpo=29854]: Fix segfault in `readline` when using `readline`’s history-size option. Patch by Nir Soffer.
- [bpo-30794](https://bugs.python.org/issue?@action=redirect&bpo=30794) [https://bugs.python.org/issue?@action=redirect&bpo=30794]: Added `multiprocessing.Process.kill` method to terminate using the `SIGKILL` signal on Unix.
- [bpo-30319](https://bugs.python.org/issue?@action=redirect&bpo=30319) [https://bugs.python.org/issue?@action=redirect&bpo=30319]: `socket.close()` now ignores `ECONNRESET` error.
- [bpo-30828](https://bugs.python.org/issue?@action=redirect&bpo=30828) [https://bugs.python.org/issue?@action=redirect&bpo=30828]: Fix out of bounds write in

**`asyncio.CFuture.remove_done_callback()`**.

- [bpo-30302](https://bugs.python.org/issue?@action=redirect&bpo=30302) [https://bugs.python.org/issue?@action=redirect&bpo=30302]: Use keywords in the `repr` of `datetime.timedelta`.
- [bpo-30807](https://bugs.python.org/issue?@action=redirect&bpo=30807) [https://bugs.python.org/issue?@action=redirect&bpo=30807]: `signal.setitimer()` may disable the timer when passed a tiny value. Tiny values (such as `1e-6`) are valid non-zero values for `setitimer()`, which is specified as taking microsecond-resolution intervals. However, on some platform, our conversion routine could convert `1e-6` into a zero interval, therefore disabling the timer instead of (re-)scheduling it.
- [bpo-30441](https://bugs.python.org/issue?@action=redirect&bpo=30441) [https://bugs.python.org/issue?@action=redirect&bpo=30441]: Fix bug when modifying `os.environ` while iterating over it
- [bpo-29585](https://bugs.python.org/issue?@action=redirect&bpo=29585) [https://bugs.python.org/issue?@action=redirect&bpo=29585]: Avoid importing `sysconfig` from `site` to improve startup speed. Python startup is about 5% faster on Linux and 30% faster on macOS.
- [bpo-29293](https://bugs.python.org/issue?@action=redirect&bpo=29293) [https://bugs.python.org/issue?@action=redirect&bpo=29293]: Add missing parameter “n” on `multiprocessing.Condition.notify()`. The doc claims `multiprocessing.Condition` behaves like `threading.Condition`, but its `notify()` method lacked the optional “n” argument (to specify the number of sleepers to wake up) that `threading.Condition.notify()` accepts.
- [bpo-30532](https://bugs.python.org/issue?@action=redirect&bpo=30532) [https://bugs.python.org/issue?@action=redirect&bpo=30532]: Fix email header value parser dropping folding white space in certain cases.
- [bpo-30596](https://bugs.python.org/issue?@action=redirect&bpo=30596) [https://bugs.python.org/issue?@action=redirect&bpo=30596]: Add a `close()` method to `multiprocessing.Process`.
- [bpo-9146](https://bugs.python.org/issue?@action=redirect&bpo=9146) [https://bugs.python.org/issue?@action=redirect&bpo=9146]: Fix a segmentation fault in `_hashopenssl` when standard hash functions such as `md5` are not available in the linked OpenSSL library. As in some special FIPS-140 build environments.
- [bpo-29169](https://bugs.python.org/issue?@action=redirect&bpo=29169) [https://bugs.python.org/issue?@action=redirect&bpo=29169]: Update `zlib` to 1.2.11.
- [bpo-30119](https://bugs.python.org/issue?@action=redirect&bpo=30119) [https://bugs.python.org/issue?@action=redirect&bpo=30119]

@action=redirect&bpo=30119]: `ftplib.FTP.putline()` now throws `ValueError` on commands that contains CR or LF. Patch by Dong-hee Na.

- [bpo-30879](https://bugs.python.org/issue?@action=redirect&bpo=30879) [https://bugs.python.org/issue?@action=redirect&bpo=30879]: `os.listdir()` and `os.scandir()` now emit bytes names when called with bytes-like argument.
- [bpo-30746](https://bugs.python.org/issue?@action=redirect&bpo=30746) [https://bugs.python.org/issue?@action=redirect&bpo=30746]: Prohibited the '=' character in environment variable names in `os.putenv()` and `os.spawn*()`.
- [bpo-30664](https://bugs.python.org/issue?@action=redirect&bpo=30664) [https://bugs.python.org/issue?@action=redirect&bpo=30664]: The description of a unittest subtest now preserves the order of keyword arguments of `TestCase.subTest()`.
- [bpo-21071](https://bugs.python.org/issue?@action=redirect&bpo=21071) [https://bugs.python.org/issue?@action=redirect&bpo=21071]: `struct.Struct.format` type is now **str** instead of **bytes**.
- [bpo-29212](https://bugs.python.org/issue?@action=redirect&bpo=29212) [https://bugs.python.org/issue?@action=redirect&bpo=29212]: Fix `concurrent.futures.thread.ThreadPoolExecutor` threads to have a non `repr()` based thread name by default when no `thread_name_prefix` is supplied. They will now identify themselves as "ThreadPoolExecutor-y\_n".
- [bpo-29755](https://bugs.python.org/issue?@action=redirect&bpo=29755) [https://bugs.python.org/issue?@action=redirect&bpo=29755]: Fixed the `lgettext()` family of functions in the `gettext` module. They now always return bytes.
- [bpo-30616](https://bugs.python.org/issue?@action=redirect&bpo=30616) [https://bugs.python.org/issue?@action=redirect&bpo=30616]: Functional API of `enum` allows to create empty enums. Patched by Dong-hee Na
- [bpo-30038](https://bugs.python.org/issue?@action=redirect&bpo=30038) [https://bugs.python.org/issue?@action=redirect&bpo=30038]: Fix race condition between signal delivery and wakeup file descriptor. Patch by Nathaniel Smith.
- [bpo-23894](https://bugs.python.org/issue?@action=redirect&bpo=23894) [https://bugs.python.org/issue?@action=redirect&bpo=23894]: `lib2to3` now recognizes `rb'...'` and `f'...'` strings.
- [bpo-24744](https://bugs.python.org/issue?@action=redirect&bpo=24744) [https://bugs.python.org/issue?@action=redirect&bpo=24744]: `pkgutil.walk_packages` function now raises `ValueError` if *path* is a string. Patch by Sanyam

Khurana.

- [bpo-24484](https://bugs.python.org/issue?@action=redirect&bpo=24484) [https://bugs.python.org/issue?@action=redirect&bpo=24484]: Avoid race condition in multiprocessing cleanup.
- [bpo-30589](https://bugs.python.org/issue?@action=redirect&bpo=30589) [https://bugs.python.org/issue?@action=redirect&bpo=30589]: Fix multiprocessing.Process.exitcode to return the opposite of the signal number when the process is killed by a signal (instead of 255) when using the “forkserver” method.
- [bpo-28994](https://bugs.python.org/issue?@action=redirect&bpo=28994) [https://bugs.python.org/issue?@action=redirect&bpo=28994]: The traceback no longer displayed for SystemExit raised in a callback registered by atexit.
- [bpo-30508](https://bugs.python.org/issue?@action=redirect&bpo=30508) [https://bugs.python.org/issue?@action=redirect&bpo=30508]: Don’t log exceptions if Task/Future “cancel()” method was called.
- [bpo-30645](https://bugs.python.org/issue?@action=redirect&bpo=30645) [https://bugs.python.org/issue?@action=redirect&bpo=30645]: Fix path calculation in **imp.load\_package()**, fixing it for cases when a package is only shipped with bytecodes. Patch by Alexandru Ardelean.
- [bpo-11822](https://bugs.python.org/issue?@action=redirect&bpo=11822) [https://bugs.python.org/issue?@action=redirect&bpo=11822]: The dis.dis() function now is able to disassemble nested code objects.
- [bpo-30624](https://bugs.python.org/issue?@action=redirect&bpo=30624) [https://bugs.python.org/issue?@action=redirect&bpo=30624]: selectors does not take KeyboardInterrupt and SystemExit into account, leaving a fd in a bad state in case of error. Patch by Giampaolo Rodola’.
- [bpo-30595](https://bugs.python.org/issue?@action=redirect&bpo=30595) [https://bugs.python.org/issue?@action=redirect&bpo=30595]: multiprocessing.Queue.get() with a timeout now polls its reader in non-blocking mode if it succeeded to acquire the lock but the acquire took longer than the timeout.
- [bpo-28556](https://bugs.python.org/issue?@action=redirect&bpo=28556) [https://bugs.python.org/issue?@action=redirect&bpo=28556]: Updates to typing module: Add generic AsyncContextManager, add support for ContextManager on all versions. Original PRs by Jelle Zijlstra and Ivan Levkivskyi
- [bpo-30605](https://bugs.python.org/issue?@action=redirect&bpo=30605) [https://bugs.python.org/issue?@action=redirect&bpo=30605]: re.compile() no longer raises a BytesWarning when compiling a bytes instance with misplaced inline modifier. Patch by Roy Williams.

- [bpo-29870](https://bugs.python.org/issue?@action=redirect&bpo=29870) [https://bugs.python.org/issue?@action=redirect&bpo=29870]: Fix ssl sockets leaks when connection is aborted in asyncio/ssl implementation. Patch by Michaël Sghaier.
- [bpo-29743](https://bugs.python.org/issue?@action=redirect&bpo=29743) [https://bugs.python.org/issue?@action=redirect&bpo=29743]: Closing transport during handshake process leaks open socket. Patch by Nikolay Kim
- [bpo-27585](https://bugs.python.org/issue?@action=redirect&bpo=27585) [https://bugs.python.org/issue?@action=redirect&bpo=27585]: Fix waiter cancellation in asyncio.Lock. Patch by Mathieu Sornay.
- [bpo-30014](https://bugs.python.org/issue?@action=redirect&bpo=30014) [https://bugs.python.org/issue?@action=redirect&bpo=30014]: modify() method of poll(), epoll() and devpoll() based classes of selectors module is around 10% faster. Patch by Giampaolo Rodola’.
- [bpo-30418](https://bugs.python.org/issue?@action=redirect&bpo=30418) [https://bugs.python.org/issue?@action=redirect&bpo=30418]: On Windows, subprocess.Popen.communicate() now also ignore EINTR on stdin.write() if the child process is still running but closed the pipe.
- [bpo-30463](https://bugs.python.org/issue?@action=redirect&bpo=30463) [https://bugs.python.org/issue?@action=redirect&bpo=30463]: Added empty \_\_slots\_\_ to abc.ABC. This allows subclassers to deny \_\_dict\_\_ and \_\_weakref\_\_ creation. Patch by Aaron Hall.
- [bpo-30520](https://bugs.python.org/issue?@action=redirect&bpo=30520) [https://bugs.python.org/issue?@action=redirect&bpo=30520]: Loggers are now pickleable.
- [bpo-30557](https://bugs.python.org/issue?@action=redirect&bpo=30557) [https://bugs.python.org/issue?@action=redirect&bpo=30557]: faulthandler now correctly filters and displays exception codes on Windows
- [bpo-30526](https://bugs.python.org/issue?@action=redirect&bpo=30526) [https://bugs.python.org/issue?@action=redirect&bpo=30526]: Add TextIOWrapper.reconfigure() and a TextIOWrapper.write\_through attribute.
- [bpo-30245](https://bugs.python.org/issue?@action=redirect&bpo=30245) [https://bugs.python.org/issue?@action=redirect&bpo=30245]: Fix possible overflow when organize struct.pack\_into error message. Patch by Yuan Liu.
- [bpo-30378](https://bugs.python.org/issue?@action=redirect&bpo=30378) [https://bugs.python.org/issue?@action=redirect&bpo=30378]: Fix the problem that logging.handlers.SysLogHandler cannot handle IPv6 addresses.
- [bpo-16500](https://bugs.python.org/issue?@action=redirect&bpo=16500) [https://bugs.python.org/issue?@action=redirect&bpo=16500]: Allow registering at-fork handlers.

- [bpo-30470](https://bugs.python.org/issue?@action=redirect&bpo=30470) [https://bugs.python.org/issue?@action=redirect&bpo=30470]: Deprecate invalid ctypes call protection on Windows. Patch by Mariatta Wijaya.
- [bpo-30414](https://bugs.python.org/issue?@action=redirect&bpo=30414) [https://bugs.python.org/issue?@action=redirect&bpo=30414]: multiprocessing.Queue.\_feed background running thread do not break from main loop on exception.
- [bpo-30003](https://bugs.python.org/issue?@action=redirect&bpo=30003) [https://bugs.python.org/issue?@action=redirect&bpo=30003]: Fix handling escape characters in HZ codec. Based on patch by Ma Lin.
- [bpo-30149](https://bugs.python.org/issue?@action=redirect&bpo=30149) [https://bugs.python.org/issue?@action=redirect&bpo=30149]: inspect.signature() now supports callables with variable-argument parameters wrapped with partialmethod. Patch by Dong-hee Na.
- [bpo-30436](https://bugs.python.org/issue?@action=redirect&bpo=30436) [https://bugs.python.org/issue?@action=redirect&bpo=30436]: importlib.find\_spec() raises ModuleNotFoundError instead of AttributeError if the specified parent module is not a package (i.e. lacks a `__path__` attribute).
- [bpo-30301](https://bugs.python.org/issue?@action=redirect&bpo=30301) [https://bugs.python.org/issue?@action=redirect&bpo=30301]: Fix AttributeError when using SimpleQueue.empty() under *spawn* and *forkserver* start methods.
- [bpo-30375](https://bugs.python.org/issue?@action=redirect&bpo=30375) [https://bugs.python.org/issue?@action=redirect&bpo=30375]: Warnings emitted when compile a regular expression now always point to the line in the user code. Previously they could point into inners of the re module if emitted from inside of groups or conditionals.
- [bpo-30329](https://bugs.python.org/issue?@action=redirect&bpo=30329) [https://bugs.python.org/issue?@action=redirect&bpo=30329]: imaplib and poplib now catch the Windows socket WSAEINVAL error (code 10022) on shutdown(SHUT\_RDWR): An invalid operation was attempted. This error occurs sometimes on SSL connections.
- [bpo-29196](https://bugs.python.org/issue?@action=redirect&bpo=29196) [https://bugs.python.org/issue?@action=redirect&bpo=29196]: Removed previously deprecated in Python 2.4 classes Plist, Dict and \_InternalDict in the plistlib module. Dict values in the result of functions readPlist() and readPlistFromBytes() are now normal dicts. You no longer can use attribute access to access items of these dictionaries.

- [bpo-9850](https://bugs.python.org/issue?@action=redirect&bpo=9850) [https://bugs.python.org/issue?@action=redirect&bpo=9850]: The **macpath** is now deprecated and will be removed in Python 3.8.
- [bpo-30299](https://bugs.python.org/issue?@action=redirect&bpo=30299) [https://bugs.python.org/issue?@action=redirect&bpo=30299]: Compiling regular expression in debug mode on CPython now displays the compiled bytecode in human readable form.
- [bpo-30048](https://bugs.python.org/issue?@action=redirect&bpo=30048) [https://bugs.python.org/issue?@action=redirect&bpo=30048]: Fixed `Task.cancel()` can be ignored when the task is running coroutine and the coroutine returned without any more `await`.
- [bpo-30266](https://bugs.python.org/issue?@action=redirect&bpo=30266) [https://bugs.python.org/issue?@action=redirect&bpo=30266]: `contextlib.AbstractContextManager` now supports anti-registration by setting `_enter_ = None` or `_exit_ = None`, following the pattern introduced in [bpo-25958](https://bugs.python.org/issue?@action=redirect&bpo=25958) [https://bugs.python.org/issue?@action=redirect&bpo=25958]. Patch by Jelle Zijlstra.
- [bpo-30340](https://bugs.python.org/issue?@action=redirect&bpo=30340) [https://bugs.python.org/issue?@action=redirect&bpo=30340]: Enhanced regular expressions optimization. This increased the performance of matching some patterns up to 25 times.
- [bpo-30298](https://bugs.python.org/issue?@action=redirect&bpo=30298) [https://bugs.python.org/issue?@action=redirect&bpo=30298]: Weaken the condition of deprecation warnings for inline modifiers. Now allowed several subsequential inline modifiers at the start of the pattern (e.g. `'(?i)(?s) ...'`). In verbose mode whitespaces and comments now are allowed before and between inline modifiers (e.g. `'(?x) (?i) (?s) ...'`).
- [bpo-30285](https://bugs.python.org/issue?@action=redirect&bpo=30285) [https://bugs.python.org/issue?@action=redirect&bpo=30285]: Optimized case-insensitive matching and searching of regular expressions.
- [bpo-29990](https://bugs.python.org/issue?@action=redirect&bpo=29990) [https://bugs.python.org/issue?@action=redirect&bpo=29990]: Fix range checking in GB18030 decoder. Original patch by Ma Lin.
- [bpo-29979](https://bugs.python.org/issue?@action=redirect&bpo=29979) [https://bugs.python.org/issue?@action=redirect&bpo=29979]: rewrite `cgi.parse_multipart`, reusing the `FieldStorage` class and making its results consistent with those of `FieldStorage` for multipart/form-data requests. Patch by Pierre Quentel.

- [bpo-30243](https://bugs.python.org/issue?@action=redirect&bpo=30243) [https://bugs.python.org/issue?@action=redirect&bpo=30243]: Removed the `__init__` methods of `_json`'s scanner and encoder. Misusing them could cause memory leaks or crashes. Now scanner and encoder objects are completely initialized in the `__new__` methods.
- [bpo-30215](https://bugs.python.org/issue?@action=redirect&bpo=30215) [https://bugs.python.org/issue?@action=redirect&bpo=30215]: Compiled regular expression objects with the `re.LOCALE` flag no longer depend on the locale at compile time. Only the locale at matching time affects the result of matching.
- [bpo-30185](https://bugs.python.org/issue?@action=redirect&bpo=30185) [https://bugs.python.org/issue?@action=redirect&bpo=30185]: Avoid `KeyboardInterrupt` tracebacks in `forkserver` helper process when `Ctrl-C` is received.
- [bpo-30103](https://bugs.python.org/issue?@action=redirect&bpo=30103) [https://bugs.python.org/issue?@action=redirect&bpo=30103]: `binascii.b2a_uu()` and `uu.encode()` now support using `' '` as zero instead of space.
- [bpo-28556](https://bugs.python.org/issue?@action=redirect&bpo=28556) [https://bugs.python.org/issue?@action=redirect&bpo=28556]: Various updates to typing module: add `typing.NoReturn` type, use `WrapperDescriptorType`, minor bug-fixes. Original PRs by Jim Farsarakis-Hilliard and Ivan Levkivskiy.
- [bpo-30205](https://bugs.python.org/issue?@action=redirect&bpo=30205) [https://bugs.python.org/issue?@action=redirect&bpo=30205]: Fix `getsockname()` for unbound `AF_UNIX` sockets on Linux.
- [bpo-30228](https://bugs.python.org/issue?@action=redirect&bpo=30228) [https://bugs.python.org/issue?@action=redirect&bpo=30228]: The `seek()` and `tell()` methods of `io.FileIO` now set the internal seekable attribute to avoid one `syscall` on `open()` (in buffered or text mode).
- [bpo-30190](https://bugs.python.org/issue?@action=redirect&bpo=30190) [https://bugs.python.org/issue?@action=redirect&bpo=30190]: `unittest`'s `assertAlmostEqual` and `assertNotAlmostEqual` provide a better message in case of failure which includes the difference between left and right arguments. (patch by Giampaolo Rodola')
- [bpo-30101](https://bugs.python.org/issue?@action=redirect&bpo=30101) [https://bugs.python.org/issue?@action=redirect&bpo=30101]: Add support for `curses.A_ITALIC`.
- [bpo-29822](https://bugs.python.org/issue?@action=redirect&bpo=29822) [https://bugs.python.org/issue?@action=redirect&bpo=29822]: `inspect.isabstract()` now works during `__init_subclass__`. Patch by Nate Soares.
- [bpo-29960](https://bugs.python.org/issue?@action=redirect&bpo=29960) [https://bugs.python.org/issue?@action=redirect&bpo=29960]

@action=redirect&bpo=29960]: Preserve generator state when `_random.Random.setstate()` raises an exception. Patch by Bryan Olson.

- [bpo-30070](https://bugs.python.org/issue?@action=redirect&bpo=30070) [https://bugs.python.org/issue?@action=redirect&bpo=30070]: Fixed leaks and crashes in errors handling in the parser module.
- [bpo-22352](https://bugs.python.org/issue?@action=redirect&bpo=22352) [https://bugs.python.org/issue?@action=redirect&bpo=22352]: Column widths in the output of `dis.dis()` are now adjusted for large line numbers and instruction offsets.
- [bpo-30061](https://bugs.python.org/issue?@action=redirect&bpo=30061) [https://bugs.python.org/issue?@action=redirect&bpo=30061]: Fixed crashes in `IOBase` methods `_next_()` and `readlines()` when `readline()` or `_next_()` respectively return non-sizeable object. Fixed possible other errors caused by not checking results of `PyObject_Size()`, `PySequence_Size()`, or `PyMapping_Size()`.
- [bpo-30218](https://bugs.python.org/issue?@action=redirect&bpo=30218) [https://bugs.python.org/issue?@action=redirect&bpo=30218]: Fix `PathLike` support for `shutil.unpack_archive`. Patch by Jelle Zijlstra.
- [bpo-10076](https://bugs.python.org/issue?@action=redirect&bpo=10076) [https://bugs.python.org/issue?@action=redirect&bpo=10076]: Compiled regular expression and match objects in the `re` module now support `copy.copy()` and `copy.deepcopy()` (they are considered atomic).
- [bpo-30068](https://bugs.python.org/issue?@action=redirect&bpo=30068) [https://bugs.python.org/issue?@action=redirect&bpo=30068]: `_io._IOBase.readlines` will check if it's closed first when hint is present.
- [bpo-29694](https://bugs.python.org/issue?@action=redirect&bpo=29694) [https://bugs.python.org/issue?@action=redirect&bpo=29694]: Fixed race condition in `pathlib.mkdir` with `flags` `parents=True`. Patch by Armin Rigo.
- [bpo-29692](https://bugs.python.org/issue?@action=redirect&bpo=29692) [https://bugs.python.org/issue?@action=redirect&bpo=29692]: Fixed arbitrary unchaining of `RuntimeError` exceptions in `contextlib.contextmanager`. Patch by Siddharth Velankar.
- [bpo-26187](https://bugs.python.org/issue?@action=redirect&bpo=26187) [https://bugs.python.org/issue?@action=redirect&bpo=26187]: Test that `sqlite3` trace callback is not called multiple times when schema is changing. Indirectly fixed by switching to use `sqlite3_prepare_v2()` in [bpo-9303](https://bugs.python.org/issue?@action=redirect&bpo=9303) [https://bugs.python.org/issue?@action=redirect&bpo=9303]. Patch by Aviv Palivoda.
- [bpo-30017](https://bugs.python.org/issue?@action=redirect&bpo=30017) [https://bugs.python.org/issue?@action=redirect&bpo=30017]

@action=redirect&bpo=30017]: Allowed calling the close() method of the zip entry writer object multiple times. Writing to a closed writer now always produces a ValueError.

- [bpo-29998](https://bugs.python.org/issue?@action=redirect&bpo=29998) [https://bugs.python.org/issue?@action=redirect&bpo=29998]: Pickling and copying ImportError now preserves name and path attributes.
- [bpo-29995](https://bugs.python.org/issue?@action=redirect&bpo=29995) [https://bugs.python.org/issue?@action=redirect&bpo=29995]: re.escape() now escapes only regex special characters.
- [bpo-29962](https://bugs.python.org/issue?@action=redirect&bpo=29962) [https://bugs.python.org/issue?@action=redirect&bpo=29962]: Add math.remainder operation, implementing remainder as specified in IEEE 754.
- [bpo-29649](https://bugs.python.org/issue?@action=redirect&bpo=29649) [https://bugs.python.org/issue?@action=redirect&bpo=29649]: Improve struct.pack\_into() exception messages for problems with the buffer size and offset. Patch by Andrew Nester.
- [bpo-29654](https://bugs.python.org/issue?@action=redirect&bpo=29654) [https://bugs.python.org/issue?@action=redirect&bpo=29654]: Support If-Modified-Since HTTP header (browser cache). Patch by Pierre Quentel.
- [bpo-29931](https://bugs.python.org/issue?@action=redirect&bpo=29931) [https://bugs.python.org/issue?@action=redirect&bpo=29931]: Fixed comparison check for ipaddress.ip\_interface objects. Patch by Sanjay Sundaresan.
- [bpo-29953](https://bugs.python.org/issue?@action=redirect&bpo=29953) [https://bugs.python.org/issue?@action=redirect&bpo=29953]: Fixed memory leaks in the replace() method of datetime and time objects when pass out of bound fold argument.
- [bpo-29942](https://bugs.python.org/issue?@action=redirect&bpo=29942) [https://bugs.python.org/issue?@action=redirect&bpo=29942]: Fix a crash in itertools.chain.from\_iterable when encountering long runs of empty iterables.
- [bpo-10030](https://bugs.python.org/issue?@action=redirect&bpo=10030) [https://bugs.python.org/issue?@action=redirect&bpo=10030]: Sped up reading encrypted ZIP files by 2 times.
- [bpo-29204](https://bugs.python.org/issue?@action=redirect&bpo=29204) [https://bugs.python.org/issue?@action=redirect&bpo=29204]: Element.getiterator() and the html parameter of XMLParser() were deprecated only in the documentation (since Python 3.2 and 3.4 correspondingly). Now using them emits a deprecation warning.
- [bpo-27863](https://bugs.python.org/issue?@action=redirect&bpo=27863) [https://bugs.python.org/issue?@action=redirect&bpo=27863]: Fixed multiple crashes in

ElementTree caused by race conditions and wrong types.

- [bpo-25996](https://bugs.python.org/issue?@action=redirect&bpo=25996) [https://bugs.python.org/issue?@action=redirect&bpo=25996]: Added support of file descriptors in `os.scandir()` on Unix. `os.fwalk()` is sped up by 2 times by using `os.scandir()`.
- [bpo-28699](https://bugs.python.org/issue?@action=redirect&bpo=28699) [https://bugs.python.org/issue?@action=redirect&bpo=28699]: Fixed a bug in pools in `multiprocessing.pool` that raising an exception at the very first of an iterable may swallow the exception or make the program hang. Patch by Davin Potts and Xiang Zhang.
- [bpo-23890](https://bugs.python.org/issue?@action=redirect&bpo=23890) [https://bugs.python.org/issue?@action=redirect&bpo=23890]: `unittest.TestCase.assertRaises()` now manually breaks a reference cycle to not keep objects alive longer than expected.
- [bpo-29901](https://bugs.python.org/issue?@action=redirect&bpo=29901) [https://bugs.python.org/issue?@action=redirect&bpo=29901]: The `zipapp` module now supports general path-like objects, not just `pathlib.Path`.
- [bpo-25803](https://bugs.python.org/issue?@action=redirect&bpo=25803) [https://bugs.python.org/issue?@action=redirect&bpo=25803]: Avoid incorrect errors raised by `Path.mkdir(exist_ok=True)` when the OS gives priority to errors such as `EACCES` over `EEXIST`.
- [bpo-29861](https://bugs.python.org/issue?@action=redirect&bpo=29861) [https://bugs.python.org/issue?@action=redirect&bpo=29861]: Release references to tasks, their arguments and their results as soon as they are finished in `multiprocessing.Pool`.
- [bpo-19930](https://bugs.python.org/issue?@action=redirect&bpo=19930) [https://bugs.python.org/issue?@action=redirect&bpo=19930]: The `mode` argument of `os.makedirs()` no longer affects the file permission bits of newly created intermediate-level directories.
- [bpo-29884](https://bugs.python.org/issue?@action=redirect&bpo=29884) [https://bugs.python.org/issue?@action=redirect&bpo=29884]: `faulthandler`: Restore the old `sigaltstack` during teardown. Patch by Christophe Zeitouny.
- [bpo-25455](https://bugs.python.org/issue?@action=redirect&bpo=25455) [https://bugs.python.org/issue?@action=redirect&bpo=25455]: Fixed crashes in `repr` of recursive buffered file-like objects.
- [bpo-29800](https://bugs.python.org/issue?@action=redirect&bpo=29800) [https://bugs.python.org/issue?@action=redirect&bpo=29800]: Fix crashes in `partial._repr_` if the keys of `partial.keywords` are not strings. Patch by Michael Seifert.
- [bpo-8256](https://bugs.python.org/issue?@action=redirect&bpo=8256) [https://bugs.python.org/issue?@action=redirect&bpo=8256]:

Fixed possible failing or crashing `input()` if attributes “encoding” or “errors” of `sys.stdin` or `sys.stdout` are not set or are not strings.

- [bpo-28692](https://bugs.python.org/issue?@action=redirect&bpo=28692) [https://bugs.python.org/issue?@action=redirect&bpo=28692]: Using non-integer value for selecting a plural form in `gettext` is now deprecated.
- [bpo-26121](https://bugs.python.org/issue?@action=redirect&bpo=26121) [https://bugs.python.org/issue?@action=redirect&bpo=26121]: Use C library implementation for math functions `erf()` and `erfc()`.
- [bpo-29619](https://bugs.python.org/issue?@action=redirect&bpo=29619) [https://bugs.python.org/issue?@action=redirect&bpo=29619]: `os.stat()` and `os.DirEntry.inode()` now convert `ino` (`st_ino`) using unsigned integers.
- [bpo-28298](https://bugs.python.org/issue?@action=redirect&bpo=28298) [https://bugs.python.org/issue?@action=redirect&bpo=28298]: Fix a bug that prevented array ‘Q’, ‘L’ and ‘l’ from accepting big intables (objects that have `_int_`) as elements.
- [bpo-29645](https://bugs.python.org/issue?@action=redirect&bpo=29645) [https://bugs.python.org/issue?@action=redirect&bpo=29645]: Speed up importing the `webbrowser` module. `webbrowser.register()` is now thread-safe.
- [bpo-28231](https://bugs.python.org/issue?@action=redirect&bpo=28231) [https://bugs.python.org/issue?@action=redirect&bpo=28231]: The `zipfile` module now accepts path-like objects for external paths.
- [bpo-26915](https://bugs.python.org/issue?@action=redirect&bpo=26915) [https://bugs.python.org/issue?@action=redirect&bpo=26915]: `index()` and `count()` methods of `collections.abc.Sequence` now check identity before checking equality when do comparisons.
- [bpo-28682](https://bugs.python.org/issue?@action=redirect&bpo=28682) [https://bugs.python.org/issue?@action=redirect&bpo=28682]: Added support for bytes paths in `os.fwalk()`.
- [bpo-29728](https://bugs.python.org/issue?@action=redirect&bpo=29728) [https://bugs.python.org/issue?@action=redirect&bpo=29728]: Add new **`socket.TCP_NOTSENT_LOWAT`** (Linux 3.12) constant. Patch by Nathaniel J. Smith.
- [bpo-29623](https://bugs.python.org/issue?@action=redirect&bpo=29623) [https://bugs.python.org/issue?@action=redirect&bpo=29623]: Allow use of path-like object as a single argument in `ConfigParser.read()`. Patch by David Ellis.
- [bpo-9303](https://bugs.python.org/issue?@action=redirect&bpo=9303) [https://bugs.python.org/issue?@action=redirect&bpo=9303]: Migrate `sqlite3` module to `_v2` API. Patch by Aviv Palivoda.
- [bpo-28963](https://bugs.python.org/issue?@action=redirect&bpo=28963) [https://bugs.python.org/issue?@action=redirect&bpo=28963]

@action=redirect&bpo=28963]: Fix out of bound iteration in `asyncio.Future.remove_done_callback` implemented in C.

- [bpo-29704](https://bugs.python.org/issue?@action=redirect&bpo=29704) [https://bugs.python.org/issue?@action=redirect&bpo=29704]: `asyncio.subprocess.SubprocessStreamProtocol` no longer closes before all pipes are closed.
- [bpo-29271](https://bugs.python.org/issue?@action=redirect&bpo=29271) [https://bugs.python.org/issue?@action=redirect&bpo=29271]: Fix `Task.current_task` and `Task.all_tasks` implemented in C to accept `None` argument as their pure Python implementation.
- [bpo-29703](https://bugs.python.org/issue?@action=redirect&bpo=29703) [https://bugs.python.org/issue?@action=redirect&bpo=29703]: Fix `asyncio` to support instantiation of new event loops in child processes.
- [bpo-29615](https://bugs.python.org/issue?@action=redirect&bpo=29615) [https://bugs.python.org/issue?@action=redirect&bpo=29615]: `SimpleXMLRPCDispatcher` no longer chains `KeyError` (or any other exception) to exception(s) raised in the dispatched methods. Patch by Petr Motejlek.
- [bpo-7769](https://bugs.python.org/issue?@action=redirect&bpo=7769) [https://bugs.python.org/issue?@action=redirect&bpo=7769]: `Method.register_function()` of `xmlrpc.server.SimpleXMLRPCDispatcher` and its subclasses can now be used as a decorator.
- [bpo-29376](https://bugs.python.org/issue?@action=redirect&bpo=29376) [https://bugs.python.org/issue?@action=redirect&bpo=29376]: Fix assertion error in `threading._DummyThread.is_alive()`.
- [bpo-28624](https://bugs.python.org/issue?@action=redirect&bpo=28624) [https://bugs.python.org/issue?@action=redirect&bpo=28624]: Add a test that checks that `cwd` parameter of `Popen()` accepts `PathLike` objects. Patch by Sayan Chowdhury.
- [bpo-28518](https://bugs.python.org/issue?@action=redirect&bpo=28518) [https://bugs.python.org/issue?@action=redirect&bpo=28518]: Start a transaction implicitly before a DML statement. Patch by Aviv Palivoda.
- [bpo-29742](https://bugs.python.org/issue?@action=redirect&bpo=29742) [https://bugs.python.org/issue?@action=redirect&bpo=29742]: `get_extra_info()` raises exception if get called on closed ssl transport. Patch by Nikolay Kim.
- [bpo-16285](https://bugs.python.org/issue?@action=redirect&bpo=16285) [https://bugs.python.org/issue?@action=redirect&bpo=16285]: `urllib.parse.quote` is now based on RFC 3986 and hence includes `'~'` in the set of characters that is not quoted by default. Patch by Christian Theune and Ratnadeep Debnath.

- [bpo-29532](https://bugs.python.org/issue?@action=redirect&bpo=29532) [https://bugs.python.org/issue?@action=redirect&bpo=29532]: Altering a kwarg dictionary passed to `functools.partial()` no longer affects a partial object after creation.
- [bpo-29110](https://bugs.python.org/issue?@action=redirect&bpo=29110) [https://bugs.python.org/issue?@action=redirect&bpo=29110]: Fix file object leak in `aifc.open()` when file is given as a filesystem path and is not in valid AIFF format. Patch by Anthony Zhang.
- [bpo-22807](https://bugs.python.org/issue?@action=redirect&bpo=22807) [https://bugs.python.org/issue?@action=redirect&bpo=22807]: Add `uuid.SafeUUID` and `uuid.UUID.is_safe` to relay information from the platform about whether generated UUIDs are generated with a multiprocessing safe method.
- [bpo-29576](https://bugs.python.org/issue?@action=redirect&bpo=29576) [https://bugs.python.org/issue?@action=redirect&bpo=29576]: Improve some deprecations in `importlib`. Some deprecated methods now emit `DeprecationWarnings` and have better descriptive messages.
- [bpo-29534](https://bugs.python.org/issue?@action=redirect&bpo=29534) [https://bugs.python.org/issue?@action=redirect&bpo=29534]: Fixed different behaviour of `Decimal.from_float()` for `_decimal` and `_pydecimal`. Thanks Andrew Nester.
- [bpo-10379](https://bugs.python.org/issue?@action=redirect&bpo=10379) [https://bugs.python.org/issue?@action=redirect&bpo=10379]: `locale.format_string` now supports the ‘monetary’ keyword argument, and `locale.format` is deprecated.
- [bpo-29851](https://bugs.python.org/issue?@action=redirect&bpo=29851) [https://bugs.python.org/issue?@action=redirect&bpo=29851]: `importlib.reload()` now raises `ModuleNotFoundError` if the module lacks a spec.
- [bpo-28556](https://bugs.python.org/issue?@action=redirect&bpo=28556) [https://bugs.python.org/issue?@action=redirect&bpo=28556]: Various updates to typing module: `typing.Counter`, `typing.ChainMap`, improved ABC caching, etc. Original PRs by Jelle Zijlstra, Ivan Levkivskyi, Manuel Krebber, and Łukasz Langa.
- [bpo-29100](https://bugs.python.org/issue?@action=redirect&bpo=29100) [https://bugs.python.org/issue?@action=redirect&bpo=29100]: Fix `datetime.fromtimestamp()` regression introduced in Python 3.6.0: check minimum and maximum years.
- [bpo-29416](https://bugs.python.org/issue?@action=redirect&bpo=29416) [https://bugs.python.org/issue?@action=redirect&bpo=29416]: Prevent infinite loop in `pathlib.Path.mkdir`

- [bpo-29444](https://bugs.python.org/issue?@action=redirect&bpo=29444) [https://bugs.python.org/issue?@action=redirect&bpo=29444]: Fixed out-of-bounds buffer access in the `group()` method of the `match` object. Based on patch by WGH.
- [bpo-29377](https://bugs.python.org/issue?@action=redirect&bpo=29377) [https://bugs.python.org/issue?@action=redirect&bpo=29377]: Add `WrapperDescriptorType`, `MethodWrapperType`, and `MethodDescriptorType` built-in types to `types` module. Original patch by Manuel Krebber.
- [bpo-29218](https://bugs.python.org/issue?@action=redirect&bpo=29218) [https://bugs.python.org/issue?@action=redirect&bpo=29218]: Unused `install_misc` command is now removed. It has been documented as unused since 2000. Patch by Eric N. Vander Weele.
- [bpo-29368](https://bugs.python.org/issue?@action=redirect&bpo=29368) [https://bugs.python.org/issue?@action=redirect&bpo=29368]: The `extend()` method is now called instead of the `append()` method when unpickle `collections.deque` and other list-like objects. This can speed up unpickling to 2 times.
- [bpo-29338](https://bugs.python.org/issue?@action=redirect&bpo=29338) [https://bugs.python.org/issue?@action=redirect&bpo=29338]: The help of a builtin or extension class now includes the constructor signature if `__text_signature__` is provided for the class.
- [bpo-29335](https://bugs.python.org/issue?@action=redirect&bpo=29335) [https://bugs.python.org/issue?@action=redirect&bpo=29335]: Fix `subprocess.Popen.wait()` when the child process has exited to a stopped instead of terminated state (ex: when under `ptrace`).
- [bpo-29290](https://bugs.python.org/issue?@action=redirect&bpo=29290) [https://bugs.python.org/issue?@action=redirect&bpo=29290]: Fix a regression in `argparse` that help messages would wrap at non-breaking spaces.
- [bpo-28735](https://bugs.python.org/issue?@action=redirect&bpo=28735) [https://bugs.python.org/issue?@action=redirect&bpo=28735]: Fixed the comparison of `mock.MagicMock` with `mock.ANY`.
- [bpo-29197](https://bugs.python.org/issue?@action=redirect&bpo=29197) [https://bugs.python.org/issue?@action=redirect&bpo=29197]: Removed deprecated function `ntpath.splitunc()`.
- [bpo-29210](https://bugs.python.org/issue?@action=redirect&bpo=29210) [https://bugs.python.org/issue?@action=redirect&bpo=29210]: Removed support of deprecated argument “exclude” in `tarfile.TarFile.add()`.
- [bpo-29219](https://bugs.python.org/issue?@action=redirect&bpo=29219) [https://bugs.python.org/issue?@action=redirect&bpo=29219]: Fixed infinite recursion in the repr of uninitialized `ctypes.CDLL` instances.

- [bpo-29192](https://bugs.python.org/issue?@action=redirect&bpo=29192) [https://bugs.python.org/issue?@action=redirect&bpo=29192]: Removed deprecated features in the `http.cookies` module.
- [bpo-29193](https://bugs.python.org/issue?@action=redirect&bpo=29193) [https://bugs.python.org/issue?@action=redirect&bpo=29193]: A format string argument for `string.Formatter.format()` is now positional-only.
- [bpo-29195](https://bugs.python.org/issue?@action=redirect&bpo=29195) [https://bugs.python.org/issue?@action=redirect&bpo=29195]: Removed support of deprecated undocumented keyword arguments in methods of regular expression objects.
- [bpo-28969](https://bugs.python.org/issue?@action=redirect&bpo=28969) [https://bugs.python.org/issue?@action=redirect&bpo=28969]: Fixed race condition in C implementation of `functools.lru_cache`. `KeyError` could be raised when cached function with full cache was simultaneously called from different threads with the same uncached arguments.
- [bpo-20804](https://bugs.python.org/issue?@action=redirect&bpo=20804) [https://bugs.python.org/issue?@action=redirect&bpo=20804]: The `unittest.mock.sentinel` attributes now preserve their identity when they are copied or pickled.
- [bpo-29142](https://bugs.python.org/issue?@action=redirect&bpo=29142) [https://bugs.python.org/issue?@action=redirect&bpo=29142]: In `urllib.request`, suffixes in `no_proxy` environment variable with leading dots could match related hostnames again (e.g. `.b.c` matches `a.b.c`). Patch by Milan Oberkirch.
- [bpo-28961](https://bugs.python.org/issue?@action=redirect&bpo=28961) [https://bugs.python.org/issue?@action=redirect&bpo=28961]: Fix `unittest.mock._Call` helper: don't ignore the name parameter anymore. Patch written by Jiajun Huang.
- [bpo-15812](https://bugs.python.org/issue?@action=redirect&bpo=15812) [https://bugs.python.org/issue?@action=redirect&bpo=15812]: `inspect.getframeinfo()` now correctly shows the first line of a context. Patch by Sam Breese.
- [bpo-28985](https://bugs.python.org/issue?@action=redirect&bpo=28985) [https://bugs.python.org/issue?@action=redirect&bpo=28985]: Update authorizer constants in `sqlite3` module. Patch by Dingyuan Wang.
- [bpo-29079](https://bugs.python.org/issue?@action=redirect&bpo=29079) [https://bugs.python.org/issue?@action=redirect&bpo=29079]: Prevent infinite loop in `pathlib.resolve()` on Windows
- [bpo-13051](https://bugs.python.org/issue?@action=redirect&bpo=13051) [https://bugs.python.org/issue?@action=redirect&bpo=13051]

@action=redirect&bpo=13051]: Fixed recursion errors in large or resized curses.textpad.Textbox. Based on patch by Tycho Andersen.

- [bpo-9770](https://bugs.python.org/issue?@action=redirect&bpo=9770) [https://bugs.python.org/issue?@action=redirect&bpo=9770]: curses.ascii predicates now work correctly with negative integers.
- [bpo-28427](https://bugs.python.org/issue?@action=redirect&bpo=28427) [https://bugs.python.org/issue?@action=redirect&bpo=28427]: old keys should not remove new values from WeakValueDictionary when collecting from another thread.
- [bpo-28923](https://bugs.python.org/issue?@action=redirect&bpo=28923) [https://bugs.python.org/issue?@action=redirect&bpo=28923]: Remove editor artifacts from Tix.py.
- [bpo-28871](https://bugs.python.org/issue?@action=redirect&bpo=28871) [https://bugs.python.org/issue?@action=redirect&bpo=28871]: Fixed a crash when deallocate deep ElementTree.
- [bpo-19542](https://bugs.python.org/issue?@action=redirect&bpo=19542) [https://bugs.python.org/issue?@action=redirect&bpo=19542]: Fix bugs in WeakValueDictionary.setdefault() and WeakValueDictionary.pop() when a GC collection happens in another thread.
- [bpo-20191](https://bugs.python.org/issue?@action=redirect&bpo=20191) [https://bugs.python.org/issue?@action=redirect&bpo=20191]: Fixed a crash in resource.prlimit() when passing a sequence that doesn't own its elements as limits.
- [bpo-16255](https://bugs.python.org/issue?@action=redirect&bpo=16255) [https://bugs.python.org/issue?@action=redirect&bpo=16255]: subprocess.Popen uses /system/bin/sh on Android as the shell, instead of /bin/sh.
- [bpo-28779](https://bugs.python.org/issue?@action=redirect&bpo=28779) [https://bugs.python.org/issue?@action=redirect&bpo=28779]: multiprocessing.set\_forkserver\_preload() would crash the forkserver process if a preloaded module instantiated some multiprocessing objects such as locks.
- [bpo-26937](https://bugs.python.org/issue?@action=redirect&bpo=26937) [https://bugs.python.org/issue?@action=redirect&bpo=26937]: The chown() method of the tarfile.TarFile class does not fail now when the grp module cannot be imported, as for example on Android platforms.
- [bpo-28847](https://bugs.python.org/issue?@action=redirect&bpo=28847) [https://bugs.python.org/issue?@action=redirect&bpo=28847]: dbm.dumb now supports reading read-only files and no longer writes the index file when it is

not changed. A deprecation warning is now emitted if the index file is missed and recreated in the 'r' and 'w' modes (will be an error in future Python releases).

- [bpo-27030](https://bugs.python.org/issue?@action=redirect&bpo=27030) [https://bugs.python.org/issue?@action=redirect&bpo=27030]: Unknown escapes consisting of '\ ' and an ASCII letter in re.sub() replacement templates regular expressions now are errors.
- [bpo-28835](https://bugs.python.org/issue?@action=redirect&bpo=28835) [https://bugs.python.org/issue?@action=redirect&bpo=28835]: Fix a regression introduced in warnings.catch\_warnings(): call warnings.showwarning() if it was overridden inside the context manager.
- [bpo-27172](https://bugs.python.org/issue?@action=redirect&bpo=27172) [https://bugs.python.org/issue?@action=redirect&bpo=27172]: To assist with upgrades from 2.7, the previously documented deprecation of inspect.getfullargspec() has been reversed. This decision may be revisited again after the Python 2.7 branch is no longer officially supported.
- [bpo-28740](https://bugs.python.org/issue?@action=redirect&bpo=28740) [https://bugs.python.org/issue?@action=redirect&bpo=28740]: Add sys.getandroidapilevel(): return the build time API version of Android as an integer. Function only available on Android.
- [bpo-26273](https://bugs.python.org/issue?@action=redirect&bpo=26273) [https://bugs.python.org/issue?@action=redirect&bpo=26273]: Add new **socket.TCP\_CONGESTION** (Linux 2.6.13) and **socket.TCP\_USER\_TIMEOUT** (Linux 2.6.37) constants. Patch written by Omar Sandoval.
- [bpo-28752](https://bugs.python.org/issue?@action=redirect&bpo=28752) [https://bugs.python.org/issue?@action=redirect&bpo=28752]: Restored the \_reduce\_() methods of datetime objects.
- [bpo-28727](https://bugs.python.org/issue?@action=redirect&bpo=28727) [https://bugs.python.org/issue?@action=redirect&bpo=28727]: Regular expression patterns, sre.SRE\_Pattern objects created by re.compile(), become comparable (only x == y and x != y operators). This change should fix the [bpo-18383](https://bugs.python.org/issue?@action=redirect&bpo=18383) [https://bugs.python.org/issue?@action=redirect&bpo=18383]: don't duplicate warning filters when the warnings module is reloaded (thing usually only done in unit tests).
- [bpo-20572](https://bugs.python.org/issue?@action=redirect&bpo=20572) [https://bugs.python.org/issue?@action=redirect&bpo=20572]: Remove the subprocess.Popen.wait endtime parameter. It was deprecated

in 3.4 and undocumented prior to that.

- [bpo-25659](https://bugs.python.org/issue?@action=redirect&bpo=25659) [https://bugs.python.org/issue?@action=redirect&bpo=25659]: In ctypes, prevent a crash calling the from\_buffer() and from\_buffer\_copy() methods on abstract classes like Array.
- [bpo-28548](https://bugs.python.org/issue?@action=redirect&bpo=28548) [https://bugs.python.org/issue?@action=redirect&bpo=28548]: In the “http.server” module, parse the protocol version if possible, to avoid using HTTP 0.9 in some error responses.
- [bpo-19717](https://bugs.python.org/issue?@action=redirect&bpo=19717) [https://bugs.python.org/issue?@action=redirect&bpo=19717]: Makes Path.resolve() succeed on paths that do not exist. Patch by Vajrasky Kok
- [bpo-28563](https://bugs.python.org/issue?@action=redirect&bpo=28563) [https://bugs.python.org/issue?@action=redirect&bpo=28563]: Fixed possible DoS and arbitrary code execution when handle plural form selections in the gettext module. The expression parser now supports exact syntax supported by GNU gettext.
- [bpo-28387](https://bugs.python.org/issue?@action=redirect&bpo=28387) [https://bugs.python.org/issue?@action=redirect&bpo=28387]: Fixed possible crash in \_io.TextIOWrapper deallocator when the garbage collector is invoked in other thread. Based on patch by Sebastian Cufre.
- [bpo-27517](https://bugs.python.org/issue?@action=redirect&bpo=27517) [https://bugs.python.org/issue?@action=redirect&bpo=27517]: LZMA compressor and decompressor no longer raise exceptions if given empty data twice. Patch by Benjamin Fogle.
- [bpo-28549](https://bugs.python.org/issue?@action=redirect&bpo=28549) [https://bugs.python.org/issue?@action=redirect&bpo=28549]: Fixed segfault in curses’s addch() with ncurses6.
- [bpo-28449](https://bugs.python.org/issue?@action=redirect&bpo=28449) [https://bugs.python.org/issue?@action=redirect&bpo=28449]: tarfile.open() with mode “r” or “r:” now tries to open a tar file with compression before trying to open it without compression. Otherwise it had 50% chance failed with ignore\_zeros = True.
- [bpo-23262](https://bugs.python.org/issue?@action=redirect&bpo=23262) [https://bugs.python.org/issue?@action=redirect&bpo=23262]: The webbrowser module now supports Firefox 36 + and derived browsers. Based on patch by Oleg Broytman.
- [bpo-24241](https://bugs.python.org/issue?@action=redirect&bpo=24241) [https://bugs.python.org/issue?@action=redirect&bpo=24241]: The webbrowser in an X environment now prefers using the default browser directly.

Also, the `webbrowser.register()` function now has a documented 'preferred' argument, to specify browsers to be returned by `get()` with no arguments. Patch by David Steele

- [bpo-27939](https://bugs.python.org/issue?@action=redirect&bpo=27939) [https://bugs.python.org/issue?@action=redirect&bpo=27939]: Fixed bugs in `tkinter.ttk.LabeledScale` and `tkinter.Scale` caused by representing the scale as float value internally in Tk. `tkinter.IntVar` now works if float value is set to underlying Tk variable.
- [bpo-28255](https://bugs.python.org/issue?@action=redirect&bpo=28255) [https://bugs.python.org/issue?@action=redirect&bpo=28255]: `calendar.TextCalendar.prweek()` no longer prints a space after a week's calendar. `calendar.TextCalendar.pryear()` no longer prints redundant newline after a year's calendar. Based on patch by Xiang Zhang.
- [bpo-28255](https://bugs.python.org/issue?@action=redirect&bpo=28255) [https://bugs.python.org/issue?@action=redirect&bpo=28255]: `calendar.TextCalendar.prmonth()` no longer prints a space at the start of new line after printing a month's calendar. Patch by Xiang Zhang.
- [bpo-20491](https://bugs.python.org/issue?@action=redirect&bpo=20491) [https://bugs.python.org/issue?@action=redirect&bpo=20491]: The `textwrap.TextWrapper` class now honors non-breaking spaces. Based on patch by Kaarle Ritvanen.
- [bpo-28353](https://bugs.python.org/issue?@action=redirect&bpo=28353) [https://bugs.python.org/issue?@action=redirect&bpo=28353]: `os.fwalk()` no longer fails on broken links.
- [bpo-28430](https://bugs.python.org/issue?@action=redirect&bpo=28430) [https://bugs.python.org/issue?@action=redirect&bpo=28430]: Fix iterator of C implemented `asyncio.Future` doesn't accept non-None value is passed to `it.send(val)`.
- [bpo-27025](https://bugs.python.org/issue?@action=redirect&bpo=27025) [https://bugs.python.org/issue?@action=redirect&bpo=27025]: Generated names for Tkinter widgets now start by the "!" prefix for readability.
- [bpo-25464](https://bugs.python.org/issue?@action=redirect&bpo=25464) [https://bugs.python.org/issue?@action=redirect&bpo=25464]: Fixed `HList.header_exists()` in `tkinter.tix` module by adding a workaround to Tix library bug.
- [bpo-28488](https://bugs.python.org/issue?@action=redirect&bpo=28488) [https://bugs.python.org/issue?@action=redirect&bpo=28488]: `shutil.make_archive()` no longer adds entry "." to ZIP archive.
- [bpo-25953](https://bugs.python.org/issue?@action=redirect&bpo=25953) [https://bugs.python.org/issue?@action=redirect&bpo=25953]

@action=redirect&bpo=25953]: re.sub() now raises an error for invalid numerical group reference in replacement template even if the pattern is not found in the string. Error message for invalid group reference now includes the group index and the position of the reference. Based on patch by SilentGhost.

- [bpo-28469](https://bugs.python.org/issue?@action=redirect&bpo=28469) [https://bugs.python.org/issue?@action=redirect&bpo=28469]: timeit now uses the sequence 1, 2, 5, 10, 20, 50,... instead of 1, 10, 100,... for autoranging.
- [bpo-28115](https://bugs.python.org/issue?@action=redirect&bpo=28115) [https://bugs.python.org/issue?@action=redirect&bpo=28115]: Command-line interface of the zipfile module now uses argparse. Added support of long options.
- [bpo-18219](https://bugs.python.org/issue?@action=redirect&bpo=18219) [https://bugs.python.org/issue?@action=redirect&bpo=18219]: Optimize csv.DictWriter for large number of columns. Patch by Mariatta Wijaya.
- [bpo-28448](https://bugs.python.org/issue?@action=redirect&bpo=28448) [https://bugs.python.org/issue?@action=redirect&bpo=28448]: Fix C implemented asyncio.Future didn't work on Windows.
- [bpo-23214](https://bugs.python.org/issue?@action=redirect&bpo=23214) [https://bugs.python.org/issue?@action=redirect&bpo=23214]: In the "io" module, the argument to BufferedReader and BytesIO's read1() methods is now optional and can be -1, matching the BufferedIOBase specification.
- [bpo-28480](https://bugs.python.org/issue?@action=redirect&bpo=28480) [https://bugs.python.org/issue?@action=redirect&bpo=28480]: Fix error building socket module when multithreading is disabled.
- [bpo-28240](https://bugs.python.org/issue?@action=redirect&bpo=28240) [https://bugs.python.org/issue?@action=redirect&bpo=28240]: timeit: remove -c/--clock and -t/--time command line options which were deprecated since Python 3.3.
- [bpo-28240](https://bugs.python.org/issue?@action=redirect&bpo=28240) [https://bugs.python.org/issue?@action=redirect&bpo=28240]: timeit now repeats the benchmarks 5 times instead of only 3 to make benchmarks more reliable.
- [bpo-28240](https://bugs.python.org/issue?@action=redirect&bpo=28240) [https://bugs.python.org/issue?@action=redirect&bpo=28240]: timeit autorange now uses a single loop iteration if the benchmark takes less than 10 seconds, instead of 10 iterations. "python3 -m timeit -s 'import time' 'time.sleep(1)'" now takes 4 seconds instead of 40 seconds.

- Distutils.sdist now looks for README and setup.py files with case sensitivity. This behavior matches that found in Setuptools 6.0 and later. See [setuptools 100](https://github.com/pypa/setuptools/issues/100) [https://github.com/pypa/setuptools/issues/100] for rationale.
- [bpo-24452](https://bugs.python.org/issue?@action=redirect&bpo=24452) [https://bugs.python.org/issue?@action=redirect&bpo=24452]: Make webbrowser support Chrome on Mac OS X. Patch by Ned Batchelder.
- [bpo-20766](https://bugs.python.org/issue?@action=redirect&bpo=20766) [https://bugs.python.org/issue?@action=redirect&bpo=20766]: Fix references leaked by pdb in the handling of SIGINT handlers.
- [bpo-27998](https://bugs.python.org/issue?@action=redirect&bpo=27998) [https://bugs.python.org/issue?@action=redirect&bpo=27998]: Fixed bytes path support in os.scandir() on Windows. Patch by Eryk Sun.
- [bpo-28317](https://bugs.python.org/issue?@action=redirect&bpo=28317) [https://bugs.python.org/issue?@action=redirect&bpo=28317]: The disassembler now decodes FORMAT\_VALUE argument.
- [bpo-28380](https://bugs.python.org/issue?@action=redirect&bpo=28380) [https://bugs.python.org/issue?@action=redirect&bpo=28380]: unittest.mock Mock autospec functions now properly support assert\_called, assert\_not\_called, and assert\_called\_once.
- [bpo-28229](https://bugs.python.org/issue?@action=redirect&bpo=28229) [https://bugs.python.org/issue?@action=redirect&bpo=28229]: lzma module now supports pathlib.
- [bpo-28321](https://bugs.python.org/issue?@action=redirect&bpo=28321) [https://bugs.python.org/issue?@action=redirect&bpo=28321]: Fixed writing non-BMP characters with binary format in plistlib.
- [bpo-28225](https://bugs.python.org/issue?@action=redirect&bpo=28225) [https://bugs.python.org/issue?@action=redirect&bpo=28225]: bz2 module now supports pathlib. Initial patch by Ethan Furman.
- [bpo-28227](https://bugs.python.org/issue?@action=redirect&bpo=28227) [https://bugs.python.org/issue?@action=redirect&bpo=28227]: gzip now supports pathlib. Patch by Ethan Furman.
- [bpo-28332](https://bugs.python.org/issue?@action=redirect&bpo=28332) [https://bugs.python.org/issue?@action=redirect&bpo=28332]: Deprecated silent truncations in socket.htons and socket.ntohs. Original patch by Oren Milman.
- [bpo-27358](https://bugs.python.org/issue?@action=redirect&bpo=27358) [https://bugs.python.org/issue?@action=redirect&bpo=27358]: Optimized merging var-keyword arguments and improved error message when passing a non-mapping as a var-keyword argument.

- [bpo-28257](https://bugs.python.org/issue?@action=redirect&bpo=28257) [https://bugs.python.org/issue?@action=redirect&bpo=28257]: Improved error message when passing a non-iterable as a var-positional argument. Added opcode BUILD\_TUPLE\_UNPACK\_WITH\_CALL.
- [bpo-28322](https://bugs.python.org/issue?@action=redirect&bpo=28322) [https://bugs.python.org/issue?@action=redirect&bpo=28322]: Fixed possible crashes when unpickle itertools objects from incorrect pickle data. Based on patch by John Leitch.
- [bpo-28228](https://bugs.python.org/issue?@action=redirect&bpo=28228) [https://bugs.python.org/issue?@action=redirect&bpo=28228]: imghdr now supports pathlib.
- [bpo-28226](https://bugs.python.org/issue?@action=redirect&bpo=28226) [https://bugs.python.org/issue?@action=redirect&bpo=28226]: compileall now supports pathlib.
- [bpo-28314](https://bugs.python.org/issue?@action=redirect&bpo=28314) [https://bugs.python.org/issue?@action=redirect&bpo=28314]: Fix function declaration (C flags) for the getiterator() method of xml.etree.ElementTree.Element.
- [bpo-28148](https://bugs.python.org/issue?@action=redirect&bpo=28148) [https://bugs.python.org/issue?@action=redirect&bpo=28148]: Stop using localtime() and gmtime() in the time module. Introduced platform independent \_PyTime\_localtime API that is similar to POSIX localtime\_r, but available on all platforms. Patch by Ed Schouten.
- [bpo-28253](https://bugs.python.org/issue?@action=redirect&bpo=28253) [https://bugs.python.org/issue?@action=redirect&bpo=28253]: Fixed calendar functions for extreme months: 0001-01 and 9999-12. Methods itermonthdays() and itermonthdays2() are reimplemented so that they don't call itermonthdates() which can cause datetime.date under/overflow.
- [bpo-28275](https://bugs.python.org/issue?@action=redirect&bpo=28275) [https://bugs.python.org/issue?@action=redirect&bpo=28275]: Fixed possible use after free in the decompress() methods of the LZMADecompressor and BZ2Decompressor classes. Original patch by John Leitch.
- [bpo-27897](https://bugs.python.org/issue?@action=redirect&bpo=27897) [https://bugs.python.org/issue?@action=redirect&bpo=27897]: Fixed possible crash in sqlite3.Connection.create\_collation() if pass invalid string-like object as a name. Patch by Xiang Zhang.
- [bpo-18844](https://bugs.python.org/issue?@action=redirect&bpo=18844) [https://bugs.python.org/issue?@action=redirect&bpo=18844]: random.choices() now has k as a keyword-only argument to improve the readability of common cases and come into line with the signature used in

other languages.

- [bpo-18893](https://bugs.python.org/issue?@action=redirect&bpo=18893) [https://bugs.python.org/issue?@action=redirect&bpo=18893]: Fix invalid exception handling in `Lib/ctypes/macholib/dyld.py`. Patch by Madison May.
- [bpo-27611](https://bugs.python.org/issue?@action=redirect&bpo=27611) [https://bugs.python.org/issue?@action=redirect&bpo=27611]: Fixed support of default root window in the `tkinter.tix` module. Added the master parameter in the `DisplayStyle` constructor.
- [bpo-27348](https://bugs.python.org/issue?@action=redirect&bpo=27348) [https://bugs.python.org/issue?@action=redirect&bpo=27348]: In the `traceback` module, restore the formatting of exception messages like “Exception: None”. This fixes a regression introduced in 3.5a2.
- [bpo-25651](https://bugs.python.org/issue?@action=redirect&bpo=25651) [https://bugs.python.org/issue?@action=redirect&bpo=25651]: Allow falsy values to be used for `msg` parameter of `subTest()`.
- [bpo-27778](https://bugs.python.org/issue?@action=redirect&bpo=27778) [https://bugs.python.org/issue?@action=redirect&bpo=27778]: Fix a memory leak in `os.getrandom()` when the `getrandom()` is interrupted by a signal and a signal handler raises a Python exception.
- [bpo-28200](https://bugs.python.org/issue?@action=redirect&bpo=28200) [https://bugs.python.org/issue?@action=redirect&bpo=28200]: Fix memory leak on Windows in the `os` module (fix `path_converter()` function).
- [bpo-25400](https://bugs.python.org/issue?@action=redirect&bpo=25400) [https://bugs.python.org/issue?@action=redirect&bpo=25400]: `RobotFileParser` now correctly returns default values for `crawl_delay` and `request_rate`. Initial patch by Peter Wirtz.
- [bpo-27932](https://bugs.python.org/issue?@action=redirect&bpo=27932) [https://bugs.python.org/issue?@action=redirect&bpo=27932]: Prevent memory leak in `win32_ver()`.
- Fix `UnboundLocalError` in `socket._sendfile_use_sendfile`.
- [bpo-28075](https://bugs.python.org/issue?@action=redirect&bpo=28075) [https://bugs.python.org/issue?@action=redirect&bpo=28075]: Check for `ERROR_ACCESS_DENIED` in Windows implementation of `os.stat()`. Patch by Eryk Sun.
- [bpo-22493](https://bugs.python.org/issue?@action=redirect&bpo=22493) [https://bugs.python.org/issue?@action=redirect&bpo=22493]: Warning message emitted by using inline flags in the middle of regular expression now contains a (truncated) regex pattern. Patch by Tim Graham.
- [bpo-25270](https://bugs.python.org/issue?@action=redirect&bpo=25270) [https://bugs.python.org/issue?@action=redirect&bpo=25270]: Prevent `codecs.escape_encode()`

from raising `SystemError` when an empty bytestring is passed.

- [bpo-28181](https://bugs.python.org/issue?@action=redirect&bpo=28181) [https://bugs.python.org/issue?@action=redirect&bpo=28181]: Get antigravity over HTTPS. Patch by Kaartic Sivaraam.
- [bpo-25895](https://bugs.python.org/issue?@action=redirect&bpo=25895) [https://bugs.python.org/issue?@action=redirect&bpo=25895]: Enable WebSocket URL schemes in `urllib.parse.urljoin`. Patch by Gergely Imreh and Markus Holtermann.
- [bpo-28114](https://bugs.python.org/issue?@action=redirect&bpo=28114) [https://bugs.python.org/issue?@action=redirect&bpo=28114]: Fix a crash in `parse_envlist()` when `env` contains byte strings. Patch by Eryk Sun.
- [bpo-27599](https://bugs.python.org/issue?@action=redirect&bpo=27599) [https://bugs.python.org/issue?@action=redirect&bpo=27599]: Fixed buffer overrun in `binascii.b2a_qp()` and `binascii.a2b_qp()`.
- [bpo-27906](https://bugs.python.org/issue?@action=redirect&bpo=27906) [https://bugs.python.org/issue?@action=redirect&bpo=27906]: Fix socket accept exhaustion during high TCP traffic. Patch by Kevin Conway.
- [bpo-28174](https://bugs.python.org/issue?@action=redirect&bpo=28174) [https://bugs.python.org/issue?@action=redirect&bpo=28174]: Handle when `SO_REUSEPORT` isn't properly supported. Patch by Seth Michael Larson.
- [bpo-26654](https://bugs.python.org/issue?@action=redirect&bpo=26654) [https://bugs.python.org/issue?@action=redirect&bpo=26654]: Inspect `functools.partial` in `asyncio.Handle.__repr__`. Patch by iceboy.
- [bpo-26909](https://bugs.python.org/issue?@action=redirect&bpo=26909) [https://bugs.python.org/issue?@action=redirect&bpo=26909]: Fix slow pipes IO in `asyncio`. Patch by INADA Naoki.
- [bpo-28176](https://bugs.python.org/issue?@action=redirect&bpo=28176) [https://bugs.python.org/issue?@action=redirect&bpo=28176]: Fix callbacks race in `asyncio.SelectorLoop.sock_connect`.
- [bpo-27759](https://bugs.python.org/issue?@action=redirect&bpo=27759) [https://bugs.python.org/issue?@action=redirect&bpo=27759]: Fix selectors incorrectly retain invalid file descriptors. Patch by Mark Williams.
- [bpo-28325](https://bugs.python.org/issue?@action=redirect&bpo=28325) [https://bugs.python.org/issue?@action=redirect&bpo=28325]: Remove vestigial MacOS 9 `macurl2path` module and its tests.
- [bpo-28368](https://bugs.python.org/issue?@action=redirect&bpo=28368) [https://bugs.python.org/issue?@action=redirect&bpo=28368]: Refuse monitoring processes if the child watcher has no loop attached. Patch by Vincent Michel.
- [bpo-28369](https://bugs.python.org/issue?@action=redirect&bpo=28369) [https://bugs.python.org/issue?@action=redirect&bpo=28369]: Raise `RuntimeError` when

transport's FD is used with `add_reader`, `add_writer`, etc.

- [bpo-28370](https://bugs.python.org/issue?@action=redirect&bpo=28370) [https://bugs.python.org/issue?@action=redirect&bpo=28370]: Speedup `asyncio.StreamReader.readexactly`. Patch by Коренберг Марк.
- [bpo-28371](https://bugs.python.org/issue?@action=redirect&bpo=28371) [https://bugs.python.org/issue?@action=redirect&bpo=28371]: Deprecate passing `asyncio.Handles` to `run_in_executor`.
- [bpo-28372](https://bugs.python.org/issue?@action=redirect&bpo=28372) [https://bugs.python.org/issue?@action=redirect&bpo=28372]: Fix `asyncio` to support formatting of non-python coroutines.
- [bpo-28399](https://bugs.python.org/issue?@action=redirect&bpo=28399) [https://bugs.python.org/issue?@action=redirect&bpo=28399]: Remove UNIX socket from FS before binding. Patch by Коренберг Марк.
- [bpo-27972](https://bugs.python.org/issue?@action=redirect&bpo=27972) [https://bugs.python.org/issue?@action=redirect&bpo=27972]: Prohibit Tasks to await on themselves.
- [bpo-24142](https://bugs.python.org/issue?@action=redirect&bpo=24142) [https://bugs.python.org/issue?@action=redirect&bpo=24142]: Reading a corrupt config file left `configparser` in an invalid state. Original patch by Florian Höch.
- [bpo-29581](https://bugs.python.org/issue?@action=redirect&bpo=29581) [https://bugs.python.org/issue?@action=redirect&bpo=29581]: `ABCMeta.__new__` now accepts `**kwargs`, allowing abstract base classes to use keyword parameters in `__init_subclass__`. Patch by Nate Soares.
- [bpo-25532](https://bugs.python.org/issue?@action=redirect&bpo=25532) [https://bugs.python.org/issue?@action=redirect&bpo=25532]: `inspect.unwrap()` will now only try to unwrap an object `sys.getrecursionlimit()` times, to protect against objects which create a new object on every attribute access.
- [bpo-30177](https://bugs.python.org/issue?@action=redirect&bpo=30177) [https://bugs.python.org/issue?@action=redirect&bpo=30177]: `path.resolve(strict=False)` no longer cuts the path after the first element not present in the filesystem. Patch by Antoine Pietri.

## Documentation

- [bpo-31294](https://bugs.python.org/issue?@action=redirect&bpo=31294) [https://bugs.python.org/issue?@action=redirect&bpo=31294]: Fix incomplete code snippet in the `ZeroMQSocketListener` and `ZeroMQSocketHandler` examples

and adapt them to Python 3.

- [bpo-21649](https://bugs.python.org/issue?@action=redirect&bpo=21649) [https://bugs.python.org/issue?@action=redirect&bpo=21649]: Add RFC 7525 and Mozilla server side TLS links to SSL documentation.
- [bpo-31128](https://bugs.python.org/issue?@action=redirect&bpo=31128) [https://bugs.python.org/issue?@action=redirect&bpo=31128]: Allow the pydoc server to bind to arbitrary hostnames.
- [bpo-30803](https://bugs.python.org/issue?@action=redirect&bpo=30803) [https://bugs.python.org/issue?@action=redirect&bpo=30803]: Clarify doc on truth value testing. Original patch by Peter Thomassen.
- [bpo-30176](https://bugs.python.org/issue?@action=redirect&bpo=30176) [https://bugs.python.org/issue?@action=redirect&bpo=30176]: Add missing attribute related constants in curses documentation.
- [bpo-30052](https://bugs.python.org/issue?@action=redirect&bpo=30052) [https://bugs.python.org/issue?@action=redirect&bpo=30052]: the link targets for `bytes()` and `bytearray()` are now their respective type definitions, rather than the corresponding builtin function entries. Use `bytes` and `bytearray` to reference the latter. In order to ensure this and future cross-reference updates are applied automatically, the daily documentation builds now disable the default output caching features in Sphinx.
- [bpo-26985](https://bugs.python.org/issue?@action=redirect&bpo=26985) [https://bugs.python.org/issue?@action=redirect&bpo=26985]: Add missing info of code object in inspect documentation.
- [bpo-19824](https://bugs.python.org/issue?@action=redirect&bpo=19824) [https://bugs.python.org/issue?@action=redirect&bpo=19824]: Improve the documentation for, and links to, template strings by emphasizing their utility for internationalization, and by clarifying some usage constraints. (See also: [bpo-20314](https://bugs.python.org/issue?@action=redirect&bpo=20314) [https://bugs.python.org/issue?@action=redirect&bpo=20314], [bpo-12518](https://bugs.python.org/issue?@action=redirect&bpo=12518) [https://bugs.python.org/issue?@action=redirect&bpo=12518])
- [bpo-28929](https://bugs.python.org/issue?@action=redirect&bpo=28929) [https://bugs.python.org/issue?@action=redirect&bpo=28929]: Link the documentation to its source file on GitHub.
- [bpo-25008](https://bugs.python.org/issue?@action=redirect&bpo=25008) [https://bugs.python.org/issue?@action=redirect&bpo=25008]: Document `smtpd.py` as effectively deprecated and add a pointer to `aiosmtpd`, a third-party asyncio-based replacement.
- [bpo-26355](https://bugs.python.org/issue?@action=redirect&bpo=26355) [https://bugs.python.org/issue?@action=redirect&bpo=26355]: Add canonical header link on

each page to corresponding major version of the documentation. Patch by Matthias Bussonnier.

- [bpo-29349](https://bugs.python.org/issue?@action=redirect&bpo=29349) [https://bugs.python.org/issue?@action=redirect&bpo=29349]: Fix Python 2 syntax in code for building the documentation.
- [bpo-23722](https://bugs.python.org/issue?@action=redirect&bpo=23722) [https://bugs.python.org/issue?@action=redirect&bpo=23722]: The data model reference and the porting section in the 3.6 What's New guide now cover the additional `__classcell__` handling needed for custom metaclasses to fully support [PEP 487](https://peps.python.org/pep-0487/) [https://peps.python.org/pep-0487/] and zero-argument `super()`.
- [bpo-28513](https://bugs.python.org/issue?@action=redirect&bpo=28513) [https://bugs.python.org/issue?@action=redirect&bpo=28513]: Documented command-line interface of zipfile.

## Tests

- [bpo-29639](https://bugs.python.org/issue?@action=redirect&bpo=29639) [https://bugs.python.org/issue?@action=redirect&bpo=29639]: `test.support.HOST` is now “localhost”, a new `HOSTv4` constant has been added for your `127.0.0.1` needs, similar to the existing `HOSTv6` constant.
- [bpo-31320](https://bugs.python.org/issue?@action=redirect&bpo=31320) [https://bugs.python.org/issue?@action=redirect&bpo=31320]: Silence traceback in `test_ssl`
- [bpo-31346](https://bugs.python.org/issue?@action=redirect&bpo=31346) [https://bugs.python.org/issue?@action=redirect&bpo=31346]: Prefer `PROTOCOL_TLS_CLIENT` and `PROTOCOL_TLS_SERVER` protocols for `SSLContext`.
- [bpo-25674](https://bugs.python.org/issue?@action=redirect&bpo=25674) [https://bugs.python.org/issue?@action=redirect&bpo=25674]: Remove `sha256.tbs-internet.com` `ssl` test
- [bpo-30715](https://bugs.python.org/issue?@action=redirect&bpo=30715) [https://bugs.python.org/issue?@action=redirect&bpo=30715]: Address ALPN callback changes for OpenSSL 1.1.0f. The latest version behaves like OpenSSL 1.0.2 and no longer aborts handshake.
- [bpo-30822](https://bugs.python.org/issue?@action=redirect&bpo=30822) [https://bugs.python.org/issue?@action=redirect&bpo=30822]: `regtest`: Exclude `tzdata` from `regtest -all`. When running the test suite using `-use=all / -u all`, exclude `tzdata` since it makes `test_datetime` too slow (15-20 min on some buildbots) which then times out on some buildbots. Fix also `regtest` command line parser to allow passing `-u extralargefile` to run `test_zipfile64`.

- [bpo-30695](https://bugs.python.org/issue?@action=redirect&bpo=30695) [https://bugs.python.org/issue?@action=redirect&bpo=30695]: Add the **set\_nomemory(start, stop)** and **remove\_mem\_hooks()** functions to the `_testcapi` module.
- [bpo-30357](https://bugs.python.org/issue?@action=redirect&bpo=30357) [https://bugs.python.org/issue?@action=redirect&bpo=30357]: `test_thread`: `setUp()` now uses `support.threading_setup()` and `support.threading_cleanup()` to wait until threads complete to avoid random side effects on following tests. Initial patch written by Grzegorz Grzywacz.
- [bpo-30197](https://bugs.python.org/issue?@action=redirect&bpo=30197) [https://bugs.python.org/issue?@action=redirect&bpo=30197]: Enhanced functions `swap_attr()` and `swap_item()` in the `test.support` module. They now work when delete replaced attribute or item inside the `with` statement. The old value of the attribute or item (or `None` if it doesn't exist) now will be assigned to the target of the "as" clause, if there is one.
- [bpo-24932](https://bugs.python.org/issue?@action=redirect&bpo=24932) [https://bugs.python.org/issue?@action=redirect&bpo=24932]: Use proper command line parsing in `_testembed`
- [bpo-28950](https://bugs.python.org/issue?@action=redirect&bpo=28950) [https://bugs.python.org/issue?@action=redirect&bpo=28950]: Disallow `-j0` to be combined with `-T/-l` in `regtest` command line arguments.
- [bpo-28683](https://bugs.python.org/issue?@action=redirect&bpo=28683) [https://bugs.python.org/issue?@action=redirect&bpo=28683]: Fix the tests that `bind()` a unix socket and raise `PermissionError` on Android for a non-root user.
- [bpo-26936](https://bugs.python.org/issue?@action=redirect&bpo=26936) [https://bugs.python.org/issue?@action=redirect&bpo=26936]: Fix the `test_socket` failures on Android - `getservbyname()`, `getservbyport()` and `getaddrinfo()` are broken on some Android API levels.
- [bpo-28666](https://bugs.python.org/issue?@action=redirect&bpo=28666) [https://bugs.python.org/issue?@action=redirect&bpo=28666]: Now `test.support.rmtree` is able to remove unwritable or unreadable directories.
- [bpo-23839](https://bugs.python.org/issue?@action=redirect&bpo=23839) [https://bugs.python.org/issue?@action=redirect&bpo=23839]: Various caches now are cleared before running every test file.
- [bpo-26944](https://bugs.python.org/issue?@action=redirect&bpo=26944) [https://bugs.python.org/issue?@action=redirect&bpo=26944]: Fix `test_posix` for Android where 'id -G' is entirely wrong or missing the effective gid.
- [bpo-28409](https://bugs.python.org/issue?@action=redirect&bpo=28409) [https://bugs.python.org/issue?@action=redirect&bpo=28409]

@action=redirect&bpo=28409]: regrtest: fix the parser of command line arguments.

- [bpo-28217](https://bugs.python.org/issue?@action=redirect&bpo=28217) [https://bugs.python.org/issue?@action=redirect&bpo=28217]: Adds `_testconsole` module to test console input.
- [bpo-26939](https://bugs.python.org/issue?@action=redirect&bpo=26939) [https://bugs.python.org/issue?@action=redirect&bpo=26939]: Add the `support.setswitchinterval()` function to fix `test_func tools` hanging on the Android armv7 qemu emulator.

## Build

- [bpo-31354](https://bugs.python.org/issue?@action=redirect&bpo=31354) [https://bugs.python.org/issue?@action=redirect&bpo=31354]: Allow `-with-lto` to be used on all builds, not just **`make profile-opt`**.
- [bpo-31370](https://bugs.python.org/issue?@action=redirect&bpo=31370) [https://bugs.python.org/issue?@action=redirect&bpo=31370]: Remove support for building `-without-threads`. This option is not really useful anymore in the 21st century. Removing lots of conditional paths allows us to simplify the code base, including in difficult to maintain low-level internal code.
- [bpo-31341](https://bugs.python.org/issue?@action=redirect&bpo=31341) [https://bugs.python.org/issue?@action=redirect&bpo=31341]: Per [PEP 11](https://peps.python.org/pep-0011/) [https://peps.python.org/pep-0011/], support for the IRIX operating system was removed.
- [bpo-30854](https://bugs.python.org/issue?@action=redirect&bpo=30854) [https://bugs.python.org/issue?@action=redirect&bpo=30854]: Fix compile error when compiling `-without-threads`. Patch by Masayuki Yamamoto.
- [bpo-30687](https://bugs.python.org/issue?@action=redirect&bpo=30687) [https://bugs.python.org/issue?@action=redirect&bpo=30687]: Locate `msbuild.exe` on Windows when building rather than `vcvarsall.bat`
- [bpo-20210](https://bugs.python.org/issue?@action=redirect&bpo=20210) [https://bugs.python.org/issue?@action=redirect&bpo=20210]: Support the *disabled* marker in Setup files. Extension modules listed after this marker are not built at all, neither by the Makefile nor by `setup.py`.
- [bpo-29941](https://bugs.python.org/issue?@action=redirect&bpo=29941) [https://bugs.python.org/issue?@action=redirect&bpo=29941]: Add `--with-assertions` configure flag to explicitly enable C `assert()` checks. Defaults to off. `--with-pydebug` implies `--with-assertions`.

- [bpo-28787](https://bugs.python.org/issue?@action=redirect&bpo=28787) [https://bugs.python.org/issue?@action=redirect&bpo=28787]: Fix out-of-tree builds of Python when configured with `--with--dtrace`.
- [bpo-29243](https://bugs.python.org/issue?@action=redirect&bpo=29243) [https://bugs.python.org/issue?@action=redirect&bpo=29243]: Prevent unnecessary rebuilding of Python during `make test`, `make install` and some other `make` targets when configured with `--enable-optimizations`.
- [bpo-23404](https://bugs.python.org/issue?@action=redirect&bpo=23404) [https://bugs.python.org/issue?@action=redirect&bpo=23404]: Don't regenerate generated files based on file modification time anymore: the action is now explicit. Replace `make touch` with `make regen-all`.
- [bpo-29643](https://bugs.python.org/issue?@action=redirect&bpo=29643) [https://bugs.python.org/issue?@action=redirect&bpo=29643]: Fix `--enable-optimization` didn't work.
- [bpo-27593](https://bugs.python.org/issue?@action=redirect&bpo=27593) [https://bugs.python.org/issue?@action=redirect&bpo=27593]: `sys.version` and the platform module `python_build()`, `python_branch()`, and `python_revision()` functions now use git information rather than hg when building from a repo.
- [bpo-29572](https://bugs.python.org/issue?@action=redirect&bpo=29572) [https://bugs.python.org/issue?@action=redirect&bpo=29572]: Update Windows build and OS X installers to use OpenSSL 1.0.2k.
- [bpo-27659](https://bugs.python.org/issue?@action=redirect&bpo=27659) [https://bugs.python.org/issue?@action=redirect&bpo=27659]: Prohibit implicit C function declarations: use `-Werror=implicit-function-declaration` when possible (GCC and Clang, but it depends on the compiler version). Patch written by Chi Hsuan Yen.
- [bpo-29384](https://bugs.python.org/issue?@action=redirect&bpo=29384) [https://bugs.python.org/issue?@action=redirect&bpo=29384]: Remove old Be OS helper scripts.
- [bpo-26851](https://bugs.python.org/issue?@action=redirect&bpo=26851) [https://bugs.python.org/issue?@action=redirect&bpo=26851]: Set Android compilation and link flags.
- [bpo-28768](https://bugs.python.org/issue?@action=redirect&bpo=28768) [https://bugs.python.org/issue?@action=redirect&bpo=28768]: Fix implicit declaration of `function_setmode`. Patch by Masayuki Yamamoto
- [bpo-29080](https://bugs.python.org/issue?@action=redirect&bpo=29080) [https://bugs.python.org/issue?@action=redirect&bpo=29080]: Removes hard dependency on `hg.exe` from `PCBuild/build.bat`
- [bpo-23903](https://bugs.python.org/issue?@action=redirect&bpo=23903) [https://bugs.python.org/issue?@action=redirect&bpo=23903]

@action=redirect&bpo=23903]: Added missed names to PC/python3.def.

- [bpo-28762](https://bugs.python.org/issue?@action=redirect&bpo=28762) [https://bugs.python.org/issue?@action=redirect&bpo=28762]: lockf() is available on Android API level 24, but the F\_LOCK macro is not defined in android-ndk-r13.
- [bpo-28538](https://bugs.python.org/issue?@action=redirect&bpo=28538) [https://bugs.python.org/issue?@action=redirect&bpo=28538]: Fix the compilation error that occurs because if\_nameindex() is available on Android API level 24, but the if\_nameindex structure is not defined.
- [bpo-20211](https://bugs.python.org/issue?@action=redirect&bpo=20211) [https://bugs.python.org/issue?@action=redirect&bpo=20211]: Do not add the directory for installing C header files and the directory for installing object code libraries to the cross compilation search paths. Original patch by Thomas Petazzoni.
- [bpo-28849](https://bugs.python.org/issue?@action=redirect&bpo=28849) [https://bugs.python.org/issue?@action=redirect&bpo=28849]: Do not define sys.implementation.\_multiarch on Android.
- [bpo-10656](https://bugs.python.org/issue?@action=redirect&bpo=10656) [https://bugs.python.org/issue?@action=redirect&bpo=10656]: Fix out-of-tree building on AIX. Patch by Tristan Carel and Michael Haubenwallner.
- [bpo-26359](https://bugs.python.org/issue?@action=redirect&bpo=26359) [https://bugs.python.org/issue?@action=redirect&bpo=26359]: Rename -with-optimiations to -enable-optimizations.
- [bpo-28444](https://bugs.python.org/issue?@action=redirect&bpo=28444) [https://bugs.python.org/issue?@action=redirect&bpo=28444]: Fix missing extensions modules when cross compiling.
- [bpo-28208](https://bugs.python.org/issue?@action=redirect&bpo=28208) [https://bugs.python.org/issue?@action=redirect&bpo=28208]: Update Windows build and OS X installers to use SQLite 3.14.2.
- [bpo-28248](https://bugs.python.org/issue?@action=redirect&bpo=28248) [https://bugs.python.org/issue?@action=redirect&bpo=28248]: Update Windows build and OS X installers to use OpenSSL 1.0.2j.
- [bpo-21124](https://bugs.python.org/issue?@action=redirect&bpo=21124) [https://bugs.python.org/issue?@action=redirect&bpo=21124]: Fix building the \_struct module on Cygwin by passing NULL instead of &PyType\_Type to PyVarObject\_HEAD\_INIT. Patch by Masayuki Yamamoto.
- [bpo-13756](https://bugs.python.org/issue?@action=redirect&bpo=13756) [https://bugs.python.org/issue?@action=redirect&bpo=13756]: Fix building extensions modules on Cygwin. Patch by Roumen Petrov, based on original patch

by Jason Tishler.

- [bpo-21085](https://bugs.python.org/issue?@action=redirect&bpo=21085) [https://bugs.python.org/issue?@action=redirect&bpo=21085]: Add configure check for `siginfo_t.si_band`, which Cygwin does not provide. Patch by Masayuki Yamamoto with review and rebase by Erik Bray.
- [bpo-28258](https://bugs.python.org/issue?@action=redirect&bpo=28258) [https://bugs.python.org/issue?@action=redirect&bpo=28258]: Fixed build with Estonian locale (python-config and distclean targets in Makefile). Patch by Arfrever Frehtes Taifersar Arahesis.
- [bpo-26661](https://bugs.python.org/issue?@action=redirect&bpo=26661) [https://bugs.python.org/issue?@action=redirect&bpo=26661]: `setup.py` now detects system `libffi` with multiarch wrapper.
- [bpo-27979](https://bugs.python.org/issue?@action=redirect&bpo=27979) [https://bugs.python.org/issue?@action=redirect&bpo=27979]: A full copy of `libffi` is no longer bundled for use when building `_ctypes` on non-OSX UNIX platforms. An installed copy of `libffi` is now required when building `_ctypes` on such platforms.
- [bpo-15819](https://bugs.python.org/issue?@action=redirect&bpo=15819) [https://bugs.python.org/issue?@action=redirect&bpo=15819]: Remove redundant include search directory option for building outside the source tree.
- [bpo-28676](https://bugs.python.org/issue?@action=redirect&bpo=28676) [https://bugs.python.org/issue?@action=redirect&bpo=28676]: Prevent missing ‘getentropy’ declaration warning on macOS. Patch by Gareth Rees.

## Windows

- [bpo-31392](https://bugs.python.org/issue?@action=redirect&bpo=31392) [https://bugs.python.org/issue?@action=redirect&bpo=31392]: Update Windows build to use OpenSSL 1.1.0f
- [bpo-30389](https://bugs.python.org/issue?@action=redirect&bpo=30389) [https://bugs.python.org/issue?@action=redirect&bpo=30389]: Adds detection of Visual Studio 2017 to `distutils` on Windows.
- [bpo-31358](https://bugs.python.org/issue?@action=redirect&bpo=31358) [https://bugs.python.org/issue?@action=redirect&bpo=31358]: `zlib` is no longer bundled in the CPython source, instead it is downloaded on demand just like `bz2`, `lzma`, `OpenSSL`, `Tcl/Tk`, and `SQLite`.
- [bpo-31340](https://bugs.python.org/issue?@action=redirect&bpo=31340) [https://bugs.python.org/issue?@action=redirect&bpo=31340]: Change to building with MSVC v141 (included with Visual Studio 2017)
- [bpo-30581](https://bugs.python.org/issue?@action=redirect&bpo=30581) [https://bugs.python.org/issue?@action=redirect&bpo=30581]

@action=redirect&bpo=30581]: os.cpu\_count() now returns the correct number of processors on Windows when the number of logical processors is greater than 64.

- [bpo-30916](https://bugs.python.org/issue?@action=redirect&bpo=30916) [https://bugs.python.org/issue?@action=redirect&bpo=30916]: Pre-build OpenSSL, Tcl and Tk and include the binaries in the build.
- [bpo-30731](https://bugs.python.org/issue?@action=redirect&bpo=30731) [https://bugs.python.org/issue?@action=redirect&bpo=30731]: Add a missing xmlns to python.manifest so that it matches the schema.
- [bpo-30291](https://bugs.python.org/issue?@action=redirect&bpo=30291) [https://bugs.python.org/issue?@action=redirect&bpo=30291]: Allow requiring 64-bit interpreters from py.exe using -64 suffix. Contributed by Steve (Gadget) Barnes.
- [bpo-30362](https://bugs.python.org/issue?@action=redirect&bpo=30362) [https://bugs.python.org/issue?@action=redirect&bpo=30362]: Adds list options (-0, -0p) to py.exe launcher. Contributed by Steve Barnes.
- [bpo-23451](https://bugs.python.org/issue?@action=redirect&bpo=23451) [https://bugs.python.org/issue?@action=redirect&bpo=23451]: Fix socket deprecation warnings in socketmodule.c. Patch by Segev Finer.
- [bpo-30450](https://bugs.python.org/issue?@action=redirect&bpo=30450) [https://bugs.python.org/issue?@action=redirect&bpo=30450]: The build process on Windows no longer depends on Subversion, instead pulling external code from GitHub via a Python script. If Python 3.6 is not found on the system (via `py -3.6`), NuGet is used to download a copy of 32-bit Python.
- [bpo-29579](https://bugs.python.org/issue?@action=redirect&bpo=29579) [https://bugs.python.org/issue?@action=redirect&bpo=29579]: Removes readme.txt from the installer.
- [bpo-25778](https://bugs.python.org/issue?@action=redirect&bpo=25778) [https://bugs.python.org/issue?@action=redirect&bpo=25778]: winreg does not truncate string correctly (Patch by Eryk Sun)
- [bpo-28896](https://bugs.python.org/issue?@action=redirect&bpo=28896) [https://bugs.python.org/issue?@action=redirect&bpo=28896]: Deprecate WindowsRegistryFinder and disable it by default
- [bpo-28522](https://bugs.python.org/issue?@action=redirect&bpo=28522) [https://bugs.python.org/issue?@action=redirect&bpo=28522]: Fixes mishandled buffer reallocation in getpathp.c
- [bpo-28402](https://bugs.python.org/issue?@action=redirect&bpo=28402) [https://bugs.python.org/issue?@action=redirect&bpo=28402]: Adds signed catalog files for stdlib on Windows.

- [bpo-28333](https://bugs.python.org/issue?@action=redirect&bpo=28333) [https://bugs.python.org/issue?@action=redirect&bpo=28333]: Enables Unicode for ps1/ps2 and input() prompts. (Patch by Eryk Sun)
- [bpo-28251](https://bugs.python.org/issue?@action=redirect&bpo=28251) [https://bugs.python.org/issue?@action=redirect&bpo=28251]: Improvements to help manuals on Windows.
- [bpo-28110](https://bugs.python.org/issue?@action=redirect&bpo=28110) [https://bugs.python.org/issue?@action=redirect&bpo=28110]: launcher.msi has different product codes between 32-bit and 64-bit
- [bpo-28161](https://bugs.python.org/issue?@action=redirect&bpo=28161) [https://bugs.python.org/issue?@action=redirect&bpo=28161]: Opening CON for write access fails
- [bpo-28162](https://bugs.python.org/issue?@action=redirect&bpo=28162) [https://bugs.python.org/issue?@action=redirect&bpo=28162]: WindowsConsoleIO readall() fails if first line starts with Ctrl + Z
- [bpo-28163](https://bugs.python.org/issue?@action=redirect&bpo=28163) [https://bugs.python.org/issue?@action=redirect&bpo=28163]: WindowsConsoleIO fileno() passes wrong flags to \_open\_osfhandle
- [bpo-28164](https://bugs.python.org/issue?@action=redirect&bpo=28164) [https://bugs.python.org/issue?@action=redirect&bpo=28164]: \_PyIO\_get\_console\_type fails for various paths
- [bpo-28137](https://bugs.python.org/issue?@action=redirect&bpo=28137) [https://bugs.python.org/issue?@action=redirect&bpo=28137]: Renames Windows path file to .pth
- [bpo-28138](https://bugs.python.org/issue?@action=redirect&bpo=28138) [https://bugs.python.org/issue?@action=redirect&bpo=28138]: Windows .pth file should allow import site

## **IDLE**

- [bpo-31493](https://bugs.python.org/issue?@action=redirect&bpo=31493) [https://bugs.python.org/issue?@action=redirect&bpo=31493]: IDLE code context – fix code update and font update timers. Canceling timers prevents a warning message when test\_idle completes.
- [bpo-31488](https://bugs.python.org/issue?@action=redirect&bpo=31488) [https://bugs.python.org/issue?@action=redirect&bpo=31488]: IDLE - Update non-key options in former extension classes. When applying configdialog changes, call .reload for each feature class. Change ParenMatch so updated options affect existing instances attached to existing editor windows.

- [bpo-31477](https://bugs.python.org/issue?@action=redirect&bpo=31477) [https://bugs.python.org/issue?@action=redirect&bpo=31477]: IDLE - Improve rstrip entry in doc. Strip trailing whitespace strips more than blank spaces. Multiline string literals are not skipped.
- [bpo-31480](https://bugs.python.org/issue?@action=redirect&bpo=31480) [https://bugs.python.org/issue?@action=redirect&bpo=31480]: IDLE - make tests pass with zzzdummy extension disabled by default.
- [bpo-31421](https://bugs.python.org/issue?@action=redirect&bpo=31421) [https://bugs.python.org/issue?@action=redirect&bpo=31421]: Document how IDLE runs tkinter programs. IDLE calls tcl/tk update in the background in order to make live interaction and experimentation with tkinter applications much easier.
- [bpo-31414](https://bugs.python.org/issue?@action=redirect&bpo=31414) [https://bugs.python.org/issue?@action=redirect&bpo=31414]: IDLE – fix tk entry box tests by deleting first. Adding to an int entry is not the same as deleting and inserting because int(“) will fail.
- [bpo-31051](https://bugs.python.org/issue?@action=redirect&bpo=31051) [https://bugs.python.org/issue?@action=redirect&bpo=31051]: Rearrange IDLE configdialog GenPage into Window, Editor, and Help sections.
- [bpo-30617](https://bugs.python.org/issue?@action=redirect&bpo=30617) [https://bugs.python.org/issue?@action=redirect&bpo=30617]: IDLE - Add docstrings and tests for outwin subclass of editor. Move some data and functions from the class to module level. Patch by Cheryl Sabella.
- [bpo-31287](https://bugs.python.org/issue?@action=redirect&bpo=31287) [https://bugs.python.org/issue?@action=redirect&bpo=31287]: IDLE - Do not modify tkinter.message in test\_configdialog.
- [bpo-27099](https://bugs.python.org/issue?@action=redirect&bpo=27099) [https://bugs.python.org/issue?@action=redirect&bpo=27099]: Convert IDLE’s built-in ‘extensions’ to regular features. About 10 IDLE features were implemented as supposedly optional extensions. Their different behavior could be confusing or worse for users and not good for maintenance. Hence the conversion. The main difference for users is that user configurable key bindings for builtin features are now handled uniformly. Now, editing a binding in a keyset only affects its value in the keyset. All bindings are defined together in the system-specific default keysets in config-extensions.def. All custom keysets are saved as a whole in config-extension.cfg. All take effect as soon as one clicks Apply or Ok. The affected events are ‘<<force-open-completions>>’, ‘<<expand-word>>’, ‘<<force-

open-calltip>>', '<<flash-paren>>', '<<format-paragraph>>', '<<run-module>>', '<<check-module>>', and '<<zoom-height>>'. Any (global) customizations made before 3.6.3 will not affect their keyset-specific customization after 3.6.3. and vice versa. Initial patch by Charles Wohlganger.

- [bpo-31206](https://bugs.python.org/issue?@action=redirect&bpo=31206) [https://bugs.python.org/issue?@action=redirect&bpo=31206]: IDLE: Factor HighPage(Frame) class from ConfigDialog. Patch by Cheryl Sabella.
- [bpo-31001](https://bugs.python.org/issue?@action=redirect&bpo=31001) [https://bugs.python.org/issue?@action=redirect&bpo=31001]: Add tests for configdialog highlight tab. Patch by Cheryl Sabella.
- [bpo-31205](https://bugs.python.org/issue?@action=redirect&bpo=31205) [https://bugs.python.org/issue?@action=redirect&bpo=31205]: IDLE: Factor KeysPage(Frame) class from ConfigDialog. The slightly modified tests continue to pass. Patch by Cheryl Sabella.
- [bpo-31130](https://bugs.python.org/issue?@action=redirect&bpo=31130) [https://bugs.python.org/issue?@action=redirect&bpo=31130]: IDLE – stop leaks in test\_configdialog. Initial patch by Victor Stinner.
- [bpo-31002](https://bugs.python.org/issue?@action=redirect&bpo=31002) [https://bugs.python.org/issue?@action=redirect&bpo=31002]: Add tests for configdialog keys tab. Patch by Cheryl Sabella.
- [bpo-19903](https://bugs.python.org/issue?@action=redirect&bpo=19903) [https://bugs.python.org/issue?@action=redirect&bpo=19903]: IDLE: Calltips use `inspect.signature` instead of `inspect.getfullargspec`. This improves calltips for builtins converted to use Argument Clinic. Patch by Louie Lu.
- [bpo-31083](https://bugs.python.org/issue?@action=redirect&bpo=31083) [https://bugs.python.org/issue?@action=redirect&bpo=31083]: IDLE - Add an outline of a TabPage class in configdialog. Update existing classes to match outline. Initial patch by Cheryl Sabella.
- [bpo-31050](https://bugs.python.org/issue?@action=redirect&bpo=31050) [https://bugs.python.org/issue?@action=redirect&bpo=31050]: Factor GenPage(Frame) class from ConfigDialog. The slightly modified tests continue to pass. Patch by Cheryl Sabella.
- [bpo-31004](https://bugs.python.org/issue?@action=redirect&bpo=31004) [https://bugs.python.org/issue?@action=redirect&bpo=31004]: IDLE - Factor FontPage(Frame) class from ConfigDialog. Slightly modified tests continue to pass. Fix General tests. Patch mostly by Cheryl Sabella.
- [bpo-30781](https://bugs.python.org/issue?@action=redirect&bpo=30781) [https://bugs.python.org/issue?@action=redirect&bpo=30781]

@action=redirect&bpo=30781]: IDLE - Use ttk widgets in ConfigDialog. Patches by Terry Jan Reedy and Cheryl Sabella.

- [bpo-31060](https://bugs.python.org/issue?@action=redirect&bpo=31060) [https://bugs.python.org/issue?@action=redirect&bpo=31060]: IDLE - Finish rearranging methods of ConfigDialog Grouping methods pertaining to each tab and the buttons will aid writing tests and improving the tabs and will enable splitting the groups into classes.
- [bpo-30853](https://bugs.python.org/issue?@action=redirect&bpo=30853) [https://bugs.python.org/issue?@action=redirect&bpo=30853]: IDLE – Factor a VarTrace class out of ConfigDialog. Instance tracers manages pairs consisting of a tk variable and a callback function. When tracing is turned on, setting the variable calls the function. Test coverage for the new class is 100%.
- [bpo-31003](https://bugs.python.org/issue?@action=redirect&bpo=31003) [https://bugs.python.org/issue?@action=redirect&bpo=31003]: IDLE: Add more tests for General tab.
- [bpo-30993](https://bugs.python.org/issue?@action=redirect&bpo=30993) [https://bugs.python.org/issue?@action=redirect&bpo=30993]: IDLE - Improve configdialog font page and tests. In configdialog: Document causal pathways in create\_font\_tab docstring. Simplify some attribute names. Move set\_samples calls to var\_changed\_font (idea from Cheryl Sabella). Move related functions to positions after the create\_widgets function. In test\_configdialog: Fix test\_font\_set so not order dependent. Fix renamed test\_indent\_scale so it tests the widget. Adjust tests for movement of set\_samples call. Add tests for load functions. Put all font tests in one class and tab indent tests in another. Except for two lines, these tests completely cover the related functions.
- [bpo-30981](https://bugs.python.org/issue?@action=redirect&bpo=30981) [https://bugs.python.org/issue?@action=redirect&bpo=30981]: IDLE – Add more configdialog font page tests.
- [bpo-28523](https://bugs.python.org/issue?@action=redirect&bpo=28523) [https://bugs.python.org/issue?@action=redirect&bpo=28523]: IDLE: replace ‘colour’ with ‘color’ in configdialog.
- [bpo-30917](https://bugs.python.org/issue?@action=redirect&bpo=30917) [https://bugs.python.org/issue?@action=redirect&bpo=30917]: Add tests for idlelib.config.IdleConf. Increase coverage from 46% to 96%. Patch by Louie Lu.
- [bpo-30934](https://bugs.python.org/issue?@action=redirect&bpo=30934) [https://bugs.python.org/issue?@action=redirect&bpo=30934]: Document coverage details for

idlelib tests. Add section to idlelib/idle-test/README.txt. Include check that branches are taken both ways. Exclude IDLE-specific code that does not run during unit tests.

- [bpo-30913](https://bugs.python.org/issue?@action=redirect&bpo=30913) [https://bugs.python.org/issue?@action=redirect&bpo=30913]: IDLE: Document ConfigDialog tk Vars, methods, and widgets in docstrings This will facilitate improving the dialog and splitting up the class. Original patch by Cheryl Sabella.
- [bpo-30899](https://bugs.python.org/issue?@action=redirect&bpo=30899) [https://bugs.python.org/issue?@action=redirect&bpo=30899]: IDLE: Add tests for ConfigParser subclasses in config. Patch by Louie Lu.
- [bpo-30881](https://bugs.python.org/issue?@action=redirect&bpo=30881) [https://bugs.python.org/issue?@action=redirect&bpo=30881]: IDLE: Add docstrings to browser.py. Patch by Cheryl Sabella.
- [bpo-30851](https://bugs.python.org/issue?@action=redirect&bpo=30851) [https://bugs.python.org/issue?@action=redirect&bpo=30851]: IDLE: Remove unused variables in configdialog. One is a duplicate, one is set but cannot be altered by users. Patch by Cheryl Sabella.
- [bpo-30870](https://bugs.python.org/issue?@action=redirect&bpo=30870) [https://bugs.python.org/issue?@action=redirect&bpo=30870]: IDLE: In Settings dialog, select font with Up, Down keys as well as mouse. Initial patch by Louie Lu.
- [bpo-8231](https://bugs.python.org/issue?@action=redirect&bpo=8231) [https://bugs.python.org/issue?@action=redirect&bpo=8231]: IDLE: call config.IdleConf.GetUserCfgDir only once.
- [bpo-30779](https://bugs.python.org/issue?@action=redirect&bpo=30779) [https://bugs.python.org/issue?@action=redirect&bpo=30779]: IDLE: Factor ConfigChanges class from configdialog, put in config; test. \* In config, put dump test code in a function; run it and unittest in 'if \_\_name\_\_ == '\_\_main\_\_':'. \* Add class config.ConfigChanges based on changes\_class\_v4.py on bpo issue. \* Add class test\_config.ChangesTest, partly using configdialog\_tests\_v1.py. \* Revise configdialog to use ConfigChanges; see tracker msg297804. \* Revise test\_configdialog to match configdialog changes. \* Remove configdialog functions unused or moved to ConfigChanges. Cheryl Sabella contributed parts of the patch.
- [bpo-30777](https://bugs.python.org/issue?@action=redirect&bpo=30777) [https://bugs.python.org/issue?@action=redirect&bpo=30777]: IDLE: configdialog - Add docstrings and fix comments. Patch by Cheryl Sabella.
- [bpo-30495](https://bugs.python.org/issue?@action=redirect&bpo=30495) [https://bugs.python.org/issue?@action=redirect&bpo=30495]

@action=redirect&bpo=30495]: IDLE: Improve textview with docstrings, PEP8 names, and more tests. Patch by Cheryl Sabella.

- [bpo-30723](https://bugs.python.org/issue?@action=redirect&bpo=30723) [https://bugs.python.org/issue?@action=redirect&bpo=30723]: IDLE: Make several improvements to parenmatch. Add ‘parens’ style to highlight both opener and closer. Make ‘default’ style, which is not default, a synonym for ‘opener’. Make time-delay work the same with all styles. Add help for config dialog extensions tab, including help for parenmatch. Add new tests. Original patch by Charles Wohlganger.
- [bpo-30674](https://bugs.python.org/issue?@action=redirect&bpo=30674) [https://bugs.python.org/issue?@action=redirect&bpo=30674]: IDLE: add docstrings to grep module. Patch by Cheryl Sabella
- [bpo-21519](https://bugs.python.org/issue?@action=redirect&bpo=21519) [https://bugs.python.org/issue?@action=redirect&bpo=21519]: IDLE’s basic custom key entry dialog now detects duplicates properly. Original patch by Saimadhav Heblikar.
- [bpo-29910](https://bugs.python.org/issue?@action=redirect&bpo=29910) [https://bugs.python.org/issue?@action=redirect&bpo=29910]: IDLE no longer deletes a character after commenting out a region by a key shortcut. Add `return 'break'` for this and other potential conflicts between IDLE and default key bindings.
- [bpo-30728](https://bugs.python.org/issue?@action=redirect&bpo=30728) [https://bugs.python.org/issue?@action=redirect&bpo=30728]: Review and change `idlelib.configdialog` names. Lowercase method and attribute names. Replace ‘colour’ with ‘color’, expand overly cryptic names, delete unneeded underscores. Replace `import *` with specific imports. Patches by Cheryl Sabella.
- [bpo-6739](https://bugs.python.org/issue?@action=redirect&bpo=6739) [https://bugs.python.org/issue?@action=redirect&bpo=6739]: IDLE: Verify user-entered key sequences by trying to bind them with tk. Add tests for all 3 validation functions. Original patch by G Polo. Tests added by Cheryl Sabella.
- [bpo-15786](https://bugs.python.org/issue?@action=redirect&bpo=15786) [https://bugs.python.org/issue?@action=redirect&bpo=15786]: Fix several problems with IDLE’s autocompletion box. The following should now work: clicking on selection box items; using the scrollbar; selecting an item by hitting Return. Hangs on MacOSX should no longer happen. Patch by Louie Lu.
- [bpo-25514](https://bugs.python.org/issue?@action=redirect&bpo=25514) [https://bugs.python.org/issue?@action=redirect&bpo=25514]

@action=redirect&bpo=25514]: Add doc subsection about IDLE failure to start. Popup no-connection message directs users to this section.

- [bpo-30642](https://bugs.python.org/issue?@action=redirect&bpo=30642) [https://bugs.python.org/issue?@action=redirect&bpo=30642]: Fix reference leaks in IDLE tests. Patches by Louie Lu and Terry Jan Reedy.
- [bpo-30495](https://bugs.python.org/issue?@action=redirect&bpo=30495) [https://bugs.python.org/issue?@action=redirect&bpo=30495]: Add docstrings for textview.py and use PEP8 names. Patches by Cheryl Sabella and Terry Jan Reedy.
- [bpo-30290](https://bugs.python.org/issue?@action=redirect&bpo=30290) [https://bugs.python.org/issue?@action=redirect&bpo=30290]: Help-about: use pep8 names and add tests. Increase coverage to 100%. Patches by Louie Lu, Cheryl Sabella, and Terry Jan Reedy.
- [bpo-30303](https://bugs.python.org/issue?@action=redirect&bpo=30303) [https://bugs.python.org/issue?@action=redirect&bpo=30303]: Add \_utest option to textview; add new tests. Increase coverage to 100%. Patches by Louie Lu and Terry Jan Reedy.
- [bpo-29071](https://bugs.python.org/issue?@action=redirect&bpo=29071) [https://bugs.python.org/issue?@action=redirect&bpo=29071]: IDLE colors f-string prefixes (but not invalid ur prefixes).
- [bpo-28572](https://bugs.python.org/issue?@action=redirect&bpo=28572) [https://bugs.python.org/issue?@action=redirect&bpo=28572]: Add 10% to coverage of IDLE's test\_configdialog. Update and augment description of the configuration system.

## Tools/Demos

- [bpo-30983](https://bugs.python.org/issue?@action=redirect&bpo=30983) [https://bugs.python.org/issue?@action=redirect&bpo=30983]: gdb integration commands (py-bt, etc.) work on optimized shared builds now, too. [PEP 523](https://peps.python.org/pep-0523/) [https://peps.python.org/pep-0523/] introduced `_PyEval_EvalFrameDefault` which inlines `PyEval_EvalFrameEx` on non-debug shared builds. This broke the ability to use py-bt, py-up, and a few other Python-specific gdb integrations. The problem is fixed by only looking for `_PyEval_EvalFrameDefault` frames in python-gdb.py. Original patch by Bruno “Polaco” Penteado.
- [bpo-29748](https://bugs.python.org/issue?@action=redirect&bpo=29748) [https://bugs.python.org/issue?@action=redirect&bpo=29748]: Added the slice index converter in

## Argument Clinic.

- [bpo-24037](https://bugs.python.org/issue?@action=redirect&bpo=24037) [https://bugs.python.org/issue?@action=redirect&bpo=24037]: Argument Clinic now uses the converter `bool(accept={int})` rather than `int` for semantical booleans. This avoids repeating the default value for Python and C and will help in converting to `bool` in future.
- [bpo-29367](https://bugs.python.org/issue?@action=redirect&bpo=29367) [https://bugs.python.org/issue?@action=redirect&bpo=29367]: `python-gdb.py` now supports also `method-wrapper (wrapperobject)` objects.
- [bpo-28023](https://bugs.python.org/issue?@action=redirect&bpo=28023) [https://bugs.python.org/issue?@action=redirect&bpo=28023]: Fix `python-gdb.py` didn't support new dict implementation.
- [bpo-15369](https://bugs.python.org/issue?@action=redirect&bpo=15369) [https://bugs.python.org/issue?@action=redirect&bpo=15369]: The `pybench` and `pystone` microbenchmark have been removed from Tools. Please use the new Python benchmark suite <https://github.com/python/pyperformance> which is more reliable and includes a portable version of `pybench` working on Python 2 and Python 3.
- [bpo-28102](https://bugs.python.org/issue?@action=redirect&bpo=28102) [https://bugs.python.org/issue?@action=redirect&bpo=28102]: The `zipfile` module CLI now prints usage to `stderr`. Patch by Stephen J. Turnbull.

## C API

- [bpo-31338](https://bugs.python.org/issue?@action=redirect&bpo=31338) [https://bugs.python.org/issue?@action=redirect&bpo=31338]: Added the `Py_UNREACHABLE()` macro for code paths which are never expected to be reached. This and a few other useful macros are now documented in the C API manual.
- [bpo-30832](https://bugs.python.org/issue?@action=redirect&bpo=30832) [https://bugs.python.org/issue?@action=redirect&bpo=30832]: Remove own implementation for thread-local storage. CPython has provided the own implementation for thread-local storage (TLS) on Python/thread.c, it's used in the case which a platform has not supplied native TLS. However, currently all supported platforms (Windows and pthreads) have provided native TLS and defined the `Py_HAVE_NATIVE_TLS` macro with unconditional in any case.
- [bpo-30708](https://bugs.python.org/issue?@action=redirect&bpo=30708) [https://bugs.python.org/issue?@action=redirect&bpo=30708]

@action=redirect&bpo=30708]: PyUnicode\_AsWideCharString() now raises a ValueError if the second argument is NULL and the wchar\_t\* string contains null characters.

- [bpo-16500](https://bugs.python.org/issue?@action=redirect&bpo=16500) [https://bugs.python.org/issue?@action=redirect&bpo=16500]: Deprecate PyOS\_AfterFork() and add PyOS\_BeforeFork(), PyOS\_AfterFork\_Parent() and PyOS\_AfterFork\_Child().
- [bpo-6532](https://bugs.python.org/issue?@action=redirect&bpo=6532) [https://bugs.python.org/issue?@action=redirect&bpo=6532]: The type of results of PyThread\_start\_new\_thread() and PyThread\_get\_thread\_ident(), and the id parameter of PyThreadState\_SetAsyncExc() changed from “long” to “unsigned long”.
- [bpo-27867](https://bugs.python.org/issue?@action=redirect&bpo=27867) [https://bugs.python.org/issue?@action=redirect&bpo=27867]: Function PySlice\_GetIndicesEx() is deprecated and replaced with a macro if Py\_LIMITED\_API is not set or set to the value between 0x03050400 and 0x03060000 (not including) or 0x03060100 or higher. Added functions PySlice\_Unpack() and PySlice\_AdjustIndices().
- [bpo-29083](https://bugs.python.org/issue?@action=redirect&bpo=29083) [https://bugs.python.org/issue?@action=redirect&bpo=29083]: Fixed the declaration of some public API functions. PyArg\_VaParse() and PyArg\_VaParseTupleAndKeywords() were not available in limited API. PyArg\_ValidateKeywordArguments(), PyArg\_UnpackTuple() and Py\_BuildValue() were not available in limited API of version < 3.3 when PY\_SSIZE\_T\_CLEAN is defined.
- [bpo-28769](https://bugs.python.org/issue?@action=redirect&bpo=28769) [https://bugs.python.org/issue?@action=redirect&bpo=28769]: The result of PyUnicode\_AsUTF8AndSize() and PyUnicode\_AsUTF8() is now of type const char \* rather of char \*.
- [bpo-29058](https://bugs.python.org/issue?@action=redirect&bpo=29058) [https://bugs.python.org/issue?@action=redirect&bpo=29058]: All stable API extensions added after Python 3.2 are now available only when Py\_LIMITED\_API is set to the PY\_VERSION\_HEX value of the minimum Python version supporting this API.
- [bpo-28822](https://bugs.python.org/issue?@action=redirect&bpo=28822) [https://bugs.python.org/issue?@action=redirect&bpo=28822]: The index parameters *start* and *end* of PyUnicode\_FindChar() are now adjusted to behave like str[start:end].
- [bpo-28808](https://bugs.python.org/issue?@action=redirect&bpo=28808) [https://bugs.python.org/issue?@action=redirect&bpo=28808]

@action=redirect&bpo=28808]:

PyUnicode\_CompareWithASCIIString() now never raises exceptions.

- [bpo-28761](https://bugs.python.org/issue?@action=redirect&bpo=28761) [https://bugs.python.org/issue?@action=redirect&bpo=28761]: The fields name and doc of structures PyMemberDef, PyGetSetDef, PyStructSequence\_Field, PyStructSequence\_Desc, and wrapperbase are now of type `const char *` rather of `char *`.
- [bpo-28748](https://bugs.python.org/issue?@action=redirect&bpo=28748) [https://bugs.python.org/issue?@action=redirect&bpo=28748]: Private variable `_Py_PackageContext` is now of type `const char *` rather of `char *`.
- [bpo-19569](https://bugs.python.org/issue?@action=redirect&bpo=19569) [https://bugs.python.org/issue?@action=redirect&bpo=19569]: Compiler warnings are now emitted if use most of deprecated functions.
- [bpo-28426](https://bugs.python.org/issue?@action=redirect&bpo=28426) [https://bugs.python.org/issue?@action=redirect&bpo=28426]: Deprecated undocumented functions `PyUnicode_AsEncodedObject()`, `PyUnicode_AsDecodedObject()`, `PyUnicode_AsDecodedUnicode()` and `PyUnicode_AsEncodedUnicode()`.

## Python 3.6.6 final

*Release date: 2018-06-27*

There were no new changes in version 3.6.6.

## Python 3.6.6 release candidate 1

*Release date: 2018-06-11*

### Core and Builtins

- [bpo-33786](https://bugs.python.org/issue?@action=redirect&bpo=33786) [https://bugs.python.org/issue?@action=redirect&bpo=33786]: Fix asynchronous generators to handle `GeneratorExit` in `athrow()` correctly
- [bpo-30654](https://bugs.python.org/issue?@action=redirect&bpo=30654) [https://bugs.python.org/issue?@action=redirect&bpo=30654]

@action=redirect&bpo=30654]: Fixed reset of the SIGINT handler to SIG\_DFL on interpreter shutdown even when there was a custom handler set previously. Patch by Philipp Kerling.

- [bpo-33622](https://bugs.python.org/issue?@action=redirect&bpo=33622) [https://bugs.python.org/issue?@action=redirect&bpo=33622]: Fixed a leak when the garbage collector fails to add an object with the `__del__` method or referenced by it into the `gc.garbage` list.  
`PyGC_Collect()` can now be called when an exception is set and preserves it.
- [bpo-31849](https://bugs.python.org/issue?@action=redirect&bpo=31849) [https://bugs.python.org/issue?@action=redirect&bpo=31849]: Fix signed/unsigned comparison warning in pyhash.c.
- [bpo-33391](https://bugs.python.org/issue?@action=redirect&bpo=33391) [https://bugs.python.org/issue?@action=redirect&bpo=33391]: Fix a leak in `set_symmetric_difference()`.
- [bpo-28055](https://bugs.python.org/issue?@action=redirect&bpo=28055) [https://bugs.python.org/issue?@action=redirect&bpo=28055]: Fix unaligned accesses in `siphash24()`. Patch by Rolf Eike Beer.
- [bpo-33231](https://bugs.python.org/issue?@action=redirect&bpo=33231) [https://bugs.python.org/issue?@action=redirect&bpo=33231]: Fix potential memory leak in `normalizestring()`.
- [bpo-29922](https://bugs.python.org/issue?@action=redirect&bpo=29922) [https://bugs.python.org/issue?@action=redirect&bpo=29922]: Improved error messages in ‘async with’ when `__aenter__()` or `__aexit__()` return non-awaitable object.
- [bpo-33199](https://bugs.python.org/issue?@action=redirect&bpo=33199) [https://bugs.python.org/issue?@action=redirect&bpo=33199]: Fix `ma_version_tag` in dict implementation is uninitialized when copying from key-sharing dict.
- [bpo-33041](https://bugs.python.org/issue?@action=redirect&bpo=33041) [https://bugs.python.org/issue?@action=redirect&bpo=33041]: Fixed jumping when the function contains an `async for` loop.
- [bpo-32282](https://bugs.python.org/issue?@action=redirect&bpo=32282) [https://bugs.python.org/issue?@action=redirect&bpo=32282]: Fix an unnecessary `ifdef` in the include of `VersionHelpers.h` in `socketmodule` on Windows.
- [bpo-21983](https://bugs.python.org/issue?@action=redirect&bpo=21983) [https://bugs.python.org/issue?@action=redirect&bpo=21983]: Fix a crash in `ctypes.cast()` in case the type argument is a ctypes structured data type. Patch by Eryk Sun and Oren Milman.

## Library

- [bpo-30167](https://bugs.python.org/issue?@action=redirect&bpo=30167) [https://bugs.python.org/issue?@action=redirect&bpo=30167]: Prevent `site.main()` exception if `PYTHONSTARTUP` is set. Patch by Steve Weber.
- [bpo-33812](https://bugs.python.org/issue?@action=redirect&bpo=33812) [https://bugs.python.org/issue?@action=redirect&bpo=33812]: `Datetime` instance `d` with non-`None` `tzinfo`, but with `d.tzinfo.utcoffset(d)` returning `None` is now treated as naive by the `astimezone()` method.
- [bpo-30805](https://bugs.python.org/issue?@action=redirect&bpo=30805) [https://bugs.python.org/issue?@action=redirect&bpo=30805]: Avoid race condition with debug logging
- [bpo-33767](https://bugs.python.org/issue?@action=redirect&bpo=33767) [https://bugs.python.org/issue?@action=redirect&bpo=33767]: The concatenation (+) and repetition (\*) sequence operations now raise `TypeError` instead of `SystemError` when performed on `mmap.mmap` objects. Patch by Zackery Spytz.
- [bpo-32684](https://bugs.python.org/issue?@action=redirect&bpo=32684) [https://bugs.python.org/issue?@action=redirect&bpo=32684]: Fix gather to propagate cancellation of itself even with `return_exceptions`.
- [bpo-33674](https://bugs.python.org/issue?@action=redirect&bpo=33674) [https://bugs.python.org/issue?@action=redirect&bpo=33674]: Fix a race condition in `SSLProtocol.connection_made()` of `asyncio.sslproto`: start immediately the handshake instead of using `call_soon()`. Previously, `data_received()` could be called before the handshake started, causing the handshake to hang or fail.
- [bpo-31647](https://bugs.python.org/issue?@action=redirect&bpo=31647) [https://bugs.python.org/issue?@action=redirect&bpo=31647]: Fixed bug where calling `write_eof()` on a `_SelectorSocketTransport` after it's already closed raises `AttributeError`.
- [bpo-33672](https://bugs.python.org/issue?@action=redirect&bpo=33672) [https://bugs.python.org/issue?@action=redirect&bpo=33672]: Fix `Task.__repr__` crash with Cython's bogus coroutines
- [bpo-33469](https://bugs.python.org/issue?@action=redirect&bpo=33469) [https://bugs.python.org/issue?@action=redirect&bpo=33469]: Fix `RuntimeError` after closing loop that used `run_in_executor`
- [bpo-11874](https://bugs.python.org/issue?@action=redirect&bpo=11874) [https://bugs.python.org/issue?@action=redirect&bpo=11874]: Use a better regex when breaking usage into wrappable parts. Avoids bogus assertion errors from custom metavar strings.

- [bpo-30877](https://bugs.python.org/issue?@action=redirect&bpo=30877) [https://bugs.python.org/issue?@action=redirect&bpo=30877]: Fixed a bug in the Python implementation of the JSON decoder that prevented the cache of parsed strings from clearing after finishing the decoding. Based on patch by c-fos.
- [bpo-33548](https://bugs.python.org/issue?@action=redirect&bpo=33548) [https://bugs.python.org/issue?@action=redirect&bpo=33548]: `tempfile._candidate_tempdir_list` should consider common TEMP locations
- [bpo-33542](https://bugs.python.org/issue?@action=redirect&bpo=33542) [https://bugs.python.org/issue?@action=redirect&bpo=33542]: Prevent `uuid.get_node` from using a DUID instead of a MAC on Windows. Patch by Zvi Effron
- [bpo-26819](https://bugs.python.org/issue?@action=redirect&bpo=26819) [https://bugs.python.org/issue?@action=redirect&bpo=26819]: Fix race condition with **`ReadTransport.resume_reading`** in Windows proactor event loop.
- [bpo-28556](https://bugs.python.org/issue?@action=redirect&bpo=28556) [https://bugs.python.org/issue?@action=redirect&bpo=28556]: Minor fixes in typing module: add annotations to `NamedTuple.__new__`, pass `*args` and `**kwargs` in `Generic.__new__`. Original PRs by Paulius Šarka and Chad Dombrova.
- [bpo-20087](https://bugs.python.org/issue?@action=redirect&bpo=20087) [https://bugs.python.org/issue?@action=redirect&bpo=20087]: Updated alias mapping with glibc 2.27 supported locales.
- [bpo-33422](https://bugs.python.org/issue?@action=redirect&bpo=33422) [https://bugs.python.org/issue?@action=redirect&bpo=33422]: Fix trailing quotation marks getting deleted when looking up byte/string literals on pydoc. Patch by Andrés Delfino.
- [bpo-33197](https://bugs.python.org/issue?@action=redirect&bpo=33197) [https://bugs.python.org/issue?@action=redirect&bpo=33197]: Update error message when constructing invalid `inspect.Parameters` Patch by Dong-hee Na.
- [bpo-33383](https://bugs.python.org/issue?@action=redirect&bpo=33383) [https://bugs.python.org/issue?@action=redirect&bpo=33383]: Fixed crash in the `get()` method of the **`dbm.ndbm`** database object when it is called with a single argument.
- [bpo-33329](https://bugs.python.org/issue?@action=redirect&bpo=33329) [https://bugs.python.org/issue?@action=redirect&bpo=33329]: Fix multiprocessing regression on newer glibcs
- [bpo-991266](https://bugs.python.org/issue?@action=redirect&bpo=991266) [https://bugs.python.org/issue?@action=redirect&bpo=991266]

@action=redirect&bpo=991266]: Fix quoting of the `Comment` attribute of `http.cookies.SimpleCookie`.

- [bpo-33131](https://bugs.python.org/issue?@action=redirect&bpo=33131) [https://bugs.python.org/issue?@action=redirect&bpo=33131]: Upgrade bundled version of pip to 10.0.1.
- [bpo-33308](https://bugs.python.org/issue?@action=redirect&bpo=33308) [https://bugs.python.org/issue?@action=redirect&bpo=33308]: Fixed a crash in the `parser` module when converting an ST object to a tree of tuples or lists with `line_info=False` and `col_info=True`.
- [bpo-33263](https://bugs.python.org/issue?@action=redirect&bpo=33263) [https://bugs.python.org/issue?@action=redirect&bpo=33263]: Fix FD leak in `_SelectorSocketTransport` Patch by Vlad Starostin.
- [bpo-33256](https://bugs.python.org/issue?@action=redirect&bpo=33256) [https://bugs.python.org/issue?@action=redirect&bpo=33256]: Fix display of `<module>` call in the html produced by `cgib.html()`. Patch by Stéphane Blondon.
- [bpo-33203](https://bugs.python.org/issue?@action=redirect&bpo=33203) [https://bugs.python.org/issue?@action=redirect&bpo=33203]: `random.Random.choice()` now raises `IndexError` for empty sequences consistently even when called from subclasses without a `getrandbits()` implementation.
- [bpo-33224](https://bugs.python.org/issue?@action=redirect&bpo=33224) [https://bugs.python.org/issue?@action=redirect&bpo=33224]: Update `difflib.mdifff()` for [PEP 479](https://peps.python.org/pep-0479/) [https://peps.python.org/pep-0479/]. Convert an uncaught `StopIteration` in a generator into a return-statement.
- [bpo-33209](https://bugs.python.org/issue?@action=redirect&bpo=33209) [https://bugs.python.org/issue?@action=redirect&bpo=33209]: End framing at the end of C implementation of `pickle.Pickler.dump()`.
- [bpo-32861](https://bugs.python.org/issue?@action=redirect&bpo=32861) [https://bugs.python.org/issue?@action=redirect&bpo=32861]: The `urllib.robotparser`'s `__str__` representation now includes wildcard entries and the “Crawl-delay” and “Request-rate” fields. Patch by Michael Lazar.
- [bpo-33096](https://bugs.python.org/issue?@action=redirect&bpo=33096) [https://bugs.python.org/issue?@action=redirect&bpo=33096]: Allow `ttk.Treeview.insert` to insert iid that has a false boolean value. Note `iid=0` and `iid=False` would be same. Patch by Garvit Khatri.
- [bpo-33127](https://bugs.python.org/issue?@action=redirect&bpo=33127) [https://bugs.python.org/issue?@action=redirect&bpo=33127]: The `ssl` module now compiles with LibreSSL 2.7.1.
- [bpo-33021](https://bugs.python.org/issue?@action=redirect&bpo=33021) [https://bugs.python.org/issue?@action=redirect&bpo=33021]

@action=redirect&bpo=33021]: Release the GIL during fstat() calls, avoiding hang of all threads when calling mmap.mmap(), os.urandom(), and random.seed(). Patch by Nir Soffer.

- [bpo-27683](https://bugs.python.org/issue?@action=redirect&bpo=27683) [https://bugs.python.org/issue?@action=redirect&bpo=27683]: Fix a regression in `ipaddress` that result of `hosts()` is empty when the network is constructed by a tuple containing an integer mask and only 1 bit left for addresses.
- [bpo-32844](https://bugs.python.org/issue?@action=redirect&bpo=32844) [https://bugs.python.org/issue?@action=redirect&bpo=32844]: Fix wrong redirection of a low descriptor (0 or 1) to stderr in subprocess if another low descriptor is closed.
- [bpo-31908](https://bugs.python.org/issue?@action=redirect&bpo=31908) [https://bugs.python.org/issue?@action=redirect&bpo=31908]: Fix output of cover files for trace module command-line tool. Previously emitted cover files only when `--missing` option was used. Patch by Michael Selik.
- [bpo-31457](https://bugs.python.org/issue?@action=redirect&bpo=31457) [https://bugs.python.org/issue?@action=redirect&bpo=31457]: If nested log adapters are used, the inner `process()` methods are no longer omitted.
- [bpo-16865](https://bugs.python.org/issue?@action=redirect&bpo=16865) [https://bugs.python.org/issue?@action=redirect&bpo=16865]: Support arrays  $\geq 2$  GiB in `ctypes`. Patch by Segev Finer.
- [bpo-31238](https://bugs.python.org/issue?@action=redirect&bpo=31238) [https://bugs.python.org/issue?@action=redirect&bpo=31238]: pydoc: the `stop()` method of the private `ServerThread` class now waits until `DocServer.serve_until_quit()` completes and then explicitly sets its `docserver` attribute to `None` to break a reference cycle.

## Documentation

- [bpo-33503](https://bugs.python.org/issue?@action=redirect&bpo=33503) [https://bugs.python.org/issue?@action=redirect&bpo=33503]: Fix broken pypi link
- [bpo-33421](https://bugs.python.org/issue?@action=redirect&bpo=33421) [https://bugs.python.org/issue?@action=redirect&bpo=33421]: Add missing documentation for `typing.AsyncContextManager`.
- [bpo-33378](https://bugs.python.org/issue?@action=redirect&bpo=33378) [https://bugs.python.org/issue?@action=redirect&bpo=33378]: Add Korean language switcher for <https://docs.python.org/3/>

- [bpo-33276](https://bugs.python.org/issue?@action=redirect&bpo=33276) [https://bugs.python.org/issue?@action=redirect&bpo=33276]: Clarify that the `__path__` attribute on modules cannot be just any value.
- [bpo-33201](https://bugs.python.org/issue?@action=redirect&bpo=33201) [https://bugs.python.org/issue?@action=redirect&bpo=33201]: Modernize documentation for writing C extension types.
- [bpo-33195](https://bugs.python.org/issue?@action=redirect&bpo=33195) [https://bugs.python.org/issue?@action=redirect&bpo=33195]: Deprecate `Py_UNICODE` usage in `c-api/arg` document. `Py_UNICODE` related APIs are deprecated since Python 3.3, but it is missed in the document.
- [bpo-33126](https://bugs.python.org/issue?@action=redirect&bpo=33126) [https://bugs.python.org/issue?@action=redirect&bpo=33126]: Document `PyBuffer_ToContiguous()`.
- [bpo-27212](https://bugs.python.org/issue?@action=redirect&bpo=27212) [https://bugs.python.org/issue?@action=redirect&bpo=27212]: Modify documentation for the `islice()` recipe to consume initial values up to the start index.
- [bpo-28247](https://bugs.python.org/issue?@action=redirect&bpo=28247) [https://bugs.python.org/issue?@action=redirect&bpo=28247]: Update `zipapp` documentation to describe how to make standalone applications.
- [bpo-18802](https://bugs.python.org/issue?@action=redirect&bpo=18802) [https://bugs.python.org/issue?@action=redirect&bpo=18802]: Documentation changes for `ipaddress`. Patch by Jon Foster and Berker Peksag.
- [bpo-27428](https://bugs.python.org/issue?@action=redirect&bpo=27428) [https://bugs.python.org/issue?@action=redirect&bpo=27428]: Update documentation to clarify that `WindowsRegistryFinder` implements `MetaPathFinder`. (Patch by Himanshu Lakhara)
- [bpo-8243](https://bugs.python.org/issue?@action=redirect&bpo=8243) [https://bugs.python.org/issue?@action=redirect&bpo=8243]: Add a note about `curses.addch` and `curses.addstr` exception behavior when writing outside a window, or pad.
- [bpo-31432](https://bugs.python.org/issue?@action=redirect&bpo=31432) [https://bugs.python.org/issue?@action=redirect&bpo=31432]: Clarify meaning of `CERT_NONE`, `CERT_OPTIONAL`, and `CERT_REQUIRED` flags for `ssl.SSLContext.verify_mode`.

## Tests

- [bpo-33655](https://bugs.python.org/issue?@action=redirect&bpo=33655) [https://bugs.python.org/issue?@action=redirect&bpo=33655]: Ignore `test_posix_fallocate` failures on BSD platforms that might be due to running on ZFS.

- [bpo-19417](https://bugs.python.org/issue?@action=redirect&bpo=19417) [https://bugs.python.org/issue?@action=redirect&bpo=19417]: Add test\_bdb.py.

## Build

- [bpo-5755](https://bugs.python.org/issue?@action=redirect&bpo=5755) [https://bugs.python.org/issue?@action=redirect&bpo=5755]: Move `-Wstrict-prototypes` option to `CFLAGS_NODIST` from `OPT`. This option emitted annoying warnings when building extension modules written in C++.
- [bpo-33614](https://bugs.python.org/issue?@action=redirect&bpo=33614) [https://bugs.python.org/issue?@action=redirect&bpo=33614]: Ensures module definition files for the stable ABI on Windows are correctly regenerated.
- [bpo-33522](https://bugs.python.org/issue?@action=redirect&bpo=33522) [https://bugs.python.org/issue?@action=redirect&bpo=33522]: Enable CI builds on Visual Studio Team Services at <https://python.visualstudio.com/cpython>
- [bpo-33012](https://bugs.python.org/issue?@action=redirect&bpo=33012) [https://bugs.python.org/issue?@action=redirect&bpo=33012]: Add `-Wno-cast-function-type` for gcc 8 for silencing warnings about function casts like casting to `PyCFunction` in method definition lists.
- [bpo-33394](https://bugs.python.org/issue?@action=redirect&bpo=33394) [https://bugs.python.org/issue?@action=redirect&bpo=33394]: Enable the verbose build for extension modules, when GNU make is passed macros on the command line.

## Windows

- [bpo-33184](https://bugs.python.org/issue?@action=redirect&bpo=33184) [https://bugs.python.org/issue?@action=redirect&bpo=33184]: Update Windows installer to OpenSSL 1.0.2o.

## macOS

- [bpo-33184](https://bugs.python.org/issue?@action=redirect&bpo=33184) [https://bugs.python.org/issue?@action=redirect&bpo=33184]: Update macOS installer build to use OpenSSL 1.0.2o.

## IDLE

- [bpo-33656](https://bugs.python.org/issue?@action=redirect&bpo=33656) [https://bugs.python.org/issue?@action=redirect&bpo=33656]

@action=redirect&bpo=33656]: On Windows, add API call saying that tk scales for DPI. On Windows 8.1 + or 10, with DPI compatibility properties of the Python binary unchanged, and a monitor resolution greater than 96 DPI, this should make text and lines sharper. It should otherwise have no effect.

- [bpo-33768](https://bugs.python.org/issue?@action=redirect&bpo=33768) [https://bugs.python.org/issue?@action=redirect&bpo=33768]: Clicking on a context line moves that line to the top of the editor window.
- [bpo-33763](https://bugs.python.org/issue?@action=redirect&bpo=33763) [https://bugs.python.org/issue?@action=redirect&bpo=33763]: IDLE: Use read-only text widget for code context instead of label widget.
- [bpo-33664](https://bugs.python.org/issue?@action=redirect&bpo=33664) [https://bugs.python.org/issue?@action=redirect&bpo=33664]: Scroll IDLE editor text by lines. Previously, the mouse wheel and scrollbar slider moved text by a fixed number of pixels, resulting in partial lines at the top of the editor box. The change also applies to the shell and grep output windows, but not to read-only text views.
- [bpo-33679](https://bugs.python.org/issue?@action=redirect&bpo=33679) [https://bugs.python.org/issue?@action=redirect&bpo=33679]: Enable theme-specific color configuration for Code Context. Use the Highlights tab to see the setting for built-in themes or add settings to custom themes.
- [bpo-33642](https://bugs.python.org/issue?@action=redirect&bpo=33642) [https://bugs.python.org/issue?@action=redirect&bpo=33642]: Display up to maxlines non-blank lines for Code Context. If there is no current context, show a single blank line.
- [bpo-33628](https://bugs.python.org/issue?@action=redirect&bpo=33628) [https://bugs.python.org/issue?@action=redirect&bpo=33628]: IDLE: Cleanup codecontext.py and its test.
- [bpo-33564](https://bugs.python.org/issue?@action=redirect&bpo=33564) [https://bugs.python.org/issue?@action=redirect&bpo=33564]: IDLE's code context now recognizes async as a block opener.
- [bpo-29706](https://bugs.python.org/issue?@action=redirect&bpo=29706) [https://bugs.python.org/issue?@action=redirect&bpo=29706]: IDLE now colors async and await as keywords in 3.6. They become full keywords in 3.7.
- [bpo-21474](https://bugs.python.org/issue?@action=redirect&bpo=21474) [https://bugs.python.org/issue?@action=redirect&bpo=21474]: Update word/identifier definition from ascii to unicode. In text and entry boxes, this affects selection by double-click, movement left/right by control-left/right, and deletion left/right by control-BACKSPACE/

DEL.

- [bpo-33204](https://bugs.python.org/issue?@action=redirect&bpo=33204) [https://bugs.python.org/issue?@action=redirect&bpo=33204]: IDLE: consistently color invalid string prefixes. A ‘u’ string prefix cannot be paired with either ‘r’ or ‘f’. Consistently color as much of the prefix, starting at the right, as is valid. Revise and extend colorizer test.
- [bpo-32831](https://bugs.python.org/issue?@action=redirect&bpo=32831) [https://bugs.python.org/issue?@action=redirect&bpo=32831]: Add docstrings and tests for codecontext.

## Tools/Demos

- [bpo-33189](https://bugs.python.org/issue?@action=redirect&bpo=33189) [https://bugs.python.org/issue?@action=redirect&bpo=33189]: **pygettext.py** now recognizes only literal strings as docstrings and translatable strings, and rejects bytes literals and f-string expressions.
- [bpo-31920](https://bugs.python.org/issue?@action=redirect&bpo=31920) [https://bugs.python.org/issue?@action=redirect&bpo=31920]: Fixed handling directories as arguments in the `pygettext` script. Based on patch by Oleg Krasnikov.
- [bpo-29673](https://bugs.python.org/issue?@action=redirect&bpo=29673) [https://bugs.python.org/issue?@action=redirect&bpo=29673]: Fix `pystackv` and `pystack gdbinit` macros.
- [bpo-32885](https://bugs.python.org/issue?@action=redirect&bpo=32885) [https://bugs.python.org/issue?@action=redirect&bpo=32885]: Add an `-n` flag for `Tools/scripts/pathfix.py` to disable automatic backup creation (files with `~` suffix).
- [bpo-31583](https://bugs.python.org/issue?@action=redirect&bpo=31583) [https://bugs.python.org/issue?@action=redirect&bpo=31583]: Fix 2to3 for using with `-add-suffix` option but without `-output-dir` option for relative path to files in current directory.

## C API

- [bpo-32374](https://bugs.python.org/issue?@action=redirect&bpo=32374) [https://bugs.python.org/issue?@action=redirect&bpo=32374]: Document that `m_traverse` for multi-phase initialized modules can be called with `m_state=NULL`, and add a sanity check

# Python 3.6.5 final

*Release date: 2018-03-28*

## Tests

- [bpo-32872](https://bugs.python.org/issue?@action=redirect&bpo=32872) [https://bugs.python.org/issue?@action=redirect&bpo=32872]: Avoid regrtest compatibility issue with namespace packages.

## Build

- [bpo-33163](https://bugs.python.org/issue?@action=redirect&bpo=33163) [https://bugs.python.org/issue?@action=redirect&bpo=33163]: Upgrade pip to 9.0.3 and setuptools to v39.0.1.

# Python 3.6.5 release candidate 1

*Release date: 2018-03-13*

## Security

- [bpo-33001](https://bugs.python.org/issue?@action=redirect&bpo=33001) [https://bugs.python.org/issue?@action=redirect&bpo=33001]: Minimal fix to prevent buffer overrun in os.symlink on Windows
- [bpo-32981](https://bugs.python.org/issue?@action=redirect&bpo=32981) [https://bugs.python.org/issue?@action=redirect&bpo=32981]: Regexes in difflib and poplib were vulnerable to catastrophic backtracking. These regexes formed potential DOS vectors (REDOS). They have been refactored. This resolves CVE-2018-1060 and CVE-2018-1061. Patch by Jamie Davis.

## Core and Builtins

- [bpo-33026](https://bugs.python.org/issue?@action=redirect&bpo=33026) [https://bugs.python.org/issue?@action=redirect&bpo=33026]: Fixed jumping out of “with” block by setting f\_lineno.
- [bpo-17288](https://bugs.python.org/issue?@action=redirect&bpo=17288) [https://bugs.python.org/issue?@action=redirect&bpo=17288]:

@action=redirect&bpo=17288]: Prevent jumps from 'return' and 'exception' trace events.

- [bpo-32889](https://bugs.python.org/issue?@action=redirect&bpo=32889) [https://bugs.python.org/issue?@action=redirect&bpo=32889]: Update Valgrind suppression list to account for the rename of Py\_ADDRESS\_IN\_RANGE to address\_in\_range.
- [bpo-32650](https://bugs.python.org/issue?@action=redirect&bpo=32650) [https://bugs.python.org/issue?@action=redirect&bpo=32650]: Pdb and other debuggers dependent on bdb.py will correctly step over (next command) native coroutines. Patch by Pablo Galindo.
- [bpo-32685](https://bugs.python.org/issue?@action=redirect&bpo=32685) [https://bugs.python.org/issue?@action=redirect&bpo=32685]: Improve suggestion when the Python 2 form of print statement is either present on the same line as the header of a compound statement or else terminated by a semi-colon instead of a newline. Patch by Nitish Chandra.
- [bpo-32583](https://bugs.python.org/issue?@action=redirect&bpo=32583) [https://bugs.python.org/issue?@action=redirect&bpo=32583]: Fix possible crashing in builtin Unicode decoders caused by write out-of-bound errors when using customized decode error handlers.
- [bpo-26163](https://bugs.python.org/issue?@action=redirect&bpo=26163) [https://bugs.python.org/issue?@action=redirect&bpo=26163]: Improved frozenset() hash to create more distinct hash values when faced with datasets containing many similar values.
- [bpo-27169](https://bugs.python.org/issue?@action=redirect&bpo=27169) [https://bugs.python.org/issue?@action=redirect&bpo=27169]: The \_\_debug\_\_ constant is now optimized out at compile time. This fixes also [bpo-22091](https://bugs.python.org/issue?@action=redirect&bpo=22091) [https://bugs.python.org/issue?@action=redirect&bpo=22091].
- [bpo-32329](https://bugs.python.org/issue?@action=redirect&bpo=32329) [https://bugs.python.org/issue?@action=redirect&bpo=32329]: sys.flags.hash\_randomization is now properly set to 0 when hash randomization is turned off by PYTHONHASHSEED=0.
- [bpo-30416](https://bugs.python.org/issue?@action=redirect&bpo=30416) [https://bugs.python.org/issue?@action=redirect&bpo=30416]: The optimizer is now protected from spending much time doing complex calculations and consuming much memory for creating large constants in constant folding.
- [bpo-18533](https://bugs.python.org/issue?@action=redirect&bpo=18533) [https://bugs.python.org/issue?@action=redirect&bpo=18533]: repr() on a dict containing its

`own values()` or `items()` no longer raises `RecursionError`; `OrderedDict` similarly. Instead, use `...`, as for other recursive structures. Patch by Ben North.

- [bpo-32028](https://bugs.python.org/issue?@action=redirect&bpo=32028) [https://bugs.python.org/issue?@action=redirect&bpo=32028]: Leading whitespace is now correctly ignored when generating suggestions for converting Py2 print statements to Py3 builtin print function calls. Patch by Sanyam Khurana.
- [bpo-32137](https://bugs.python.org/issue?@action=redirect&bpo=32137) [https://bugs.python.org/issue?@action=redirect&bpo=32137]: The repr of deeply nested dict now raises a `RecursionError` instead of crashing due to a stack overflow.

## Library

- [bpo-33064](https://bugs.python.org/issue?@action=redirect&bpo=33064) [https://bugs.python.org/issue?@action=redirect&bpo=33064]: `lib2to3` now properly supports trailing commas after `*args` and `**kwargs` in function signatures.
- [bpo-31804](https://bugs.python.org/issue?@action=redirect&bpo=31804) [https://bugs.python.org/issue?@action=redirect&bpo=31804]: Avoid failing in `multiprocessing.Process` if the standard streams are closed or `None` at exit.
- [bpo-33037](https://bugs.python.org/issue?@action=redirect&bpo=33037) [https://bugs.python.org/issue?@action=redirect&bpo=33037]: Skip sending/receiving data after SSL transport closing.
- [bpo-30353](https://bugs.python.org/issue?@action=redirect&bpo=30353) [https://bugs.python.org/issue?@action=redirect&bpo=30353]: Fix ctypes pass-by-value for structs on 64-bit Cygwin/MinGW.
- [bpo-33009](https://bugs.python.org/issue?@action=redirect&bpo=33009) [https://bugs.python.org/issue?@action=redirect&bpo=33009]: Fix `inspect.signature()` for single-parameter `partialmethods`.
- [bpo-32969](https://bugs.python.org/issue?@action=redirect&bpo=32969) [https://bugs.python.org/issue?@action=redirect&bpo=32969]: Expose several missing constants in `zlib` and fix corresponding documentation.
- [bpo-32713](https://bugs.python.org/issue?@action=redirect&bpo=32713) [https://bugs.python.org/issue?@action=redirect&bpo=32713]: Fixed `tarfile.itn` handling of out-of-bounds float values. Patch by Joffrey Fuhrer.
- [bpo-30622](https://bugs.python.org/issue?@action=redirect&bpo=30622) [https://bugs.python.org/issue?@action=redirect&bpo=30622]: The `ssl` module now detects

missing NPN support in LibreSSL.

- [bpo-32922](https://bugs.python.org/issue?@action=redirect&bpo=32922) [https://bugs.python.org/issue?@action=redirect&bpo=32922]: `dbm.open()` now encodes filename with the filesystem encoding rather than default encoding.
- [bpo-32859](https://bugs.python.org/issue?@action=redirect&bpo=32859) [https://bugs.python.org/issue?@action=redirect&bpo=32859]: In `os.dup2`, don't check every call whether the `dup3` syscall exists or not.
- [bpo-21060](https://bugs.python.org/issue?@action=redirect&bpo=21060) [https://bugs.python.org/issue?@action=redirect&bpo=21060]: Rewrite confusing message from `setup.py` upload from “No dist file created in earlier command” to the more helpful “Must create and upload files in one command”.
- [bpo-32857](https://bugs.python.org/issue?@action=redirect&bpo=32857) [https://bugs.python.org/issue?@action=redirect&bpo=32857]: In `tkinter`, `after_cancel` (`None`) now raises a `ValueError` instead of canceling the first scheduled function. Patch by Cheryl Sabella.
- [bpo-32852](https://bugs.python.org/issue?@action=redirect&bpo=32852) [https://bugs.python.org/issue?@action=redirect&bpo=32852]: Make sure `sys.argv` remains as a list when running `trace`.
- [bpo-32841](https://bugs.python.org/issue?@action=redirect&bpo=32841) [https://bugs.python.org/issue?@action=redirect&bpo=32841]: Fixed `asyncio.Condition` issue which silently ignored cancellation after notifying and cancelling a conditional lock. Patch by Bar Harel.
- [bpo-31787](https://bugs.python.org/issue?@action=redirect&bpo=31787) [https://bugs.python.org/issue?@action=redirect&bpo=31787]: Fixed refleaks of `__init__()` methods in various modules. (Contributed by Oren Milman)
- [bpo-30157](https://bugs.python.org/issue?@action=redirect&bpo=30157) [https://bugs.python.org/issue?@action=redirect&bpo=30157]: Fixed guessing quote and delimiter in `csv.Sniffer.sniff()` when only the last field is quoted. Patch by Jake Davis.
- [bpo-32394](https://bugs.python.org/issue?@action=redirect&bpo=32394) [https://bugs.python.org/issue?@action=redirect&bpo=32394]: `socket`: Remove `TCP_FASTOPEN`, `TCP_KEEPCNT` flags on older version Windows during run-time.
- [bpo-32777](https://bugs.python.org/issue?@action=redirect&bpo=32777) [https://bugs.python.org/issue?@action=redirect&bpo=32777]: Fix a rare but potential pre-exec child process deadlock in `subprocess` on POSIX systems when marking file descriptors inheritable on `exec` in the child process. This bug appears to have been introduced in 3.4.

- [bpo-32647](https://bugs.python.org/issue?@action=redirect&bpo=32647) [https://bugs.python.org/issue?@action=redirect&bpo=32647]: The ctypes module used to depend on indirect linking for dlopen. The shared extension is now explicitly linked against libdl on platforms with dl.
- [bpo-32734](https://bugs.python.org/issue?@action=redirect&bpo=32734) [https://bugs.python.org/issue?@action=redirect&bpo=32734]: Fixed `asyncio.Lock()` safety issue which allowed acquiring and locking the same lock multiple times, without it being free. Patch by Bar Harel.
- [bpo-32727](https://bugs.python.org/issue?@action=redirect&bpo=32727) [https://bugs.python.org/issue?@action=redirect&bpo=32727]: Do not include name field in SMTP envelope from address. Patch by Stéphane Wirtel
- [bpo-27931](https://bugs.python.org/issue?@action=redirect&bpo=27931) [https://bugs.python.org/issue?@action=redirect&bpo=27931]: Fix email address header parsing error when the username is an empty quoted string. Patch by Xiang Zhang.
- [bpo-32304](https://bugs.python.org/issue?@action=redirect&bpo=32304) [https://bugs.python.org/issue?@action=redirect&bpo=32304]: distutils' upload command no longer corrupts tar files ending with a CR byte, and no longer tries to convert CR to CRLF in any of the upload text fields.
- [bpo-32502](https://bugs.python.org/issue?@action=redirect&bpo=32502) [https://bugs.python.org/issue?@action=redirect&bpo=32502]: `uuid.uuid1` no longer raises an exception if a 64-bit hardware address is encountered.
- [bpo-31848](https://bugs.python.org/issue?@action=redirect&bpo=31848) [https://bugs.python.org/issue?@action=redirect&bpo=31848]: Fix the error handling in `Aifc_read.initfp()` when the SSND chunk is not found. Patch by Zackery Spytz.
- [bpo-32555](https://bugs.python.org/issue?@action=redirect&bpo=32555) [https://bugs.python.org/issue?@action=redirect&bpo=32555]: On FreeBSD and Solaris, `os.strerror()` now always decode the byte string from the current locale encoding, rather than using ASCII/surrogateescape in some cases.
- [bpo-32521](https://bugs.python.org/issue?@action=redirect&bpo=32521) [https://bugs.python.org/issue?@action=redirect&bpo=32521]: The nis module is now compatible with new libnsl and headers location.
- [bpo-32473](https://bugs.python.org/issue?@action=redirect&bpo=32473) [https://bugs.python.org/issue?@action=redirect&bpo=32473]: Improve `ABCMeta._dump_registry()` output readability
- [bpo-32521](https://bugs.python.org/issue?@action=redirect&bpo=32521) [https://bugs.python.org/issue?@action=redirect&bpo=32521]: glibc has removed Sun RPC. Use replacement libtirpc headers and library in nis module.

- [bpo-32228](https://bugs.python.org/issue?@action=redirect&bpo=32228) [https://bugs.python.org/issue?@action=redirect&bpo=32228]: Ensure that `truncate()` preserves the file position (as reported by `tell()`) after writes longer than the buffer size.
- [bpo-26133](https://bugs.python.org/issue?@action=redirect&bpo=26133) [https://bugs.python.org/issue?@action=redirect&bpo=26133]: Don't unsubscribe signals in asyncio UNIX event loop on interpreter shutdown.
- [bpo-32185](https://bugs.python.org/issue?@action=redirect&bpo=32185) [https://bugs.python.org/issue?@action=redirect&bpo=32185]: The SSL module no longer sends IP addresses in SNI TLS extension on platforms with OpenSSL 1.0.2+ or inet\_pton.
- [bpo-32323](https://bugs.python.org/issue?@action=redirect&bpo=32323) [https://bugs.python.org/issue?@action=redirect&bpo=32323]: `urllib.parse.urlsplit()` does not convert zone-id (scope) to lower case for scoped IPv6 addresses in hostnames now.
- [bpo-32302](https://bugs.python.org/issue?@action=redirect&bpo=32302) [https://bugs.python.org/issue?@action=redirect&bpo=32302]: Fix `bdist_wininst` of `distutils` for CRT v142: it binary compatible with CRT v140.
- [bpo-32255](https://bugs.python.org/issue?@action=redirect&bpo=32255) [https://bugs.python.org/issue?@action=redirect&bpo=32255]: A single empty field is now always quoted when written into a CSV file. This allows to distinguish an empty row from a row consisting of a single empty field. Patch by Licht Takeuchi.
- [bpo-32277](https://bugs.python.org/issue?@action=redirect&bpo=32277) [https://bugs.python.org/issue?@action=redirect&bpo=32277]: Raise `NotImplementedError` instead of `SystemError` on platforms where `chmod(..., follow_symlinks=False)` is not supported. Patch by Anthony Sottile.
- [bpo-32199](https://bugs.python.org/issue?@action=redirect&bpo=32199) [https://bugs.python.org/issue?@action=redirect&bpo=32199]: The `getnode()` ip getter now uses 'ip link' instead of 'ip link list'.
- [bpo-27456](https://bugs.python.org/issue?@action=redirect&bpo=27456) [https://bugs.python.org/issue?@action=redirect&bpo=27456]: Ensure `TCP_NODELAY` is set on Linux. Tests by Victor Stinner.
- [bpo-31900](https://bugs.python.org/issue?@action=redirect&bpo=31900) [https://bugs.python.org/issue?@action=redirect&bpo=31900]: The `locale.localeconv()` function now sets temporarily the `LC_CTYPE` locale to the `LC_NUMERIC` locale to decode `decimal_point` and `thousands_sep` byte strings if they are non-ASCII or longer than 1 byte, and the `LC_NUMERIC` locale is different than the

LC\_CTYPE locale. This temporary change affects other threads. Same change for the `str.format()` method when formatting a number (`int`, `float`, `float` and subclasses) with the `n` type (ex: `'{:n}'.format(1234)`).

- [bpo-31802](https://bugs.python.org/issue?@action=redirect&bpo=31802) [https://bugs.python.org/issue?@action=redirect&bpo=31802]: Importing native path module (`posixpath`, `ntpath`) now works even if the `os` module still is not imported.

## Documentation

- [bpo-17232](https://bugs.python.org/issue?@action=redirect&bpo=17232) [https://bugs.python.org/issue?@action=redirect&bpo=17232]: Clarify docs for `-O` and `-OO`. Patch by Terry Reedy.
- [bpo-32800](https://bugs.python.org/issue?@action=redirect&bpo=32800) [https://bugs.python.org/issue?@action=redirect&bpo=32800]: Update link to w3c doc for xml default namespaces.
- [bpo-8722](https://bugs.python.org/issue?@action=redirect&bpo=8722) [https://bugs.python.org/issue?@action=redirect&bpo=8722]: Document `__getattr__()` behavior when property `get()` method raises `AttributeError`.
- [bpo-32614](https://bugs.python.org/issue?@action=redirect&bpo=32614) [https://bugs.python.org/issue?@action=redirect&bpo=32614]: Modify RE examples in documentation to use raw strings to prevent `DeprecationWarning` and add text to REGEX HOWTO to highlight the deprecation.
- [bpo-31972](https://bugs.python.org/issue?@action=redirect&bpo=31972) [https://bugs.python.org/issue?@action=redirect&bpo=31972]: Improve docstrings for `pathlib.PurePath` subclasses.
- [bpo-17799](https://bugs.python.org/issue?@action=redirect&bpo=17799) [https://bugs.python.org/issue?@action=redirect&bpo=17799]: Explain real behaviour of `sys.settrace` and `sys.setprofile` and their C-API counterparts regarding which type of events are received in each function. Patch by Pablo Galindo Salgado.

## Tests

- [bpo-32517](https://bugs.python.org/issue?@action=redirect&bpo=32517) [https://bugs.python.org/issue?@action=redirect&bpo=32517]: Fix failing `test_asyncio` on macOS 10.12.2+ due to transport of `KqueueSelector` loop was not being closed.

- [bpo-32721](https://bugs.python.org/issue?@action=redirect&bpo=32721) [https://bugs.python.org/issue?@action=redirect&bpo=32721]: Fix test\_hashlib to not fail if the \_md5 module is not built.
- [bpo-32252](https://bugs.python.org/issue?@action=redirect&bpo=32252) [https://bugs.python.org/issue?@action=redirect&bpo=32252]: Fix faulthandler\_suppress\_crash\_report() used to prevent core dump files when testing crashes. getrlimit() returns zero on success.
- [bpo-31518](https://bugs.python.org/issue?@action=redirect&bpo=31518) [https://bugs.python.org/issue?@action=redirect&bpo=31518]: Debian Unstable has disabled TLS 1.0 and 1.1 for SSLv23\_METHOD(). Change TLS/SSL protocol of some tests to PROTOCOL\_TLS or PROTOCOL\_TLSv1\_2 to make them pass on Debian.

## Build

- [bpo-32635](https://bugs.python.org/issue?@action=redirect&bpo=32635) [https://bugs.python.org/issue?@action=redirect&bpo=32635]: Fix segfault of the crypt module when libxcrypt is provided instead of libcrypt at the system.

## Windows

- [bpo-33016](https://bugs.python.org/issue?@action=redirect&bpo=33016) [https://bugs.python.org/issue?@action=redirect&bpo=33016]: Fix potential use of uninitialized memory in nt.\_getfinalpathname
- [bpo-32903](https://bugs.python.org/issue?@action=redirect&bpo=32903) [https://bugs.python.org/issue?@action=redirect&bpo=32903]: Fix a memory leak in os.chdir() on Windows if the current directory is set to a UNC path.
- [bpo-31966](https://bugs.python.org/issue?@action=redirect&bpo=31966) [https://bugs.python.org/issue?@action=redirect&bpo=31966]: Fixed WindowsConsoleIO.write() for writing empty data.
- [bpo-32409](https://bugs.python.org/issue?@action=redirect&bpo=32409) [https://bugs.python.org/issue?@action=redirect&bpo=32409]: Ensures activate.bat can handle Unicode contents.
- [bpo-32457](https://bugs.python.org/issue?@action=redirect&bpo=32457) [https://bugs.python.org/issue?@action=redirect&bpo=32457]: Improves handling of denormalized executable path when launching Python.
- [bpo-32370](https://bugs.python.org/issue?@action=redirect&bpo=32370) [https://bugs.python.org/issue?@action=redirect&bpo=32370]: Use the correct encoding for ipconfig output in the uuid module. Patch by Segev Finer.

- [bpo-29248](https://bugs.python.org/issue?@action=redirect&bpo=29248) [https://bugs.python.org/issue?@action=redirect&bpo=29248]: Fix `os.readlink()` on Windows, which was mistakenly treating the `PrintNameOffset` field of the reparse data buffer as a number of characters instead of bytes. Patch by Craig Holmquist and SSE4.
- [bpo-32588](https://bugs.python.org/issue?@action=redirect&bpo=32588) [https://bugs.python.org/issue?@action=redirect&bpo=32588]: Create standalone `_distutils_findvs` module.

## macOS

- [bpo-32726](https://bugs.python.org/issue?@action=redirect&bpo=32726) [https://bugs.python.org/issue?@action=redirect&bpo=32726]: Provide an additional, more modern macOS installer variant that supports macOS 10.9+ systems in 64-bit mode only. Upgrade the supplied third-party libraries to OpenSSL 1.0.2n, XZ 5.2.3, and SQLite 3.22.0. The 10.9+ installer now links with and supplies its own copy of Tcl/Tk 8.6.8.

## IDLE

- [bpo-32984](https://bugs.python.org/issue?@action=redirect&bpo=32984) [https://bugs.python.org/issue?@action=redirect&bpo=32984]: Set `__file__` while running a startup file. Like Python, IDLE optionally runs one startup file in the Shell window before presenting the first interactive input prompt. For IDLE, `-s` runs a file named in environmental variable `IDLESTARTUP` or `PYTHONSTARTUP`; `-r file` runs `file`. Python sets `__file__` to the startup file name before running the file and unsets it before the first prompt. IDLE now does the same when run normally, without the `-n` option.
- [bpo-32940](https://bugs.python.org/issue?@action=redirect&bpo=32940) [https://bugs.python.org/issue?@action=redirect&bpo=32940]: Simplify and rename `StringTranslatePseudoMapping` in `pyparse`.
- [bpo-32916](https://bugs.python.org/issue?@action=redirect&bpo=32916) [https://bugs.python.org/issue?@action=redirect&bpo=32916]: Change `str` to `code` in `pyparse`.
- [bpo-32905](https://bugs.python.org/issue?@action=redirect&bpo=32905) [https://bugs.python.org/issue?@action=redirect&bpo=32905]: Remove unused code in `pyparse` module.

- [bpo-32874](https://bugs.python.org/issue?@action=redirect&bpo=32874) [https://bugs.python.org/issue?@action=redirect&bpo=32874]: Add tests for `pyparse`.
- [bpo-32837](https://bugs.python.org/issue?@action=redirect&bpo=32837) [https://bugs.python.org/issue?@action=redirect&bpo=32837]: Using the system and place-dependent default encoding for `open()` is a bad idea for IDLE's system and location-independent files.
- [bpo-32826](https://bugs.python.org/issue?@action=redirect&bpo=32826) [https://bugs.python.org/issue?@action=redirect&bpo=32826]: Add “encoding = utf-8” to `open()` in IDLE's `test_help_about`. GUI test `test_file_buttons()` only looks at initial `ascii`-only lines, but failed on systems where `open()` defaults to ‘`ascii`’ because `readline()` internally reads and decodes far enough ahead to encounter a non-`ascii` character in `CREDITS.txt`.
- [bpo-32765](https://bugs.python.org/issue?@action=redirect&bpo=32765) [https://bugs.python.org/issue?@action=redirect&bpo=32765]: Update `configdialog` General tab docstring to add new widgets to the widget list.

## Tools/Demos

- [bpo-24960](https://bugs.python.org/issue?@action=redirect&bpo=24960) [https://bugs.python.org/issue?@action=redirect&bpo=24960]: `2to3` and `lib2to3` can now read pickled grammar files using `pkgutil.get_data()` rather than probing the filesystem. This lets `2to3` and `lib2to3` work when run from a zipfile.
- [bpo-32222](https://bugs.python.org/issue?@action=redirect&bpo=32222) [https://bugs.python.org/issue?@action=redirect&bpo=32222]: Fix `pygettext` not extracting docstrings for functions with type annotated arguments. Patch by Toby Harradine.

## C API

- [bpo-29084](https://bugs.python.org/issue?@action=redirect&bpo=29084) [https://bugs.python.org/issue?@action=redirect&bpo=29084]: Undocumented C API for `OrderedDict` has been excluded from the limited C API. It was added by mistake and actually never worked in the limited C API.

## Python 3.6.4 final

*Release date: 2017-12-18*

There were no new code changes in version 3.6.4 since v3.6.4rc1.

## Python 3.6.4 release candidate 1

*Release date: 2017-12-05*

### Core and Builtins

- [bpo-32176](https://bugs.python.org/issue?@action=redirect&bpo=32176) [https://bugs.python.org/issue?@action=redirect&bpo=32176]: `co_flags.CO_NOFREE` is now always set correctly by the code object constructor based on freevars and cellvars, rather than needing to be set correctly by the caller. This ensures it will be cleared automatically when additional cell references are injected into a modified code object and function.
- [bpo-31949](https://bugs.python.org/issue?@action=redirect&bpo=31949) [https://bugs.python.org/issue?@action=redirect&bpo=31949]: Fixed several issues in printing tracebacks (`PyTraceBack_Print()`). Setting `sys.tracebacklimit` to 0 or less now suppresses printing tracebacks. Setting `sys.tracebacklimit` to None now causes using the default limit. Setting `sys.tracebacklimit` to an integer larger than `LONG_MAX` now means using the limit `LONG_MAX` rather than the default limit. Fixed integer overflows in the case of more than `2**31` traceback items on Windows. Fixed output errors handling.
- [bpo-30696](https://bugs.python.org/issue?@action=redirect&bpo=30696) [https://bugs.python.org/issue?@action=redirect&bpo=30696]: Fix the interactive interpreter looping endlessly when no memory.
- [bpo-20047](https://bugs.python.org/issue?@action=redirect&bpo=20047) [https://bugs.python.org/issue?@action=redirect&bpo=20047]: `Bytearray` methods `partition()` and `rpartition()` now accept only bytes-like objects as separator, as documented. In particular they now raise `TypeError` rather of returning a bogus result when an integer is passed as a separator.
- [bpo-31852](https://bugs.python.org/issue?@action=redirect&bpo=31852) [https://bugs.python.org/issue?@action=redirect&bpo=31852]: Fix a segmentation fault caused by a combination of the `async` soft keyword and continuation

lines.

- [bpo-21720](https://bugs.python.org/issue?@action=redirect&bpo=21720) [https://bugs.python.org/issue?@action=redirect&bpo=21720]: BytesWarning no longer emitted when the *fromlist* argument of `__import__()` or the `__all__` attribute of the module contain bytes instances.
- [bpo-31825](https://bugs.python.org/issue?@action=redirect&bpo=31825) [https://bugs.python.org/issue?@action=redirect&bpo=31825]: Fixed OverflowError in the ‘unicode-escape’ codec and in `codecs.escape_decode()` when decode an escaped non-ascii byte.
- [bpo-28603](https://bugs.python.org/issue?@action=redirect&bpo=28603) [https://bugs.python.org/issue?@action=redirect&bpo=28603]: Print the full context/cause chain of exceptions on interpreter exit, even if an exception in the chain is unhashable or compares equal to later ones. Patch by Zane Bitter.
- [bpo-31786](https://bugs.python.org/issue?@action=redirect&bpo=31786) [https://bugs.python.org/issue?@action=redirect&bpo=31786]: Fix timeout rounding in the select module to round correctly negative timeouts between -1.0 and 0.0. The functions now block waiting for events as expected. Previously, the call was incorrectly non-blocking. Patch by Pablo Galindo.
- [bpo-31642](https://bugs.python.org/issue?@action=redirect&bpo=31642) [https://bugs.python.org/issue?@action=redirect&bpo=31642]: Restored blocking “from package import module” by setting `sys.modules[“package.module”]` to None.
- [bpo-31626](https://bugs.python.org/issue?@action=redirect&bpo=31626) [https://bugs.python.org/issue?@action=redirect&bpo=31626]: Fixed a bug in debug memory allocator. There was a write to freed memory after shrinking a memory block.
- [bpo-31619](https://bugs.python.org/issue?@action=redirect&bpo=31619) [https://bugs.python.org/issue?@action=redirect&bpo=31619]: Fixed a ValueError when convert a string with large number of underscores to integer with binary base.
- [bpo-31592](https://bugs.python.org/issue?@action=redirect&bpo=31592) [https://bugs.python.org/issue?@action=redirect&bpo=31592]: Fixed an assertion failure in Python parser in case of a bad `unicodedata.normalize()`. Patch by Oren Milman.
- [bpo-31588](https://bugs.python.org/issue?@action=redirect&bpo=31588) [https://bugs.python.org/issue?@action=redirect&bpo=31588]: Raise a **TypeError** with a helpful error message when class creation fails due to a metaclass with a bad `__prepare__()` method. Patch by

Oren Milman.

- [bpo-31566](https://bugs.python.org/issue?@action=redirect&bpo=31566) [https://bugs.python.org/issue?@action=redirect&bpo=31566]: Fix an assertion failure in `_warnings.warn()` in case of a bad `__name__` global. Patch by Oren Milman.
- [bpo-31505](https://bugs.python.org/issue?@action=redirect&bpo=31505) [https://bugs.python.org/issue?@action=redirect&bpo=31505]: Fix an assertion failure in `json.make_encoder()` received a bad `encoder()` argument. Patch by Oren Milman.
- [bpo-31492](https://bugs.python.org/issue?@action=redirect&bpo=31492) [https://bugs.python.org/issue?@action=redirect&bpo=31492]: Fix assertion failures in case of failing to import from a module with a bad `__name__` attribute, and in case of failing to access an attribute of such a module. Patch by Oren Milman.
- [bpo-31490](https://bugs.python.org/issue?@action=redirect&bpo=31490) [https://bugs.python.org/issue?@action=redirect&bpo=31490]: Fix an assertion failure in `ctypes` class definition, in case the class has an attribute whose name is specified in `__anonymous__` but not in `__fields__`. Patch by Oren Milman.
- [bpo-31478](https://bugs.python.org/issue?@action=redirect&bpo=31478) [https://bugs.python.org/issue?@action=redirect&bpo=31478]: Fix an assertion failure in `_random.Random.seed()` in case the argument has a bad `__abs__()` method. Patch by Oren Milman.
- [bpo-31315](https://bugs.python.org/issue?@action=redirect&bpo=31315) [https://bugs.python.org/issue?@action=redirect&bpo=31315]: Fix an assertion failure in `imp.create_dynamic()`, when `spec.name` is not a string. Patch by Oren Milman.
- [bpo-31311](https://bugs.python.org/issue?@action=redirect&bpo=31311) [https://bugs.python.org/issue?@action=redirect&bpo=31311]: Fix a crash in the `__setstate__()` method of `ctypes._CData`, in case of a bad `__dict__`. Patch by Oren Milman.
- [bpo-31293](https://bugs.python.org/issue?@action=redirect&bpo=31293) [https://bugs.python.org/issue?@action=redirect&bpo=31293]: Fix crashes in true division and multiplication of a `timedelta` object by a float with a bad `as_integer_ratio()` method. Patch by Oren Milman.
- [bpo-31285](https://bugs.python.org/issue?@action=redirect&bpo=31285) [https://bugs.python.org/issue?@action=redirect&bpo=31285]: Fix an assertion failure in `warnings.warn_explicit`, when the return value of the received loader's `get_source()` has a bad `splitlines()` method. Patch by Oren Milman.

- [bpo-30817](https://bugs.python.org/issue?@action=redirect&bpo=30817) [https://bugs.python.org/issue?@action=redirect&bpo=30817]: **PyErr\_PrintEx()** clears now the ignored exception that may be raised by **\_PySys\_SetObjectId()**, for example when no memory.

## Library

- [bpo-28556](https://bugs.python.org/issue?@action=redirect&bpo=28556) [https://bugs.python.org/issue?@action=redirect&bpo=28556]: Two minor fixes for `typing` module: allow shallow copying instances of generic classes, improve interaction of `__init_subclass__` with generics. Original PRs by Ivan Levkivskiy.
- [bpo-27240](https://bugs.python.org/issue?@action=redirect&bpo=27240) [https://bugs.python.org/issue?@action=redirect&bpo=27240]: The header folding algorithm for the new email policies has been rewritten, which also fixes [bpo-30788](https://bugs.python.org/issue?@action=redirect&bpo=30788) [https://bugs.python.org/issue?@action=redirect&bpo=30788], [bpo-31831](https://bugs.python.org/issue?@action=redirect&bpo=31831) [https://bugs.python.org/issue?@action=redirect&bpo=31831], and [bpo-32182](https://bugs.python.org/issue?@action=redirect&bpo=32182) [https://bugs.python.org/issue?@action=redirect&bpo=32182]. In particular, RFC2231 folding is now done correctly.
- [bpo-32186](https://bugs.python.org/issue?@action=redirect&bpo=32186) [https://bugs.python.org/issue?@action=redirect&bpo=32186]: `io.FileIO.readall()` and `io.FileIO.read()` now release the GIL when getting the file size. Fixed hang of all threads with inaccessible NFS server. Patch by Nir Soffer.
- [bpo-12239](https://bugs.python.org/issue?@action=redirect&bpo=12239) [https://bugs.python.org/issue?@action=redirect&bpo=12239]: Make **`msilib.SummaryInformation.GetProperty()`** return `None` when the value of property is `VT_EMPTY`. Initial patch by Mark Mc Mahon.
- [bpo-31325](https://bugs.python.org/issue?@action=redirect&bpo=31325) [https://bugs.python.org/issue?@action=redirect&bpo=31325]: Fix wrong usage of **`collections.namedtuple()`** in the **`RobotFileParser.parse()`** method. Initial patch by Robin Wellner.
- [bpo-12382](https://bugs.python.org/issue?@action=redirect&bpo=12382) [https://bugs.python.org/issue?@action=redirect&bpo=12382]: **`msilib.OpenDatabase()`** now raises a better exception message when it couldn't open or create an MSI file. Initial patch by William Tisäter.
- [bpo-32110](https://bugs.python.org/issue?@action=redirect&bpo=32110) [https://bugs.python.org/issue?@action=redirect&bpo=32110]

@action=redirect&bpo=32110]:

`codecs.StreamReader.read(n)` now returns not more than *n* characters/bytes for non-negative *n*. This makes it compatible with `read()` methods of other file-like objects.

- [bpo-32072](https://bugs.python.org/issue?@action=redirect&bpo=32072) [https://bugs.python.org/issue?@action=redirect&bpo=32072]: Fixed issues with binary plists: Fixed saving bytearrays. Identical objects will be saved only once. Equal references will be load as identical objects. Added support for saving and loading recursive data structures.
- [bpo-32034](https://bugs.python.org/issue?@action=redirect&bpo=32034) [https://bugs.python.org/issue?@action=redirect&bpo=32034]: Make `asyncio.IncompleteReadError` and `LimitOverrunError` pickleable.
- [bpo-32015](https://bugs.python.org/issue?@action=redirect&bpo=32015) [https://bugs.python.org/issue?@action=redirect&bpo=32015]: Fixed the looping of `asyncio` in the case of reconnection the socket during waiting `async read/write` from/to the socket.
- [bpo-32011](https://bugs.python.org/issue?@action=redirect&bpo=32011) [https://bugs.python.org/issue?@action=redirect&bpo=32011]: Restored support of loading marshal files with the `TYPE_INT64` code. These files can be produced in Python 2.7.
- [bpo-31970](https://bugs.python.org/issue?@action=redirect&bpo=31970) [https://bugs.python.org/issue?@action=redirect&bpo=31970]: Reduce performance overhead of `asyncio` debug mode.
- [bpo-9678](https://bugs.python.org/issue?@action=redirect&bpo=9678) [https://bugs.python.org/issue?@action=redirect&bpo=9678]: Fixed determining the MAC address in the `uuid` module: Using `ifconfig` on NetBSD and OpenBSD. Using `arp` on Linux, FreeBSD, NetBSD and OpenBSD. Based on patch by Takayuki Shimizukawa.
- [bpo-30057](https://bugs.python.org/issue?@action=redirect&bpo=30057) [https://bugs.python.org/issue?@action=redirect&bpo=30057]: Fix potential missed signal in `signal.signal()`.
- [bpo-31933](https://bugs.python.org/issue?@action=redirect&bpo=31933) [https://bugs.python.org/issue?@action=redirect&bpo=31933]: Fix `Blake2` params `leaf_size` and `node_offset` on big endian platforms. Patch by Jack O'Connor.
- [bpo-31927](https://bugs.python.org/issue?@action=redirect&bpo=31927) [https://bugs.python.org/issue?@action=redirect&bpo=31927]: Fixed compilation of the `socket` module on NetBSD 8. Fixed assertion failure or reading arbitrary data when parse a `AF_BLUETOOTH` address on NetBSD and DragonFly BSD.

- [bpo-27666](https://bugs.python.org/issue?@action=redirect&bpo=27666) [https://bugs.python.org/issue?@action=redirect&bpo=27666]: Fixed stack corruption in `curses.box()` and `curses.ungetmouse()` when the size of types `chtype` or `mmask_t` is less than the size of C long. `curses.box()` now accepts characters as arguments. Based on patch by Steve Fink.
- [bpo-31897](https://bugs.python.org/issue?@action=redirect&bpo=31897) [https://bugs.python.org/issue?@action=redirect&bpo=31897]: `plistlib` now catches more errors when read binary plists and raises `InvalidFileException` instead of unexpected exceptions.
- [bpo-25720](https://bugs.python.org/issue?@action=redirect&bpo=25720) [https://bugs.python.org/issue?@action=redirect&bpo=25720]: Fix the method for checking pad state of `curses WINDOW`. Patch by Masayuki Yamamoto.
- [bpo-31893](https://bugs.python.org/issue?@action=redirect&bpo=31893) [https://bugs.python.org/issue?@action=redirect&bpo=31893]: Fixed the layout of the `kqueue_event` structure on OpenBSD and NetBSD. Fixed the comparison of the `kqueue_event` objects.
- [bpo-31891](https://bugs.python.org/issue?@action=redirect&bpo=31891) [https://bugs.python.org/issue?@action=redirect&bpo=31891]: Fixed building the `curses` module on NetBSD.
- [bpo-28416](https://bugs.python.org/issue?@action=redirect&bpo=28416) [https://bugs.python.org/issue?@action=redirect&bpo=28416]: Instances of `pickle.Pickler` subclass with the `persistent_id()` method and `pickle.Unpickler` subclass with the `persistent_load()` method no longer create reference cycles.
- [bpo-28326](https://bugs.python.org/issue?@action=redirect&bpo=28326) [https://bugs.python.org/issue?@action=redirect&bpo=28326]: Fix `multiprocessing.Process` when `stdout` and/or `stderr` is closed or `None`.
- [bpo-31457](https://bugs.python.org/issue?@action=redirect&bpo=31457) [https://bugs.python.org/issue?@action=redirect&bpo=31457]: If nested log adapters are used, the inner `process()` methods are no longer omitted.
- [bpo-31457](https://bugs.python.org/issue?@action=redirect&bpo=31457) [https://bugs.python.org/issue?@action=redirect&bpo=31457]: The `manager` property on `LoggerAdapter` objects is now properly settable.
- [bpo-31806](https://bugs.python.org/issue?@action=redirect&bpo=31806) [https://bugs.python.org/issue?@action=redirect&bpo=31806]: Fix timeout rounding in `time.sleep()`, `threading.Lock.acquire()` and `socket.socket.settimeout()` to round correctly negative timeouts between -1.0 and 0.0. The functions now block waiting for events as expected. Previously, the call was

incorrectly non-blocking. Patch by Pablo Galindo.

- [bpo-28603](https://bugs.python.org/issue?@action=redirect&bpo=28603) [https://bugs.python.org/issue?@action=redirect&bpo=28603]: `traceback`: Fix a `TypeError` that occurred during printing of exception tracebacks when either the current exception or an exception in its context/cause chain is unhashable. Patch by Zane Bitter.
- [bpo-30058](https://bugs.python.org/issue?@action=redirect&bpo=30058) [https://bugs.python.org/issue?@action=redirect&bpo=30058]: Fixed buffer overflow in `select.kqueue.control()`.
- [bpo-31770](https://bugs.python.org/issue?@action=redirect&bpo=31770) [https://bugs.python.org/issue?@action=redirect&bpo=31770]: Prevent a crash when calling the `__init__()` method of a `sqlite3.Cursor` object more than once. Patch by Oren Milman.
- [bpo-31672](https://bugs.python.org/issue?@action=redirect&bpo=31672) [https://bugs.python.org/issue?@action=redirect&bpo=31672]: `idpattern` in `string.Template` matched some non-ASCII characters. Now it uses `-i` regular expression local flag to avoid non-ASCII characters.
- [bpo-31764](https://bugs.python.org/issue?@action=redirect&bpo=31764) [https://bugs.python.org/issue?@action=redirect&bpo=31764]: Prevent a crash in `sqlite3.Cursor.close()` in case the `Cursor` object is uninitialized. Patch by Oren Milman.
- [bpo-31752](https://bugs.python.org/issue?@action=redirect&bpo=31752) [https://bugs.python.org/issue?@action=redirect&bpo=31752]: Fix possible crash in `timedelta` constructor called with custom integers.
- [bpo-31701](https://bugs.python.org/issue?@action=redirect&bpo=31701) [https://bugs.python.org/issue?@action=redirect&bpo=31701]: On Windows, `faulthandler.enable()` now ignores MSC and COM exceptions.
- [bpo-31728](https://bugs.python.org/issue?@action=redirect&bpo=31728) [https://bugs.python.org/issue?@action=redirect&bpo=31728]: Prevent crashes in `_elementtree` due to unsafe cleanup of `Element.text` and `Element.tail`. Patch by Oren Milman.
- [bpo-31620](https://bugs.python.org/issue?@action=redirect&bpo=31620) [https://bugs.python.org/issue?@action=redirect&bpo=31620]: an empty `asyncio.Queue` now doesn't leak memory when `queue.get` pollers timeout
- [bpo-31632](https://bugs.python.org/issue?@action=redirect&bpo=31632) [https://bugs.python.org/issue?@action=redirect&bpo=31632]: Fix method `set_protocol()` of class `_SSLProtocolTransport` in `asyncio` module. This method was previously modifying a wrong reference to the protocol.
- [bpo-31675](https://bugs.python.org/issue?@action=redirect&bpo=31675) [https://bugs.python.org/issue?@action=redirect&bpo=31675]

@action=redirect&bpo=31675]: Fixed memory leaks in Tkinter's methods `splitlist()` and `split()` when pass a string larger than 2 GiB.

- [bpo-31673](https://bugs.python.org/issue?@action=redirect&bpo=31673) [https://bugs.python.org/issue?@action=redirect&bpo=31673]: Fixed typo in the name of Tkinter's method `adderrorinfo()`.
- [bpo-30806](https://bugs.python.org/issue?@action=redirect&bpo=30806) [https://bugs.python.org/issue?@action=redirect&bpo=30806]: Fix the string representation of a `netrc` object.
- [bpo-15037](https://bugs.python.org/issue?@action=redirect&bpo=15037) [https://bugs.python.org/issue?@action=redirect&bpo=15037]: Added a workaround for `getkey()` in `curses` for `ncurses 5.7` and earlier.
- [bpo-25351](https://bugs.python.org/issue?@action=redirect&bpo=25351) [https://bugs.python.org/issue?@action=redirect&bpo=25351]: Avoid `venv` activate failures with undefined variables
- [bpo-25532](https://bugs.python.org/issue?@action=redirect&bpo=25532) [https://bugs.python.org/issue?@action=redirect&bpo=25532]: `inspect.unwrap()` will now only try to unwrap an object `sys.getrecursionlimit()` times, to protect against objects which create a new object on every attribute access.
- [bpo-30347](https://bugs.python.org/issue?@action=redirect&bpo=30347) [https://bugs.python.org/issue?@action=redirect&bpo=30347]: Stop crashes when concurrently iterate over `itertools.groupby()` iterators.
- [bpo-31516](https://bugs.python.org/issue?@action=redirect&bpo=31516) [https://bugs.python.org/issue?@action=redirect&bpo=31516]: `threading.current_thread()` should not return a dummy thread at shutdown.
- [bpo-31351](https://bugs.python.org/issue?@action=redirect&bpo=31351) [https://bugs.python.org/issue?@action=redirect&bpo=31351]: `python -m ensurepip` now exits with non-zero exit code if pip bootstrapping has failed.
- [bpo-31482](https://bugs.python.org/issue?@action=redirect&bpo=31482) [https://bugs.python.org/issue?@action=redirect&bpo=31482]: `random.seed()` now works with bytes in version = 1
- [bpo-31334](https://bugs.python.org/issue?@action=redirect&bpo=31334) [https://bugs.python.org/issue?@action=redirect&bpo=31334]: Fix `poll.poll([timeout])` in the `select` module for arbitrary negative timeouts on all OSes where it can only be a non-negative integer or -1. Patch by Riccardo Coccioli.
- [bpo-31310](https://bugs.python.org/issue?@action=redirect&bpo=31310) [https://bugs.python.org/issue?@action=redirect&bpo=31310]: `multiprocessing`'s semaphore

tracker should be launched again if crashed.

- [bpo-31308](https://bugs.python.org/issue?@action=redirect&bpo=31308) [https://bugs.python.org/issue?@action=redirect&bpo=31308]: Make multiprocessing's forkserver process immune to Ctrl-C and other user interruptions. If it crashes, restart it when necessary.

## Documentation

- [bpo-32105](https://bugs.python.org/issue?@action=redirect&bpo=32105) [https://bugs.python.org/issue?@action=redirect&bpo=32105]: Added `asyncio.BaseEventLoop.connect_accepted_socket` versionadded marker.
- [bpo-31537](https://bugs.python.org/issue?@action=redirect&bpo=31537) [https://bugs.python.org/issue?@action=redirect&bpo=31537]: Fix incorrect usage of `get_history_length` in readline documentation example code. Patch by Brad Smith.
- [bpo-30085](https://bugs.python.org/issue?@action=redirect&bpo=30085) [https://bugs.python.org/issue?@action=redirect&bpo=30085]: The operator functions without double underscores are preferred for clarity. The one with underscores are only kept for back-compatibility.

## Tests

- [bpo-31380](https://bugs.python.org/issue?@action=redirect&bpo=31380) [https://bugs.python.org/issue?@action=redirect&bpo=31380]: Skip `test_httpserver` `test_undecodable_file` on macOS: fails on APFS.
- [bpo-31705](https://bugs.python.org/issue?@action=redirect&bpo=31705) [https://bugs.python.org/issue?@action=redirect&bpo=31705]: Skip `test_socket.test_sha256()` on Linux kernel older than 4.5. The test fails with `ENOKEY` on kernel 3.10 (on ppc64le). A fix was merged into the kernel 4.5.
- [bpo-31174](https://bugs.python.org/issue?@action=redirect&bpo=31174) [https://bugs.python.org/issue?@action=redirect&bpo=31174]: Fix `test_tools.test_unparse`: `DirectoryTestCase` now stores the names sample to always test the same files. It prevents false alarms when hunting reference leaks.
- [bpo-30695](https://bugs.python.org/issue?@action=redirect&bpo=30695) [https://bugs.python.org/issue?@action=redirect&bpo=30695]: Add the `set_nomemory(start, stop)` and `remove_mem_hooks()` functions to the `_testcapi` module.

## Build

- [bpo-32059](https://bugs.python.org/issue?@action=redirect&bpo=32059) [https://bugs.python.org/issue?@action=redirect&bpo=32059]: `detect_modules()` in `setup.py` now also searches the `sysroot` paths when cross-compiling.
- [bpo-31957](https://bugs.python.org/issue?@action=redirect&bpo=31957) [https://bugs.python.org/issue?@action=redirect&bpo=31957]: Fixes Windows SDK version detection when building for Windows.
- [bpo-31609](https://bugs.python.org/issue?@action=redirect&bpo=31609) [https://bugs.python.org/issue?@action=redirect&bpo=31609]: Fixes quotes in `PCbuild/clean.bat`
- [bpo-31934](https://bugs.python.org/issue?@action=redirect&bpo=31934) [https://bugs.python.org/issue?@action=redirect&bpo=31934]: Abort the build when building out of a not clean source tree.
- [bpo-31926](https://bugs.python.org/issue?@action=redirect&bpo=31926) [https://bugs.python.org/issue?@action=redirect&bpo=31926]: Fixed Argument Clinic sometimes causing compilation errors when there was more than one function and/or method in a `.c` file with the same name.
- [bpo-28791](https://bugs.python.org/issue?@action=redirect&bpo=28791) [https://bugs.python.org/issue?@action=redirect&bpo=28791]: Update Windows builds to use SQLite 3.21.0.
- [bpo-28791](https://bugs.python.org/issue?@action=redirect&bpo=28791) [https://bugs.python.org/issue?@action=redirect&bpo=28791]: Update OS X installer to use SQLite 3.21.0.
- [bpo-22140](https://bugs.python.org/issue?@action=redirect&bpo=22140) [https://bugs.python.org/issue?@action=redirect&bpo=22140]: Prevent double substitution of prefix in `python-config.sh`.
- [bpo-31536](https://bugs.python.org/issue?@action=redirect&bpo=31536) [https://bugs.python.org/issue?@action=redirect&bpo=31536]: Avoid wholesale rebuild after **make regen-all** if nothing changed.

## Windows

- [bpo-1102](https://bugs.python.org/issue?@action=redirect&bpo=1102) [https://bugs.python.org/issue?@action=redirect&bpo=1102]: Return `None` when `View.Fetch()` returns `ERROR_NO_MORE_ITEMS` instead of raising `MSIError`. Initial patch by Anthony Tuininga.
- [bpo-31944](https://bugs.python.org/issue?@action=redirect&bpo=31944) [https://bugs.python.org/issue?@action=redirect&bpo=31944]: Fixes Modify button in Apps and Features dialog.

## macOS

- [bpo-31392](https://bugs.python.org/issue?@action=redirect&bpo=31392) [https://bugs.python.org/issue?@action=redirect&bpo=31392]: Update macOS installer to use OpenSSL 1.0.2m

## IDLE

- [bpo-32207](https://bugs.python.org/issue?@action=redirect&bpo=32207) [https://bugs.python.org/issue?@action=redirect&bpo=32207]: Improve tk event exception tracebacks in IDLE. When tk event handling is driven by IDLE's run loop, a confusing and distracting queue.EMPT traceback context is no longer added to tk event exception tracebacks. The traceback is now the same as when event handling is driven by user code. Patch based on a suggestion by Serhiy Storchaka.
- [bpo-32164](https://bugs.python.org/issue?@action=redirect&bpo=32164) [https://bugs.python.org/issue?@action=redirect&bpo=32164]: Delete unused file idlelib/tabbedpages.py. Use of TabbedPageSet in configdialog was replaced by ttk.Notebook.
- [bpo-32100](https://bugs.python.org/issue?@action=redirect&bpo=32100) [https://bugs.python.org/issue?@action=redirect&bpo=32100]: IDLE: Fix old and new bugs in pathbrowser; improve tests. Patch mostly by Cheryl Sabella.
- [bpo-31858](https://bugs.python.org/issue?@action=redirect&bpo=31858) [https://bugs.python.org/issue?@action=redirect&bpo=31858]: IDLE – Restrict shell prompt manipulation to the shell. Editor and output windows only see an empty last prompt line. This simplifies the code and fixes a minor bug when newline is inserted. Sys.ps1, if present, is read on Shell start-up, but is not set or changed.
- [bpo-31860](https://bugs.python.org/issue?@action=redirect&bpo=31860) [https://bugs.python.org/issue?@action=redirect&bpo=31860]: The font sample in the IDLE configuration dialog is now editable. Changes persist while IDLE remains open
- [bpo-31836](https://bugs.python.org/issue?@action=redirect&bpo=31836) [https://bugs.python.org/issue?@action=redirect&bpo=31836]: Test\_code\_module now passes if run after test\_idle, which sets ps1. The code module uses sys.ps1 if present or sets it to '> > >' if not. Test\_code\_module now properly tests both behaviors. Ditto for ps2.
- [bpo-28603](https://bugs.python.org/issue?@action=redirect&bpo=28603) [https://bugs.python.org/issue?@action=redirect&bpo=28603]

@action=redirect&bpo=28603]: Fix a TypeError that caused a shell restart when printing a traceback that includes an exception that is unhashable. Patch by Zane Bitter.

- [bpo-13802](https://bugs.python.org/issue?@action=redirect&bpo=13802) [https://bugs.python.org/issue?@action=redirect&bpo=13802]: Use non-Latin characters in the IDLE's Font settings sample. Even if one selects a font that defines a limited subset of the unicode Basic Multilingual Plane, tcl/tk will use other fonts that define a character. The expanded example give users of non-Latin characters a better idea of what they might see in IDLE's shell and editors. To make room for the expanded sample, frames on the Font tab are re-arranged. The Font/Tabs help explains a bit about the additions.
- [bpo-31460](https://bugs.python.org/issue?@action=redirect&bpo=31460) [https://bugs.python.org/issue?@action=redirect&bpo=31460]: Simplify the API of IDLE's Module Browser. Passing a widget instead of an flist with a root widget opens the option of creating a browser frame that is only part of a window. Passing a full file name instead of pieces assumed to come from a .py file opens the possibility of browsing python files that do not end in .py.
- [bpo-31649](https://bugs.python.org/issue?@action=redirect&bpo=31649) [https://bugs.python.org/issue?@action=redirect&bpo=31649]: IDLE - Make \_htest, \_utest parameters keyword only.
- [bpo-31559](https://bugs.python.org/issue?@action=redirect&bpo=31559) [https://bugs.python.org/issue?@action=redirect&bpo=31559]: Remove test order dependence in idle\_test.test\_browser.
- [bpo-31459](https://bugs.python.org/issue?@action=redirect&bpo=31459) [https://bugs.python.org/issue?@action=redirect&bpo=31459]: Rename IDLE's module browser from Class Browser to Module Browser. The original module-level class and method browser became a module browser, with the addition of module-level functions, years ago. Nested classes and functions were added yesterday. For back-compatibility, the virtual event < <open-class-browser> >, which appears on the Keys tab of the Settings dialog, is not changed. Patch by Cheryl Sabella.
- [bpo-31500](https://bugs.python.org/issue?@action=redirect&bpo=31500) [https://bugs.python.org/issue?@action=redirect&bpo=31500]: Default fonts now are scaled on HiDPI displays.
- [bpo-1612262](https://bugs.python.org/issue?@action=redirect&bpo=1612262) [https://bugs.python.org/issue?@action=redirect&bpo=1612262]: IDLE module browser now

shows nested classes and functions. Original patches for code and tests by Guilherme Polo and Cheryl Sabella, respectively.

## Tools/Demos

- [bpo-30722](https://bugs.python.org/issue?@action=redirect&bpo=30722) [https://bugs.python.org/issue?@action=redirect&bpo=30722]: Make redemo work with Python 3.6 and newer versions. Also, remove the `LOCALE` option since it doesn't work with string patterns in Python 3. Patch by Christoph Sarnowski.

## C API

- [bpo-20891](https://bugs.python.org/issue?@action=redirect&bpo=20891) [https://bugs.python.org/issue?@action=redirect&bpo=20891]: Fix `PyGILState_Ensure()`. When `PyGILState_Ensure()` is called in a non-Python thread before `PyEval_InitThreads()`, only call `PyEval_InitThreads()` after calling `PyThreadState_New()` to fix a crash.
- [bpo-31532](https://bugs.python.org/issue?@action=redirect&bpo=31532) [https://bugs.python.org/issue?@action=redirect&bpo=31532]: Fix memory corruption due to allocator mix in `getpath.c` between `Py_GetPath()` and `Py_SetPath()`
- [bpo-30697](https://bugs.python.org/issue?@action=redirect&bpo=30697) [https://bugs.python.org/issue?@action=redirect&bpo=30697]: The **`PyExc_RecursionErrorInst`** singleton is removed and **`PyErr_NormalizeException()`** does not use it anymore. This singleton is persistent and its members being never cleared may cause a segfault during finalization of the interpreter. See also [bpo-22898](https://bugs.python.org/issue?@action=redirect&bpo=22898) [https://bugs.python.org/issue?@action=redirect&bpo=22898].

## Python 3.6.3 final

*Release date: 2017-10-03*

## Library

- [bpo-31641](https://bugs.python.org/issue?@action=redirect&bpo=31641) [https://bugs.python.org/issue?@action=redirect&bpo=31641]: Re-allow arbitrary iterables in

`concurrent.futures.as_completed()`. Fixes regression in 3.6.3rc1.

## Build

- [bpo-31662](https://bugs.python.org/issue?@action=redirect&bpo=31662) [https://bugs.python.org/issue?@action=redirect&bpo=31662]: Fix typos in Windows `uploadrelease.bat` script. Fix Windows Doc build issues in `Doc/make.bat`.
- [bpo-31423](https://bugs.python.org/issue?@action=redirect&bpo=31423) [https://bugs.python.org/issue?@action=redirect&bpo=31423]: Fix building the PDF documentation with newer versions of Sphinx.

## Python 3.6.3 release candidate 1

*Release date: 2017-09-18*

## Security

- [bpo-29781](https://bugs.python.org/issue?@action=redirect&bpo=29781) [https://bugs.python.org/issue?@action=redirect&bpo=29781]: `SSLObject.version()` now correctly returns `None` when handshake over BIO has not been performed yet.
- [bpo-30947](https://bugs.python.org/issue?@action=redirect&bpo=30947) [https://bugs.python.org/issue?@action=redirect&bpo=30947]: Upgrade libexpat embedded copy from version 2.2.1 to 2.2.3 to get security fixes.

## Core and Builtins

- [bpo-31471](https://bugs.python.org/issue?@action=redirect&bpo=31471) [https://bugs.python.org/issue?@action=redirect&bpo=31471]: Fix an assertion failure in `subprocess.Popen()` on Windows, in case the `env` argument has a bad `keys()` method. Patch by Oren Milman.
- [bpo-31418](https://bugs.python.org/issue?@action=redirect&bpo=31418) [https://bugs.python.org/issue?@action=redirect&bpo=31418]: Fix an assertion failure in `PyErr_WriteUnraisable()` in case of an exception with a bad `__module__` attribute. Patch by Oren Milman.
- [bpo-31416](https://bugs.python.org/issue?@action=redirect&bpo=31416) [https://bugs.python.org/issue?@action=redirect&bpo=31416]: Fix assertion failures in case of a

bad warnings.filters or warnings.defaultaction. Patch by Oren Milman.

- [bpo-31411](https://bugs.python.org/issue?@action=redirect&bpo=31411) [https://bugs.python.org/issue?@action=redirect&bpo=31411]: Raise a `TypeError` instead of `SystemError` in case `warnings.onceregistry` is not a dictionary. Patch by Oren Milman.
- [bpo-31373](https://bugs.python.org/issue?@action=redirect&bpo=31373) [https://bugs.python.org/issue?@action=redirect&bpo=31373]: Fix several possible instances of undefined behavior due to floating-point demotions.
- [bpo-30465](https://bugs.python.org/issue?@action=redirect&bpo=30465) [https://bugs.python.org/issue?@action=redirect&bpo=30465]: Location information (`lineno` and `col_offset`) in f-strings is now (mostly) correct. This fixes tools like `flake8` from showing warnings on the wrong line (typically the first line of the file).
- [bpo-31343](https://bugs.python.org/issue?@action=redirect&bpo=31343) [https://bugs.python.org/issue?@action=redirect&bpo=31343]: Include `sys/sysmacros.h` for `major()`, `minor()`, and `makedev()`. GNU C library plans to remove the functions from `sys/types.h`.
- [bpo-31291](https://bugs.python.org/issue?@action=redirect&bpo=31291) [https://bugs.python.org/issue?@action=redirect&bpo=31291]: Fix an assertion failure in `zipimport.zipimporter.get_data` on Windows, when the return value of `pathname.replace('/', '\\')` isn't a string. Patch by Oren Milman.
- [bpo-31271](https://bugs.python.org/issue?@action=redirect&bpo=31271) [https://bugs.python.org/issue?@action=redirect&bpo=31271]: Fix an assertion failure in the `write()` method of `io.TextIOWrapper`, when the encoder doesn't return a bytes object. Patch by Oren Milman.
- [bpo-31243](https://bugs.python.org/issue?@action=redirect&bpo=31243) [https://bugs.python.org/issue?@action=redirect&bpo=31243]: Fix a crash in some methods of `io.TextIOWrapper`, when the decoder's state is invalid. Patch by Oren Milman.
- [bpo-30721](https://bugs.python.org/issue?@action=redirect&bpo=30721) [https://bugs.python.org/issue?@action=redirect&bpo=30721]: `print` now shows correct usage hint for using Python 2 redirection syntax. Patch by Sanyam Khurana.
- [bpo-31070](https://bugs.python.org/issue?@action=redirect&bpo=31070) [https://bugs.python.org/issue?@action=redirect&bpo=31070]: Fix a race condition in `importlib._get_module_lock()`.
- [bpo-31095](https://bugs.python.org/issue?@action=redirect&bpo=31095) [https://bugs.python.org/issue?@action=redirect&bpo=31095]: Fix potential crash during GC

caused by `tp_dealloc` which doesn't call `PyObject_GC_UnTrack()`.

- [bpo-31071](https://bugs.python.org/issue?@action=redirect&bpo=31071) [https://bugs.python.org/issue?@action=redirect&bpo=31071]: Avoid masking original `TypeError` in call with `*` unpacking when other arguments are passed.
- [bpo-30978](https://bugs.python.org/issue?@action=redirect&bpo=30978) [https://bugs.python.org/issue?@action=redirect&bpo=30978]: `str.format_map()` now passes key lookup exceptions through. Previously any exception was replaced with a `KeyError` exception.
- [bpo-30808](https://bugs.python.org/issue?@action=redirect&bpo=30808) [https://bugs.python.org/issue?@action=redirect&bpo=30808]: Use `_Py_atomic` API for concurrency-sensitive signal state.
- [bpo-30876](https://bugs.python.org/issue?@action=redirect&bpo=30876) [https://bugs.python.org/issue?@action=redirect&bpo=30876]: Relative import from unloaded package now reimports the package instead of failing with `SystemError`. Relative import from non-package now fails with `ImportError` rather than `SystemError`.
- [bpo-30703](https://bugs.python.org/issue?@action=redirect&bpo=30703) [https://bugs.python.org/issue?@action=redirect&bpo=30703]: Improve signal delivery. Avoid using `Py_AddPendingCall` from signal handler, to avoid calling signal-unsafe functions. The tests I'm adding here fail without the rest of the patch, on Linux and OS X. This means our signal delivery logic had defects (some signals could be lost).
- [bpo-30765](https://bugs.python.org/issue?@action=redirect&bpo=30765) [https://bugs.python.org/issue?@action=redirect&bpo=30765]: Avoid blocking in `pthread_mutex_lock()` when `PyThread_acquire_lock()` is asked not to block.
- [bpo-31161](https://bugs.python.org/issue?@action=redirect&bpo=31161) [https://bugs.python.org/issue?@action=redirect&bpo=31161]: Make sure the 'Missing parentheses' syntax error message is only applied to `SyntaxError`, not to subclasses. Patch by Martijn Pieters.
- [bpo-30814](https://bugs.python.org/issue?@action=redirect&bpo=30814) [https://bugs.python.org/issue?@action=redirect&bpo=30814]: Fixed a race condition when import a submodule from a package.
- [bpo-30597](https://bugs.python.org/issue?@action=redirect&bpo=30597) [https://bugs.python.org/issue?@action=redirect&bpo=30597]: `print` now shows expected input in custom error message when used as a Python 2 statement. Patch by Sanyam Khurana.

## Library

- [bpo-31499](https://bugs.python.org/issue?@action=redirect&bpo=31499) [https://bugs.python.org/issue?@action=redirect&bpo=31499]: xml.etree: Fix a crash when a parser is part of a reference cycle.
- [bpo-28556](https://bugs.python.org/issue?@action=redirect&bpo=28556) [https://bugs.python.org/issue?@action=redirect&bpo=28556]: typing.get\_type\_hints now finds the right globals for classes and modules by default (when no globals was specified by the caller).
- [bpo-28556](https://bugs.python.org/issue?@action=redirect&bpo=28556) [https://bugs.python.org/issue?@action=redirect&bpo=28556]: Speed improvements to the typing module. Original PRs by Ivan Levkivskyi and Mitar.
- [bpo-31544](https://bugs.python.org/issue?@action=redirect&bpo=31544) [https://bugs.python.org/issue?@action=redirect&bpo=31544]: The C accelerator module of ElementTree ignored exceptions raised when looking up TreeBuilder target methods in XMLParser().
- [bpo-31234](https://bugs.python.org/issue?@action=redirect&bpo=31234) [https://bugs.python.org/issue?@action=redirect&bpo=31234]: socket.create\_connection() now fixes manually a reference cycle: clear the variable storing the last exception on success.
- [bpo-31457](https://bugs.python.org/issue?@action=redirect&bpo=31457) [https://bugs.python.org/issue?@action=redirect&bpo=31457]: LoggerAdapter objects can now be nested.
- [bpo-31400](https://bugs.python.org/issue?@action=redirect&bpo=31400) [https://bugs.python.org/issue?@action=redirect&bpo=31400]: Improves SSL error handling to avoid losing error numbers.
- [bpo-28958](https://bugs.python.org/issue?@action=redirect&bpo=28958) [https://bugs.python.org/issue?@action=redirect&bpo=28958]: ssl.SSLContext() now uses OpenSSL error information when a context cannot be instantiated.
- [bpo-27340](https://bugs.python.org/issue?@action=redirect&bpo=27340) [https://bugs.python.org/issue?@action=redirect&bpo=27340]: SSLSocket.sendall() now uses memoryview to create slices of data. This fixes support for all bytes-like object. It is also more efficient and avoids costly copies.
- [bpo-31178](https://bugs.python.org/issue?@action=redirect&bpo=31178) [https://bugs.python.org/issue?@action=redirect&bpo=31178]: Fix string concatenation bug in rare error path in the subprocess module
- [bpo-31350](https://bugs.python.org/issue?@action=redirect&bpo=31350) [https://bugs.python.org/issue?@action=redirect&bpo=31350]: Micro-optimize

`asyncio._get_running_loop()` to become up to 10% faster.

- [bpo-31170](https://bugs.python.org/issue?@action=redirect&bpo=31170) [https://bugs.python.org/issue?@action=redirect&bpo=31170]: `expat`: Update `libexpat` from 2.2.3 to 2.2.4. Fix copying of partial characters for UTF-8 input (`libexpat` bug 115): <https://github.com/libexpat/libexpat/issues/115>
- [bpo-29136](https://bugs.python.org/issue?@action=redirect&bpo=29136) [https://bugs.python.org/issue?@action=redirect&bpo=29136]: Add TLS 1.3 cipher suites and `OP_NO_TLSv1_3`.
- [bpo-29212](https://bugs.python.org/issue?@action=redirect&bpo=29212) [https://bugs.python.org/issue?@action=redirect&bpo=29212]: Fix `concurrent.futures.thread.ThreadPoolExecutor` threads to have a non `repr()` based thread name by default when no `thread_name_prefix` is supplied. They will now identify themselves as “ThreadPoolExecutor-y\_n”.
- [bpo-9146](https://bugs.python.org/issue?@action=redirect&bpo=9146) [https://bugs.python.org/issue?@action=redirect&bpo=9146]: Fix a segmentation fault in `_hashopenssl` when standard hash functions such as `md5` are not available in the linked `OpenSSL` library. As in some special `FIPS-140` build environments.
- [bpo-27144](https://bugs.python.org/issue?@action=redirect&bpo=27144) [https://bugs.python.org/issue?@action=redirect&bpo=27144]: The `map()` and `as_completed()` iterators in `concurrent.futures` now avoid keeping a reference to yielded objects.
- [bpo-10746](https://bugs.python.org/issue?@action=redirect&bpo=10746) [https://bugs.python.org/issue?@action=redirect&bpo=10746]: Fix ctypes producing wrong [PEP 3118](https://peps.python.org/pep-3118/) [https://peps.python.org/pep-3118/] type codes for integer types.
- [bpo-22536](https://bugs.python.org/issue?@action=redirect&bpo=22536) [https://bugs.python.org/issue?@action=redirect&bpo=22536]: The `subprocess` module now sets the filename when `FileNotFoundError` is raised on POSIX systems due to the executable or `cwd` not being found.
- [bpo-31249](https://bugs.python.org/issue?@action=redirect&bpo=31249) [https://bugs.python.org/issue?@action=redirect&bpo=31249]: `concurrent.futures: WorkItem.run()` used by `ThreadPoolExecutor` now breaks a reference cycle between an exception object and the `WorkItem` object.
- [bpo-31247](https://bugs.python.org/issue?@action=redirect&bpo=31247) [https://bugs.python.org/issue?@action=redirect&bpo=31247]: `xmlrpc.server` now explicitly

breaks reference cycles when using `sys.exc_info()` in code handling exceptions.

- [bpo-30102](https://bugs.python.org/issue?@action=redirect&bpo=30102) [https://bugs.python.org/issue?@action=redirect&bpo=30102]: The `ssl` and `hashlib` modules now call `OPENSSL_add_all_algorithms_noconf()` on `OpenSSL < 1.1.0`. The function detects CPU features and enables optimizations on some CPU architectures such as `POWER8`. Patch is based on research from Gustavo Serra Scalet.
- [bpo-31185](https://bugs.python.org/issue?@action=redirect&bpo=31185) [https://bugs.python.org/issue?@action=redirect&bpo=31185]: Fixed miscellaneous errors in `asyncio` speedup module.
- [bpo-31135](https://bugs.python.org/issue?@action=redirect&bpo=31135) [https://bugs.python.org/issue?@action=redirect&bpo=31135]: `ttk`: fix the `destroy()` method of `LabeledScale` and `OptionMenu` classes. Call the parent `destroy()` method even if the used attribute doesn't exist. The `LabeledScale.destroy()` method now also explicitly clears label and scale attributes to help the garbage collector to destroy all widgets.
- [bpo-31107](https://bugs.python.org/issue?@action=redirect&bpo=31107) [https://bugs.python.org/issue?@action=redirect&bpo=31107]: Fix `copyreg._slotnames()` mangled attribute calculation for classes whose name begins with an underscore. Patch by Shane Harvey.
- [bpo-31061](https://bugs.python.org/issue?@action=redirect&bpo=31061) [https://bugs.python.org/issue?@action=redirect&bpo=31061]: Fixed a crash when using `asyncio` and threads.
- [bpo-30502](https://bugs.python.org/issue?@action=redirect&bpo=30502) [https://bugs.python.org/issue?@action=redirect&bpo=30502]: Fix handling of long oids in `ssl`. Based on patch by Christian Heimes.
- [bpo-30119](https://bugs.python.org/issue?@action=redirect&bpo=30119) [https://bugs.python.org/issue?@action=redirect&bpo=30119]: `ftplib.FTP.putline()` now throws `ValueError` on commands that contains `CR` or `LF`. Patch by Dong-hee Na.
- [bpo-30595](https://bugs.python.org/issue?@action=redirect&bpo=30595) [https://bugs.python.org/issue?@action=redirect&bpo=30595]: `multiprocessing.Queue.get()` with a timeout now polls its reader in non-blocking mode if it succeeded to acquire the lock but the acquire took longer than the timeout.
- [bpo-29403](https://bugs.python.org/issue?@action=redirect&bpo=29403) [https://bugs.python.org/issue?@action=redirect&bpo=29403]: Fix `unittest.mock`'s `autospec` to not fail on method-bound builtin functions. Patch by Aaron

Gallagher.

- [bpo-30961](https://bugs.python.org/issue?@action=redirect&bpo=30961) [https://bugs.python.org/issue?@action=redirect&bpo=30961]: Fix decrementing a borrowed reference in `tracemalloc`.
- [bpo-25684](https://bugs.python.org/issue?@action=redirect&bpo=25684) [https://bugs.python.org/issue?@action=redirect&bpo=25684]: Change `ttk.OptionMenu` radiobuttons to be unique across instances of `OptionMenu`.
- [bpo-30886](https://bugs.python.org/issue?@action=redirect&bpo=30886) [https://bugs.python.org/issue?@action=redirect&bpo=30886]: Fix `multiprocessing.Queue.join_thread()`: it now waits until the thread completes, even if the thread was started by the same process which created the queue.
- [bpo-29854](https://bugs.python.org/issue?@action=redirect&bpo=29854) [https://bugs.python.org/issue?@action=redirect&bpo=29854]: Fix segfault in readline when using readline's history-size option. Patch by Nir Soffer.
- [bpo-30319](https://bugs.python.org/issue?@action=redirect&bpo=30319) [https://bugs.python.org/issue?@action=redirect&bpo=30319]: `socket.close()` now ignores `ECONNRESET` error.
- [bpo-30828](https://bugs.python.org/issue?@action=redirect&bpo=30828) [https://bugs.python.org/issue?@action=redirect&bpo=30828]: Fix out of bounds write in **`asyncio.CFuture.remove_done_callback()`**.
- [bpo-30807](https://bugs.python.org/issue?@action=redirect&bpo=30807) [https://bugs.python.org/issue?@action=redirect&bpo=30807]: `signal.setitimer()` may disable the timer when passed a tiny value. Tiny values (such as 1e-6) are valid non-zero values for `setitimer()`, which is specified as taking microsecond-resolution intervals. However, on some platform, our conversion routine could convert 1e-6 into a zero interval, therefore disabling the timer instead of (re-)scheduling it.
- [bpo-30441](https://bugs.python.org/issue?@action=redirect&bpo=30441) [https://bugs.python.org/issue?@action=redirect&bpo=30441]: Fix bug when modifying `os.environ` while iterating over it
- [bpo-30532](https://bugs.python.org/issue?@action=redirect&bpo=30532) [https://bugs.python.org/issue?@action=redirect&bpo=30532]: Fix email header value parser dropping folding white space in certain cases.
- [bpo-30879](https://bugs.python.org/issue?@action=redirect&bpo=30879) [https://bugs.python.org/issue?@action=redirect&bpo=30879]: `os.listdir()` and `os.scandir()` now emit bytes names when called with bytes-like argument.
- [bpo-30746](https://bugs.python.org/issue?@action=redirect&bpo=30746) [https://bugs.python.org/issue?@action=redirect&bpo=30746]: Prohibited the '=' character in

environment variable names in `os.putenv()` and `os.spawn*()`.

- [bpo-29755](https://bugs.python.org/issue?@action=redirect&bpo=29755) [https://bugs.python.org/issue?@action=redirect&bpo=29755]: Fixed the `gettext()` family of functions in the `gettext` module. They now always return bytes.

## Documentation

- [bpo-31294](https://bugs.python.org/issue?@action=redirect&bpo=31294) [https://bugs.python.org/issue?@action=redirect&bpo=31294]: Fix incomplete code snippet in the `ZeroMQSocketListener` and `ZeroMQSocketHandler` examples and adapt them to Python 3.
- [bpo-21649](https://bugs.python.org/issue?@action=redirect&bpo=21649) [https://bugs.python.org/issue?@action=redirect&bpo=21649]: Add RFC 7525 and Mozilla server side TLS links to SSL documentation.
- [bpo-30803](https://bugs.python.org/issue?@action=redirect&bpo=30803) [https://bugs.python.org/issue?@action=redirect&bpo=30803]: Clarify doc on truth value testing. Original patch by Peter Thomassen.

## Tests

- [bpo-31320](https://bugs.python.org/issue?@action=redirect&bpo=31320) [https://bugs.python.org/issue?@action=redirect&bpo=31320]: Silence traceback in `test_ssl`
- [bpo-25674](https://bugs.python.org/issue?@action=redirect&bpo=25674) [https://bugs.python.org/issue?@action=redirect&bpo=25674]: Remove `sha256.tbs-internet.com` ssl test
- [bpo-30715](https://bugs.python.org/issue?@action=redirect&bpo=30715) [https://bugs.python.org/issue?@action=redirect&bpo=30715]: Address ALPN callback changes for OpenSSL 1.1.0f. The latest version behaves like OpenSSL 1.0.2 and no longer aborts handshake.
- [bpo-30822](https://bugs.python.org/issue?@action=redirect&bpo=30822) [https://bugs.python.org/issue?@action=redirect&bpo=30822]: `regtest`: Exclude `tzdata` from `regtest -all`. When running the test suite using `-use=all` / `-u all`, exclude `tzdata` since it makes `test_datetime` too slow (15-20 min on some buildbots) which then times out on some buildbots. Fix also `regtest` command line parser to allow passing `-u extralargefile` to run `test_zipfile64`.

## Build

- [bpo-30854](https://bugs.python.org/issue?@action=redirect&bpo=30854) [https://bugs.python.org/issue?@action=redirect&bpo=30854]: Fix compile error when compiling `-without-threads`. Patch by Masayuki Yamamoto.

## Windows

- [bpo-30389](https://bugs.python.org/issue?@action=redirect&bpo=30389) [https://bugs.python.org/issue?@action=redirect&bpo=30389]: Adds detection of Visual Studio 2017 to distutils on Windows.
- [bpo-31340](https://bugs.python.org/issue?@action=redirect&bpo=31340) [https://bugs.python.org/issue?@action=redirect&bpo=31340]: Change to building with MSVC v141 (included with Visual Studio 2017)
- [bpo-30581](https://bugs.python.org/issue?@action=redirect&bpo=30581) [https://bugs.python.org/issue?@action=redirect&bpo=30581]: `os.cpu_count()` now returns the correct number of processors on Windows when the number of logical processors is greater than 64.
- [bpo-30731](https://bugs.python.org/issue?@action=redirect&bpo=30731) [https://bugs.python.org/issue?@action=redirect&bpo=30731]: Add a missing `xmlns` to `python.manifest` so that it matches the schema.

## IDLE

- [bpo-31493](https://bugs.python.org/issue?@action=redirect&bpo=31493) [https://bugs.python.org/issue?@action=redirect&bpo=31493]: IDLE code context – fix code update and font update timers. Canceling timers prevents a warning message when `test_idle` completes.
- [bpo-31488](https://bugs.python.org/issue?@action=redirect&bpo=31488) [https://bugs.python.org/issue?@action=redirect&bpo=31488]: IDLE - Update non-key options in former extension classes. When applying configdialog changes, call `.reload` for each feature class. Change `ParenMatch` so updated options affect existing instances attached to existing editor windows.
- [bpo-31477](https://bugs.python.org/issue?@action=redirect&bpo=31477) [https://bugs.python.org/issue?@action=redirect&bpo=31477]: IDLE - Improve `rstrip` entry in doc. Strip trailing whitespace strips more than blank spaces. Multiline string literals are not skipped.
- [bpo-31480](https://bugs.python.org/issue?@action=redirect&bpo=31480) [https://bugs.python.org/issue?@action=redirect&bpo=31480]: IDLE - make tests pass with `zzdummy` extension disabled by default.
- [bpo-31421](https://bugs.python.org/issue?@action=redirect&bpo=31421) [https://bugs.python.org/issue?@action=redirect&bpo=31421]

@action=redirect&bpo=31421]: Document how IDLE runs tkinter programs. IDLE calls tcl/tk update in the background in order to make live interaction and experimentation with tkinter applications much easier.

- [bpo-31414](https://bugs.python.org/issue?@action=redirect&bpo=31414) [https://bugs.python.org/issue?@action=redirect&bpo=31414]: IDLE – fix tk entry box tests by deleting first. Adding to an int entry is not the same as deleting and inserting because int(“) will fail.
- [bpo-31051](https://bugs.python.org/issue?@action=redirect&bpo=31051) [https://bugs.python.org/issue?@action=redirect&bpo=31051]: Rearrange IDLE configdialog GenPage into Window, Editor, and Help sections.
- [bpo-30617](https://bugs.python.org/issue?@action=redirect&bpo=30617) [https://bugs.python.org/issue?@action=redirect&bpo=30617]: IDLE - Add docstrings and tests for outwin subclass of editor. Move some data and functions from the class to module level. Patch by Cheryl Sabella.
- [bpo-31287](https://bugs.python.org/issue?@action=redirect&bpo=31287) [https://bugs.python.org/issue?@action=redirect&bpo=31287]: IDLE - Do not modify tkinter.message in test\_configdialog.
- [bpo-27099](https://bugs.python.org/issue?@action=redirect&bpo=27099) [https://bugs.python.org/issue?@action=redirect&bpo=27099]: Convert IDLE’s built-in ‘extensions’ to regular features. About 10 IDLE features were implemented as supposedly optional extensions. Their different behavior could be confusing or worse for users and not good for maintenance. Hence the conversion. The main difference for users is that user configurable key bindings for builtin features are now handled uniformly. Now, editing a binding in a keyset only affects its value in the keyset. All bindings are defined together in the system-specific default keysets in config-extensions.def. All custom keysets are saved as a whole in config-extension.cfg. All take effect as soon as one clicks Apply or Ok. The affected events are ‘<<force-open-completions>>’, ‘<<expand-word>>’, ‘<<force-open-calltip>>’, ‘<<flash-paren>>’, ‘<<format-paragraph>>’, ‘<<run-module>>’, ‘<<check-module>>’, and ‘<<zoom-height>>’. Any (global) customizations made before 3.6.3 will not affect their keyset-specific customization after 3.6.3. and vice versa. Initial patch by Charles Wohlganger.
- [bpo-31206](https://bugs.python.org/issue?@action=redirect&bpo=31206) [https://bugs.python.org/issue?@action=redirect&bpo=31206]: IDLE: Factor HighPage(Frame)

class from ConfigDialog. Patch by Cheryl Sabella.

- [bpo-31001](https://bugs.python.org/issue?@action=redirect&bpo=31001) [https://bugs.python.org/issue?@action=redirect&bpo=31001]: Add tests for configdialog highlight tab. Patch by Cheryl Sabella.
- [bpo-31205](https://bugs.python.org/issue?@action=redirect&bpo=31205) [https://bugs.python.org/issue?@action=redirect&bpo=31205]: IDLE: Factor KeysPage(Frame) class from ConfigDialog. The slightly modified tests continue to pass. Patch by Cheryl Sabella.
- [bpo-31130](https://bugs.python.org/issue?@action=redirect&bpo=31130) [https://bugs.python.org/issue?@action=redirect&bpo=31130]: IDLE – stop leaks in test\_configdialog. Initial patch by Victor Stinner.
- [bpo-31002](https://bugs.python.org/issue?@action=redirect&bpo=31002) [https://bugs.python.org/issue?@action=redirect&bpo=31002]: Add tests for configdialog keys tab. Patch by Cheryl Sabella.
- [bpo-19903](https://bugs.python.org/issue?@action=redirect&bpo=19903) [https://bugs.python.org/issue?@action=redirect&bpo=19903]: IDLE: Calltips use **`inspect.signature`** instead of **`inspect.getfullargspec`**. This improves calltips for builtins converted to use Argument Clinic. Patch by Louie Lu.
- [bpo-31083](https://bugs.python.org/issue?@action=redirect&bpo=31083) [https://bugs.python.org/issue?@action=redirect&bpo=31083]: IDLE - Add an outline of a TabPage class in configdialog. Update existing classes to match outline. Initial patch by Cheryl Sabella.
- [bpo-31050](https://bugs.python.org/issue?@action=redirect&bpo=31050) [https://bugs.python.org/issue?@action=redirect&bpo=31050]: Factor GenPage(Frame) class from ConfigDialog. The slightly modified tests continue to pass. Patch by Cheryl Sabella.
- [bpo-31004](https://bugs.python.org/issue?@action=redirect&bpo=31004) [https://bugs.python.org/issue?@action=redirect&bpo=31004]: IDLE - Factor FontPage(Frame) class from ConfigDialog. Slightly modified tests continue to pass. Fix General tests. Patch mostly by Cheryl Sabella.
- [bpo-30781](https://bugs.python.org/issue?@action=redirect&bpo=30781) [https://bugs.python.org/issue?@action=redirect&bpo=30781]: IDLE - Use ttk widgets in ConfigDialog. Patches by Terry Jan Reedy and Cheryl Sabella.
- [bpo-31060](https://bugs.python.org/issue?@action=redirect&bpo=31060) [https://bugs.python.org/issue?@action=redirect&bpo=31060]: IDLE - Finish rearranging methods of ConfigDialog Grouping methods pertaining to each tab and the buttons will aid writing tests and improving the tabs and will enable splitting the groups into classes.
- [bpo-30853](https://bugs.python.org/issue?@action=redirect&bpo=30853) [https://bugs.python.org/issue?@action=redirect&bpo=30853]

@action=redirect&bpo=30853]: IDLE – Factor a VarTrace class out of ConfigDialog. Instance tracers manages pairs consisting of a tk variable and a callback function. When tracing is turned on, setting the variable calls the function. Test coverage for the new class is 100%.

- [bpo-31003](https://bugs.python.org/issue?@action=redirect&bpo=31003) [https://bugs.python.org/issue?@action=redirect&bpo=31003]: IDLE: Add more tests for General tab.
- [bpo-30993](https://bugs.python.org/issue?@action=redirect&bpo=30993) [https://bugs.python.org/issue?@action=redirect&bpo=30993]: IDLE - Improve configdialog font page and tests. In configdialog: Document causal pathways in create\_font\_tab docstring. Simplify some attribute names. Move set\_samples calls to var\_changed\_font (idea from Cheryl Sabella). Move related functions to positions after the create widgets function. In test\_configdialog: Fix test\_font\_set so not order dependent. Fix renamed test\_indent\_scale so it tests the widget. Adjust tests for movement of set\_samples call. Add tests for load functions. Put all font tests in one class and tab indent tests in another. Except for two lines, these tests completely cover the related functions.
- [bpo-30981](https://bugs.python.org/issue?@action=redirect&bpo=30981) [https://bugs.python.org/issue?@action=redirect&bpo=30981]: IDLE – Add more configdialog font page tests.
- [bpo-28523](https://bugs.python.org/issue?@action=redirect&bpo=28523) [https://bugs.python.org/issue?@action=redirect&bpo=28523]: IDLE: replace ‘colour’ with ‘color’ in configdialog.
- [bpo-30917](https://bugs.python.org/issue?@action=redirect&bpo=30917) [https://bugs.python.org/issue?@action=redirect&bpo=30917]: Add tests for idlelib.config.IdleConf. Increase coverage from 46% to 96%. Patch by Louie Lu.
- [bpo-30934](https://bugs.python.org/issue?@action=redirect&bpo=30934) [https://bugs.python.org/issue?@action=redirect&bpo=30934]: Document coverage details for idlelib tests. Add section to idlelib/idle-test/README.txt. Include check that branches are taken both ways. Exclude IDLE-specific code that does not run during unit tests.
- [bpo-30913](https://bugs.python.org/issue?@action=redirect&bpo=30913) [https://bugs.python.org/issue?@action=redirect&bpo=30913]: IDLE: Document ConfigDialog tk Vars, methods, and widgets in docstrings This will facilitate improving the dialog and splitting up the class. Original patch by Cheryl Sabella.

- [bpo-30899](https://bugs.python.org/issue?@action=redirect&bpo=30899) [https://bugs.python.org/issue?@action=redirect&bpo=30899]: IDLE: Add tests for ConfigParser subclasses in config. Patch by Louie Lu.
- [bpo-30881](https://bugs.python.org/issue?@action=redirect&bpo=30881) [https://bugs.python.org/issue?@action=redirect&bpo=30881]: IDLE: Add docstrings to browser.py. Patch by Cheryl Sabella.
- [bpo-30851](https://bugs.python.org/issue?@action=redirect&bpo=30851) [https://bugs.python.org/issue?@action=redirect&bpo=30851]: IDLE: Remove unused variables in configdialog. One is a duplicate, one is set but cannot be altered by users. Patch by Cheryl Sabella.
- [bpo-30870](https://bugs.python.org/issue?@action=redirect&bpo=30870) [https://bugs.python.org/issue?@action=redirect&bpo=30870]: IDLE: In Settings dialog, select font with Up, Down keys as well as mouse. Initial patch by Louie Lu.
- [bpo-8231](https://bugs.python.org/issue?@action=redirect&bpo=8231) [https://bugs.python.org/issue?@action=redirect&bpo=8231]: IDLE: call config.IdleConf.GetUserCfgDir only once.
- [bpo-30779](https://bugs.python.org/issue?@action=redirect&bpo=30779) [https://bugs.python.org/issue?@action=redirect&bpo=30779]: IDLE: Factor ConfigChanges class from configdialog, put in config; test. \* In config, put dump test code in a function; run it and unittest in 'if \_\_name\_\_ == '\_\_main\_\_':'. \* Add class config.ConfigChanges based on changes\_class\_v4.py on bpo issue. \* Add class test\_config.ChangesTest, partly using configdialog\_tests\_v1.py. \* Revise configdialog to use ConfigChanges; see tracker msg297804. \* Revise test\_configdialog to match configdialog changes. \* Remove configdialog functions unused or moved to ConfigChanges. Cheryl Sabella contributed parts of the patch.
- [bpo-30777](https://bugs.python.org/issue?@action=redirect&bpo=30777) [https://bugs.python.org/issue?@action=redirect&bpo=30777]: IDLE: configdialog - Add docstrings and fix comments. Patch by Cheryl Sabella.
- [bpo-30495](https://bugs.python.org/issue?@action=redirect&bpo=30495) [https://bugs.python.org/issue?@action=redirect&bpo=30495]: IDLE: Improve textview with docstrings, PEP8 names, and more tests. Patch by Cheryl Sabella.
- [bpo-30723](https://bugs.python.org/issue?@action=redirect&bpo=30723) [https://bugs.python.org/issue?@action=redirect&bpo=30723]: IDLE: Make several improvements to parenmatch. Add 'parens' style to highlight both opener and closer. Make 'default' style, which is not default, a synonym for 'opener'. Make time-delay work the same with

all styles. Add help for config dialog extensions tab, including help for parenmatch. Add new tests. Original patch by Charles Wohlganger.

- [bpo-30674](https://bugs.python.org/issue?@action=redirect&bpo=30674) [https://bugs.python.org/issue?@action=redirect&bpo=30674]: IDLE: add docstrings to grep module. Patch by Cheryl Sabella
- [bpo-21519](https://bugs.python.org/issue?@action=redirect&bpo=21519) [https://bugs.python.org/issue?@action=redirect&bpo=21519]: IDLE's basic custom key entry dialog now detects duplicates properly. Original patch by Saimadhav Heblikar.
- [bpo-29910](https://bugs.python.org/issue?@action=redirect&bpo=29910) [https://bugs.python.org/issue?@action=redirect&bpo=29910]: IDLE no longer deletes a character after commenting out a region by a key shortcut. Add `return 'break'` for this and other potential conflicts between IDLE and default key bindings.
- [bpo-30728](https://bugs.python.org/issue?@action=redirect&bpo=30728) [https://bugs.python.org/issue?@action=redirect&bpo=30728]: Review and change `idlelib.configdialog` names. Lowercase method and attribute names. Replace 'colour' with 'color', expand overly cryptic names, delete unneeded underscores. Replace `import *` with specific imports. Patches by Cheryl Sabella.
- [bpo-6739](https://bugs.python.org/issue?@action=redirect&bpo=6739) [https://bugs.python.org/issue?@action=redirect&bpo=6739]: IDLE: Verify user-entered key sequences by trying to bind them with tk. Add tests for all 3 validation functions. Original patch by G Polo. Tests added by Cheryl Sabella.

## Tools/Demos

- [bpo-30983](https://bugs.python.org/issue?@action=redirect&bpo=30983) [https://bugs.python.org/issue?@action=redirect&bpo=30983]: gdb integration commands (py-bt, etc.) work on optimized shared builds now, too. [PEP 523](https://peps.python.org/pep-0523/) [https://peps.python.org/pep-0523/] introduced `_PyEval_EvalFrameDefault` which inlines `PyEval_EvalFrameEx` on non-debug shared builds. This broke the ability to use py-bt, py-up, and a few other Python-specific gdb integrations. The problem is fixed by only looking for `_PyEval_EvalFrameDefault` frames in `python-gdb.py`. Original patch by Bruno "Polaco" Penteado.

# Python 3.6.2 final

*Release date: 2017-07-17*

No changes since release candidate 2

## Python 3.6.2 release candidate 2

*Release date: 2017-07-07*

### Security

- [bpo-30730](https://bugs.python.org/issue?@action=redirect&bpo=30730) [https://bugs.python.org/issue?@action=redirect&bpo=30730]: Prevent environment variables injection in subprocess on Windows. Prevent passing other environment variables and command arguments.
- [bpo-30694](https://bugs.python.org/issue?@action=redirect&bpo=30694) [https://bugs.python.org/issue?@action=redirect&bpo=30694]: Upgrade expat copy from 2.2.0 to 2.2.1 to get fixes of multiple security vulnerabilities including: CVE-2017-9233 (External entity infinite loop DoS), CVE-2016-9063 (Integer overflow, re-fix), CVE-2016-0718 (Fix regression bugs from 2.2.0's fix to CVE-2016-0718) and CVE-2012-0876 (Counter hash flooding with SipHash). Note: the CVE-2016-5300 (Use os-specific entropy sources like getrandom) doesn't impact Python, since Python already gets entropy from the OS to set the expat secret using `XML_SetHashSalt()`.
- [bpo-30500](https://bugs.python.org/issue?@action=redirect&bpo=30500) [https://bugs.python.org/issue?@action=redirect&bpo=30500]: Fix `urllib.parse.splithost()` to correctly parse fragments. For example, `splithost('://127.0.0.1#@evil.com/')` now correctly returns the `127.0.0.1` host, instead of treating `@evil.com` as the host in an authentication (`login@host`).

## Python 3.6.2 release candidate 1

*Release date: 2017-06-17*

## Security

- [bpo-29591](https://bugs.python.org/issue?@action=redirect&bpo=29591) [https://bugs.python.org/issue?@action=redirect&bpo=29591]: Update expat copy from 2.1.1 to 2.2.0 to get fixes of CVE-2016-0718 and CVE-2016-4472. See <https://sourceforge.net/p/expat/bugs/537/> for more information.

## Core and Builtins

- [bpo-30682](https://bugs.python.org/issue?@action=redirect&bpo=30682) [https://bugs.python.org/issue?@action=redirect&bpo=30682]: Removed a too-strict assertion that failed for certain f-strings, such as `eval("f\n")` and `eval("f\r")`.
- [bpo-30604](https://bugs.python.org/issue?@action=redirect&bpo=30604) [https://bugs.python.org/issue?@action=redirect&bpo=30604]: Move `co_extra_freefuncs` to not be per-thread to avoid crashes
- [bpo-29104](https://bugs.python.org/issue?@action=redirect&bpo=29104) [https://bugs.python.org/issue?@action=redirect&bpo=29104]: Fixed parsing backslashes in f-strings.
- [bpo-27945](https://bugs.python.org/issue?@action=redirect&bpo=27945) [https://bugs.python.org/issue?@action=redirect&bpo=27945]: Fixed various segfaults with dict when input collections are mutated during searching, inserting or comparing. Based on patches by Duane Griffin and Tim Mitchell.
- [bpo-25794](https://bugs.python.org/issue?@action=redirect&bpo=25794) [https://bugs.python.org/issue?@action=redirect&bpo=25794]: Fixed `type._setattr_()` and `type._delattr_()` for non-interned attribute names. Based on patch by Eryk Sun.
- [bpo-30039](https://bugs.python.org/issue?@action=redirect&bpo=30039) [https://bugs.python.org/issue?@action=redirect&bpo=30039]: If a `KeyboardInterrupt` happens when the interpreter is in the middle of resuming a chain of nested 'yield from' or 'await' calls, it's now correctly delivered to the innermost frame.
- [bpo-12414](https://bugs.python.org/issue?@action=redirect&bpo=12414) [https://bugs.python.org/issue?@action=redirect&bpo=12414]: `sys.getsizeof()` on a code object now returns the sizes which includes the code struct and sizes of objects which it references. Patch by Dong-hee Na.
- [bpo-29949](https://bugs.python.org/issue?@action=redirect&bpo=29949) [https://bugs.python.org/issue?@action=redirect&bpo=29949]: Fix memory usage regression of

set and frozenset object.

- [bpo-29935](https://bugs.python.org/issue?@action=redirect&bpo=29935) [https://bugs.python.org/issue?@action=redirect&bpo=29935]: Fixed error messages in the `index()` method of tuple, list and deque when pass indices of wrong type.
- [bpo-29859](https://bugs.python.org/issue?@action=redirect&bpo=29859) [https://bugs.python.org/issue?@action=redirect&bpo=29859]: Show correct error messages when any of the `pthread_*` calls in `thread_pthread.h` fails.
- [bpo-28876](https://bugs.python.org/issue?@action=redirect&bpo=28876) [https://bugs.python.org/issue?@action=redirect&bpo=28876]: `bool(range)` works even if `len(range)` raises `OverflowError`.
- [bpo-29600](https://bugs.python.org/issue?@action=redirect&bpo=29600) [https://bugs.python.org/issue?@action=redirect&bpo=29600]: Fix wrapping coroutine return values in `StopIteration`.
- [bpo-28856](https://bugs.python.org/issue?@action=redirect&bpo=28856) [https://bugs.python.org/issue?@action=redirect&bpo=28856]: Fix an oversight that `%b` format for bytes should support objects follow the buffer protocol.
- [bpo-29714](https://bugs.python.org/issue?@action=redirect&bpo=29714) [https://bugs.python.org/issue?@action=redirect&bpo=29714]: Fix a regression that bytes format may fail when containing zero bytes inside.
- [bpo-29478](https://bugs.python.org/issue?@action=redirect&bpo=29478) [https://bugs.python.org/issue?@action=redirect&bpo=29478]: If `max_line_length = None` is specified while using the `Compat32` policy, it is no longer ignored. Patch by Mircea Cosbuc.

## Library

- [bpo-30616](https://bugs.python.org/issue?@action=redirect&bpo=30616) [https://bugs.python.org/issue?@action=redirect&bpo=30616]: Functional API of enum allows to create empty enums. Patched by Dong-hee Na
- [bpo-30038](https://bugs.python.org/issue?@action=redirect&bpo=30038) [https://bugs.python.org/issue?@action=redirect&bpo=30038]: Fix race condition between signal delivery and wakeup file descriptor. Patch by Nathaniel Smith.
- [bpo-23894](https://bugs.python.org/issue?@action=redirect&bpo=23894) [https://bugs.python.org/issue?@action=redirect&bpo=23894]: `lib2to3` now recognizes `rb'...'` and `f'...'` strings.
- [bpo-23890](https://bugs.python.org/issue?@action=redirect&bpo=23890) [https://bugs.python.org/issue?@action=redirect&bpo=23890]: `unittest.TestCase.assertRaises()` now manually breaks a reference cycle to not keep objects

alive longer than expected.

- [bpo-30149](https://bugs.python.org/issue?@action=redirect&bpo=30149) [https://bugs.python.org/issue?@action=redirect&bpo=30149]: inspect.signature() now supports callables with variable-argument parameters wrapped with partialmethod. Patch by Dong-hee Na.
- [bpo-30645](https://bugs.python.org/issue?@action=redirect&bpo=30645) [https://bugs.python.org/issue?@action=redirect&bpo=30645]: Fix path calculation in imp.load\_package(), fixing it for cases when a package is only shipped with bytecodes. Patch by Alexandru Ardelean.
- [bpo-29931](https://bugs.python.org/issue?@action=redirect&bpo=29931) [https://bugs.python.org/issue?@action=redirect&bpo=29931]: Fixed comparison check for ipaddress.ip\_interface objects. Patch by Sanjay Sundaresan.
- [bpo-30605](https://bugs.python.org/issue?@action=redirect&bpo=30605) [https://bugs.python.org/issue?@action=redirect&bpo=30605]: re.compile() no longer raises a BytesWarning when compiling a bytes instance with misplaced inline modifier. Patch by Roy Williams.
- [bpo-24484](https://bugs.python.org/issue?@action=redirect&bpo=24484) [https://bugs.python.org/issue?@action=redirect&bpo=24484]: Avoid race condition in multiprocessing cleanup (#2159)
- [bpo-28994](https://bugs.python.org/issue?@action=redirect&bpo=28994) [https://bugs.python.org/issue?@action=redirect&bpo=28994]: The traceback no longer displayed for SystemExit raised in a callback registered by atexit.
- [bpo-30508](https://bugs.python.org/issue?@action=redirect&bpo=30508) [https://bugs.python.org/issue?@action=redirect&bpo=30508]: Don't log exceptions if Task/Future "cancel()" method was called.
- [bpo-28556](https://bugs.python.org/issue?@action=redirect&bpo=28556) [https://bugs.python.org/issue?@action=redirect&bpo=28556]: Updates to typing module: Add generic AsyncContextManager, add support for ContextManager on all versions. Original PRs by Jelle Zijlstra and Ivan Levkivskyi
- [bpo-29870](https://bugs.python.org/issue?@action=redirect&bpo=29870) [https://bugs.python.org/issue?@action=redirect&bpo=29870]: Fix ssl sockets leaks when connection is aborted in asyncio/ssl implementation. Patch by Michaël Sghaïer.
- [bpo-29743](https://bugs.python.org/issue?@action=redirect&bpo=29743) [https://bugs.python.org/issue?@action=redirect&bpo=29743]: Closing transport during handshake process leaks open socket. Patch by Nikolay Kim
- [bpo-27585](https://bugs.python.org/issue?@action=redirect&bpo=27585) [https://bugs.python.org/issue?@action=redirect&bpo=27585]: Fix waiter cancellation in asyncio.Lock. Patch by Mathieu Sornay.

- [bpo-30418](https://bugs.python.org/issue?@action=redirect&bpo=30418) [https://bugs.python.org/issue?@action=redirect&bpo=30418]: On Windows, subprocess.Popen.communicate() now also ignore EINTR on stdin.write() if the child process is still running but closed the pipe.
- [bpo-29822](https://bugs.python.org/issue?@action=redirect&bpo=29822) [https://bugs.python.org/issue?@action=redirect&bpo=29822]: inspect.isabstract() now works during \_\_init\_subclass\_\_. Patch by Nate Soares.
- [bpo-29581](https://bugs.python.org/issue?@action=redirect&bpo=29581) [https://bugs.python.org/issue?@action=redirect&bpo=29581]: ABCMeta.\_\_new\_\_ now accepts \*\*kwargs, allowing abstract base classes to use keyword parameters in \_\_init\_subclass\_\_. Patch by Nate Soares.
- [bpo-30557](https://bugs.python.org/issue?@action=redirect&bpo=30557) [https://bugs.python.org/issue?@action=redirect&bpo=30557]: faulthandler now correctly filters and displays exception codes on Windows
- [bpo-30378](https://bugs.python.org/issue?@action=redirect&bpo=30378) [https://bugs.python.org/issue?@action=redirect&bpo=30378]: Fix the problem that logging.handlers.SysLogHandler cannot handle IPv6 addresses.
- [bpo-29960](https://bugs.python.org/issue?@action=redirect&bpo=29960) [https://bugs.python.org/issue?@action=redirect&bpo=29960]: Preserve generator state when \_random.Random.setstate() raises an exception. Patch by Bryan Olson.
- [bpo-30414](https://bugs.python.org/issue?@action=redirect&bpo=30414) [https://bugs.python.org/issue?@action=redirect&bpo=30414]: multiprocessing.Queue.\_feed background running thread do not break from main loop on exception.
- [bpo-30003](https://bugs.python.org/issue?@action=redirect&bpo=30003) [https://bugs.python.org/issue?@action=redirect&bpo=30003]: Fix handling escape characters in HZ codec. Based on patch by Ma Lin.
- [bpo-30301](https://bugs.python.org/issue?@action=redirect&bpo=30301) [https://bugs.python.org/issue?@action=redirect&bpo=30301]: Fix AttributeError when using SimpleQueue.empty() under spawn and forkserver start methods.
- [bpo-30329](https://bugs.python.org/issue?@action=redirect&bpo=30329) [https://bugs.python.org/issue?@action=redirect&bpo=30329]: imaplib and poplib now catch the Windows socket WSAEINTR error (code 10022) on shutdown(SHUT\_RDWR): An invalid operation was attempted. This error occurs sometimes on SSL connections.
- [bpo-30375](https://bugs.python.org/issue?@action=redirect&bpo=30375) [https://bugs.python.org/issue?@action=redirect&bpo=30375]

@action=redirect&bpo=30375]: Warnings emitted when compile a regular expression now always point to the line in the user code. Previously they could point into inners of the re module if emitted from inside of groups or conditionals.

- [bpo-30048](https://bugs.python.org/issue?@action=redirect&bpo=30048) [https://bugs.python.org/issue?@action=redirect&bpo=30048]: Fixed `Task.cancel()` can be ignored when the task is running coroutine and the coroutine returned without any more `await`.
- [bpo-30266](https://bugs.python.org/issue?@action=redirect&bpo=30266) [https://bugs.python.org/issue?@action=redirect&bpo=30266]: `contextlib.AbstractContextManager` now supports anti-registration by setting `_enter_ = None` or `_exit_ = None`, following the pattern introduced in [bpo-25958](https://bugs.python.org/issue?@action=redirect&bpo=25958) [https://bugs.python.org/issue?@action=redirect&bpo=25958]. Patch by Jelle Zijlstra.
- [bpo-30298](https://bugs.python.org/issue?@action=redirect&bpo=30298) [https://bugs.python.org/issue?@action=redirect&bpo=30298]: Weaken the condition of deprecation warnings for inline modifiers. Now allowed several subsequential inline modifiers at the start of the pattern (e.g. `'(?:)(?s) ...'`). In verbose mode whitespaces and comments now are allowed before and between inline modifiers (e.g. `'(?:x) (?:i) (?s) ...'`).
- [bpo-29990](https://bugs.python.org/issue?@action=redirect&bpo=29990) [https://bugs.python.org/issue?@action=redirect&bpo=29990]: Fix range checking in GB18030 decoder. Original patch by Ma Lin.
- [bpo-26293](https://bugs.python.org/issue?@action=redirect&bpo=26293) [https://bugs.python.org/issue?@action=redirect&bpo=26293]: Change resulted because of zipfile breakage. (See also: [bpo-29094](https://bugs.python.org/issue?@action=redirect&bpo=29094) [https://bugs.python.org/issue?@action=redirect&bpo=29094])
- [bpo-30243](https://bugs.python.org/issue?@action=redirect&bpo=30243) [https://bugs.python.org/issue?@action=redirect&bpo=30243]: Removed the `__init__` methods of `_json`'s scanner and encoder. Misusing them could cause memory leaks or crashes. Now scanner and encoder objects are completely initialized in the `__new__` methods.
- [bpo-30185](https://bugs.python.org/issue?@action=redirect&bpo=30185) [https://bugs.python.org/issue?@action=redirect&bpo=30185]: Avoid `KeyboardInterrupt` tracebacks in `forkserver` helper process when Ctrl-C is received.
- [bpo-28556](https://bugs.python.org/issue?@action=redirect&bpo=28556) [https://bugs.python.org/issue?@action=redirect&bpo=28556]: Various updates to typing module:

add typing.NoReturn type, use WrapperDescriptorType, minor bug-fixes. Original PRs by Jim Fasarakis-Hilliard and Ivan Levkivskyi.

- [bpo-30205](https://bugs.python.org/issue?@action=redirect&bpo=30205) [https://bugs.python.org/issue?@action=redirect&bpo=30205]: Fix getsockname() for unbound AF\_UNIX sockets on Linux.
- [bpo-30070](https://bugs.python.org/issue?@action=redirect&bpo=30070) [https://bugs.python.org/issue?@action=redirect&bpo=30070]: Fixed leaks and crashes in errors handling in the parser module.
- [bpo-30061](https://bugs.python.org/issue?@action=redirect&bpo=30061) [https://bugs.python.org/issue?@action=redirect&bpo=30061]: Fixed crashes in IOBase methods `_next_()` and `readlines()` when `readline()` or `_next_()` respectively return non-sizeable object. Fixed possible other errors caused by not checking results of `PyObject_Size()`, `PySequence_Size()`, or `PyMapping_Size()`.
- [bpo-30017](https://bugs.python.org/issue?@action=redirect&bpo=30017) [https://bugs.python.org/issue?@action=redirect&bpo=30017]: Allowed calling the `close()` method of the zip entry writer object multiple times. Writing to a closed writer now always produces a `ValueError`.
- [bpo-30068](https://bugs.python.org/issue?@action=redirect&bpo=30068) [https://bugs.python.org/issue?@action=redirect&bpo=30068]: `_io.IOBase.readlines` will check if it's closed first when hint is present.
- [bpo-29694](https://bugs.python.org/issue?@action=redirect&bpo=29694) [https://bugs.python.org/issue?@action=redirect&bpo=29694]: Fixed race condition in `pathlib.mkdir` with `flags` `parents=True`. Patch by Armin Rigo.
- [bpo-29692](https://bugs.python.org/issue?@action=redirect&bpo=29692) [https://bugs.python.org/issue?@action=redirect&bpo=29692]: Fixed arbitrary unchaining of `RuntimeError` exceptions in `contextlib.contextmanager`. Patch by Siddharth Velankar.
- [bpo-29998](https://bugs.python.org/issue?@action=redirect&bpo=29998) [https://bugs.python.org/issue?@action=redirect&bpo=29998]: Pickling and copying `ImportError` now preserves name and path attributes.
- [bpo-29953](https://bugs.python.org/issue?@action=redirect&bpo=29953) [https://bugs.python.org/issue?@action=redirect&bpo=29953]: Fixed memory leaks in the `replace()` method of `datetime` and `time` objects when pass out of bound fold argument.
- [bpo-29942](https://bugs.python.org/issue?@action=redirect&bpo=29942) [https://bugs.python.org/issue?@action=redirect&bpo=29942]: Fix a crash in `itertools.chain.from_iterable` when encountering long runs of empty iterables.

- [bpo-27863](https://bugs.python.org/issue?@action=redirect&bpo=27863) [https://bugs.python.org/issue?@action=redirect&bpo=27863]: Fixed multiple crashes in ElementTree caused by race conditions and wrong types.
- [bpo-28699](https://bugs.python.org/issue?@action=redirect&bpo=28699) [https://bugs.python.org/issue?@action=redirect&bpo=28699]: Fixed a bug in pools in multiprocessing.pool that raising an exception at the very first of an iterable may swallow the exception or make the program hang. Patch by Davin Potts and Xiang Zhang.
- [bpo-25803](https://bugs.python.org/issue?@action=redirect&bpo=25803) [https://bugs.python.org/issue?@action=redirect&bpo=25803]: Avoid incorrect errors raised by Path.mkdir(exist\_ok=True) when the OS gives priority to errors such as EACCES over EEXIST.
- [bpo-29861](https://bugs.python.org/issue?@action=redirect&bpo=29861) [https://bugs.python.org/issue?@action=redirect&bpo=29861]: Release references to tasks, their arguments and their results as soon as they are finished in multiprocessing.Pool.
- [bpo-29884](https://bugs.python.org/issue?@action=redirect&bpo=29884) [https://bugs.python.org/issue?@action=redirect&bpo=29884]: faulthandler: Restore the old sigaltstack during teardown. Patch by Christophe Zeitouny.
- [bpo-25455](https://bugs.python.org/issue?@action=redirect&bpo=25455) [https://bugs.python.org/issue?@action=redirect&bpo=25455]: Fixed crashes in repr of recursive buffered file-like objects.
- [bpo-29800](https://bugs.python.org/issue?@action=redirect&bpo=29800) [https://bugs.python.org/issue?@action=redirect&bpo=29800]: Fix crashes in partial.\_repr\_ if the keys of partial.keywords are not strings. Patch by Michael Seifert.
- [bpo-29742](https://bugs.python.org/issue?@action=redirect&bpo=29742) [https://bugs.python.org/issue?@action=redirect&bpo=29742]: get\_extra\_info() raises exception if get called on closed ssl transport. Patch by Nikolay Kim.
- [bpo-8256](https://bugs.python.org/issue?@action=redirect&bpo=8256) [https://bugs.python.org/issue?@action=redirect&bpo=8256]: Fixed possible failing or crashing input() if attributes “encoding” or “errors” of sys.stdin or sys.stdout are not set or are not strings.
- [bpo-28298](https://bugs.python.org/issue?@action=redirect&bpo=28298) [https://bugs.python.org/issue?@action=redirect&bpo=28298]: Fix a bug that prevented array ‘Q’, ‘L’ and ‘I’ from accepting big intables (objects that have \_\_int\_\_) as elements. Patch by Oren Milman.
- [bpo-28231](https://bugs.python.org/issue?@action=redirect&bpo=28231) [https://bugs.python.org/issue?@action=redirect&bpo=28231]: The zipfile module now accepts path-like objects for external paths.

- [bpo-26915](https://bugs.python.org/issue?@action=redirect&bpo=26915) [https://bugs.python.org/issue?@action=redirect&bpo=26915]: `index()` and `count()` methods of `collections.abc.Sequence` now check identity before checking equality when do comparisons.
- [bpo-29615](https://bugs.python.org/issue?@action=redirect&bpo=29615) [https://bugs.python.org/issue?@action=redirect&bpo=29615]: `SimpleXMLRPCDispatcher` no longer chains `KeyError` (or any other exception) to exception(s) raised in the dispatched methods. Patch by Petr Motejlek.
- [bpo-30177](https://bugs.python.org/issue?@action=redirect&bpo=30177) [https://bugs.python.org/issue?@action=redirect&bpo=30177]: `path.resolve(strict=False)` no longer cuts the path after the first element not present in the filesystem. Patch by Antoine Pietri.

## IDLE

- [bpo-15786](https://bugs.python.org/issue?@action=redirect&bpo=15786) [https://bugs.python.org/issue?@action=redirect&bpo=15786]: Fix several problems with IDLE's autocompletion box. The following should now work: clicking on selection box items; using the scrollbar; selecting an item by hitting Return. Hangs on MacOSX should no longer happen. Patch by Louie Lu.
- [bpo-25514](https://bugs.python.org/issue?@action=redirect&bpo=25514) [https://bugs.python.org/issue?@action=redirect&bpo=25514]: Add doc subsection about IDLE failure to start. Popup no-connection message directs users to this section.
- [bpo-30642](https://bugs.python.org/issue?@action=redirect&bpo=30642) [https://bugs.python.org/issue?@action=redirect&bpo=30642]: Fix reference leaks in IDLE tests. Patches by Louie Lu and Terry Jan Reedy.
- [bpo-30495](https://bugs.python.org/issue?@action=redirect&bpo=30495) [https://bugs.python.org/issue?@action=redirect&bpo=30495]: Add docstrings for `textview.py` and use PEP8 names. Patches by Cheryl Sabella and Terry Jan Reedy.
- [bpo-30290](https://bugs.python.org/issue?@action=redirect&bpo=30290) [https://bugs.python.org/issue?@action=redirect&bpo=30290]: Help-about: use pep8 names and add tests. Increase coverage to 100%. Patches by Louie Lu, Cheryl Sabella, and Terry Jan Reedy.
- [bpo-30303](https://bugs.python.org/issue?@action=redirect&bpo=30303) [https://bugs.python.org/issue?@action=redirect&bpo=30303]: Add `_utest` option to `textview`; add new tests. Increase coverage to 100%. Patches by Louie Lu

and Terry Jan Reedy.

## C API

- [bpo-27867](https://bugs.python.org/issue?@action=redirect&bpo=27867) [https://bugs.python.org/issue?@action=redirect&bpo=27867]: Function `PySlice_GetIndicesEx()` no longer replaced with a macro if `Py_LIMITED_API` is not set.

## Build

- [bpo-29941](https://bugs.python.org/issue?@action=redirect&bpo=29941) [https://bugs.python.org/issue?@action=redirect&bpo=29941]: Add `--with-assertions` configure flag to explicitly enable C `assert()` checks. Defaults to off. `--with-pydebug` implies `--with-assertions`.
- [bpo-28787](https://bugs.python.org/issue?@action=redirect&bpo=28787) [https://bugs.python.org/issue?@action=redirect&bpo=28787]: Fix out-of-tree builds of Python when configured with `--with--dtrace`.
- [bpo-29243](https://bugs.python.org/issue?@action=redirect&bpo=29243) [https://bugs.python.org/issue?@action=redirect&bpo=29243]: Prevent unnecessary rebuilding of Python during `make test`, `make install` and some other make targets when configured with `--enable-optimizations`.
- [bpo-23404](https://bugs.python.org/issue?@action=redirect&bpo=23404) [https://bugs.python.org/issue?@action=redirect&bpo=23404]: Don't regenerate generated files based on file modification time anymore: the action is now explicit. Replace `make touch` with `make regen-all`.
- [bpo-29643](https://bugs.python.org/issue?@action=redirect&bpo=29643) [https://bugs.python.org/issue?@action=redirect&bpo=29643]: Fix `--enable-optimization` didn't work.

## Documentation

- [bpo-30176](https://bugs.python.org/issue?@action=redirect&bpo=30176) [https://bugs.python.org/issue?@action=redirect&bpo=30176]: Add missing attribute related constants in curses documentation.
- [bpo-30052](https://bugs.python.org/issue?@action=redirect&bpo=30052) [https://bugs.python.org/issue?@action=redirect&bpo=30052]: the link targets for `bytes()` and `bytearray()` are now their respective type definitions, rather than the corresponding builtin function entries. Use

`bytes` and `bytearray` to reference the latter. In order to ensure this and future cross-reference updates are applied automatically, the daily documentation builds now disable the default output caching features in Sphinx.

- [bpo-26985](https://bugs.python.org/issue?@action=redirect&bpo=26985) [https://bugs.python.org/issue?@action=redirect&bpo=26985]: Add missing info of code object in inspect documentation.

## Tools/Demos

- [bpo-29367](https://bugs.python.org/issue?@action=redirect&bpo=29367) [https://bugs.python.org/issue?@action=redirect&bpo=29367]: `python-gdb.py` now supports also `method-wrapper (wrapperobject)` objects.

## Tests

- [bpo-30357](https://bugs.python.org/issue?@action=redirect&bpo=30357) [https://bugs.python.org/issue?@action=redirect&bpo=30357]: `test_thread: setUp()` now uses `support.threading_setup()` and `support.threading_cleanup()` to wait until threads complete to avoid random side effects on following tests. Initial patch written by Grzegorz Grzywacz.
- [bpo-30197](https://bugs.python.org/issue?@action=redirect&bpo=30197) [https://bugs.python.org/issue?@action=redirect&bpo=30197]: Enhanced functions `swap_attr()` and `swap_item()` in the `test.support` module. They now work when delete replaced attribute or item inside the `with` statement. The old value of the attribute or item (or `None` if it doesn't exist) now will be assigned to the target of the `"as"` clause, if there is one.

## Windows

- [bpo-30687](https://bugs.python.org/issue?@action=redirect&bpo=30687) [https://bugs.python.org/issue?@action=redirect&bpo=30687]: Locate `msbuild.exe` on Windows when building rather than `vcvarsall.bat`
- [bpo-30450](https://bugs.python.org/issue?@action=redirect&bpo=30450) [https://bugs.python.org/issue?@action=redirect&bpo=30450]: The build process on Windows no longer depends on Subversion, instead pulling external code from GitHub via a Python script. If Python 3.6 is not found on the system (via `py -3.6`), NuGet is used to download a copy of 32-bit Python.

# Python 3.6.1 final

*Release date: 2017-03-21*

## Core and Builtins

- [bpo-29723](https://bugs.python.org/issue?@action=redirect&bpo=29723) [https://bugs.python.org/issue?@action=redirect&bpo=29723]: The `sys.path[0]` initialization change for [bpo-29139](https://bugs.python.org/issue?@action=redirect&bpo=29139) [https://bugs.python.org/issue?@action=redirect&bpo=29139] caused a regression by revealing an inconsistency in how `sys.path` is initialized when executing `__main__` from a zipfile, directory, or other import location. The interpreter now consistently avoids ever adding the import location's parent directory to `sys.path`, and ensures no other `sys.path` entries are inadvertently modified when inserting the import location named on the command line.

## Build

- [bpo-27593](https://bugs.python.org/issue?@action=redirect&bpo=27593) [https://bugs.python.org/issue?@action=redirect&bpo=27593]: fix format of git information used in `sys.version`
- Fix incompatible comment in `python.h`

# Python 3.6.1 release candidate 1

*Release date: 2017-03-04*

## Core and Builtins

- [bpo-28893](https://bugs.python.org/issue?@action=redirect&bpo=28893) [https://bugs.python.org/issue?@action=redirect&bpo=28893]: Set correct `__cause__` for errors about invalid awaitables returned from `__aiter__` and `__anext__`.
- [bpo-29683](https://bugs.python.org/issue?@action=redirect&bpo=29683) [https://bugs.python.org/issue?@action=redirect&bpo=29683]: Fixes to memory allocation in `_PyCode_SetExtra`. Patch by Brian Coleman.
- [bpo-29684](https://bugs.python.org/issue?@action=redirect&bpo=29684) [https://bugs.python.org/issue?@action=redirect&bpo=29684]: Fix minor regression of `PyEval_CallObjectWithKeywords`. It should raise `TypeError`

when kwargs is not a dict. But it might cause segv when args=NULL and kwargs is not a dict.

- [bpo-28598](https://bugs.python.org/issue?@action=redirect&bpo=28598) [https://bugs.python.org/issue?@action=redirect&bpo=28598]: Support `__rmod__` for subclasses of `str` being called before `str.__mod__`. Patch by Martijn Pieters.
- [bpo-29607](https://bugs.python.org/issue?@action=redirect&bpo=29607) [https://bugs.python.org/issue?@action=redirect&bpo=29607]: Fix `stack_effect` computation for `CALL_FUNCTION_EX`. Patch by Matthieu Dartiailh.
- [bpo-29602](https://bugs.python.org/issue?@action=redirect&bpo=29602) [https://bugs.python.org/issue?@action=redirect&bpo=29602]: Fix incorrect handling of signed zeros in complex constructor for complex subclasses and for inputs having a `__complex__` method. Patch by Serhiy Storchaka.
- [bpo-29347](https://bugs.python.org/issue?@action=redirect&bpo=29347) [https://bugs.python.org/issue?@action=redirect&bpo=29347]: Fixed possibly dereferencing undefined pointers when creating weakref objects.
- [bpo-29438](https://bugs.python.org/issue?@action=redirect&bpo=29438) [https://bugs.python.org/issue?@action=redirect&bpo=29438]: Fixed use-after-free problem in key sharing dict.
- [bpo-29319](https://bugs.python.org/issue?@action=redirect&bpo=29319) [https://bugs.python.org/issue?@action=redirect&bpo=29319]: Prevent `RunMainFromImporter` overwriting `sys.path[0]`.
- [bpo-29337](https://bugs.python.org/issue?@action=redirect&bpo=29337) [https://bugs.python.org/issue?@action=redirect&bpo=29337]: Fixed possible `BytesWarning` when compare the code objects. Warnings could be emitted at compile time.
- [bpo-29327](https://bugs.python.org/issue?@action=redirect&bpo=29327) [https://bugs.python.org/issue?@action=redirect&bpo=29327]: Fixed a crash when pass the iterable keyword argument to `sorted()`.
- [bpo-29034](https://bugs.python.org/issue?@action=redirect&bpo=29034) [https://bugs.python.org/issue?@action=redirect&bpo=29034]: Fix memory leak and use-after-free in `os` module (`path_converter`).
- [bpo-29159](https://bugs.python.org/issue?@action=redirect&bpo=29159) [https://bugs.python.org/issue?@action=redirect&bpo=29159]: Fix regression in `bytes(x)` when `x.__index__()` raises `Exception`.
- [bpo-28932](https://bugs.python.org/issue?@action=redirect&bpo=28932) [https://bugs.python.org/issue?@action=redirect&bpo=28932]: Do not include `<sys/random.h>` if it does not exist.
- [bpo-25677](https://bugs.python.org/issue?@action=redirect&bpo=25677) [https://bugs.python.org/issue?@action=redirect&bpo=25677]: Correct the positioning of the

syntax error caret for indented blocks. Based on patch by Michael Layzell.

- [bpo-29000](https://bugs.python.org/issue?@action=redirect&bpo=29000) [https://bugs.python.org/issue?@action=redirect&bpo=29000]: Fixed bytes formatting of octals with zero padding in alternate form.
- [bpo-26919](https://bugs.python.org/issue?@action=redirect&bpo=26919) [https://bugs.python.org/issue?@action=redirect&bpo=26919]: On Android, operating system data is now always encoded/decoded to/from UTF-8, instead of the locale encoding to avoid inconsistencies with `os.fsencode()` and `os.fsdecode()` which are already using UTF-8.
- [bpo-28991](https://bugs.python.org/issue?@action=redirect&bpo=28991) [https://bugs.python.org/issue?@action=redirect&bpo=28991]: `functools.lru_cache()` was susceptible to an obscure reentrancy bug triggerable by a monkey-patched `len()` function.
- [bpo-28739](https://bugs.python.org/issue?@action=redirect&bpo=28739) [https://bugs.python.org/issue?@action=redirect&bpo=28739]: f-string expressions are no longer accepted as docstrings and by `ast.literal_eval()` even if they do not include expressions.
- [bpo-28512](https://bugs.python.org/issue?@action=redirect&bpo=28512) [https://bugs.python.org/issue?@action=redirect&bpo=28512]: Fixed setting the offset attribute of `SyntaxError` by `PyErr_SyntaxLocationEx()` and `PyErr_SyntaxLocationObject()`.
- [bpo-28918](https://bugs.python.org/issue?@action=redirect&bpo=28918) [https://bugs.python.org/issue?@action=redirect&bpo=28918]: Fix the cross compilation of `xxlimited` when Python has been built with `Py_DEBUG` defined.
- [bpo-28731](https://bugs.python.org/issue?@action=redirect&bpo=28731) [https://bugs.python.org/issue?@action=redirect&bpo=28731]: Optimize `_PyDict_NewPresized()` to create correct size dict. Improve speed of dict literal with constant keys up to 30%.

## Library

- [bpo-29169](https://bugs.python.org/issue?@action=redirect&bpo=29169) [https://bugs.python.org/issue?@action=redirect&bpo=29169]: Update `zlib` to 1.2.11.
- [bpo-29623](https://bugs.python.org/issue?@action=redirect&bpo=29623) [https://bugs.python.org/issue?@action=redirect&bpo=29623]: Allow use of path-like object as a single argument in `ConfigParser.read()`. Patch by David Ellis.
- [bpo-28963](https://bugs.python.org/issue?@action=redirect&bpo=28963) [https://bugs.python.org/issue?@action=redirect&bpo=28963]

@action=redirect&bpo=28963]: Fix out of bound iteration in `asyncio.Future.remove_done_callback` implemented in C.

- [bpo-29704](https://bugs.python.org/issue?@action=redirect&bpo=29704) [https://bugs.python.org/issue?@action=redirect&bpo=29704]: `asyncio.subprocess.SubprocessStreamProtocol` no longer closes before all pipes are closed.
- [bpo-29271](https://bugs.python.org/issue?@action=redirect&bpo=29271) [https://bugs.python.org/issue?@action=redirect&bpo=29271]: Fix `Task.current_task` and `Task.all_tasks` implemented in C to accept `None` argument as their pure Python implementation.
- [bpo-29703](https://bugs.python.org/issue?@action=redirect&bpo=29703) [https://bugs.python.org/issue?@action=redirect&bpo=29703]: Fix `asyncio` to support instantiation of new event loops in child processes.
- [bpo-29376](https://bugs.python.org/issue?@action=redirect&bpo=29376) [https://bugs.python.org/issue?@action=redirect&bpo=29376]: Fix assertion error in `threading._DummyThread.is_alive()`.
- [bpo-28624](https://bugs.python.org/issue?@action=redirect&bpo=28624) [https://bugs.python.org/issue?@action=redirect&bpo=28624]: Add a test that checks that `cwd` parameter of `Popen()` accepts `PathLike` objects. Patch by Sayan Chowdhury.
- [bpo-28518](https://bugs.python.org/issue?@action=redirect&bpo=28518) [https://bugs.python.org/issue?@action=redirect&bpo=28518]: Start a transaction implicitly before a DML statement. Patch by Aviv Palivoda.
- [bpo-29532](https://bugs.python.org/issue?@action=redirect&bpo=29532) [https://bugs.python.org/issue?@action=redirect&bpo=29532]: Altering a `kwargs` dictionary passed to `functools.partial()` no longer affects a partial object after creation.
- [bpo-29110](https://bugs.python.org/issue?@action=redirect&bpo=29110) [https://bugs.python.org/issue?@action=redirect&bpo=29110]: Fix file object leak in `aifc.open()` when file is given as a filesystem path and is not in valid AIFF format. Patch by Anthony Zhang.
- [bpo-28556](https://bugs.python.org/issue?@action=redirect&bpo=28556) [https://bugs.python.org/issue?@action=redirect&bpo=28556]: Various updates to typing module: `typing.Counter`, `typing.ChainMap`, improved ABC caching, etc. Original PRs by Jelle Zijlstra, Ivan Levkivskyi, Manuel Krebber, and Łukasz Langa.
- [bpo-29100](https://bugs.python.org/issue?@action=redirect&bpo=29100) [https://bugs.python.org/issue?@action=redirect&bpo=29100]: Fix `datetime.fromtimestamp()` regression introduced in Python 3.6.0: check minimum and maximum years.

- [bpo-29519](https://bugs.python.org/issue?@action=redirect&bpo=29519) [https://bugs.python.org/issue?@action=redirect&bpo=29519]: Fix weakref spewing exceptions during interpreter shutdown when used with a rare combination of multiprocessing and custom codecs.
- [bpo-29416](https://bugs.python.org/issue?@action=redirect&bpo=29416) [https://bugs.python.org/issue?@action=redirect&bpo=29416]: Prevent infinite loop in `pathlib.Path.mkdir`
- [bpo-29444](https://bugs.python.org/issue?@action=redirect&bpo=29444) [https://bugs.python.org/issue?@action=redirect&bpo=29444]: Fixed out-of-bounds buffer access in the `group()` method of the `match` object. Based on patch by WGH.
- [bpo-29335](https://bugs.python.org/issue?@action=redirect&bpo=29335) [https://bugs.python.org/issue?@action=redirect&bpo=29335]: Fix `subprocess.Popen.wait()` when the child process has exited to a stopped instead of terminated state (ex: when under `ptrace`).
- [bpo-29290](https://bugs.python.org/issue?@action=redirect&bpo=29290) [https://bugs.python.org/issue?@action=redirect&bpo=29290]: Fix a regression in `argparse` that help messages would wrap at non-breaking spaces.
- [bpo-28735](https://bugs.python.org/issue?@action=redirect&bpo=28735) [https://bugs.python.org/issue?@action=redirect&bpo=28735]: Fixed the comparison of `mock.MagicMock` with `mock.ANY`.
- [bpo-29316](https://bugs.python.org/issue?@action=redirect&bpo=29316) [https://bugs.python.org/issue?@action=redirect&bpo=29316]: Restore the provisional status of `typing` module, add corresponding note to documentation. Patch by Ivan L.
- [bpo-29219](https://bugs.python.org/issue?@action=redirect&bpo=29219) [https://bugs.python.org/issue?@action=redirect&bpo=29219]: Fixed infinite recursion in the repr of uninitialized `ctypes.CDLL` instances.
- [bpo-29011](https://bugs.python.org/issue?@action=redirect&bpo=29011) [https://bugs.python.org/issue?@action=redirect&bpo=29011]: Fix an important omission by adding `Deque` to the `typing` module.
- [bpo-28969](https://bugs.python.org/issue?@action=redirect&bpo=28969) [https://bugs.python.org/issue?@action=redirect&bpo=28969]: Fixed race condition in C implementation of `functools.lru_cache`. `KeyError` could be raised when cached function with full cache was simultaneously called from different threads with the same uncached arguments.
- [bpo-29142](https://bugs.python.org/issue?@action=redirect&bpo=29142) [https://bugs.python.org/issue?@action=redirect&bpo=29142]: In `urllib.request`, suffixes in `no_proxy` environment variable with leading dots could match

related hostnames again (e.g. .b.c matches a.b.c). Patch by Milan Oberkirch.

- [bpo-28961](https://bugs.python.org/issue?@action=redirect&bpo=28961) [https://bugs.python.org/issue?@action=redirect&bpo=28961]: Fix unittest.mock.\_Call helper: don't ignore the name parameter anymore. Patch written by Jiajun Huang.
- [bpo-29203](https://bugs.python.org/issue?@action=redirect&bpo=29203) [https://bugs.python.org/issue?@action=redirect&bpo=29203]: functools.lru\_cache() now respects [PEP 468](https://peps.python.org/pep-0468/) [https://peps.python.org/pep-0468/] and preserves the order of keyword arguments. f(a = 1, b = 2) is now cached separately from f(b = 2, a = 1) since both calls could potentially give different results.
- [bpo-15812](https://bugs.python.org/issue?@action=redirect&bpo=15812) [https://bugs.python.org/issue?@action=redirect&bpo=15812]: inspect.getframeinfo() now correctly shows the first line of a context. Patch by Sam Breese.
- [bpo-29094](https://bugs.python.org/issue?@action=redirect&bpo=29094) [https://bugs.python.org/issue?@action=redirect&bpo=29094]: Offsets in a ZIP file created with extern file object and modes “w” and “x” now are relative to the start of the file.
- [bpo-29085](https://bugs.python.org/issue?@action=redirect&bpo=29085) [https://bugs.python.org/issue?@action=redirect&bpo=29085]: Allow random.Random.seed() to use high quality OS randomness rather than the pid and time.
- [bpo-29061](https://bugs.python.org/issue?@action=redirect&bpo=29061) [https://bugs.python.org/issue?@action=redirect&bpo=29061]: Fixed bug in secrets.randbelow() which would hang when given a negative input. Patch by Brendan Donegan.
- [bpo-29079](https://bugs.python.org/issue?@action=redirect&bpo=29079) [https://bugs.python.org/issue?@action=redirect&bpo=29079]: Prevent infinite loop in pathlib.resolve() on Windows
- [bpo-13051](https://bugs.python.org/issue?@action=redirect&bpo=13051) [https://bugs.python.org/issue?@action=redirect&bpo=13051]: Fixed recursion errors in large or resized curses.textpad.Textbox. Based on patch by Tycho Andersen.
- [bpo-29119](https://bugs.python.org/issue?@action=redirect&bpo=29119) [https://bugs.python.org/issue?@action=redirect&bpo=29119]: Fix weakrefs in the pure python version of collections.OrderedDict move\_to\_end() method. Contributed by Andra Bogildea.
- [bpo-9770](https://bugs.python.org/issue?@action=redirect&bpo=9770) [https://bugs.python.org/issue?@action=redirect&bpo=9770]: curses.ascii predicates now work correctly with negative

integers.

- [bpo-28427](https://bugs.python.org/issue?@action=redirect&bpo=28427) [https://bugs.python.org/issue?@action=redirect&bpo=28427]: old keys should not remove new values from WeakValueDictionary when collecting from another thread.
- [bpo-28923](https://bugs.python.org/issue?@action=redirect&bpo=28923) [https://bugs.python.org/issue?@action=redirect&bpo=28923]: Remove editor artifacts from Tix.py.
- [bpo-29055](https://bugs.python.org/issue?@action=redirect&bpo=29055) [https://bugs.python.org/issue?@action=redirect&bpo=29055]: Neaten-up empty population error on random.choice() by suppressing the upstream exception.
- [bpo-28871](https://bugs.python.org/issue?@action=redirect&bpo=28871) [https://bugs.python.org/issue?@action=redirect&bpo=28871]: Fixed a crash when deallocate deep ElementTree.
- [bpo-19542](https://bugs.python.org/issue?@action=redirect&bpo=19542) [https://bugs.python.org/issue?@action=redirect&bpo=19542]: Fix bugs in WeakValueDictionary.setdefault() and WeakValueDictionary.pop() when a GC collection happens in another thread.
- [bpo-20191](https://bugs.python.org/issue?@action=redirect&bpo=20191) [https://bugs.python.org/issue?@action=redirect&bpo=20191]: Fixed a crash in resource.prlimit() when passing a sequence that doesn't own its elements as limits.
- [bpo-28779](https://bugs.python.org/issue?@action=redirect&bpo=28779) [https://bugs.python.org/issue?@action=redirect&bpo=28779]: multiprocessing.set\_forkserver\_preload() would crash the forkserver process if a preloaded module instantiated some multiprocessing objects such as locks.
- [bpo-28847](https://bugs.python.org/issue?@action=redirect&bpo=28847) [https://bugs.python.org/issue?@action=redirect&bpo=28847]: dbm.dumb now supports reading read-only files and no longer writes the index file when it is not changed.
- [bpo-26937](https://bugs.python.org/issue?@action=redirect&bpo=26937) [https://bugs.python.org/issue?@action=redirect&bpo=26937]: The chown() method of the tarfile.TarFile class does not fail now when the grp module cannot be imported, as for example on Android platforms.

## **IDLE**

- [bpo-29071](https://bugs.python.org/issue?@action=redirect&bpo=29071) [https://bugs.python.org/issue?@action=redirect&bpo=29071]

@action=redirect&bpo=29071]: IDLE colors f-string prefixes (but not invalid ur prefixes).

- [bpo-28572](https://bugs.python.org/issue?@action=redirect&bpo=28572) [https://bugs.python.org/issue?@action=redirect&bpo=28572]: Add 10% to coverage of IDLE's test\_configdialog. Update and augment description of the configuration system.

## Windows

- [bpo-29579](https://bugs.python.org/issue?@action=redirect&bpo=29579) [https://bugs.python.org/issue?@action=redirect&bpo=29579]: Removes readme.txt from the installer
- [bpo-29326](https://bugs.python.org/issue?@action=redirect&bpo=29326) [https://bugs.python.org/issue?@action=redirect&bpo=29326]: Ignores blank lines in .pth files (Patch by Alexey Izbyshv)
- [bpo-28164](https://bugs.python.org/issue?@action=redirect&bpo=28164) [https://bugs.python.org/issue?@action=redirect&bpo=28164]: Correctly handle special console filenames (patch by Eryk Sun)
- [bpo-29409](https://bugs.python.org/issue?@action=redirect&bpo=29409) [https://bugs.python.org/issue?@action=redirect&bpo=29409]: Implement [PEP 529](https://peps.python.org/pep-0529/) [https://peps.python.org/pep-0529/] for io.FileIO (Patch by Eryk Sun)
- [bpo-29392](https://bugs.python.org/issue?@action=redirect&bpo=29392) [https://bugs.python.org/issue?@action=redirect&bpo=29392]: Prevent crash when passing invalid arguments into msvcrt module.
- [bpo-25778](https://bugs.python.org/issue?@action=redirect&bpo=25778) [https://bugs.python.org/issue?@action=redirect&bpo=25778]: winreg does not truncate string correctly (Patch by Eryk Sun)
- [bpo-28896](https://bugs.python.org/issue?@action=redirect&bpo=28896) [https://bugs.python.org/issue?@action=redirect&bpo=28896]: Deprecate WindowsRegistryFinder and disable it by default.

## C API

- [bpo-27867](https://bugs.python.org/issue?@action=redirect&bpo=27867) [https://bugs.python.org/issue?@action=redirect&bpo=27867]: Function PySlice\_GetIndicesEx() is replaced with a macro if Py\_LIMITED\_API is not set or set to the value between 0x03050400 and 0x03060000 (not including) or 0x03060100 or higher.
- [bpo-29083](https://bugs.python.org/issue?@action=redirect&bpo=29083) [https://bugs.python.org/issue?@action=redirect&bpo=29083]: Fixed the declaration of some

public API functions. `PyArg_VaParse()` and `PyArg_VaParseTupleAndKeywords()` were not available in limited API. `PyArg_ValidateKeywordArguments()`, `PyArg_UnpackTuple()` and `Py_BuildValue()` were not available in limited API of version `< 3.3` when `PY_SSIZE_T_CLEAN` is defined.

- [bpo-29058](https://bugs.python.org/issue?@action=redirect&bpo=29058) [https://bugs.python.org/issue?@action=redirect&bpo=29058]: All stable API extensions added after Python 3.2 are now available only when `Py_LIMITED_API` is set to the `PY_VERSION_HEX` value of the minimum Python version supporting this API.

## Documentation

- [bpo-28929](https://bugs.python.org/issue?@action=redirect&bpo=28929) [https://bugs.python.org/issue?@action=redirect&bpo=28929]: Link the documentation to its source file on GitHub.
- [bpo-25008](https://bugs.python.org/issue?@action=redirect&bpo=25008) [https://bugs.python.org/issue?@action=redirect&bpo=25008]: Document `smtpd.py` as effectively deprecated and add a pointer to `aiosmtpd`, a third-party asyncio-based replacement.
- [bpo-26355](https://bugs.python.org/issue?@action=redirect&bpo=26355) [https://bugs.python.org/issue?@action=redirect&bpo=26355]: Add canonical header link on each page to corresponding major version of the documentation. Patch by Matthias Bussonnier.
- [bpo-29349](https://bugs.python.org/issue?@action=redirect&bpo=29349) [https://bugs.python.org/issue?@action=redirect&bpo=29349]: Fix Python 2 syntax in code for building the documentation.

## Tests

- [bpo-28087](https://bugs.python.org/issue?@action=redirect&bpo=28087) [https://bugs.python.org/issue?@action=redirect&bpo=28087]: Skip `test_asyncore` and `test_eintr` poll failures on macOS. Skip some tests of `select.poll` when running on macOS due to unresolved issues with the underlying system poll function on some macOS versions.
- [bpo-29571](https://bugs.python.org/issue?@action=redirect&bpo=29571) [https://bugs.python.org/issue?@action=redirect&bpo=29571]: to match the behaviour of the `re.LOCALE` flag, `test_re.test_locale_flag` now uses `locale.getpreferredencoding(False)` to determine

the candidate encoding for the test regex (allowing it to correctly skip the test when the default locale encoding is a multi-byte encoding)

- [bpo-28950](https://bugs.python.org/issue?@action=redirect&bpo=28950) [https://bugs.python.org/issue?@action=redirect&bpo=28950]: Disallow -j0 to be combined with -T/-l in regrtest command line arguments.
- [bpo-28683](https://bugs.python.org/issue?@action=redirect&bpo=28683) [https://bugs.python.org/issue?@action=redirect&bpo=28683]: Fix the tests that bind() a unix socket and raise PermissionError on Android for a non-root user.
- [bpo-26939](https://bugs.python.org/issue?@action=redirect&bpo=26939) [https://bugs.python.org/issue?@action=redirect&bpo=26939]: Add the support.setswitchinterval() function to fix test\_functools hanging on the Android armv7 qemu emulator.

## Build

- [bpo-27593](https://bugs.python.org/issue?@action=redirect&bpo=27593) [https://bugs.python.org/issue?@action=redirect&bpo=27593]: sys.version and the platform module python\_build(), python\_branch(), and python\_revision() functions now use git information rather than hg when building from a repo.
- [bpo-29572](https://bugs.python.org/issue?@action=redirect&bpo=29572) [https://bugs.python.org/issue?@action=redirect&bpo=29572]: Update Windows build and OS X installers to use OpenSSL 1.0.2k.
- [bpo-26851](https://bugs.python.org/issue?@action=redirect&bpo=26851) [https://bugs.python.org/issue?@action=redirect&bpo=26851]: Set Android compilation and link flags.
- [bpo-28768](https://bugs.python.org/issue?@action=redirect&bpo=28768) [https://bugs.python.org/issue?@action=redirect&bpo=28768]: Fix implicit declaration of function \_setmode. Patch by Masayuki Yamamoto
- [bpo-29080](https://bugs.python.org/issue?@action=redirect&bpo=29080) [https://bugs.python.org/issue?@action=redirect&bpo=29080]: Removes hard dependency on hg.exe from PCBuild/build.bat
- [bpo-23903](https://bugs.python.org/issue?@action=redirect&bpo=23903) [https://bugs.python.org/issue?@action=redirect&bpo=23903]: Added missed names to PC/python3.def.
- [bpo-28762](https://bugs.python.org/issue?@action=redirect&bpo=28762) [https://bugs.python.org/issue?@action=redirect&bpo=28762]: lockf() is available on Android API level 24, but the F\_LOCK macro is not defined in android-

ndk-r13.

- [bpo-28538](https://bugs.python.org/issue?@action=redirect&bpo=28538) [https://bugs.python.org/issue?@action=redirect&bpo=28538]: Fix the compilation error that occurs because if\_nameindex() is available on Android API level 24, but the if\_nameindex structure is not defined.
- [bpo-20211](https://bugs.python.org/issue?@action=redirect&bpo=20211) [https://bugs.python.org/issue?@action=redirect&bpo=20211]: Do not add the directory for installing C header files and the directory for installing object code libraries to the cross compilation search paths. Original patch by Thomas Petazzoni.
- [bpo-28849](https://bugs.python.org/issue?@action=redirect&bpo=28849) [https://bugs.python.org/issue?@action=redirect&bpo=28849]: Do not define sys.implementation.\_multiarch on Android.

## Python 3.6.0 final

*Release date: 2016-12-23*

No changes since release candidate 2

## Python 3.6.0 release candidate 2

*Release date: 2016-12-16*

### Core and Builtins

- [bpo-28147](https://bugs.python.org/issue?@action=redirect&bpo=28147) [https://bugs.python.org/issue?@action=redirect&bpo=28147]: Fix a memory leak in split-table dictionaries: setattr() must not convert combined table into split table. Patch written by INADA Naoki.
- [bpo-28990](https://bugs.python.org/issue?@action=redirect&bpo=28990) [https://bugs.python.org/issue?@action=redirect&bpo=28990]: Fix asyncio SSL hanging if connection is closed before handshake is completed. (Patch by HoHo-Ho)

### Tools/Demos

- [bpo-28770](https://bugs.python.org/issue?@action=redirect&bpo=28770) [https://bugs.python.org/issue?@action=redirect&bpo=28770]: Fix python-gdb.py for fastcalls.

## Windows

- [bpo-28896](https://bugs.python.org/issue?@action=redirect&bpo=28896) [https://bugs.python.org/issue?@action=redirect&bpo=28896]: Deprecate WindowsRegistryFinder.

## Build

- [bpo-28898](https://bugs.python.org/issue?@action=redirect&bpo=28898) [https://bugs.python.org/issue?@action=redirect&bpo=28898]: Prevent gdb build errors due to HAVE\_LONG\_LONG redefinition.

## Python 3.6.0 release candidate 1

*Release date: 2016-12-06*

## Core and Builtins

- [bpo-23722](https://bugs.python.org/issue?@action=redirect&bpo=23722) [https://bugs.python.org/issue?@action=redirect&bpo=23722]: Rather than silently producing a class that doesn't support zero-argument `super()` in methods, failing to pass the new `__classcell__` namespace entry up to `type.__new__` now results in a `DeprecationWarning` and a class that supports zero-argument `super()`.
- [bpo-28797](https://bugs.python.org/issue?@action=redirect&bpo=28797) [https://bugs.python.org/issue?@action=redirect&bpo=28797]: Modifying the class `_dict_` inside the `_set_name_` method of a descriptor that is used inside that class no longer prevents calling the `_set_name_` method of other descriptors.
- [bpo-28782](https://bugs.python.org/issue?@action=redirect&bpo=28782) [https://bugs.python.org/issue?@action=redirect&bpo=28782]: Fix a bug in the implementation `yield from` when checking if the next instruction is `YIELD_FROM`. Regression introduced by WORDCODE ([bpo-26647](https://bugs.python.org/issue?@action=redirect&bpo=26647) [https://bugs.python.org/issue?@action=redirect&bpo=26647]).

## Library

- [bpo-27030](https://bugs.python.org/issue?@action=redirect&bpo=27030) [https://bugs.python.org/issue?@action=redirect&bpo=27030]: Unknown escapes in `re.sub()` replacement template are allowed again. But they still are deprecated and will be disabled in 3.7.
- [bpo-28835](https://bugs.python.org/issue?@action=redirect&bpo=28835) [https://bugs.python.org/issue?@action=redirect&bpo=28835]: Fix a regression introduced in `warnings.catch_warnings()`: call `warnings.showwarning()` if it was overridden inside the context manager.
- [bpo-27172](https://bugs.python.org/issue?@action=redirect&bpo=27172) [https://bugs.python.org/issue?@action=redirect&bpo=27172]: To assist with upgrades from 2.7, the previously documented deprecation of `inspect.getfullargspec()` has been reversed. This decision may be revisited again after the Python 2.7 branch is no longer officially supported.
- [bpo-26273](https://bugs.python.org/issue?@action=redirect&bpo=26273) [https://bugs.python.org/issue?@action=redirect&bpo=26273]: Add new **`socket.TCP_CONGESTION`** (Linux 2.6.13) and **`socket.TCP_USER_TIMEOUT`** (Linux 2.6.37) constants. Patch written by Omar Sandoval.
- [bpo-24142](https://bugs.python.org/issue?@action=redirect&bpo=24142) [https://bugs.python.org/issue?@action=redirect&bpo=24142]: Reading a corrupt config file left `configparser` in an invalid state. Original patch by Florian Höch.
- [bpo-28843](https://bugs.python.org/issue?@action=redirect&bpo=28843) [https://bugs.python.org/issue?@action=redirect&bpo=28843]: Fix `asyncio C Task` to handle exceptions `_traceback_`.

## C API

- [bpo-28808](https://bugs.python.org/issue?@action=redirect&bpo=28808) [https://bugs.python.org/issue?@action=redirect&bpo=28808]: `PyUnicode_CompareWithASCIIString()` now never raises exceptions.

## Documentation

- [bpo-23722](https://bugs.python.org/issue?@action=redirect&bpo=23722) [https://bugs.python.org/issue?@action=redirect&bpo=23722]: The data model reference and the porting section in the What's New guide now cover the additional `__classcell__` handling needed for custom

metaclasses to fully support [PEP 487](https://peps.python.org/pep-0487/) [https://peps.python.org/pep-0487/] and zero-argument `super()`.

## Tools/Demos

- [bpo-28023](https://bugs.python.org/issue?@action=redirect&bpo=28023) [https://bugs.python.org/issue?@action=redirect&bpo=28023]: Fix python-gdb.py didn't support new dict implementation.

# Python 3.6.0 beta 4

*Release date: 2016-11-21*

## Core and Builtins

- [bpo-28532](https://bugs.python.org/issue?@action=redirect&bpo=28532) [https://bugs.python.org/issue?@action=redirect&bpo=28532]: Show `sys.version` when `-V` option is supplied twice.
- [bpo-27100](https://bugs.python.org/issue?@action=redirect&bpo=27100) [https://bugs.python.org/issue?@action=redirect&bpo=27100]: The `with`-statement now checks for `__enter__` before it checks for `__exit__`. This gives less confusing error messages when both methods are missing. Patch by Jonathan Ellington.
- [bpo-28746](https://bugs.python.org/issue?@action=redirect&bpo=28746) [https://bugs.python.org/issue?@action=redirect&bpo=28746]: Fix the `set_inheritable()` file descriptor method on platforms that do not have the `ioctl FIOCLEX` and `FIONCLEX` commands.
- [bpo-26920](https://bugs.python.org/issue?@action=redirect&bpo=26920) [https://bugs.python.org/issue?@action=redirect&bpo=26920]: Fix not getting the locale's charset upon initializing the interpreter, on platforms that do not have `langinfo`.
- [bpo-28648](https://bugs.python.org/issue?@action=redirect&bpo=28648) [https://bugs.python.org/issue?@action=redirect&bpo=28648]: Fixed crash in `Py_DecodeLocale()` in debug build on Mac OS X when decode astral characters. Patch by Xiang Zhang.
- [bpo-19398](https://bugs.python.org/issue?@action=redirect&bpo=19398) [https://bugs.python.org/issue?@action=redirect&bpo=19398]: Extra slash no longer added to `sys.path` components in case of empty compile-time `PYTHONPATH` components.

- [bpo-28665](https://bugs.python.org/issue?@action=redirect&bpo=28665) [https://bugs.python.org/issue?@action=redirect&bpo=28665]: Improve speed of the STORE\_DEREF opcode by 40%.
- [bpo-28583](https://bugs.python.org/issue?@action=redirect&bpo=28583) [https://bugs.python.org/issue?@action=redirect&bpo=28583]: PyDict\_SetDefault didn't combine split table when needed. Patch by Xiang Zhang.
- [bpo-27243](https://bugs.python.org/issue?@action=redirect&bpo=27243) [https://bugs.python.org/issue?@action=redirect&bpo=27243]: Change PendingDeprecationWarning -> DeprecationWarning. As it was agreed in the issue, `_aiter_` returning an awaitable should result in PendingDeprecationWarning in 3.5 and in DeprecationWarning in 3.6.
- [bpo-26182](https://bugs.python.org/issue?@action=redirect&bpo=26182) [https://bugs.python.org/issue?@action=redirect&bpo=26182]: Fix a reflink in code that raises DeprecationWarning.
- [bpo-28721](https://bugs.python.org/issue?@action=redirect&bpo=28721) [https://bugs.python.org/issue?@action=redirect&bpo=28721]: Fix asynchronous generators `aclose()` and `athrow()` to handle StopAsyncIteration propagation properly.

## Library

- [bpo-28752](https://bugs.python.org/issue?@action=redirect&bpo=28752) [https://bugs.python.org/issue?@action=redirect&bpo=28752]: Restored the `_reduce_()` methods of datetime objects.
- [bpo-28727](https://bugs.python.org/issue?@action=redirect&bpo=28727) [https://bugs.python.org/issue?@action=redirect&bpo=28727]: Regular expression patterns, `_sre.SRE_Pattern` objects created by `re.compile()`, become comparable (only `x == y` and `x != y` operators). This change should fix the [bpo-18383](https://bugs.python.org/issue?@action=redirect&bpo=18383) [https://bugs.python.org/issue?@action=redirect&bpo=18383]: don't duplicate warning filters when the warnings module is reloaded (thing usually only done in unit tests).
- [bpo-20572](https://bugs.python.org/issue?@action=redirect&bpo=20572) [https://bugs.python.org/issue?@action=redirect&bpo=20572]: The `subprocess.Popen.wait` method's undocumented `endtime` parameter now raises a DeprecationWarning.
- [bpo-25659](https://bugs.python.org/issue?@action=redirect&bpo=25659) [https://bugs.python.org/issue?@action=redirect&bpo=25659]: In `ctypes`, prevent a crash calling the `from_buffer()` and `from_buffer_copy()` methods on abstract

classes like `Array`.

- [bpo-19717](https://bugs.python.org/issue?@action=redirect&bpo=19717) [https://bugs.python.org/issue?@action=redirect&bpo=19717]: Makes `Path.resolve()` succeed on paths that do not exist. Patch by Vajrasky Kok
- [bpo-28563](https://bugs.python.org/issue?@action=redirect&bpo=28563) [https://bugs.python.org/issue?@action=redirect&bpo=28563]: Fixed possible DoS and arbitrary code execution when handle plural form selections in the `gettext` module. The expression parser now supports exact syntax supported by GNU `gettext`.
- [bpo-28387](https://bugs.python.org/issue?@action=redirect&bpo=28387) [https://bugs.python.org/issue?@action=redirect&bpo=28387]: Fixed possible crash in `_io.TextIOWrapper.deallocator` when the garbage collector is invoked in other thread. Based on patch by Sebastian Cufre.
- [bpo-28600](https://bugs.python.org/issue?@action=redirect&bpo=28600) [https://bugs.python.org/issue?@action=redirect&bpo=28600]: Optimize `loop.call_soon`.
- [bpo-28613](https://bugs.python.org/issue?@action=redirect&bpo=28613) [https://bugs.python.org/issue?@action=redirect&bpo=28613]: Fix `get_event_loop()` return the current loop if called from coroutines/callbacks.
- [bpo-28634](https://bugs.python.org/issue?@action=redirect&bpo=28634) [https://bugs.python.org/issue?@action=redirect&bpo=28634]: Fix `asyncio.isfuture()` to support `unittest.Mock`.
- [bpo-26081](https://bugs.python.org/issue?@action=redirect&bpo=26081) [https://bugs.python.org/issue?@action=redirect&bpo=26081]: Fix ref leak in `_asyncio.Future._iter_().throw`.
- [bpo-28639](https://bugs.python.org/issue?@action=redirect&bpo=28639) [https://bugs.python.org/issue?@action=redirect&bpo=28639]: Fix `inspect.isawaitable` to always return bool Patch by Justin Mayfield.
- [bpo-28652](https://bugs.python.org/issue?@action=redirect&bpo=28652) [https://bugs.python.org/issue?@action=redirect&bpo=28652]: Make loop methods reject socket kinds they do not support.
- [bpo-28653](https://bugs.python.org/issue?@action=redirect&bpo=28653) [https://bugs.python.org/issue?@action=redirect&bpo=28653]: Fix a ref leak in `functools.lru_cache`.
- [bpo-28703](https://bugs.python.org/issue?@action=redirect&bpo=28703) [https://bugs.python.org/issue?@action=redirect&bpo=28703]: Fix `asyncio.iscoroutinefunction` to handle `Mock` objects.
- [bpo-28704](https://bugs.python.org/issue?@action=redirect&bpo=28704) [https://bugs.python.org/issue?@action=redirect&bpo=28704]: Fix `create_unix_server` to support Path-like objects (PEP 519).
- [bpo-28720](https://bugs.python.org/issue?@action=redirect&bpo=28720) [https://bugs.python.org/issue?@action=redirect&bpo=28720]

@action=redirect&bpo=28720]: Add  
collections.abc.AsyncGenerator.

## Documentation

- [bpo-28513](https://bugs.python.org/issue?@action=redirect&bpo=28513) [https://bugs.python.org/issue?@action=redirect&bpo=28513]: Documented command-line interface of zipfile.

## Tests

- [bpo-28666](https://bugs.python.org/issue?@action=redirect&bpo=28666) [https://bugs.python.org/issue?@action=redirect&bpo=28666]: Now test.support.rmtree is able to remove unwritable or unreadable directories.
- [bpo-23839](https://bugs.python.org/issue?@action=redirect&bpo=23839) [https://bugs.python.org/issue?@action=redirect&bpo=23839]: Various caches now are cleared before running every test file.

## Build

- [bpo-10656](https://bugs.python.org/issue?@action=redirect&bpo=10656) [https://bugs.python.org/issue?@action=redirect&bpo=10656]: Fix out-of-tree building on AIX. Patch by Tristan Carel and Michael Haubenwallner.
- [bpo-26359](https://bugs.python.org/issue?@action=redirect&bpo=26359) [https://bugs.python.org/issue?@action=redirect&bpo=26359]: Rename `-with-optimizations` to `-enable-optimizations`.
- [bpo-28676](https://bugs.python.org/issue?@action=redirect&bpo=28676) [https://bugs.python.org/issue?@action=redirect&bpo=28676]: Prevent missing ‘getentropy’ declaration warning on macOS. Patch by Gareth Rees.

## Python 3.6.0 beta 3

*Release date: 2016-10-31*

## Core and Builtins

- [bpo-28128](https://bugs.python.org/issue?@action=redirect&bpo=28128) [https://bugs.python.org/issue?@action=redirect&bpo=28128]: Deprecation warning for invalid str and byte escape sequences now prints better information

about where the error occurs. Patch by Serhiy Storchaka and Eric Smith.

- [bpo-28509](https://bugs.python.org/issue?@action=redirect&bpo=28509) [https://bugs.python.org/issue?@action=redirect&bpo=28509]: dict.update() no longer allocate unnecessary large memory.
- [bpo-28426](https://bugs.python.org/issue?@action=redirect&bpo=28426) [https://bugs.python.org/issue?@action=redirect&bpo=28426]: Fixed potential crash in PyUnicode\_AsDecodedObject() in debug build.
- [bpo-28517](https://bugs.python.org/issue?@action=redirect&bpo=28517) [https://bugs.python.org/issue?@action=redirect&bpo=28517]: Fixed of-by-one error in the peephole optimizer that caused keeping unreachable code.
- [bpo-28214](https://bugs.python.org/issue?@action=redirect&bpo=28214) [https://bugs.python.org/issue?@action=redirect&bpo=28214]: Improved exception reporting for problematic `_set_name_` attributes.
- [bpo-23782](https://bugs.python.org/issue?@action=redirect&bpo=23782) [https://bugs.python.org/issue?@action=redirect&bpo=23782]: Fixed possible memory leak in `_PyTraceback_Add()` and exception loss in `PyTraceBack_Here()`.
- [bpo-28471](https://bugs.python.org/issue?@action=redirect&bpo=28471) [https://bugs.python.org/issue?@action=redirect&bpo=28471]: Fix “Python memory allocator called without holding the GIL” crash in `socket.setblocking`.

## Library

- [bpo-27517](https://bugs.python.org/issue?@action=redirect&bpo=27517) [https://bugs.python.org/issue?@action=redirect&bpo=27517]: LZMA compressor and decompressor no longer raise exceptions if given empty data twice. Patch by Benjamin Fogle.
- [bpo-28549](https://bugs.python.org/issue?@action=redirect&bpo=28549) [https://bugs.python.org/issue?@action=redirect&bpo=28549]: Fixed segfault in `curses`’s `addch()` with `ncurses6`.
- [bpo-28449](https://bugs.python.org/issue?@action=redirect&bpo=28449) [https://bugs.python.org/issue?@action=redirect&bpo=28449]: `tarfile.open()` with mode “r” or “r:” now tries to open a tar file with compression before trying to open it without compression. Otherwise it had 50% chance failed with `ignore_zeros = True`.
- [bpo-23262](https://bugs.python.org/issue?@action=redirect&bpo=23262) [https://bugs.python.org/issue?@action=redirect&bpo=23262]: The `webbrowser` module now supports Firefox 36+ and derived browsers. Based on patch by Oleg Broytman.

- [bpo-27939](https://bugs.python.org/issue?@action=redirect&bpo=27939) [https://bugs.python.org/issue?@action=redirect&bpo=27939]: Fixed bugs in `tkinter.ttk.LabeledScale` and `tkinter.Scale` caused by representing the scale as float value internally in Tk. `tkinter.IntVar` now works if float value is set to underlying Tk variable.
- [bpo-18844](https://bugs.python.org/issue?@action=redirect&bpo=18844) [https://bugs.python.org/issue?@action=redirect&bpo=18844]: The various ways of specifying weights for `random.choices()` now produce the same result sequences.
- [bpo-28255](https://bugs.python.org/issue?@action=redirect&bpo=28255) [https://bugs.python.org/issue?@action=redirect&bpo=28255]: `calendar.TextCalendar().prmonth()` no longer prints a space at the start of new line after printing a month's calendar. Patch by Xiang Zhang.
- [bpo-20491](https://bugs.python.org/issue?@action=redirect&bpo=20491) [https://bugs.python.org/issue?@action=redirect&bpo=20491]: The `textwrap.TextWrapper` class now honors non-breaking spaces. Based on patch by Kaarle Ritvanen.
- [bpo-28353](https://bugs.python.org/issue?@action=redirect&bpo=28353) [https://bugs.python.org/issue?@action=redirect&bpo=28353]: `os.fwalk()` no longer fails on broken links.
- [bpo-28430](https://bugs.python.org/issue?@action=redirect&bpo=28430) [https://bugs.python.org/issue?@action=redirect&bpo=28430]: Fix iterator of C implemented `asyncio.Future` doesn't accept non-None value is passed to `it.send(val)`.
- [bpo-27025](https://bugs.python.org/issue?@action=redirect&bpo=27025) [https://bugs.python.org/issue?@action=redirect&bpo=27025]: Generated names for Tkinter widgets now start by the "!" prefix for readability.
- [bpo-25464](https://bugs.python.org/issue?@action=redirect&bpo=25464) [https://bugs.python.org/issue?@action=redirect&bpo=25464]: Fixed `HList.header_exists()` in `tkinter.tix` module by addin a workaround to Tix library bug.
- [bpo-28488](https://bugs.python.org/issue?@action=redirect&bpo=28488) [https://bugs.python.org/issue?@action=redirect&bpo=28488]: `shutil.make_archive()` no longer adds entry `"/` to ZIP archive.
- [bpo-25953](https://bugs.python.org/issue?@action=redirect&bpo=25953) [https://bugs.python.org/issue?@action=redirect&bpo=25953]: `re.sub()` now raises an error for invalid numerical group reference in replacement template even if the pattern is not found in the string. Error message for invalid group reference now includes the group index and

the position of the reference. Based on patch by SilentGhost.

- [bpo-18219](https://bugs.python.org/issue?@action=redirect&bpo=18219) [https://bugs.python.org/issue?@action=redirect&bpo=18219]: Optimize csv.DictWriter for large number of columns. Patch by Mariatta Wijaya.
- [bpo-28448](https://bugs.python.org/issue?@action=redirect&bpo=28448) [https://bugs.python.org/issue?@action=redirect&bpo=28448]: Fix C implemented asyncio.Future didn't work on Windows.
- [bpo-28480](https://bugs.python.org/issue?@action=redirect&bpo=28480) [https://bugs.python.org/issue?@action=redirect&bpo=28480]: Fix error building socket module when multithreading is disabled.
- [bpo-24452](https://bugs.python.org/issue?@action=redirect&bpo=24452) [https://bugs.python.org/issue?@action=redirect&bpo=24452]: Make webbrowser support Chrome on Mac OS X.
- [bpo-20766](https://bugs.python.org/issue?@action=redirect&bpo=20766) [https://bugs.python.org/issue?@action=redirect&bpo=20766]: Fix references leaked by pdb in the handling of SIGINT handlers.
- [bpo-28492](https://bugs.python.org/issue?@action=redirect&bpo=28492) [https://bugs.python.org/issue?@action=redirect&bpo=28492]: Fix how StopIteration exception is raised in \_asyncio.Future.
- [bpo-28500](https://bugs.python.org/issue?@action=redirect&bpo=28500) [https://bugs.python.org/issue?@action=redirect&bpo=28500]: Fix asyncio to handle async gens GC from another thread.
- [bpo-26923](https://bugs.python.org/issue?@action=redirect&bpo=26923) [https://bugs.python.org/issue?@action=redirect&bpo=26923]: Fix asyncio.Gather to refuse being cancelled once all children are done. Patch by Johannes Ebke.
- [bpo-26796](https://bugs.python.org/issue?@action=redirect&bpo=26796) [https://bugs.python.org/issue?@action=redirect&bpo=26796]: Don't configure the number of workers for default threadpool executor. Initial patch by Hans Lawrenz.
- [bpo-28544](https://bugs.python.org/issue?@action=redirect&bpo=28544) [https://bugs.python.org/issue?@action=redirect&bpo=28544]: Implement asyncio.Task in C.

## Windows

- [bpo-28522](https://bugs.python.org/issue?@action=redirect&bpo=28522) [https://bugs.python.org/issue?@action=redirect&bpo=28522]: Fixes mishandled buffer reallocation in getpathp.c

## Build

- [bpo-28444](https://bugs.python.org/issue?@action=redirect&bpo=28444) [https://bugs.python.org/issue?@action=redirect&bpo=28444]: Fix missing extensions modules when cross compiling.
- [bpo-28208](https://bugs.python.org/issue?@action=redirect&bpo=28208) [https://bugs.python.org/issue?@action=redirect&bpo=28208]: Update Windows build and OS X installers to use SQLite 3.14.2.
- [bpo-28248](https://bugs.python.org/issue?@action=redirect&bpo=28248) [https://bugs.python.org/issue?@action=redirect&bpo=28248]: Update Windows build and OS X installers to use OpenSSL 1.0.2j.

## Tests

- [bpo-26944](https://bugs.python.org/issue?@action=redirect&bpo=26944) [https://bugs.python.org/issue?@action=redirect&bpo=26944]: Fix test\_posix for Android where ‘id -G’ is entirely wrong or missing the effective gid.
- [bpo-28409](https://bugs.python.org/issue?@action=redirect&bpo=28409) [https://bugs.python.org/issue?@action=redirect&bpo=28409]: regrtest: fix the parser of command line arguments.

## Python 3.6.0 beta 2

*Release date: 2016-10-10*

## Core and Builtins

- [bpo-28183](https://bugs.python.org/issue?@action=redirect&bpo=28183) [https://bugs.python.org/issue?@action=redirect&bpo=28183]: Optimize and cleanup dict iteration.
- [bpo-26081](https://bugs.python.org/issue?@action=redirect&bpo=26081) [https://bugs.python.org/issue?@action=redirect&bpo=26081]: Added C implementation of asyncio.Future. Original patch by Yuriy Selivanov.
- [bpo-28379](https://bugs.python.org/issue?@action=redirect&bpo=28379) [https://bugs.python.org/issue?@action=redirect&bpo=28379]: Added sanity checks and tests for PyUnicode\_CopyCharacters(). Patch by Xiang Zhang.
- [bpo-28376](https://bugs.python.org/issue?@action=redirect&bpo=28376) [https://bugs.python.org/issue?@action=redirect&bpo=28376]: The type of long range iterator is now registered as Iterator. Patch by Oren Milman.
- [bpo-28376](https://bugs.python.org/issue?@action=redirect&bpo=28376) [https://bugs.python.org/issue?@action=redirect&bpo=28376]: Creating instances of

`range_iterator` by calling `range_iterator` type now is deprecated. Patch by Oren Milman.

- [bpo-28376](https://bugs.python.org/issue?@action=redirect&bpo=28376) [https://bugs.python.org/issue?@action=redirect&bpo=28376]: The constructor of `range_iterator` now checks that step is not 0. Patch by Oren Milman.
- [bpo-26906](https://bugs.python.org/issue?@action=redirect&bpo=26906) [https://bugs.python.org/issue?@action=redirect&bpo=26906]: Resolving special methods of uninitialized type now causes implicit initialization of the type instead of a fail.
- [bpo-18287](https://bugs.python.org/issue?@action=redirect&bpo=18287) [https://bugs.python.org/issue?@action=redirect&bpo=18287]: `PyType_Ready()` now checks that `tp_name` is not NULL. Original patch by Niklas Koep.
- [bpo-24098](https://bugs.python.org/issue?@action=redirect&bpo=24098) [https://bugs.python.org/issue?@action=redirect&bpo=24098]: Fixed possible crash when AST is changed in process of compiling it.
- [bpo-28201](https://bugs.python.org/issue?@action=redirect&bpo=28201) [https://bugs.python.org/issue?@action=redirect&bpo=28201]: Dict reduces possibility of 2nd conflict in hash table when hashes have same lower bits.
- [bpo-28350](https://bugs.python.org/issue?@action=redirect&bpo=28350) [https://bugs.python.org/issue?@action=redirect&bpo=28350]: String constants with null character no longer interned.
- [bpo-26617](https://bugs.python.org/issue?@action=redirect&bpo=26617) [https://bugs.python.org/issue?@action=redirect&bpo=26617]: Fix crash when GC runs during weakref callbacks.
- [bpo-27942](https://bugs.python.org/issue?@action=redirect&bpo=27942) [https://bugs.python.org/issue?@action=redirect&bpo=27942]: String constants now interned recursively in tuples and frozensets.
- [bpo-21578](https://bugs.python.org/issue?@action=redirect&bpo=21578) [https://bugs.python.org/issue?@action=redirect&bpo=21578]: Fixed misleading error message when `ImportError` called with invalid keyword args.
- [bpo-28203](https://bugs.python.org/issue?@action=redirect&bpo=28203) [https://bugs.python.org/issue?@action=redirect&bpo=28203]: Fix incorrect type in `complex(1.0, {2:3})` error message. Patch by Soumya Sharma.
- [bpo-28086](https://bugs.python.org/issue?@action=redirect&bpo=28086) [https://bugs.python.org/issue?@action=redirect&bpo=28086]: Single var-positional argument of tuple subtype was passed uncathed to the C-defined function. Now it is converted to exact tuple.
- [bpo-28214](https://bugs.python.org/issue?@action=redirect&bpo=28214) [https://bugs.python.org/issue?@action=redirect&bpo=28214]: Now `__set_name__` is looked up on the class instead of the instance.

- [bpo-27955](https://bugs.python.org/issue?@action=redirect&bpo=27955) [https://bugs.python.org/issue?@action=redirect&bpo=27955]: Fallback on reading /dev/urandom device when the getrandom() syscall fails with EPERM, for example when blocked by SECCOMP.
- [bpo-28192](https://bugs.python.org/issue?@action=redirect&bpo=28192) [https://bugs.python.org/issue?@action=redirect&bpo=28192]: Don't import readline in isolated mode.
- Upgrade internal unicode databases to Unicode version 9.0.0.
- [bpo-28131](https://bugs.python.org/issue?@action=redirect&bpo=28131) [https://bugs.python.org/issue?@action=redirect&bpo=28131]: Fix a regression in zipimport's compile\_source(). zipimport should use the same optimization level as the interpreter.
- [bpo-28126](https://bugs.python.org/issue?@action=redirect&bpo=28126) [https://bugs.python.org/issue?@action=redirect&bpo=28126]: Replace Py\_MEMCPY with memcpy(). Visual Studio can properly optimize memcpy().
- [bpo-28120](https://bugs.python.org/issue?@action=redirect&bpo=28120) [https://bugs.python.org/issue?@action=redirect&bpo=28120]: Fix dict.pop() for splitted dictionary when trying to remove a "pending key" (Not yet inserted in split-table). Patch by Xiang Zhang.
- [bpo-26182](https://bugs.python.org/issue?@action=redirect&bpo=26182) [https://bugs.python.org/issue?@action=redirect&bpo=26182]: Raise DeprecationWarning when async and await keywords are used as variable/attribute/class/function name.

## Library

- [bpo-27998](https://bugs.python.org/issue?@action=redirect&bpo=27998) [https://bugs.python.org/issue?@action=redirect&bpo=27998]: Fixed bytes path support in os.scandir() on Windows. Patch by Eryk Sun.
- [bpo-28317](https://bugs.python.org/issue?@action=redirect&bpo=28317) [https://bugs.python.org/issue?@action=redirect&bpo=28317]: The disassembler now decodes FORMAT\_VALUE argument.
- [bpo-26293](https://bugs.python.org/issue?@action=redirect&bpo=26293) [https://bugs.python.org/issue?@action=redirect&bpo=26293]: Fixed writing ZIP files that starts not from the start of the file. Offsets in ZIP file now are relative to the start of the archive in conforming to the specification.
- [bpo-28380](https://bugs.python.org/issue?@action=redirect&bpo=28380) [https://bugs.python.org/issue?@action=redirect&bpo=28380]: unittest.mock Mock autospec functions now properly support assert\_called,

`assert_not_called`, and `assert_called_once`.

- [bpo-27181](https://bugs.python.org/issue?@action=redirect&bpo=27181) [https://bugs.python.org/issue?@action=redirect&bpo=27181]: `remove`, `statistics.geometric_mean` and `defer` until 3.7.
- [bpo-28229](https://bugs.python.org/issue?@action=redirect&bpo=28229) [https://bugs.python.org/issue?@action=redirect&bpo=28229]: `lzma` module now supports `pathlib`.
- [bpo-28321](https://bugs.python.org/issue?@action=redirect&bpo=28321) [https://bugs.python.org/issue?@action=redirect&bpo=28321]: Fixed writing non-BMP characters with binary format in `plistlib`.
- [bpo-28225](https://bugs.python.org/issue?@action=redirect&bpo=28225) [https://bugs.python.org/issue?@action=redirect&bpo=28225]: `bz2` module now supports `pathlib`. Initial patch by Ethan Furman.
- [bpo-28227](https://bugs.python.org/issue?@action=redirect&bpo=28227) [https://bugs.python.org/issue?@action=redirect&bpo=28227]: `gzip` now supports `pathlib`. Patch by Ethan Furman.
- [bpo-27358](https://bugs.python.org/issue?@action=redirect&bpo=27358) [https://bugs.python.org/issue?@action=redirect&bpo=27358]: Optimized merging var-keyword arguments and improved error message when passing a non-mapping as a var-keyword argument.
- [bpo-28257](https://bugs.python.org/issue?@action=redirect&bpo=28257) [https://bugs.python.org/issue?@action=redirect&bpo=28257]: Improved error message when passing a non-iterable as a var-positional argument. Added opcode `BUILD_TUPLE_UNPACK_WITH_CALL`.
- [bpo-28322](https://bugs.python.org/issue?@action=redirect&bpo=28322) [https://bugs.python.org/issue?@action=redirect&bpo=28322]: Fixed possible crashes when unpickle `itertools` objects from incorrect pickle data. Based on patch by John Leitch.
- [bpo-28228](https://bugs.python.org/issue?@action=redirect&bpo=28228) [https://bugs.python.org/issue?@action=redirect&bpo=28228]: `imghdr` now supports `pathlib`.
- [bpo-28226](https://bugs.python.org/issue?@action=redirect&bpo=28226) [https://bugs.python.org/issue?@action=redirect&bpo=28226]: `compileall` now supports `pathlib`.
- [bpo-28314](https://bugs.python.org/issue?@action=redirect&bpo=28314) [https://bugs.python.org/issue?@action=redirect&bpo=28314]: Fix function declaration (C flags) for the `getiterator()` method of `xml.etree.ElementTree.Element`.
- [bpo-28148](https://bugs.python.org/issue?@action=redirect&bpo=28148) [https://bugs.python.org/issue?@action=redirect&bpo=28148]: Stop using `localtime()` and `gmtime()` in the `time` module. Introduced platform independent `_PyTime_localtime` API that is similar to POSIX

localtime\_r, but available on all platforms. Patch by Ed Schouten.

- [bpo-28253](https://bugs.python.org/issue?@action=redirect&bpo=28253) [https://bugs.python.org/issue?@action=redirect&bpo=28253]: Fixed calendar functions for extreme months: 0001-01 and 9999-12. Methods `itermonthdays()` and `itermonthdays2()` are reimplemented so that they don't call `itermonthdates()` which can cause `datetime.date` under/overflow.
- [bpo-28275](https://bugs.python.org/issue?@action=redirect&bpo=28275) [https://bugs.python.org/issue?@action=redirect&bpo=28275]: Fixed possible use after free in the `decompress()` methods of the `LZMADecompressor` and `BZ2Decompressor` classes. Original patch by John Leitch.
- [bpo-27897](https://bugs.python.org/issue?@action=redirect&bpo=27897) [https://bugs.python.org/issue?@action=redirect&bpo=27897]: Fixed possible crash in `sqlite3.Connection.create_collation()` if pass invalid string-like object as a name. Patch by Xiang Zhang.
- [bpo-18844](https://bugs.python.org/issue?@action=redirect&bpo=18844) [https://bugs.python.org/issue?@action=redirect&bpo=18844]: `random.choices()` now has `k` as a keyword-only argument to improve the readability of common cases and come into line with the signature used in other languages.
- [bpo-18893](https://bugs.python.org/issue?@action=redirect&bpo=18893) [https://bugs.python.org/issue?@action=redirect&bpo=18893]: Fix invalid exception handling in `Lib/ctypes/macholib/dyld.py`. Patch by Madison May.
- [bpo-27611](https://bugs.python.org/issue?@action=redirect&bpo=27611) [https://bugs.python.org/issue?@action=redirect&bpo=27611]: Fixed support of default root window in the `tkinter.tix` module. Added the master parameter in the `DisplayStyle` constructor.
- [bpo-27348](https://bugs.python.org/issue?@action=redirect&bpo=27348) [https://bugs.python.org/issue?@action=redirect&bpo=27348]: In the `traceback` module, restore the formatting of exception messages like "Exception: None". This fixes a regression introduced in 3.5a2.
- [bpo-25651](https://bugs.python.org/issue?@action=redirect&bpo=25651) [https://bugs.python.org/issue?@action=redirect&bpo=25651]: Allow falsy values to be used for `msg` parameter of `subTest()`.
- [bpo-27778](https://bugs.python.org/issue?@action=redirect&bpo=27778) [https://bugs.python.org/issue?@action=redirect&bpo=27778]: Fix a memory leak in `os.getrandom()` when the `getrandom()` is interrupted by a signal and a signal handler raises a Python exception.
- [bpo-28200](https://bugs.python.org/issue?@action=redirect&bpo=28200) [https://bugs.python.org/issue?@action=redirect&bpo=28200]

@action=redirect&bpo=28200]: Fix memory leak on Windows in the os module (fix path\_converter() function).

- [bpo-25400](https://bugs.python.org/issue?@action=redirect&bpo=25400) [https://bugs.python.org/issue?@action=redirect&bpo=25400]: RobotFileParser now correctly returns default values for crawl\_delay and request\_rate. Initial patch by Peter Wirtz.
- [bpo-27932](https://bugs.python.org/issue?@action=redirect&bpo=27932) [https://bugs.python.org/issue?@action=redirect&bpo=27932]: Prevent memory leak in win32\_ver().
- Fix UnboundLocalError in socket.\_sendfile\_use\_sendfile.
- [bpo-28075](https://bugs.python.org/issue?@action=redirect&bpo=28075) [https://bugs.python.org/issue?@action=redirect&bpo=28075]: Check for ERROR\_ACCESS\_DENIED in Windows implementation of os.stat(). Patch by Eryk Sun.
- [bpo-22493](https://bugs.python.org/issue?@action=redirect&bpo=22493) [https://bugs.python.org/issue?@action=redirect&bpo=22493]: Warning message emitted by using inline flags in the middle of regular expression now contains a (truncated) regex pattern. Patch by Tim Graham.
- [bpo-25270](https://bugs.python.org/issue?@action=redirect&bpo=25270) [https://bugs.python.org/issue?@action=redirect&bpo=25270]: Prevent codecs.escape\_encode() from raising SystemError when an empty bytestring is passed.
- [bpo-28181](https://bugs.python.org/issue?@action=redirect&bpo=28181) [https://bugs.python.org/issue?@action=redirect&bpo=28181]: Get antigravity over HTTPS. Patch by Kaartic Sivaraam.
- [bpo-25895](https://bugs.python.org/issue?@action=redirect&bpo=25895) [https://bugs.python.org/issue?@action=redirect&bpo=25895]: Enable WebSocket URL schemes in urllib.parse.urljoin. Patch by Gergely Imreh and Markus Holtermann.
- [bpo-28114](https://bugs.python.org/issue?@action=redirect&bpo=28114) [https://bugs.python.org/issue?@action=redirect&bpo=28114]: Fix a crash in parse\_envlist() when env contains byte strings. Patch by Eryk Sun.
- [bpo-27599](https://bugs.python.org/issue?@action=redirect&bpo=27599) [https://bugs.python.org/issue?@action=redirect&bpo=27599]: Fixed buffer overrun in binascii.b2a\_qp() and binascii.a2b\_qp().
- [bpo-27906](https://bugs.python.org/issue?@action=redirect&bpo=27906) [https://bugs.python.org/issue?@action=redirect&bpo=27906]: Fix socket accept exhaustion during high TCP traffic. Patch by Kevin Conway.
- [bpo-28174](https://bugs.python.org/issue?@action=redirect&bpo=28174) [https://bugs.python.org/issue?@action=redirect&bpo=28174]: Handle when SO\_REUSEPORT isn't properly supported. Patch by Seth Michael Larson.

- [bpo-26654](https://bugs.python.org/issue?@action=redirect&bpo=26654) [https://bugs.python.org/issue?@action=redirect&bpo=26654]: Inspect `functools.partial` in `asyncio.Handle.__repr__`. Patch by iceboy.
- [bpo-26909](https://bugs.python.org/issue?@action=redirect&bpo=26909) [https://bugs.python.org/issue?@action=redirect&bpo=26909]: Fix slow pipes IO in `asyncio`. Patch by INADA Naoki.
- [bpo-28176](https://bugs.python.org/issue?@action=redirect&bpo=28176) [https://bugs.python.org/issue?@action=redirect&bpo=28176]: Fix callbacks race in `asyncio.SelectorLoop.sock_connect`.
- [bpo-27759](https://bugs.python.org/issue?@action=redirect&bpo=27759) [https://bugs.python.org/issue?@action=redirect&bpo=27759]: Fix selectors incorrectly retain invalid file descriptors. Patch by Mark Williams.
- [bpo-28368](https://bugs.python.org/issue?@action=redirect&bpo=28368) [https://bugs.python.org/issue?@action=redirect&bpo=28368]: Refuse monitoring processes if the child watcher has no loop attached. Patch by Vincent Michel.
- [bpo-28369](https://bugs.python.org/issue?@action=redirect&bpo=28369) [https://bugs.python.org/issue?@action=redirect&bpo=28369]: Raise `RuntimeError` when transport's FD is used with `add_reader`, `add_writer`, etc.
- [bpo-28370](https://bugs.python.org/issue?@action=redirect&bpo=28370) [https://bugs.python.org/issue?@action=redirect&bpo=28370]: Speedup `asyncio.StreamReader.readexactly`. Patch by Копенберг Марк.
- [bpo-28371](https://bugs.python.org/issue?@action=redirect&bpo=28371) [https://bugs.python.org/issue?@action=redirect&bpo=28371]: Deprecate passing `asyncio.Handles` to `run_in_executor`.
- [bpo-28372](https://bugs.python.org/issue?@action=redirect&bpo=28372) [https://bugs.python.org/issue?@action=redirect&bpo=28372]: Fix `asyncio` to support formatting of non-python coroutines.
- [bpo-28399](https://bugs.python.org/issue?@action=redirect&bpo=28399) [https://bugs.python.org/issue?@action=redirect&bpo=28399]: Remove UNIX socket from FS before binding. Patch by Копенберг Марк.
- [bpo-27972](https://bugs.python.org/issue?@action=redirect&bpo=27972) [https://bugs.python.org/issue?@action=redirect&bpo=27972]: Prohibit Tasks to await on themselves.

## Windows

- [bpo-28402](https://bugs.python.org/issue?@action=redirect&bpo=28402) [https://bugs.python.org/issue?@action=redirect&bpo=28402]: Adds signed catalog files for stdlib on Windows.

- [bpo-28333](https://bugs.python.org/issue?@action=redirect&bpo=28333) [https://bugs.python.org/issue?@action=redirect&bpo=28333]: Enables Unicode for ps1/ps2 and input() prompts. (Patch by Eryk Sun)
- [bpo-28251](https://bugs.python.org/issue?@action=redirect&bpo=28251) [https://bugs.python.org/issue?@action=redirect&bpo=28251]: Improvements to help manuals on Windows.
- [bpo-28110](https://bugs.python.org/issue?@action=redirect&bpo=28110) [https://bugs.python.org/issue?@action=redirect&bpo=28110]: launcher.msi has different product codes between 32-bit and 64-bit
- [bpo-28161](https://bugs.python.org/issue?@action=redirect&bpo=28161) [https://bugs.python.org/issue?@action=redirect&bpo=28161]: Opening CON for write access fails
- [bpo-28162](https://bugs.python.org/issue?@action=redirect&bpo=28162) [https://bugs.python.org/issue?@action=redirect&bpo=28162]: WindowsConsoleIO readall() fails if first line starts with Ctrl + Z
- [bpo-28163](https://bugs.python.org/issue?@action=redirect&bpo=28163) [https://bugs.python.org/issue?@action=redirect&bpo=28163]: WindowsConsoleIO fileno() passes wrong flags to \_open\_osfhandle
- [bpo-28164](https://bugs.python.org/issue?@action=redirect&bpo=28164) [https://bugs.python.org/issue?@action=redirect&bpo=28164]: \_PyIO\_get\_console\_type fails for various paths
- [bpo-28137](https://bugs.python.org/issue?@action=redirect&bpo=28137) [https://bugs.python.org/issue?@action=redirect&bpo=28137]: Renames Windows path file to .pth
- [bpo-28138](https://bugs.python.org/issue?@action=redirect&bpo=28138) [https://bugs.python.org/issue?@action=redirect&bpo=28138]: Windows .pth file should allow import site

## C API

- [bpo-28426](https://bugs.python.org/issue?@action=redirect&bpo=28426) [https://bugs.python.org/issue?@action=redirect&bpo=28426]: Deprecated undocumented functions PyUnicode\_AsEncodedObject(), PyUnicode\_AsDecodedObject(), PyUnicode\_AsDecodedUnicode() and PyUnicode\_AsEncodedUnicode().

## Build

- [bpo-28258](https://bugs.python.org/issue?@action=redirect&bpo=28258) [https://bugs.python.org/issue?@action=redirect&bpo=28258]

@action=redirect&bpo=28258]: Fixed build with Estonian locale (python-config and distclean targets in Makefile). Patch by Arfrever Frehtes Taifersar Arahesis.

- [bpo-26661](https://bugs.python.org/issue?@action=redirect&bpo=26661) [https://bugs.python.org/issue?@action=redirect&bpo=26661]: setup.py now detects system libffi with multiarch wrapper.
- [bpo-15819](https://bugs.python.org/issue?@action=redirect&bpo=15819) [https://bugs.python.org/issue?@action=redirect&bpo=15819]: Remove redundant include search directory option for building outside the source tree.

## Tests

- [bpo-28217](https://bugs.python.org/issue?@action=redirect&bpo=28217) [https://bugs.python.org/issue?@action=redirect&bpo=28217]: Adds \_testconsole module to test console input.

# Python 3.6.0 beta 1

*Release date: 2016-09-12*

## Core and Builtins

- [bpo-23722](https://bugs.python.org/issue?@action=redirect&bpo=23722) [https://bugs.python.org/issue?@action=redirect&bpo=23722]: The `_class_` cell used by zero-argument `super()` is now initialized from `type._new_` rather than `_build_class_`, so class methods relying on that will now work correctly when called from metaclass methods during class creation. Patch by Martin Teichmann.
- [bpo-25221](https://bugs.python.org/issue?@action=redirect&bpo=25221) [https://bugs.python.org/issue?@action=redirect&bpo=25221]: Fix corrupted result from `PyLong_FromLong(0)` when Python is compiled with `NSMALLPOSINTS = 0`.
- [bpo-27080](https://bugs.python.org/issue?@action=redirect&bpo=27080) [https://bugs.python.org/issue?@action=redirect&bpo=27080]: Implement formatting support for [PEP 515](https://peps.python.org/pep-0515/) [https://peps.python.org/pep-0515/]. Initial patch by Chris Angelico.
- [bpo-27199](https://bugs.python.org/issue?@action=redirect&bpo=27199) [https://bugs.python.org/issue?@action=redirect&bpo=27199]: In tarfile, expose `copyfileobj` bufsize to improve throughput. Patch by Jason Fried.

- [bpo-27948](https://bugs.python.org/issue?@action=redirect&bpo=27948) [https://bugs.python.org/issue?@action=redirect&bpo=27948]: In f-strings, only allow backslashes inside the braces (where the expressions are). This is a breaking change from the 3.6 alpha releases, where backslashes are allowed anywhere in an f-string. Also, require that expressions inside f-strings be enclosed within literal braces, and not escapes like `f'\x7b"hi"\x7d'`.
- [bpo-28046](https://bugs.python.org/issue?@action=redirect&bpo=28046) [https://bugs.python.org/issue?@action=redirect&bpo=28046]: Remove platform-specific directories from `sys.path`.
- [bpo-28071](https://bugs.python.org/issue?@action=redirect&bpo=28071) [https://bugs.python.org/issue?@action=redirect&bpo=28071]: Add early-out for differencing from an empty set.
- [bpo-25758](https://bugs.python.org/issue?@action=redirect&bpo=25758) [https://bugs.python.org/issue?@action=redirect&bpo=25758]: Prevents `zipimport` from unnecessarily encoding a filename (patch by Eryk Sun)
- [bpo-25856](https://bugs.python.org/issue?@action=redirect&bpo=25856) [https://bugs.python.org/issue?@action=redirect&bpo=25856]: The `__module__` attribute of extension classes and functions now is interned. This leads to more compact pickle data with protocol 4.
- [bpo-27213](https://bugs.python.org/issue?@action=redirect&bpo=27213) [https://bugs.python.org/issue?@action=redirect&bpo=27213]: Rework `CALL_FUNCTION*` opcodes to produce shorter and more efficient bytecode. Patch by Demur Rumed, design by Serhiy Storchaka, reviewed by Serhiy Storchaka and Victor Stinner.
- [bpo-26331](https://bugs.python.org/issue?@action=redirect&bpo=26331) [https://bugs.python.org/issue?@action=redirect&bpo=26331]: Implement tokenizing support for [PEP 515](https://peps.python.org/pep-0515/) [https://peps.python.org/pep-0515/]. Patch by Georg Brandl.
- [bpo-27999](https://bugs.python.org/issue?@action=redirect&bpo=27999) [https://bugs.python.org/issue?@action=redirect&bpo=27999]: Make “global after use” a `SyntaxError`, and ditto for `nonlocal`. Patch by Ivan Levkivskiy.
- [bpo-28003](https://bugs.python.org/issue?@action=redirect&bpo=28003) [https://bugs.python.org/issue?@action=redirect&bpo=28003]: Implement [PEP 525](https://peps.python.org/pep-0525/) [https://peps.python.org/pep-0525/] – Asynchronous Generators.
- [bpo-27985](https://bugs.python.org/issue?@action=redirect&bpo=27985) [https://bugs.python.org/issue?@action=redirect&bpo=27985]: Implement [PEP 526](https://peps.python.org/pep-0526/) [https://peps.python.org/pep-0526/] – Syntax for Variable Annotations. Patch by Ivan Levkivskiy.
- [bpo-26058](https://bugs.python.org/issue?@action=redirect&bpo=26058) [https://bugs.python.org/issue?@action=redirect&bpo=26058]

@action=redirect&bpo=26058]: Add a new private version to the builtin dict type, incremented at each dictionary creation and at each dictionary change. Implementation of the PEP 509.

- [bpo-27364](https://bugs.python.org/issue?@action=redirect&bpo=27364) [https://bugs.python.org/issue?@action=redirect&bpo=27364]: A backslash-character pair that is not a valid escape sequence now generates a DeprecationWarning. Patch by Emanuel Barry.
- [bpo-27350](https://bugs.python.org/issue?@action=redirect&bpo=27350) [https://bugs.python.org/issue?@action=redirect&bpo=27350]: **dict** implementation is changed like PyPy. It is more compact and preserves insertion order. (Concept developed by Raymond Hettinger and patch by Inada Naoki.)
- [bpo-27911](https://bugs.python.org/issue?@action=redirect&bpo=27911) [https://bugs.python.org/issue?@action=redirect&bpo=27911]: Remove unnecessary error checks in `exec_builtin_or_dynamic()`.
- [bpo-27078](https://bugs.python.org/issue?@action=redirect&bpo=27078) [https://bugs.python.org/issue?@action=redirect&bpo=27078]: Added BUILD\_STRING opcode. Optimized f-strings evaluation.
- [bpo-17884](https://bugs.python.org/issue?@action=redirect&bpo=17884) [https://bugs.python.org/issue?@action=redirect&bpo=17884]: Python now requires systems with `inttypes.h` and `stdint.h`
- [bpo-27961](https://bugs.python.org/issue?@action=redirect&bpo=27961) [https://bugs.python.org/issue?@action=redirect&bpo=27961]: Require platforms to support `long long`. Python hasn't compiled without `long long` for years, so this is basically a formality.
- [bpo-27355](https://bugs.python.org/issue?@action=redirect&bpo=27355) [https://bugs.python.org/issue?@action=redirect&bpo=27355]: Removed support for Windows CE. It was never finished, and Windows CE is no longer a relevant platform for Python.
- Implement [PEP 523](https://peps.python.org/pep-0523/) [https://peps.python.org/pep-0523/].
- [bpo-27870](https://bugs.python.org/issue?@action=redirect&bpo=27870) [https://bugs.python.org/issue?@action=redirect&bpo=27870]: A left shift of zero by a large integer no longer attempts to allocate large amounts of memory.
- [bpo-25402](https://bugs.python.org/issue?@action=redirect&bpo=25402) [https://bugs.python.org/issue?@action=redirect&bpo=25402]: In int-to-decimal-string conversion, improve the estimate of the intermediate memory required, and remove an unnecessarily strict overflow check. Patch by Serhiy Storchaka.
- [bpo-27214](https://bugs.python.org/issue?@action=redirect&bpo=27214) [https://bugs.python.org/issue?@action=redirect&bpo=27214]

@action=redirect&bpo=27214]: In `long_invert`, be more careful about modifying object returned by `long_add`, and remove an unnecessary check for small longs. Thanks Oren Milman for analysis and patch.

- [bpo-27506](https://bugs.python.org/issue?@action=redirect&bpo=27506) [https://bugs.python.org/issue?@action=redirect&bpo=27506]: Support passing the bytes/bytearray.translate() “delete” argument by keyword.
- [bpo-27812](https://bugs.python.org/issue?@action=redirect&bpo=27812) [https://bugs.python.org/issue?@action=redirect&bpo=27812]: Properly clear out a generator’s frame’s backreference to the generator to prevent crashes in `frame.clear()`.
- [bpo-27811](https://bugs.python.org/issue?@action=redirect&bpo=27811) [https://bugs.python.org/issue?@action=redirect&bpo=27811]: Fix a crash when a coroutine that has not been awaited is finalized with warnings-as-errors enabled.
- [bpo-27587](https://bugs.python.org/issue?@action=redirect&bpo=27587) [https://bugs.python.org/issue?@action=redirect&bpo=27587]: Fix another issue found by PVS-Studio: Null pointer check after use of ‘def’ in `_PyState_AddModule()`. Initial patch by Christian Heimes.
- [bpo-27792](https://bugs.python.org/issue?@action=redirect&bpo=27792) [https://bugs.python.org/issue?@action=redirect&bpo=27792]: The modulo operation applied to `bool` and other `int` subclasses now always returns an `int`. Previously the return type depended on the input values. Patch by Xiang Zhang.
- [bpo-26984](https://bugs.python.org/issue?@action=redirect&bpo=26984) [https://bugs.python.org/issue?@action=redirect&bpo=26984]: `int()` now always returns an instance of exact `int`.
- [bpo-25604](https://bugs.python.org/issue?@action=redirect&bpo=25604) [https://bugs.python.org/issue?@action=redirect&bpo=25604]: Fix a minor bug in integer true division; this bug could potentially have caused off-by-one-ulp results on platforms with unreliable `ldexp` implementations.
- [bpo-24254](https://bugs.python.org/issue?@action=redirect&bpo=24254) [https://bugs.python.org/issue?@action=redirect&bpo=24254]: Make class definition namespace ordered by default.
- [bpo-27662](https://bugs.python.org/issue?@action=redirect&bpo=27662) [https://bugs.python.org/issue?@action=redirect&bpo=27662]: Fix an overflow check in `List_New`: the original code was checking against `Py_SIZE_MAX` instead of the correct upper bound of `Py_SSIZE_T_MAX`. Patch by Xiang Zhang.

- [bpo-27782](https://bugs.python.org/issue?@action=redirect&bpo=27782) [https://bugs.python.org/issue?@action=redirect&bpo=27782]: Multi-phase extension module `import` now correctly allows the `m_methods` field to be used to add module level functions to instances of non-module types returned from `Py_create_mod`. Patch by Xiang Zhang.
- [bpo-27936](https://bugs.python.org/issue?@action=redirect&bpo=27936) [https://bugs.python.org/issue?@action=redirect&bpo=27936]: The `round()` function accepted a second `None` argument for some types but not for others. Fixed the inconsistency by accepting `None` for all numeric types.
- [bpo-27487](https://bugs.python.org/issue?@action=redirect&bpo=27487) [https://bugs.python.org/issue?@action=redirect&bpo=27487]: Warn if a submodule argument to “python -m” or `runpy.run_module()` is found in `sys.modules` after parent packages are imported, but before the submodule is executed.
- [bpo-27157](https://bugs.python.org/issue?@action=redirect&bpo=27157) [https://bugs.python.org/issue?@action=redirect&bpo=27157]: Make only `type()` itself accept the one-argument form. Patch by Eryk Sun and Emanuel Barry.
- [bpo-27558](https://bugs.python.org/issue?@action=redirect&bpo=27558) [https://bugs.python.org/issue?@action=redirect&bpo=27558]: Fix a `SystemError` in the implementation of “raise” statement. In a brand new thread, raise a `RuntimeError` since there is no active exception to reraise. Patch written by Xiang Zhang.
- [bpo-28008](https://bugs.python.org/issue?@action=redirect&bpo=28008) [https://bugs.python.org/issue?@action=redirect&bpo=28008]: Implement [PEP 530](https://peps.python.org/pep-0530/) [https://peps.python.org/pep-0530/] – asynchronous comprehensions.
- [bpo-27942](https://bugs.python.org/issue?@action=redirect&bpo=27942) [https://bugs.python.org/issue?@action=redirect&bpo=27942]: Fix memory leak in `codeobject.c`

## Library

- [bpo-28732](https://bugs.python.org/issue?@action=redirect&bpo=28732) [https://bugs.python.org/issue?@action=redirect&bpo=28732]: Fix crash in `os.spawnv()` with no elements in `args`
- [bpo-28485](https://bugs.python.org/issue?@action=redirect&bpo=28485) [https://bugs.python.org/issue?@action=redirect&bpo=28485]: Always raise `ValueError` for negative `compileall.compile_dir(workers=...)` parameter, even when multithreading is unavailable.
- [bpo-28037](https://bugs.python.org/issue?@action=redirect&bpo=28037) [https://bugs.python.org/issue?@action=redirect&bpo=28037]

@action=redirect&bpo=28037]: Use `sqlite3_get_autocommit()` instead of setting `Connection->inTransaction` manually.

- [bpo-25283](https://bugs.python.org/issue?@action=redirect&bpo=25283) [https://bugs.python.org/issue?@action=redirect&bpo=25283]: Attributes `tm_gmtoff` and `tm_zone` are now available on all platforms in the return values of `time.localtime()` and `time.gmtime()`.
- [bpo-24454](https://bugs.python.org/issue?@action=redirect&bpo=24454) [https://bugs.python.org/issue?@action=redirect&bpo=24454]: Regular expression match object groups are now accessible using `__getitem__`. “`mo[x]`” is equivalent to “`mo.group(x)`”.
- [bpo-10740](https://bugs.python.org/issue?@action=redirect&bpo=10740) [https://bugs.python.org/issue?@action=redirect&bpo=10740]: `sqlite3` no longer implicitly commit an open transaction before DDL statements.
- [bpo-17941](https://bugs.python.org/issue?@action=redirect&bpo=17941) [https://bugs.python.org/issue?@action=redirect&bpo=17941]: Add a *module* parameter to `collections.namedtuple()`.
- [bpo-22493](https://bugs.python.org/issue?@action=redirect&bpo=22493) [https://bugs.python.org/issue?@action=redirect&bpo=22493]: Inline flags now should be used only at the start of the regular expression. Deprecation warning is emitted if uses them in the middle of the regular expression.
- [bpo-26885](https://bugs.python.org/issue?@action=redirect&bpo=26885) [https://bugs.python.org/issue?@action=redirect&bpo=26885]: `xmlrpc` now supports unmarshalling additional data types used by Apache XML-RPC implementation for numerics and `None`.
- [bpo-28070](https://bugs.python.org/issue?@action=redirect&bpo=28070) [https://bugs.python.org/issue?@action=redirect&bpo=28070]: Fixed parsing inline verbose flag in regular expressions.
- [bpo-19500](https://bugs.python.org/issue?@action=redirect&bpo=19500) [https://bugs.python.org/issue?@action=redirect&bpo=19500]: Add client-side SSL session resumption to the `ssl` module.
- [bpo-28022](https://bugs.python.org/issue?@action=redirect&bpo=28022) [https://bugs.python.org/issue?@action=redirect&bpo=28022]: Deprecate `ssl`-related arguments in favor of `SSLContext`. The deprecation include manual creation of `SSLSocket` and `certfile/keyfile` (or similar) in `ftplib`, `httplib`, `imaplib`, `smtplib`, `poplib` and `urllib`.
- [bpo-28043](https://bugs.python.org/issue?@action=redirect&bpo=28043) [https://bugs.python.org/issue?@action=redirect&bpo=28043]: `SSLContext` has improved default settings: `OP_NO_SSLv2`, `OP_NO_SSLv3`, `OP_NO_COMPRESSION`, `OP_CIPHER_SERVER_PREFERENCE`,

OP\_SINGLE\_DH\_USE, OP\_SINGLE\_ECDH\_USE and HIGH ciphers without MD5.

- [bpo-24693](https://bugs.python.org/issue?@action=redirect&bpo=24693) [https://bugs.python.org/issue?@action=redirect&bpo=24693]: Changed some RuntimeError's in the zipfile module to more appropriate types. Improved some error messages and debugging output.
- [bpo-17909](https://bugs.python.org/issue?@action=redirect&bpo=17909) [https://bugs.python.org/issue?@action=redirect&bpo=17909]: `json.load` and `json.loads` now support binary input encoded as UTF-8, UTF-16 or UTF-32. Patch by Serhiy Storchaka.
- [bpo-27137](https://bugs.python.org/issue?@action=redirect&bpo=27137) [https://bugs.python.org/issue?@action=redirect&bpo=27137]: the pure Python fallback implementation of `functools.partial` now matches the behaviour of its accelerated C counterpart for subclassing, pickling and text representation purposes. Patch by Emanuel Barry and Serhiy Storchaka.
- Fix possible integer overflows and crashes in the mmap module with unusual usage patterns.
- [bpo-1703178](https://bugs.python.org/issue?@action=redirect&bpo=1703178) [https://bugs.python.org/issue?@action=redirect&bpo=1703178]: Fix the ability to pass the `-link-objects` option to the `distutils build_ext` command.
- [bpo-28019](https://bugs.python.org/issue?@action=redirect&bpo=28019) [https://bugs.python.org/issue?@action=redirect&bpo=28019]: `itertools.count()` no longer rounds non-integer step in range between 1.0 and 2.0 to 1.
- [bpo-18401](https://bugs.python.org/issue?@action=redirect&bpo=18401) [https://bugs.python.org/issue?@action=redirect&bpo=18401]: Pdb now supports the 'readrc' keyword argument to control whether .pdbrc files should be read. Patch by Martin Matusiak and Sam Kimbrel.
- [bpo-25969](https://bugs.python.org/issue?@action=redirect&bpo=25969) [https://bugs.python.org/issue?@action=redirect&bpo=25969]: Update the lib2to3 grammar to handle the unpacking generalizations added in 3.5.
- [bpo-14977](https://bugs.python.org/issue?@action=redirect&bpo=14977) [https://bugs.python.org/issue?@action=redirect&bpo=14977]: mailcap now respects the order of the lines in the mailcap files ("first match"), as required by RFC 1542. Patch by Michael Lazar.
- [bpo-28082](https://bugs.python.org/issue?@action=redirect&bpo=28082) [https://bugs.python.org/issue?@action=redirect&bpo=28082]: Convert re flag constants to IntFlag.
- [bpo-28025](https://bugs.python.org/issue?@action=redirect&bpo=28025) [https://bugs.python.org/issue?@action=redirect&bpo=28025]: Convert all ssl module constants

to IntEnum and IntFlags. SSLContext properties now return flags and enums.

- [bpo-23591](https://bugs.python.org/issue?@action=redirect&bpo=23591) [https://bugs.python.org/issue?@action=redirect&bpo=23591]: Add Flag, IntFlag, and auto() to enum module.
- [bpo-433028](https://bugs.python.org/issue?@action=redirect&bpo=433028) [https://bugs.python.org/issue?@action=redirect&bpo=433028]: Added support of modifier spans in regular expressions.
- [bpo-24594](https://bugs.python.org/issue?@action=redirect&bpo=24594) [https://bugs.python.org/issue?@action=redirect&bpo=24594]: Validates persist parameter when opening MSI database
- [bpo-17582](https://bugs.python.org/issue?@action=redirect&bpo=17582) [https://bugs.python.org/issue?@action=redirect&bpo=17582]: xml.etree.ElementTree nows preserves whitespaces in attributes (Patch by Duane Griffin. Reviewed and approved by Stefan Behnel.)
- [bpo-28047](https://bugs.python.org/issue?@action=redirect&bpo=28047) [https://bugs.python.org/issue?@action=redirect&bpo=28047]: Fixed calculation of line length used for the base64 CTE in the new email policies.
- [bpo-27576](https://bugs.python.org/issue?@action=redirect&bpo=27576) [https://bugs.python.org/issue?@action=redirect&bpo=27576]: Fix call order in OrderedDict.\_\_init\_\_().
- email.generator.DecodedGenerator now supports the policy keyword.
- [bpo-28027](https://bugs.python.org/issue?@action=redirect&bpo=28027) [https://bugs.python.org/issue?@action=redirect&bpo=28027]: Remove undocumented modules from Lib/plat-\*: IN, CDROM, DLFCN, TYPES, CDIO, and STROPTS.
- [bpo-27445](https://bugs.python.org/issue?@action=redirect&bpo=27445) [https://bugs.python.org/issue?@action=redirect&bpo=27445]: Don't pass str(\_charset) to MIMEText.set\_payload(). Patch by Claude Paroz.
- [bpo-24277](https://bugs.python.org/issue?@action=redirect&bpo=24277) [https://bugs.python.org/issue?@action=redirect&bpo=24277]: The new email API is no longer provisional, and the docs have been reorganized and rewritten to emphasize the new API.
- [bpo-22450](https://bugs.python.org/issue?@action=redirect&bpo=22450) [https://bugs.python.org/issue?@action=redirect&bpo=22450]: urllib now includes an Accept : \* / \* header among the default headers. This makes the results of REST API requests more consistent and predictable especially when proxy servers are involved.
- lib2to3.pgen3.driver.load\_grammar() now creates a stable

cache file between runs given the same Grammar.txt input regardless of the hash randomization setting.

- [bpo-28005](https://bugs.python.org/issue?@action=redirect&bpo=28005) [https://bugs.python.org/issue?@action=redirect&bpo=28005]: Allow ImportError in encoding implementation to propagate.
- [bpo-26667](https://bugs.python.org/issue?@action=redirect&bpo=26667) [https://bugs.python.org/issue?@action=redirect&bpo=26667]: Support path-like objects in importlib.util.
- [bpo-27570](https://bugs.python.org/issue?@action=redirect&bpo=27570) [https://bugs.python.org/issue?@action=redirect&bpo=27570]: Avoid zero-length memcpy() etc calls with null source pointers in the “ctypes” and “array” modules.
- [bpo-22233](https://bugs.python.org/issue?@action=redirect&bpo=22233) [https://bugs.python.org/issue?@action=redirect&bpo=22233]: Break email header lines *only* on the RFC specified CR and LF characters, not on arbitrary unicode line breaks. This also fixes a bug in HTTP header parsing.
- [bpo-27331](https://bugs.python.org/issue?@action=redirect&bpo=27331) [https://bugs.python.org/issue?@action=redirect&bpo=27331]: The email.mime classes now all accept an optional policy keyword.
- [bpo-27988](https://bugs.python.org/issue?@action=redirect&bpo=27988) [https://bugs.python.org/issue?@action=redirect&bpo=27988]: Fix email iter\_attachments incorrect mutation of payload list.
- [bpo-16113](https://bugs.python.org/issue?@action=redirect&bpo=16113) [https://bugs.python.org/issue?@action=redirect&bpo=16113]: Add SHA-3 and SHAKE support to hashlib module.
- Eliminate a tautological-pointer-compare warning in \_scproxy.c.
- [bpo-27776](https://bugs.python.org/issue?@action=redirect&bpo=27776) [https://bugs.python.org/issue?@action=redirect&bpo=27776]: The `os.urandom()` function does now block on Linux 3.17 and newer until the system urandom entropy pool is initialized to increase the security. This change is part of the [PEP 524](https://peps.python.org/pep-0524/) [https://peps.python.org/pep-0524/].
- [bpo-27778](https://bugs.python.org/issue?@action=redirect&bpo=27778) [https://bugs.python.org/issue?@action=redirect&bpo=27778]: Expose the Linux `getrandom()` syscall as a new `os.getrandom()` function. This change is part of the [PEP 524](https://peps.python.org/pep-0524/) [https://peps.python.org/pep-0524/].
- [bpo-27691](https://bugs.python.org/issue?@action=redirect&bpo=27691) [https://bugs.python.org/issue?@action=redirect&bpo=27691]: Fix ssl module’s parsing of

GEN\_RID subject alternative name fields in X.509 certs.

- [bpo-18844](https://bugs.python.org/issue?@action=redirect&bpo=18844) [https://bugs.python.org/issue?@action=redirect&bpo=18844]: Add random.choices().
- [bpo-25761](https://bugs.python.org/issue?@action=redirect&bpo=25761) [https://bugs.python.org/issue?@action=redirect&bpo=25761]: Improved error reporting about truncated pickle data in C implementation of unpickler. UnpicklingError is now raised instead of AttributeError and ValueError in some cases.
- [bpo-26798](https://bugs.python.org/issue?@action=redirect&bpo=26798) [https://bugs.python.org/issue?@action=redirect&bpo=26798]: Add BLAKE2 (blake2b and blake2s) to hashlib.
- [bpo-26032](https://bugs.python.org/issue?@action=redirect&bpo=26032) [https://bugs.python.org/issue?@action=redirect&bpo=26032]: Optimized globbing in pathlib by using os.scandir(); it is now about 1.5–4 times faster.
- [bpo-25596](https://bugs.python.org/issue?@action=redirect&bpo=25596) [https://bugs.python.org/issue?@action=redirect&bpo=25596]: Optimized glob() and iglob() functions in the glob module; they are now about 3–6 times faster.
- [bpo-27928](https://bugs.python.org/issue?@action=redirect&bpo=27928) [https://bugs.python.org/issue?@action=redirect&bpo=27928]: Add scrypt (password-based key derivation function) to hashlib module (requires OpenSSL 1.1.0).
- [bpo-27850](https://bugs.python.org/issue?@action=redirect&bpo=27850) [https://bugs.python.org/issue?@action=redirect&bpo=27850]: Remove 3DES from ssl module's default cipher list to counter measure sweet32 attack (CVE-2016-2183).
- [bpo-27766](https://bugs.python.org/issue?@action=redirect&bpo=27766) [https://bugs.python.org/issue?@action=redirect&bpo=27766]: Add ChaCha20 Poly1305 to ssl module's default cipher list. (Required OpenSSL 1.1.0 or LibreSSL).
- [bpo-25387](https://bugs.python.org/issue?@action=redirect&bpo=25387) [https://bugs.python.org/issue?@action=redirect&bpo=25387]: Check return value of winsound.MessageBeep.
- [bpo-27866](https://bugs.python.org/issue?@action=redirect&bpo=27866) [https://bugs.python.org/issue?@action=redirect&bpo=27866]: Add SSLContext.get\_ciphers() method to get a list of all enabled ciphers.
- [bpo-27744](https://bugs.python.org/issue?@action=redirect&bpo=27744) [https://bugs.python.org/issue?@action=redirect&bpo=27744]: Add AF\_ALG (Linux Kernel crypto) to socket module.
- [bpo-26470](https://bugs.python.org/issue?@action=redirect&bpo=26470) [https://bugs.python.org/issue?@action=redirect&bpo=26470]

@action=redirect&bpo=26470]: Port ssl and hashlib module to OpenSSL 1.1.0.

- [bpo-11620](https://bugs.python.org/issue?@action=redirect&bpo=11620) [https://bugs.python.org/issue?@action=redirect&bpo=11620]: Fix support for SND\_MEMORY in winsound.PlaySound. Based on a patch by Tim Leshner.
- [bpo-11734](https://bugs.python.org/issue?@action=redirect&bpo=11734) [https://bugs.python.org/issue?@action=redirect&bpo=11734]: Add support for IEEE 754 half-precision floats to the struct module. Based on a patch by Eli Stevens.
- [bpo-27919](https://bugs.python.org/issue?@action=redirect&bpo=27919) [https://bugs.python.org/issue?@action=redirect&bpo=27919]: Deprecated `extra_path` distribution option in distutils packaging.
- [bpo-23229](https://bugs.python.org/issue?@action=redirect&bpo=23229) [https://bugs.python.org/issue?@action=redirect&bpo=23229]: Add new `cmath` constants: `cmath.inf` and `cmath.nan` to match `math.inf` and `math.nan`, and also `cmath.infj` and `cmath.nanj` to match the format used by complex repr.
- [bpo-27842](https://bugs.python.org/issue?@action=redirect&bpo=27842) [https://bugs.python.org/issue?@action=redirect&bpo=27842]: The `csv.DictReader` now returns rows of type `OrderedDict`. (Contributed by Steve Holden.)
- Remove support for passing a file descriptor to `os.access`. It never worked but previously didn't raise.
- [bpo-12885](https://bugs.python.org/issue?@action=redirect&bpo=12885) [https://bugs.python.org/issue?@action=redirect&bpo=12885]: Fix error when distutils encounters symlink.
- [bpo-27881](https://bugs.python.org/issue?@action=redirect&bpo=27881) [https://bugs.python.org/issue?@action=redirect&bpo=27881]: Fixed possible bugs when setting `sqlite3.Connection.isolation_level`. Based on patch by Xiang Zhang.
- [bpo-27861](https://bugs.python.org/issue?@action=redirect&bpo=27861) [https://bugs.python.org/issue?@action=redirect&bpo=27861]: Fixed a crash in `sqlite3.Connection.cursor()` when a factory creates not a cursor. Patch by Xiang Zhang.
- [bpo-19884](https://bugs.python.org/issue?@action=redirect&bpo=19884) [https://bugs.python.org/issue?@action=redirect&bpo=19884]: Avoid spurious output on OS X with Gnu Readline.
- [bpo-27706](https://bugs.python.org/issue?@action=redirect&bpo=27706) [https://bugs.python.org/issue?@action=redirect&bpo=27706]: Restore deterministic behavior of `random.Random().seed()` for string seeds using seeding version 1. Allows sequences of calls to `random()` to exactly

match those obtained in Python 2. Patch by Nofar Schnider.

- [bpo-10513](https://bugs.python.org/issue?@action=redirect&bpo=10513) [https://bugs.python.org/issue?@action=redirect&bpo=10513]: Fix a regression in `Connection.commit()`. Statements should not be reset after a commit.
- [bpo-12319](https://bugs.python.org/issue?@action=redirect&bpo=12319) [https://bugs.python.org/issue?@action=redirect&bpo=12319]: Chunked transfer encoding support added to `http.client.HTTPConnection` requests. The `urllib.request.AbstractHTTPHandler` class does not enforce a Content-Length header any more. If a HTTP request has a file or iterable body, but no Content-Length header, the library now falls back to use chunked transfer-encoding.
- A new version of `typing.py` from <https://github.com/python/typing>: - Collection (only for 3.6) ([bpo-27598](https://bugs.python.org/issue?@action=redirect&bpo=27598) [https://bugs.python.org/issue?@action=redirect&bpo=27598]) - Add `FrozenSet` to `_all_` (upstream #261) - fix crash in `_get_type_vars()` (upstream #259) - Remove the dict constraint in `ForwardRef._eval_type` (upstream #252)
- [bpo-27832](https://bugs.python.org/issue?@action=redirect&bpo=27832) [https://bugs.python.org/issue?@action=redirect&bpo=27832]: Make `_normalize` parameter to `Fraction` constructor keyword-only, so that `Fraction(2, 3, 4)` now raises `TypeError`.
- [bpo-27539](https://bugs.python.org/issue?@action=redirect&bpo=27539) [https://bugs.python.org/issue?@action=redirect&bpo=27539]: Fix unnormalised `Fraction.__pow__` result in the case of negative exponent and negative base.
- [bpo-21718](https://bugs.python.org/issue?@action=redirect&bpo=21718) [https://bugs.python.org/issue?@action=redirect&bpo=21718]: `cursor.description` is now available for queries using CTEs.
- [bpo-27819](https://bugs.python.org/issue?@action=redirect&bpo=27819) [https://bugs.python.org/issue?@action=redirect&bpo=27819]: In `distutils.sdist`s, simply produce the “gztar” (gzipped tar format) distributions on all platforms unless “formats” is supplied.
- [bpo-2466](https://bugs.python.org/issue?@action=redirect&bpo=2466) [https://bugs.python.org/issue?@action=redirect&bpo=2466]: `posixpath.ismount` now correctly recognizes mount points which the user does not have permission to access.
- [bpo-9998](https://bugs.python.org/issue?@action=redirect&bpo=9998) [https://bugs.python.org/issue?@action=redirect&bpo=9998]: On Linux, `ctypes.util.find_library` now looks in `LD_LIBRARY_PATH` for shared libraries.
- [bpo-27573](https://bugs.python.org/issue?@action=redirect&bpo=27573) [https://bugs.python.org/issue?@action=redirect&bpo=27573]

@action=redirect&bpo=27573]: exit message for code.interact is now configurable.

- [bpo-27930](https://bugs.python.org/issue?@action=redirect&bpo=27930) [https://bugs.python.org/issue?@action=redirect&bpo=27930]: Improved behaviour of logging.handlers.QueueListener. Thanks to Paulo Andrade and Petr Viktorin for the analysis and patch.
- [bpo-6766](https://bugs.python.org/issue?@action=redirect&bpo=6766) [https://bugs.python.org/issue?@action=redirect&bpo=6766]: Distributed reference counting added to multiprocessing to support nesting of shared values / proxy objects.
- [bpo-21201](https://bugs.python.org/issue?@action=redirect&bpo=21201) [https://bugs.python.org/issue?@action=redirect&bpo=21201]: Improves readability of multiprocessing error message. Thanks to Wojciech Walczak for patch.
- `asyncio`: Add `set_protocol` / `get_protocol` to `Transports`.
- [bpo-27456](https://bugs.python.org/issue?@action=redirect&bpo=27456) [https://bugs.python.org/issue?@action=redirect&bpo=27456]: `asyncio`: Set `TCP_NODELAY` by default.

## IDLE

- [bpo-15308](https://bugs.python.org/issue?@action=redirect&bpo=15308) [https://bugs.python.org/issue?@action=redirect&bpo=15308]: Add ‘interrupt execution’ (^C) to Shell menu. Patch by Roger Serwy, updated by Bayard Randel.
- [bpo-27922](https://bugs.python.org/issue?@action=redirect&bpo=27922) [https://bugs.python.org/issue?@action=redirect&bpo=27922]: Stop IDLE tests from ‘flashing’ gui widgets on the screen.
- [bpo-27891](https://bugs.python.org/issue?@action=redirect&bpo=27891) [https://bugs.python.org/issue?@action=redirect&bpo=27891]: Consistently group and sort imports within `idlelib` modules.
- [bpo-17642](https://bugs.python.org/issue?@action=redirect&bpo=17642) [https://bugs.python.org/issue?@action=redirect&bpo=17642]: add larger font sizes for classroom projection.
- Add version to title of IDLE help window.
- [bpo-25564](https://bugs.python.org/issue?@action=redirect&bpo=25564) [https://bugs.python.org/issue?@action=redirect&bpo=25564]: In section on IDLE – console differences, mention that using `exec` means that `__builtins__` is defined for each statement.
- [bpo-27821](https://bugs.python.org/issue?@action=redirect&bpo=27821) [https://bugs.python.org/issue?@action=redirect&bpo=27821]: Fix 3.6.0a3 regression that

prevented custom key sets from being selected when no custom theme was defined.

## C API

- [bpo-26900](https://bugs.python.org/issue?@action=redirect&bpo=26900) [https://bugs.python.org/issue?@action=redirect&bpo=26900]: Excluded underscored names and other private API from limited API.
- [bpo-26027](https://bugs.python.org/issue?@action=redirect&bpo=26027) [https://bugs.python.org/issue?@action=redirect&bpo=26027]: Add support for path-like objects in PyUnicode\_FSConverter() & PyUnicode\_FSDecoder().

## Tests

- [bpo-27427](https://bugs.python.org/issue?@action=redirect&bpo=27427) [https://bugs.python.org/issue?@action=redirect&bpo=27427]: Additional tests for the math module. Patch by Francisco Couzo.
- [bpo-27953](https://bugs.python.org/issue?@action=redirect&bpo=27953) [https://bugs.python.org/issue?@action=redirect&bpo=27953]: Skip math and cmath tests that fail on OS X 10.4 due to a poor libm implementation of tan.
- [bpo-26040](https://bugs.python.org/issue?@action=redirect&bpo=26040) [https://bugs.python.org/issue?@action=redirect&bpo=26040]: Improve test\_math and test\_cmath coverage and rigour. Patch by Jeff Allen.
- [bpo-27787](https://bugs.python.org/issue?@action=redirect&bpo=27787) [https://bugs.python.org/issue?@action=redirect&bpo=27787]: Call gc.collect() before checking each test for “dangling threads”, since the dangling threads are weak references.

## Build

- [bpo-27566](https://bugs.python.org/issue?@action=redirect&bpo=27566) [https://bugs.python.org/issue?@action=redirect&bpo=27566]: Fix clean target in freeze makefile (patch by Lisa Roach)
- [bpo-27705](https://bugs.python.org/issue?@action=redirect&bpo=27705) [https://bugs.python.org/issue?@action=redirect&bpo=27705]: Update message in validate\_ucrtbase.py
- [bpo-27976](https://bugs.python.org/issue?@action=redirect&bpo=27976) [https://bugs.python.org/issue?@action=redirect&bpo=27976]: Deprecate building \_ctypes with the bundled copy of libffi on non-OSX UNIX platforms.
- [bpo-27983](https://bugs.python.org/issue?@action=redirect&bpo=27983) [https://bugs.python.org/issue?@action=redirect&bpo=27983]

@action=redirect&bpo=27983]: Cause lack of llvm-profdata tool when using clang as required for PGO linking to be a configure time error rather than make time when `--with-optimizations` is enabled. Also improve our ability to find the llvm-profdata tool on MacOS and some Linuxes.

- [bpo-21590](https://bugs.python.org/issue?@action=redirect&bpo=21590) [https://bugs.python.org/issue?@action=redirect&bpo=21590]: Support for DTrace and SystemTap probes.
- [bpo-26307](https://bugs.python.org/issue?@action=redirect&bpo=26307) [https://bugs.python.org/issue?@action=redirect&bpo=26307]: The profile-opt build now applies PGO to the built-in modules.
- [bpo-26359](https://bugs.python.org/issue?@action=redirect&bpo=26359) [https://bugs.python.org/issue?@action=redirect&bpo=26359]: Add the `-with-optimizations` flag to turn on LTO and PGO build support when available.
- [bpo-27917](https://bugs.python.org/issue?@action=redirect&bpo=27917) [https://bugs.python.org/issue?@action=redirect&bpo=27917]: Set platform triplets for Android builds.
- [bpo-25825](https://bugs.python.org/issue?@action=redirect&bpo=25825) [https://bugs.python.org/issue?@action=redirect&bpo=25825]: Update references to the \$(LIBPL) installation path on AIX. This path was changed in 3.2a4.
- Update OS X installer to use SQLite 3.14.1 and XZ 5.2.2.
- [bpo-21122](https://bugs.python.org/issue?@action=redirect&bpo=21122) [https://bugs.python.org/issue?@action=redirect&bpo=21122]: Fix LTO builds on OS X.
- [bpo-17128](https://bugs.python.org/issue?@action=redirect&bpo=17128) [https://bugs.python.org/issue?@action=redirect&bpo=17128]: Build OS X installer with a private copy of OpenSSL. Also provide a sample Install Certificates command script to install a set of root certificates from the third-party certifi module.

## Tools/Demos

- [bpo-27952](https://bugs.python.org/issue?@action=redirect&bpo=27952) [https://bugs.python.org/issue?@action=redirect&bpo=27952]: Get Tools/scripts/fixcid.py working with Python 3 and the current “re” module, avoid invalid Python backslash escapes, and fix a bug parsing escaped C quote signs.

## Windows

- [bpo-28065](https://bugs.python.org/issue?@action=redirect&bpo=28065) [https://bugs.python.org/issue?@action=redirect&bpo=28065]

@action=redirect&bpo=28065]: Update xz dependency to 5.2.2 and build it from source.

- [bpo-25144](https://bugs.python.org/issue?@action=redirect&bpo=25144) [https://bugs.python.org/issue?@action=redirect&bpo=25144]: Ensures TargetDir is set before continuing with custom install.
- [bpo-1602](https://bugs.python.org/issue?@action=redirect&bpo=1602) [https://bugs.python.org/issue?@action=redirect&bpo=1602]: Windows console doesn't input or print Unicode (PEP 528)
- [bpo-27781](https://bugs.python.org/issue?@action=redirect&bpo=27781) [https://bugs.python.org/issue?@action=redirect&bpo=27781]: Change file system encoding on Windows to UTF-8 (PEP 529)
- [bpo-27731](https://bugs.python.org/issue?@action=redirect&bpo=27731) [https://bugs.python.org/issue?@action=redirect&bpo=27731]: Opt-out of MAX\_PATH on Windows 10
- [bpo-6135](https://bugs.python.org/issue?@action=redirect&bpo=6135) [https://bugs.python.org/issue?@action=redirect&bpo=6135]: Adds encoding and errors parameters to subprocess.
- [bpo-27959](https://bugs.python.org/issue?@action=redirect&bpo=27959) [https://bugs.python.org/issue?@action=redirect&bpo=27959]: Adds oem encoding, alias ansi to mbcs, move aliasmbcs to codec lookup.
- [bpo-27982](https://bugs.python.org/issue?@action=redirect&bpo=27982) [https://bugs.python.org/issue?@action=redirect&bpo=27982]: The functions of the winsound module now accept keyword arguments.
- [bpo-20366](https://bugs.python.org/issue?@action=redirect&bpo=20366) [https://bugs.python.org/issue?@action=redirect&bpo=20366]: Build full text search support into SQLite on Windows.
- [bpo-27756](https://bugs.python.org/issue?@action=redirect&bpo=27756) [https://bugs.python.org/issue?@action=redirect&bpo=27756]: Adds new icons for Python files and processes on Windows. Designs by Cherry Wang.
- [bpo-27883](https://bugs.python.org/issue?@action=redirect&bpo=27883) [https://bugs.python.org/issue?@action=redirect&bpo=27883]: Update sqlite to 3.14.1.0 on Windows.

## Python 3.6.0 alpha 4

*Release date: 2016-08-15*

### Core and Builtins

- [bpo-27704](https://bugs.python.org/issue?@action=redirect&bpo=27704) [https://bugs.python.org/issue?@action=redirect&bpo=27704]: Optimized creating bytes and

bytearray from byte-like objects and iterables. Speed up to 3 times for short objects. Original patch by Naoki Inada.

- [bpo-26823](https://bugs.python.org/issue?@action=redirect&bpo=26823) [https://bugs.python.org/issue?@action=redirect&bpo=26823]: Large sections of repeated lines in tracebacks are now abbreviated as “[Previous line repeated {count} more times]” by the builtin traceback rendering. Patch by Emanuel Barry.
- [bpo-27574](https://bugs.python.org/issue?@action=redirect&bpo=27574) [https://bugs.python.org/issue?@action=redirect&bpo=27574]: Decreased an overhead of parsing keyword arguments in functions implemented with using Argument Clinic.
- [bpo-22557](https://bugs.python.org/issue?@action=redirect&bpo=22557) [https://bugs.python.org/issue?@action=redirect&bpo=22557]: Now importing already imported modules is up to 2.5 times faster.
- [bpo-17596](https://bugs.python.org/issue?@action=redirect&bpo=17596) [https://bugs.python.org/issue?@action=redirect&bpo=17596]: Include `<wincrypt.h>` to help with Min GW building.
- [bpo-17599](https://bugs.python.org/issue?@action=redirect&bpo=17599) [https://bugs.python.org/issue?@action=redirect&bpo=17599]: On Windows, rename the privately defined `REPARSE_DATA_BUFFER` structure to avoid conflicting with the definition from Min GW.
- [bpo-27507](https://bugs.python.org/issue?@action=redirect&bpo=27507) [https://bugs.python.org/issue?@action=redirect&bpo=27507]: Add integer overflow check in `bytearray.extend()`. Patch by Xiang Zhang.
- [bpo-27581](https://bugs.python.org/issue?@action=redirect&bpo=27581) [https://bugs.python.org/issue?@action=redirect&bpo=27581]: Don’t rely on wrapping for overflow check in `PySequence_Tuple()`. Patch by Xiang Zhang.
- [bpo-1621](https://bugs.python.org/issue?@action=redirect&bpo=1621) [https://bugs.python.org/issue?@action=redirect&bpo=1621]: Avoid signed integer overflow in list and tuple operations. Patch by Xiang Zhang.
- [bpo-27419](https://bugs.python.org/issue?@action=redirect&bpo=27419) [https://bugs.python.org/issue?@action=redirect&bpo=27419]: Standard `__import__()` no longer look up “`__import__`” in globals or builtins for importing submodules or “from import”. Fixed a crash if raise a warning about unabling to resolve package from `__spec__` or `__package__`.
- [bpo-27083](https://bugs.python.org/issue?@action=redirect&bpo=27083) [https://bugs.python.org/issue?@action=redirect&bpo=27083]: Respect the `PYTHONCASEOK` environment variable under Windows.
- [bpo-27514](https://bugs.python.org/issue?@action=redirect&bpo=27514) [https://bugs.python.org/issue?@action=redirect&bpo=27514]

@action=redirect&bpo=27514]: Make having too many statically nested blocks a SyntaxError instead of SystemError.

- [bpo-27366](https://bugs.python.org/issue?@action=redirect&bpo=27366) [https://bugs.python.org/issue?@action=redirect&bpo=27366]: Implemented [PEP 487](https://peps.python.org/pep-0487/) [https://peps.python.org/pep-0487/] (Simpler customization of class creation). Upon subclassing, the `__init_subclass__` classmethod is called on the base class. Descriptors are initialized with `__set_name__` after class creation.

## Library

- [bpo-26027](https://bugs.python.org/issue?@action=redirect&bpo=26027) [https://bugs.python.org/issue?@action=redirect&bpo=26027]: Add [PEP 519](https://peps.python.org/pep-0519/) [https://peps.python.org/pep-0519/] `Path` support to the `os` and `os.path` modules. Includes code from Jelle Zijlstra. (See also: [bpo-27524](https://bugs.python.org/issue?@action=redirect&bpo=27524) [https://bugs.python.org/issue?@action=redirect&bpo=27524])
- [bpo-27598](https://bugs.python.org/issue?@action=redirect&bpo=27598) [https://bugs.python.org/issue?@action=redirect&bpo=27598]: Add Collections to `collections.abc`. Patch by Ivan Levkivskiy, docs by Neil Girdhar.
- [bpo-25958](https://bugs.python.org/issue?@action=redirect&bpo=25958) [https://bugs.python.org/issue?@action=redirect&bpo=25958]: Support “anti-registration” of special methods from various ABCs, like `__hash__`, `__iter__` or `__len__`. All these (and several more) can be set to `None` in an implementation class and the behavior will be as if the method is not defined at all. (Previously, this mechanism existed only for `__hash__`, to make mutable classes unhashable.) Code contributed by Andrew Barnert and Ivan Levkivskiy.
- [bpo-16764](https://bugs.python.org/issue?@action=redirect&bpo=16764) [https://bugs.python.org/issue?@action=redirect&bpo=16764]: Support keyword arguments to `zlib.decompress()`. Patch by Xiang Zhang.
- [bpo-27736](https://bugs.python.org/issue?@action=redirect&bpo=27736) [https://bugs.python.org/issue?@action=redirect&bpo=27736]: Prevent segfault after interpreter re-initialization due to ref count problem introduced in code for [bpo-27038](https://bugs.python.org/issue?@action=redirect&bpo=27038) [https://bugs.python.org/issue?@action=redirect&bpo=27038] in 3.6.0a3. Patch by Xiang Zhang.
- [bpo-25628](https://bugs.python.org/issue?@action=redirect&bpo=25628) [https://bugs.python.org/issue?@action=redirect&bpo=25628]: The *verbose* and *rename* parameters for `collections.namedtuple` are now keyword-only.

- [bpo-12345](https://bugs.python.org/issue?@action=redirect&bpo=12345) [https://bugs.python.org/issue?@action=redirect&bpo=12345]: Add mathematical constant tau to math and cmath. See also [PEP 628](https://peps.python.org/pep-0628/) [https://peps.python.org/pep-0628/].
- [bpo-26823](https://bugs.python.org/issue?@action=redirect&bpo=26823) [https://bugs.python.org/issue?@action=redirect&bpo=26823]: traceback.StackSummary.format now abbreviates large sections of repeated lines as “[Previous line repeated {count} more times]” (this change then further affects other traceback display operations in the module). Patch by Emanuel Barry.
- [bpo-27664](https://bugs.python.org/issue?@action=redirect&bpo=27664) [https://bugs.python.org/issue?@action=redirect&bpo=27664]: Add to concurrent.futures.thread.ThreadPoolExecutor() the ability to specify a thread name prefix.
- [bpo-27181](https://bugs.python.org/issue?@action=redirect&bpo=27181) [https://bugs.python.org/issue?@action=redirect&bpo=27181]: Add geometric\_mean and harmonic\_mean to statistics module.
- [bpo-27573](https://bugs.python.org/issue?@action=redirect&bpo=27573) [https://bugs.python.org/issue?@action=redirect&bpo=27573]: code.interact now prints an message when exiting.
- [bpo-6422](https://bugs.python.org/issue?@action=redirect&bpo=6422) [https://bugs.python.org/issue?@action=redirect&bpo=6422]: Add autorange method to timeit.Timer objects.
- [bpo-27773](https://bugs.python.org/issue?@action=redirect&bpo=27773) [https://bugs.python.org/issue?@action=redirect&bpo=27773]: Correct some memory management errors server\_hostname in \_ssl.wrap\_socket().
- [bpo-26750](https://bugs.python.org/issue?@action=redirect&bpo=26750) [https://bugs.python.org/issue?@action=redirect&bpo=26750]: unittest.mock.create\_autospec() now works properly for subclasses of property() and other data descriptors. Removes the never publicly used, never documented unittest.mock.DescriptorTypes tuple.
- [bpo-26754](https://bugs.python.org/issue?@action=redirect&bpo=26754) [https://bugs.python.org/issue?@action=redirect&bpo=26754]: Undocumented support of general bytes-like objects as path in compile() and similar functions is now deprecated.
- [bpo-26800](https://bugs.python.org/issue?@action=redirect&bpo=26800) [https://bugs.python.org/issue?@action=redirect&bpo=26800]: Undocumented support of general bytes-like objects as paths in os functions is now deprecated.
- [bpo-26981](https://bugs.python.org/issue?@action=redirect&bpo=26981) [https://bugs.python.org/issue?@action=redirect&bpo=26981]: Add \_order\_ compatibility shim to enum.Enum for Python 2/3 code bases.

- [bpo-27661](https://bugs.python.org/issue?@action=redirect&bpo=27661) [https://bugs.python.org/issue?@action=redirect&bpo=27661]: Added tzinfo keyword argument to datetime.combine.
- In the curses module, raise an error if window.getstr() or window.instr() is passed a negative value.
- [bpo-27783](https://bugs.python.org/issue?@action=redirect&bpo=27783) [https://bugs.python.org/issue?@action=redirect&bpo=27783]: Fix possible usage of uninitialized memory in operator.methodcaller.
- [bpo-27774](https://bugs.python.org/issue?@action=redirect&bpo=27774) [https://bugs.python.org/issue?@action=redirect&bpo=27774]: Fix possible Py\_DECREF on unowned object in \_sre.
- [bpo-27760](https://bugs.python.org/issue?@action=redirect&bpo=27760) [https://bugs.python.org/issue?@action=redirect&bpo=27760]: Fix possible integer overflow in binascii.b2a\_qp.
- [bpo-27758](https://bugs.python.org/issue?@action=redirect&bpo=27758) [https://bugs.python.org/issue?@action=redirect&bpo=27758]: Fix possible integer overflow in the \_csv module for large record lengths.
- [bpo-27568](https://bugs.python.org/issue?@action=redirect&bpo=27568) [https://bugs.python.org/issue?@action=redirect&bpo=27568]: Prevent HTTPoxy attack (CVE-2016-1000110). Ignore the HTTP\_PROXY variable when REQUEST\_METHOD environment is set, which indicates that the script is in CGI mode.
- [bpo-7063](https://bugs.python.org/issue?@action=redirect&bpo=7063) [https://bugs.python.org/issue?@action=redirect&bpo=7063]: Remove dead code from the “array” module’s slice handling. Patch by Chuck.
- [bpo-27656](https://bugs.python.org/issue?@action=redirect&bpo=27656) [https://bugs.python.org/issue?@action=redirect&bpo=27656]: Do not assume sched.h defines any SCHED\_\* constants.
- [bpo-27130](https://bugs.python.org/issue?@action=redirect&bpo=27130) [https://bugs.python.org/issue?@action=redirect&bpo=27130]: In the “zlib” module, fix handling of large buffers (typically 4 GiB) when compressing and decompressing. Previously, inputs were limited to 4 GiB, and compression and decompression operations did not properly handle results of 4 GiB.
- [bpo-24773](https://bugs.python.org/issue?@action=redirect&bpo=24773) [https://bugs.python.org/issue?@action=redirect&bpo=24773]: Implemented [PEP 495](https://peps.python.org/pep-0495/) [https://peps.python.org/pep-0495/] (Local Time Disambiguation).
- Expose the EPOLLEXCLUSIVE constant (when it is defined) in the select module.
- [bpo-27567](https://bugs.python.org/issue?@action=redirect&bpo=27567) [https://bugs.python.org/issue?@action=redirect&bpo=27567]

@action=redirect&bpo=27567]: Expose the EPOLLRDHUP and POLLRDHUP constants in the select module.

- [bpo-1621](https://bugs.python.org/issue?@action=redirect&bpo=1621) [https://bugs.python.org/issue?@action=redirect&bpo=1621]: Avoid signed int negation overflow in the “audioop” module.
- [bpo-27533](https://bugs.python.org/issue?@action=redirect&bpo=27533) [https://bugs.python.org/issue?@action=redirect&bpo=27533]: Release GIL in nt.\_isdir
- [bpo-17711](https://bugs.python.org/issue?@action=redirect&bpo=17711) [https://bugs.python.org/issue?@action=redirect&bpo=17711]: Fixed unpickling by the persistent ID with protocol 0. Original patch by Alexandre Vassalotti.
- [bpo-27522](https://bugs.python.org/issue?@action=redirect&bpo=27522) [https://bugs.python.org/issue?@action=redirect&bpo=27522]: Avoid an unintentional reference cycle in email.feedparser.
- [bpo-27512](https://bugs.python.org/issue?@action=redirect&bpo=27512) [https://bugs.python.org/issue?@action=redirect&bpo=27512]: Fix a segfault when os.fspath() called an \_fspath\_() method that raised an exception. Patch by Xiang Zhang.

## IDLE

- [bpo-27714](https://bugs.python.org/issue?@action=redirect&bpo=27714) [https://bugs.python.org/issue?@action=redirect&bpo=27714]: text\_textview and test\_autocomplete now pass when re-run in the same process. This occurs when test\_idle fails when run with the -w option but without -jn. Fix warning from test\_config.
